LIST OF WRITERS IN VOL. II.

INITIALS.	NAMES.
G. F. B.	George Ferguson Bowen, M. A. Late Fellow of Brasenose College, Oxford.
E. H. B.	Edward Herbert Bunbury, M. A. Late Fellow of Trinity College, Cambridge.
G. B.	George Butler, M. A. Late Fellow of Exeter College, Oxford.
W. B. D.	William Bodham Donne.
T. H. D.	Thomas H. Dyer.
J. S. H.	J. S. Howson, M. A. Principal of the Collegiate Institution, Liverpool.
E. B. J.	Edward Boucher James, M. A. Fellow and Tutor of Queen's College, Oxford.
R. G. L.	Robert Gordon Latham, M. A. Late Fellow of King's College, Cambridge.
G. L.	George Long, M. A. Late Fellow of Trinity College, Cambridge.
W. R.	William Ramsay, M. A. Professor of Humanity in the University of Glasgow.
J. R.	John Robson, B. A. Of the University of London.
L. S.	Leonhard Schmitz, Ph. D., LL. D., F. R. S. E. Rector of the High School of Edinburgh.
C. R. S.	Charles Roach Smith, F. S. A.
P. S.	Philip Smith, B. A. Head Master of Mill Hill School.
V.	W. S. W. Vaux, M. A. Of the British Museum.
H. W.	Henry Walford, M. A. Of Wadham College, Oxford.
G. W.	George Williams, B. D. Fellow of King's College, Cambridge.

The Articles which have no initials attached to them are written by the Editor

A DICTIONARY

OF

GREEK AND ROMAN GEOGRAPHY.

IABA'DIUS (Ἰαβαδίου νῆσος, Ptol. vii. 2. § 29, viii. 27. § 10), an island off the lower half of the Golden Chersonesus. It is said by Ptolemy to mean the "Island of Barley," to have been very fertile in grain and gold, and to have had a metropolis called ARGYRE. There can be little doubt that it is the same as the present *Java*, which also signifies "barley." Humboldt, on the other hand, considers it to be *Sumatra* (*Kritische Unters.* i. p. 64); and Mannert, the small island of *Banca*, on the SE. side of *Sumatra*. [V.]

JABBOK (Ἰόβακχος, Joseph.; Ἰαβώχ, LXX.), a stream on the east of Jordan, mentioned first in the history of Jacob (*Gen.* xxxii. 22). It formed, according to Josephus, the northern border of the Amorites, whose country he describes as isolated by the Jordan on the west, the Arnon on the south, and the Jabbok on the north. (*Ant.* iv. 5. § 2.) He further describes it as the division between the dominions of Sihon, king of the Amorites, and Og, whom he calls king of Galadene and Gaulonitis (§ 3)—the Bashan of Scripture. In the division of the land among the tribes, the river Jabbok was assigned as the northern limit of Gad and Reuben. (*Deut.* iii. 16.) To the north of the river, in the country of Bashan, the half tribe of Manasseh had their possession (13, 14.) [AMMONITAE; AMORITES.] It is correctly placed by Eusebius (*Onomast. s. v.*) between Ammon, or Philadelphia, and Gerasa (*Gerash*); to which S. Jerome adds, with equal truth, that it is 4 miles from the latter. It flows into the Jordan. It is now called *El-Zerka*, and "divides the district of *Moerad* from the country called *El-Belka*." (Burckhardt's *Syria*, p. 347.) It was crossed in its upper part by Irby and Mangles, an hour and twenty minutes (exactly 4 miles) SW. of *Gerash*, on their way to *Es-Szalt*. (*Travels*, p. 319, comp. p. 475.) [G. W.]

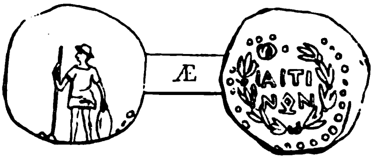
JABESH (Ἰάβεις, LXX.; Ἰάβης, Ἰαβισσά, Ἰαβεῖς, Joseph.), a city of Gilead, the inhabitants of which were exterminated, during the early times of the Judges (see xx. 28), for not having joined in the national league against the men of Gibeah (xxi. 9, &c.). Three centuries later, it was besieged by the Ammonite king, Nahash, when the hard terms offered to the inhabitants by the invaders roused the indignation of Saul, and resulted in the relief of the town and the rout of the Ammonites. (1 *Sam.* xi.) It was probably in requital for this deliverance that the inhabitants of Jabesh-Gilead, having heard of the indignity offered to the bodies of Saul and his sons after the battle of Gilboa, "arose, and went all night, and took the body of Saul, and the bodies of his sons, from the wall of Beth-shan, and came to Jabesh and burnt them there; and they took their bones and buried them under a tree at Jabesh, and fasted seven days." (1 *Sam.* xxxi. 11—13; 2 *Sam.* ii. 4—7.) It was situated, according to Eusebius, in the hills, 6 miles from Pella, on the road to *Gerash*; and its site was marked in his time by a large village (*s. vv.* Ἀριαώθ and Ἰάβις). The writer was unsuccessful in his endeavours to recover its site in 1842; but a tradition of the city is still retained in the name of the valley that runs into the plain of the Jordan, one hour and a quarter south of *Wady Mus*, in which Pella is situated. This valley is still called *Wady Yabes*, and the ruins of the city doubtless exist, and will probably be recovered in the mountains in the vicinity of this valley. [G. W.]

JABNEH. [IAMNIA.]

JACCA. [JACCETANI; VASCONES.]

JACCETA'NI (Ἰακκετανοί), the most important of the small tribes at the S. foot of the Pyrenees, in Hispania Tarraconensis, E. of the VASCONES, and N. of the ILERGETES. Their country, JACCETANIA (Ἰακκετανία), lay in the N. of *Arragon*, below the central portion of the Pyrenaean chain, whence it extended towards the Iberus as far as the neighbourhood of Ilerda and Osca; and it formed a part of the theatre of war in the contests between Sertorius and Pompey, and between Julius Caesar and Pompey's legates, Afranius and Petreius. (Strab. iii. p. 161; Caes. *B. C.* i. 60: concerning the reading, see LACETANI; Ptol. ii. 6. § 72.) None of their cities were of any consequence. The capital, JACCA (*Jaca*, in *Biscaya*), from which they derived their name, belonged, in the time of Ptolemy, to the VASCONES, among whom indeed Pliny appears to include the Jaccetani altogether (iii. 3. s. 4). Their other cities, as enumerated by Ptolemy, and identified, though with no great certainty, by Ukert (vol. ii. pt. 1. p. 425), are the following:—IESPUS (Ἰεσπός, *Igualeda*); CERESUS (Κερεσός, *S. Columba de Ceralto*); ANABIS (Ἀνάβις, *Tarrega*); BACASIS (Βακασίς, *Manresa*, the district round which is still called *Bages*); TELOBIS (Τηλοβίς, *Martorell*); ASCERRIS (Ἀσκερρίς, *Sagarra*); UDURA (Οὔδουρα, *Cardona*); LISSA or LESA (Λῆσα, near *Manresa*); SETELSIS (Σετελσίς ἢ Σελενσίς, *Solsona*); CINNA (Κίννα, near *Guisona*), perhaps the same place as the SCISSUM of Livy (xxi. 60, where the MSS. have Scissis, Stissum, Sisa), and the CISSA of

Polybius (iii. 76: coins, *ap.* Sestini, pp. 132, 163; Num. Goth.). [P. S.]



IA'DERA (Ἰάδερα, Ptol. iii. 16. § 10; Ἰάδαρα, Nicet. p. 348; Iadera, Plin. iii. 26; Iader, Pomp. Mela, ii. 3. § 13; *Peut. Tab.*; Geog. Rav.; on the orthography of the name see Tzchucke, *ad Melam, l. c.* vol. ii. pt. 2. p. 275: *Eth.* Iadertinus, Hirt. *B. A.* 42: *Zara*), the capital of Liburnia in Illyricum. Under Augustus it was made a Roman colony. ("Parens coloniae," *Inscr. ap. Farlati, Illyr. Sacr.*, vol. v. p. 3; comp. Ptol. *l. c.*) Afterwards it bore the name of DIODORA, and paid a tribute of 110 pieces of gold to the Eastern emperors (Const. Porph. *de Adm. Imp.* 30), until it was handed over, in the reign of Basil the Macedonian, to the Slavonic princes. *Zara*, the modern capital of Dalmatia, and well known for the famous siege it stood against the combined French and Venetians, at the beginning of the Fourth Crusade (Gibbon, c. lx.; Wilken, *die Kreuzz.* vol. v. p. 167), stands upon the site of Iadera. Little remains of the ancient city; the sea-gate called *Porta di San Chrysogono* is Roman, but it seems likely that it has been brought from Aenona. The gate is a single arch with a Corinthian pilaster at each side supporting an entablature.

Eckhel (vol. ii. p. 152) doubts the evidence of any coins of Iadera, though some have been attributed to it by other writers on numismatics. (Sir G. Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 78; J. F. Neigebaur, *Die Sudslaven*, pp. 181—191.) [E. B. J.]

IADO'NI, a people in the extreme NW. of Hispania Tarraconensis, mentioned only by Pliny, who places them next to the Arrotrebae. (Plin. iv. 20. s. 34.) [P. S.]

IAETA or IETAE (Ἰεταί, Steph. B.: *Eth.* Ἰεταῖος, Id.; but Diodorus has Ἰαιτῖνος, and this is confirmed by coins, the legend of which is uniformly Ἰαιτινων, Eckhel, vol. i. p. 216: in Latin, Cicero has Ietini, but Pliny Ietenses), a town of the interior of Sicily, in the NW. of the island, not very far from Panormus. It was mentioned by Philistus (*ap.* Steph. B. *s. v.*) as a fortress, and it is called by Thucydides also (if the reading Ἰετάς be admitted, in vii. 2) a fortress of the Siculians (τεῖχος τῶν Σικελῶν), which was taken by Gylippus on his march from Himera through the interior of the island towards Syracuse. It first appears as an independent city in the time of Pyrrhus, and was attacked by that monarch on account of its strong position and the advantages it offered for operations against Panormus; but the inhabitants readily capitulated. (Diod. xxii. 10, p. 498.) In the First Punic War it was occupied by a Carthaginian garrison, but after the fall of Panormus drove out these troops and opened its gates to the Romans. (Id. xxiii. 18, p. 505.) Under the Roman government it appears as a municipal town, but not one of much importance. The Ietini are only noticed in passing by Cicero among the towns whose lands had been utterly ruined by the exactions of Verres; and the Ietenses are enumerated by Pliny among the "populi stipendiarii" of the interior of Sicily. (Cic. *Verr.* iii. 43; Plin. iii. 8. s. 14.) Many MSS. of Cicero read *Letini*, and it is probable that the Λῆτον of Ptolemy (iii. 4. § 15) is only a corruption of the same name.

The position of Iaeta is very obscurely intimated, but it appears from Diodorus that it was not very remote from Panormus, and that its site was one of great natural strength. Silius Italicus also alludes to its elevated situation ("celsus Ietas," xiv. 271). Fazello assures us that there was a mediaeval fortress called *Iato* on the summit of a lofty mountain, about 15 miles from *Palermo*, and 12 N. of Entella, which was destroyed by Frederic II. at the same time with the latter city; and this he supposes, probably enough, to be the site of Iaeta. He says the mountain was still called *Monte di Iato*, though more commonly known as *Monte di S. Cosmano*, from a church on its summit. (Fazell. x. p. 471; Amic. *Lex. Top. Sic.* vol. ii. p. 291.) The spot is not marked on any modern map, and does not appear to have been visited by any recent travellers. The position thus assigned to Iaeta agrees well with the statements of Diodorus, but is wholly irreconcilable with the admission of Ἰετάς into the text of Thucydides (vii. 2): this reading, however, is a mere conjecture (see Arnold's note), and must probably be discarded as untenable. [E. H. B.]

COIN OF IAETA.

JAEZER (Ἰαζήρ, LXX.; Ἰαζήρ and Ἀσώρ, Euseb.), a city of Gilead, assigned to the tribe of Gad by Moses. In Numbers (xxxii. 1), "the land of Jazer" is mentioned as contiguous to "the land of Gilead, and suited to cattle." In Jeremiah (xlviii. 32), "the sea of Jazer" occurs in some versions, as in the English; but Reland (*s. v.* p. 825) justly remarks, that this is not certain, as the passage may be pointed after the word "sea," and "Jazer," as a vocative, commence the following clause. But as "the land of Jazer" is used for the country south of Gilead, so the Dead Sea may be designated "the sea of Jazer." Eusebius (*Onomast. s. v.* Ἀσώρ) places it 8 miles west of Philadelphia or Ammon; and elsewhere (*s. v.* Ἰασήρ), 10 miles west of Philadelphia, and 15 from Esbon (Heshbon). He adds, that a large river takes its rise there, which runs into the Jordan. In a situation nearly corresponding with this, between *Szalt* and *Esbus*, Burckhardt passed some ruins named *Szyr*, where a valley named *Wady Szyr* takes its rise and runs into the Jordan. This is doubtless the modern representative of the ancient Jazer. "In two hours and a half (from *Szalt*) we passed, on our right, the *Wady Szyr*, which has its source near the road, and falls into the Jordan. *Above the source*, on the declivity of the valley, are the ruins called *Szyr*." (*Syria*, p. 364.) It is probably identical with the Γάζωρος of Ptolemy which he reckons among the cities of Palestine on the east of the Jordan (v. 16). [G. W.]

IA'LYSUS (Ἰάλυσος, Ἰάλυσσος, or Ἰήλυσσος: *Eth.* Ἰαλύσσιος), one of the three ancient Doric cities in the island of Rhodes, and one of the six towns constituting the Doric hexapolis. It was situated only six stadia to the south-west of the city of Rhodes, and it would seem that the rise of the latter city was the cause of the decay of Ialysus; for in the time of Strabo (xiv. p. 655) it existed only as a village. Pliny (v. 36) did not consider it as an independent place at all, but imagined that Ialysus was the ancient name of Rhodes. Orychoma, the citadel, was situated above Ialysus, and still existed in the time of Strabo. It is supposed by some that

Orychoma was the same as the fort Achaia, which is said to have been the first settlement of the Heliadae in the island (Diod. Sic. v. 57; Athen. viii. p. 360); at any rate, Achaia was situated in the territory of Ialysus, which bore the name Ialysia. (Comp. Hom. *Il.* ii. 656; Pind. *Ol.* vii. 106; Herod. ii. 182; Thucyd. viii. 44; Ptol. v. 2. § 34; Steph. B. *s. v.*; Scylax, *Peripl.* p. 81; Dionys. Perieg. 504; Ov. *Met.* vii. 365; Pomp. Mela, ii. 7.) The site of ancient Ialysus is still occupied by a village bearing the name *Ialiso*, about which a few ancient remains are found. (Ross, *Reisen auf den Griech. Inseln*, vol. iii. p. 98.) [L. S.]

IAMISSA. [THAMESIS.]

IAMNA, IAMNO. [BALEARES, p. 374, b.]

IAMNIA ('Ιαβνής, LXX.; 'Ιάμνια, 'Ιάμνεια Ἰεμναά), a city of the Philistines, assigned to the tribe of Judah in the LXX. of Joshua xv. 45 (Γέμνα); but omitted in the Hebrew, which only mentions it in 2 *Chron.* xxvi. 6 (JABNEH in the English version), as one of the cities of the Philistines taken and destroyed by king Uzziah. It is celebrated by Philo Judaeus as the place where the first occasion was given to the Jewish revolt under Caligula, and to his impious attempt to profane the temple at Jerusalem. His account is as follows:— In the city of Iamnia, one of the most populous of Judaea, a small Gentile population had established itself among the more numerous Jews, to whom they occasioned no little annoyance by the wanton violation of their cherished customs. An unprincipled government officer, named Capito, who had been sent to Palestine to collect the tribute, anxious to pre-occupy the emperor with accusations against the Jews before their well-grounded complaints of his boundless extortion could reach the capital, ordered an altar of mud to be raised in the town for the deification of the emperor. The Jews, as he had anticipated, indignant at the profanation of the Holy Land, assembled in a body, and demolished the altar. On hearing this, the emperor, incensed already at what had lately occurred in Egypt, resolved to resent this insult by the erection of an equestrian statue of himself in the Holy of Holies. (Philo, *de Legat. ad Caium*, *Op.* vol. ii. p. 573.) With respect to its site, it is assigned by Josephus to that part of the tribe of Judah occupied by the children of Dan (*Ant.* v. 1. § 22); and he reckons it as an inland city. (*Ant.* xiv. 4. § 4, *B. J.* i. 7. § 7.) Thus, likewise, in the 1st book of Maccabees (x. 69, 71), it is spoken of as situated in the plain country; but the author of the 2nd book speaks of the harbour and fleet of the Iamnites, which were fired by Judas Maccabaeus; when the light of the conflagration was seen at Jerusalem, 240 stadia distant. The apparent discrepancy may, however, be reconciled by the notices of the classical geographers, who make frequent mention of this town. Thus Pliny expressly says, "Iamnes duae: altera intus," and places them between Azotus and Joppa (v. 12); and Ptolemy, having mentioned 'Ιαμνιτῶν, "the port of the Iamnites," as a maritime town between Joppa and Azotus, afterwards enumerates Iamnia among the cities of Judaea. From all which it is evident that Iamnia had its Majuma, or naval arsenal, as Gaza, Azotus, and Ascalon also had. (Le Quien, *Oriens Christ.* vol. iii. col. 587, and 622.) The Itinerary of Antoninus places it 36 M. P. from Gaza, and 12 M. P. from Diospolis (or Lydda); and Eusebius (*Onom. s. v.* 'Ιάμνεια) places it between Diospolis and *Azotus*. Its site is still marked by ruins which retain the ancient name *Yebna*, situated on a small eminence on the west side of *Wady Rûbîn*, an hour distant from the sea. (Irby and Mangles, *Travels*, p. 182.) "The ruins of a Roman bridge," which they noticed, spanning the *Nahr-el-Rûbîn* between *Yebna* and the sea, was doubtless built for the purpose of facilitating traffic between the town and its sea-port. [G. W.]

IAMPHORINA, the capital of the Maedi, in Macedonia, which was taken B. C. 211 by Philip, son of Demetrius. (Liv. xxvi. 25.) It is probably represented by *Vraniá* or *Ivorina*, in the upper valley of the *Moráva*. (Leake, *Northern Greece*, vol. iii. p. 473.) [E. B. J.]

IANGACAUCA'NI [MAURETANIA.]

JANUA'RIA ('Ιανουαρία ἄκρα), a promontory on the coast of Cilicia, near Serrepolis, between Mallus and Aegaea. (*Stadiasm.* §§ 149, 150.) It is now called *Karadash*. [L. S.]

IA'PIS ('Ιαπίς), a small stream which formed the boundary between Megaris and the territory of Eleusis. [ATTICA, p. 323, a.]

IA'PODES, IA'PYDES ('Ιάποδες, Strab. iii. p. 207, vii. p. 313; 'Ιάπυδες, Ptol. ii. 16. § 8; Liv. xliii. 5; Virg. *Georg.* iii. 475; Tibull. iv. 1. 108), an Illyrian people to the N. of Dalmatia, and E. of Liburnia, who occupied IAPYDIA (Plin. iii. 19), or the present military frontier of *Croatia*, comprised between the rivers *Kulpa* and *Korana* to the N. and E., and the *Velebich* range to the S.

In the interior, their territory was spread along MONS ALBIUS (*Velika*), which forms the extremity of the great Alpine chain, and rises to a great elevation; on the other side of the mountain they reached towards the Danube, and the confines of Pannonia. They followed the custom of the wild Thracian tribes in tattooing themselves, and were armed in the Keltic fashion, living in their poor country (like the *Morlacchi* of the present day) chiefly on zea and millet. (Strab. vii. p. 315.)

In B. C. 129, the consul C. Sempronius Tuditanus carried on war against this people, at first unsuccessfully, but afterwards gained a victory over them, chiefly by the military skill of his legate, D. Junius Brutus, for which he was allowed to celebrate a triumph at Rome (Appian, *B. C.* i. 19, *Illyr.* 10; Liv. *Epit.* lix.; *Fasti Capit.*) They had a "foedus" with Rome (Cic. *pro Balb.* 14), but were in B. C. 34 finally subdued by Octavianus, after an obstinate defence, in which Metulum, their principal town, was taken (Strab. *l. c.*; Appian, *Illyr. l. c.*).

METULUM (Μετοῦλον), their capital, was situated on the river COLAPIS (*Kulpa*) to the N., on the frontier of Pannonia (Appian, *l. c.*), and has been identified with *Möttling* or *Métlika* on the *Kulpa*. The Antonine Itinerary has the following places on the road from Senia (*Zengg*) to Siscia (*Sissek*):— AVENDONE (comp. *Peut. Tab.*; Abendo, Geog. Rav.; Αὐενδεᾶται, Appian, *Illyr. l. c.*; Οὐένδος, Strab. iv. p. 207, vii. p. 314.); ARUPIUM (Arypium, *Peut. Tab.*; Parupium, Geog. Rav.; 'Αρουπῖνοι, App. *Illyr.* 16., perhaps the same as the 'Αρουκκία of Ptolemy, ii. 16. § 9), now *Ottochatz*. At BIBIUM, which should be read BIVIUM (Wesseling, *ad loc.*), the road divided, taking a direction towards Pannonia, which the Itinerary follows, and also towards Dalmatia, which is given in the Peutinger Table.

Neigebaur (*Die Sudslaven*, pp. 224—235) has identified from a local antiquary the following sites of the Table:

EPIDOTIUM (*Uselle*); AUCUS (*Chauke*); AU-

SANCALIO (*Vissuch*, near *Udbina*); CLUMBETAE (*Grachatz*). [E. B. J.]

IAPY'GIA (Ἰαπυγία), was the name given by the Greeks to the SE. portion of Italy, bordering on the Adriatic Sea, but the term was used with considerable vagueness, being sometimes restricted to the extreme SE. point or peninsula, called also Messapia, and by the Romans Calabria; at other times extended so as to include the whole of what the Romans termed Apulia. Thus Scylax describes the whole coast from Lucania to the promontory of Drion (Mt. Garganus) as comprised in Iapygia, and even includes under that appellation the cities of Metapontum and Heraclea on the gulf of Tarentum, which are usually assigned to Lucania. Hence he states that their coast-line extended for a space of six days and nights' voyage. (Scyl. § 14. p. 5.) Polybius at a later period used the name in an equally extended sense, so as to include the whole of Apulia (iii. 88), as well as the Messapian peninsula; but he elsewhere appears to use the name of Iapygians as equivalent to the Roman term Apulians, and distinguishes them from the Messapians (ii. 24). This is, however, certainly contrary to the usage of earlier Greek writers. Herodotus distinctly applies the term of Iapygia to the peninsula, and calls the Messapians an Iapygian tribe; though he evidently did not *limit* it to this portion of Italy, and must have extended it, at all events, to the land of the Peucetians, if not of the Daunians also. (Herod. iv. 99, vii. 170.) Aristotle also clearly identifies the Iapygians with the Messapians (*Pol.* v. 3), though the limits within which he applies the name of Iapygia (*Ib.* vii. 10) cannot be defined. Indeed, the name of the Iapygian promontory (ἡ ἄκρα ἡ Ἰαπυγία), universally given to the headland which formed the extreme point of the peninsula, sufficiently proves that this was considered to belong to Iapygia. Strabo confines the term of Iapygia to the peninsula, and says that it was called by some Iapygia, by others Messapia or Calabria. (Strab. vi. pp. 281, 282.) Appian and Dionysius Periegetes, on the contrary, follow Polybius in applying the name of Iapygia to the Roman Apulia, and the latter expressly says that the Iapygian tribes extended as far as Hyrium on the N. side of Mt. Garganus. (Appian, *Ann.* 45; Dionys. Per. 379.) Ptolemy, as usual, follows the Roman writers, and adopts the names then in use for the divisions of this part of Italy: hence he ignores altogether the name of Iapygia, which is not found in any Roman writer as a geographical appellation; though the Latin poets, as usual, adopted it from the Greeks. (Virg. *Aen.* xi. 247; Ovid, *Met.* xv. 703.)

We have no clue to the origin or meaning of the name of Iapygians, which was undoubtedly given to the *people* (IAPYGES, Ἰάπυγες) before it was applied to the country which they inhabited. Niebuhr (vol. i. p. 146) considers it as etymologically connected with the Latin *Apulus*, but this is very doubtful. The name appears to have been a general one, including several tribes or nations, among which were the Messapians, Sallentini, and Peucetians: hence Herodotus calls the Messapians, Iapygians (Ἰήπυγες Μεσσάπιοι, vii. 170); and the two names are frequently interchanged. The Greek mythographers, as usual, derived the name from a hero, Iapyx, whom they represented as a son of Lycaon, a descent probably intended to indicate the Pelasgic origin of the Iapygians. (Anton. Liberal. 31; Plin. iii. 11 s. 16.) For a further account of the national affinities of the different tribes in this part of Italy, as well as for a description of its physical geography, see the articles APULIA and CALABRIA. [E. H. B.]

IAPY'GIUM PROMONTO'RIUM (Ἄκρα Ἰαπυγία: *Capo Sta. Maria di Leuca*), a headland which forms the extreme SE. point of Italy, as well as the extremity of the long peninsula or promontory that divides the gulf of Tarentum from the Adriatic sea. It is this long projecting strip of land, commonly termed the *heel* of Italy, and designated by the Romans as Calabria, that was usually termed by the Greeks Iapygia, whence the name of the promontory in question. The latter is well described by Strabo as a rocky point extending far out to sea towards the SE., but inclining a little towards the Lacinian promontory, which rises opposite to it, and together with it encloses the gulf of Tarentum. He states the interval between these two headlands, and consequently the width of the Tarentine gulf, at its entrance, at about 700 stadia (70 G. miles), which slightly exceeds the truth. Pliny calls the same distance 100 M. P. or 800 stadia; but the real distance does not exceed 66 G. miles or 660 stadia. (Strab. vi. pp. 258, 281; Plin. iii. 11. s. 16; Ptol. iii. 1. § 13; Polyb. x. 1.)

The same point was also not unfrequently termed the Salentine promontory (PROMONTORIUM SALENTINUM, Mel. ii. 4. § 8; Ptol. *l. c.*), from the people of that name who inhabited the country immediately adjoining. Sallust applies the same name to the whole of the Calabrian or Messapian peninsula. (Sall. *ap. Serv. ad Aen.* iii. 400.) Its modern name is derived from the ancient church of *Sta. Maria di Leuca*, situated close to the headland, and which has preserved the name of the ancient town and port of Leuca; the latter was situated immediately on the W. of the promontory, and afforded tolerable shelter for vessels. [LEUCA.] Hence we find the Athenian fleet, in B. C. 415, on its way to Sicily, touching at the Iapygian promontory after crossing from Corcyra (Thuc. vi. 30, 44); and there can be no doubt that this was the customary course in proceeding from Greece to Sicily. [E. H. B.]

IA'RDANUS (Ἰάρδανος), a river on the N. coast of Crete, near the banks of which the Cydonians dwelt. (Hom. *Od.* iii. 292.) It is identified with the rapid stream of the *Platanió*, which rises in the White Mountains, and, after flowing between the *Rhizite* villages of *Thériso* and *Láki* or *Lákus*, runs through a valley formed by low hills, and filled with lofty platanes; from which it obtains its name. The river of *Platanió* falls into the sea, nearly opposite the islet of *Hághios Theódhoros*, where there is good anchorage. (Pashley, *Trav.* vol. ii. p. 22; Höck, *Kreta*, vol. i. pp. 23, 384.) [E. B. J.]

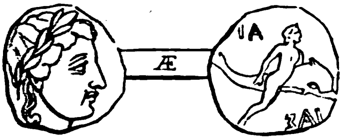
IARDANUS, a river of Elis. [PHEIA.]

JARZETHA. [LIBYA.]

IASI. [IASSII.]

JASO'NIUM (Ἰασόνιον Ptol. vi. 10. § 3), a town in Margiana, at the junction of the Margus (*Murgháb*) and some small streams which flow into it. (Cf. also Ammian. xxiii. 6.) [V.]

JASO'NIUM (τὸ Ἰασόνιον, Ptol. vi. 2. § 4; Strab. xi. p. 526), a mountain in Media, which extended in a NW. direction from the M. Parachoatras (*M. Elwend*), forming the connecting link between the Taurus and the outlying spurs of the Antitaurus. It is placed by Ptolemy between the Orontes and the Coronus. [V.]



JASO'NIUM (Ἰασώνιον), a promontory on the

coast of Pontus, 130 stadia to the north-east of Polemonium; it is the most projecting cape on that coast, and forms the terminating point of the chain of Mount Paryadres. It was believed to have received its name from the fact that Jason had landed there. (Strab. xii. p. 548; Arrian, *Peripl.* p. 17; Anonym. *Peripl.* p. 11; Ptol. v. 6. § 4; Xenoph. *Anab.* vi. 2. § 1, who calls it Ἰασονία ἀκτή.) It still bears the name *Jasoon*, though it is more commonly called Cape *Bona* or *Vona*, from a town of the same name. (Hamilton, *Researches*, vol. i. p. 269.) The *Asineia*, called a Greek acropolis by Scylax (p. 33), is probably no other than the Jasonium. [L. S.]

IASPIS. [CONTESTANIA.]

IASSII (Ἰάσσιοι), mentioned by Ptolemy as a population of Upper Pannonia (ii. 14. § 2). Pliny's form of the name (iii. 25) is *Iasi*. He places them on the *Drave*. [R. G. L.]

IASSUS, or IASUS (Ἴασσος, or Ἴασος: *Eth.* Ἰασσεύς), a town of Caria, situated on a small island close to the north coast of the Iasian bay, which derives its name from Iassus. The town is said to have been founded at an unknown period by Argive colonists; but as they had sustained severe losses in a war with the native Carians, they invited the son of Neleus, who had previously founded Miletus, to come to their assistance. The town appears on that occasion to have received additional settlers. (Polyb. xvi. 12.) The town, which appears to have occupied the whole of the little island, had only ten stadia in circumference; but it nevertheless acquired great wealth (Thucyd. viii. 28), from its fisheries and trade in fish (Strab. xiv. p. 658). After the Sicilian expedition of the Athenians, during the Peloponnesian war, Iassus was attacked by the Lacedaemonians and their allies; it was governed at the time by Amorges, a Persian chief, who had revolted from Darius. It was taken by the Lacedaemonians, who captured Amorges, and delivered him up to Tissaphernes. The town itself was destroyed on that occasion; but must have been rebuilt, for we afterwards find it besieged by the last Philip of Macedonia, who, however, was compelled by the Romans to restore it to Ptolemy of Egypt. (Polyb. xvii. 2; Liv. xxxii. 33; comp. Ptol. v. 2. § 9; Plin. v. 29; *Stad. Mar. Magn.* §§ 274, 275; Hierocl. p. 689.) The mountains in the neighbourhood of Iassus furnished a beautiful kind of marble, of a blood-red and livid white colour, which was used by the ancients for ornamental purposes. (Paul. Silent. *Ecphr. S. Soph.* ii. 213.) Near the town was a sanctuary of Hestias, with a statue of the goddess, which, though standing in the open air, was believed never to be touched by the rain. (Polyb. xvi. 12.) The same story is related, by Strabo, of a temple of Artemis in the same neighbourhood. Iassus, as a celebrated fishing place, is alluded to by Athenaeus (iii. p. 105, xiii. p. 606). The place is still existing, under the name of *Askem* or *Asyn Kalessi*. Chandler (*Travels in As. Min.* p. 226) relates that the island on which the town was built is now united to the mainland by a small isthmus. Part of the city walls still exist, and are of a regular, solid, and handsome structure. In the side of the rock a theatre with many rows of seats still remains, and several inscriptions and coins have been found there. (Comp. Spon and Wheler, *Voyages*, vol. i. p. 361.)

COIN OF IASUS IN CARIA.

A second town of the name of Iassus existed in Cappadocia or Armenia Minor (Ptol. v. 7. § 6), on the north-east of Zoropassus. [L. S.]

IASTAE (Ἰάσται, Ptol. vi. 12), a Scythian tribe, whose position must be sought for in the neighbourhood of the river Iastus. [E. B. J.]

IASTUS (Ἴαστος), a river which, according to Ptolemy (vi. 12), was, like the Polytimetus (*Kohik*), an affluent of the Caspian basin, and should in fact be considered as such in the sense given to a denomination which at that time embraced a vast and complicated hydraulic system. [JAXARTES.] Von Humboldt (*Asie Centrale*, vol. ii. p. 263) has identified it with the *Kizil-Deria*, the dry bed of which may be traced on the barren wastes of *Kizil Koum* in W. Turkistan. It is no unusual circumstance in the sandy steppes of N. Asia for rivers to change their course, or even entirely to disappear. Thus the *Kizil-Deria*, which was known to geographers till the commencement of this century, no longer exists. (Comp. Levchine, *Hordes et Steppes des Kirghiz Kazaks*, p. 456.) [E. B. J.]

IASTUS, a river mentioned by Ptolemy (vi. 14. § 2) as falling into the Caspian between the Jaik and the Oxus. It is only safe to call it one of the numerous rivers of Independent Tartary. [R. G. L.]

IASUS. [OEUM.]

IA'TII (Ἰάτιοι, Ptol. vi. 12. § 4), a people in the northern part of Sogdiana. They are also mentioned by Pliny (vi. 16. s. 18); but nothing certain is known of their real position. [V.]

IATINUM (Ἰάτινον), according to Ptolemy (ii. 8. § 15) the city of the Meldi, a people of Gallia Lugdunensis. It is supposed to be the same place as the Fixtuinum of the Table [FIXTUINUM], and to be represented by the town of *Meaux* on the *Marne*. Walckenaer, who trusts more to the accuracy of the distances in the Table than we safely can do, says that the place Fixtuinum has not in the Table the usual mark which designates a capital town, and that the measures do not carry the position of Fixtuinum as far as *Meaux*, but only as far as *Montbout*. He conjectures that the word Fixtuinum may be a corruption of Fines Iatinorum, and accordingly must be a place on the boundary of the little community of the Meldi. This conjecture might be good, if the name of the people was Iatini, and not Meldi. [G. L.]

JATRIPPA. [LATHRIPPA.]

IATRA or IATRUM (Ἰατρόν), a town in Moesia, situated at the point where the river Iatrus or Iantrus empties itself into the Danube, a few miles to the east of Ad Novas. (Procop. *de Aed.* iv. 7; Theophylact. vii. 2; *Notit. Imp.* 29, where it is erroneously called Latra; Geogr. Rav.. iv. 7, where, as in the *Peut. Tab.*, it bears the name Laton.) [L. S.]

IATRUS (in the *Peut. Tab.* IANTRUS), a river traversing the central part of Moesia. It has its sources in Mount Haemus, and, having in its course to the north received the waters of several tributaries, falls into the Danube close by the town of Iatra. (Plin. iii. 29, where the common reading is Ieterus; Jornand. *Get.* 18; Geogr. Rav. iv. 7.) It is probably the same as the Athrys (Ἄθρυς) mentioned by Herodotus (iv. 49). Its modern name is *Iantra*. [L. S.]

JAXARTES, IAXARTES (ὁ Ἰαξάρτης), the river of Central Asia which now bears the name of *Syr-Daria*, or Yellow River (*Daria* is the generic Tartar name for all rivers, and *Syr*="yellow"), and which, watering the barren steppes of the *Kirghiz-Cossacks*, was known to the civilised world in the most remote ages.

The exploits of Cyrus and Alexander the Great have inscribed its name in history many centuries before our aera. If we are to believe the traditionary statements about Cyrus, the left bank of this river formed the N. limit of the vast dominion of that conqueror, who built a town, deriving its name from the founder [CYRESCHATA], upon its banks; and it was upon the right bank that he lost his life in battle with Tomyris, Queen of the Massagetae. Herodotus (i. 201—216), who is the authority for this statement, was aware of the existence of the *Syr-Daria;* and although the name Jaxartes, which was a denomination adopted by the Greeks and followed by the Romans, does not appear in his history, yet the Araxes of Herodotus can be no other than the actual *Syr*, because there is no other great river in the country of the Massagetae. Much has been written upon the mysterious river called Araxes by Herodotus; M. De Guignes, Fosse, and Gatterer, suppose that it is the same as the Oxus or *Amou-Daria;* M. De la Nauze sees in it the Araxes of Armenia; while Bayer, St. Croix, and Larcher, conceive that under this name the *Volga* is to be understood. The true solution of the enigma seems to be that which has been suggested by D'Anville, that the Araxes is an appellative common to the *Amou*, the Armenian *Aras*, the *Volga*, and the *Syr*. (Comp. ARAXES, p. 188; *Mém. de l'Acad. des Inscr.* vol. xxxvi. pp. 69—85; Heeren, *Asiat. Nations*, vol. ii. p. 19, trans.) From this it may be concluded, that Herodotus had some vague acquaintance with the *Syr*, though he did not know it by name, but confounded it with the Araxes; nor was Aristotle more successful, as the *Syr*, the *Volga*, and the *Don*, have been recognised in the description of the Araxes given in his *Meteorologics* (i. 13. § 15), which, it must be recollected, was written before Alexander's expedition to India. (Comp. Ideler, *Meteorologia Vet. Graecor. et Rom. ad l. c.*, Berol, 1832; St. Croix, *Examen Critique des Hist. d'Alex.* p. 703.)

A century after Herodotus, the physical geography of this river-basin became well known to the Greeks, from the expedition of Alexander to Bactria and Sogdiana. In B. C. 329, Alexander reached the Jaxartes, and, after destroying the seven towns or fortresses upon that river the foundation of which was ascribed to Cyrus, founded a city, bearing his own name, upon its banks, ALEXANDREIA ULTIMA (*Khojend*). (Q. Curt. vii. 6; Arrian, *Anab.* iv. 1. § 3.)

After the Macedonian conquest, the *Syr* is found in all the ancient geographers under the form Jaxartes: while the country to the N. of it bore the general name of Scythia, the tracts between the *Syr* and *Amou* were called Transoxiana. The Jaxartes is not properly a Greek word, it was borrowed by the Greeks from the Barbarians, by whom, as Arrian (*Anab.* iii. 30. § 13) asserts, it was called Orxantes (Ὀρξάντης). Various etymologies of this name have been given (St. Croix, *Examen Critique des Hist. d'Alex.* § 6), but they are too uncertain to be relied on: but whatever be the derivation of the word, certain it is that the *Syr* appears in all ancient writers under the name Jaxartes. Some, indeed, confounded the Jaxartes and the Tanaïs, and that purposely, as will be seen hereafter. A few have confounded it with the Oxus; while all, without exception, were of opinion that both the Jaxartes and the Oxus discharged their waters into the Caspian, and not into the Sea of Aral. It seems, at first sight, curious, to those who know, the true position of these rivers, that the Greeks, in describing their course, and determining the distance of their respective "embouchures," should have taken the Sea of Aral for the Caspian, and that their mistake should have been repeated up to very recent times. Von Humboldt (*Asie Centrale*, vol. ii. pp. 162—297) — to whose extensive inquiry we owe an invaluable digest of the views entertained respecting the geography of the Caspian and Oxus by classical, Arabian, and European writers and travellers, along with the latest investigations of Russian scientific and military men — arrives at these conclusions respecting the ancient junction of the Aral, Oxus, and Caspian:

1st. That, at a period before the historical era, but nearly approaching to those revolutions which preceded it, the great depression of Central Asia — the concavity of *Turan* — may have been one large interior sea, connected on the one hand with the Euxine, on the other hand, by channels more or less broad, with the Icy Sea, and the *Balkash* and its adjoining lakes.

2nd. That, probably in the time of Herodotus, and even so late as the Macedonian invasion, the Aral was merely a bay or gulf of the Caspian, connected with it by a lateral prolongation, into which the Oxus flowed.

3rd. That, by the preponderance of evaporation over the supply of water by the rivers, or by diluvial deposits, or by Plutonic convulsions, the Aral and Caspian were separated, and a bifurcation of the Oxus developed,— one portion of its waters continuing its course to the Caspian, the other terminating in the Aral.

4th. That the continued preponderance of evaporation has caused the channel communicating with the Caspian to dry up.

At present it must be allowed that, in the absence of more data, the existence of this great Aralo-Caspian basin within the "historic period," must be a moot point; though the geological appearances prove by the equable distribution of the same peculiar organic remains, that the tract between the Aral and the Caspian was once the bed of an united and continuous sea, and that the Caspian of the present day is the small residue of the once mighty Aralo-Caspian Sea.

Strabo (xi. pp. 507—517) was acquainted with the true position of this river, and has exposed the errors committed by the historians of Alexander (p. 508), who confounded the mountains of the Paropamisus — or Paropanisus, as all the good MSS. of Ptolemy read (*Asie Centrale*, vol. i. pp. 114—118) — with the Caucasus, and the Jaxartes with the Tanaïs. All this was imagined with a view of exalting the glory of Alexander, so that the great conqueror might be supposed, after subjugating Asia, to have arrived at the *Don* and the Caucasus, the scene of the legend where Hercules unbound the chains of the fire-bringing Titan.

The Jaxartes, according to Strabo (p. 510), took its rise in the mountains of India, and he determines it as the frontier between Sogdiana and the nomad Scy-

thians (pp. 514, 517), the principal tribes of which were the Sacae, Dahae, and Massagetae, and adds (p. 518) that its "embouchure" was, according to Patrocles, 80 parasangs from the mouth of the Oxus. Pliny (vi. 18) says that the Scythians called it "Silis," probably a form of the name *Syr*, which it now bears, and that Alexander and his soldiers thought that it was the Tanaïs. It has been conjectured that the Alani, in whose language the word *tan* (*Tan-aïs*, Dan, Don) signified a river, may have brought this appellative first to the E., and then to the W. of the Aralo-Caspian basin, in their migrations, and thus have contributed to confirm an error so flattering to the vanity of the Macedonian conquerors. (*Asie Centrale*, vol. ii. pp. 254, 291; comp, Schafarik, *Slav. Alt.* vol. i. p. 500.) Pomponius Mela (iii. 5. § 6) merely states that it watered the vast countries of Scythia and Sogdiana, and discharged itself into that E. portion of the Caspian which was called Scythicus Sinus.

Arrian, in recounting the capture of Cyropolis (*Anab.* iv. 3. § 4), has mentioned the curious fact, that the Macedonian army entered the town by the dried-up bed of the river; these desiccations are not rare in the sandy steppes of Central Asia, — as for instance, in the sudden drying up of one of the arms of the Jaxartes, known under the name of *Tanghi-Daria*, the account of which was first brought to Europe in 1820. (Comp. *Journ. Geog. Soc.* vol. xiv. pp. 333—335.)

Ptolemy (vi. 12. § 1) has fixed mathematically the sources, as well as the "embouchure," of the Jaxartes. According to him the river rises in lat. 43° and long. 125°, in the mountain district of the COMEDI (ἡ ὀρεινὴ Κωμηδῶν, § 3: *Muz-Tágh*), and throws itself into the Caspian in lat. 48° and long. 97°, carrying with it the waters of many affluents, the principal of which are called, the one BASCATIS (Βασκατίς, § 3), and the other DEMUS (Δῆμος, § 3). He describes it as watering three countries, that of the "Sacae," "Sogdiana," and "Scythia intra Imaum." In the first of these, upon its right bank, were found the COMARI (Κόμαροι) and CARATAE (Καράται, vi. 13. § 3); in the second, on the left bank, the ANIESES (Ἀνιέσεις) and DREPSIANI (Δρεψιανοί), who extended to the Oxus, the TACHORI (Τάχοροι), and IATII (Ἰάτιοι, vi. 12. § 4); in Scythia, on the N. bank of the *Syr*, lived the JAXARTAE (Ἰαξάρται), a numerous people (vi. 14. § 10), and near the "embouchure," the ARIACAE (Ἀριάκαι, vi. 14. § 13). Ammianus Marcellinus (xxiii. 6. § 59), describing Central Asia, in the upper course of the Jaxartes which falls into the Caspian, speaks of two rivers, the ARAXATES and DYMAS (probably the Demus of Ptolemy), "qui per juga vallesque praecipites in campestrem planitiem decurrentes Oxiam nomine paludem efficiunt longe lateque diffusam." This is the first intimation, though very vague, as to the formation of the *Sea of Aral*, and requires a more detailed examination. [OXIA PALUS.]

The obscure Geographer of Ravenna, who lived, as it is believed, about the 7th century A. D., mentions the river Jaxartes in describing Hyrcania.

Those who wish to study the accounts given by mediaeval and modern travellers, will find much valuable information in the "Dissertation on the River Jaxartes" annexed to Levchine, *Hordes et Steppes des Kirghiz-Kasaks*, Paris, 1840. This same writer (pp. 53—70) has described the course of the *Syr-Daria*, which has its source in the mountains of *Kachkar-Davan*, a branch of the range called by the Chinese the "Mountains of Heaven," and, taking a NW. course through the sandy steppes of *Kizil-Koum* and *Kara-Koum*, unites its waters with those of the *Sea of Aral*, on its E. shores, at the gulf of *Kamechlou-Bachi*. [E. B. J.]

JAXAMATAE (Ἰαξαμάται, Ἰαξαμᾶται, Ἰξομάται, Ixomatae, Amm. Marc. xxii. 8. § 31; Exomatae, Val. Flacc. *Argonaut.* vi. 144, 569) a people who first appear in history during the reign of Satyrus III., king of Bosporus, who waged war with Tirgatao, their queen. (Polyaen. viii. 55.) The ancients attribute them to the Sarmatian stock. (Scymn. *Fr.* p. 140; Anon. *Peripl. Eux.* p. 2.) Pomponius Mela (i. 19. § 17) states that they were distinguished by the peculiarity of the women being as tried warriors as the men. Ptolemy (v. 9) has placed them between the *Don* and *Volga*, which agrees well with the position assigned to them by the authors mentioned above. In the second century of our era they disappear from history. Schafarik (*Slav. Alt.* vol. i. p. 340), who considers the Sarmatians to belong to the Median stock, connects them with the Median word "mat" = "people," as in the termination Sauromatae; but it is more probable that the Sarmatians were Slavonians. [E. B. J.]

JA'ZYGES, IA'ZYGES (Ἰάζυγες, Steph. B. Iazyx), a people belonging to the Sarmatian stock, whose original settlements were on the Palus Maeotis. (Ptol. iii. 5. § 19; Strab. vii. p. 306; Arrian, *Anab.* 1, 3; Amm. Marc. xxii. 8. § 31.) They were among the barbarian tribes armed by Mithridates (Appian, *Mithr.* 69); during the banishment of Ovid they were found on the Danube, and in Bessarabia and Wallachia (*Ep. ex Pont.* i. 2, 79, iv. 7, 9, *Trist.* ii. 19. 1.) In A. D. 50, either induced by the rich pastures of Hungary, or forced onwards from other causes, they no longer appear in their ancient seats, but in the plains between the Lower Theiss and the mountains of Transylvania, from which they had driven out the Dacians. (Tac. *Ann.* xii. 29; Plin. iv. 12.) This migration, probably, did not extend to the whole of the tribe, as is implied in the surname "Metanastae;" henceforward history speaks of the IAZYGES METANASTAE (Ἰάζυγες οἱ Μετανάσται), who were the Sarmatians with whom the Romans so frequently came in collision. (Comp. Gibbon, c. xviii.) In the second century of our era, Ptolemy (iii. 7) assigns the Danube, the Theiss, and the Carpathians as the limits of this warlike tribe, and enumerates the following towns as belonging to them: — USCENUM (Οὔσκενον); BORMANUM or GORMANUM (Βόρμανον, *al.* Γόρμανον); ABIETA or ABINTA (Ἀβίητα, *al.* Ἄβιντα); TRISSUM (Τρισσόν); CANDANUM (Κάνδανον); PARCA (Πάρκα); PESSIUM (Πέσσιον); and PARTISCUM (Πάρτισκον). These towns were, it would seem, constructed not by the Iazyges themselves, who lived in tents and waggons, but by the former Slave inhabitants of Hungary; and this supposition is confirmed by the fact that the names are partly Keltic and partly Slavish. Mannert and Reichard (Forbiger, vol. iii. p. 1111) have guessed at the modern representatives of these places, but Schafarik (*Slav. Alt.* vol. i. p. 514) is of opinion that no conclusion can be safely drawn except as to the identity of *Pesth* with Pessium, and of *Potisije* with Partiscum.

The Iazyges lived on good terms with their neighbours on the W., the German Quadi (Tac. *Hist.* iii. 5), with whom they united for the purpose of subju-

gating the native Slaves and resisting the power of Rome. A portion of their territory was taken from them by Decebalus, which, after Trajan's Dacian conquests, was incorporated with the Roman dominions. (Dion Cass. xlviii. 10, 11.) Pannonia and Moesia were constantly exposed to their inroads; but, A.D. 171, they were at length driven from their last holds in the province, and pushed across the Danube, by M. Aurelius. In mid-winter they returned in great numbers, and attempted to cross the frozen stream; the Romans encountered them upon the ice, and inflicted a severe defeat. (Dion Cass. lxxi. 7, 8, 16.) At a later period, as the Roman Empire hastened to its fall, it was constantly exposed to the attacks of these wild hordes, who, beaten one day, appeared the next, plundering and laying waste whatever came in their way. (Amm. Marc. xvii. 12, 13, xxix. 6.) The word "peace" was unknown to them. (Flor. iv. 12.)

They called themselves "Sarmatae Limigantes," and were divided into two classes of freemen and slaves, "Sarmatae Liberi," "Sarmatae Servi." Ammianus Marcellinus (xvii. 13. § 1) calls the subject class "Limigantes" (a word which has been falsely explained by "Limitanei"), and St. Jerome (*Chron.*) says that the ruling Sarmatians had the title "Arcagarantes." By a careful comparison of the accounts given by Dion Cassius, Ammianus, Jerome, and the writer of the Life of Constantine, it may be clearly made out that the Sarmatian Iazyges, besides subjugating the Getae in Dacia and on the Lower Danube, had, by force of arms, enslaved a people distinct from the Getae, and living on the Theiss and at the foot of the Carpathians. Although the nations around them were called, both the ruling and the subject race, Sarmatians, yet the free Sarmatians were entirely distinct from the servile population in language, customs, and mode of life. The Iazyges, wild, bold riders, scoured over the plains of the Danube and Theiss valleys on their unbroken horses, while their only dwellings were the waggons drawn by oxen in which they carried their wives and children. The subject Sarmatians, on the other hand, had wooden houses and villages, such as those enumerated by Ptolemy (*l. c.*); they fought more on foot than on horseback, and were daring seamen, all of which peculiarities were eminently characteristic of the ancient Slaves. (Schafarik, vol. i. p. 250.)

The Slaves often rose against their masters, who sought an alliance against them among the Victofali and Quadi. (Ammian. *l. c.*; Euseb. *Vit. Constant.* iv. 6.) The history of this obscure and remarkable warfare (A. D. 334) is given by Gibbon (c. xviii.; comp. Le Beau, *Bas Empire*, vol. i. p. 337; Manso, *Leben Constantins*, p. 195). In A. D. 357—359 a new war broke out, in which Constantius made a successful campaign, and received the title "Sarmaticus." (Gibbon, c. xix.; Le Beau, vol. ii. pp. 245—273.) In A. D. 471 two of their leaders, Benga and Babaï, were defeated before Singidunum (*Belgrade*) by Theodoric the Ostrogoth. (Jornand. *de Reb. Get.* 55; comp. Gibbon, c. xxxix.; Le Beau, vol. vii. p. 44.) The hordes of the Huns, Gepidae, and Goths broke the power of this wild people, whose descendants, however, concealed themselves in the desert districts of the Theiss till the arrival of the Magyars.

Another branch of the Sarmatian Iazyges were settled behind the Carpathians in *Podlachia*, and were known in history at the end of the 10th century of our era; it is probable that they were among the northern tribes vanquished by Hermanric in A. D. 332—350, and that they were the same people as those mentioned by Jornandes (*de Reb. Get.* 3) under the corrupt form INAUNXES.

There is a monograph on this subject by Hennig (*Comment. de Rebus Iazygum S. Iazvingorum*, Regiomont, 1812); a full and clear account of the fortunes of these peoples will be found in the German translation of the very able work of Schafarik, the historian of the Slavish races.

In 1799 a golden dish was found with an inscription in Greek characters, now in the imperial cabinet of antiquities at Vienna, which has been referred to the Iazyges. (Von Hammer, *Osman. Gesch.* vol. iii. p. 726.) [E. B. J.]

IBAN (*Ἴβαν*, Cedren. vol. ii. p. 774), a city which Cedrenus (*l. c.*) describes as the metropolis of Vasbouragan (*μητρόπολις δὲ αὕτη τοῦ Βασπαρακάν*).

The name survives in the modern *Ván*. St. Martin, the historian of Armenia (*Mém. sur l'Armenie*, vol. i. p. 117), says that, according to native traditions, *Ván* is a very ancient city, the foundation of which was attributed to Semiramis. Ruined in course of time, it was rebuilt by a king called Van, who lived a short time before the expedition of Alexander the Great, and who gave it his name; but, having again fallen into decay, it was restored by Vagh-Arshag (Valarsases), brother to Arsases, and first king of Armenia of the race of the Arsasidae. In the middle of the 4th century after Christ it was captured by Sapor II. (Ritter, *Erdkunde*, vol. ix. pp. 787, 981; *London Geog. Journal*, vol. viii. p. 66.) [ARTEMITA BUANA.] [E. B. J.]

IBER. [IBERUS.]

IBE'RA, a city of Hispania Citerior, mentioned only by Livy, who gives no explicit account of its site, further than that it was near the Iberus (*Ebro*), whence it took its name; but, from the connection of the narrative, we may safely infer that it was not far from the sea. At the time referred to, namely, in the Second Punic War, it was the wealthiest city in those parts. (Liv. xxiii. 28.) The manner in which Livy mentions it seems also to warrant the conclusion that it was still well known under Augustus. Two coins are extant, one with the epigraph MUN. HIBERA JULIA on the one side, and ILERCAVONIA on the other; and the other with the head of Tiberius on the obverse, and on the reverse the epigraph M. H. J. ILERCAVONIA; whence it appears to have been made a municipium by Julius, or by Augustus in his honour, and to have been situated in the territory of the ILERCAONES. The addition DERT. on the latter of these coins led Harduin to identify the place with Dertosa, the site of which, however, on the left bank of the river, does not agree with the probable position of Ibera. Florez supposes the allusion to be to a treaty between Ibera and Dertosa. The ships with spread sails on both coins, indicate its maritime site, which modern geographers seek on the S. side of the delta of the *Ebro*, at *S. Carlos de la Rapita*, near *Amposta*. Its decay is easily accounted for by its lying out of the great high road, amidst the malaria of the river-delta, and in a position where its port would be choked by the alluvial deposits of the *Ebro*. It seems probable that the port is now represented by the *Salinas*, or lagoon, called *Puerto de los Alfaques*, which signifies *Port of the Jaws*, i. e. of the river. (Plin. iii. 3. s. 4; Harduin, *ad loc.*; Marca, *Hisp.* ii. 8; Florez, *Med. de Esp.* vol. ii. p. 453; Sestini,

p. 160; Rasche, *Lex. Num. s. v.*; Eckhel, vol. i. pp. 50, 51; Ukert, vol. ii. pt. 1. pp. 416, 417; Ford, *Handbook of Spain*, p. 210.) [P. S.]

IBE'RIA (ἡ Ἰβηρία), the extensive tract of country which lies between the Euxine and Caspian seas, to the S. of the great chain of the Caucasus, and which, bounded on the W. by Colchis, on the E. by Albania, and the S. by Armenia, is watered by the river Cyrus (*Kúr*). (Strab. xi. p. 499, comp. i. pp. 45, 69; Pomp. Mel. iii. 5. § 6; Plin. vi. 11; Ptol. v. 11.) From these limits, it will be seen that the Iberia of the ancients corresponds very nearly with modern *Georgia*, or *Grusia*, as it is called by the Russians. Strabo (p. 500) describes it as being hemmed in by mountains, over which there were only four passes known. One of these crossed the MOSCHICHI MONTES, which separated Iberia from Colchis, by the Colchian fortress SARAPANA (*Scharapani*), and is the modern road from *Mingrelia* into *Georgia* over *Suram*. Another, on the N., rises from the country of the Nomades in a steep ascent of three days' journey (along the valley of the *Terek* or *Tergl*); after which the road passes through the defile of the river ARAGUS, a journey of four days, where the pass is closed at the lower end by an impregnable wall. This, no doubt, is the pass of the celebrated Caucasian Gates [CAUCASIAE PORTAE], described by Pliny (vi. 12) as a prodigious work of nature, formed by abrupt precipices, and having the interval closed by gates with iron bars. Beneath ran a river which emitted a strong smell ("Subter medias (fores), amne diri odoris fluente," Plin. *l. c.*). It is identified with the great central road leading from the W. of Georgia by the pass of *Dáriyel*, so named from a fortress situated on a rock washed by the river *Terek*, and called by the Georgians *Shevis Kari*, or the Gate of Shevi. The third pass was from Albania, which at its commencement was cut through the rock, but afterwards went through a marsh formed by the river which descended from the Caucasus, and is the same as the strong defile now called *Derbend* or "narrow pass," from the chief city of *Dághestán*, which is at the extremity of the great arm which branches out from the Caucasus, and, by its position on a steep and almost inaccessible ridge, overhanging the Caspian sea, at once commands the coast-road and the Albanian Gates. The fourth pass, by which Pompeius and Canidius entered Iberia, led up from Armenia, and is referred to the high road from *Erzrum*, through *Kars*, to the N. [ARAGUS.]

The surface of the country is greatly diversified with mountains, hills, plains, and valleys; the best portion of this rich province is the basin of the *Kúr*, with the valleys of the *Aragavi*, *Alazan*, and other tributary streams. Strabo (p. 499) speaks of the numerous cities of Iberia, with their houses having tiled roofs, as well as some architectural pretensions. Besides this, they had market-places and other public buildings.

The people of the IBERES or IBERI (Ἴβηρες, Steph. B. *s. v.*) were somewhat more civilised than their neighbours in Colchis. According to Strabo (p. 500), they were divided into four castes:—

(1.) The royal horde, from which the chiefs, both in peace and war, were taken. (2.) The priests, who acted also as arbitrators in their quarrels with the neighbouring tribes. (3.) Soldiers and husbandmen. (4.) The mass of the population, who were slaves to the king. The form of government was patriarchal. The people of the plain were peaceful, and cultivated the soil; while their dress was the same as that of the Armenians and Medes. The mountaineers were more warlike, and resembled the Scythians and Sarmatians. As, during the time of Herodotus (iii. 9), Colchis was the N. limit of the Persian empire, the Iberians were probably, in name, subjects of that monarchy. Along with the other tribes between the Caspian and the Euxine, they acknowledged the supremacy of Mithridates. The Romans became acquainted with them in the campaigns of Lucullus and Pompeius. In B. C. 65, the latter general commenced his march northwards in pursuit of Mithridates, and had to fight against the Iberians, whom he compelled to sue for peace. (Plut. *Pomp.* 34.) A. D. 35, when Tiberius set up Tiridates as a claimant to the Parthian throne, he induced the Iberian princes, Mithridates and his brother Pharasmanes, to invade Armenia; which they did, and subdued the country. (Tac. *Ann.* vi. 33—36; comp. *Dict. of Biog.* PHARASMANES.) In A. D. 115, when Armenia became a Roman province under Trajan, the king of the Iberians made a form of submitting himself to the emperor. (Eutrop. viii. 3; comp. Dion Cass. lxix. 15; Spartian. *Hadrian.* 17.)

Under the reign of Constantine the Iberians were converted by a captive woman to Christianity, which has been preserved there, though mixed with superstition, down to the present times. One of the original sources for this story, which will be found in Neander (*Allgemein Gesch. der Christl. Relig.* vol. iii. pp. 234—236; comp. Milman, *Hist. of Christianity*, vol. ii. p. 480), is Rufinus (x. 10), from whom the Greek church historians (Socrat. i. 20; Sozom. ii. 7; Theod. i. 24; Mos. Choren. ii. 83) have borrowed it. In A. D. 365—378, by the ignominious treaty of Jovian, the Romans renounced the sovereignty and alliance of Armenia and Iberia. Sapor, after subjugating Armenia, marched against Sauromaces, who was king of Iberia by the permission of the emperors, and, after expelling him, reduced Iberia to the state of a Persian province. (Amm. Marc. xxvii. 12; Gibbon, c. xxv; Le Beau, *Bas Empire*, vol. iii. p. 357.)

During the wars between the Roman emperors and the Sassanian princes, the IBERIAN GATES had come into the possession of a prince of the Huns, who offered this important pass to Anastasius; but when the emperor built Darus, with the object of keeping the Persians in check, Cobades, or Kobâd, seized upon the defiles of the Caucasus, and fortified them, though less as a precaution against the Romans than against the Huns and other northern barbarians. (Procop. *B. P.* i. 10; Gibbon, c. xl.; Le Beau, vol. vi., pp. 269, 442, vol. vii. p. 398.) For a curious history of this pass, and its identification with the fabled wall of Gog and Magog, see Humboldt, *Asie Centrale*, vol. ii. pp. 93—104; Eichwald, *Peripl. des Casp. Meeres*, vol. i. pp. 128—132. On the decline of the Persian power, the Iberian frontier was the scene of the operations of the emperors Maurice and Heraclius. Iberia is now a province of Russia.

The Georgians, who do not belong to the Indo-European family of nations, are the same race as the ancient Iberians. By the Armenian writers they are still called *Virk*, a name of perhaps the same original as Ἴβηρες. They call themselves *Kartli*, and derive their origin, according to their national traditions, from an eponymous ancestor, *Kartlos*. Like the Armenians, with whom however, there is

no affinity either in language or descent, they have an old version of the Bible into their language. The structure of this language has been studied by Adelung (*Mithridat.* vol. i. pp. 430, foll.) and other modern philologers, among whom may be mentioned Brosset, the author of several learned memoirs on the Georgian grammar and language: Klaproth, also, has given a long vocabulary of it, in his *Asia Polyglotta.*

Armenian writers have supplied historical memoirs to Georgia, though it has not been entirely wanting in domestic chronicles. These curious records, which have much the style and appearance of the half-legendary monkish histories of other countries, are supposed to be founded on substantial truth. One of the most important works on Georgian history is the memorials of the celebrated Orpelian family, which have been published by St. Martin, with a translation. Some account of these, along with a short sketch of the History of the Georgians and their literature, will be found in Prichard (*Physical Hist. of Mankind*, vol. iv. pp. 261—276). Dubois de Montpéreux (*Voyage autour du Caucase*, vol. ii. pp. 8—169) has given an outline of the history of Georgia, from native sources; and the maps in the magnificent Atlas that accompanies his work will be found of great service. [E. B. J.]

IBE'RIA INDIAE ('Ιβηρία, *Peripl. M. E.* p. 24, ed. Hudson), a district placed by the author of the Periplus between Larica and the Scythians. It was doubtless peopled by some of the Scythian tribes, who gradually made their descent to the S. and SE. part of *Scinde*, and founded the Indo-Scythic empire, on the overthrow of the Greek kings of Bactria, about B. C. 136. The name would seem to imply that the population who occupied this district had come from the Caucasus. [V.]

IBE'RICUM MARE. [HISPANUM MARE.]

IBE'RES, IBE'RI, IBE'RIA. [HISPANIA.]

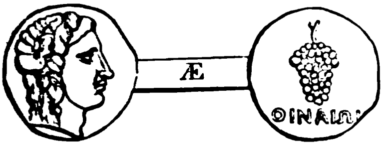
IBERINGAE ('Ιβερίγγαι, Ptol. vii. 2. § 18), a people placed by Ptolemy between the Bepyrrhus Mons (*Naraka Mts.?*) and the Montes Damassi, in India extra Gangem, near the *Brahmaputra.* [V.]

IBE'RUS ('Ιβηρ, gen. -ηρος, and 'Ιβηρος; in MSS. often Hiberus: *Ebro*), one of the chief rivers of Spain, the basin of which includes the NE. portion of the peninsula, between the great mountain chains of the Pyrenees and Idubeda. [HISPANIA.] It rises in the mountains of the Cantabri, not far from the middle of the chain, near the city of Juliobriga (the source lies 12 miles W. of *Reyñosa*), and, flowing with a nearly uniform direction to the SE., after a course of 450 M. P. (340 miles), falls into the Mediterranean, in 40° 42′ N. lat., and 0° 50′ E. long., forming a considerable delta at its mouth. It was navigable for 260 M. P. from the town of VARIA (*Varea*, in *Burgos*). Its chief tributaries were:—on the left, the SICORIS (*Segre*) and the GALLICUS (*Gallego*), and on the right the SALO (*Xalon*). It was long the boundary of the two Spains [HISPANIA], whence perhaps arose the error of Appian (*Hisp.* 6), who makes it divide the peninsula into two *equal* parts. There are some other errors not worthy of notice. The origin of the name is disputed. Dismissing derivations from the Phoenician, the question seems to depend very much on whether the Iberians derived their name from the river, as was the belief of the ancient writers, or whether the river took its name from the people, as W. von Humboldt contends. If the former was the case, and if Niebuhr's view is correct, that the population of NE. Spain was originally Celtic [HISPANIA], a natural etymology is at once found in the Celtic *aber*, i. e. *water.* (Polyb. ii. 13, iii. 34, 40, et alib.; Scyl. p. 1; Strab. iii. pp. 156, et seq.; Steph. B. *s. v.*; Mela, ii. 6. § 5; Caes. *B. C.* i. 60; Liv. xxi. 5, 19, 22, &c.; Plin. iii. 3. s. 4, iv. 20. s. 34; Lucan. iv. 23; Cato, *Orig. VII. ap.* Nonius, *s. v. Pisculentus.*) [P. S.]

IBETTES. [SAMOS.]

IBES, a town in the SE. of Hispania Citerior, mentioned by Livy (xxviii. 21, where the MSS. vary in the reading), is perhaps the modern *Ibi*, NE. of *Valencia.* (Coins, *ap.* Sestini, p. 156; Laborde, *Itin.* vol. i. p. 293.) [P. S.]

IBIO'NES, VIBIO'NES ('Ιβιώνες, *al.* Οὐιβιώνες, Ptol. iii. 5. § 23), a Slavonian people of Sarmatia Europaea, whom Schafarik (*Slav. Alt.* vol. i. p. 213) looks for in the neighbourhood of a river *Iva-Iviza-Ivinka*, of which there are several in Russia deriving their name from "iwa" = "Salix Alba," or the common white willow. [E. B. J.]



IBLIODURUM, in Gallia Belgica, is placed by the Antonine Itin. on the road between Virodunum (*Verdun*) and Divodurum (*Metz*). The termination (*durum*) implies that it is on a stream. The whole distance in the Itin. between *Verdun* and *Metz* is 23 Gallic leagues, or 34½ M. P., which is less than even the direct distance between *Verdun* and *Metz.* There is, therefore, an error in the numbers in the Itin. somewhere between Virodunum and Divodurum, which D'Anville corrects in his usual way. The site of Ibliodurum is supposed to be on the *Iron*, at a place about two leagues above its junction with the *Orne*, a branch of the *Mosel*, and on the line of an old road. [G. L.]

ICA'RIA. [ATTICA, p. 328, b.]

ICA'RIUM MARE. [ICARUS; AEGAEUM MARE.]

I'CARUS, I'CARIA ('Ικαρος, 'Ικαρία: *Nikaria*), an island of the Aegean, to the west of Samos, according to Strabo (x. p. 480, xiv. 639), 80 stadia from Cape Ampelos, while Pliny (v. 23) makes the distance 35 miles. The island is in reality a continuation of the range of hills traversing Samos from east to west, whence it is long and narrow, and extends from NE. to SW. Its length, according to Pliny, is 17 miles, and its circumference, according to Strabo, 300 stadia. The island, which gave its name to the whole of the surrounding sea (*Icarium Mare* or *Pelagus*), derived its own name, according to tradition, from Icarus, the son of Daedalus, who was believed to have fallen into the sea near this island. (Ov. *Met.* viii. 195, foll.) The cape forming the easternmost point of the island was called *Drepanum* or *Dracanum* (Strab. xiv. pp. 637, 639; Hom. *Hymn.* xxxiv. 1; Diod. Sic. iii. 66; Plin. iv. 23; Steph. B. *s. v.* Δράκονον), and near it was a small town of the same name. Further west, on the north coast, was the small town of ISTI ('Ιστοι), with a tolerably good roadstead; to the south of this was another little place, called OENOE (Οἰνόη, Strab. *l. c.*; Athen. i. p. 30.) According to some traditions, Dionysus was born on Cape Draconum (Theocrit. *Idyll.* xxvi. 33), and Artemis had a temple near Isti, called Tauropolion. The island had received its first colonists from Miletus (Strab. xiv. p. 635); but in the time of Strabo it belonged to the Samians: it had then but few inhabitants, and was mainly used by the Samians as pasture land for their flocks. (Strab. x. pp. 488, xiv. p. 639; Scylax, pp. 22; Aeschyl. *Pers.* 887; Thucyd. iii. 92, viii.

99; Ptol. v. 2. § 30; P. Mela, ii. 7.) Modern writers derive the name of Icaria from the Ionic word *κάρα*, a pasture (Hesych. *s. v.* Κάρ), according to which it would mean "the pasture land." In earlier times it is said to have been called Doliche (Plin. *l. c.*; Callim. *Hymn. in Dian.* 187), Macris (Plin. *l. c.*; Eustath. *ad Dionys. Per.* 530; Liv. xxvii. 13), and Ichthyoessa (Plin. *l. c.*). Respecting the present condition of the island, see Tournefort, *Voyage du Levant*, ii. lett. 9. p. 94; and Ross, *Reisen auf den Griech. Inseln*, vol. ii. p. 164, fol. [L. S.]

COIN OF OENOE OR OENAE, IN ICARUS.

ICARUSA, a river the embouchure of which is on the E. coast of the Euxine, mentioned only by Pliny (vi. 5). Icarusa answers to the *Ukrash* river; and the town and river of Hieros is doubtless the HIEROS PORTUS (*ἱερὸς λιμήν*) of Arrian (*Peripl.* p. 19), which has been identified with *Sunjuk-kala*. (Rennell, *Compar. Geog.* vol. ii. p. 328.) [E. B. J.]

ICAUNUS or ICAUNA (*Yonne*), in Gallia, a river which is a branch of the Sequana (*Seine*). Autesiodurum or Autessiodurum (*Auxerre*) is on the *Yonne*. The name Icaunus is only known from inscriptions. D'Anville (*Notice, &c., s. v.* Icauna) states, on the authority of the Abbé le Beuf, that there was found on a stone on the modern wall of *Auxerre* the inscription DEAE ICAVNI. He supposes that Icauni ought to be Icauniae, but without any good reason. He also adds that the name Icauna appears in a writing of the fifth century. According to Ukert (*Gallien*, p. 145), who also cites Le Beuf, the inscription is "Deabus Icauni." It is said that in the ninth century *Auxerre* was named Icauna, Hionna, Junia. (Millin, *Voyage*, i. p. 167, cited by Ukert, *Gallien*, p. 474.) Icauna is as likely to be the Roman form of the original Celtic name as Icaunus. [G. L.]

ICENI, in Britain. Tacitus is the only author who gives us the exact form *Iceni*. He mentions them twice.

First, they are defeated by the propraetor P. Ostorius, who, after fortifying the valleys of the Autona (Aufona) and Sabrina, reduces the Iceni, and then marches against the Cangi, a population sufficiently distant from Norfolk or Suffolk (the area of the Iceni) to be near the Irish Sea. (*Ann.* xii. 31, 32.) The difficulties that attend the geography of the campaign of Ostorius have been indicated in the article CAMULODUNUM. It is not from this passage that we fix the Iceni.

The second notice gives us the acconnt of the great rebellion under Boadicea, wife of Prasutagus. From this we infer that Camulodunum was not far from the Icenian area, and that the Trinobantes were a neighbouring population. Perhaps we are justified in carrying the Iceni as far south as the frontiers of Essex and Herts. (*Ann.* xiv. 31—37.)

The real reason, however, for fixing the Iceni lies in the assumption that they are the same as the Simeni of Ptolemy, whose town was Venta (*Norwich* or *Caistor*); an assumption that is quite reasonable, since the Venta of Ptolemy's Simeni is mentioned in the Itinerary as the Venta Icenorum, and in contradistinction to the Venta Belgarum (*Winchester*). [R. G. L.]

ICH (Ἴχ), a river of Central Asia which only occurs in Menander of Byzantium (*Hist. Legat. Barbarorum ad Romanos*, p. 300, ed. Niebuhr, Bonn, 1829), surnamed the "Protector," and contemporary with the emperor Maurice, in the 6th century after Christ, to whom comparative geography is indebted for much curious information about the basin of the Caspian and the rivers which discharge themselves into it on the E. Niebuhr has recognised, in the passage from Menander to which reference has been made, the first intimation of the knowledge of the existence of the lake of Aral, after the very vague intimations of some among the authors of the classical period. Von Humboldt (*Asie Centrale*, vol. ii. p. 186) has identified the Ich with the *Emba* or *Djem*, which rises in the mountain range *Airuruk*, not far from the sources of the *Or*, and, after traversing the sandy steppes of *Saghiz* and *Bakoumbaï*, falls into the Caspian at its NE. corner. (Comp. Levchine, *Hordes et Steppes des Kirghis-Kazaks*, p. 65.) [E. B. J.]

ICHANA (Ἴχανα: *Eth.* Ἰχανῖνος), a city of Sicily, which, according to Stephanus of Byzantium, held out for a long time against the arms of the Syracusans, whence he derives its name (from the verb *ἰχανάω*, a form equivalent to *ἰσχανάω*), but gives us no indication of the period to which this statement refers. The Ichanenses, however, are mentioned by Pliny (iii. 8. s. 14) among the stipendiary towns of the interior of Sicily, though, according to Sillig (*ad loc.*), the true reading is Ipanenses. [HIPPANA.] In either case we have no clue to the position of the city, and it is a mere random conjecture of Cluverius to give the name of Ichana to the ruins of a city which still remain at a place called *Vindicari*, a few miles N. of Cape Pachynum, and which were identified (with still less probability) by Fazello as those of Imachara. [IMACHARA.] [E. H. B.]

ICHNAE (Ἴχναι), a city of Bottiaea, in Macedonia, which Herodotus (vii. 123) couples with Pella. (Leake, *Travels in Northern Greece*, vol. iv. p. 582.) [E. B. J.]

ICHNAE (Ἴχναι, Isid. Char. p. 3; Steph. B. *s. v.*), a small fortified town, or castle, in Mesopotamia, situated on the river Bilecha, which itself flowed into the Euphrates. It is said by Isidorus to have owed its origin to the Macedonians. There can be little doubt that it is the same place as is called in Dion Cassius Ἴχνιαι (xl. 12), and in Plutarch Ἴσχναι (*Crass.* c. 25). According to the former writer, it was the place where Crassus overcame Talymenus: according to the latter, that to which the younger Crassus was persuaded to fly when wounded. Its exact position cannot be determined; but it is clear that it was not far distant from the important town of Carrhae. [V.]

ICCIUS PORTUS. [ITIUS.]

ICHTHYO'PHAGI (Ἰχθυοφάγοι, Diod. iii. 15, seq.; Herod. iii. 19; Pausan. i. 33. § 4; Plin. vi. 30. s. 32), were one of the numerous tribes dwelling on each shore of the Red Sea which derived their appellation from the principal article of their diet. *Fish-eaters*, however, were not confined to this region: in the present day, savages, whose only diet is fish cast ashore and cooked in the sun, are found on the coasts of New Holland. The Aethiopian Ichthyophagi, who appear to have been the most numerous of these

tribes, dwelt to the southward of the Regio Troglodytica. Of these, and other more inland races, concerning whose strange forms and modes of life curious tales are related by the Greek and Roman writers, a further account is given under TROGLODYTES. [W. B. D.]

ICHTHYOPHAGORUM SINUS (Ἰχθυοφάγων κόλπος, Ptol. vi. 7. § 13), was a deeply embayed portion of the Persian gulf, in lat. 25° N., situated between the headlands of the Sun and Asabé on the eastern coast of Arabia. The inhabitants of its borders were of the same mixed race — Aethiopo-Arabian — with the Ichthyophagi of Aethiopia. The bay was studded with islands, of which the principal were Aradus, Tylos, and Tharos. [W. B. D.]

ICHTHYS. [ELIS, p. 817, b.]

ICIANI, in Britain, mentioned in the Itinerary as a station on the road from London to *Carlisle* (Luguballium). As more than one of the stations on each side (Villa Faustini, Cambοricum, &c.) are uncertain, the locality of the Iciani is uncertain also. *Chesterford*, *Ickburg*, and *Thetford* are suggested in the *Monumenta Britannica.* [R. G. L.]

ICIDMAGUS, a town of Gallia Lugdunensis, is placed by the Table on a road between Revessium (supposed to be *St. Paulian*) and Aquae Segete. [AQUAE SEGETE.] Icidmagus is probably *Issengeaux* or *Issinhaux*, which is SSW. of *St. Etienne*, on the west side of the mountains, and in the basin of the *Upper Loire*. The resemblance of name is the chief reason for fixing on this site. [G. L.]

ICO'NII (Ἰκόνιοι), an Alpine people of Gallia. Strabo (p. 185) says: "Above the Cavares are the Vocontii, and Tricorii, and Iconii, and Peduli;" and again (p. 203): "Next to the Vocontii are the Siconii, and Tricorii, and after them the Medali (Medulli), who inhabit the highest summits." These Iconii and Siconii are evidently the same people, and the *sigma* in the name Siconii seems to be merely a repetition of the final *sigma* of the word Οὐκοντιούς. The Peduli of the first passage, as some editions have it, is also manifestly the name Medulli. The ascertained position of the Cavares on the east side of the Rhone, between the *Durance* and *Isère*, and that of the Vocontii east of the Cavares, combined with Strabo's remark about the position of the Medulli, show that the Tricorii and the Iconii are between the Vocontii and the Medulli, who were on the High Alps; and this is all that we know. [G. L.]

ICO'NIUM (Ἰκόνιον: *Eth.* Ἰκονιεύς: *Cogni*, *Kunjah*, or *Koniyeh*), was regarded in the time of Xenophon (*Anab.* i. 2. § 19) as the easternmost town of Phrygia, while all later authorities describe it as the principal city of Lycaonia. (Cic. *ad Fam.* iii. 6, 8, xv. 3.) Strabo (xii. p. 568) calls it a πολίχνιον, whence we must infer that it was then still a small place; but he adds that it was well peopled, and was situated in a fertile district of Lycaonia. Pliny (v. 27), however, and the Acts of the Apostles, describe it as a very populous city, inhabited by Greeks and Jews. Hence it would appear that, within a short period, the place had greatly risen in importance. In Pliny's time the territory of Iconium formed a tetrarchy comprising 14 towns, of which Iconium was the capital. On coins belonging to the reign of the emperor Gallienus, the town is called a Roman colony, which was, probably, only an assumed title, as no author speaks of it as a colony. Under the Byzantine emperors it was the metropolis of Lycaonia, and is frequently mentioned (Hierocl. p. 675); but it was wrested from them first by the Saracens, and afterwards by the Turks, who made it the capital of an empire, the sovereigns of which took the title of Sultans of Iconium. Under the Turkish dominion, and during the period of the Crusades, Iconium acquired its greatest celebrity. It is still a large and populous town, and the residence of a pasha. The place contains some architectural remains and inscriptions, but they appear almost all to belong to the Byzantine period. (Comp. Amm. Marc. xiv. 2; Steph. B. *s. v.*; Ptol. v. 6. § 16; Leake, *Asia Minor*, p. 48; Hamilton, *Researches*, vol. ii. p. 205, fol.; Eckhel, vol. iii. p. 31; Sestini, *Geo. Num.* p. 48.) The name Iconium led the ancients to derive it from εἰκών, which gave rise to the fable that the city derived its name from an image of Medusa, brought thither by Perseus (Eustath. *ad Dionys. Per.* 856); hence Stephanus B. maintains that the name ought to be spelt Εἰκόνιον, a form actually adopted by Eustathius and the Byzantine writers, and also found on some coins. [L. S.]

ICORIGIUM. [EGORIGIUM.]

ICOS. [ICUS.]

ICOSITA'NI. [ILICI.]

ICO'SIUM (Ἰκόσιον: *Algier*), a city on the coast of Mauretania Caesariensis, E. of Caesarea, a colony under the Roman empire, and presented by Vespasian with the *jus Latinum.* (*Itin. Ant.* p. 15; Mela, i. 6. § 1; Plin. v. 2. s. 1; Ptol. iv. 2. § 6.) Its site, already well indicated by the numbers of Ptolemy, who places it 30′ W. of the mouth of the Savus, has been identified with certainty by inscriptions discovered by the French. (Pellissier, in the *Exploration Scientifique de l'Algérie*, vol. vi. p. 350.) Many modern geographers, following Mannert, who was misled by a confusion in the numbers of the Itinerary, put this and all the neighbouring places too far west. [Comp. IOL.] [P. S.]

ICTIMU'LI or VICTIMU'LI (Ἰκτούμουλοι, Strab.), a people of Cisalpine Gaul, situated at the foot of the Alps, in the territory of Vercellae. They are mentioned by Strabo (v. p. 218), who speaks of a village of the Ictimuli, where there were gold mines, which he seems to place in the neighbourhood of Vercellae; but the passage is so confused that it would leave us in doubt. Pliny, however, who notices the gold mines of the Victimuli among the most productive in Italy, distinctly places them "in agro Vercellensi." We learn from him that they were at one time worked on so large a scale that a law was passed by the Roman censors prohibiting the employment in them of more than 5000 men at once. (Plin. xxxiii. 4. s. 21.) Their site is not more precisely indicated by either of the above authors, but the Geographer of Ravenna mentions the "civitas, quae dicitur Victimula" as situated "near Eporedia, not far from the foot of the Alps" (Geogr. Rav. iv. 30); and a modern writer has traced the existence of the "Castellum Victimula" during the middle ages, and shown that it must have been situated between *Ivrea* and *Biella* on the banks of the *Elvo*. Traces of the ancient gold mines, which appear to have been worked during the middle ages, may be still observed in the neighbouring mountains. (Durandi, *Alpi Graie e Pennine*, pp. 110—112; Walckenaer, *Géogr. des Gaules*, vol. i. p. 168.) [E. H. B.]

ICTIS, in Britain, mentioned by Diodorus Siculus (v. 22) as an island lying off the coast of the tin districts, and, at low tides, becoming a peninsula, whither the tin was conveyed in waggons. *St. Michael's Mount* is the suggested locality for Ictis

Probably, however, there is a confusion between the Isle of Wight, the Isle of Portland, the Scilly Isles, and the isle just mentioned; since the name is suspiciously like *Vectis*, the physical conditions being different. This view is confirmed by the text of Pliny (iv. 30), who writes, "Timaeus historicus a Britannia introrsus *sex dierum* navigatione abesse dicit insulam *Mictin in qua candidum plumbum provenist*; ad eam Britannos vitilibus navigiis corio circumsutis navigare." [R. G. L.]

ICTODURUM, in Gallia. The Antonine Itin. places Caturiges (*Chorges*) on the road between Eburodunum (*Embrun*) and Vapincum (*Gap*); and the Table adds Ictodurum between Caturigomagus, which is also *Chorges*, and Vapincum. We may infer from the name that Ictodurum is some stream between *Chorges* and *Gap*; and the Table places it half-way. The road distance is more than the direct line. By following the road from either of these places towards the other till we come to the stream, we shall ascertain its position. D'Anville names the small stream the *Vence*; and Walckenaer names the site of Ictodurum, *La Bastide Vieille*. [G. L.]

ICULISMA, a place in Gallia, mentioned by Ausonius (*Ep.* xv. 22) as a retired and lonely spot where his friend Tetradius, to whom he addresses this poetical epistle, was at one time engaged in teaching:—

> "Quondam docendi munere adstrictum gravi
> Iculisma cum te absconderet."

It is assumed to be the place called Civitas Ecolismensium in the Notitia Prov. Gall., which is *Angoulême*, in the French department of *Charente*, on the river *Charente*. [G. L.]

ICUS (Ἶκος: *Eth.* Ἴκιος), one of the group of islands off the coast of Magnesia in Thessaly, lay near Peparethus, and was colonised at the same time by the Cnossians of Crete. (Scymn. Chius, 582; Strab. ix. p. 436; Appian, *B. C.* v. 7.) The fleet of Attalus and the Rhodians sailed past Scyrus to Icus. (Liv. xxxi. 45.) Phanodemus wrote an account of this insignificant island. (Steph. B. *s. v.*) It is now called *Sarakino*. (Leake, *Northern Greece*, vol. iii. p. 312.)

IDA, IDAEUS MONS (ἡ Ἴδη, Ἴδα: *Ida*), a range of mountains of Phrygia, belonging to the system of Mount Taurus. It traverses western Mysia in many branches, whence it was compared by the ancients to the scolopendra or milliped (Strab. xiii. p. 583), its main branch extending from the south-east to the north-west; it is of considerable height, the highest point, called Gargarus or Gargaron, rising about 4650 feet above the level of the sea. The greater part is covered with wood, and contains the sources of innumerable streams and many rivers, whence Homer (*Il.* viii. 47) calls the mountain πολυπίδαξ. In the Homeric poems it is also described as rich in wild beasts. (Comp. Strab. xiii. pp. 602, 604; Hom. *Il.* ii. 824, vi. 283, viii. 170, xi. 153, 196; Athen. xv. 8; Hor. *Od.* iii. 20. 15; Ptol. v. 2. § 13; Plin. v. 32.) The highlands about Zeleia formed the northern extremity of Mount Ida, while Lectum formed its extreme point in the south-west. Two other subordinate ranges, parting from the principal summit, the one at Cape Rhoeteum, the other at Sigeum, may be said to enclose the territory of Troy in a crescent; while another central ridge between the two, separating the valley of the Scamander from that of the Simois, gave to the whole the form of the Greek letter ε. (Demetr. *ap. Strab.* xiii. p. 597.) The principal rivers of which the sources are in Mount Ida, are the Simois, Scamander, Granicus, Aesepus, Rhodius, Caresus, and others. (Hom. *Il.* xii. 20, foll.) The highest peak, Gargarus, affords an extensive view over the Hellespont, Propontis, and the whole surrounding country. Besides Gargarus, three other high peaks of Ida are mentioned: viz. Cotylus, about 3500 feet high, and about 150 stadia above Scepsis; Pytna; and Dicte. (Strab. xiii. p. 472.) Timosthenes (*ap. Steph. B. s. v.* Ἀλεξάνδρεια) and Strabo (xiii. p. 606) mention a mountain belonging to the range of Ida, near Antandrus, which bore the name of Alexandria, where Paris (Alexander) was believed to have pronounced his judgment as to the beauty of the three goddesses. (Comp. Clarke's *Travels*, ii. p. 134; Hunt's Journal in *Walpole's Turkey*, i. p. 120; Cramer's *Asia Minor*, i. 120.) [L. S.]

IDA (Ἴδη, Ptol. iii. 17. § 9; Pomp. Mela, ii. 7. § 12; Plin. iv. 12, xvi. 33; Virg. *Aen.* iii. 105; Solin. ii.; Avien. 676; Prisc. 528), the central and loftiest point of the mountain range which traverses the island of Crete throughout the whole length from W. to E. In the middle of the island, where it is broadest (Strab. x. pp. 472, 475, 478), Mt. Ida lifts its head covered with snow. (Theophrast. *H. P.* iv. 1.) The lofty summits terminate in three peaks, and, like the main chain of which it is the nucleus, the offshoots to the N. slope gradually towards the sea, enclosing fertile plains and valleys, and form by their projections the numerous bays and gulfs with which the coast is indented. Mt. Ida, now called *Psiloriti*, sinks down rapidly towards the SE. into the extensive plain watered by the Lethaeus. This side of the mountain, which looks down upon the plain of *Mesara*, is covered with cypresses (comp. Theophrast. *de Vent.* p. 405; Dion. Perieg. 503; Eustath. *ad. loc.*), pines, and junipers. Mt. Ida was the locality assigned for the legends connected with the history of Zeus, and there was a cavern in its slopes sacred to that deity. (Diod. Sic. v. 70.)

The Cretan Ida, like its Trojan namesake, was connected with the working of iron, and the Idaean Dactyls, the legendary discoverers of metallurgy, are assigned sometimes to the one and sometimes to the other. Wood was essential to the operations of smelting and forging; and the word Ida, an appellative for any wood-covered mountain, was used perhaps, like the German *berg*, at once for a mountain and a mining work. (Kenrick, *Aegypt of Herodotus*, p. 278; Höck, *Kreta*, vol. i. p. 4.) [E. B. J.]

I'DACUS (Ἴδακος), a town of the Thracian Chersonese, mentioned by Thucydides (viii. 104) in his account of the manoeuvres before the battle of Cynossema, and not far from ARRHIANA. Although nothing whatever is known of these places, yet, as the Athenians were sailing in the direction of the Propontis from the Aegaean, it would appear that Idacus was nearest the Aegaean, and Arrhiana further up the Hellespont, towards Sestus and the Propontis. (Arnold, *ad loc.*) [E. B. J.]

IDALIA, IDA'LIUM (Ἰδάλιον: *Eth.* Ἰδαλεύς, Steph. B.; Plin. v. 31), a town in Cyprus, adjoining to which was a forest sacred to Aphrodite; the poets who connect this place with her worship, give no indications of the precise locality. (Theocr. *Id.* xv. 100; Virg. *Aen.* i. 681, 692, x. 51; Catull. *Pel. et Thet.* 96; Propert. ii. 13; Lucan, viii. 17.) Engel (*Kypros*, vol. i. p. 153) identifies it with *Dalin*, de-

scribed by Mariti (*Viaggi*, vol. i. p. 204), situated to the south of Leucosia, at the foot of Mount Olympus. [E. B. J.]

IDIMIUM, a town in Lower Pannonia, on the east of Sirmium, according to the Peut. Tab.; in the Ravenna Geographer (iv. 19) it is called Idominium. Its site must be looked for in the neighbourhood of *Munvicza*. [L. S.]

IDIMUS, a town of uncertain site in Upper Moesia, probably on the *Morawa* in *Servia*. (*It. Ant.* 134; *Tab. Peut.*) [L. S.]

IDISTAVISUS CAMPUS, the famous battle-field where Germanicus, in A. D. 16, defeated Arminius. The name is mentioned only by Tacitus (*Ann.* ii. 16), who describes it as a "campus medius inter Visurgim et colles," and further says of it, that "ut ripae fluminis cedunt aut prominentia montium resistunt, inaequaliter sinuatur. Pone tergum insurgebat silva, editis in altum ramis et pura humo inter arborum truncos." This plain between the river *Weser* and the hills has been the subject of much discussion among the modern historians of Germany, and various places have been at different times pointed out as answering the description of Tacitus' Idistavisus. It was formerly believed that it was the plain near *Vegesack*, below *Bremen*; more recent writers are pretty unanimous in believing that Germanicus went up the river *Weser* to a point beyond the modern town of *Minden*, and crossed it in the neighbourhood of *Hausberge*, whence the battle probably took place between *Hausberge* and *Rinteln*, not far from the Porta Vestphalica. (Ledebur, *Land u. Volk der Bructerer*, p. 288.) As to the name of the place, it used to be believed that it had arisen out of a Roman asking a German what the place was, and the German answering, "It is a wiese" (it is a meadow); but Grimm (*Deutsche Mythol.* p. 372. 2nd edit.) has shown that the plain was probably called *Idisiaviso*, that is, "the maiden's meadow" (from *idisi*, a maiden). [L. S.]

IDO'MENE (Ἰδομένη, Ptol. iii. 13. § 39; Idomenia, *Peut. Tab.*), a town of Macedonia which the Tabular Itinerary places at 12 M. P. from Stena, the pass now called *Demírkapi*, or Iron Gate, on the river *Vardhári*. Sitalces, on his route from Thrace to Macedonia, crossed Mt. Cercine, leaving the Paeones on his right, and the Sinti and Maedi on his left, and descended upon the Axius at Idomene. (Thuc. ii. 98.) It probably stood upon the right bank of the Axius, as it is included by Ptolemy (*l. c.*) in Emathia, and was near Doberus, next to which it is named by Hierocles among the towns of Consular Macedonia, under the Byzantine empire. (Leake, *North. Greece*, vol. iii. p. 444.) [E. B. J.]

IDO'MENE. [ARGOS AMPHILOCHICUM.]

IDRAE (Ἴδραι, Ptol. iii. 5. § 23), a people of Sarmatia Europaea, whose position cannot be made out from the indications given by Ptolemy. (Schafarik, *Slav. Alt.* vol. i. p. 213.) [E. B. J.]

I'DRIAS (Ἰδριάς), according to Stephanus B. (*s. v.*), a town in Caria which had formerly borne the name of Chrysaoris. Herodotus (v. 118) describes the river Marsyas as flowing from a district called Idrias; and it is conjectured that Stratoniceia, founded by Antiochus Soter, was built on the site of the ancient town of Idrias. (Comp. Leake, *Asia Minor*, p. 235; see LAODICEIA.) [L. S.]

IDU'BEDA (Ἰδούβεδα, misspelt by Agathemerus Ἰνδούβαλδα, ii. 9: *Sierra de Oca* and *Sierra de Lorenzo*), a great mountain chain of Hispania, running in a SE. direction from the mountains of the Cantabri to the Mediterranean, almost parallel to the *Ebro*, the basin of which it borders on the W. Strabo makes it also parallel to the Pyrenees, in conformity with his view of the direction of that chain from N. to S. (Strab. iii. p. 161; Ptol. ii. 6. § 21.) Its chief offsets were: — M. CAUNUS, near Bilbilis (Martial, i. 49, iv. 55), the SALTUS MANLIANUS (Liv. xl. 39: probably the *Sierra Molina*), and, above all, M. OROSPEDA, which strikes off from it to the S. long before it reaches the sea, and which ought perhaps rather to be regarded as its principal prolongation than as a mere branch. [P. S.]

IDUMAEA (Ἰδουμαία), the name of the country inhabited by the descendants of Edom (or Esau), being, in fact, only the classical form of that ancient Semitic name. (Joseph. *Ant.* ii. 1. § 1.) It is otherwise called Mount Seir. (*Gen.* xxxii. 3, xxxvi. 8; *Deut.* ii. 5; *Joshua*, xxiv. 4.) It lay between Mount Horeb and the southern border of Canaan (*Deut.* i. 2), extending apparently as far south as the *Gulf of Akaba* (*Deut.* ii. 2—8), as indeed its ports, Ezion-geber, and Eloth, are expressly assigned to the "land of Edom." (2 *Chron.* viii. 17.) This country was inhabited in still more ancient times by the Horims (*Deut.* ii. 12, 22), and derived its more ancient name from their patriarch Seir (*Gen.* xxxvi. 20; comp. xiv. 6), as is properly maintained by Reland, against the fanciful conjecture of Josephus and others. (*Palaestina*, pp. 68, 69.) The Jewish historian extends the name Idumaea so far to the north as to comprehend under it great part of the south of Judaea; as when he says that the tribe of Simeon received as their inheritance that part of Idumaea which borders on Egypt and Arabia. (*Ant.* v. 1. § 22) He elsewhere calls Hebron the first city of Idumaea, i. e. reckoning from the north. (*B. J.* iv. 9. § 7.) From his time the name Idumaea disappears from geographical descriptions, except as an historical appellation of the country that was then called Gebalene, or the southern desert (ἡ κατὰ μεσημβρίαν ἐρῆμος, Euseb. *Onom. s. v.* Αἰλάμ), or Arabia. The historical records of the Idumaeans, properly so called, are very scanty. Saul made war upon them; David subdued the whole country; and Solomon made Ezion-geber a naval station. (1 *Sam.* xiv. 47, 2 *Sam.* viii. 14; 1 *Kings*, xi. 16, ix. 26.) The Edomites, however, recovered their national independence under Joram, king of Judah (2 *Kings*, xiv. 7), and avenged themselves on the Jews in the cruelties which they practised at the capture of Jerusalem by Nebuchadnezzar. (*Psalms*, cxxxvii. 7.) It was probably during the Babylonish captivity that they extended themselves as far north as Hebron, where they were attacked and subdued by Judas Maccabaeus. (1 *Maccab.* v. 65—68; Joseph. *Ant.* xii. 8. § 6.) It was on this account that the whole of the south of Palestine, about Hebron, Gaza, and Eleutheropolis (*Beit Jebrin*), came to be designated Idumaea. (Joseph. *B. J.* iv. 9. § 7, *c. Apion.* ii. 9; S. Jerom. *Comment. in Obad.* ver. 1.) Meanwhile, the ancient seats of the children of Edom had been invaded and occupied by another tribe, the Nabathaeans, the descendants of the Ishmaelite patriarch Nebaioth [NABATHAEI], under which name the country and its capital [PETRA] became famous among Greek and Roman geographers and historians, on which account their description of the district is more appropriately given under that head. St. Jerome's brief but accurate notice of its general features may here suffice: — "Omnis australis regio Idumaeorum de Eleuthero-

poli usque ad Petram et Ailam (haec est possessio Esau) in specubus habitatiunculas habet; et propter nimios calores solis, quia meridiana provincia est, subterraneis tuguriis utitur." (*Comment. in Obad.* vv. 5, 6.) And again, writing of the same country, he says that south of Tekoa "ultra nullus est viculus, ne agrestes quidem casae et furnorum similes, quas Afri appellant mapalia. Tanta est eremi vastitas, quae usque ad Mare Rubrum Persarumque et Aethiopum atque Indorum terminos dilatatur. Et quia humi arido atque arenoso nihil omnino frugum gignitur, cuncta sunt plena pastoribus, ut sterilitatem terrae compenset pecorum multitudine." (*Prolog. ad Amosum.*) [G. W.]

IDUNUM, a town in the extreme south of Pannonia (Ptol. ii. 14. § 3), which, from inscriptions found on the spot, is identified with the modern *Judenburg*. [L. S.]

JEBUS, JEBUSITES. [JERUSALEM.]

JEHOSHAPHAT, VALLEY OF. [JERUSALEM.]

IENA, in Britain, mentioned by Ptolemy (ii. 3. § 2) as an estuary between the outlets of the rivers Abravannus and Deva to the south of the promontory of the Novantae (= *Wigton Bay*). [R. G. L.]

IERABRI'GA. [ARABRICA.]

JERICHO (Ἱεριχώ, Ἱεριχοῦς, Strab.), a strongly fortified city of the Canaanites, miraculously taken by Joshua, who utterly destroyed it, and prohibited it from being rebuilt under pain of an anathema (*Josh.* ii. vi.), which was braved and incurred by Hiel of Bethel, five centuries afterwards, in the reign of Ahab, king of Israel. (1 *Kings*, xvi. 34.) It then became a school of the prophets. (2 *Kings*, ii. 4, 5.) It lay in the border of Benjamin, to which tribe it was assigned (*Josh.* xviii. 12, 21), but was not far from the southern borders of Ephraim (xvi. 1). It is mentioned in the New Testament in connection with the wealthy revenue-farmer Zacchaeus, who resided there, and probably farmed the government dues of its rich and well cultivated plain. Josephus describes it as well situated, and fruitful in palms and balsam. (*Ant.* iv. 8. § 1, *B. J.* i. 6. § 6.) He places the city 60 stadia from the Jordan, 150 from Jerusalem (*B. J.* iv. 8. § 3), the intervening country being a rocky desert. He accounts for the narrow limits of the tribe of Benjamin by the fact that Jericho was included in that tribe, the fertility of which far surpassed the richest soil in other parts of Palestine (§§ 21, 22). Its plain was 70 stadia long by 20 wide, irrigated by the waters of the fountain of Elisha, which possessed almost miraculous properties. (*Ant.* iv. 8. §§ 2, 3.) It was one of the eleven toparchies of Judaea. (*B. J.* iii. 2.) Its palm grove was granted by Antony to Cleopatra (i. 18. § 5), and the subsequent possession of this envied district by Herod the Great, who first farmed the revenues for Cleopatra, and then redeemed them (*Ant.* xiv. 4. §§ 1, 2), probably gave occasion to the proverbial use of his name in Horace (*Ep.* ii. 2. 184): —

> "cessare et ludere et ungi,
> Praeferat Herodis palmetis pinguibus."

It is mentioned by Strabo (xvi. p. 763) and Pliny (v. 14) in connection with its palm-trees and fountains. The former also alludes to the palace and its garden of balsam, the cultivation and collecting of which is more fully described by Pliny (xii. 25).

The palace was built by Herod the Great, as his own residence, and there it was that he died; having first confined in the hippodrome the most illustrious men of the country, with the intention that they should be massacred after his death, that there might be a general mourning throughout the country on that occurrence. (*B. J.* i. 33. § 6.) Josephus further mentions that Jericho was visited by Vespasian shortly before he quitted the country, where he left the tenth legion (*B. J.* iv. 8. § 1, 9. § 1); but he does not mention its destruction by Titus on account of the perfidy of its inhabitants; a fact which is supplied by Eusebius and St. Jerome. They add that a third city had been built in its stead; but that the ruins of both the former were still to be seen (*Onomast. s. v.*) The existing ruins can only be referred to this latest city, which is frequently mentioned in the mediaeval pilgrimages. They stand on the skirts of the mountain country that shuts in the valley of the Jordan on the west, about three hours distant from the river. They are very extensive, but present nothing of interest. The waters of the fountain of Elisha, now *'Ain-es-Sultan*, well answer to the glowing description of Josephus, and still fertilise the soil in its immediate neighbourhood. But the palms, balsam, sugar-canes, and roses, for which this Paradise was formerly celebrated, have all disappeared, and the modern *Riha* consists only of the tents of a Bedouin encampment. [G. W.]

IERNE, is a better form for the ancient name of Ireland than HIBERNIA, IBERNIA, IVERNIA, &c., both as being nearer the present Gaelic name *Eri*, and as being the oldest form which occurs. It is the form found in Aristotle. It is also the form found in the poem attributed to Orpheus on the Argonautic expedition, which, spurious as it is, may nevertheless be as old as the time of Onomacritus (i. e. the reign of the first Darius): —

> — νήσοισιν Ἰέρνισιν ἆσσον ἵκωμαι.
> (Orpheus, 1164, ed. Leipzig, 1764.)

Aristotle (*de Mundo*, c. 3) writes, that in the ocean beyond the Pillars of Hercules "are two islands, called Britannic, very large, Albion and Ierne, beyond the Celtae." In Diodorus Siculus (v. 32) the form is Iris; the island Iris being occupied by Britons, who were cannibals. Strabo (ii. p. 107) makes Ierne the farthest voyage northwards from Celtica. It was too cold to be other than barely habitable, the parts beyond it being absolutely uninhabited. The reported distance from Celtica is 500 stadia. The same writer attributes cannibalism to the Irish; adding, however, that his authority, which was probably the same as that of Diodorus, was insufficient. The form in Pomponius Mela is *Iverna*. In Iverna the luxuriance of the herbage is so great as to cause the cattle who feed on it to burst, unless occasionally taken off. Pliny's form is Hybernia (iv. 30). Solinus, whose form is Hibernia, repeats the statement of Mela as to the pasture, and adds that no snakes are found there. Warlike beyond the rest of her sex, the Hibernian mother, on the birth of a male child, places the first morsel of food in his mouth with the point of a sword (c. 22). Avienus, probably from the similarity of the name to ἱερα, writes: —

> "Ast in duobus in *Sacram*, sic insulam
> Dixere prisci, solibus cursus rata est.
> Haec inter undas multa cespitem jacit
> Eamque late gens Hibernorum colit."
> (*Ora Marit.* 109—113.)

Avienus's authorities were Carthaginian. More im-

portant than these scanty notices, and, indeed, more important than all the notices of Ireland put together, is the text of Ptolemy. In this author the details for Ireland (Ἰούρνια) are fuller, rather than scantier, than those for Great Britain. Yet, as Ireland was never reduced, or even explored by the Romans, his authorities must have been other than Latin. Along with this fact must be taken another, viz., that of the earliest notice of Ireland (Ἰέρνη) being full as early as the earliest of Britain; earlier, if we attribute the Argonautic poem to Onomacritus; earlier, too, if we suppose that Hanno was the authority of Avienus.

If not Roman, the authorities for Ierne must have been Greek, or Phoenician, — Greek from *Marseilles*, Phoenician from either the mother-country or Carthage. The probabilities are in favour of the latter. On the other hand, early as we may make the first voyage from Carthage (viâ Spain) to Ireland, we find no traces of any permanent occupancy, or of any intermixture of blood. The name *Ierne* was native; though it need not necessarily have been taken from the Iernians themselves. It may been Iberian (Spanish) as well. Some of the names in Ptolemy — a large proportion — are still current, e. g. Liboius, Senus, Oboca, Birgus, Eblana, Nagnatae, &c., = *Liffy*, *Shannon*, *Avoca*, *Barrow*, *Dublin*, *Connaught*, &c. Ptolemy gives us chiefly the names of the Irish rivers and promontories, which, although along a sea-board so deeply indented as that of Ireland not always susceptible of accurate identification, are still remarkably true in the general outline. What is of more importance, inasmuch as it shows that his authorities had gone inland, is the fact of seven towns being mentioned: — "The *inland* towns are these, Rhigia, Rhaeba, Laverus, Macolicum, Dunum, another Rhigia, Turnis."

The *populations* are the Vennicnii and Rhobogdii, in *Ulster*; the Nagnatae, in *Connaught*; the Erdini and Erpeditani, between the Nagnatae and Vennicnii; the Uterni and Vodiae, in *Munster*; and the Auteri, Gangani, the Veliborae (or Ellebri), between the Uterni and Nagnatae. This leaves *Leinster* for the Brigantes, Coriondi, Menapii, Cauci, Blanii, Voluntii, and Darnii, the latter of whom may have been in *Ulster*. Besides the inland towns, there was a *Menapia* (πόλις) and an Eblana (πόλις) on the coast.

Tacitus merely states that Agricola meditated the conquest of Ireland, and that the Irish were not very different from the Britons: — "Ingenia, cultusque hominum haud multum a Britannia differunt." (*Agric.* 24.)

It is remarkable that on the eastern coast one British and two German names occur, — Brigantes, Cauci, and Menapii. It is more remarkable that two of these names are more or less associated on the continent. The Chauci lie north of the Menapii in Germany, though not directly. The inference from this is by no means easy. Accident is the last resource to the ethnographical philologist; so that more than one writer has assumed a colonisation. Such a fact is by no means improbable. It is not much more difficult for Germans to have been in Wexford in the second century than it was for Northmen to have been so in the eighth, ninth, and tenth. On the other hand, the root *m-n-p* seems to have been Celtic, and to have been a common, rather than a proper, name; since Pliny gives us the island *Monapia* = *Anglesea*. No opinion is given as to the nature of these coincidences.

Of none of the Irish tribes mentioned by Ptolemy do we meet any separate substantive notice, a notice of their playing any part in history, or a notice of their having come in contact with any other nation. They appear only as details in the list of the populations of Ierne. Neither do the *Ierni* appear collectively in history. They lay beyond the pale of the classical (Roman or Greek) nations, just as did the tribes of Northern Germany and Scandinavia; and we know them only in their geography, not in their history.

But they may have been tribes unmentioned by Ptolemy, which *do* appear in history; or the names of Ptolemy may have been changed. Ptolemy says nothing about any *Scoti*; but Claudian does. He also connects them with Ireland: —

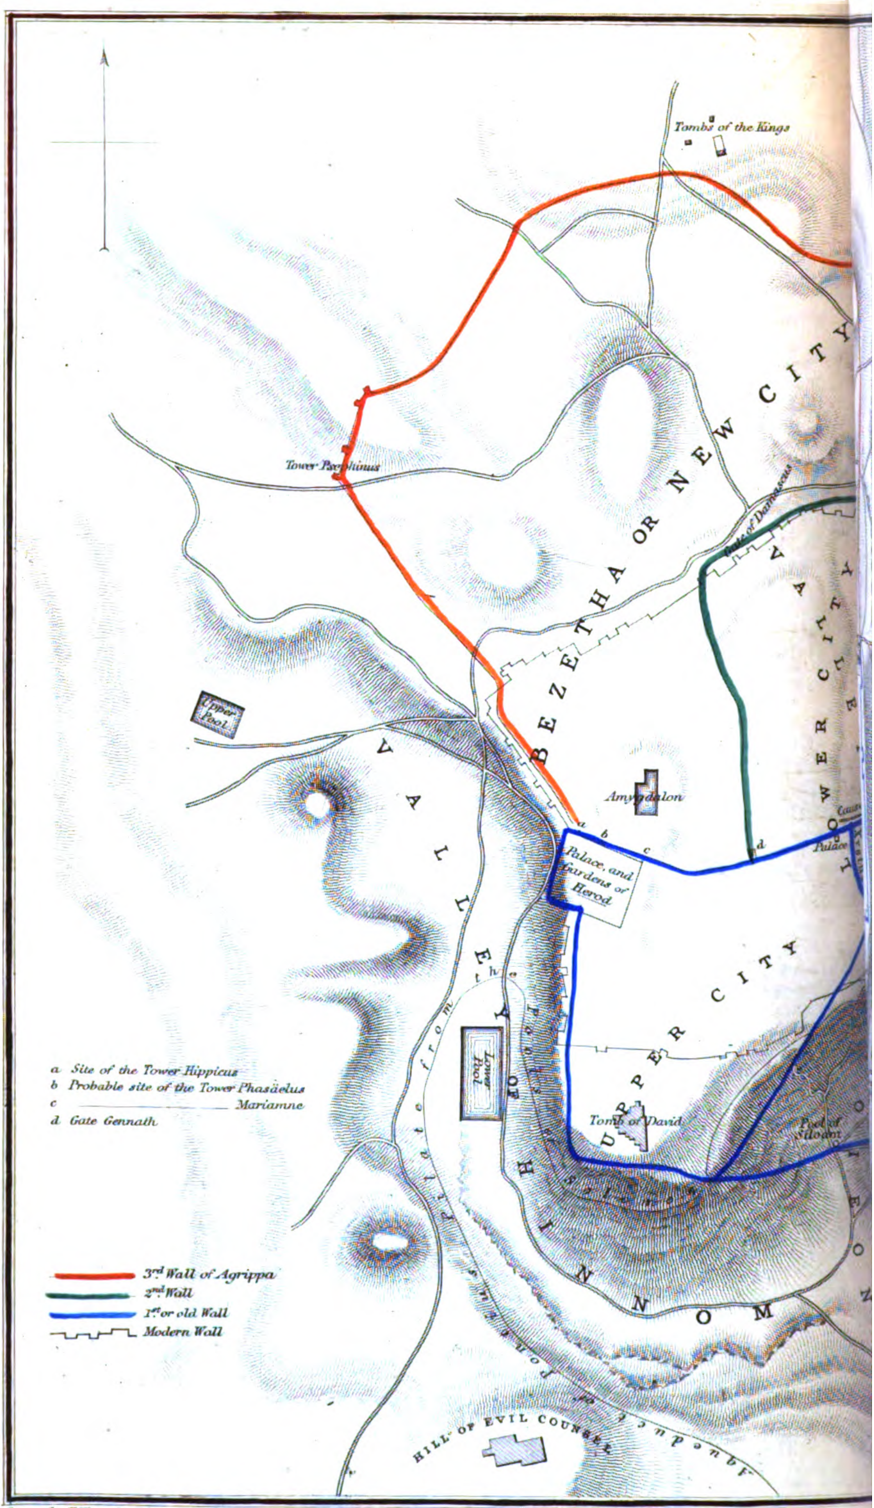
> "maduerunt Saxone fuso
> Orcades; incaluit Pictorum sanguine Thule
> *Scotorum* cumulos flevit glacialis *Ierne*."
> (*De Tert. Consul. Honorii*, 72—74.)

Again: —

> "totum quum Scotus Iernen
> Movit."
> (*In Prim. Consul. Stilich.* ii. 252.)

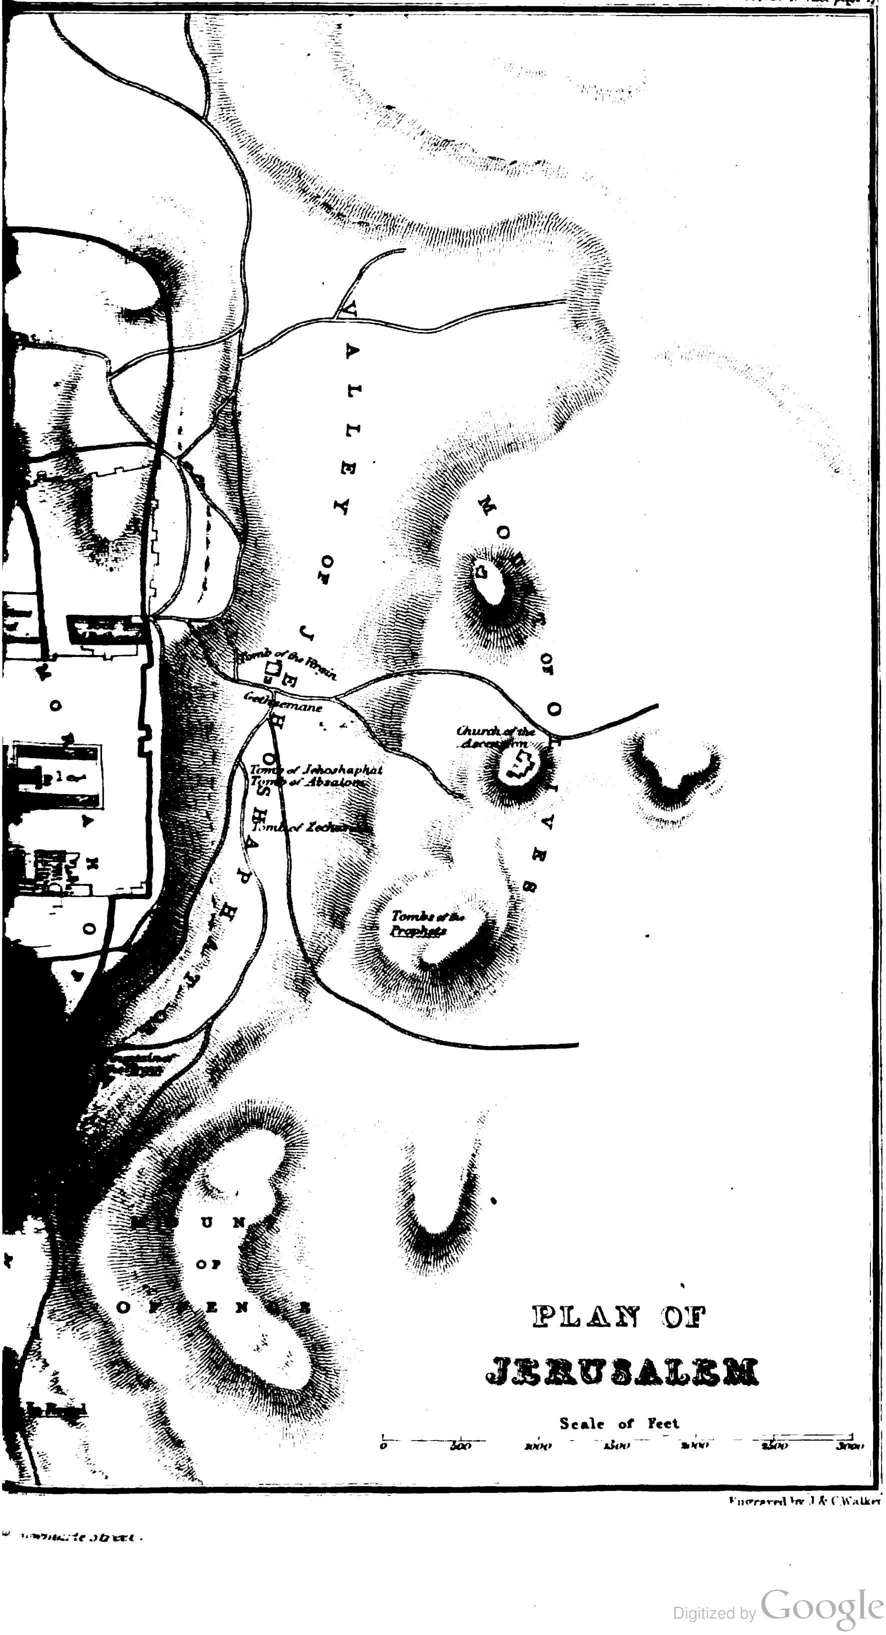
The extent to which the current opinions as to the early history of the Gaels of Scotland confirm the ideas suggested by the text of Claudian is considered under SCOTI. At present it may be said that *Scoti* may easily have been either a generic name for some of the tribes mentioned in detail by Ptolemy, or else a British instead of a Gaelic name. At any rate, the Scoti may easily have been, in the time of Ptolemy, an Irish population.

Two other names suggest a similar question, — Belgae, and Attacotti. The claim of the latter to have been Irish is better than that of the former. The Attacotti occur in more than one Latin writer; the Belgae (Fir-bolgs) in the Irish annals only. [See ATTACOTTI, and BELGAE OF BRITANNIA.]



The ethnology of the ancient Ierne is ascertained by that of modern Ireland. The present population belongs to the Gaelic branch of the Celtic stock; a population which cannot be shown to have been introduced within the historical period, whilst the stock of the time of Ptolemy cannot be shown to have been ejected. Hence, the inference that the population of Ierne consisted of the ancestors of the present Irish, is eminently reasonable, — so reasonable that no objections lie against it. That English and Scandinavian elements have been introduced since, is well known. That Spanish (Iberic) and Phoenician elements may have been introduced in the ante-historical period, is likely; the extent to which it took place being doubtful. The most cautious investigators of Irish archaeology have hesitated to pronounce any existing remains either Phoenician or Iberian. Neither are there any remains referable to pagan Rome. [R. G. L.]

IERNUS, in Ireland, mentioned by Ptolemy (ii. 2. § 4) as the most southern of two rivers (the Durus being the other) lying between the Senus (*Shannon*) and the Southern Promontory (*Mizen Head*) = either the *Kenmare* or the *Bantry Bay River*. [R. G. L.]



JERUSALEM, the ancient capital of Palaestine, and the seat of the Hebrew kingdom.

I. NAMES.

The name by which this ancient capital is most commonly known was not its original appellation, but apparently compounded of two earlier names.

... Street.

attached, perhaps, to two neighbouring sites afterwards incorporated into one. The sacred narrative, by implication, and Josephus, explicitly, recognise from the first a distinction between the Upper and the Lower city, the memorial of which is supposed to be retained in the dual form of the Hebrew name יְרוּשָׁלַיִם. The learned are divided in opinion as to whether the Salem of Melchizedek is identical with Jerusalem. St. Jerome, who cites Josephus and a host of Christian authorities in favour of their identity, himself maintaining the opposite conclusion, says that extensive ruins of the palace of Melchizedek were shown in his day in the neighbourhood of Scythopolis, and makes the Salem of that patriarch identical with "Shalem, a city of Shechem" (*Gen.* xxxiii. 18); the same, no doubt, with the Salim near to Aenon (*St. John*, iii. 23), where a village of the same name still exists in the mountains east of *Nablûs*. Certain, however, it is that Jerusalem is intended by this name in Psalm lxxvi. 2, and the almost universal agreement of Jews and Christians in its identity with the city of Melchizedek is still further confirmed by the religious character which seems to have attached to its governor at the time of the coming in of the children of Israel, when we find it under the rule of Adonizedek, the exact equivalent to Melchizedek ("righteous Lord"). Regarding, then, the latter half of the name as representing the ancient Salem, we have to inquire into the origin of the former half, concerning which there is considerable diversity of opinion. Josephus has been understood to derive it from the Greek word Ἱερον, prefixed to Salem. In the obscure passage (*Ant.* vii. 3. § 2) he is so understood by St. Jerome; but Isaac Vossius defends him from this imputation, which certainly would not raise his character as an etymologist. Lightfoot, after the Rabbies, and followed by Whiston, regards the former half of the name as an abbreviation of the latter part of the title Jehovah-*jireh*, which this place seems to have received on occasion of Abraham offering up his son on one of the mountains of "the land of Moriah." (*Gen.* xxii. 8, 14.) Reland, followed by Raumer, adopts the root יָרַשׁ, *yarash*, and supposes the name to be compounded of יְרוּשׁ and שָׁלֵם, which would give a very good sense, "hereditas," or "possessio hereditaria pacis." Lastly, Dr. Wells, followed by Dr. Lee, regards the former part of the compound name as a modification of the name Jebus, יְבוּס, one of the earlier names of the city, from which its Canaanitish inhabitants were designated Jebusites. Dr. Wells imagines that the ב was changed into ר, for the sake of euphony; Dr. Lee, for euphemy, as Jebusalem would mean "the trampling down of peace"—a name of ill omen. Of these various interpretations, it may be said that Lightfoot's appears to have the highest authority; but that Reland's is otherwise the most satisfactory. Its other Scripture name, *Sion*, is merely an extension of the name of one particular quarter of the city to the whole. There is a further question among critics as to whether by the city Cadytis, mentioned in Herodotus, Jerusalem is intended. It is twice alluded to by the historian: once as a city of the Syrians of Palaestine, not much smaller than Sardis (iii. 5); again, as having been taken by Pharaoh-Necho, king of Egypt, after his victory in Magdolum (ii. 159). The main objections urged against the identity of Cadytis and Jerusalem in these passages, are, that in the former passage Herodotus is apparently confining his survey to the sea-border of Palaestine, and that the fact narrated in the second is not alluded to in the sacred narrative. But, on the other hand, there is no mention in sacred or profane history of any other city, maritime or inland, that could at all answer to the description of Cadytis in respect to its size: and the capture of Jerusalem by Necho after the battle of Megiddo,—which is evidently corrupted by Herodotus into Magdolum, the name of a city on the frontier of Egypt towards Palaestine, with which he was more familiar,—though not expressly mentioned, is implied in Holy Scripture; for the deposition and deportation of Jehoahaz, and the substitution and subjugation of Jehoiakim, could not have been effected, unless Necho had held possession of the capital. (2 *Kings*, xxiv. 29—35; comp. 2 *Chron.* xxxvi. 3.) It may, then, safely be concluded that Cadytis is Jerusalem; and it is remarkable that this earliest form of its classical name is nearly equivalent to the modern name by which alone it is now known to its native inhabitants. *El-Khuds* signifies "*the Holy* (city)," and this title appears to have been attached to it as early as the period of Isaiah (xlviii. 2, lii. 1), and is of frequent recurrence after the Captivity. (*Nehem.* xi. 1, 18; *St. Matth.* iv. 5, xxvii. 53.) Its pagan name Colonia Aelia Capitolina, like those imposed on many other ancient cities in Palaestine, never took any hold on the native population of the country, nor, indeed, on the classical historians or ecclesiastical writers. It probably existed only in state papers, and on coins, many of which are preserved to this day. (See the end of the article.)

II. General Site.

Jerusalem was situated in the heart of the mountain district which commences at the south of the great plain of Esdraelon and is continued throughout the whole of Samaria and Judaea quite to the southern extremity of the Promised Land. It is almost equidistant from the Mediterranean and from the river Jordan, being about thirty miles from each, and situated at an elevation of 2000 feet above the level of the Mediterranean. Its site is well defined by its circumjacent valleys.

Valleys.—(1) In the north-west quarter of the city is a shallow depression, occupied by an ancient pool. This is the head of the *Valley of Hinnom*, which from this point takes a southern course, confining the city on the western side, until it makes a sharp angle to the east, and forms the southern boundary of the city to its south-east quarter, where it is met by another considerable valley from the north, which must next be described.

(2) At the distance of somewhat less than 1500 yards from the "upper pool" at the head of the Valley of Hinnom, are the "Tombs of the Kings," situated at the head of the *Valley of Jehoshaphat*, which runs at first in an eastern course at some distance north of the modern city, until, turning sharply to the south, it skirts the eastern side of the town, and meets the Valley of Hinnom at the south-east angle, as already described, from whence they run off together in a southerly direction to the Dead Sea. Through this valley the brook Kedron is supposed once to have run; and, although no water has been known to flow through the valley within the annals of history, it is unquestionably entitled to the alias of the *Valley of the Kedron*.

The space between the basin at the head of the Valley of Hinnom and the head of the Valley of

Jehoshaphat is occupied by a high rocky ridge or swell of land, which attains its highest elevation a little without the north-west angle of the present town. The city, then, occupied the termination of this broad swell of land, being isolated, except on the north, by the two great valleys already described, towards which the ground declined rapidly from all parts of the city. This rocky promontory is, however, broken by one or two subordinate valleys, and the declivity is not uniform.

(3) There is, for example, another valley, very inferior in magnitude to those which encircle the city, but of great importance in a topographical view, as being the main geographical feature mentioned by Josephus in his description of the city. This valley of the Tyropoeon (cheese-makers) meets the Valley of Hinnom at the Pool of Siloam, very near its junction with the Valley of Jehoshaphat, and can be distinctly traced through the city, along the west side of the Temple enclosure, to the Damascus gate, where it opens into a small plain. The level of this valley, running as it does through the midst of a city that has undergone such constant vicissitudes and such repeated destruction, has of course been greatly raised by the desolations of so many generations, but is so marked a feature in modern as in former times, that it is singular it was not at once recognised in the attempt to re-distribute the ancient Jerusalem from the descriptions of Josephus. It would be out of place to enter into the arguments for this and other identifications in the topography of ancient Jerusalem; the conclusions only can be stated, and the various hypotheses must be sought in the works referred to at the end of the article.

Hills. — Ancient Jerusalem, according to Josephus, occupied "two eminences, which fronted each other, and were divided by an intervening ravine, at the brink of which the closely-built houses terminated." This ravine is the Tyropoeon, already referred to, and this division of the city, which the historian observes from the earliest period, is of the utmost importance in the topography of Jerusalem. The two hills and the intermediate valley are more minutely described as follows:—

(1) *The Upper City.*—"Of these eminences, that which had upon it the Upper City was by much the loftier, and in its length the straiter. This eminence, then, for its strength, used to be called the stronghold by king David, ... but by us it was called the Upper Agora.

(2) *The Lower City.*—"The other eminence, which was called Acra, and which supported the Lower City, was in shape gibbous (ἀμφίκυρτος).

(3) *The Temple Mount.*—"Opposite to this latter was a third eminence, which was naturally lower than Acra, and was once separated from it by another broad ravine: but afterwards, in the times when the Asmonaeans reigned, they filled up the ravine, wishing to join the city to the Temple; and having levelled the summit of Acra, they made it lower, so that in this quarter also the Temple might be seen rising above other objects.

"But the ravine called the Tyropoeon (cheese-makers), which we mentioned as dividing the eminences of the Upper City and the Lower, reaches to Siloam; for so we call the spring, both sweet and abundant. But on their outer sides the two eminences of the city were hemmed in within deep ravines, and, by reason of the precipices on either side, there was no approach to them from any quarter." (*B. Jud.* v. 4, 5.)

This, then, was the disposition of the ancient city, on which a few remarks must be made before we proceed to the new city. The two-fold division, which, as has been said, is recognised by Josephus from the first, is implied also in the sacred narrative, not only in the account of its capture by the Israelites, and subsequently by David, but in all such passages as mention the city of David or Mount Sion as distinct from Salem and Jerusalem. (Comp. *Josh.* xv. 63; *Judges*, i. 8, 21; 2 *Sam.* v. 6—9; *Psalms*, lxxvi. 2, &c.) The account given by Josephus of the taking of the city is this: that "the Israelites, having besieged it, after a time took the Lower City, but the Upper City was hard to be taken by reason of the strength of its walls, and the nature of its position" (*Ant.* v. 2. § 2); and, subsequently, that "David laid siege to Jerusalem, and took the Lower City by assault, while the citadel still held out" (vii. 3. § 1). Having at length got possession of the Upper City also, "he encircled the two within one wall, so as to form one body" (§ 2). This could only be effected by taking in the intercjacent valley, which is apparently the part called Millo.

(4) But when in process of time the city overflowed its old boundaries, the hill *Bezetha*, or *New City*, was added to the ancient hills, as is thus described by Josephus:—"The city, being overabundant in population, began gradually to creep beyond its old walls, and the people joining to the city the region which lay to the north of the temple and close to the hill (of Acra), advanced considerably, so that even a fourth eminence was surrounded with habitations, viz. that which is called Bezetha, situated opposite to the Antonia, and divided from it by a deep ditch; for the ground had been cut through on purpose, that the foundations of the Antonia might not, by joining the eminence, be easy of approach, and of inferior height."

The Antonia, it is necessary here to add, in anticipation of a more detailed description, was a castle situated at the north-western angle of the outer enclosure of the Temple, occupying a precipitous rock 50 cubits high.

It is an interesting fact, and a convenient one to facilitate a description of the city, that the several parts of the ancient city are precisely coincident with the distinct quarters of modern Jerusalem: for that, 1st, the Armenian and Jewish quarters, with the remainder of Mount Sion, now excluded from the walls, composed the Upper City; 2dly, the Mahommedan quarter corresponds exactly with the Lower City; 3dly, that the Haram-es-Sherif, or Noble Sanctuary, of the Moslems, occupies the Temple Mount; and 4thly, that the Haret (quarter) Bab-el-Hitta is the declivity of the hill Bezetha, which attains its greatest elevation to the north of the modern city wall, but was entirely included within the wall of Agrippa, together with a considerable space to the north and west of the Lower City, including all the Christian quarter.

The several parts of the ancient city were enclosed by distinct walls, of which Josephus gives a minute description, which must be noticed in detail, as furnishing the fullest account we have of the city as it existed during the Roman period; a description which, as far as it relates to the Old city, will serve for the elucidation of the ante-Babylonish capital,—as it is clear, from the account of the rebuilding of the walls by Nehemiah (iii., vi.), that the new fortifications followed the course of the ancient *enceinte*.

III. Walls.

1. *Upper City and Old Wall.*—"Of the three walls, the old one was difficult to be taken, both on account of the ravines, and of the eminence above them on which it was situated. But, in addition to the advantage of the position, it was also strongly built, as David and Solomon, and the kings after them, were very zealous about the work. Beginning towards the north, from the tower called Hippicus, and passing through the place called Xystus, then joining the council chamber, it was united to the western cloister of the Temple. In the other direction, towards the west, commencing from the same place, and extending through a place called Bethso to the gate of the Essenes, and then turning towards the south above the fountain Siloam, thence again bending toward the east to the Pool of Solomon, and running through a place which they called Ophla, it was joined to the eastern cloister of the Temple." To understand this description, it is only necessary to remark, that the walls are described, not by the direction in which they run, but by the quarter which they face; i. e. the wall "turning towards the south" is the south wall, and so with the others; so that the Hippic Tower evidently lay at the NW. angle of the Upper City; and, as the position of this tower is of the first importance in the description of the city walls, it is a fortunate circumstance that we are able to fix its exact site.

(1) *The Hippic Tower* is mentioned in connection with two neighbouring towers on the same north wall, all built by Herod the Great, and connected with his splendid palace that occupied the north-west angle of the Upper City. "These towers," says the historian, "surpassed all in the world in extent, beauty, and strength, and were dedicated to the memory of his brother, his friend, and his best loved wife.

"*The Hippicus*, named from his friend, was a square of 25 cubits, and thirty high, entirely solid. Above the part which was solid, and constructed with massive stones, was a reservoir for the rain-water, 20 cubits in depth; and above this a house of two stories, 25 cubits high, divided into different apartments; above which were battlements of 2 cubits, on a parapet of 3 cubits, making the whole height 80 cubits.

(2) "*The Tower Phasaelus*, which was named from his brother, was 40 cubits square, and solid to the height of 40 cubits; but above it was erected a cloister 10 cubits high, fortified with breastworks and ramparts; in the middle of the cloister was carried up another tower, divided into costly chambers and a bath-room, so that the tower was in nothing inferior to a palace. Its summit was adorned with parapets and battlements, more than the preceding. It was in all 90 cubits high, and resembled the tower of Pharus near Alexandria, but was of much larger circumference.

(3) "*The Tower Mariamne* was solid to the height of 30 cubits, and 20 cubits square, having above a richer and more exquisitely ornamented dwelling. Its entire height was 55 cubits.

"Such in size were the three towers; but they looked much larger through the site which they occupied; for both the old wall itself, in the range of which they stood, was built upon a lofty eminence, and likewise a kind of crest of this eminence reared itself to the height of 30 cubits, on which the towers being situated received much additional elevation. The towers were constructed of white marble, in blocks of 20 cubits long, 10 wide, and 5 deep, so exactly joined together that each tower appeared to be one mass of rock."

Now, the modern citadel of Jerusalem occupies the NW. angle of Mount Sion, and its northern wall rises from a deep fosse, having towers at either angle, the bases of which are protected on the outside by massive masonry sloping upward from the fosse. The NW. tower, divided only by the trench from the Jaffa gate, is a square of 45 feet. The NE., commonly known as the Tower of David, is 70 feet 3 inches long, by 56 feet 4 inches broad. The sloping bulwark is 40 feet high from the bottom of the trench; but this is much choked up with rubbish. To the tower part there is no known or visible entrance, either from above or below, and no one knows of any room or space in it. The lower part of this platform is, indeed, the solid rock merely cut into shape, and faced with massive masonry, which rock rises to the height of 42 feet. This rock is doubtless the crest of the hill described by Josephus as 30 cubits or 45 feet high. Now, if the dimensions of Hippicus and Phasaelus, as already given, are compared with those of the modern towers on the north side of the citadel, we find that the dimensions of that at the NW. angle—three of whose sides are determined by the scarped rock on which it is based—so nearly agree with those of Hippicus, and the width of the NE. tower—also determined by the cut rock—so nearly with the square of Phasaelus, that there can be no difficulty in deciding upon their identity of position. Mariamne has entirely disappeared.

"To these towers, situated on the north, was joined within—

(4) "*The Royal Palace*, surpassing all powers of description. It was entirely surrounded by a wall 30 cubits high, with decorated towers at equal intervals, and contained enormous banquetting halls, besides numerous chambers richly adorned. There were also many porticoes encircling one another, with different columns to each, surrounding green courts, planted with a variety of trees, having long avenues through them; and deep channels and reservoirs everywhere around, filled with bronze statues, through which the water flowed; and many towers of tame pidgeons about the fountains."

This magnificent palace, unless the description is exaggerated beyond all licence, must have occupied a larger space than the present fortress, and most probably its gardens extended along the western edge of Mount Sion as far as the present garden of the Armenian Convent; and the decorated towers of this part of the wall, which was spared by the Romans when they levelled the remainder of the city, seem to have transmitted their name to modern times, as the west front of the city wall at this part is called *Abroth Ghazzeh*, i.e. *The Towers of Gaza.*

(5) As the *Xystus* is mentioned next to the Hippicus by Josephus, in his description of the north wall of the Upper City, it may be well to proceed at once to that; deferring the consideration of the Gate Gennath, which obviously occurred between the two, until we come to the Second Wall. The Xystus is properly a covered portico attached to the Greek Gymnasium, which commonly had uncovered walks connected with it. (*Dict. Ant.* p. 580.) As the Jerusalem Xystus was a place where public meetings were occasionally convened (*Bell. Jud.* ii. 6. § 3), it must be understood to be a wide public

promenade, though not necessarily connected with a gymnasium, but perhaps rather with another palace which occupied "this extremity of the Upper City;" for the name was given also to a terraced walk with colonnades attached to Roman villas. (Vitruv. v. 11.)

(6) *The House of the Asmonaeans* was above the Xystus, and was apparently occupied as a palace by the Younger Agrippa; for, when he addressed the multitude assembled in the Xystus, he placed his sister Berenice in the house of the Asmonaeans, that she might be visible to them. (*B. J. l. c.*)

(7) *The Causeway.* At the Xystus we are told *a causeway* (γέφυρα) joined the Temple to the Upper City, and one of the Temple gates opened on to this causeway. That the γέφυρα was a causeway and not a bridge, is evident from the expression of Josephus in another passage, where he says that the valley was interrupted or filled up, for the passage (τῆς φάραγγος εἰς δίοδον ἀπειλημμένης, *Ant.* xv. 11. § 5.). As the Tyropoeon divided the Upper from the Lower City, and the Temple Mount was attached to the Lower, it is obvious that the Tyropoeon is the valley here mentioned. This earth-wall or embankment, was the work of Solomon, and is the only monument of that great king in Jerusalem that can be certainly said to have escaped the ravages of time; for it exists to the present day, serving the same purpose to the Mahometans as formerly to the Jews: the approach to the Mosk enclosure from the Bazaars passes over this causeway, which is therefore the most frequented thoroughfare in the city. (Williams, *Holy City*, vol. ii. pp. 392 – 397, and note, pp. 601—607.)

It is highly probable that the Xystus was nothing else than the wide promenade over this mound, adorned with a covered cloister between the trees, with which the Rabbinical traditions assure us that Solomon's causeway was shaded. It is clear that the north wall of the Upper City must have crossed the valley by this causeway to the Gate *Shallecheth*, which is explained to mean the Gate of the Embankment. (1 *Chron.* xxvi. 16.)

(8) *The Council-Chamber* (βουλή, βουλευτήριον) is the next place mentioned on the northern line of wall, as the point where it joined the western portico of the Temple. And it is remarkable that the corresponding office in the modern town occupies the same site; the Mehkemeh, or Council-Chamber of the Judicial Divan, being now found immediately outside the Gate of the Chain, at the end of the causeway, corresponding in position to the Shallecheth of the Scriptures.

We have now to trace the wall of the Upper City in the opposite direction from the same point, viz. the Hippic Tower at the NW. angle. The points noticed are comparatively few. "It first ran southward (i. e. with a western aspect), through a place called Bethso, to the Gate of the Essenes; then, turning E., it ran (with a southern aspect) above the fountain of Siloam; thence it bent northward, and ran (with an eastern aspect) to the Pool of Solomon, and extending as far as a place called Ophla, was joined to the eastern cloister of the Temple."

ii. On the *West Front* neither of the names which occur are found again in the notices of the city: but Bethso may safely be assigned to the site of the garden of the Armenian Convent, and the Gate of the Essenes may be fixed to a spot not very far from the SW. corner of the modern city, a little to the W. of the Tomb of David, near which a remarkable ridge seems still to indicate the foundations of the ancient city wall.

iii. Along the south face of the Upper City the old wall may still be traced, partly by scarped rock and partly by foundations of the ancient wall, which have served as a quarry for the repairs of the neighbouring buildings for many ages. Its course from this point to the Temple is very difficult to determine, as the steep declivity to the Tyropoeon would make it extremely inconvenient to carry the wall in a straight line, while, on the contrary, the absence of all notice of any deviation from a direct line in a description in which the angles are uniformly noted, would seem to imply that there was no such deflection in its course. As it is clear, however, that the Upper City was entirely encompassed with a wall of its own, nowhere noticed by Josephus, except so far as it was coincident with the outer wall, it may be safely conjectured that this east wall of the Upper City followed the brow of the ridge from the south-east angle of the Hill Sion, along a line nearly coincident with the aqueduct; while the main wall continued its easterly course down the steep slope of Sion, across the valley of the Tyropoeon, not far from its mouth,—a little above the Pool of Siloam,—and then up the ridge Ophel, until it reached the brow of the eastern valley. It may serve to countenance this theory to observe, that in the account of this wall in Nehemiah there is mention of "the stairs that go down from the city of David," by which stairs also the procession went up when encompassing the city wall. (iii. 15, xii. 37.)

iv. The further course of the old wall to the eastern cloister of the Temple is equally obscure, as the several points specified in the description are not capable of identification by any other notices. These are the Pool of Solomon and a place called Ophla, in the description already cited, to which may be added, from an incidental notice, the Basilica of Grapte or Monobazus. (*B. J.* v. 8. § 1.)

The *Pool of Solomon* has been sometimes identified with the Fountain of the Virgin, from which the Pool of Siloam is supplied, and sometimes with that very pool. Both solutions are unsatisfactory, for Siloam would scarcely be mentioned a second time in the same passage under another name, and the fountain in question cannot, with any propriety, be called a pool.

The place called *Ophla* — in Scripture *Ophel* — is commonly supposed to be the southern spur of the Temple Mount, a narrow rocky ridge extending down to Siloam. But it is more certain that it is used in a restricted sense in this passage, than that it is ever extended to the whole ridge. (See *Holy City*, vol. ii. p. 365, note 7.) It was apparently a large fortified building, to the south of the Temple, connected with an outlying tower (*Nehem.* iii. 27, 28), and probably situated near the southern extremity of the present area of the Mosk of Omar. And the massive angle of ancient masonry at the SE. corner of the enclosure, "impending over the Valley of Jehoshaphat, which here actually bends south-west round the corner, having a depth of about 130 feet," may possibly have belonged to the "outlying tower," as it presents that appearance within (*H. C.* vol. ii. pp. 311, 317). It is clear, in any case, that the wall under consideration must have joined the eastern cloister of the Temple somewhere to the north of this angle, as the bend in the valley indicated by Dr. Robinson would have precluded the possibility of a junction at this angle.

2. *The Second Wall, and the Lower City.*—The account of the second wall in Josephus, is very meagre. He merely says that it began at the Gate Gennath, a place in the old wall; and, after encompassing the Lower City, had its termination at the Fortress Antonia."

There is here no clue to the position of the Gate Gennath. It is, however, quite certain that it was between the Hippic Tower and the Xystus: and the north-west angle of the Upper City was occupied by the extensive palace of Herod the Great, and its imposing towers stood on the north front of this old wall, where a rocky crest rose to the height of 30 cubits, which would of course preclude the possibility of an exit from the city for some distance to the east of the tower. Other incidental notices make it clear that there was a considerable space between the third and the second wall at their southern quarter, comparatively free from buildings, and, consequently, a considerable part of the north wall of the Upper City unprotected by the second wall:—e. g. Cestius, having taken the outer wall, encamped within the New City, in front of the Royal Palace (*B. J.* ii. 19. § 5); Titus attacked the outer wall in its southern part, "both because it was lower there than elsewhere, inasmuch as this part of the New City was thinly inhabited, and afforded an easy passage to the third (or inmost) wall, through which Titus had hoped to take the Upper City" (v. 6. § 2). Accordingly, when the legions had carried the outer and the second wall, a bank was raised against the northern wall of Sion at a pool called Amygdalon, and another about thirty cubits from it, at the high-priest's monument." The Almond Pool is no doubt identical with the tank that still exists at no great distance from the modern fortress; and the monument must, therefore, have been some 50 feet to the east of this, also in the angle formed by the north wall of the Upper City and the southern part of the second wall.

There is the head of an old archway still existing above a heap of ruins, at a point about half way between the Hippic Tower and the north-west angle of Mount Sion, where a slight depression in that hill brings it nearly to a level with the declivity to the north. This would afford a good starting-point for the second wall, traces of which may still be discovered in a line north of this, quite to the Damascus gate where are two chambers of ancient and very massive masonry, which appear to have flanked an old gate of the second wall at its weakest part, where it crossed the valley of the Tyropoeon. From this gate, the second wall probably followed the line of the present city wall to a point near the Gate of Herod, now blocked up; whence it was carried along the brow of the hill to the north-east angle of the fortress Antonia, which occupied a considerable space on the north-west of the Temple area, in connection with which it will be described below.

3. *The Third Wall, and the New City.*—The third wall, which enclosed a very considerable space to the north of the old city, was the work of Herod Agrippa the Elder, and was only commenced about thirty years before the destruction of Jerusalem, and never completed according to the original design, in consequence of the jealousy of the Roman government. The following is Josephus's account:—"This third wall Agrippa drew round the superadded city, which was all exposed. It commenced at the Tower Hippicus, from whence it extended to the northern quarter, as far as the Tower Psephinus; then, passing opposite to the Monuments of Helena, and being produced through the Royal Caves, it bent, at the angular tower, by the monument called the Fuller's, and, joining the old wall, terminated at the valley of the Kedron." It was commenced with stones 20 cubits long and 10 wide, and was raised by the Jews to the height of 25 cubits, with the battlements.

(1) As the site of the Hippic Tower has been already fixed, the first point to be noticed in this third wall is the *Psephine Tower*, which, Josephus informs us, was the most wonderful part of this great work, situated at its north-west quarter, over against Hippicus, octagonal in form, 70 cubits in height, commanding a view of Arabia towards the east, of the Mediterranean towards the west, and of the utmost limits of the Hebrew possessions. The site of this tower is still marked, by its massive foundations, at the spot indicated in the plan; and considerable remains of the wall that connected it with the Hippic Tower are to be traced along the brow of the ridge that shuts in the upper part of the valley of Hinnom, and almost in a line with the modern wall. At the highest point of that ridge the octagonal ground-plan of the tower may be seen, and a large cistern in the midst of the ruins further confirms their identity, as we are informed that the towers were furnished with reservoirs for the rain water.

(2) The next point mentioned is the *Monuments of Helena*, which, we are elsewhere told, were three pyramids, situated at a distance of 3 stadia from the city. (*Ant.* xx. 3. § 3.) About a century later (A. D. 174) Pausanias speaks of the tomb of Helena, in the city of Solyma, as having a door so constructed as to open by mechanical contrivance, at a certain hour, one day in the year. Being thus opened, it closes again of itself after a short interval; and, should you attempt to open it at another time, you would break the door before you could succeed. (Paus. viii. 16.) The pyramids are next mentioned by Eusebius (*Hist. Eccles.* ii. 12), as remarkable monumental pillars still shown in the suburbs of Jerusalem; and St. Jerome, a century later, testified that they still stood. (*Epist. ad Eustochium*, *Op.* tom. iv. pars ii. p. 673.) The latest notice is that of an Armenian writer in the 5th century, who describes the tomb as a remarkable monument before the gates of Jerusalem. (*Hist. Armen.* lib. ii. cap. 32.) Notwithstanding these repeated notices of the sepulchral monuments of the queen of Adiabene, it is not now possible to fix their position with any degree of certainty, some archaeologists assigning them to the Tombs of the Kings (Robinson, *Bib. Res.* vol. i. pp. 465, 535—538), others to the Tombs of the Martyrs, about ¾ of a mile to the west of the former. (Schultz, *Jerusalem*, pp. 63—67; De Saulcy, tom. ii. pp. 326, 327.) A point halfway between these two monuments would seem to answer better to the incidental notices of the monuments, and they may with great probability be fixed to a rocky court on the right of the road to *Nebi Samwil*, where there are several excavated tombs. Opposite the Monuments of Helena was the Gate of the Women in the third wall, which is mentioned more than once, and must have been between the Nablus road and the Psephine Tower.

(3) *The Royal Caves* is the next point mentioned on the third wall. They are, doubtless, identical with the remarkable and extensive excavations still called the Tombs of the Kings, most probably

the same which are elsewhere called the Monument of Herod, and, from the character of their decorations, may very well be ascribed to the Herodian period. M. de Saulcy has lately added to our previous information concerning them, and, by a kind of exhausting process, he endeavours to prove that they could have been no other than the tombs of David and the early kings of Judah, which have always hitherto been placed on Mount Sion, where the traditionary site is still guarded by the Moslems. (*Voyage en Syrie*, tom. ii. pp. 228—281.)

(4) The Fuller's monument is the last-mentioned point on the new wall, and, as an angular tower occupied this site, the monument must have been at the north-east angle of the New City; probably one of the many rock graves cut in the perpendicular face of the Valley of Jehoshaphat, near one of which Dr. Schultz has described the foundations of a tower. (*Jerusalem*, pp. 38, 64.) The Monument of the Fuller probably gave its name to the Fuller's field, which is mentioned by the prophet Isaiah as the spot near which the Assyrian army under Rabshakeh encamped (xxxvi. 2, vii. 3); and the traditionary site of the camp of the Assyrians, which we shall find mentioned by Josephus, in his account of the siege, was certainly situated in this quarter. From this north-east angle the third wall followed the brow of the Valley of Jehoshaphat until it reached the wall of the Outer Temple at its north-east angle.

Having thus completed the circuit of the walls, as described by Josephus, and endeavoured to fix the various points mentioned in his description (which furnishes the most numerous topographical notices now extant of ancient Jerusalem), we shall be in a condition to understand the most important historical facts of its interesting and chequered history, when we have further taken a brief survey of the Temple. But, first, a singular and perplexing discrepancy must be noticed between the general and the detailed statements of the historian, as to the extent of the ancient city; for, while he states the circuit of the entire city to be no more than 33 stadia, or 4 Roman miles *plus* 1 stadium, the specification of the measure of the wall of Agrippa alone gives, on the lowest computation, an excess of 12 stadia, or 1½ mile, over that of the entire city!—for it had 90 towers, 20 cubits wide, at intervals of 200 cubits. No satisfactory solution of this difficulty has yet been discovered.

IV. The Temple Mount.

The Temple Mount, called in Scripture the Mountain of the Lord's House, and Moriah (2 *Chron.* iii. 1), is situated at the south-east of the city, and is easily identified with the site of the Dome of the Mosk in modern Jerusalem. It was originally a third hill of the Old City, over against Acra, but separated from it by a broad ravine, which, however, was filled up by the Asmonaean princes, so that these two hills became one, and are generally so reckoned by the historian. (*B. J.* v. 4.)

1. *The Outer Court.*—The Temple, in the widest signification of the word (τὸ ἱερόν), consisted of two courts, one within the other, though the inner one is sometimes subdivided, and distributed into four other courts. The area of the Outer Court was in great part artificial, for the natural level space on the summit of the mount being found too confined for the Temple, with its surrounding chambers, courts, and cloisters, was gradually increased by mechanical expedients. This extension was commenced by Solomon, who raised from the depth of the eastern valley a wall of enormous stones, bound together with lead, within which he raised a bank of earth to a level with the native rock. On this was erected a cloister, which, with its successors, always retained the name of "Solomon's Porch." (στοὰ Σολομῶνος, *St. John*, x. 23; *Acts*, iii. 11, v. 12.) This process of enlarging the court by artificial embankments was continued by successive kings; but particularly by Herod the Great, who, when he reconstructed the Temple Proper (ναός), enlarged the Outer Court to double its former size, and adorned it with stately cloisters. (*Ant.* xv. 11. § 5.) Of these, the Royal Porch, on the south, was the most remarkable of all his magnificent works. It consisted of four rows of Corinthian columns, distributed into a central nave and lateral aisles; the aisles being 30 feet in width and 50 in height, and the nave half as wide again as the aisles, and double their height, rising into a clerestory of unusually large proportions. The other cloisters were double, and their total width only 30 cubits. To this Outer Court there were four gates on the west, towards the city, and one on each of the other sides; of which that on the east is still remaining, commonly called the Golden Gate.

2. *The Inner Court.*—The Inner Temple (ἱερόν) was separated from the Outer by a stone wall (φραγμός, see *Ephes.* ii. 14) 3 cubits in height, on which stood pillars at equal distances, with inscriptions, in Greek and Latin, prohibiting aliens from access. To this court there was an ascent of fourteen steps, then a level space of 10 cubits, and then a further ascent of five steps to the gates, of which there were four on the north and south sides, and two on the east, but none on the west, where stood the Sanctuary (ναός).

The place of the Altar, in front of the ναός, is determined with the utmost precision by the existence in the Sacred Rock of the Moslems, under their venerated dome, of the very cesspool and drain of the Jewish altar, which furnishes a key to the restoration of the whole Temple, the dimensions of which, in all its parts, are given in minute detail in the treatise called Middoth (i. e. measures), one of the very ancient documents contained in the Mishna. The drain communicating with this cesspool, through which the blood ran off into the Kedron, was at the south-west angle of the Altar; and there was a trap connected with this cave, 1 cubit square (commonly closed with a marble slab), through which a man occasionally descended to cleanse it and to clear obstructions. Both the drain and the trap are to be seen in the rock at this day.

The Altar was 32 cubits square at its base, but gradually contracted, so that its hearth was only 24 cubits square. It was 15 cubits high, and had an ascent by an inclined plane on the south side, 32 cubits long and 16 wide.

Between the Altar and the porch of the Temple was a space of 22 cubits, rising in a gentle ascent by steps to the vestibule, the door of which was 40 cubits high and 20 wide. The total length of the Holy House itself was only 100 cubits, and this was subdivided into three parts: the Pronaus 11, the Sanctuary 40, the Holy of Holies 20, allowing 29 cubits for the partition walls and a small chamber behind (i. e. west of) the Most Holy place. The total width of the building was 70 cubits; of which the Sanctuary only occupied 20, the remainder being distributed into side chambers, in three stories, as-

signed to various uses. The Pronaus was, however, 30 cubits wider, 15 on the north, and 15 on the south, giving it a total length of 100 cubits, which, with a width of only 11 cubits, must have presented the proportions of a Narthex in a Byzantine church. Its interior height was 90 cubits, and, while the chambers on the sides of the Temple rose only to the height of 60 cubits, there was an additional story of 40 cubits above the Sanctuary, also occupied by chambers, rising into a clerestory of the same elevation as the vestibule.

The front of the Temple was plated with gold, and reflected back the beams of the rising sun with dazzling effect; and, where it was not encrusted with gold, it was exceedingly white. Some of the stones of which it was constructed were 45 cubits long, 5 deep, and 6 wide.

East of the Altar was the Court of the Priests, 135 cubits long and 11 wide; and, east of that again, was the Court of Israel, of the same dimensions. East of this was the Court of the Women, 135 cubits square, considerably below the level of the former, to which there was an ascent of 15 semicircular steps to the magnificent gates of Corinthian brass, 50 cubits in height, with doors of 40 cubits, so ponderous that they could with difficulty be shut by 20 men, the spontaneous opening of which was one of the portents of the approaching destruction of the Temple, mentioned by Josephus (*Bell. Jud.* vi. 5. § 3), and repeated by Tacitus (*Hist.* v. 13).

Thus much must suffice for this most venerated seat of the Hebrew worship from the age of Solomon until the final destruction of the Jewish polity. But, in order to complete the survey, it will be necessary to notice the Acropolis, which occupied the north-west angle of the Temple enclosure, and which was, says the historian, the fortress of the Temple, as the Temple was of the city. Its original name was Baris, until Herod the Great, having greatly enlarged and beautified it, changed its name to Antonia, in honour of his friend Mark Antony. It combined the strength of a castle with the magnificence of a palace, and was like a city in extent,—comprehending within its walls not only spacious apartments, but courts and camping ground for soldiers. It was situated on an elevated rock, which was faced with slabs of smooth stone, upon which was raised a breastwork of 3 cubits high, within which was the building, rising to a height of 40 cubits. It had turrets at its four corners, three of them 50 cubits high, but that at the south-east angle was 70 cubits, and commanded a view of the whole Temple. It communicated with the northern and western cloisters of the Temple at the angle of the area, by flights of steps for the convenience of the garrison which usually occupied this commanding position; and it is a remarkable and interesting coincidence, that the site of the official residence of the Roman procurator and his guard is now occupied by the *Seraiyah*, or official residence of the Turkish Pasha and his guard: for there can be no question of the identity of the site, since the native rock here, as at Hippicus, still remains to attest the fidelity of the Jewish historian. The rock is here "cut perpendicularly to an extent of 20 feet in some parts; while within the area also, in the direction of the Mosk, a considerable portion of the rock has been cut away" to the general level of the enclosure (Bartlett, *Walks about Jerusalem*, pp. 156, 174, 175); so that the *Seraiyah*, or government house, actually "rests upon a precipice of rock which formerly swept down abruptly, and has obviously been cut away to form the level below, which also bears marks of having been scarped."

The fortress was protected towards Bezetha by an artificial fosse, so as to prevent its foundations from being assailed from that quarter. This fosse has only lately been filled in.

It is certain, from several passages, that the fortress Antonia did not cover the whole of the northern front of the Temple area; and, as the second wall, that encircled the Lower City, ended at the fortress, it is clear that this wall could not have coincided with the modern wall at the north-east quarter of the modern city. It is demonstrable, from several allusions and historical notices, that there must have been a considerable space between the second and third wall on the northern front of the Temple area. (Williams, *Holy City*, vol. ii. pp. 348—353.)

V. History.

The ancient history of Jerusalem may be conveniently divided into four periods. 1. The Canaanitish, or Amorite. 2. The Hebrew, or Ante-Babylonian. 3. The Jewish, or Post-Babylonian. 4. The Roman, or classical.

1. Of these, the first may claim the fullest notice here, as the sources of information concerning it are much less generally known or read than those of the later periods, and anything that relates to the remote history of that venerable city cannot but be full of interest to the antiquarian, no less than to the Christian student.

It has been said that the learned are divided in opinion as to the identity of the Salem of Melchizedek with the Jerusalem of Sacred History. The writer of a very learned and interesting Review of the Second Edition of the Holy City, which appeared in the *Christian Remembrancer* (vol. xviii. October, 1849), may be said to have demonstrated that identity by a close critical analysis of all the passages in which the circumstances are alluded to; and has further shown it to be highly probable that this patriarch was identical, not with Shem, as has been sometimes supposed, but with Heber, the son of Peleg, from whom the land of Canaan had obtained the name of the "land of the Hebrews" or Heberites, as early as the days of Joseph's deportation to Egypt. (*Gen.* xl. 15.)

But the elucidation which the early history of Jerusalem receives from the monuments of Egypt is extremely important and valuable, as relating to a period which is passed over in silence by the sacred historian; and these notices are well collected and arranged in the review referred to, being borrowed from Mr. Osburn's very interesting work entitled *Egypt, her Testimony to the Truth.* After citing some monuments of Sethos, and Sesostris his son, relating to the Jebusites, the writer proceeds:—"What glimpses, then, do we obtain, if any, of the existence of such a city as Jerusalem during the recorded period? Under that name, of course, we must not expect to find it; since even in the days of Joshua and the Judges it is so called by anticipation. (*Holy City*, vol. i. p. 3, note.) But there is a city which stands forth with a very marked and peculiar prominence in these wars of the kings of Egypt with the Jebusites, Amorites, and neighbouring nations. We meet with it first as a fortress of the Amorites. Sethos II. is engaged in besieging it. It is situated on a hill, and strengthened with two tiers of ramparts. The inscription sets forth that it is in the

land of Amor, or the Amorite; and that the conqueror 'had made bare his right arm to overcome the chiefs of many walled cities.' This implies that the fort in question, the name of which is inscribed upon it, was the chief stronghold of the nation. That name, when translated from the hieroglyphics into Coptic, and thence into Hebrew, is Chadash. The next notice of Chadash belongs to the reign of Sesostris, and connects it with the Jebusite nation. The Ammonites had laid siege to the city, and a joint embassy of the Jebusites and Hittites, who were then tributary to Sesostris, entreat him to come to their aid. The Egyptians having accordingly sailed over the Dead Sea, met with another embassy, from the Zuzims, which gave further particulars of the siege. The enemy had seized on the fortified camps erected by the Egyptians to secure their hold over the country, and spread terror to the very walls of Chadash. A great battle is fought on a mountain to the south of the city of Chadash. The inscription further describes Chadash as being in the land of Heth. What, then, do we gather from these combined notices? Plainly this, that Chadash was a city of the first importance, both in a military and civil point of view; the centre of interest to three or four of the most powerful of the Canaanitish nations; in a word, their metropolis. We find it moreover placed, by one inscription, in the territory of the Amorites, by another in that of the Hittites, while it is obviously inhabited, at the same time, by the Jebusites. Now, omitting for the present the consideration of the Hittites, this is the exact character and condition in which Jerusalem appears in Scripture at the time of Joshua's invasion. Its metropolitan character is evinced by the lead which Adoni-zedek, its king, takes in the confederacy of the Five Kings; its strength as a fortress, by the fact that it was not then even attempted by Joshua, nor ever taken for 400 years after. And while, as the royal city of Adoni-zedek, it is reckoned among the Amorite possessions, it is no less distinctly called Jebus (*Josh.* xv. 8, xviii. 28; *Judg.* i. 21, xix. 10) down to the days of David; the truth being, apparently, that the Amorite power having been extinguished in the person of Adoni-zedek, the Jebusite thenceforth obtained the ascendency in the city which the two nations inhabited in common. Nor is there any difficulty in accounting, from Scripture, for the share assigned by the monuments to the Hittites in the possession of the city; for, as Mr. Osburn has observed, the tribes of the Amorites and Hittites appear, from Scripture, to have bordered upon each other. The city was probably, therefore, situated at a point where the possessions of the three tribes met. Can we, then, hesitate to identify the Chadash of the hieroglyphics with the Κάδυτις of Herodotus, the El-Kuds of the Arabs, the Kadatha of the Syrians, the 'Holy' City? The only shadow of an objection that appears to lie against it is, that, strictly speaking, the name should be not Chadash, but Kadash. But when it is considered that the name is a translation out of Canaanitish into hieroglyphics, thence into Coptic, and thence again into Hebrew, and that the difference between ח and ק is, after all, but small, it is not too much to suppose that Kadesh is what is really intended to be represented. That Jerusalem should be known to the Canaanites by such a name as this, denoting it 'the Holy,' will not seem unreasonable, if we bear in mind what has been noticed above with reference to the title Adoni-zedek; and the fact forms an interesting link, connecting the Arabian and Syrian name for the city with its earlier nomenclature, and confirming the identity of Herodotus's Cadytis with Jerusalem. Mr. Osburn has only very doubtingly propounded (p. 66, note) the view we have undertaken to defend. He inclines to identify Chadash with the Hadashah, or Addasa, enumerated among the southernmost cities towards the border of Edom, given to Judah (*Josh.* xv. 21) from among the Amorites' possessions. But it seems incredible that we should never hear again, in the history of Joshua's conquest, of so important a city as Chadash evidently was: besides, Hadashah seems to lie too far south. We presume Mr. Osburn will not be otherwise than pleased to find the more interesting view supported by any arguments which had not occurred to him. And we have reserved one which we think Aristotle himself would allow to be of the nature of a τεκμήριον or 'clinching argument.' It is a geographical one. The paintings represent Chadash as surrounded by a river or brook on three sides; and this river or brook runs into the Dead Sea, toward the northern part of it. Surely, nothing could more accurately describe the very remarkable conformation of Jerusalem; its environment on the east, south, and west, by the waters of the valleys of Jehoshaphat and Hinnom, and their united course, after their junction, through the Wady En-Nâr into the north-west part of the Dead Sea. And there are some difficulties or peculiarities in the Scripture narrative respecting Jerusalem, which the monuments, thus interpreted, will be found to explain or illustrate. We have already alluded to its being in one place spoken of as an Amorite city, in another as the chief seat of the Jebusites. The LXX. were so pressed with this difficulty, that they adopted the rendering 'Jebusite' for 'Amorite' in the passage which makes Adoni-zedek an Amorite king. (*Josh.* x. 5.) The hieroglyphics clear up the difficulty, and render the change of reading unnecessary. Again, there is a well-known ambiguity as to whether Jerusalem was situated in the tribe of Judah or Benjamin; and the view commonly acquiesced in is, that, being in the borders of the two tribes, it was considered common to both. Perhaps the right of possession, or the apportionment, was never fully settled; though the Rabbies draw you the exact line through the very court of the Temple. But how, it may be asked, came such an element of confusion to be introduced into the original distribution of the Holy Land among the tribes? The answer seems to be, that territory was, for convenience' sake, assigned, in some measure, according to existing divisions: thus, the Amorite and Hittite possessions, as a whole, fell to Judah; the Jebusite to Benjamin; and then all the uncertainty resulting from that joint occupancy of the city by the three nations, which is testified to by the monuments, was necessarily introduced into the rival claims of the two tribes." (*Christian Remembrancer*, vol. xviii. pp. 457—459.)

The importance of the powerful Jebusite tribe, who are represented as having "more than one city or stronghold near the Dead Sea, and are engaged in a succession of wars with the kings of Egypt in the neighbourhood of its shores;" whose rich garments of Babylonish texture,—depicted in the hieroglyphics,—and musical instruments, and warlike accoutrements, testify to a higher degree of culture and civilisation than was found among the neighbouring tribes, with many of whom they were on terms of offensive and defensive alliance:—all this

accounts for the firm hold with which they maintained their possession of their stronghold, the capital of their tribe, for upwards of five centuries after the coming in of the children of Israel under Joshua (cir. B. C. 1585); during which period, according to Josephus, they held uninterrupted and exclusive possession of the Upper City, while the Israelites (whether of the tribe of Judah or of Benjamin is uncertain) seem only to have occupied the Lower City for a time, and then to have been expelled by the garrison of the Upper City. (Joseph. *Ant.* v. 2. §§ 2, 5, 7; comp. *Judges*, i. 8, 21, xix. 10—12.)

2. It was not until after David, having reigned seven years in Hebron, came into undisputed possession of the kingdom of Israel, that Jerusalem was finally subjugated (cir. B. C. 1049) and the Jebusite garrison expelled. It was then promoted to the dignity of the capital of his kingdom, and the Upper and Lower City were united and encircled by one wall. (1 *Chron.* xi. 8; comp. Joseph. *Ant.* vii. 3. § 2.)

Under his son Solomon it became also the ecclesiastical head of the nation, and the Ark of the Covenant, and the Tabernacle of the Congregation, after having been long dissevered, met on the threshing-floor of Araunah the Jebusite, on Mount Moriah. (1 *Chron.* xxi. 15; 2 *Chron.* iii. 1.) Besides erecting the Temple, king Solomon further adorned the city with palaces and public buildings. (1 *Kings*, vi. viii. 1—8.) The notices of the city from this period are very scanty. Threatened by Shishak, king of Egypt (B. C. 972), and again by the Arabians under Zerah (cir. 950), it was sacked by the combined Philistines and Arabs during the disastrous reign of Jehoram (884), and subsequently by the Israelites, after their victory over Amaziah at Bethshemesh (cir. B. C. 808). In the invasion of the confederate armies of Pekah of Israel and Rezin of Syria, during the reign of Ahaz, the capital barely escaped (cir. 730; comp. *Isaiah*, vii. 1—9, and 2 *Kings*, xvi. 5, with 2 *Chron.* xxviii. 5); as it did in a still more remarkable manner in the following reign, when invested twice, as it would seem, by the generals of Sennacherib, king of Assyria (B. C. 713). The deportation of Manasseh to Babylon would seem to intimate that the city was captured by the Chaldeans as early as 650; but the fact is not recorded expressly in the sacred narrative. (2 *Chron.* xxxiii.) From this period its disasters thickened apace. After the battle of Megiddo it was taken by Pharaoh Necho, king of Egypt (B. C. 609), who held it only about two years, when it passed, together with the whole country under the sway of the Chaldeans, and Jehoiakim and some of the princes of the blood royal were carried to Babylon, with part of the sacred vessels of the Temple. A futile attempt on the part of Jehoiakim to regain his independence after his restoration, resulted in his death; and his son had only been seated on his tottering throne three months when Nebuchadnezzar again besieged and took the city (598), and the king, with the royal family and principal officers of state, were carried to Babylon, Zedekiah having been appointed by the conqueror to the nominal dignity of king. Having held it nearly ten years, he revolted, when the city was a third time besieged by Nebuchadnezzar (B. C. 587). The Temple and all the buildings of Jerusalem were destroyed by fire, and its walls completely demolished.

3. As the entire desolation of the city does not appear to have continued more than fifty years, the "seventy years" must date from the first deportation; and its restoration was a gradual work, as the desolation had been. The first commission issued in favour of the Jews in the first year of Cyrus (B.C. 538) contemplated only the restoration of the Temple, which was protracted, in consequence of numerous vexatious interruptions, for 120 years, — i. e. until the eighth year of Darius Nothus (B.C. 418). According to the most probable chronology it was his successor, Artaxerxes Mnemon, who issued the second commission to Ezra, in the seventh year of his reign, and a third to Nehemiah in his twentieth year (B. C. 385). It was only in virtue of the edict with which he was intrusted, backed by the authority with which he was armed as the civil governor of Palaestine, that the restoration of the city was completed; and it has been before remarked that the account of the rebuilding of the walls clearly intimates that the limits of the restored city were identical with that of the preceding period: but the topographical notices are not sufficiently clear to enable us to determine with any degree of accuracy or certainty the exact line of the walls. (See the attempts of Schultz, pp. 82—91; and Williams, *Memoir*, 111—121.) Only fifty years after its restoration Jerusalem passed into the power of a new master (B. C. 332), when, according to Josephus, the conqueror visited Jerusalem, after the subjugation of Gaza, and accorded to its inhabitants several important privileges (Josephus, *Ant.* xi. 8). On the death of Alexander, and the division of his conquests among his generals, it was the ill-fortune of Judaea to become the frontier province of the rival kingdoms of Egypt and Syria; and it was consequently seldom free from the miseries of war. Ptolemy Soter was the first to seize it,—by treachery, according to Josephus (B. C. 305), who adds that he ruled over it with violence. (*Ant.* xii. 1.) But the distinctions which he conferred upon such of its inhabitants as he carried into Egypt, and the privileges which he granted to their high priest, Simon the son of Onias, do not bear out this representation (*Ecclus.* l. 1, 2.) But his successor, Ptolemy Philadelphus, far outdid him in liberality; and the embassy of his favourite minister Aristeas, in conjunction with Andreas, the chief of his body-guard, to the chief priest Eleazar, furnishes us with an apparently authentic, and certainly genuine, account of the city in the middle of the third century before the Christian era, of which an outline may be here given. "It was situated in the midst of mountains, on a lofty hill, whose crest was crowned with the magnificent Temple, girt with three walls, seventy cubits high, of proportionate thickness and length corresponding to the extent of the building. . . . . . The Temple had an eastern aspect: its spacious courts, paved throughout with marble, covered immense reservoirs containing large supplies of water, which gushed out by mechanical contrivance to wash away the blood of the numerous sacrifices offered there on the festivals. . . . . The foreigners viewed the Temple from a strong fortress on its north side, and describe the appearance which the city presented. . . . . It was of moderate extent, being about forty furlongs in circuit. . . . . . The disposition of its towers resembled the arrangement of a theatre: some of the streets ran along the brow of the hill; others, lower down, but parallel to these, followed the course of the valley, and they were connected by cross streets. The city was built

on the sloping side of a hill, and the streets were furnished with raised pavements, along which some of the passengers walked on high, while others kept the lower path,—a precaution adopted to secure those who were purified from the pollution which contact with anything unclean could have occasioned. . . . . . The place, too, was well adapted for mercantile pursuits, and abounded in artificers of various crafts. Its market was supplied with spicery, gold, and precious stones, by the Arabs, in whose neighbouring mountains there had formerly been mines of copper and iron, but the works had been abandoned during the Persian domination, in consequence of a representation to the government that they must prove ruinously expensive to the country. It was also richly furnished with all such articles as are imported by sea, since it had commodious harbours — as Ascalon, Joppa, Gaza, and Ptolemais, from none of which it was far distant." (Aristeas, *ap. Gallandii Biblioth. Vet. Pat.* tom. ii. pp. 805, &c.) The truthfulness of this description is not affected by the authorship; there is abundance of evidence, internal and external, to prove that it was written by one who had actually visited the Jewish capital during the times of the Ptolemies (cir. B.C. 250).

The Seleucidae of Asia were not behind the Ptolemies in their favours to the Jews; and the peace and prosperity of the city suffered no material diminution, while it was handed about as a marriage dowry, or by the chances of war, between the rivals, until internal factions subjected it to the dominion of Antiochus Epiphanes, whose tyranny crushed for a time the civil and ecclesiastical polity of the nation (B. C. 175). The Temple was stripped of its costly sacred vessels, the palaces burned, the city walls demolished, and an idol-altar raised on the very altar of the Temple, on which daily sacrifices of swine were offered. This tyranny resulted in a vigorous national revolution, which secured to the Jews a greater amount of independence than they had enjoyed subsequently to the captivity. This continued, under the Asmonean princes, until the conquest of the country by the Romans; from which time, though nominally subject to a native prince, it was virtually a mere dependency, and little more than a province, of the Roman empire. Once again before this the city was recaptured by Antiochus Sidetes, during the reign of John Hyrcanus (cir. 135), when the city walls, which had been restored by Judas, were again levelled with the ground.

4. The capture of the city by Pompey is recorded by Strabo, and was the first considerable event that fixed the attention of the classical writers on the city (B.C. 63). He ascribes the intervention of Pompey to the disputes of the brothers Hyrcanus and Aristobulus, the sons of Alexander Jannaeus, who first assumed regal power. He states that the conqueror levelled the fortifications when he had taken the city, which he did by filling up an enormous fosse which defended the Temple on the north side. The particulars of the siege are more fully given by Josephus, who states that Pompey entered the Holy of Holies, but abstained from the sacred treasures of the Temple, which were plundered by Crassus on his way to Parthia (B. C. 54). The struggle for power between Antigonus, the son of Aristobulus, and Herod, the son of Antipater, led to the sacking of the city by the Parthians, whose aid had been sought by the former (B. C. 40). Herod, having been appointed king by the senate, only secured possession of his capital after a long siege, in which he was assisted by Sosius, Antony's lieutenant, and the Roman legionaries. Mention has been already made of the palace in the Upper City and the fortress Antonia, erected, or enlarged and beautified, by Herod. He also undertook to restore the Temple to a state of magnificence that should rival the glory of Solomon's; and a particular description is given of this work by the Jewish historian (*Ant.* xv. 11.) The erection of a theatre and circus, and the institution of quinquennial games in honour of the emperor, went far to conform his city to a pagan capital. On the death of Herod and the banishment of his son Archelaus, Judaea was reduced to a Roman province, within the praefecture of Syria, and subject to a subordinate governor, to whom was intrusted the power of life and death. His ordinary residence at Jerusalem was the fortress Antonia; but Caesarea now shared with Jerusalem the dignity of a metropolis. Coponius was the first procurator (A. D. 7), under the praefect Cyrenius. The only permanent monument left by the procurators is the aqueduct of Pontius Pilate (A. D. 26—36), constructed with the sacred Corban, which he seized for that purpose. This aqueduct still exists, and conveys the water from the Pools of Solomon to the Mosk at Jerusalem (*Holy City*, vol. ii. pp. 498—501). The particulars of the siege by Titus, so fully detailed by Josephus, can only be briefly alluded to. It occupied nearly 100,000 men little short of five months, having been commenced on the 14th of Xanthicus (April), and terminated with the capture and conflagration of the Upper City on the 8th of Gorpeius (September). This is to be accounted for by the fact that, not only did each of the three walls, but also the Fortress and Temple, require to be taken in detail, so that the operations involved five distinct sieges. The general's camp was established close to the Psephine Tower, with one legion, the twelfth; the tenth was encamped near the summit of Mount Olivet: the fifth opposite to the Hippic Tower, two stadia distant from it. The first assault was made apparently between the towers Hippicus and Psephinus, and the outer wall was carried on the fifteenth day of the the siege. This new wall of Agrippa was immediately demolished, and Titus encamped within the New City, on the traditional camping-ground of the Assyrians. Five days later, the second wall was carried at its northern quarter, but the Romans were repulsed, and only recaptured it after a stout resistance of three days. Four banks were then raised,—two against Antonia, and two against the northern wall of the Upper City. After seventeen days of incessant toil the Romans discovered that their banks had been undermined, and their engines were destroyed by fire. It was then resolved to surround the city with a wall, so as to form a complete blockade. The line of circumvallation, 39 furlongs in circuit, with thirteen redoubts equal to an additional 10 furlongs, was completed in three days. Four fresh banks were raised in twenty-one days, and the Antonia was carried two months after the occupation of the Lower City. Another month elapsed before they could succeed in gaining the Inner Sanctuary, when the Temple was accidentally fired by the Roman soldiers. The Upper City still held out. Two banks were next raised against its eastern wall over against the Temple. This occupied eighteen days; and the Upper City was at length carried, a month after the Inner Sanctuary.

This memorable siege has been thought worthy of special mention by Tacitus, and his lively abridgment, as it would appear, of Josephus's detailed narrative, must have served to raise his countrymen's ideas, both of the military prowess and of the powers of endurance of the Jews.

The city was wholly demolished except the three towers Hippicus, Phasaelus, and Mariamne, and so much of the western wall as would serve to protect the legion left there to garrison the place, and prevent any fresh insurrectionary movements among the Jews, who soon returned and occupied the ruins. The palace of Herod on Mount Sion was probably converted into a barrack for their accommodation, as it had been before used for the same purpose. (*Bell. Jud.* vii. 1. § 1, ii. 15. § 5, 17. §§ 8, 9.)

Sixty years after its destruction, Jerusalem was visited by the emperor Hadrian, who then conceived the idea of rebuilding the city, and left his friend and kinsman Aquila there to superintend the work, A. D. 130. (Epiphanius, *de Pond. et Mens.* §§ 14, 15.) He had intended to colonise it with Roman veterans, but his project was defeated or suspended by the outbreak of the revolt headed by Barcochebas, his son Rufus, and his grandson Romulus. The insurgents first occupied the capital, and attempted to rebuild the Temple: they were speedily dislodged, and then held out in Bethar for nearly three years. [BETHAR.] On the suppression of the revolt, the building of the city was proceeded with, and luxurious palaces, a theatre, and temples, with other public buildings, fitted it for a Roman population. The Chronicon Alexandrinum mentions *τὰ δύο δημόσια καὶ τὸ θέατρον καὶ τὸ τρικάμερον καὶ τὸ τετράνυμφον καὶ τὸ δωδεκάπυλον τὸ πρὶν ὀνομαζόμενον ἀναβαθμοὶ καὶ τὴν κόδραν.* A temple of Jupiter Capitolinus, from whom the city derived its new name, occupied the site of the Temple, and a tetrastyle fane of Venus was raised over the site of the Holy Sepulchre. The ruined Temple and city furnished materials for these buildings. The city was divided into seven quarters (ἄμφοδα), each of which had its own warden (ἀμφοδάρχης). Part of Mount Sion was excluded from the city, as at present, and was "ploughed as a field." (*Micah*, iii. 12; St. Jerome, *Comment. in loc.*; *Itinerarium Hierosol.* p. 592, ed. Wesseling.) The history of Aelia Capitolina has been made the subject of distinct treatises by C. E. Deyling, "Aeliae Capitolinae Origines et Historia" (appended to his father's *Observationes Sacrae*, vol. v. p. 433, &c.), and by Dr. Münter, late Bishop of Copenhagen (translated by W. Wadden Turner, and published in Dr. Robinson's *Bibliotheca Sacra*, p. 393, &c.), who have collected all the scattered notices of it as a pagan city. Its coins also belong to this period, and extend from the reign of Hadrian to Severus. One of the former emperor (IMP. CAES. TRAIAN. HADRIANVS. AVG., which exhibits Jupiter in a tetrastyle temple, with the legend COL. AEL. CAP.) confirms the account of Dion Cassius (lxix. 12), that a temple to Jupiter was erected on the site of God's temple (Eckhel, *Doct. Num. Vet.* pars i. tom. iii. p. 443); while one of Antoninus (ANTONINVS. AVG. PIVS. P. P. TR. P. COS. III., representing Venus in a similar temple, with the legend C. A. C. or COL. AEL. CAP.) no less distinctly confirms the Christian tradition that a shrine of Venus was erected over the Sepulchre of our Lord. (Vaillant, *Numismata Aerea Imperat. in Col.* pt. i. p. 239; Eckhel, *l. c.* p. 442.)

Under the emperor Constantine, Jerusalem, which had already become a favourite place of pilgrimage to the Christians, was furnished with new attractions by that emperor and his mother, and the erection of the Martyry of the Resurrection inaugurated a new aera of the Holy City, which now recovered its ancient name, after it had apparently fallen into complete oblivion among the government officers in Palaestine itself. (Euseb. *de Mart. Palaest.* cap. ii.) The erection of his church was commenced the year after the Council of Nicaea, and occupied ten years. It was dedicated on the tricennalia of the emperor, A. D. 336. (Euseb. *Vita Constantini*, iii. 30—40, iv. 40—47.) Under the emperor Julian, the city again became an object of interest to the pagans, and the account of the defeat of Julian's attempt to rebuild the Temple is preserved by Ammianus Marcellinus, an unexceptional witness (xxiii. 1: all the historical notices are collected by Bishop Warburton, in his work on the subject, entitled Julian.) In 451, the see of Jerusalem was erected into a patriarchate; and its subsequent history is chiefly occupied with the conflicting opinions of its incumbents on the subject of the heresies which troubled the church at that period. In the following century (cir. 532) the emperor Justinian emulated the zeal of his predecessor Constantine by the erection of churches and hospitals at Jerusalem, a complete account of which has been left by Procopius. (*De Aedificiis Justin ani*, v. 6.) In A. D. 614, the city with all its sacred places was desolated by the Persians under Chosroes II., when, according to the contemporary records, 90,000 Christians, of both sexes and of all ages, fell victims to the relentless fury of the Jews, who, to the number of 26,000, had followed the Persians from Galilee to Jerusalem to gratify their hereditary malice by the massacre of the Christians. The churches were immediately restored by Modestus; and the city was visited by Heraclius (A. D. 629) after his defeat of the Persians. Five years later (A. D. 634) it was invested by the Saracens, and, after a defence of four months, capitulated to the khalif Omar in person; since which time it has followed the vicissitudes of the various dynasties that have swayed the destinies of Western Asia.

It remains to add a few words concerning the modern city and its environs.

V. THE MODERN CITY.

El-Kods, the modern representative of its most ancient name Kadeshah, or Cadytis, "is surrounded by a high and strong cut-stone wall, built on the solid rock, loop-holed throughout, varying from 25 to 60 feet in height, having no ditch." It was built by the sultan Suliman (A. D. 1542), as is declared by many inscriptions on the wall and gates. It is in circuit about 2½ miles, and has four gates facing the four cardinal points. 1. The Jaffa Gate, on the west, called by the natives Bab-el-Hallil, i. e. the Hebron Gate. 2. The Damascus Gate, on the north, Bab-el-'Amûd, the Gate of the Column. 3. The St. Stephen's Gate, on the east, Bab-Sitti-Miryam, St. Mary's Gate. 4. The Sion Gate, on the south, Bab-en-Nebi Daûd, the Gate of the Prophet David. A fifth gate, on the south, near the mouth of the Tyropoeon, is sometimes opened to facilitate the introduction of the water from a neighbouring well. A line drawn from the Jaffa Gate to the Mosk, along the course of the old wall, and another, cutting this at right angles, drawn from the Sion to the Damascus Gate, could divide the

city into the four quarters by which it is usually distinguished.

These four quarters are:—(1) The Armenian Quarter at the SW.; (2) the Jew's Quarter at the SE.,—both these being on Mount Sion; (3) the Christian Quarter at the NW.; (4) the Mahometan Quarter, occupying the remainder of the city on the west and north of the great Haram-es-Sherif, the noble Sanctuary, which represents the ancient Temple area. The Mosk, which occupies the grandest and once most venerated spot in the world, is, in its architectural design and proportions, as it was formerly in its details, worthy of its site. It was built for Abd-el Melik Ibn-Marwan, of the house of Ommiyah, the tenth khalif. It was commenced in A. D. 688, and completed in three years, and when the vicissitudes it has undergone within a space of nearly 1200 years are considered, it is perhaps rather a matter of astonishment that the fabric should have been preserved so entire than that the adornment should exhibit in parts marks of ruinous decay.

The Church of Justinian,—now the Mosk El-Aksa,—to the south of the same area, is also a conspicuous object in the modern city; and the Church of the Holy Sepulchre, with its appendages, occupies a considerable space to the west. The greater part of the remaining space is occupied with the Colleges or Hospitals of the Moslems, in the vicinity of the Mosks, and with the Monasteries of the several Christian communities, of which the Patriarchal Convent of St. Constantine, belonging to the Greeks, near the Church of the Holy Sepulchre, and that of the Armenians, dedicated to St. James, on the highest part of Mount Sion, are the most considerable.

The population of the modern city has been variously estimated, some accounts stating it as low as 10,000, others as high as 30,000. It may be safely assumed as about 12,000, of which number nearly half are Moslems, the other half being composed of Jews and Christians in about equal proportions. It is governed by a Turkish pasha, and is held by a small garrison. Most of the European nations are there represented by a consul.

VI. Environs.

A few sites of historical interest remain to be noticed in the environs of Jerusalem: as the valleys which environ the city have been sufficiently described at the commencement of the article, the mountains may here demand a few words.

The *Scopus*, which derived its name, as Josephus informs us, from the extensive view which it commanded of the surrounding country, is the high ground to the north of the city, beyond the Tombs of the Kings, 7 stadia from the city (*B. J.* ii. 19. § 4, v. 2. § 3), where both Cestius and Titus first encamped on their approach to the city (*ll. cc.*): this range is now occupied by a village named *Shâphât*,—the Semitic equivalent to the Greek σκοπός. On the east of the city is the Mount of Olives, extending along the whole length of its eastern wall, conspicuous with its three summits, of which the centre is the highest, and is crowned with a pile of buildings occupying the spot where Helena, the mother of Constantine, built a Basilica in commemoration of the Ascension of our Lord. (Eusebius, *Vita Constantini*, iii. 12, *Laudes*, § 9.) A little below the southern summit is a remarkable gallery of sepulchral chambers arranged in a semicircle concentric with a circular funnel-shaped hall 24 feet in diameter, with which it is connected by three passages. They are popularly called "the Tombs of the Prophets," but no satisfactory account has been given of these extensive excavations. (Plans are given by Schultz, Krafft, and Tobler, in the works referred to below.) Dr. Schultz was inclined to identify this with the rock περιστήριον, mentioned by Josephus in his account of the Wall of Circumvallation (*B. J.* v. 12), which he supposes to be a translation of the Latin Columbarium. (See *Dict. Ant.* art. *Funus*, p. 561, b.)

In the bed of the Valley of Jehoshaphat, immediately beneath the centre summit of Mount Olivet, where the dry bed of the brook Kedron is spanned by a bridge, is the *Garden of Gethsemane*, with its eight venerable olive-trees protected by a stone wall; and close by is a subterranean church, in which is shown the reputed tomb of the Virgin, who, however, according to an ancient tradition, countenanced by the Council of Ephesus (A. D. 431), died and was buried in that city. (Labbe, *Concilia*, tom. iii. col. 573.)

A little to the south of this, still in the bed of the valley, are two remarkable monolithic sepulchral monuments, ascribed to Absalom and Zechariah, exhibiting in their sculptured ornaments a mixture of Doric, Ionic, and perhaps Egyptian architecture, which may possibly indicate a change in the original design in conformity with later taste. Connected with these are two series of sepulchral chambers, one immediately behind the Pillar of Absalom, called by the name of *Jehoshaphat;* the other between the monoliths, named the *Cave of St. James*, which last is a pure specimen of the Doric order. (See *A General View in Holy City*, vol. ii. p. 449, and detailed plans, &c. in pp. 157, 158, with Professor Willis's description.)

To the south of Mount Olivet is another rocky eminence, to which tradition has assigned the name of the *Mount of Offence*, as "the hill before Jerusalem" where king Solomon erected altars for idolatrous worship (1 *Kings*, xi. 7). In the rocky base of this mount, overhanging the Kedron, is the rock-hewn village of Siloam, chiefly composed of sepulchral excavations, much resembling a Columbarium, and most probably the rock Peristerium of Josephus. Immediately below this village, on the opposite side of the valley, is the intermitting *Fountain of the Virgin*, at a considerable depth below the bed of the valley, with a descent of many steps hewn in the rock. Its supply of water is very scanty, and what is not drawn off here runs through the rocky ridge of Ophel, by an irregular passage, to the Pool of Siloam in the mouth of the Tyropoeon. This pool, which is mentioned in the New Testament (*St. John*, ix. 7, &c.), is now filled with earth and cultivated as a garden, a small tank with columns built into its side serves the purpose of a pool, and represents the "quadriporticum" of the Bordeaux Pilgrim (A. D. 333), who also mentions "Alia piscina grandis foras." This was probably identical with Hezekiah's Pool "between the two walls" (*Is.* xxii. 11), as it certainly is with the "Pool of Siloah by the king's garden" in Nehemiah (iii. 15, ii. 14; comp. 2 *Kings*, xxv. 4. The arguments are fully stated in the *Holy City*, vol. ii. pp. 474—480. M. de Saulcy accepts the identification.) *The king's gardens* are still represented in a verdant spot, where the concurrence of the three valleys, Hinnom, Jehoshaphat, and Tyropoeon,

forms a small plain, which is cultivated by the villagers of Siloam.

In the mouth of the southern valley which forms the continuation of these three valleys towards the Dead Sea, is a deep well, variously called the *Well of Nehemiah*, of *Job*, or *Joab;* supposed to be identical with Enrogel, "the well of the spies," mentioned in the borders of Judah and Benjamin, and elsewhere (*Josh.* xv. 7, xviii. 16; 2 *Sam.* xvii. 17; 1 *Kings*, i. 9).

On the opposite side of the valley, over against the Mount of Offence, is another high rocky hill, facing Mount Sion, called the *Hill of Evil Council*, from a tradition that the house of Annas the high-priest, father-in-law to Caiaphas (*St. John*, xviii. 13, 24), once occupied this site. There is a curious coincidence with this in a notice of Josephus, who, in his account of the wall of circumvallation, mentions the monument of Ananus in this part (v. 12. § 2); which monument has lately been identified with an ancient rock-grave of a higher class,—the Aceldama of ecclesiastical tradition,—a little below the ruins on this hill; which is again attested to be "the Potter's Field," by a stratum of white clay, which is still worked. (Schultz, *Jerusalem*, p. 39.)

This grave is one of a series of sepulchres excavated in the lower part of this hill; among which are several bearing Greek inscriptions, of which all that is clearly intelligible are the words THC. AΓIAC. CIωN., indicating that they belonged to inhabitants or communities in Jerusalem. (See the Inscriptions in Krafft, and the comments on his decipherments in the Holy City, *Memoir*, pp. 56—60).

Higher up the Valley of Hinnom is a large and very ancient pool, now called the Sultan's (*Birket-es-Sultan*), from the fact that it was repaired, and adorned with a handsome fountain, by Sultan Suliman Ibn-Selim, 1520—1566, the builder of the present city-wall. It is, however, not only mentioned in the mediaeval notices of the city, but is connected by Nehemiah with another antiquity in the vicinity, called *En-nebi David.* On Mount Sion, immediately above, and to the east of the pool, is a large and irregular mass of building, supposed by Christians, Jews, and Moslems, to contain the *Tomb of David*, and of his successors the kings of Judah. It has been said that M. de Saulcy has attempted an elaborate proof of the identity of the Tombs of the Kings, at the head of the Valley of Jehoshaphat, with the *Tomb of David.* His theory is inadmissable; for it is clear, from the notices of Nehemiah, that the Sepulchres of David were not far distant from the Pool of "Siloah," close to "the pool that was made," and, consequently, on that part of Mount Sion where they are now shown. (*Nehem.* iii. 16—19.) The memory of David's tomb was still preserved until the destruction of Jerusalem (Josephus, *Ant.* xiii. 8. § 4, xvi. 7. § 1; *Acts*, ii. 29), and is noticed occasionally in the middle ages. (See *Holy City*, vol. ii. pp. 505—513.) In the same pile of buildings, now occupied by the Moslems, is shown the Coenaculum where our Lord is said to have instituted the Last Supper. Epiphanius mentions that this church was standing when Hadrian visited Jerusalem (*Pond. et Mens.* cap. xiv.), and there St. Cyril delivered some of his catechetical lectures (*Catech.* xvi. 4). It was in this part of the Upper City that Titus spared the houses and city wall to form barracks for the soldiers of the garrison. (Vide sup.)

Above the Pool of the Sultan, *the Aqueduct of Pontius Pilate*, already mentioned, crosses the Valley of Hinnom on nine low arches; and, being carried along the side of Mount Sion, crosses the Tyropoeon by the causeway into the Haram. The water is conveyed from Etham, or the Pools of Solomon, about two miles south of Bethlehem. (Josephus, *B. J.* ii. 9. § 4.)

The mention of this aqueduct recalls a notice of Strabo, which has been perpetually illustrated in the history of the city; viz., that it was *ἐντὸς μὲν εὔϋδρον ἐκτὸς δὲ παντελῶς διψηρόν ..... αὐτὸ μὲν εὔϋδρον, τὴν δὲ κύκλῳ χώραν ἔχον λυπρὰν καὶ ἄνυδρον.* (xvi. p. 723.) Whence this abundant supply was derived it is extremely difficult to imagine, as, of course, the aqueduct just mentioned would be immediately cut off in case of siege; and, without this, the inhabitants of the modern city are almost entirely dependent on rain-water. But the accounts of the various sieges, and the other historical notices, as well as existing remains, all testify to the fact that there was a copious source of living water introduced into the city from without, by extensive subterranean aqueducts. The subject requires, and would repay, a more accurate and careful investigation. (See *Holy City*, vol. ii. p. 453—505.)

Besides the other authorities cited or referred to in the course of this article, the principal modern sources for the topography of Jerusalem are the following:—Dr. Robinson's *Biblical Researches*, vols. i. and ii; Williams's *Holy City;* Dr. Wilson's *Lands of the Bible;* Dr. E. G. Schultz, *Jerusalem;* W. Krafft, *Die Topographie Jerusalems;* Carl Ritter, *Die Erdkunde von Asien, &c., Palästina*, Berlin, 1852, pp. 297—508; Dr. Titus Tobler, *Golgotha*, 1851; *Die Siloahquelle und die Oelberg*, 1852; *Denkblätter aus Jerusalem*, 1853; F. de Saulcy, *Voyage autour de la Mer Morte*, tom. 2. [G. W.]

COINS OF AELIA CAPITOLINA (JERUSALEM).

IESPUS. [JACCETANI.]

JEZREEL. [ESDRAELA.]

IGILGILI (Ἰγιλγιλί, Ptol.: *Jijeli*), a sea-port of Mauretania Caesariensis, on the Sinus Numidicus, made a Roman colony by Augustus. It stands on a headland, on the E. side of which a natural roadstead is formed by a reef of rocks running parallel to the shore; and it was probably in ancient times the emporium of the surrounding country. (*Itin. Ant.* p. 18; Plin. v. 2. s. 1; Ptol. iv. 2. § 11; Ammian. Marc. xxix. 5; *Tab. Peut.*; Shaw, *Travels*, p. 45; Barth, *Wanderungen, &c.*, p. 66.) [P. S.]

IGILIUM (*Giglio*), an island off the coast of

Etruria, directly opposite to the Mons Argentarius and the port of Cosa. It is, next to Ilva, the most considerable of the islands near the coast of Etruria, being 6 miles long by about 3 in breadth, and consists of a group of mountains of considerable elevation. Hence Rutilius speaks of its "silvosa cacumina." (*Itin.* i. 325.) From that author we learn that, when Rome was taken by Alaric (A. D. 410), a number of fugitives from the city took refuge in Igilium, the insular position of which afforded them complete security. Caesar also mentions it, during the Civil War, in conjunction with the neighbouring port of Cosa, as furnishing a few vessels to Domitius, with which that general sailed for Massilia. (Caes. *B. C.* i. 34; Plin. iii. 6. s. 12; Mela, ii. 7. § 19.) It is evident, therefore, that it was inhabited in ancient as well as modern times. [E. H. B.]

IGLE'TES, IGNE'TES. [HISPANIA.]

IGULLIO'NES, in European Sarmatia, mentioned by Ptolemy as lying between the Stavani and Coistoboci, and to the east of the Venedi (iii. 5. § 21). Now the Stavani lay south of the Galindae and Sudini, populations of which the locality is known to be that of the Galinditae and Sudovitae of the middle ages, i. e. the parts about the *Spirding-see* in East Prussia. This would place the Igulliones in the southern part of *Lithuania*, or in parts of *Grodno*, *Podolia*, and *Volhynia*, in the country of the *Jazwingi* of the thirteenth century, — there or thereabouts. Zeuss has allowed himself to consider some such form as Ἰτυγγίωνες as the truer reading; and, so doing, identifies the *names*, as well as the localities, of the two populations (Ἰτυγγίων, *Jacwing*),—the varieties of form being very numerous. The *Jacwings* were *Lithuanians*—Lithuanians as opposed to *Slavonians;* and in this lies their ethnological importance, inasmuch as the southward extension of that branch of the Sarmatian stock is undetermined. (See Zeuss, *s. v. Jazwingi.*) [R. G. L.]

IGU'VIUM (Ἰγούϊον: *Eth.* Iguvinus: *Gubbio*), an ancient and important town of Umbria, situated on the W. slope of the Apennines, but not far from their central ridge, and on the left of the Via Flaminia. Its existence as an ancient Umbrian city is sufficiently attested by its coins, as well as by a remarkable monument presently to be noticed; but we find no mention of it in history previous to the period of its subjection to Rome, and we only learn incidentally from Cicero that it enjoyed the privileged condition of a "foederata civitas," and that the terms of its treaty were of a highly favourable character. (Cic. *pro Balb.* 20, where the reading of the older editions, "Fulginatium," is certainly erroneous: see Orelli, *ad loc.*) The first mention of its name occurs in Livy (xlv. 43, where there is no doubt we should read Iguvium for "Igiturvium") as the place selected by the Roman senate for the confinement of the Illyrian king Gentius and his sons, when the people of Spoletium refused to receive them. Its natural strength of position, which was evidently the cause of its selection on this occasion, led also to its bearing a conspicuous part in the beginning of the civil war between Caesar and Pompey, when it was occupied by the praetor Minucius Thermus with five cohorts; but on the approach of Curio with three cohorts, Thermus, who was apprehensive of a revolt of the citizens, abandoned the town without resistance. (Caes. *B. C.* i. 12; Cic. *ad Att.* vii. 13, b.) Under the Roman dominion Iguvium seems to have lapsed into the condition of an ordinary municipal town: we find it noticed in an inscription as one of the "xv. populi Umbriae" (Orell. *Inscr.* 98), as well as by Pliny and Ptolemy (Plin. iii. 14. s. 19; Ptol. iii. 1. § 53), and it is probable that in Strabo also we should read Ἰγούιον for the corrupt name Ἴτουρον of the MSS. and earlier editions. (Strab. v. p. 227; Cluver. *Ital.* p. 626.) But its secluded position in the mountains, and at a distance of some miles from the line of the Via Flaminia, was probably unfavourable to its prosperity, and it does not seem to have been a place of much importance. Silius Italicus speaks of it as very subject to fogs (viii. 459). It early became the see of a bishop, and retained its episcopal rank throughout the middle ages, when it rose to be a place of considerably more importance than it had enjoyed under the Roman empire.

The modern city of *Gubbio* contains no ruins of ancient date; but about 8 miles to the E. of it, at a place now called *La Schieggia*, on the line of the ancient Flaminian Way, and just at the highest point of the pass by which it crosses the main ridge of the Apennines, some vestiges of an ancient temple are still visible, which are supposed with good reason to be those of the temple of Jupiter Apenninus. This is represented in the Tabula Peutingeriana as existing at the highest point of the pass, and is noticed also by Claudian in describing the progress of Honorius along the Flaminian Way. (Claudian, *de VI. Cons. Hon.* 504; *Tab. Peut.*) The oracle consulted by the emperor Claudius "in Apennino" (Treb. Poll. *Claud.* 10) may perhaps have reference to the same spot. Many bronze idols and other small objects of antiquity have been found near the ruins in question; but a far more important discovery, made on the same site in 1444, was that of the celebrated tables of bronze, commonly known as the Tabulae Eugubinae, which are still preserved in the city of *Gubbio*. These tables, which are seven in number, contain long inscriptions, four of which are in Etruscan characters, two in Latin, and one partially in Etruscan and partially in Latin characters; but the *language* is in all cases apparently the same, and is wholly distinct from that of the genuine Etruscan monuments on the one hand, as well as from Latin on the other, though exhibiting strong traces of affinity with the older Latin forms, as well as with the existing remains of the Oscan dialects. There can be no doubt that the language which we here find is that of the Umbrians themselves, who are represented by all ancient writers as nationally distinct both from the Etruscans and the Sabellian races. The ethnological and linguistic inferences from these important monuments will be more fully considered under the article UMBRIA. It is only of late years that they have been investigated with care; early antiquaries having formed the most extravagant theories as to their meaning: Lanzi had the merit of first pointing out that they evidently related only to certain sacrificial and other religious rites to be celebrated at the temple of Jupiter by the Iguvians themselves and some neighbouring communities. The interpretation has since been carried out, as far as our imperfect knowledge will permit, by Lepsius, Grotefend, and still more recently in the elaborate work of Aufrecht and Kirchhoff. (Lanzi, *Saggio di Lingua Etrusca*, vol. iii. pp. 657—768; Lepsius, *de Tabulis Eugubinis*, 1833; *Inscriptiones Umbricae et Oscae*, Lips. 1841; Grotefend, *Rudimenta Linguae Umbricae*, Hannov. 1835—1839; Aufrecht u. Kirchhoff, *Die Umbrischen Sprach. Denkmäler*, 4to. Berlin, 1849.) In the still im-

perfect state of our knowledge of the inscriptions in question, it is somewhat hazardous to draw from them positive conclusions as to proper names; but it seems that we may fairly infer the mention of several small towns or communities in the immediate neighbourhood of Iguvium. These were, however, in all probability not independent communities, but *pagi*, or villages dependent upon Iguvium itself. Of this description were: Akerunia or Acerronia (probably answering to the Latin Aquilonia), Clavernia (in Lat. Clavenna), Curia or Cureia, Casilum, Juviscum, Museia, Pierium (?), Tarsina, and Trebla or Trepla. The last of these evidently corresponds to the Latin name Trebia or Trebula, and may refer to the Umbrian town of that name: the Cureiati of the inscription are evidently the same with the Curiates of Pliny, mentioned by him among the extinct communities of Umbria (Plin. iii. 14. s. 19); while the names of Museia and Casilum are said to be still retained by two villages called *Museia* and *Casilo* in the immediate neighbourhood of *Gubbio*. *Chiaserna*, another neighbouring village, is perhaps the Claverna of the Tables.

The coins of Iguvium, which are of bronze, and of large size (so that they must be anterior to the reduction of the Italian As), have the legend IKVVINI, which is probably the original form of the name, and is found in the Tables, though we here meet also with the softened and probably later form "Ijovina," or "Iiovina." [E. H. B.]

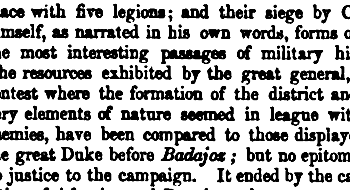
ILA, in Scotland, mentioned by Ptolemy (ii. 3. § 5) as the first river south of the Bernbium Promontorium = *Firth of Dornoch*. [R. G. L.]

ILARAU'GATAE. [HISPANIA; ILERGETES.]

ILARCU'RIS. [CARPETANI.]

ILARGUS, a river of Rhaetia Secunda, flowing from west to east, and emptying itself into the Danube. (Pedo Albinov. *Eleg. ad Liv.* 386, where the common reading is Itargus; others read Isargus, and regard it as the same as the river Atagis (Ἄταγις) mentioned by Strabo, iv. p. 207, with Groskurd's note, vol. i. p. 356.) It would, however, appear that Ilargus and Isargus were two different rivers, since in later writers we find, with a slight change, a river Iliilara (*Vita S. Magni*, 18), answering to the modern *Iller*, and another, Ysarche (Act. S. Cassiani, ap. Resch. *Annal. Sabion.* iv. 7), the modern *Eisach*, which flows in a southern direction, and empties itself into the Athesis. [L. S.]

ILA'TTIA (Ἰλαττία, Polyb. *ap. Steph. B. s. v.*), a town of Crete, which is probably the same as the ELATUS of Pliny (iv. 12). Some editions read Clatus, incorrectly classed by him among the inland towns. (Höck, *Kreta*, vol. i. p. 432.) [E. B. J.]



ILDUM. [EDETANI.]

ILEI. [HERMIONE.]

ILEOSCA. [OSCA.]

ILERCA'ONES (Ἰλερκάονες, Ptol. ii. 6. §§ 16, 64; Ilercaonenses, Liv. xxii. 21; Illurgavonenses, Caes. *B. C.* i. 60: in this, as in so many other Spanish names, the *c* and *g* are interchangeable), a people of Hispania Tarraconensis, occupying that portion of the sea-coast of EDETANIA which lay between the rivers UDUBA and IBERUS. Their exact boundaries appear to have been a little to the N. of each of these rivers. They possessed the town of Dertosa (*Tortosa*), on the left bank of the Iberus, and it was their chief city. [DERTOSA.] Their other towns, according to Ptolemy, were: — ADEBA (Ἄδεβα: *Amposta ?*), TIARIULIA (Τιαριουλία: Teari Julienses, *ap.* Plin. iii. 3. s. 4: *Trayguera*), BISCARGIS (Βισκαργίς; Biscargitani civ. Rom., Plin.: *Berrus*), SIGARRA (Σίγαῤῥα: *Segarra*, Marca, *Hisp.* ii. 8), CARTHAGO VETUS (Καρχηδὼν παλαιά: *Carta Vieja*, Marca, *ibid.*), and THEAVA (Θεαύα). Ukert also assigns to them, on the N. of the Iberus, TRAJA CAPITA, OLEASTRUM, TARRACO, and other places, which seem clearly to have belonged to the COSETANI. The name of their country, ILERCAVONIA, occurs on the coins of their city IBERA. [P. S.]

ILERDA (Ἰλέρδα, and rarely Εἰλέρδα; Hilerda, Auson. *Epist.* xxv. 59: *Eth.* Ἰλερδῖται, Ilerdenses: *Lerida*), the chief city of the ILERGETES, in Hispania Tarraconensis, is a place of considerable importance, historically as well as geographically. It stood upon an eminence, on the right (W.) bank of the river SICORIS (*Segre*), the principal tributary of the *Ebro*, and some distance above its confluence with the CINGA (*Cinca*); thus commanding the country between those rivers, as well as the great road from Tarraco to the NW. of Spain, which here crossed the Sicoris. (*Itin. Ant.* pp. 391, 452.) Its situation (*propter ipsius loci opportunitatem*, Caes. *B. C.* i. 38) induced the legates of Pompey in Spain to make it the key of their defence against Caesar, in the first year of the Civil War (B. C. 49). Afranius and Petreius threw themselves into the place with five legions; and their siege by Caesar himself, as narrated in his own words, forms one of the most interesting passages of military history. The resources exhibited by the great general, in a contest where the formation of the district and the very elements of nature seemed in league with his enemies, have been compared to those displayed by the great Duke before *Badajoz*; but no epitome can do justice to the campaign. It ended by the capitulation of Afranius and Petreius, who were conquered as much by Caesar's generosity as by his strategy. (Caes. *B. C.* i. 38, et seq.; Flor. iv. 12; Appian, *B. C.* ii. 42; Vell. Pat. ii. 42; Suet. *Caes.* 34; Lucan, *Pharsal.* iv. 11, 144.) Under the empire, Ilerda was a very flourishing city, and a municipium. It had a fine stone bridge over the Sicoris, on the foundations of which the existing bridge is built. In the time of Ausonius the city had fallen into decay; but it rose again into importance in the middle ages. (Strab. iii. p. 161; Horat. *Epist.* i. 20. 13; coins, *ap.* Florez, *Med.* ii. pp. 451, 646, iii. p. 73; Mionnet, vol. i. p. 44, Suppl. vol. i. p. 89; Sestini, pp. 161, 166; Eckhel, vol. i. p. 51.) [P. S.]

COIN OF ILERDA.

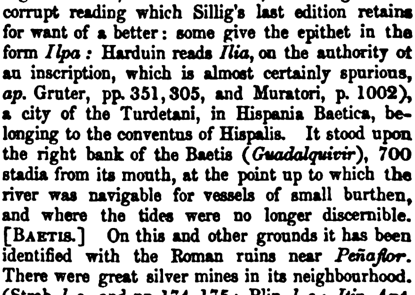
ILERGE'TES (Ἰλέργητες, Ptol. ii. 6. § 68; Liv. xxi. 23, 61, xxii. 22; Plin. iii. 3. s. 4; Ἰλουργῆτες, Polyb. iii. 35) or ILE'RGETAE (Ἰλεργέται, Strab. iii. p. 161: doubtless the Ἰλαραυγάται of Hecataeus, *ap.* Steph. B. *s. v.*), a people of Hispania Tarraconensis, extending on the N. of the Iberus (*Ebro*) from the river GALLICUS (*Gallego*) to both banks of the SICORIS (*Segre*), and as far E. as the RUBRICATUS (*Llobregat*); and having for neighbours the

EDETANI and CELTIBERI on the S., the VASCONES on the W., on the N. and NE. the small peoples at the foot of the Pyrenees, as the JACCETANI, CASTELLANI, AUSETANI, and CERRETANI, and on the SE. the COSETANI. Besides ILERDA, their chief cities were: — the colony of CELSA (*Velilla*, near *Xelsa*), OSCA (*Huesca*), famous in the story of Sertorius; and ATHANAGIA, which Livy (xxi. 61) makes their capital, but which no other writer names. On the great road from Italy into the N. of Spain, reckoning from Tarraco, stood ILERDA, 62 M. P.; TOLOUS, 32 M. P., in the conventus of Caesaraugusta, and with the civitas Romana (Plin.); PERTUSA, 18 M. P. (*Pertusa*, on the *Alcanadre*); OSCA, 19 M. P., whence it was 46 M. P. to Caesaraugusta (*Itin. Ant.* p. 391).

On a loop of the same road, starting from Caesaraugusta, were: — GALLICUM, 15 M. P., on the river Gallicus (*Zunra*, on the *Gallego*); BORTINAE, 18 M. P. (Βουρτίνα, Ptol.: *Torinos*); OSCA, 12 M. P.; CAUS, 29 M. P.; MENDICULEIA, 19 M. P. (probably *Monzon*); ILERDA, 22 M. P. (*Itin. Ant.* pp. 451, 452). On the road from Caesaraugusta, up the valley of the Gallicus, to Benearnum (*Orthes*) in Gallia, were, FORUM GALLORUM, 30 M. P. (*Gurrea*), and EBELLINUM, 22 M. P. (*Beilo*), whence it was 24 M. P. to the summit of the pass over the Pyrenees (*Itin. Ant.* p. 452). Besides these places, Ptolemy mentions BERGUSIA Βεργουσία: *Balaguer*), on the Sicoris; BERGIDUM (Βέργιδον); ERGA (Ἔργα); SUCCOSA (Σουκκῶσα); GALLICA FLAVIA (Γάλλικα Φλαουία: *Fraga ?*); and ORGIA (Ὠρκία, prob. *Orgagna*), a name also found on coins (Sestini, *Med. Isp.* p. 99), while the same coins bear the name of AESONES, and inscriptions found near the Sicoris have AESONENSIS and JESSONENSIS (Muratori, *Nov. Thes.* p. 1021, Nos. 2, 3; Spon, *Misc. Erud. Ant.* p. 188), with which the GESSORIENSES of Pliny may perhaps have some connection. BERSICAL is mentioned on coins (Sestini, p. 107), and OCTOGESA (prob. *La Granja*, at the confluence of the *Segre* and the *Ebro*) by Caesar (*B. C.* i. 61; Ukert, vol. ii. pt. 1. pp. 450—453). [P. S.]

ILE'SIUM. [EILESIUM.]

I'LICI or IL'LICI (*Itin. Ant.* p. 401; Ἰλικιὰς ἢ Ἰλλικίς, Ptol. ii. 6. § 62: *Elche*), an inland city of the Contestani, but near the coast, on which it had a port (Ἰλλικιτανὸς λιμήν, Ptol. *l. c.* § 14), lying just in the middle of the bay formed by the Pr. Saturni and Dianium, which was called Illicitanus Sinus. The city itself stood at the distance of 52 M. P. from Carthago Nova, on the great road to Tarraco (*Itin. Ant.* p. 401), and was a *Colonia immunis*, with the *jus Italicum* (Plin. iii. 3. s. 4; Paulus, *Dig.* viii. *de Cens.*). Its coins are extant of the period of the empire (Florez, *Med. de Esp.* vol. ii. p. 458; Sestini, p. 166; Mionnet, vol. i. p. 45, Suppl. vol. i. p. 90; Eckhel, vol. i. p. 51). Pliny adds to his mention of the place: *in eam contribuuntur Icositani.* (Ukert, vol. ii. pt. 1. pp. 402, 403.) [P. S.]



ILIENSES (Ἰλιεῖς, Paus.), a people of the interior of Sardinia, who appear to have been one of the most considerable of the mountain tribes in that island. Mela calls them "antiquissimi in ea populorum," and Pliny also mentions them among the "celeberrimi populorum" of Sardinia. (Mel. ii. 7. § 19; Plin. iii. 7. s. 13.) Pausanias, who terms them Ἰλιεῖς, distinctly ascribes to them a *Trojan* origin, and derives them from a portion of the companions of Aeneas, who settled in the island, and remained there in quiet until they were compelled by the Africans, who subsequently occupied the coasts of Sardinia, to take refuge in the more rugged and inaccessible mountain districts of the interior. (Paus. x. 17. § 7.) This tale has evidently originated in the resemblance of the name of Ilienses, in the form which the Romans gave it, to that of the Trojans; and the latter part of the story was invented to account for the apparent anomaly of a people that had come by sea dwelling in the interior of the island. What the native name of the Ilienses was, we know not, and we are wholly in the dark as to their real origin or ethnical affinities: but their existence as one of the most considerable tribes of the interior at the period of the Roman conquest, is well ascertained; and they are repeatedly mentioned by Livy as contending against the supremacy of Rome. Their first insurrection, in B.C. 181, was repressed, rather than put down, by the praetor M. Pinarius; and in B.C. 178, the Ilienses and Balari, in conjunction, laid waste all the more fertile and settled parts of the island; and were even able to meet the consul Ti. Sempronius Gracchus in a pitched battle, in which, however, they were defeated with heavy loss. In the course of the following year they appear to have been reduced to complete submission; and their name is not again mentioned in history. (Liv. xl. 19, 34, xli. 6, 12, 17.)

The situation and limits of the territory occupied by the Ilienses, cannot be determined: but we find them associated with the Balari and Corsi, as inhabiting the central and mountainous districts of the island. Their name is not found in Ptolemy, though he gives a long list of the tribes of the interior.

Many writers have identified the Ilienses with the Iolaenses or Iolai, who are also placed in the interior of Sardinia; and it is not improbable that they were really the same people, but ancient authors certainly make a distinction between the two. [E. H. B.]

ILIGA. [HELICE.]

I'LIPA. 1. (Ἴλιπα, Strab. iii. pp. 141, seq.; Ἰλλίπα ἢ Λαῖπα μεγάλη, Ptol. ii. 4. § 13; Ilipa cognomine Illa, Plin. iii. 1. s. 3, according to the corrupt reading which Sillig's last edition retains for want of a better: some give the epithet in the form *Ilpa*: Harduin reads *Ilia*, on the authority of an inscription, which is almost certainly spurious, *ap.* Gruter, pp. 351, 305, and Muratori, p. 1002), a city of the Turdetani, in Hispania Baetica, belonging to the conventus of Hispalis. It stood upon the right bank of the Baetis (*Guadalquivir*), 700 stadia from its mouth, at the point up to which the river was navigable for vessels of small burthen, and where the tides were no longer discernible. [BAETIS.] On this and other grounds it has been identified with the Roman ruins near *Peñaflor*. There were great silver mines in its neighbourhood. (Strab. *l. c.*, and pp. 174, 175; Plin. *l. c.*; *Itin. Ant.* p. 411; Liv. xxxv. 1; Florez, *Esp. S.* vol. vii.

COIN OF ILIPA.

p. 222, vol. ix. p. 24, vol. xii. p. 52; Morales, *Antig.* p. 88: Mentelle, *Esp. Anc.* p. 243; Coins ap. Florez, *Med. de Esp.* vol. ii. p. 468, vol. iii. p. 79; Mionnet, vol. i. p. 15, Suppl. vol. i. p. 28; Eckhel, vol. i. p. 22; Ukert, vol. ii. pt. 1. p. 374.)

2. [ILIPLA.] [P. S.]

I'LIPLA (Coins; ILIPA, *Itin. Ant.* p. 432; probably the Ἰλλίπουλα of Ptol. ii. 4. § 12: *Niebla*), a city of the Turdetani, in the W. of Hispania Baetica, on the high road from Hispalis to the mouth of the Anas. (Caro, *Antig. Hisp.* iii. 81; Coins ap. Florez, *Med.* vol. ii. p. 471; Mionnet, vol. i. p. 16, Suppl. vol. i. p. 29; Sestini, p. 53; Eckhel, vol. i. p. 22.) [P. S.]

ILI'PULA. 1. Surnamed LAUS by Pliny (iii. 1. s. 3), and MAGNA by Ptolemy (Ἰλλίπουλα μεγάλη, ii. 4. § 12), a city of the Turduli, in Baetica, between the Baetis and the coast, perhaps *Loxa*. (Ukert, vol. ii. pt. 1. p. 363.)

2. MINOR (prob. *Olvera* or *Lepe di Ronda*, near *Carmona*), a tributary town of the Turdetani, in Hispania Baetica, belonging to the conventus of Hispalis. (Plin. iii. 1. s. 3; Sestini, *Med. Esp.* p. 54.) [P. S.]

ILI'PULA MONS (Ἰλίπουλα), a range of mountains in Baetica, S. of the Baetis, mentioned only by Ptolemy (ii. 4. § 15), and supposed by some to be the *Sierra Nevada*, by others the *Sierra de Alhama* or the *Alpujarras*. [P. S.]

ILISSUS. [ATTICA, p. 323, a.]

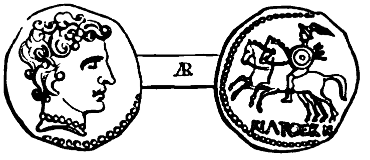
ILISTRA (Ἴλιστρα: *Illisera*), a town in Lycaonia, on the road from Laranda to Isaura, which is still in existence. (Hierocl. p. 675; *Concil. Ephes.* p. 534; *Concil. Chalced.* p. 674; Hamilton, *Researches*, vol. ii. p. 324; Leake, *Asia Minor*, p. 102.) [L. S.]

ILITHYIA (Εἰλειθυίας πόλις, Strab. xvii. p. 817; Εἰλιθυίας, Ptol. iv. 5. § 73), a town of the Egyptian Heptanomis, 30 miles NE. of Apollinopolis Magna. It was situated on the eastern bank of the Nile, in lat. 25° 3' N. According to Plutarch (*Isis et Osir.* c. 73), Ilithyia contained a temple dedicated to Bubastis, to whom, as to the Taurian Artemis, human victims were, even at a comparatively recent period, sacrificed. A bas-relief (Minutoi, p. 394, seq.) discovered in the temple of Bubastis at *El-Kab*, representing such a sacrifice, seems to confirm Plutarch's statement. The practice of human sacrifice among the Aegyptians is, indeed, called in question by Herodotus (ii. 45); yet that it once prevailed among them is rendered probable by Manetho's statement of a king named Amosis having abolished the custom, and substituted a waxen image for the human victim. (Porphyr. *de Abstinent.* ii. p. 223; Euseb. *Praep. Evang.* iv. 16; comp. Ovid, *Fast.* v. 621.) The singularity in Plutarch's story is the recent date of the imputed sacrifices. [W. B. D.]

ILITURGIS. [ILLITURGIS.]

ILIUM, I'LIOS (Ἴλιον, ἡ Ἴλιος: *Eth.* Ἰλιεύς, f. Ἰλιάς), sometimes also called TROJA (Τροία), whence the inhabitants are commonly called Τρῶες, and in the Latin writers Trojani. The existence of this city, to which we commonly give the name of Troy, cannot be doubted any more than the simple fact of the Trojan War, which was believed to have ended with the capture and destruction of the city, after a war of ten years, B. C. 1184. Troy was the principal city of the country called Troas. As the city has been the subject of curious inquiry, both in ancient and modern times, it will be necessary, in the first instance, to collect and analyse the statements of the ancient writers; and to follow up this discussion by an account of the investigations of modern travellers and scholars to identify the site of the famous city. Our most ancient authority are the Homeric poems; but we must at the very outset remark, that we cannot look upon the poet in every respect as a careful and accurate topographer; but that, admitting his general accuracy, there may yet be points on which he cannot be taken to account as if it had been his professed object to communicate information on the topography of Troy.

The city of Ilium was situated on a rising ground, somewhat above the plain between the rivers Scamander and Simois, at a distance, as Strabo asserts, of 42 stadia from the coast of the Hellespont. (Hom. *Il.* xx. 216, fol.; Strab. xiii. p. 596.) That it was not quite in the plain is clear from the epithets ἠνεμόεσσα, αἰπεινή, and ὀφρυόεσσα. Behind it, on the south-east, there rose a hill, forming a branch of Mount Ida, surmounted by the acropolis, called Pergamum (τὸ Πέργαμον, Hom. *Il.* iv. 508, vi. 512; also τὰ Πέργαμα, Soph. *Phil.* 347, 353, 611; or, ἡ Πέργαμος, Hom. *Il.* v. 446, 460.) This fortified acropolis contained not only all the temples of the gods (*Il.* iv. 508, v. 447, 512, vi. 88, 257, xxii. 172, &c.), but also the palaces of Priam and his sons, Hector and Paris (*Il.* vi. 317, 370, 512, vii. 345). The city must have had many gates, as may be inferred from the expression πᾶσαι πύλαι (*Il.* ii. 809, and elsewhere), but only one is mentioned by name, viz., the Σκαιαὶ πύλαι, which led to the camp of the Greeks, and must accordingly have been on the north-west part of the city, that is, the part just opposite the acropolis (*Il.* iii. 145, 149, 263, vi. 306, 392, xvi. 712, &c.). The origin of this name of the "left gate" is unknown, though it may possibly have reference to the manner in which the signs in the heavens were observed; for, during this process, the priest turned his face to the north, so that the north-west would be on his left hand. Certain minor objects alluded to in the Iliad, such as the tombs of Ilus, Aesyetes, and Myrine, the Scopie and Erineus, or the wild fig-tree, we ought probably not attempt to urge very strongly: we are, in fact, prevented from attributing much weight to them by the circumstance that the inhabitants of New Ilium, who believed that their town stood on the site of the ancient city, boasted that they could show close to their walls these doubtful vestiges of antiquity. (Strab. xiii. p. 599.) The walls of Ilium are described as lofty and strong, and as flanked with towers; they were fabled to have been built by Apollo and Poseidon (*Il.* i. 129, ii. 113, 288, iii. 153, 384, 386, vii. 452, viii. 519). These are the only points of the topography of Ilium derivable from the Homeric poems. The city was destroyed, according to the common tradition, as already remarked, about B. C. 1184; but afterwards we hear of a new Ilium, though we are not informed when and on what site it was built. Herodotus (vii. 42) relates that Xerxes, before invading Greece, offered sacrifices to Athena at Pergamum, the ancient acropolis of Priam; but this does not quite justify the inference that the new town of Ilium was then already in existence, and all that we can conclude from this passage is, that the people at that time entertained no doubt as to the sites of the ancient city and its acropolis. Strabo (xiii. p. 601) states that Ilium was restored during the last dynasty of the Lydian kings; that is, before the subjugation of Western Asia by the Persians: and both Xenophon (*Hellen.* i. 1. § 4) and Scylax (p. 35) seem to speak of Ilium as a town actually existing in their days.



It is also certain that in the time of Alexander New Ilium did exist, and was inhabited by Aeolians. (Demosth. *c. Aristocr.* p. 671; Arrian, *Anab.* i. 11. § 7; Strab. xiii. p. 593, foll.) This new town, which is distinguished by Strabo from the famous ancient city, was not more than 12 stadia, or less than two English miles, distant from the sea, and was built upon the spur of a projecting edge of Ida, separating the basins of the Scamander and Simois. It was at first a place of not much importance (Strab. xiii. pp. 593, 601), but increased in the course of time, and was successively extended and embellished by Alexander, Lysimachus, and Julius Caesar. During the Mithridatic War New Ilium was taken by Fimbria, in B. C. 85, on which occasion it suffered greatly. (Strab. xiii. p. 594; Appian, *Mithrid.* 53; Liv. *Epit.* lxxxiii.) It is said to have been once destroyed before that time, by one Charidemus (Plut. *Sertor.* 1.; Polyaen. iii. 14): but we neither know when this happened, nor who this Charidemus was. Sulla, however, favoured the town extremely, in consequence of which it rose, under the Roman dominion, to considerable prosperity, and enjoyed exemption from all taxes. (Plin. v. 33.) These were the advantages which the place owed to the tradition that it occupied the identical site of the ancient and holy city of Troy: for, it may here be observed, that no ancient author of Greece or Rome ever doubted the identity of the site of Old and New Ilium until the time of Demetrius of Scepsis, and Strabo, who adopted his views; and that, even afterwards, the popular belief among the people of Ilium itself, as well as throughout the world generally, remained as firmly established as if the criticism of Demetrius and Strabo had never been heard of. These critics were led to look for Old Ilium farther inland, because they considered the space between New Ilium and the coast far too small to have been the scene of all the great exploits described in the Iliad; and, although they are obliged to own that not a vestige of Old Ilium was to be seen anywhere, yet they assumed that it must have been situated about 42 stadia from the sea-coast. They accordingly fixed upon a spot which at the time bore the name of Ἰλιέων κώμη. This view, with its assumption of Old and New Ilium as two distinct places, does not in any way remove the difficulties which it is intended to remove; for the spase will still be found far too narrow, not to mention that it demands of the poet what can be demanded only of a geographer or an historian. On these grounds we, in common with the general belief of all antiquity, which has also found able advocates among modern critics, assume that Old and New Ilium occupied the same site. The statements in the Iliad which appear irreconcilable with this view will disappear if we bear in mind that we have to do with an entirely legendary story, which is little concerned about geographical accuracy.

The site of New Ilium (according to our view, identical with that of Old Ilium) is acknowledged by all modern inquirers and travellers to be the spot covered with ruins now called *Kissarlik*, between the villages of *Kum-kioi*, *Kalli-fatli*, and *Tchiblak*, a little to the west of the last-mentioned place, and not far from the point where the Simois once joined the Scamander. Those who maintain that Old Ilium was situated in a different locality cannot, of course, be expected to agree in their opinions as to its actual site, it being impossible to fix upon any one spot agreeing in every particular with the poet's description. Respecting the nationality of the inhabitants of Ilium, we shall have to speak in the article TROAS. (Comp. Spohn, *de Agro Trojano*, Lipsiae, 1814, 8vo.; Rennell, *Observations on the Topography of the Plain of Troy*, London, 1814, 4to.; Choiseul-Gouffier, *Voyage Pittoresque de la Grèce*, Paris, 1820, vol. ii. p. 177, foll.; Leake, *Asia Minor*, p. 275, foll.; Grote, *Hist. of Greece*, vol. i. p. 436, foll.; Eckenbrecher, *über die Lage des Homerischen Ilion*, Rhein. Mus. Neue Folge, vol. ii. pp. 1—49, where a very good plan of the district of Ilion is given. See also, Welcker, *Kleine Schriften*, vol. ii. p. 1, foll.; C. Maclaren, *Dissertation on the Topography of the Trojan War*, Edinburgh, 1822; Mauduit, *Découvertes dans la Troiade, &c.*, Paris & Londres, 1840.) [L. S.]

COIN OF ILIUM.

ILLI'BERIS (Ἰλλιβερίς, Ptol. ii. 4. § 11), or ILLI'BERI LIBERINI (Plin. iii. 1. s. 3), one of the chief cities of the Turduli, in Hispania Baetica, between the Baetis and the coast, is identified by inscriptions with *Granada*. It is probably the Elibyrge (Ἐλιβύργη) of Stephanus Byzantinus. (Inscr. *ap.* Gruter, p. 277, No. 3; Florez, *Esp. S.* vol. v. p. 4, vol. xii. p. 81; Mentelle, *Geogr. Comp. Esp. Mod.* p. 163; Coins *ap.* Florez, *Med.* vol. iii p. 75; Mionnet, vol. i. p. 15, Suppl. vol. i. p. 28 Eckhel, vol. i. p. 22.) [P. S.]

COIN OF ILLIBERIS (IN SPAIN).

ILLI'BERIS or ILLIBERRIS (Ἰλιβερίς), a town in the country of the Sordones, or Sardones, or Sordi, in Gallia Aquitania. The first place that Hannibal came to after passing through the Eastern Pyrenees was Illiberis. (Liv. xxi. 24.) He must have passed by *Bellegarde*. Illiberis was near a small river Illiberis, which is south of another small stream, the Ruscino, which had also on it a town named Ruscino. (Strab. p. 182.) Mela (ii. 5) and Pliny (iii. 4) speak of Illiberis as having once been a great place, but in their time being decayed. The road in the Antonine Itin. from Arelate (*Arles*) through the Pyrenees to Juncaria passes from Ruscino (*Castel-Rousillon*) to Ad Centuriones, and omits Illiberis; but the Table places Illiberis between Ruscino and Ad Centenarium, which is the same place as the Ad Centuriones of the Itin. [CENTURIONES, AD.] Illiberis is *Elne*, on the river *Tech*.

Illiberis or Illiberris is an Iberian name. There is another place, Climberris, on the Gallic side of the Pyrenees, which has the same termination. [AUSCI.] It is said that *berri*, in the Basque, means "a town." The site of Illiberis is fixed at *Elne* by the Itins.; and we find an explanation of

the name *Elne* in the fact that either the name of Illiberis was changed to Helena or Elena, or Helena was a camp or station near it. Constans was murdered by Magnentius "not far from the Hispaniae, in a castrum named Helena." (Eutrop. x. 9.) Victor's Epitome (c. 41) describes Helena as a town very near to the Pyrenees; and Zosimus has the same (ii. 42; and Orosius, vii. 29). It is said by some writers that Helena was so named after the place was restored by Constantine's mother Helena, or by Constantine, or by some of his children; but the evidence of this is not given. The river of Illiberis is the TICHIS of Mela, and TECUM of Pliny, now the *Tech*. In the text of Ptolemy (ii. 10) the name of the river is written Illeris.

Some geographers have supposed Illiberis to be *Collioure*, near *Port Vendre*, which is a plain mistake. [G. L.]

ILLICI. [ILICI.]

ILLI'PULA. [ILIPULA.]

ILLITURGIS, ILITURGIS, or ILITURGI (probably the 'Ιλουργίς of Ptol. ii. 4. § 9, as well as the 'Ιλουργεία of Polybius, *ap.* Steph. B. *s. v.*, and the 'Ιλυργία of Appian, *Hisp.* 32: *Eth.* Illurgitani), a considerable city of Hispania Baetica, situated on a steep rock on the N. side of the Baetis, on the road from Corduba to Castulo, 20 M. P. from the latter, and five days' march from Carthago Nova. In the Second Punic War it went over to the Romans, like its neighbours, Castulo and Mentesa, and endured two sieges by the Carthaginians, both of which were raised; but, upon the overthrow of the two Scipios, the people of Illiturgis and Castulo revolted to the Carthaginians, the former adding to their treason the crime of betraying and putting to death the Romans who had fled to them for refuge. At least such is the Roman version of their offence, for which a truly Roman vengeance was taken by Publius Scipio, B.C. 206. After a defence, such as might be expected when despair of mercy was added to national fortitude, the city was stormed and burnt over the slaughtered corpses of all its inhabitants, children and women as well as men. (Liv. xxiii. 49, xxiv. 41, xxvi. 17, 41, xxviii. 19, 20.) Ten years later it had recovered sufficiently to be again besieged by the Romans, and taken with the slaughter of all its adult male population. (Liv. xxxiv. 10.) Under the Roman empire it was a considerable city, with the surname of FORUM JULIUM. Its site is believed to have been in the neighbourhood of *Andujar*, where the church of S. Potenciana now stands. (*Itin. Ant.* p. 403; Plin. iii. 1. s. 3; Priscian. vi. p. 682, ed. Putsch; Morales, *Antig.* p. 56, b.; Mentelle, *Esp. Mod.* p. 183; Laborde, *Itin.* vol. ii. p. 113; Florez, *Esp. S.* vol. xii. p. 369; Coins, *ap.* Florez, *Med.* vol. iii. p. 81; Mionnet, vol. i. p. 16; Sestini, p. 56; Eckhel, vol. i. p. 23; Ukert, vol. ii. pt. 1. p. 380.) [P. S.]

ILLURCO or ILURCO, a town in the W. part of Hispania Baetica, near *Pinos*, on the river *Cubillas*. (Inscr. *ap.* Gruter, pp. 235, 406; Muratori, p. 1051, Nos. 2, 3; Florez, *Esp. S.* vol. xii. p. 98; Coins, *ap.* Florez, *Med. de Esp.* vol. ii. p. 472; Mionnet, vol. i. p. 17; Sestini, *Med. Isp.* p. 57; Eckhel, vol. i. p. 23.) [P. S.]

ILLURGAVONENSES. [ILERCAONES.]

ILLYRIA, [ILLYRICUM.]

ILLY'RICUM (τὸ 'Ιλλυρικόν: *Eth.* and *Adj.* 'Ιλλύριος, 'Ιλλυρικός, Illyrius, Illyricus), the eastern coast of the Adriatic sea.

1. *The Name.* — The Greek name is ILLYRIS ('Ιλλυρίς, Hecat. *Fr.* 65; Polyb. iii. 16; Strab. ii. pp. 108, 123, 129, vii. p. 317; Dionys. Per. 96; Herodian, vi. 7; Apollod. ii. 1. § 3; Ptol. viii. 7. § 1), but the more ancient writers usually employ the name of the people, οἱ 'Ιλλύριοι (ἐν τοῖς 'Ιλλυρίοις, Herod. i. 196, iv. 49; Scyl. pp. 7, 10). The name ILLYRIA ('Ιλλυρία) very rarely occurs. (Steph. B. *s. v.*; Prop. i. 8. 2.) By the Latin writers it generally went under the name of "Illyricum" (Caes. *B. G.* ii. 35, iii. 7; Varr. *R. R.* ii. 10. § 7; Cic. *ad Att.* x. 6; Liv. xliv. 18, 26; Ovid, *Trist.* i. 3. 121; Mela, ii. 3. § 13; Tac. *Ann.* i. 5, 46, ii. 44, 53, *Hist.* i. 2, 9, 76; Flor. i. 18, iv. 2; Just. vii. 2; Suet. *Tib.* 16; Vell. Pat. ii. 109), and the general assent of geographers has given currency to this form.

2. *Extent and Limits.* — The Roman Illyricum was of very different extent from the Illyris or οἱ 'Ιλλύριοι of the Greeks, and was itself not the same at all times, but must be considered simply as an artificial and geographical expression for the borderers who occupied the E. coast of the Adriatic, from the junction of that gulf with the Ionic sea, to the estuaries of the river Po. The earliest writer who has left any account of the peoples inhabiting this coast is Scylax; according to whom (c. 19—27) the Illyrians, properly so called (for the Liburnians and Istrians beyond them are excluded), occupy the sea-coast from Liburnia to the Chaonians of Epirus. The Bulini were the northernmost of these tribes, and the Amantini the southernmost. Herodotus (i. 196) includes under the name, the Heneti or Veneti, who lived at the head of the gulf; in another passage (iv. 49) he places the Illyrians on the tributary streams of the *Morava* in *Servia*.

It is evident that the Gallic invasions, of which there are several traditions, threw the whole of these districts and their tribes into such confusion, that it is impossible to harmonise the statements of the Periplus of Scylax, or the far later Scymnus of Chios, with the descriptions in Strabo and the Roman historians.

In consequence of this immigration of the Gauls, Appian has confounded together Gauls, Thracians, Paeonians, and Illyrians. A legend which he records (*Illyr.* 1) makes Celtus, Illyrius, and Gala, to have been three brothers, the sons of the Cyclops Polyphemus, and is grounded probably on the intermixture of Celtic tribes (the Boii, the Scordisci, and the Taurisci) among the Illyrians: the Iapodes, a tribe on the borders of Istria, are described by Strabo (iv. p. 143) as half Celts, half Illyrians. On a rough estimate, it may be said that, in the earliest times, Illyricum was the coast between the Naro (*Neretva*) and the Drilo (*Drin*), bounded on the E. by the Triballi. At a later period it comprised all the various tribes from the Celtic Taurisci to the Epirots and Macedonians, and eastward as far as Moesia, including the Veneti, Pannonians, Dalmatians, Dardani, Autariatae, and many others. This is Illyricum in its most extended meaning in the ancient writers till the 2nd century of the Christian era: as, for instance, in Strabo (vii. pp. 313—319), during the reign of Augustus, and in Tacitus (*Hist.* i. 2, 9, 76, ii. 86; comp. Joseph. *B. J.* ii. 16), in his account of the civil wars which preceded the fall of Jerusalem. When the boundary of Rome reached to the Danube, the "Illyricus Limes" (as it is designated in the "Scriptores Historiae Augustae"), or "Illyrian frontier," comprised the following provinces: — Noricum, Pannonia Superior, Pannonia

Inferior, Moesia Superior, Moesia Inferior, Dacia, and Thrace. This division continued till the time of Constantine, who severed from it Lower Moesia and Thrace, but added to it Macedonia, Thessaly, Achaia, Old and New Epirus, Praevalitana, and Crete. At this period it was one of the four great divisions of the Roman empire under a "Praefectus Praetorio," and it is in this signification that it is used by the later writers, such as Sextus Rufus, the "Auctor Notitiae Dignitatum Imperii," Zosimus, Jornandes, and others. At the final division of the Roman empire, the so-called "Illyricum Orientale," containing the provinces of Macedonia, Thessaly, Epirus, Hellas, New Epirus, Crete, and Praevalitana, was incorporated with the Lower Empire; while "Illyricum Occidentale" was united with Rome, and embraced Noricum, Pannonia, Dalmatia, Savia, and Valeria Ripensis.

A. ILLYRIS BARBARA or ROMANA, was separated from Istria by the small river Arsia (*Arsa*), and bounded S. and E. by the Drilo, and on the N. by the Savus; consequently it is represented now by part of *Croatia*, all *Dalmatia*, the *Herzegovina*, *Monte-Negro*, nearly all *Bosnia*, and part of *Albania*.

Illyris Romana was divided into three districts, the northern of which was IAPYDIA, extending S. as far as the Tedanius (*Zermagna*); the strip of land extending from the Arsia to the Titius (*La Kerka*) was called LIBURNIA, or the whole of the north of what was once Venetian Dalmatia; the territory of the DALMATAE was at first comprehended between the Naro and the Tilurus or Nestus: it then extended to the Titius. A list of the towns will be found under the several heads of IAPYDIA, LIBURNIA, and DALMATIA.

B. ILLYRIS GRAECA, which was called in later times EPIRUS NOVA, extended from the river Drilo to the SE., up to the Ceraunian mountains, which separated it from Epirus Proper. On the N. it was bounded by the Roman Illyricum and Mount Scordus, on the W. by the Ionian sea, on the S. by Epirus, and on the E. by Macedonia; comprehending, therefore, nearly the whole of modern *Albania*. Next to the frontier of Chaonia is the small town of AMANTIA, and the people of the AMANTIANS and BULLIONES. They are followed by the TAULANTII, who occupied the country N. of the AOUS — the great river of S. Macedonia, which rises in Mount Lacmon, and discharges itself into the Adriatic — as far as Epidamnus. The chief towns of this country were APOLLONIA, and EPIDAMNUS or DYRRHACHIUM. In the interior, near the Macedonian frontier, there is a considerable lake, LACUS LYCHNITIS, from which the Drilo issues. Ever since the middle ages there has existed in this part the town of Achrida, which has been supposed to be the ancient LYCHNIDUS, and was the capital of the Bulgarian empire, when it extended from the Euxine as far as the interior of Aetolia, and comprised S. Illyricum, Epirus, Acarnania, Aetolia, and a part of Thessaly. During the Roman period the DASSARETAE dwelt there; the neighbouring country was occupied by the AUTARIATAE, who are said to have been driven from their country in the time of Cassander, when they removed as fugitives with their women and children into Macedonia. The ARDIAEI and PARTHINI dwelt N. of the Autariatae, though not at the same time, but only during the Roman period. SCODRA (*Scutari*), in later times the capital of Praevalitana, was unknown during the flourishing period of Grecian history, and more properly belongs to Roman Illyricum; as LISSUS, which was situated at the mouth of the Drilo, was fixed upon by the Romans as the border town of the Illyrians in the S., beyond which they were not allowed to sail with their privateers. Internal communication in this Illyricum was kept up by the VIA CANDAVIA or EGNATIA, the great line which connected Italy and the East — Rome, Constantinople, and Jerusalem. A road of such importance, as Colonel Leake remarks (*North. Greece*, vol. iii. p. 311), and on which the distance had been marked with milestones soon after the Roman conquest of Macedonia, we may believe to have been kept in the best order as long as Rome was the centre of a vigorous authority; but it probably shared the fate of many other great establishments in the decline of the empire, and especially when it became as much the concern of the Byzantine as of the Roman government. This fact accounts for the discrepancies in the Itineraries; for though Lychnidus, Heracleia, and Edessa, still continued, as on the Candavian Way described by Polybius (*ap. Strab.* vii. pp. 322, 323), to be the three principal points between Dyrrhachium and Thessalonica (nature, in fact, having strongly drawn that line in the valley of the Genusus), there appears to have been a choice of routes over the ridges which contained the boundaries of Illyricum and Macedonia. By comparing the Antonine Itinerary, the Peutingerian Table, and the Jerusalem Itinerary, the following account of stations in Illyricum is obtained: —

Dyrrhachium or Apollonia.

3. *Physical Geography.* — The Illyrian range of mountains, which traverses *Dalmatia* under the name of *Mount Prolog*, and partly under other names (Mons Albius, Bebius), branches off in *Carniola* from the Julian Alps, and then, at a considerable distance from the sea, stretches towards Venetia, approaches the sea beyond Aquileia near *Trieste*, and forms Istria. After passing through Istria as a lofty mountain, though not reaching the snow line, and traversing *Dalmatia*, which it separates from *Bosnia*, it extends into *Albania*. It is a limestone range, and, like most mountains belonging to that formation, much broken up; hence the bold and picturesque coast runs out into many promontories, and is flanked by numerous islands.

These islands appear to have originated on the breaking up of the lower grounds by some violent action, leaving their limestone summits above water. From the salient position of the promontory terminating in *Punta della Planca*, they are divided into two distinct groups, which the Greek geographers called ABSYRTIDES and LIBURNIDES. They trend NW. and SE., greatly longer than broad, and form various fine channels, called "canale," and named from the nearest adjacent island: these being bold,

with scarcely a hidden danger, give ships a secure passage between them. *Cherso*, *Osero*, *Lussin*, *Sansego* (Absyrtides), abound with fossil bones. The bone-breccia of these islands appears to be the same conglomerate with those of *Gibraltar*, *Cerigo*, and other places in the Mediterranean. The Liburnian group (*Λιβυρνίδες νῆσοι*, Strab. ii. p. 124, vii. pp. 315, 317; "Liburnicae Insulae," Plin. iii. 30), LISSA (*Grossa*), BRATTIA (*Brazza*), ISSA (*Lissa*), MELITA (*Meleda*), CORCYRA NIGRA (*Curzola*), PHAROS (*Lesina*) and OLYNTA (*Solta*), have good ports, but are badly supplied with drinkable water, and are not fertile. The mountainous tract, though industriously cultivated towards the shore, is for the most part, as in the days of Strabo (*l. c.*), wild, rugged, and barren. The want of water and the arid soil make Dalmatia unfit for agriculture; and therefore of old, this circumstance, coupled with the excellency and number of the harbours, made the natives more known for piracy than for commercial enterprise. A principal feature of the whole range is that called Monte-Negro (*Czernagora*), consisting chiefly of the cretaceous or Mediterranean limestone, so extensively developed from the Alps to the Archipelago, and remarkable for its craggy character. The general height is about 3000 feet, with a few higher summits, and the slopes are gentle in the direction of the inclination of the "strata," with precipices at the outcroppings, which give a fine variety to the scenery.

There is no sign of volcanic action in Dalmatia; and the Nymphaeum near Apollonia, celebrated for the flames that rose continually from it, has probably no reference to anything of a volcanic nature, but is connected with the beds of asphaltum, or mineral pitch, which occur in great abundance in the nummulitic limestone of Albania.

The coast of what is now called *Middle Albania*, or the Illyrian territory, N. of Epirus, is, especially in its N. portion, of moderate height, and in some places even low and unwholesome, as far as AULON (*Valona* or *Avlona*), where it suddenly becomes rugged and mountainous, with precipitous cliffs descending rapidly towards the sea. This is the *Khimara* range, upwards of 4000 feet high, dreaded by ancient mariners as the Acro-Ceraunian promontory. The interior of this territory was much superior to N. Illyricum in productiveness: though mountainous, it has more valleys and open plains for cultivation. The sea-ports of Epidamnus and Apollonia introduced the luxuries of wine and oil to the barbarians; whose chiefs learnt also to value the woven fabrics, the polished and carved metallic work, the tempered weapons, and the pottery which was furnished them by Grecian artisans. Salt fish, and, what was of more importance to the inland residents on lakes like that of Lychnidus, salt itself, was imported. In return they supplied the Greeks with those precious commodities, cattle and slaves. Silver mines were also worked at DAMASTIUM. Wax and honey were probably articles of export; and it is a proof that the natural products of Illyria were carefully sought out, when we find a species of iris peculiar to the country collected and sent to Corinth, where its root was employed to give the special flavour to a celebrated kind of aromatic unguent. Grecian commerce and intercourse not only tended to civilise the S. Illyrians beyond their northern brethren, who shared with the Thracian tribes the custom of tattooing their bodies and of offering human sacrifices; but through the introduction of Grecian exiles, made them acquainted with Hellenic ideas and legends, as may be seen by the tale of Cadmus and Harmonia, from whom the chiefs of the Illyrian Encheleees professed to trace their descent. (Comp. Grote, *Hist. of Greece*, vol. iv. pp. 1—10, and the authorities quoted there; to which may be added, Wilkinson, *Dalmatia and Montenegro*, vol. i. pp. 38—42; J. F. Neigebaur, *Die Sudslaven*, Leipzig, 1851; Niebuhr, *Lect. on Ethnog. and Geog.* vol. i. pp. 297—314; Smyth, *The Mediterranean*, pp. 40—45; Hahn, *Albanesische Studien*, Wien, 1854.)

4. *Race and National Character.*—Sufficient is not known either of the language or customs of the Illyrians, by which their race may be ascertained. The most accurate among the ancient writers have always distinguished them as a separate nation, or group of nations, from both the Thracians and Epirots.

The ancient Illyrians are unquestionably the ancestors of the people generally known in Europe by the name Albanians, but who are called by the Turks "Arnauts," and by themselves "Skipetares," which means in their language "mountaineers," or "dwellers on rocks," and inhabit the greater part of ancient Illyricum and Epirus. They have a peculiar language, and constitute a particular race, which is very distinct from the Slavonian inhabitants who border on them towards the N. The ancients, as has been observed, distinguished the Illyrians from the Epirots, and have given no intimations that they were in any way connected. But the Albanians, who inhabit both Illyricum and Epirus, are one people, whose language is only varied by slight modifications of dialect. The Illyrians appear to have been pressed southwards by Slavonian hordes, who settled in Dalmatia. Driven out from their old territories, they extended themselves towards the S., where they now inhabit many districts which never belonged to them in former times, and have swallowed up the Epirots, and extinguished their language. According to Schafarik (*Slav. Alt* vol. i. p. 31) the modern Albanian population is 1,200,000.

Ptolemy is the earliest writer in whose works the name of the Albanians has been distinctly recognised. He mentions (iii. 13. § 23) a tribe called ALBANI (Ἀλβανοί) and a town ALBANOPOLIS (Ἀλβανόπολις), in the region lying to the E. of the Ionian sea; and from the names of places with which Albanopolis is connected, it appears clearly to have been in the S. part of the Illyrian territory, and in modern *Albania*. There are no means of forming a conjecture how the name of this obscure tribe came to be extended to so considerable a nation. The latest work upon the Albanian language is that of F. Ritter von Xylander (*Die Sprache der Albanesen oder Skhipetaren*, 1835), who has elucidated this subject, and established the principal facts upon a firm basis. An account of the positions at which Xylander arrived will be found in Prichard (*The Physical History of Mankind*, vol. iii. pp. 477—482).

As the Dalmatian Slaves have adopted the name Illyrians, the Slavonian language spoken in Dalmatia, especially at *Ragusa*, is also called Illyrian; and this designation has acquired general currency; but it must always be remembered that the ancient Illyrians were in no way connected with the Slave races. In the practice of tattooing their bodies, and offering human sacrifices, the Illyrians resembled the Thracians (Strab. vii. p. 315; Herod. v. 6): the

custom of one of their tribes, the Dalmatians, to have a new division of their lands every eighth year (Strab. *l. c.*), resembled the well-known practice of the Germans, only advanced somewhat further towards civilised life. The author of the Periplus ascribed to Scylax (*l. c.*) speaks of the great influence enjoyed by their women, whose lives, in consequence, he describes as highly licentious. The Illyrian, like the modern Albanian Skipetar, was always ready to fight for hire; and rushed to battle, obeying only the instigation of his own love of fighting, or vengeance, or love of blood, or craving for booty. But as soon as the feeling was satisfied, or overcome by fear, his rapid and impetuous rush was succeeded by an equally rapid retreat or flight. (Comp. Grote, *Hist. of Greece*, vol. vi. p. 609.) They did not fight in the phalanx, nor were they merely ψιλοί; they rather formed an intermediate class between them and the phalanx. Their arms were short spears and light javelins and shields ("peltastae"); the chief weapon, however, was the μάχαιρα, or Albanian knife. Dr. Arnold has remarked (*Hist. of Rome*, vol. i. p. 495),—"The eastern coast of the Adriatic is one of those ill-fated portions of the earth which, though placed in immediate contact with civilisation, have remained perpetually barbarian." But Scymnus of Chios (comp. Arnold, vol. iii. p. 477), writing of the Illyrians about a century before the Christian era, calls them "a religious people, just and kind to strangers, loving to be liberal, and desiring to live orderly and soberly." After the Roman conquest, and during its dominion, they were as civilised as most other peoples reclaimed from barbarism. The emperor Diocletian and St. Jerome were both Illyrians. And the palace at *Spalato* is the earliest existing specimen of the legitimate combination of the round arch and the column; and the modern history of the eastern shores of the Adriatic begins with the relations established by Heraclius with the Serbs or W. Slaves, who moved down from the Carpathians into the provinces between the Adriatic and the Danube. The states which they constituted were of considerable weight in the history of Europe, and the kingdoms, or bannats, of Croatia, Servia, Bosnia, Rascia, and Dalmatia, occupied for some centuries a political position very like that now held by the secondary monarchical states of the present day. The people of Narenta, who had a republican form of government, once disputed the sway of the Adriatic with the Venetians; Ragusa, which sent her Argosies (Ragosies) to every coast, never once succumbed to the winged Lion of St. Mark; and for some time it seemed probable that the Servian colonies established by Heraclius were likely to take a prominent part in advancing the progress of European civilisation. (Comp. Finlay, *Greece under the Romans*, p. 409.)

5. *History*.—The Illyrians do not appear in history before the Peloponnesian War, when Brasidas and Perdiccas retreated before them, and the Illyrians, for the first time, probably, had to encounter Grecian troops. (Thuc. iv. 124—128.) Nothing is heard of these barbarians afterwards, till the time of Philip of Macedon, by whose vigour and energy their incursions were first repressed, and their country partially conquered. Their collision with the Macedonians appears to have risen under the following circumstances. During the 4th century before Christ a large immigration of Gallic tribes from the westward was taking place, invading the territory of the more northerly Illyrians, and driving them further to the south. Under Bardylis the Illyrians, who had formed themselves into a kingdom, the origin of which cannot be traced, had extended themselves over the towns, villages, and plains of W. Macedonia (Diod. xvi. 4; Theopomp. *Fr.* 35, ed. Didot.; Cic. *de Off.* ii. 11; Phot. *Bibl.* p. 530, ed. Bekker; Liban. *Orat.* xxviii. p. 632). As soon as the young Philip of Macedon came to the throne, he attacked these hereditary enemies B. C. 360, and pushed his successes so vigorously, as to reduce to subjection all the tribes to the E. of Lychnidus. (Comp. Grote, *Hist. of Greece*, vol. xi. pp. 302—304.) A state was formed the capital of which was probably near Ragusa, but the real Illyrian pirates with whom the Romans came in collision, must have occupied the N. of Dalmatia. Rhodes was still a maritime power; but by B.C. 233 the Illyrians had become formidable in the Adriatic, ravaging the coasts, and disturbing the navigation of the allies of the Romans. Envoys were sent to Teuta, the queen of the Illyrians, demanding reparation: she replied, that piracy was the habit of her people, and finally had the envoys murdered. (Polyb. ii. 8; Appian, *Illyr.* 7; Zonar. viii. 19; comp. Plin. xxxiv. 11.) A Roman army for the first time crossed the Ionian gulf, and concluded a peace with the Illyrians upon honourable terms, while the Greek states of Corcyra, Apollonia, and Epidamnus, received their liberty as a gift from Rome.

On the death of Teuta, the traitor Demetrius of Pharos made himself guardian of Pineus, son of Agron, and usurped the chief authority in Illyricum: thinking that the Romans were too much engaged in the Gallic wars, he ventured on several piratical acts. This led to the Second Illyrian War, B.C. 219, which resulted in the submission of the whole of Illyricum. Demetrius fled to Macedonia, and Pineus was restored to his kingdom. (Polyb. iii. 16, 18; Liv. xxii. 33; App. *Illyr.* 7, 8; Flor. ii. 5; Dion Cass. xxxiv. 46, 151; Zonar. viii. 20.) Pineus was succeeded by his uncle Scerdilaidas, and Scerdilaidas by his son Pleuratus, who, for his fidelity to the Roman cause during the Macedonian War, was rewarded at the peace of 196 by the addition to his territories of Lychnidus and the Parthini, which had before belonged to Macedonia (Polyb. xviii. 30, xxi. 9, xxii. 4; Liv. xxxi. 28, xxxii. 34.) In the reign of Gentius, the last king of Illyricum, the Dalmatae revolted, B. C. 180; and the praetor L. Anicius, entering Illyricum, finished the war within thirty days, by taking the capital Scodra (*Scutari*), into which Gentius had thrown himself, B. C. 168. (Polyb. xxx. 13; Liv. xliv. 30—32, xlv. 43; Appian, *Illyr.* 9; Eutrop. iv. 6.) Illyricum, which was divided into three parts, became annexed to Rome. (Liv. xlv. 26.) The history of the Roman wars with DALMATIA, IAPYDIA, and LIBURNIA, is given under those heads.

In B. C. 27 Illyricum was under the rule of a proconsul appointed by the senate (Dion Cass. liii. 12): but the frequent attempts of the people to recover their liberty showed the necessity of maintaining a strong force in the country; and in B. C. 11 (Dion Cass. liv. 34) it was made an imperial province, with P. Cornelius Dolabella for "legatus" ("leg. pro. pr.," Orelli, *Inscr.* no. 2365, comp. no. 3128; Tac. *Hist.* ii. 86; Marquardt, in Becker's *Röm. Alt.* vol. iii. pt. i. pp. 110—115). A large region, extending far inland towards the valley of the *Save* and the *Drave*, contained bodies of soldiery

who were stationed in the strong links of the chain of military posts which was scattered along the frontier of the Danube. Inscriptions are extant on which the records of its occupation by the 7th and 11th legions can still be read. (Orelli, nos. 3452, 3553, 4995, 4996; comp. Joseph. *B. J.* ii. 16; Tac. *Ann.* iv. 5, *Hist.* ii. 11. 85.) There was at that time no seat of government or capital; but the province was divided into regions called "conventus:" each region, of which there were three, named from the towns of SCARDONA, SALONA, and NARONA, was subdivided into numerous "decuriae." Thus the "conventus" of Salona had 382 "decuriae." (Plin. iii. 26.) IADERA, SALONA, NARONA, and EPIDAURUS, were Roman "coloniae;" APOLLONIA and CORCYRA, "civitates liberae." (Appian, *Illyr.* 8; Polyb. ii. 11.) The jurisdiction of the "pro-praetor," or "legatus," does not appear to have extended throughout the whole of Illyricum, but merely over the maritime portion. The inland district either had its own governor, or was under the praefect of Pannonia. Salona in later times became the capital of the province (Procop. *B. G.* i. 15; Hierocles), and the governor was styled "praeses." (Orelli, nos. 1098, 3599.) The most notable of these were Dion Cassius the historian, and his father Cassius Apronianus.

The warlike youth of Pannonia and Dalmatia afforded an inexhaustible supply of recruits to the legions stationed on the banks of the Danube; and the peasants of Illyricum, who had already given Claudius, Aurelian, and Probus to the sinking empire, achieved the work of rescuing it by the elevation of Diocletian and Maximian to the imperial purple. (Comp. Gibbon, c. xiii.)

After the final division of the empire, Marcellinus, "Patrician of the West," occupied the maritime portion of W. Illyricum, and built a fleet which claimed the dominion of the Adriatic. [DALMATIA.] E. Illyricum appears to have suffered so much from the hostilities of the Goths and the oppressions of Alaric, who was declared, A. D. 398, its master-general (comp. Claudian, *in Eutrop.* ii. 216, *de Bell. Get.* 535), that there is a law of Theodosius II. which exempts the cities of Illyricum from contributing towards the expenses of the public spectacles at Constantinople. (Theod. cod. x. tit. 8. s. 7.) But though suffering from these inroads, casual encounters often showed that the people were not destitute of courage and military skill. Attila himself, the terror of both Goths and Romans, was defeated before the town of Azimus, a frontier fortress of Illyricum. (Priscus, p. 143, ed. Bonn; comp. Gibbon, c. xxxiv.; Finlay, *Greece under the Romans*, p. 203.) The coasts of Illyricum were considered of great importance to the court of Constantinople. The rich produce transported by the caravans which reached the N. shores of the Black Sea was then conveyed to Constantinople to be distributed through W. Europe. Under these circumstances, it was of the utmost consequence to defend the two points of Thessalonica and Dyrrhachium, the two cities which commanded the extremities of the usual road between Constantinople and the Adriatic. (Tafel, *de Thessalonica*, p. 221; Hullman, *Geschich. des Byzantischen Handels*, p. 76.) The open country was abandoned to the Avars and the E. Slaves, who made permanent settlements even to the S. of the Via Egnatia; but none of these settlements were allowed to interfere with the lines of communication, without which the trade of the West would have been lost to the Greeks. Heraclius, in his plan for circumscribing the ravages of the northern enemies of the empire, occupied the whole interior of the country, from the borders of Istria to the territory of Dyrrhachium, with colonies of the Serbs or W. Slaves. From the settlement of the Servian Slavonians within the bounds of the empire we may therefore date, as has been said above, the earliest encroachments of the Illyrian or Albanian race on the Hellenic population of the South. The singular events which occurred in the reign of Heraclius are not among the least of the elements which have gone to make up the condition of the modern Greek nation. [E. B. J.]

ILORCI. [ELIOCROCA.]

ILU'CIA. [ORETANI.]

ILURATUM (Ἰλούρατον, Ptol. iii. 6. § 6), a town in the interior of the Tauric Chersonese, probably somewhat to the N. of *Kaffa*. [E. B. J.]

ILURCA'ONES. [ILERCAONES.]

ILURCIS. [GRACCURRIS.]

ILURGEIA, ILURGIS. [ILLITURGIS.]

ILU'RGETAE. [ILERGETES.]

ILURO, in Gallia Aquitania, is placed by the Antonine Itin. on the road from Caesaraugusta, in Spain, to Beneharnum. [BENEHARNUM.] Iluro is between Aspaluca [ASPALUCA] and Beneharnum. The modern site of Iluro is *Oléron*, which is the same name. *Oléron* is in the department of *Basses Pyrénées*, at the junction of the *Gave d'Aspe*, the river of Aspaluca, and the *Gave d'Ossau*, which by their union form the *Gave d'Oléron*. *Gave* is the name in these parts for the river-valleys of the Pyrenees. In the Notitia of Gallia, Iluro is the Civitas Elloronensium. The place was a bishop's see from the commencement of the sixth century. [G. L.]

I'LURO. 1. (*Alora*), a city of Baetica, situated on a hill. (Inscr. *ap.* Carter, *Travels*, p. 161; Ukert, vol. ii. pt. 1. p. 358.)

2. [LAEETANI.] [P. S.]

ILU'ZA (τὰ Ἴλουζα), a town in Phrygia Pacatiana, which is mentioned only in very late writers, and is probably the same as Aludda in the Table of Peutinger; in which case it was situated between Sebaste and Acmonia, 25 Roman miles to the east of the latter town. It was the see of a Christian bishop. (Hierocl. p. 667; *Concil. Constant.* iii. p. 534.) [L. S.]

ILVA (Ἰλούα, Ptol.: *Elba*), called by the Greeks AETHALIA (Αἰθαλία, Strab., Diod.; Αἰθάλεια, Ps. Arist., Philist. *ap. Steph. B.*), an island in the Tyrrhenian Sea, lying off the coast of Etruria, opposite to the headland and city of Populonium. It is much the most important of the islands in this sea, situated between Corsica and the mainland, being about 18 miles in length, and 12 in its greatest breadth. Its outline is extremely irregular, the mountains which compose it, and which rise in some parts to a height of above 3000 feet, being indented by deep gulfs and inlets, so that its breadth in some places does not exceed 3 miles. Its circuit is greatly overstated by Pliny at 100 Roman miles: the same author gives its distance from Populonium at 10 miles, which is just about correct; but the width of the strait which separates it from the *nearest* point of the mainland (near *Piombino*) does not much exceed 6, though estimated by Diodorus as 100 stadia (12½ miles), and by Strabo, through an enormous error, at not less than 300 stadia. (Strab. v. p. 223; Diod. v. 13; Plin. iii. 6. s. 12; Mel. ii. 7. § 19; Scyl. p. 2. § 6; Apoll. Rhod.

iv. 654.) Ilva was celebrated in ancient times, as it still is at the present day, for its iron mines; these were probably worked from a very early period by the Tyrrhenians of the opposite coast, and were already noticed by Hecataeus, who called the island Αἰθάλη: indeed, its Greek name was generally regarded as derived from the smoke (αἰθάλη) of the numerous furnaces employed in smelting the iron. (Diod. v. 13; Steph. B. *s. v.*) In the time of Strabo, however, the iron ore was no longer smelted in the island itself, the want of fuel compelling the inhabitants (as it does at the present day) to transport the ore to the opposite mainland, where it was smelted and wrought so as to be fitted for commercial purposes. The unfailing abundance of the ore (alluded to by Virgil in the line

"Insula inexhaustis Chalybum generosa metallis")

led to the notion that it grew again as fast as it was extracted from the mines. It had also the advantage of being extracted with great facility, as it is not sunk deep beneath the earth, but forms a hill or mountain mass of solid ore. (Strab. *l. c.*; Diod. *l. c.*; Virg. *Aen.* x. 174; Plin. iii. 6. s. 12, xxxiv. 14. s. 41; Pseud. Arist. *de Mirab.* 95; Rutil. *Itin.* i. 351—356; Sil. Ital. viii. 616.) The mines, which are still extensively worked, are situated at a place called *Rio*, near the E. coast of the island; they exhibit in many cases unequivocal evidence of the ancient workings.

The only mention of Ilva that occurs in history is in B. C. 453, when we learn from Diodorus that it was ravaged by a Syracusan fleet under Phayllus, in revenge for the piratical expeditions of the Tyrrhenians. Phayllus having effected but little, a second fleet was sent under Apelles, who is said to have made himself master of the island; but it certainly did not remain subject to Syracuse. (Diod. xi. 88.) The name is again incidentally mentioned by Livy (xxx. 39) during the expedition of the consul Tib. Claudius to Corsica and Sardinia.

Ilva has the advantage of several excellent ports, of which that on the N. side of the island, now called *Porto Ferraio*, was known in ancient times as the PORTUS ARGOUS (Ἀργῷος λιμήν), from the circumstance that the Argonauts were believed to have touched there on their return voyage, while sailing in quest of Circe. (Strab. v. p. 224; Diod. iv. 56; Apollon. Rhod. iv. 658.) Considerable ruins of buildings of Roman date are visible at a place called *Le Grotte*, near *Porto Ferraio*, and others are found near *Capo Castello*, at the NE. extremity of the island. The quarries of granite near *S. Piero*, in the SW. part of *Elba*, appears also to have been extensively worked by the Romans, though no notice of them is found in any ancient writer; but numerous columns, basins for fountains, and other architectural ornaments, still remain, either wholly or in part hewn out of the adjacent quarry. (Hoare, *Class. Tour*, vol. i. pp. 23—29). [E. H. B.]

ILVATES, a Ligurian tribe, whose name is found only in Livy. He mentions them first as taking up arms in B. C. 200, in concert with the Gaulish tribes of the Insubres and Cenomani, to destroy the Roman colonies of Placentia and Cremona. They are again noticed three years later as being still in arms, after the submission of their Transpadane allies; but in the course of that year's campaign (B. C. 197) they were reduced by the consul Q. Minucius, and their name does not again appear in history. (Liv. xxx. 10, xxxi. 29, 30.) From the circumstances here related, it is clear that they dwelt on the N. slopes of the Apennines, towards the plains of the Padus, and apparently not very far from Clastidium (*Casteggio*); but we cannot determine with certainty either the position or extent of their territory. Their name, like those of most of the Ligurian tribes mentioned by Livy, had disappeared in the Augustan age, and is not found in any of the geographers. [LIGURIA.] Walckenaer, however, supposes the ELEATES over whom the consul M. Fulvius Nobilior celebrated a triumph in B. C. 159 (Fast. Capit. *ap. Gruter*, p. 297), and who are in all probability the same people with the Veleiates of Pliny [VELEIA], to be identical also with the Ilvates of Livy; but this cannot be assumed without further proof. (Walckenaer, *Géogr. des Gaules*, vol. i. p. 154.) [E. H. B.]

IMACHARA (Ἰμιχάρα or Ἡμιχάρα, Ptol.: *Eth.* Imacharensis, Cic.; Imacarensis, Plin.), a city of Sicily, the name of which does not appear in history, but which is repeatedly mentioned by Cicero among the municipal towns of the island. There is great discrepancy in regard to the form of the name, which is written in many MSS. "Macarensis" or "Macharensis;" and the same uncertainty is found in those of Pliny, who also notices the town among those of the interior of Sicily. (Cic. *Verr.* iii. 18, 42, v. 7; Zumpt, *ad loc.*; Plin. iii. 8. s. 14; Sillig, *ad loc.*) From the manner in which it is spoken of by Cicero, it would seem to have been a town of some consideration, with a territory fertile in corn. That writer associates it with Herbita, Assorus, Agyrium, and other towns of the interior, in a manner that would lead us to suppose it situated in the same region of Sicily; and this inference is confirmed by Ptolemy, who places Hemichara or Himichara (evidently the same place) in the NE. of Sicily, between Capitium and Centuripa. (Ptol. iii. 4. § 12.) Hence Cluverius conjectures that it may have occupied the site of *Traina*, but this is wholly uncertain. Fazello and other Sicilian writers have supposed the ruins of an ancient city, which are still visible on the coast about 9 miles N. of Cape Pachynum, near the *Porto Vindicari*, to be those of Imachara; but though the name of *Macaresa*, still borne by an adjoining headland, gives some colour to this opinion, it is wholly opposed to the data furnished us by ancient authors, who all agree in placing Imachara in the *interior* of the island. The ruins in question, which indicate the site of a considerable town, are regarded by Cluverius (but equally without authority) as those of Ichana. (Cluver. *Sicil.* p. 356; Fazell. *de Reb. Sic.* iv. 2, p. 217; Amico, *Not. ad Fazell.* pp. 417, 447; Hoare's *Classical Tour*, vol. ii. p. 301.) [E. H. B.]

IMA'US, the great mountain chain, which, according to the ancients, divided Northern Asia into "Scythia intra Imaum" and "Scythia extra Imaum." This word (τὸ Ἴμαον ὄρος, Strab. xv. p. 689; Ptol. vi. 13. § 1; τὸ Ἰμαῖον ὄρος, Strab. ii. p. 129; ὁ Ἴμαος, Agathem. ii. 9: although all the MSS. of Strabo (xi. p. 516) have Isamus (Ἴσαμος) in the passage describing the expedition of the Graeco-Bactrian king Menander, yet there can be no doubt but that the text is corrupt, and the word Imaus should be substituted), connected with the Sanscrit *himavat*, "snowy" (comp. Plin. vi. 17; Bohlen, *das Alte Indien*, vol. i. p. 11; Lassen, *Ind. Alt.* vol. i. p. 17), is one of those many significative expressions which have been used for mountain masses upon every zone of the earth's surface (for instance, *Mont Blanc*, in *Savoy*, *Sierra*

Nevada, in *Granada* and *California*), and survives in the modern *Himálaya*.

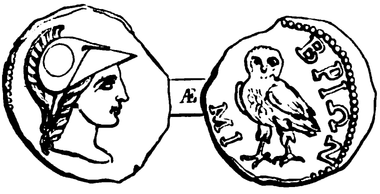
From very early times the Greeks were aware of a great line of mountains running throughout Central Asia, nearly E. and W., between the 36th and 37th degrees of latitude, and which was known by the name of the diaphragm of Dicaearchus, or the parallel of Rhodes.

The Macedonian expeditions of Alexander and Seleucus Nicator opened up Asia as far as the sources of the Ganges, but not further. But the knowledge which the Greeks thus obtained of Asia was much enlarged by intercourse with other Eastern nations. The indications given by Strabo and Ptolemy (*l. c.*), when compared with the orographic configuration of the Asiatic continent, recognise in a very remarkable manner the principal features of the mountain chain of Central Asia, which extends from the Chinese province of *Hou-pé*, S. of the gulf of *Petcheli*, along the line of the *Kuen-lün* (not, as has generally been supposed, the *Himálaya*), continuing from the *Hindú-Kúsh* along the S. shores of the Caspian through *Mázanderán*, and rising in the crater-shaped summit of *Damávend*, through the pass of *Elburz* and *Ghilan*, until it terminates in the Taurus in the SW. corner of Asia Minor. It is true that there is a break between Taurus and the W. continuation of the *Hindú-Kúsh*, but the cold "plateaux" of *Azerbijan* and *Kurdistán*, and the isolated summit of *Ararat*, might easily give rise to the supposed continuity both of Taurus and Anti-Taurus from *Karamania* and Argaeus up to the high chain of *Elburz*, which separates the damp, wooded, and unhealthy plains of *Mázanderán* from the arid "plateaux" of *Irak* and *Khorasan*.

The name of Imaus was, as has been seen, in the first instance, applied by the Greek geographers to the *Hindú-Kúsh* and to the chain parallel to the equator to which the name of *Himálaya* is usually given in the present day. Gradually the name was transferred to the colossal intersection running N. and S.,—the meridian axis of Central Asia, or the *Bolor* range. The division of Asia into "intra et extra Imaum" was unknown to Strabo and Pliny, though the latter describes the knot of mountains formed by the intersections of the *Himálaya*, the *Hindú-Kúsh*, and *Bolor*, by the expression "quorum (Montes Emodi) promontorium Imaus vocatur" (vi. 17). The *Bolor* chain has been for ages, with one or two exceptions, the boundary between the empires of *China* and *Turkestan*; but the ethnographical distinction between "Scythia intra et extra Imaum" was probably suggested by the division of India into "intra et extra Gangem," and of the whole continent into "intra et extra Taurum." In Ptolemy, or rather in the maps appended to all the editions, and attributed to Agathodaemon, the meridian chain of Imaus is prolonged up to the most northerly plains of the *Irtych* and *Obi*. The positive notions of the ancients upon the route of commerce from the Euphrates to the Seres, forbid the opinion, that the idea of an Imaus running from N. to S., and N. of the *Himálaya*, dividing Upper Asia into two equal parts, was a mere geographic dream. The expressions of Ptolemy are so precise, that there can be little doubt but that he was aware of the existence of the *Bolor* range. In the special description of Central Asia, he speaks twice of Imaus running from S. to N., and, indeed, clearly calls it a meridian chain (κατὰ μεσημβρινήν πως γραμμήν, Ptol. vi. 14. § 1: comp. vi. 13. § 1), and places at the foot of Imaus the BYLTAE (Βῦλται, vi. 13. § 3), in the country of *Little Thibet*, which still bears the indigenous name of *Baltistan*. At the sources of the Indus are the DARADRAE (viii. 1. § 42), the Dardars or Derders mentioned in the poem of the *Mahábhárata* and in the fragments of Megasthenes, through whom the Greeks received accounts of the region of auriferous sand, and who occupied the S. slopes of the Indian Caucasus, a little to the W. of *Kaschmir*. It is to be remarked that Ptolemy does not attach Imaus to the COMEDORUM MONTES (*Koundous*), but places the Imaus too far to the E., 8° further than the meridian of the principal source of the Ganges (*Gungótri*). The cause of this mistake, in placing Imaus so far further towards the E. than the *Bolor* range, no doubt arose from the data upon which Ptolemy came to his conclusion being selected from two different sources. The Greeks first became acquainted with the Comedorum Montes when they passed the Indian Caucasus between *Cabul* and *Balkh*, and advanced over the "plateau" of *Bamian* along the W. slopes of *Bolor*, where Alexander found, in the tribe of the Sibae, the descendants of Heracles (Strab. xvi. p. 688), just as Marco Polo and Burnes (*Travels in Bokhara*, vol. ii. p. 214) met with people who boasted that they had sprung from the Macedonian conquerors. The N. of *Bolor* was known from the route of the traffic of the Seres, as described by Marinus of Tyre and Ptolemy (i. 12). The combination of notions obtained from such different sources was imperfectly made, and hence the error in longitude.

These obscure orographical relations have been illustrated by Humboldt upon the most logical principles, and the result of many apparently contradictory accounts is so presented as to form one connected whole. (*Asie Centrale*, vol. i. pp. 100—164, vol. ii. pp. 365—440.)

The *Bolor* range is one link of a long series of elevated ranges running, as it were, from S. to N., which, with axes parallel to each other, but alternating in their localities, extend from *Cape Comorin* to the *Icy Sea*, between the 64th and 75th degrees of longitude, keeping a mean direction of SSE. and NNW. Lassen (*Indische Alterthumskunde*) coincides with the results obtained by Humboldt. [E. B. J.]



I'MBRASUS (Ἴμβρασος), one of the three small rivers flowing down from Mount Ampelus in the island of Samos. (Strab. xiv. p. 637; Plin. v. 37.) According to a fragment from Callimachus (213; comp. Schol. *ad Apollon. Rhod.* i. 187, ii. 868), this river, once called Parthenius, flowed in front of the ancient sanctuary of Hera, outside the town of Samos, and the goddess derived from it the surname of Imbrasia. [L. S.]

IMBRINIUM. [SAMNIUM.]

IMBROS (Ἴμβρος: *Eth.* Ἴμβριος), an island in the Aegaean sea, off the SW. coast of the Thracian Chersonesus, and near the islands of Samothrace and Lemnos. According to Pliny (iv. 12. s. 23), Imbros is 62 miles in circumference; but this is nearly double its real size. It is mountainous and well wooded, and its highest summit is 1845 feet above the level of the sea. It contains, however, several fertile valleys, and a river named Ilissus in antiquity. (Plin. *l. c.*) Its town on the northern side was called by the same name, and there are still some ruins of it remaining. Imbros was inhabited in early times by the Pelasgians, and was, like the neighbouring island of Samothrace, celebrated for its

worship of the Cabeiri and Hermes, whom the Carians called Imbrasus. (Steph. B. *s. v.* Ἴμβρος.) Both the island and the city of Imbros are mentioned by Homer, who gives to the former the epithet of παιπαλοέσσῃ. (*Il.* xiii. 33, xiv. 281, xxiv. 78, *Hymn. in Apoll.* 36.) The island was annexed to the Persian empire by Otanes, a general of Dareius, at which time it was still inhabited by Pelasgians. (Herod. v. 26.) It was afterwards colonised by the Athenians, and was no doubt taken by Miltiades along with Lemnos. It was always regarded in later times as an ancient Athenian possession: thus the peace of Antalcidas, which declared the independence of all the Grecian states, nevertheless allowed the Athenians to retain possession of Lemnos, Imbros, and Scyros (Xen. *Hell.* iv. 8. § 15, v. 1. § 31); and at the end of the war with Philip the Romans restored to the same people the islands of Lemnos, Imbros, Delos, and Scyros. (Liv. xxxiii. 30.)

The coins of Imbros have the common Athenian emblem, the head of Pallas. Imbros seems to have afforded good anchorage. The fleet of Antiochus first sailed to Imbros, and from thence crossed over to Sciathus. (Liv. xxxv. 43.) The ship which carried Ovid into exile also anchored in the harbour of Imbros, which the poet calls "Imbria

COIN OF IMBROS.

tellus." (Ov. *Trist.* i. 10, 18.) The island is still called by its ancient name, *Embro* or *Imru.*

IMEUS MONS, is the name given in the Tabula Peutingeriana to the mountain pass which leads from the basin of the lake Fucinus to that of the Peligni, and was traversed by the Via Valeria on the way from Alba to Corfinium. This pass, now called the *Forca Carruso*, must in all ages have been an important line of communication, being a natural saddle-like depression in the ridge which bounds the lake Fucinus on the E., so that the ascent from *Coll' Armeno* (Cerfennia) to the summit of the pass (a distance of 5 miles) presents but little difficulty. The latter is the highest point reached by the line of the Valerian Way in traversing the whole breadth of Italy from one sea to the other, but is elevated only a few hundred feet above the lake Fucinus. The Roman road across this pass was first rendered practicable for carriages by the emperor Claudius, who continued the Via Valeria from Cerfennia to the mouth of the Aternus. [CERFENNIA.] (*Tab. Peut.*; Holsten. *Not. ad Cluv.* p. 154; Kramer, *Fuciner See*, pp. 14, 60.) [E. H. B.]

IMMADRUS or IMMADRA, a position on the coast of Gallia Narbonensis between Telo (*Toulon*) and Massilia. The distances along the coast were doubtless accurately measured, but we cannot be certain that they are accurately given in the MSS.; and it seems that the routes, especially in the parts near the coast, have been sometimes confounded. Immadrus, the next station east of *Marseille*, is placed by D'Anville, and others who follow him, at the *Isle de Maire;* but the numbers will not agree. The real distance is much less than xii. M. P., which is the distance in the Itin.; and D'Anville, applying his usual remedy, alters it to vii. But Walckenaer well objects to fixing on a little island or rock as the position of Immadrus, and then charging the Itinerary with being wrong. He finds the distance from a little bay west of *Cap Morgiou* to *Marseille* to agree with the Itin. measure of 12 M. P. [G. L.]

IMMUNDUS SINUS (ἀκάθαρτος κόλπος, Strab. xvii. p. 770; Diod. iii. 39; Ptol. iv. 5. § 7; Plin. vi. 29. s. 33), the modern *Foul Bay*, in lat. 22° N., derived its appellation from the badness of its anchorage, and the difficulty of navigating vessels among its numerous reefs and breakers. In its furthest western recess lay the city of Berenice, founded, or rather enlarged, by Ptolemy Philadelphus, and so named by him in honour of his mother, the widow of Ptolemy Soter; and opposite its mouth was the island Ophiodes, famous alike for the reptiles which infested it, and its quarries of topaz. The latter was much employed by Aegyptian artisans for ornamenting rings, scarabaei, &c., &c. [BERENICE.] [W. B. D.]

IMUS PYRENAEUS, a station in Aquitania, at the northern base of the Pyrenees, on the road from Aquae Tarbellicae (*Dax*) to Pompelon (*Pamplona*) in Spain. Imus Pyrenaeus is between Carasa (*Garis*) and the Summus Pyrenaeus. The Summus Pyrenaeus is the *Sommet de Castel-Pinon;* and the Imus Pyrenaeus is *St. Jean-Pied-de-Port*, "at the foot of the pass." The distance in the Itin. between Summus Pyrenaeus and Imus Pyrenaeus is v., which D'Anville would alter to x., to fit the real distance. Walckenaer takes the measure to be Gallic leagues, and therefore the v. will be equivalent to 7½ M. P. [G. L.]

INA (Ἶνα, Ptol.: *Eth.* Inensis), a town of Sicily, the position of which is wholly unknown, except that Ptolemy reckons it among the inland towns in the south of the island. (Ptol. iii. 4. § 15.) That author is the only one of the geographers that mentions it, and the name has been thought corrupt; but it is supported by the best MSS. of Ptolemy, and the reading "Inenses" is equally well supported in Cicero (*Verr.* iii. 43), where the old editions had "Ennenses." (Zumpt, *ad loc.*) The orator appears to rank them among the minor communities of the island which had been utterly ruined by the exactions of Verres. [E. H. B.]

INACHO'RIUM (Ἰναχώριον, Ptol. iii. 17. § 2), a city of Crete, which, from the similarity of sound, Mr. Pashley (*Trav.* vol. ii. p. 78) is inclined to believe was situated in the modern district of *Enneakhoriá*, on the W. coast of Crete. (Höck, *Kreta*, vol. i. p. 379.) [E. B. J.]

I'NACHUS (Ἴναχος). 1. A river of the Argeia. [ARGOS, p. 200, b.]

2. A river in the territory of Argos Amphilochicum. [ARGOS AMPHILOCH., p. 208, b.]

INARIME. [AENARIA.]

I'NATUS (Ἴνατος, Ptol. iii. 17. § 2), a city of Crete, the same, no doubt, as Einatus (Εἴνατος, Steph. B.; Hesych. *Etym. Magn. s. v.*), situated on a mountain and river of the same name. The Peutinger Table puts a place called Inata on a river 24 M. P. E. of Lisia, and 32 M. P. W. of Hierapytna. These distances agree well with the three or four hamlets known by the name *Kastelianá*, derived from the Venetian fortress, Castle Belvedere, situated on a hill a little to the N. of the villages. The

goddess Eileithyia is said to have been worshipped here, and to have obtained one of her epithets from it. (Callim, *Fr.* 168; Pashley, *Trav.* vol. i. p. 289; Höck, *Kreta*, vol. i. p. 412.) [E. B. J.]

INCARUS, on the coast of Gallia Narbonensis, is placed by the Itin. next to Massilia. It is west of Massilia, and the distance is 12 M. P. The place is *Carry*, which retains its name. The distance of the Itin. was probably estimated by a boat rowing along the coast; and a good map is necessary to show how far it is correct. [G. L.]

INCRIO'NES ('Ιγκρίωνες), a tribe of the Sigambri, mentioned only by Ptolemy (ii. 11. § 9). They apparently occupied the southernmost part of the territory inhabited by the Sigambri. Some believe them to be the same as the Juhones of Tacitus (*Ann.* xiii. 57), in whose territory an extensive conflagration of the soil occurred in A. D. 59. Some place them near the mouth of the river *Lahn* and the little town of *Engers;* while others, with less probability, regard *Ingersheim*, on the *Neckar*, as the place once inhabited by the Incriones. [L. S.]

INDAPRATHAE ('Ινδαπρᾶθαι, Ptol. viii. 2. § 18, a name, doubtless, connected with the Sanscrit *Indra-prastha*), a people occupying nearly the same position as the IBERINGAE. [V.]

I'NDIA (ἡ 'Ινδία, Polyaen. iv. 3. § 30; Plin. vi. 17. s. 20; ἡ τῶν 'Ινδῶν γῆ, Arrian, *Anab.* v. 4; ἡ 'Ινδική, Strab. xi. p. 514: *Eth.* 'Ινδός), a country of great extent in the southern part of Asia, bounded on the north by the great chain of the *Himálaya* mountains, which extend, under variously modified names, from the *Brahmaputra* river on the E. to the Indus on the W., and which were known in ancient times under the names Emodus and Imaus. [EMODI MONTES.] These mountains separated the plain country of India to the S. of them from the steppes of Tátary on the N., and formed the water-shed of most of the great rivers with which India is so plentifully supplied. On the E. the *Brahmaputra*, which separates it from *Ava* and *Burmah*, is its principal boundary; though, if the definition of India be adopted which was in vogue among the later classical geographers, those countries as far as the commencement of the Chinese empire on the S. must be comprehended within the limits of India. On the S. it is bounded by the *Bay of Bengal* and the Indian Ocean, and on the W. by the Indus, which separates it from Gedrosia, Arachosia, and the land of the Paropamisadae. Some writers, indeed (as Lassen, *Pentap. Indic.* Bonn, 1827), have considered the districts along the southern spurs of the Paropamisus (or *Hindú-Kush*) as part of India; but the passage of Pliny on which Lassen relies would make India comprehend the whole of *Afghánistan* to *Beluchistán* on the Indian Ocean; a position which can hardly be maintained as the deliberate opinion of any ancient author.

It may, indeed, be doubted whether the Indians themselves ever laid down any accurate boundary of their country westward (*Laws of Manu*, ii. v. 22, quoted by Lassen, *Pentap. Indic.* p. 8); though the *Sarasváti* (Hydraotes) separated their sacred land from Western India. Generally, however, the Indus was held to be their western boundary, as is clear from Strabo's words (xv. p. 689), and may be inferred from Pliny's description (vi. 20. s. 23).

It is necessary, before we proceed to give the principal divisions, mountain ranges, rivers, and cities of India, to trace very briefly, through the remains of classical literature, the gradual progress of the knowledge which the ancient world possessed of this country; a land which, from first to last, seems to have been to them a constant source of wonder and admiration, and therefore not unnaturally the theme of many strange and fabulous relations, which even their most critical writers have not failed to record.

Though the Greeks were not acquainted with India in the heroic ages, and though the name itself does not occur in their earliest writers, it seems not unlikely that they had some faint idea of a distant land in the far East which was very populous and fruitful. The occurrence of the names of objects of Indian merchandise, such as κασσίτερος, ἐλέφας, and others, would seem to show this. The same thing would seem to be obscurely hinted at in the two Aethiopias mentioned by Homer, the one towards the setting, and the other in the direction of the rising sun (*Od.* i. 23, 24); and a similar inference may probably be drawn from some of the early notices of these Aethiopians, whose separate histories are perpetually confounded together, many things being predicated of the African nation which could be only true of an Indian people, and *vice versâ*. That there were a people whom the Greeks called Aethiopes in the neighbourhood of, if not within the actual boundaries of India, is clear from Herodotus (vii. 70), who states in another place that all the Indians (except the Daradae) resembled the Aethiopians in the dark colour of their skins (iii. 101); while abundant instances may be observed of the intermixture of the accounts of the African and Indian Aethiopians, as, for example, in Ctesias (*Indic.* 7, ed. Bähr. p. 354), Pliny (viii. 30. 3), who quotes Ctesias, Scylax, in his description of India (*ap.* Philostrat. *Vit. Apoll.* iii. 14), Tzetzes (*Chil.* vii. 144), Aelian (*H. An.* xvi. 31), Agatharchides (*de Rubro Mari*, p. 44, ed. Huds.), Pollux (*Onomast.* v. 5), and many other writers. Just in the same way a confusion may be noticed in the accounts of Libya, as in Herodotus (iv. 168—199; cf. Ctesias, *Indic.* 13), where he intermixes Indian and African tales. Even so late as Alexander's invasion, we know that the same confusion prevailed, Alexander himself believing that he would find the sources of the Nile in India. (Strab. xv. p. 696; Arrian, *Exp. Alex.* vi. 1.)

It is not remarkable that the Greeks should have had but little knowledge of India or its inhabitants till a comparatively late period of their history, and that neither Homer nor Pindar, nor the great Greek dramatists Sophocles and Euripides, should mention by its name either India or any of its people. It is probable that, at this early period, neither commerce nor any other cause had led the Greeks beyond the shores of Syria eastward, and that it was not till the Persian wars that the existence of vast and populous regions to the E. of Persia itself became distinctly known to them. Some individual names may have reached the ears of those who inquired; perhaps some individual travellers may have heard of these far distant realms; such, for instance, as the physician Democedes, when residing at the court of Dareius, the son of Hystaspes (Herod. iii. 127), and Democritus of Abdera (B. C. 460—400), who is said by several authors to have travelled to Egypt, Persia, Aethiopia, and India (Diog. Laërt. ix. 72; Strab. xvi. p. 703; Clem. *Strom.* i. p. 304; Suidas, *s. v.*). Yet little was probably known beyond a few names.

The first historian who speaks clearly on the subject is Hecataeus of Miletus (B.C. 549—486). In the few fragments which remain of his writings, and which have been carefully collected by Klausen (Berl.

1831), the Indi and the Indus (*Fragm.* 174 and 178), the Argante (*Fragm.* 176), the people of Opia on the banks of the Indus (*Fragm.* 175), the Calatiae, (*Fragm.* 177; Herod. iii. 38; or Calantiae, Herod. iii. 97), Gandara and the Gandarii (*Fragm.* 178) and their city Caspapyrus (*Fragm.* 179; Caspatyrus, Herod. iii. 102, iv. 44), are mentioned, in company with other Eastern places. Further, it appears, from the testimony of Herodotus, that Scylax of Caryanda, who was sent by Dareius, navigated the Indus to Caspatyrus in Pactyice, and thence along the Erythraean sea by the Arabian gulf to the coast of Egypt (iv. 44); in the course of which voyage he must have seen something of India, of which he is said to have recorded several marvels (cf. Aristot. *Polit.* vii. 14; Philostr. *Vit. Apoll. Tyan.* iii. 14; Tzetz. *Chil.* vii. 144); though Klausen has shown satisfactorily, in his edition of the fragments which remain, that the Periplus usually ascribed to this Scylax is at least as late as the time of Philip of Macedon.

The notices preserved in Herodotus and the remains of Ctesias are somewhat fuller, both having had opportunities, the one as a great traveller, the other as a resident for many years at the court of Artaxerxes, which no previous writers had had. The knowledge of Herodotus (B. C. 484—408) is, however, limited to the account of the satrapies of Dareius; the twentieth of which, he states, comprehended that part of India which was tributary to the Persians (iii. 94), the country of the most Eastern people with whom he was acquainted (iii. 95—102). To the S. of them, along the Indian Ocean, were, according to his view, the Asiatic Aethiopians (iii. 94); beyond them, desert. He adds that the Indians were the greatest and wealthiest people known; he speaks of the Indus (on whose banks, as well as on those of the Nile, crocodiles were to be seen) as flowing through their land (iv. 44), and mentions by name Caspatyrus (a town of Pactyice), the nomadic Padai (iii. 99), and the Calatiae (iii. 38) or Calantiae (iii. 97). He places also in the seventh satrapy the Gandarii (iii. 91) [GANDARAE], a race who, under the name of *Gandharas*, are known as a genuine Sanscrit-speaking tribe, and who may therefore be considered as connected with India, though their principal seat seems to have been on the W. side of the Indus, probably in the neighbourhood of the present *Candahar*.

Ctesias (about B. C. 400) wrote twenty-three books of *Persica*, and one of *Indica*, with other works on Asiatic subjects. These are all lost, except some fragments preserved by Photius. In his *Persica* he mentions some places in Bactria (*Fragm.* 5, ed. Bähr) and Cyrtaea, on the Erythraean sea (*Fragm.* 40); and in his *Indica* he gives an account of the Indus, of the manners and customs of the natives of India, and of its productions, some of which bear the stamp of a too credulous mind, but are not altogether uninteresting or valueless.

On the advance of Alexander through Bactriana to the banks of the Indus, a new light was thrown on the geography of India; and the Greeks, for the first time, acquired with tolerable accuracy some knowledge of the chief features of this remarkable country. A number of writers—some of them officers of Alexander's army—devoted themselves to a description of different parts of his route, or to an account of the events which took place during his progress from Babylon to the Hyphasis; and to the separate narratives of Beton and Diognetus, Nearchus, Onesicritus, Aristobulus, and Callisthenes, condensed and extracted by Strabo, Pliny, and Arrian, we owe most of our knowledge of India as it appeared to the ancients. None of the original works of these writers have been preserved, but the voyage of Nearchus (the most important of them, though the places in India he names are few in number) has been apparently given by Arrian (in his *Indica*) with considerable minuteness. Nearchus seems to have kept a day-book, in which he entered the distances between each place. He notices Pattala, on the Indus (from which he started), and Coreatis (perhaps the present *Kurâchi*). Pliny, who calls this voyage that of Nearchus and Onesicritus, adds some few places, not noticed by Arrian (vi. 23. s. 26). Onesicritus himself considered the land of the Indians to be one-third of the whole inhabited world (Strab. xv. p. 691), and was the first writer who noticed Taprobane (*Ceylon*). (Ibid. p. 691.) Both writers appear, from Strabo, to have left interesting memorials of the manners and customs of the natives (Strab. xi. p. 517, xv. p. 726) and of the natural history of the country. (Strab. xv. pp. 693, 705, 716, 717; Aelian, *Hist. An.* xvi. 39, xvii. 6; Plin. vi. 22. s. 24, vii. 2. s. 2; Tzetz. *Chil.* iii. 13.) Aristobulus is so frequently quoted by Arrian and Strabo, that it is not improbable that he may have written a distinct work on India: he is mentioned as noticing the swelling and floods of the rivers of the *Panjâb*, owing to the melting of the snow and the rain (Strab. xv. p. 691), the mouths of the Indus (p. 701), the Brachmanes at Taxila (p. 714), the trees of Hyrcania and India (xi. p. 509), the rice and the mode of its tillage (xv. p. 692), and the fish of the Nile and Indus, respectively (xv. p. 707, xvii. p. 804).

Subsequently to these writers,—probably all in the earlier part of the third century B. C.,—were some others, as Megasthenes, Daimachus, Patrocles and Timosthenes, who contributed considerably to the increasing stock of knowledge relative to India. Of these, the most valuable additions were those acquired by Megasthenes and Daimachus, who were respectively ambassadors from Seleucus to the Courts of Sandrocottus (Chandragupta) and his successor Allitrochades (Strab. ii. p. 70, xv. p. 702; Plin. vi. 17. s. 21), or, as it probably ought to be written, Amitrochades. Megasthenes wrote a work often quoted by subsequent writers, which he called τὰ Ἰνδικά (Athen. iv. p. 153; Clem. Alex. *Strom.* i. p. 132; Joseph. *c. Apion.* i. 20, *Antiq.* x. 11. § 1), in which he probably embodied the results of his observations. From the fragments which remain, and which have been carefully collected by Schwanbeck (*Megasthenis Indica*, Bonn, 1846), it appears that he was the first to give a tolerably accurate account of the breadth of India,—making it about 16,000 stadia (Arrian, iii. 7, 8; Strab. i. p. 68, xv. p. 689),—to mention the Ganges by name, and to state that it was larger than the Indus (Arrian, v. 6, 10, *Indic.* 4, 13), and to give, besides this, some notice of no less than fifteen tributaries of the Indus, and nineteen of the Ganges. He remarked that India contained 118 nations, and so many cities that they could not be numbered (Arrian, *Indic.* 7, 10); and observed (the first among the Greeks) the existence of *castes* among the people (Strab. xv. p. 703; Arrian, *Ind.* 11, 12; Diod. ii. 40, 41; Solin. c. 52), with some peculiarities of the Indian religious system, and of the Brachmanes (or *Brah-*

sau). (Strab. xv. pp. 711—714; Clem. Alex. *Strom.* i. 131.) Again Daimachus, who lived for a long time at Palibothra (Strab. ii. p. 70), wrote a work upon India, which, though according to Strabo full of fables, must also have contained much valuable information. Patrocles, whom Strabo evidently deemed a writer of veracity (Strab. ii. p. 70), as the admiral of Seleucus, sailed upon the Indian Ocean, and left an account, in which he stated his belief that India was the same breadth that Megasthenes had maintained (Strab. ii. p. 69. xv. p. 689); but also that it could be circumnavigated—an erroneous view, which seems to have arisen from the idea, that the Caspian Sea and the Northern Ocean were connected. (Strab. ii. p. 74, xi. p. 518.)

With the establishment of the mathematical schools at Alexandria, commenced a new aera in Grecian geography; the first systematic arrangement of the divisions of the earth's surface being made by Eratosthenes (B.C. 276—161), who drew a series of parallels of latitude—at unequal distances, however—through a number of places remotely distant from one another. According to his plan, his most southern parallel was extended through Taprobane and the Cinnamon coast (the SE. end of the *Arabian Gulf*); his second parallel (at an interval of 3400 stadia) passed though the S. coast of India, the mouths of the Indus and Meroë; his third (at an interval of 5000 stadia) passed through Palibothra and Syene; his fourth (at a similar interval) connected the Upper Ganges, Indus, and Alexandria; his fifth (at an interval of 3750 stadia) passed through Thina (the capital of the Seres), the whole chain of the Emodus, Imaus, Paropamisus, and the island of Rhodes. (Strab. i. p. 68, ii. pp. 113—132.) At the same time he drew seven parallels of longitude (or meridians), the first of which passed through the E. coast of China, the second through the mouths of the Ganges, and the third through those of the Indus. His great geographical error was that the intersection of his meridians and latitudes formed *right* angles. (Strab. ii. pp. 79, 80, 92, 93.) The shape of the inhabited portion of the globe he compared to a Macedonian *Chlamys* extended. (Strab. ii. p. 118, xi. p. 519; Macrob. *Somn. Scip.* ii. 9.) The breadth of India between the Ganges and Indus he made to be 16,000 stadia. Taprobane, like his predecessors, he held to be 5000 stadia long.

Hipparchus (about B.C. 150), the father of Greek astronomy, followed Patrocles, Daimachus, and Megasthenes, in his view of the shape of India; making it, however, not so wide at the S. as Eratosthenes had made it (Strab. ii. pp. 77, 81), but much wider towards the N., even to the extent of from 20,000 to 30,000 stadia (Strab. ii. p. 68). Taprobane he held not to be an island, but the commencement of another continent, which extended onward to the S. and W.,—following, probably, the idea which had prevailed since the time of Aristotle, that Africa and SE. India were connected on the other side of the Indian Ocean. (Mela, iii. 7. § 7; Plin. vi. 22. s. 24.) Artemidorus (about B.C. 100) states that the Ganges rises in the Montes Emodi, flows S. till it arrives at Gange, and then E. by Palibothra to its mouths (Strab. xv. p. 719): Taprobane he considered to be about 7000 stadia long and 500 broad (Steph. B.). The whole breadth of India, from the Ganges to the Indus, he made to be 16,000 stadia. (Plin. vi. 19. s. 22.)

The greater part of all that was known up to his time was finally reduced into a consistent shape by Strabo (B.C. 66—A.D. 36). His view of India was not materially different from that which had been the received opinion since Eratosthenes. He held that it was the greatest and most Eastern land in the world, and the Ganges its greatest stream (ii. p. 130, xv. pp. 690, 719); that it stretched S. as far as the parallel of Meroë, but not so far N. as Hipparchus thought (ii. pp. 71, 72, 75); that it was in shape like a lozenge, the S. and E. being the longest sides. Its greatest breadth was 16,000 stadia on the E., its least 13,000 on the W.; its greatest length on the S., 19,000 stadia. Below the S. coast he placed Taprobane, which was, in his opinion, not less than Great Britain (ii. p. 130, xv. p. 690). Pliny the Elder and Pomponius Mela, who were contemporaries, added somewhat to the geographical knowledge previously acquired, by incorporating into their works the results of different expeditions sent out during the earlier emperors. Thus, Pliny follows Agrippa in making India 3300 M. P. long, and 2300 M. P. broad, though he himself suggests a different and shorter distance (vi. 17. s. 21); while, after Seneca, he reckoned that it contained 118 peoples and 60 rivers. The Emodus, Imaus, Paropamisus, and Caucasus, he connected in one continued chain from E. to W., stating that S. of these great mountains, the land was, like Egypt, one vast plain (vi. 18. s. 22), comprehending many wastes and much fruitful land (vi. 20. s. 23). For a fuller notice of Taprobane than had been given by previous writers, he was indebted to the ambassadors of the emperor Claudius, from whom he learnt that it had towards India a length of 10,000 stadia, and 500 towns,—one, the capital, Palaesimundum, of vast size. The sea between it and the continent is, he says, very shallow, and the distance from the nearest point a journey of four days (vi. 22. s. 24). The measurements of the distances round the coast of India he gives with some minuteness, and in some instances with less exaggeration than his predecessors.

With Marinus of Tyre and Claudius Ptolemaeus, in the middle of the second century, the classical knowledge of geography may be said to terminate. The latter, especially, has, in this branch of knowledge, exercised an influence similar to that of Aristotle in the domain of the moral and physical sciences. Both writers took a more comprehensive view of India than had been taken before, owing in some degree to the journey of a Macedonian trader named Titianus, whose travels extended along the Taurus to the capital of China (Ptol. i. 11. § 7), and to the voyage of a sailor named Alexander, who found his way across the Indian Ocean to Cattigara (Ptol. i. 14. § 1), which Ptolemy places in lat. 8° 30′ S., and between 170° and 180° E. long. Hence, his idea that the Indian Ocean was a vast central sea, with land to the S. Taprobane he held to be four times as big as it really is (vii. 4), and the largest island in the world; and he mentions a cluster of islands to the NE. and S. (in all probability, those now known as the *Maldives* and *Laccadives*). In the most eastern part of India, beyond the *Gulf of Bengal*, which he terms the Golden Chersonesus, he speaks of IABADIUS and MANIOLAE; the first of which is probably that now known as *Java*, while the name of the second has been most likely preserved in *Manilla*. The main divisions of India into *India intra Gangem* and *India extra Gangem*, have been adopted by the

majority of subsequent geographers, from Ptolemy. Subsequent to this date, there are few works which fall within the range of classical geography, or which have added any information of real value on the subject of India; while most of them have borrowed from Ptolemy, whose comprehensive work was soon a text-book in the hands of learned men. From Agathemerus (at the end of the second century) and Dionysius Periegetes (towards the end of the third century) some few particulars may be gleaned: — as for instance, from the latter, the establishment of the Indo-Scythi along the banks of the Indus, in *Scinde* and *Guzerat;* and, from a work known by the name of *Periplus Maris Erythraei* (the date of which, though late, is not certainly determined), some interesting notices of the shores of the Indian Ocean. Festus Avienus, whose paraphrase of Dionysius Periegetes supplies some *lacunae* in other parts of his work, adds nothing of interest to his metrical account of Indian Geography.

Such may serve as a concise outline of the progress of knowledge in ancient times relative to India. Before, however, we proceed to describe the country itself under the various heads of mountains, rivers, provinces, and cities, it will be well to say a few words on the origin of the name INDIA, with some notice of the subdivisions which were in use among the earlier geographers, but which we have not thought it convenient in this place to perpetuate.

The names INDUS, INDIA, are no doubt derived from the Sanscrit appellation of the river, *Sindhu*, which, in the plural form, means also the people who dwelt along its banks. The adjoining countries have adopted this name, with slight modifications: thus, *Hendu* is the form in the Zend or old Persian, *Hoddu* in the Hebrew (*Esther*, i. 1, viii. 9). The Greek language softened down the word by omitting the *h*, hence Ἰνδος, Ἰνδια; though in some instances the native name was preserved almost unchanged, as in the Σίνθος of the Periplus Maris Erythraei. Pliny bears testimony to the native form, when he says, "Indus incolis Sindus appellatus" (vi. 20. s. 23).

The great divisions of India which have been usually adopted are those of Ptolemy (vii. 1. § 1), into, — (1) *India intra Gangem*, a vast district, which was bounded, according to that geographer, on the W. by the Paropamisadae, Arachosia, and Gedrosia; on the N. by the Imaus, in the direction of the Sogdiani and Sacae; on the E. by the Ganges, and on the S. by a part of the Indian Ocean: and (2) *India extra Gangem* (Ptol. vii. 2. § 1), which was bounded on the W. by the Ganges; on the N. by Scythia and Serica; on the E. by the Sinae, and by a line extended from their country to the Μεγάλος κόλπος (*Gulf of Siam*); and on the S. by the Indian Ocean, and a line drawn from the island of Menuthias (Ptol. vii. 2. § 1), whence it appears that Ptolemy considered that the Ganges flowed nearly due N. and S. We have considered that this division is too arbitrary to be adopted here; we merely state it as the one proposed by Ptolemy and long current among geographers. The later ecclesiastical writers made use of other terms, as ἡ ἐνδότερω Ἰνδια, in which they included even Arabia (Socrat. *H. E.* i. 19; Theod. i. 23; Theoph. i. 35), and ἡ ἐσχάτη Ἰνδια (Sozomen, ii. 23).

The principal mountains of India (considered as a whole) were: — the eastern portion of the Paropamisus (or *Hindú-Kush*), the Imaus (*Haimava*), and the Emodus (now known by the generic name of the *Himálaya*.) To the extreme E. were the Montes Semanthini, the boundary of the land of the Sinae the Montes Damassi, and the Bepyrrhus M. (probably the present *Naraka M.*). An extension of the M. Damassi is the Maeandrus M. (now *Muin-Mura*). In *India intra Gangem* Ptolemy mentions many mountains, the names of which can with difficulty be supplied with their modern representatives: as the Orudii M., in the S. extremity of the land between the Tyndis and the Chaberus; the Uxentus M., to the N. of them; the Adisathrus M.; the Bittigo M. (probably the range now known as the *Gháts*), and the M. Vindius (unquestionably the present *Vindhya*), which extend NE. and SW. along the N. bank of the *Nerbudda;* M. Sardonix (probably the present *Sautpura*); and M. Apocopa (perhaps the present *Aravelli*).

The principal promontories in India are: — in the extreme E., Promontorium Magnum, the western side of the Sinus Magnus; Malaei Colon, on the S. coast of the golden peninsula; Promontorium Aureae Chersonesi, the southern termination of the Sinus Sabaracus, on the western side of the Chersonesus; Cory or Calligicum, between the S. Argaricus and the S. Colchicus, near the SW. end of the peninsula of *Hindostán;* Comaria (now *C. Comorin*), the most southern point of *Hindostán;* Calae Carias (or Callicaris), between the towns Anamagara and Muziris; Simylla (or Semylla, the southern end of the S. Barygazenus, perhaps the present *C. St. John*), and Maleum.

In the same direction from E. to W. are the following gulfs and bays: — the Sinus Magnus (now *Gulf of Siam*); S. Perimulicus, and Sabaricus, on the E. and W. side of the Chersonesus Aurea; S. Gangeticus (*Bay of Bengal*), S. Argaricus, opposite the N. end of Taprobane (probably *Palks Bay*); S. Colchicus (*Bay of Manaar*); S. Barygazenus (*Gulf of Cambay*), and S. Canthi (most likely the *Gulf of Cutch*).

The rivers of India are very numerous, and many of them of great size. The most important (from E. to W.) are the Dorias (*Salven?*) and Doanas (the *Irrawaddy*), the Chrysoana, Besynga, the Tocosanna (probably the present *Arrakan*), and the Catabeda (now *Curmsul*); the Ganges, with many tributaries, themselves large rivers. [GANGES.] Along the W. side of the *Bay of Bengal* are the Adamas (*Brahmini*), Dosaron (*Mahanádi*), Maesolus (*Godávári*), Tyndis (*Kistna*), and the Chaberis or Chaberus (the *Cáveri*). Along the shores of the Indian Ocean are the Nanaguna (*Tarty*), the Namadus (*Narmadá* or *Nerbudda*), and lastly the Indus, with its several tributaries. [INDUS.]

The towns in India known to the ancients were very numerous; yet it is remarkable that but few details have been given concerning them in the different authors of whose works fragments still remain. Generally, these writers seem to have been content with a simple list of the names, adding, in some instances, that such a place was an important mart for commerce. The probability is, that, even so late as Ptolemy, few cities had reached sufficient importance to command the productions of an extensive surrounding country; and that, in fact, with one or two exceptions, the towns which he and others enumerate were little more than the head places of small districts, and in no sense capitals of great empires, such as *Ghazna*, *Delhi*, and *Calcutta* have become in later periods of Indian history. Beginning from the extreme E., the principal states and towns mentioned in the ancient writers are: Perimula,

on the E. coast of the Golden Chersonesus (in the neighbourhood of *Malacca*); Tacola (perhaps *Tavai* or *Tavoy*); Triglyphon, in the district of the Cyrrhadiae, at the mouth of the *Brahmaputra* (now *Tiperah* or *Tripura*); and Cattigara, the exact position of which has been much disputed among geographers, but which Lassen has placed conjecturally in *Borneo*. Northward of Triglyphon are a number of small districts, about which nothing certain is known, as Chalcitis, Basanarae, Cacobae, and Aminachae, the Indraprathae, and Iberingae; and to the W., along the swamp-land at the foot of the *Himálaya* chain, are the Tiladae, Passalae, Corancali, and the Tacaraei. All the above may be considered as belonging to *India extra Gangem*.

Again, from the line of coast from E. to W., the first people along the western mouths of the Ganges are called the Gangaridae, with their chief town Gange (in the neighbourhood of the modern *Calcutta*); the Calingae, with their chief towns Parthalis and Dandagula (the latter probably *Calinapattana*, about halfway between *Mahánadi* and *Godávari*); the Maesoli and Maesolia, occupying nearly the same range of coast as that now called the *Circars*, with the capital Pitynda, and Contacossyla (*Masulipattana ?*) and Alosygna on the sea-coast; W. of the Maesolus (*Godávari*), the Arvarni, with the chief town Malanga (probably *Mandarágja*, the present *Madras*). Then follow the Soringi and Bati, till we come to the land of Pandion (Πανδίονος χώρα), which extends to the southern extremity of the peninsula of *Hindustán*, and was a district of great wealth and importance at the time of the Periplus. (*Peripl.* pp. 31, 33.) There can be no doubt that the land of Pandion is the same as the Indian *Pándja*, and its capital Modura the present *Mathura*. Within the same district were Argara (whence the S. Argaricus derives its name), the Carei, and the Colchi. At the SW. end of the peninsula were Cottiara (*Cochin*), and Comaria, whence the promontory *Comorin* derives its name. Following the western coast, we arrive at Limyrica (*Peripl.* pp. 30, 36), undoubtedly in the neighbourhood of *Mangalore*, with its chief towns Carura (most likely *Coimbatore*, where a great quantity of Roman coins have been dug up during the last fifteen years) and Tyndis (in the neighbourhood of *Goa*); and then Musopale, Nitrae, and Mandagara; all places on the sea-coast, or at no great distance from it. Somewhat further inland, within the district known generically at the time of the Periplus by the name of Dachinabades (*Dakhinabháda*, or *Deccan*), was the district of Ariaca (Ἀρίακα Σαδανῶν, Ptol. vii. 1. §§ 6, 82; cf. *Peripl.* p. 30), with its chief town Hippocura (*Nandira* or *Hydrabad*, if not, as Ritter has imagined, the sea-port *Mangalore*); Baetana, Simylla (on the coast near *Bassein*), Omenagara (undoubtedly the celebrated fortress *Ahmed-nagar*), and Tagara (*Peripl.* p. 19), the present *Deoghir*. Further N., the rich commercial state of Larice appears to have extended from the Namadus (*Narmadá* or *Nerbudda*) to Barygaza (*Beroach*) and the *Gulf of Cambay*. Its chief town was, in Ptolemy's time, Ozene (*Oujein* or *Ujjayini*), a place well known to the antiquaries of India for the vast numbers of the earliest Indian coinage constantly found among its ruins: Minnagara, the position of which is doubtful, and Barygaza, the chief emporium of the commerce of Western India. North of Larice was Syrastrene (*Saurashtran*), to the west of the *Gulf of Cambay;* and still further to the westward, at the mouths of the Indus, Pattalene (Lower *Scinde*, and the neighbourhood of *Kuráchi*), with its capital Pattala (*Pótala*.)

It is much more difficult to determine the exact site of the various tribes and nations mentioned in ancient authors as existing in the interior of the country, than it is to ascertain the corresponding modern localities of those which occupied the sea-coast. Some, however, of them can be made out with sufficient certainty, by comparison of their classical names with the Sanscrit records, and in some instances with the modern native appellations. Following, then, the course of the Indus northwards, we find, at least in the times of Ptolemy and of the Periplus, a wide-spread race of Scythian origin, occupying both banks of the river, in a district called, from them, INDO-SCYTHIA. The exact limits of their country cannot now be traced; but it is probable that they extended from Pattalene on the S. as far as the lower ranges of the *Hindú-Kush*, — in fact, that their empire swayed over the whole of modern *Scinde* and the *Panjáb;* a view which is borne out by the extensive remains of their Topes and coinage, which are found throughout these districts, and especially to the northward, near the head waters of the three western of the Five Rivers. A great change had no doubt taken place by the successful invasion of a great horde of Scythians towards the close of the second century B. C., as they are known to have overthrown the Greek kingdom of Bactriana, at the same time effacing many of the names of the tribes whom Alexander had met with two centuries before, such as the Aspasii, Assaceni, Massiani, Hippasii; with the towns of Acadera, Daedala, Massaga, and Embolima, which are preserved in Arrian, and others of Alexander's historians.

Further N., along the bases of the Paropamisus, Imaus, and Emodus, in the direction from W. to E., we find mention of the Sampatae, the district Suastene (now *Sewad*), and Goryaea, with the towns Gorya and Dionysopolis, or Nagara (now *Nagar*); and further E., between the Suastus and the Indus, the Gandarae (one, doubtless, of the original seats of the *Gandháras*). Following the mountain-range to the E., we come to Caspiria (now *Cashmir*, in earlier times known, as we have seen, to Herodotus, under the name of Caspatyrus). Southward of *Cashmír* was the territory of Varsa, with its capital Taxila, a place of importance so early as the time of Alexander (Arrian, v. 8), and probably indicated now by the extensive remains of *Manikyála* (Burnes, *Travels*, vol. i. p. 65), if, indeed, these are not too much to the eastward. A little further S. was the land of Pandous (Πανδώου χώρα, doubtless the representative of one of the Pandava dynasties of early Hindú history), during the time of Alexander the territory of the king Porus. Further eastward were the state Cylindrine, with the sources of the *Sutledge*, Jumna, and Ganges; and the Gangani, whose territory extended into the highest range of the *Himálaya*.

Many small states and towns are mentioned in the historians of Alexander's campaigns along the upper *Panjáb*, which we cannot here do more than glance at, as Peucelaotis (*Puskkalávati*), Nicaea, Bucephala, the Glaucanitae, and the Sibae or Sibi. Following next the course of the Ganges, we meet with the Daetichae, the Nanichae, Prasiaca; and the Mandalae, with its celebrated capital Palibothra (beyond all doubt the present *Pátaliputra*, or *Patna*), situated at the junction of

the Erannoboas (*Hiranjávaha*) and the Ganges; with some smaller states, as the Surasenae, and the towns Methora and Clisobra, which were subject to the Prasii. Southward from Palibothra, in the interior of the plain country, dwelt the Cooconagae, on the banks of the Adamas, the Sabârae, the Salaceni, the Drillophyllitae, the Adeisathri, with their capital Sagida (probably the present *Sohagpur*), situated on the northern spurs of the *Vindhya*, at no great distance from the sources of the Sonus. Between the Sonus and the Ganges were the Bolingae. In a NW. direction, beyond the Sonus and the *Vindhya*, we find a territory called Sandrabatis, and the Gymnosophistae, who appear to have occupied the country now called *Sirhind*, as far as the river *Sutledge*. The Caspeirаei (at least in the time of Ptolemy; see Ptol. vii. 1. § 47) seem to have extended over a considerable breadth of country, as their sacred town Modura (Μόδουρα ἡ τῶν ϑεῶν) was situated, apparently, at no great distance from the *Nerbudda*, though its exact position has not been identified. The difficulty of identification is much, indeed, increased by the error of reckoning which prevails throughout Ptolemy, who held that the coast of India towards the Indian Ocean was in a straight line E. and W. from Taprobane and the Indus, thereby placing Nanaguna and the Namadus in the same parallel of latitude. On the southern spurs of the *Vindhya*, between the Namadus and Nanaguna, on the edge of the *Deccan*, were the Phyllitae and Gondali; and to the E. of them, between the Bittigo M. and the river Chaberus (*Cáveri*), the nomad Sorae (Σῶραι νομάδες), with a chief town Sora, at the eastern end of M. Bittigo. To the southward of these, on the Chaberus and Solen, were several smaller tribes, the Brachmani Magi, the Ambastae, Bettigi or Bitti, and the Tabassi.

All the above-mentioned districts and towns of any importance are more fully described under their respective names.

The ancients appear to have known but little of the islands which are now considered to form part of the East Indies, with the exception of Taprobane or *Ceylon*, of which Pliny and Ptolemy have left some considerable notices. The reason is, that it was not till a much later period of the world's history that the Indian Archipelago was fully opened out by its commercial resources to scientific inquiry. Besides *Ceylon*, however, Ptolemy mentions, in its neighbourhood, a remarkable cluster of small islands, doubtless (as we have remarked before) those now known as the *Laccadives* and *Maldives;* the island of Iabadius (*Java*), below the Chersonesus Aurea; and the Satyrorum Insulae, on the same parallel with the S. end of this Chersonesus, which may perhaps answer to the *Anamba* or *Natuna* islands.

Of the government of India, considered as a whole, comparatively little was known to the Greek writers; indeed, with the exception of occasional names of kings, it may be asserted that they knew nothing E. of Palibothra. Nor is this strange; direct connection with the interior of the country ceased with the fall of the Graeco-Bactrian empire; from that period almost all the information about India which found its way to the nations of the West was derived from the merchants and others, who made voyages to the different out-ports of the country. It may be worth while to state briefly here some of the principal rulers mentioned by the Greek and Roman writers; premising that, previous to the advance of Alexander, history is on these subjects silent. Previous, indeed, to Alexander, we have nothing on which we can rely. There is no evidence that Darius himself invaded any part of India, though a portion of the NW. provinces of Bactria may have paid him tribute, as stated by Herodotus. The expeditions of Dionysus and Hercules, and the wars of Sesostris and Semiramis in India, can be considered as nothing more than fables too credulously recorded by Ctesias. At the time of the invasion of Alexander the Great, there can be no doubt that there was a settled monarchy in the western part of India, and his dealings with it are very clearly to be made out. In the north of the *Panjáb* was the town or district Taxila (probably *Manikyála*, or very near it), which was ruled by a king named Taxiles; it being a frequent Indian custom to name the king from the place he ruled over. His name in Diodorus is Mophis (xvii. 86), and in Curtius, Omphis (viii. 12), which was probably the real one, and is itself of Indian origin. It appears that Alexander left his country as he found it. (Strab. xv. pp. 698, 699, 716.) The name of Taxiles is not mentioned in any Indian author. The next ruler Alexander met with was Porus (probably *Paurava* Sanscr., a change which Strabo indicates in that of Δαριαύην into Δαρεῖον), with whom Taxiles had been at war. (Arrian, v. 21.) Alexander appears to have succeeded in reconciling them, and to have increased the empire of Porus, so as to make his rule comprehend the whole country between the Hydaspes and Acesines. (Arrian, v. 20, 21, 29.) His country is not named in any Indian writer. Shortly afterwards, Alexander received an embassy and presents from Abisaris (no doubt *Abhisára*), whose territory, as has been shown by Prof. Wilson from the *Annals of Cashmir*, must have been in the mountains in the southern part of that province. (*Asiat. Res.* vol. xv. p. 116.) There had been previously a war between this ruler and the Malli, Oxydracae, and the people of the *Lower Panjáb*, which had ended in nothing. Alexander confirmed Abisaris in the possession of his own territory, made Philip satrap of the Malli and Oxydracae, and Pytho of the land between the confluence of the Indus and Acesines and the sea (Arrian, vi. 15); placing, at the same time, Oxyarces over the Paropamisadae. (Arr. vi. 15.) It may be observed that, in the time of Ptolemy, the Cashmirians appear to have held the whole of the *Panjáb*, so far as the *Vindhya* mountains, a portion of the southern country being, however, in the hands of the Malli and Cathaei.

The same state of things prevailed for some time after the death of Alexander, as appears by a decree of Perdiccas, mentioned in Diodorus (xviii. 3), and with little material change under Antipater. (Diod. xviii. 39.) Indeed, the provinces remained true to the Macedonians till the commencement of the rule of the Prasii, when Sandrocottus took up arms against the Macedonian governors. (Justin. xv. 4.) The origin of this rebellion is clearly traceable. Porus was slain by Eudamus about B.C. 317 (Diod. xix. 14); hence Sandrocottus must have been on the throne about the time that Seleucus took Babylon, B.C. 312. The attempt of the Indians to recover their freedom was probably aided by the fact that Porus had been slain by a Greek. Sandrocottus, as king of the Prasii (Sansc. *Prachya*) and of the nations on the Ganges, made war with Seleucus Nicator, who penetrated far into India. Plutarch says he ruled over all India, but this is not likely. (Plut. *Alex.* 62.) It appears

that he crossed the Indus, and obtained by marriage Arachosia, Gedrosia, and the Paropamisadae, from Seleucus. (Strab. xv. p. 724; Appian, *Syr.* 55.) It was to his court that Megasthenes (as we have before stated) was sent. Sandrocottus was succeeded by Amitrochates (Sansc. *Amitraghâtas*), which is almost certainly the true form of the name, though Strabo calls him Allitrochades. He was the contemporary of Antiochus Soter. (Athen. xiv. 67.) It is clear, from Athenaeus (*l. c.*), that the same friendship was maintained between the two descendants as between the two fathers. Daimachus was sent as ambassador to Palibothra. (Strab. ii. p. 70.) Then came the wars between the Parthians and Bactrians, and the more complete establishment of the Graeco-Bactrian kingdom, under Menander, Apollodotus, Eucratides, and their successors, to which we cannot here do more than allude. The effect, however, of these wars was to interrupt communication between the East and the West; hence the meagre nature of the historical records of the period. The expedition of Antiochus the Great to India brought to light the name of another king, Sophagasenus (Polyb. xi. 32), who was, in all probability, king of the Prasii. The Scythians finally put an end to the Bactrian empire about B. C. 136. (De Guignes, *Mém. de l'Acad. d. Inscr.* xxv. p. 17.) This event is noticed in the Periplus (p. 22), where, however, Parthi must be taken to mean Scythi. (See also *Periplus*, p. 24; Dionys. Perieg. vv. 1087—1088.) Eustathius adds, in his commentary on Dionysius:—*Οἱ καὶ Ἰνδοσκύθαι συνθέτως λεγόμενοι.* Minnagara was their chief town, a name, as appears from Isid. Char. (p. 9), which was partly Scythian and partly Sanscrit. (Cf. also De Guignes, *l. c.*)

The Scythians were in their turn driven out of India by Vicrámaditya, about B. C. 56 (Colebrooke, *Ind. Algebra*, Lond. 1817, p. 43), who established his seat of empire at *Oujein* (*Ujjayini*). At the time when the Periplus was compiled, the capital had been again changed, as we there read, Ὀζήνη, *ἐν ᾗ καὶ τὰ Βασιλεία πρότερον ἦν.*

It is remarkable that no allusion has been found in any of the early literature of the Hindús to Alexander the Great; but the effect of the later expeditions of the Bactrian kings is apparently indicated under the name of the *Yavana*. In the astronomical works, the *Yavana* are barbarians who understood astronomy, whence it has been conjectured by Colebrooke that the Alexandrians are referred to. (*Ind. Algebra*, p. 80.) Generally, there can be no doubt that the *Yavana* mean nations to the W. of India. Thus, in the Mahabhárata, they make war on the Indians, in conjunction with the Páradi (i. e. Parthi), and the Sacae or Scythians. (Lassen, *Pentap.* p. 60.) In the Drama of the Mudra-Ráxasa, which refers to the war between Chandragupta and another Indian King, it is stated that Cusumapura (i. e. Palibothra) was surrounded by the Cirratae, Yavani, Cambogi, Persae, Bactrians, and the other forces of Chandragupta, and the king of the Mountain Regions. Lassen thinks, with much reason, that this refers to Seleucus, who, in his war with Chandragupta, reached, as we know, Palibothra. (Plin. vi. 17.)

With regard to the commerce of ancient India, which we have every reason to suppose was very extensive, it is impossible in this place to do more than to indicate a few of the principal facts. Indeed, the commerce of India, including the northern and the southern districts, may be considered as an epitome of the commerce of the world, there being few productions of any other country which may not be found somewhere within its vast area.

The principal directions in which the commerce of ancient India flowed were, between Western India and Africa, between the interior of the *Deccan* and the outports of the southern and western coast of the Indian Ocean, between *Ceylon* and the ports of the *Coromandel* coast, between the *Coromandel* coast and the Aurea Chersonesus, and, in the N., along the Ganges and into Tátary and the territory of the Sinae. There appears also to have been a remarkable trade with the opposite coast of Africa, along the district now called *Zanguebar*, in sesamum, rice, cotton goods, cane-honey (sugar), which was regularly sent from the interior of Ariaca (*Concan*) to Barygaza (*Beroach*), and thence westward. (*Peripl.* p. 8.) Arab sailors are mentioned who lived at Muza (*Mocha*), and who traded with Barygaza. (*Peripl.* p. 12.) Banians of India had established themselves on the N. side of Socotra, called the island of Dioscorides (*Peripl.* p. 17): while, even so early as Agatharchides, there was evidently an active commerce between Western India and Yemen. (Agatharch. p. 66, ed. Hudson.) Again, the rapidity with which Alexander got his fleet together seems to show that there must have been a considerable commerce by boats upon the Indus. At the time of the Periplus there was a chain of ports along the western coast, — Barygaza (*Beroach*), Muziris in Limyrica (*Mangalore*), Nelkynda (*Neliceram*), Pattala (once supposed to be Tatta, but much more probably *Hydrabád*), and Calliene, now *Gallian* (*Peripl.* p. 30): while there were three principal emporia for merchandise, — Ozene (*Oujein*), the chief mart of foreign commerce, (vide an interesting account of its ruins, *Asiat. Res.* vol. vi. p. 36), and for the transmission of the goods to Barygaza; Tagara, in the interior of the *Deccan* (almost certainly *Deoghir* or *Devanagari* near *Ellora*), whence the goods were conveyed over difficult roads to Barygaza and Pluthana or Plithana, a place the exact position of which cannot now be determined, but, from the character of the products of the place, must have been somewhere in the *Gháts*.

Along the *Regio Paralia* to the S., and on the *Coromandel* coast, were several ports of consequence; and extensive pearl fisheries in the kingdom of king Pandion, near Colchi, and near the island of Epiodorus, where the *πιννικόν* (a silky thread spun from the Pinna-fish) was procured. (*Peripl.* p. 33). Further to the N. were, — Masalia (*Masulipatam*), famous for its cotton goods (*Peripl.* p. 35); and Gange, a great mart for muslin, betel, pearls, &c., somewhere near the mouth of the Ganges, its exact locality, however, not being now determinable. (*Peripl.* p. 36.) The commerce of *Ceylon* (*Selandib*, i. e. *Sinhala-dwipa*) was in pearls of the best class, and precious stones of all kinds, especially the ruby and the emerald. The notices in Ptolemy and Pliny shew that its shores were well furnished with commercial towns (Ptol. vii. 4. §§ 3, 4, 5), while we know from the narrative of Cosmas Indicopleustes (*ap.* Montfaucon, *Coll. Nova Bibl. Patr.* vol. ii.) that it was, in the sixth century A.D., the centre of Hindu commerce. Besides these places, we learn that there was an emporium upon the *Coromandel* coast, whence the merchant ships crossed over to Chryse (in all probability *Malacca*), in the Aurea Chersonesus; the name of it, however, is not specified.

It is probable, however, that the greatest line of commerce was from the N. and W. along the

Ganges, commencing with Taxila near the Indus, or *Lahore* on that river, and passing thence to Palibothra. This was called the Royal Road. It is remarkable that the Ramayana describes a road from Ayodhiya (*Oude*), over the Ganges and the Jumna, to *Hastinapúra* and *Lahore*, which must be nearly identical with that mentioned in the Greek geographers. The commerce, which appears to have existed between the interior of Asia, India, and the land of the Sinae and Serica, is very remarkable. It is stated that from Thina (the capital of the Sinae) fine cottons and silk were sent on foot to Bactra, and thence down the Ganges to Limyrica. (*Peripl.* p. 36.) The Periplus speaks of a sort of annual fair which was held within the territory of the Thinae, to which malabathron (betel) was imported from India. It is not easy to make out whereabouts Thina itself was situated, and none of the modern attempts at identification appear to us at all satisfactory: it is clearly, however, a northern town, in the direction of *Ladakh* in *Thibet*, and not, as Ptolemy placed it, at *Malacca* in *Tenasserim*, or, as Vincent (*Voyage of Nearchus*, vol. ii. p. 735) conjectured, at *Arracan*. It is curious that silk should be so constantly mentioned as an article of import from other countries, especially *Serica*, as there is every reason to suppose that it was indigenous in India; the name for silk throughout the whole of the Indian Archipelago being the Sanscrit word *sutra*. (Colebrooke, *Asiat. Res.* vol. v. p. 61.)

It is impossible to give in this work any details as to the knowledge of ancient India exhibited in the remains of native poems or histories. The whole of this subject has been examined with great ability by Lassen in his *Indische Alterthumskunde;* and to his pages, to which we are indebted for most of the Sanscrit names which we have from time to time inserted, we must refer our readers. From the careful comparison which has been made by Lassen and other orientalists (among whom Pott deserves especial mention) of the Indian names preserved by the Greek writers, a great amount of evidence has been adduced in favour of the general faithfulness of those who recorded what they saw or heard. In many instances, as may be seen by the names we have already quoted, the Greek writers have been content with a simple adaptation of the sounds which they heard to those best suited for their own pronunciation. When we consider the barbarous words which have come to Europe in modern times as the European representations of the names of places and peoples existing at the present time, we have reason to be surprised at the accuracy with which Greek ears appreciated, and the Greek language preserved, names which must have appeared to Greeks far more barbarous than they would have seemed to the modern conquerors of the country. The attention of modern scholars has detected many words of genuine Indian origin in a Greek dress; and an able essay by Prof. Tychsen on such words in the fragments of Ctesias will repay the perusal of those who are interested in such subjects. (See Heeren, *Asiatic Nations*, vol. ii. Append. 4, ed. Lond. 1846.)

The generic name of the inhabitants of the whole country to the E. of Persia and S. of the *Himálaya* mountains (with the exception of the Seres) was, in ancient times, INDI (Ἰνδοί), or Indians. It is true that the appellation referred to a much wider or much less extensive range of country, at different periods of history. There can, however, be no doubt, that when the ancient writers speak of the INDI, they mean the inhabitants of a vast territory in the SE. part of Asia. The extension of the meaning of the name depended on the extension of the knowledge of India, and may be traced, though less completely, in the same manner as we have traced the gradual progress of knowledge relative to the land itself. The Indi are mentioned in more than one of the fragments of Hecataeus (Hecat. *Fragm.* 175, 178), and are stated by Aeschylus to have been a people in the neighbourhood of the Aethiopians, who made use of camels. (*Suppl.* 284—287.) Herodotus is the first ancient author who may be said to give any real description of them; and he is led to refer to them, only because a portion of this country, which adjoined the territory of Dareius, was included in one of the satrapies of his vast empire, and, therefore, paid him tribute. Some part of his narrative (iii. 94—106, iv. 44, vii. 65) may be doubted, as clearly from hearsay evidence; some is certainly fabulous. The sum of it is, that the Indians were the most populous and richest nation which he knew of (iii. 94), and that they consisted of many different tribes, speaking different languages. Some of them, he states, dwelt in the immediate neighbourhood of the Aethiopians, and were, like them, black in colour (iii. 98, 101); some, in the marshes and desert land still further E. The manners of these tribes, whom he calls Padaei, and Callatiae or Calantiae, were in the lowest grade of civilisation,—a wandering race, living on raw flesh and raw fish, and of cannibal habits. (Cf. Strab. xv. p. 710, from which Mannert, v. 1. p. 3, infers that the Padaei were not after all genuine Indians, but Tátars.) Others (and these were the most warlike) occupied the more northern districts in the neighbourhood of Caspatyrus (*Cashmir*) in the *Regio Pactyice*. Herodotus places that part of India which was subject to Dareius in the 20th satrapy, and states that the annual tribute from it amounted to 360 talents (iii. 94). Xenophon speaks of the Indians as a great nation, and one worthy of alliance with Cyaxares and the Medes (i. 5. § 3, iii. 2. § 25, vi. 2. § 1), though he does not specify to what part of India he refers. That, however, it was nearly the same as that which Herodotus describes, no one can doubt.

From the writers subsequent to Alexander, the following particulars relative to the people and their manners may be gathered. The ancients considered that they were divided into seven castes:—1. *Priests*, the royal counsellors, and nearly connected with, if not the same as, the Βραχμᾶνες or Brahmins. (Strab. xv. pp. 712—716; Arrian, *Ind.* 11.) With these Strabo (*l. c.*) makes another class, whom he calls Γαρμᾶνες. These, as Grosskurd (iii. p. 153) has suggested, would seem, from the description of their habits, to have been *fakirs*, or penitents, and the same as the Gymnosophistae so often mentioned by Strabo and Arrian. This caste was exempted from taxes and service in war. 2. *Husbandmen*, who were free from war-service. They were the most numerous of the seven castes. (Strab. xv. p. 704.) The land itself was held to belong to the king, who farmed it out, leaving to the cultivator one-fourth of the produce as his share. 3. *Hunters and shepherds*, who lead a wandering life, their office being to rear cattle and beasts of burden: the horse and the elephant were held to be for the kings only. (Strab. *l. c.*) 4. *Artizans and handicraftsmen*, of all kinds. (Strab. xv. p. 707.) 5. *Warriors*. (Strab. *l. c.*) 6. *Political officers* (ἔφοροι, Strab.

l. c.), who looked after affairs in the towns, &c., and reported secretly to the king. 7. *The Royal Counsellors*, who presided over the administration of justice (Strab. *l. c.*), and kept the archives of the realm.

It was not permitted for intermarriages to take place between any of these classes, nor for any one to perform the office allotted to another, except in the case of the first caste (called also that of the φιλοσοφοί), to which class a man might be raised from any of the other classes. (Strab. *l. c.*; Arrian, *Ind.* c. 12; Diod. ii. 41; Plin. vi. 19. s. 22.) We may remark that the modern writers on India recognise only four castes, called respectively *Brahmans*, *Kshatryas*, *Vaisyas*, and *Sudras*,—a division which Heeren has suggested (we think without sufficient evidence) to indicate the remains of distinct races. (*Asiat. Nat.* vol. ii. p. 220.) The lowest of the people (now called Pariahs), as belonging to none of the above castes, are nowhere distinctly mentioned by ancient writers (but cf. Strab. xv. p. 709; Diod. ii. 29; Arrian, *Ind.* c. 10).

The general description of the Indians, drawn from Megasthenes and others who had lived with them, is very pleasing. Theft is said to have been unknown, so that houses could be left unfastened. (Strab. xv. p. 709.) No Indian was known to speak falsehood. (Strab. *l. c.*; Arrian, *Ind.* c. 12.) They were extremely temperate, abstaining wholly from wine (Strab. *l. c.*),—their hatred of drunkenness being so great that any girl of the harem, who should see the king drunk, was at liberty to kill him. (Strab. xv. p. 710.) No class eat meat (Herod. iii. 100), their chief sustenance being rice, which afforded them also a strong drink, i. e. *arrak*. (Strab. xv. p. 694.) Hence an especial freedom from diseases, and long lives; though maturity was early developed, especially in the female sex, girls of seven years old being deemed marriageable. (Strab. xv. pp. 701—706; Arrian, *Ind.* 9.) The women are said to have been remarkable for their chastity, it being impossible to tempt them with any smaller gifts than that of an elephant (Arrian, *Ind.* c. 17), which was not considered discreditable by their countrymen; and the usual custom of marriage was for the father to take his daughters and to give them in marriage to the youths who had distinguished themselves most in gymnastic exercises. (Arrian, *l. c.*; Strab. xv. p. 717.) To strangers they ever showed the utmost hospitality. (Diod. ii. 42.) As warriors they were notorious (Arrian, *Ind.* c. 9; *Exped. Alex.* v. 4; Plut. *Alex.* c. 59, 63): the weapons of the foot-soldiers being bows and arrows, and a great two-handed sword: and of the cavalry, a javelin and a round shield (Arrian, *Ind.* c. 16; Strab. xv. p. 717; Curt. viii. 9.) In the *Panjáb*, it is said that the Macedonians encountered poisoned arrows. (Diod. xvii. 103.) Manly exercises of all kinds were in vogue among them. The chase was the peculiar privilege of royalty (Strab. xv. pp. 709—712; Ctes. *Ind.* 14; Curt. viii. 9, seq.); gymnastics, music, and dancing, of the rest of the people (Strab. xv. p. 709; Arrian, *Exp. Alex.* vi. 3); and juggling and slight of hand were then, as now, among their chief amusements. (Aelian, viii. 7; Juven. vi. 582.) Their usual dress befitted their hot climate, and was of white linen (Philost. *Vit. Apoll.* ii. 9) or of cotton-stuff (Strab. xv. p. 719; Arrian, *Ind.* c. 16); their heads and shoulders partially covered (Arrian, *l. c.*; Curt. viii. 9, 15) or shaded from the sun by umbrellas (Arrian, *l. c.*); with shoes of white leather, with very thick and many-coloured soles. (Arrian, *l. c.*) Gold and ivory rings and ear-rings were in common use; and they were wont to dye their beards, not only black and white, but also red and green. (Arrian, *l. c.*) In general form of body, they were thin and elegantly made, with great litheness (Arrian, *Ind.* c. 17; Strab. ii. p. 103, xv. p. 695), but were larger than other Asiatics. (Arrian, *Exped. Alex.* v. 4; Plin. vii. 2.)

Some peculiar customs they had, which have lasted to the present day, such as self-immolation by water or fire, and throwing themselves from precipices (Strab. xv. pp. 716, 718; Curt. viii. 9; Arrian, *Exped. Alex.* vii. 5; Lucan. iii. 42; Plin. vi. 19. s. 20), and the burning of the widow (*suttee*); not, indeed, agreeably to any fixed law, but rather according to custom (Strab. xv. pp. 699—714; Diod. xvii. 91, xix. 33; Cic. *Tusc. Disp.* v. 27.) For writing materials they used the bark of trees (Strab. xv. p. 717; Curt. ix. 15), probably much as the modern Cinghalese use the leaf of the palm. Their houses were generally built of wood or of the bamboo-cane; but in the cold mountain districts, of clay. (Arrian, *Ind.* c. 10.) It is a remarkable proof of the extent to which civilisation had been carried in ancient India, that there were, throughout great part of the country, high roads, with stones set up (answering to our milestones), on which were inscribed the name of the place and the distance to the next station. (Strab. xv. pp. 689—708; Arrian, *Ind.* c. 3.) [V.]

IN'DICUS OCEANUS (ὁ Ἰνδικὸς ὠκεανός, Agath. ii. 14; τὸ Ἰνδικὸν πέλαγος, Ptol. vii. 1. § 5). The Indian Ocean of the ancients may be considered generally as that great sea which washed the whole of the southern portion of India, extending from the parallel of longitude of the mouths of the Indus to the shores of the Chersonesus Aurea. It seems, indeed, to have been held by them as part, however, of a yet greater extent of water, the limits of which were undefined, at least to the southwards, and to which they gave the generic name of the *Southern Sea*. Thus Herodotus speaks of ἡ νοτίη θάλασσα in this sense (iv. 37), as does also Strabo (ii. p. 121); Diodorus calls it ἡ κατὰ μεσημβρίαν ὠκεανός (iii. 38), while the Erythraean sea, taken in its most extended meaning, doubtless conveyed the same sense. (Herod. ii. 102, iv. 37; compared with Strab. i. p. 33.) Ptolemy gives the distances across this sea as stated by seafaring men; at the same time he guards against their over-statements, by recording his opinion in favour of no more than one-third of their measurements: this space he calls 8670 stadia (i. 13. § 7). The distance along its shores, following the indentations of the coast-line, he estimates, on the same authority, at 19,000 stadia. It is evident, however, that Ptolemy himself had no clear idea of the real form of the Indian Ocean, and that he inclined to the opinion of Hipparchus, Polybius, and Marinus of Tyre, that it was a vast inland sea the southern portion of it being bounded by the shores of an unknown land which he supposed to connect Cattigara in the Chersonesus Aurea with the promontory of Prasum (now *Cape Delgado*) in Africa (comp. iv. 9. §§ 1, 3, vii. 3. §§ 1, 3, 6). The origin of this error it is not easy now to ascertain, but it seems to have been connected with one which is found in the historians of Alexander's expedition, according to which there was a connection between the Indus and the Nile, so that the sources of the Acesines (*Chenáb*) were confounded with those of the Nile. (Arrian, vi. 1.) Strabo, indeed, appears to have had some leaning to a similar view, in that he connected the Erythraean with the Atlantic sea (ii. p. 130); which was also

the opinion of Eratosthenes (Strab. i. p. 64). The Indian Ocean contains at its eastern end three principal gulfs, which are noticed in ancient authors, — the SINUS PERIMULICUS (Ptol. vii. 2. § 5), in the Chersonesus Aurea (probably now the *Straits of Malacca*); the SINUS SABARACUS (Ptol. vii. 2. § 4), now the *Gulf of Martaban;* and the SINUS GANGETICUS, or *Bay of Bengal.* [V.]

INDIGE'TES, or INDI'GETAE, (Ἰνδικῆται, Strab.; Ἐνδιγέται, Ptol.), a people of Hispania Tarraconensis, in the extreme NE. corner of the peninsula, around the gulf of Rhoda and Emporiae (*Gulf of Ampurias*), as far as the Trophies of Pompey (τὰ Πομπηΐου τρόπαια, ἀναθήματα τοῦ Πομπηΐου), on the summit of the pass over the Pyrenees, which formed the boundary of Gaul and Spain (Strab. iii. p. 160, iv. p. 178). [POMPEII TROPAEA.] They were divided into four tribes. Their chief cities, besides EMPORIAE and RHODA, were: JUNCARIA (Ἰουγγαρία, Ptol. ii. 6. § 73: *Junquera*, or, as some suppose, *Figueras*), 16 M P. south of the summit of the Pyrenees (Summum Pyrenaeum, *Itin.*), on the high road to Tarraco (*Itin. Ant.* pp. 390, 397); CINNIANA (*Cervia*), 15 M. P. further S. (*Ib.*; *Tab. Peut.*); and DECIANA, near *Junquera* (Ptol. ii. 6. § 73). On the promontory formed by the E. extremity of the Pyrenees (*C. Creus*), was a temple of Venus, with a small seaport on the N. side (Ἀφροδισίας, Steph. B.; τὸ Ἀφροδίσιον ἱερόν, Ptol. ii. 6. § 20; Pyrenaea Venus, Plin. iii. 3. s. 4; Portus Veneris, Mela, ii. 6. § 5; Portus Pyrenaei, Liv. xxxiv. 8: *Porte Vendres*), which some made the boundary of Gaul and Spain, instead of the Trophies of Pompey. Ptolemy names two small rivers as falling into the gulf of Emporiae, the CLODIANUS (Κλωδιανός: *Fluvia*) and the SAMBROCAS (Σαμβρόκα ἐκβολαί): Pliny names the TICHIS, which is the small river flowing past *Rosas.* The district round the gulf of Emporiae was called JUNCARIUS CAMPUS (τὸ Ἰουγγάριον πεδίον), from the abundance of rushes which grew upon its marshy soil. (Strab. iii. pp. 156, 163; Steph. B. *s. v.* Ἰνδικῆται; Eustath. *ad Il.* i. p. 191; Avien. *Or. Mar.* 523; Ukert, vol. ii. pt. 1. pp. 315, &c.) [P. S.]

INDOSCY'THIA (Ἰνδοσκυθία: *Eth.* Ἰνδοσκύθης), a district of wide extent along the Indus, which probably comprehended the whole tract watered by the Lower Indus, *Cutch, Guzerat*, and *Saurashtran.* It derived its name from the Scythian tribes, who gradually pressed onwards to the south and the sea-coast after they had overthrown the Graeco-Bactrian empire, about A. D. 136. It is first mentioned in the Periplus M. E. (p. 22) as occupying the banks of the Indus; while in Ptolemy is a fuller description, with the names of some of its principal subdivisions, as Pattalene, Abiria, and Syrastrene (*Saurashtran*), with an extensive list of towns which belonged to it (vii. 1. §§ 55—61). Some of them, as Binagara (properly Minnagara), have been recognised as partially Scythic in form. (Lassen, *Pentap.* p. 56; cf. Isidor. Char. p. 9.) In Dionysius Periegetes (v. 1088) the same people are described as νότιοι Σκύθαι. As late as the middle of the sixth century A.D., Cosmas Indicopleustes speaks of White Huns, or Mongolians, as the inhabitants of the *Panjáb* (ii. p. 338). These may be considered as the remains of the same Scythic empire, the predecessors of the hordes who subsequently poured down from the north under Jinghíz Khan. (Ritter, *Erdkunde*, vol. i. p. 558.) [V.]

INDUS (ὁ Ἰνδός), one of the principal rivers of Asia, and the boundary westward of India. It is mentioned first in ancient authors by Hecataeus of Miletus (*Fragm.* 144, ed. Klausen), and subsequently by Herodotus (iv. 44), who, however, only notices it in connection with various tribes who, he states, lived upon its banks. As in the case of India itself, so in that of the Indus, the first real description which the ancients obtained of this river was from the historians of Alexander the Great's marches. Arrian states that its sources were in the lower spurs of the Paropamisus, or Indian Caucasus (*Hindú-Kúsh*); wherein he agrees with Mela (iii. 7. § 6), Strabo (xv. p. 690), Curtius (viii. 9. § 3), and other writers. It was, in Arrian's opinion, a vast stream, even from its first sources, the largest river in the world except the Ganges, and the recipient of many tributaries, themselves larger than any other known stream. It has been conjectured, from the descriptions of the Indus which Arrian has preserved that the writers from whom he has condensed his narrative must have seen it at the time when its waters were at their highest, in August and September. Quoting from Ctesias (v. 4, 11), and with the authority of the other writers (v. 20), Arrian gives 40 stadia for the mean breadth of the river, and 15 stadia where it was most contracted; below the confluence of the principal tributaries he considers its breadth may be 100 stadia, and even more than this when much flooded (vi. 14). Pliny, on the other hand, considers that it is nowhere more than 50 stadia broad (vi. 20. s. 23); which is clearly the same opinion as that of Strabo, who states, that though those who had not measured the breadth put it down at 100 stadia, those, on the other hand, who had measured it, asserted that 50 stadia was its greatest, and 7 stadia its least breadth (xv. p. 700). Its depth, according to Pliny (*l. c.*), was nowhere less than 15 fathoms. According to Diodorus, it was the greatest river in the world after the Nile (ii. 35). Curtius states that its waters were cold, and of the colour of the sea (viii. 9. § 4). Its current is held by some to have been slow (as by Mela, iii. 7. § 6); by others, rapid (as by Eustath. *in Dionys. Perieg.* v. 1088). Its course towards the sea, after leaving the mountains, was nearly SW. (Plin. vi. 20. s. 23); on its way it received, according to Strabo (xv. p. 700) and Arrian (v. 6), 15, according to Pliny, 19 other tributary rivers (*l. c.*). About 2000 stadia from the Indian Ocean, it was divided into two principal arms (Strab. xv. p. 701), forming thereby a Delta, like that of the Nile, though not so large, called Pattalene, from its chief town Pattala (which Arrian asserts meant, in the Indian tongue, Delta (v. 4); though this statement may be questioned). (Cf. also Arrian, *Ind.* 2; Dionys. Perieg. v. 1088.) The flat land at the mouths of rivers which flow from high mountain-ranges with a rapid stream, is ever changing: hence, probably, the different accounts which we receive of the mouths of the Indus from those who recorded the history of Alexander, and from the works of later geographers. The former (as we have stated), with Strabo, gave the Indus only two principal outlets into the Indian Ocean, — at a distance, the one from the other, according to Aristobulus (*ap.* Strab. xv. p. 690), of 1000 stadia, but, according to Nearchus (*l. c.*), of 1800 stadia. The latter mention more than two mouths: Mela (iii. 7. § 6) speaking of "plura ostia," and Ptolemy giving the names of seven (vii. 1. § 28), in which he is confirmed by the author of the Periplus Maris Erythraei (p. 22). The names

of these mouths, in a direction from W. to E., are: — 1. Σάγαπα στόμα (the *Pitti* or *Lohari*), not improbably in the arm of the stream by which Alexander's fleet gained the Indian Ocean; 2. Σίνθων στόμα (the *Rikala*); 3. Χρυσοῦν στόμα (the *Hagamari* or *Kukewari*), whereby merchandise and goods ascended to Tatta; 4. Χάριφον στόμα (the *Mala?*); 5. Σάπαρα; 6. Σάβαλα or Σαβάλασα (the *Pinyari* or *Sir*); 7. Λωνιβάρη (probably *Lonívári*, the *Púrana*, *Darya* or *Kori*). For the conjectural identifications of these mouths, most of which are now closed, except in high floods, see Lassen's Map of Ancient India. The principal streams which flowed into the Indus are: — on the right or western bank of the river, the Choaspes, called by Arrian the Guraeus, and by Ptolemy the Suastus (the *Attok*); and the Cophen (*Cábul* river), with its own smaller tributary the Choes (the *Kow*); and, on the left or eastern bank, the greater rivers, — which give its name to the *Panjáb* (or the country of the Five Rivers), — the Acesines (*Chenáb*), the Hydaspes or Bidaspes (*Jelum*), the Hydraotes (*Ravi*); and the Hypanis or Hyphasis (the *Sutledge*). [See these rivers under their respective names.] As in the case of the Ganges, so in that of the Indus, it has been left to modern researches to determine accurately the real sources of the river: it is now well known that the Indus rises at a considerable distance on the NE. side of the *Himálaya*, in what was considered by the Hindus their most sacred land, and which was also the district in which, on opposite sides of the mountains, the *Brahmaputra*, the *Ganges*, and the *Jumna*, have their several sources. From its source, the Indus flows NW. to *Iskardu*, and thence W. and SW., till it bursts through the mountain barriers, and descends into the plain of the *Panjáb*, passing along the western edge of *Cashmir*. (Ritter, *Erdkunde*, vol. v. p. 216; Moorcroft, *Travels in Ladakh and Cashmir*, 1841.) The native name *Sindhu* has been preserved with remarkable accuracy, both in the Greek writers and in modern times. Thus, in the Periplus, we find Σινθός (p. 23); in Ptolemy, Σίνθων (vii. 1. § 2), from which, by the softening of the Ionic pronunciation, the Greeks obtained their form Ἰνδος. (Cf. Plin. vi. 20; Cosmas, *Indic.* p. 337.) The present name is *Sind* or *Sindhu*. (Ritter, vol. v. pp. 29, 171.) [V.]

INDUS, a river of the south-east of Caria, near the town of Cibyra. On its banks was situated, according to Livy (xxxviii. 14), the fort of Thabusion. Pliny (v. 29) states that sixty other rivers, and upwards of a hundred mountain torrents, emptied themselves into it. This river, which is said to have received its name from some Indian who had been thrown into it from an elephant, is probably no other than the river Calbis (Κάλβις, Strab. xiv. p. 651; Ptol. v. 2. § 11; Pomp. Mela, i. 16), at present called *Quingi*, or *Tavas*, which has its sources on Mount Cadmus, above Cibyra, and passing through Caria empties itself into the sea near Caunus, opposite to the island of Rhodes. [L. S.]

INDU'STRIA, a town of Liguria, situated on the right bank of the Padus, about 20 miles below Turin. It is mentioned only by Pliny, who tells us that its ancient name was BODINCOMAGUS, which he connects with Bodincus, the native name of the Padus [PADUS], and adds that it was at this point that river first attained a considerable depth. (Plin. iii. 16. s. 20.) Its site (which was erroneously fixed by earlier writers at *Casale*) has been established beyond question at a place called *Monteù di Po*, a few miles below *Chivasso*, but on the right bank of the river, where excavations have brought to light numerous coins and objects of ancient art, some of them of great beauty, as well as several inscriptions, which leave no doubt that the remains thus discovered are those of Industria. They also prove that it enjoyed municipal rank under the Roman empire. (Ricolvi e Rivautella, *Il sito dell' antica città d'Industria, &c.*, Torino, 1745, 4to.; Millin, *Voy. en Piémont*, vol. i. pp. 308—311.) [E. H. B.]

INESSA. [AETNA.]

INFERUM MARE. [TYRRHENUM MARE.]

INGAEVONES. [GERMANIA and HELLEVIONES.]

INGAUNI (Ἰγγαυνοι), a Ligurian tribe, who inhabited the sea-coast and adjoining mountains, at the foot of the Maritime Alps, on the W. side of the *Gulf of Genoa*. Their position is clearly identified by that of their capital or chief town, Albium Ingaunum, still called *Albenga*. They appear to have been in early times one of the most powerful and warlike of the Ligurian tribes, and bear a prominent part in the long-continued wars of the Romans with that people. Their name is first mentioned in B. C. 205, on occasion of the landing of Mago, the brother of Hannibal, in Liguria. They were at that time engaged in hostilities with the Epanterii, a neighbouring tribe who appear to have dwelt further inland: the Carthaginian general concluded an alliance with them, and supported them against the mountaineers of the interior; he subsequently returned to their capital after his defeat by the Romans in Cisalpine Gaul, and it was from thence that he took his final departure for Africa, B. C. 203. (Liv. xxviii. 46, xxx. 19.) After the close of the Second Punic War, B. C. 201, a treaty was concluded with the Ingauni by the Roman consul, C. Aelius (Id. xxxi. 2); but sixteen years later (in B. C. 185) we find them at war with the Romans, when their territory was invaded by the consul Appius Claudius, who defeated them in several battles, and took six of their towns. (Id. xxxix. 32.) But four years afterwards, B. C. 181, they were still in arms, and were attacked for the second time by the proconsul Aemilius Paullus. This general was at first involved in great perils, the Ingauni having surprised and besieged him in his camp; but he ultimately obtained a great and decisive victory, in which 15,000 of the enemy were killed and 2500 taken prisoners. This victory procured to Aemilius the honour of a triumph, and was followed by the submission of the whole people of the Ingauni ("Ligurum Ingaunorum omne nomen"), while all the other Ligurians sent to Rome to sue for peace. (Liv. xl. 25—28, 34.) From this time we hear nothing more of the Ingauni in history, probably on account of the loss of the later books of Livy; for that they did not long remain at peace with Rome, and that hostilities were repeatedly renewed before they were finally reduced to submission and settled down into the condition of Roman subjects, is clearly proved by the fact stated by Pliny, that their territory was assigned to them, and its boundaries fixed or altered, no less than *thirty* times. ("Liguribus Ingaunis agro tricies dato," Plin. iii. 5. s. 6.) They appear to have been much addicted, in common with other maritime Ligurian tribes, to habits of piracy, a tendency which they retained down to a late period. (Liv. xl. 28, 41; Vopisc. *Procul.* 12.) We find them still existing and recognised as a separate tribe in the days of

Strabo and Pliny; but we have no means of fixing the extent or limits of their territory, which evidently comprised a considerable portion of the sea-coast on each side of their capital city, and probably extended on the W. till it met that of the Intemelii. It must have included several minor towns, but their capital, of which the name is variously written Albium Ingaunum and Albingaunum, is the only town expressly assigned to them by ancient writers. [ALBIUM INGAUNUM.] (Strab. iv. p. 202; Plin. iii. 5. s. 6.) [E. H. B.]

I'NGENA. [ABRINCATUI.]

INI'CERUM, a town in Lower Pannonia, in the neighbourhood of which there was a praetorium, or place of rest for the emperors when they travelled in those parts. (*Itin. Ant.* pp. 260, 265.) Some identify it with the modern *Possega.* [L. S.]

INO'PUS. [DELOS.]

INSA'NI MONTES (τὰ Μαινόμενα ὄρη, Ptol. iii. 3. § 7), a range of mountains in Sardinia, mentioned by Livy (xxx. 39) in a manner which seems to imply that they were in the NE. part of the island; and this is confirmed by Claudian, who speaks of them as rendering the northern part of Sardinia rugged and savage, and the adjoining seas stormy and dangerous to navigators. (Claudian, *B. Gild.* 513.) Hence, it is evident that the name was applied to the lofty and rugged range of mountains in the N. and NE. part of the island: and was, doubtless, given to them by Roman navigators, on account of the sudden and frequent storms to which they gave rise. (Liv. *l. c.*). Ptolemy also places the Μαινόμενα ὄρη — a name which is obviously translated from the Latin one — in the interior of the island, and though he would seem to consider them as nearer the W. than the E. coast, the position which he assigns them may still be referred to the same range or mass of mountains, which extends from the neighbourhood of Olbia (*Terra Nova*) on the E. coast, to that of Cornus on the W. [SARDINIA.] [E. H. B.]

I'NSUBRES, a people both in Gallia Transalpina and Gallia Cisalpina. D'Anville, on the authority of Livy (v. 34), places the Insubres of Gallia Transalpina in that part of the territory of the Aedui where there was a town Mediolanum, between Forum Segusianorum [FORUM SEGUSIANORUM] and Lugdunum (*Lyon*). This is the only ground that there is for supposing that there existed a people or a pagus in Gallia Transalpina named Insubres. Of the Insubres in Gallia Cisalpina, an account is given elsewhere [Vol. I. p. 936]. [G. L.]

I'NSULA, or I'NSULA ALLO'BROGUM, in Gallia Narbonensis. Livy (xxi. 31), after describing Hannibal's passage of the Rhone, says that he directed his march on the east side towards the inland parts of Gallia. At his fourth encampment he came to the Insula, "where the rivers Arar and the Rhodanus, flowing down from the Alps by two different directions, comprise between them some tract of country, and then unite: it is the level country between them which is called the Insula. The Allobroges dwell near." One might easily see that there must be some error in the word Arar; for Hannibal could not have reached the latitude of Lugdunum (*Lyon*) in four days from the place where he crossed the Rhone; and this is certain, though we do not know the exact place where he did cross the Rhone. Nor, if he had got to the junction of the Arar and Rhodanus, could Livy say that he reached a place near which the Allobroges dwell; for, if he had marched from the Isara (*Isère*) to the junction of the *Saône* and Rhone, he would have passed through the country of the Allobroges. [ALLOBROGES.] Nor does the Arar (*Saône*) flow from the Alps, though the Isara does. Besides this, if Hannibal had gone so far north as the part between the *Saône* and Rhone, he would have gone much further north than was necessary for his purpose, as Livy describes it. It is therefore certain, if we look to the context only, that we must read "Isara" for "Arar;" and there is a reading of one MS., cited by Gronovius, which shows that Isara may have once been in the text, and that it has been corrupted. (Walckenaer, *Géog. &c.* vol. i. p. 135.) Livy in this passage copied Polybius, in whose MSS. (iii. 49) the name of the river is Scoras or Scaras; a name which the editors ought to have kept, instead of changing it into Isaras (Ἰσάρας), as Bekker and others before him have done, though the Isara or *Isère* is certainly the river. In the latest editions of Ptolemy (ii. 10. § 6) the Isara appears in the form Isar (Ἴσαρ); but it is certain that there are great variations in the MSS. of Ptolemy, and in the editions. Walckenaer (vol. i. p. 134) says that the edition of Ulm of 1482 has Sicarus, and that there is "Sicaros" in the Strassburg editions of 1513, 1520, 1522. The editio princeps of 1475 has "Cisur;" and others have "Tisar" and "Tisara." The probable conclusion is, that "Isc-ar" is one of the forms of the name, which is as genuine a Celtic form as "Is-ar" or "Isara," the form in Cicero (*ad Fam.* x. 15, &c.). "Isc-ara" may be compared with the British forms "Isaca" (the *Exe*), Isca, and Ischalis; and Is-ara with the names of the Italian rivers Ausar and Aesis.

Polybius compares the country in the angle between the Rhone and the Isara (*Isère*) to the Delta of Egypt in extent and form, except that in the Delta the sea unites the one side and the channels of the streams which form the two other sides; but here mountains almost inaccessible form the third side of this Insula. He describes it as populous, and a corn country. The junction of the Isar, as Strabo calls the river (p. 185), and the Rhone, was, according to him, opposite the place where the *Cévennes* approach near to the banks of the Rhone.

The *Isère*, one of the chief branches of the Rhone, rises in the high Pennine Alps, and flows through the valleys of the Alpine region by a very winding course past *St. Maurice*, *Moutiers*, *Conflans*, *Montmeilian*, where it begins to be navigable, *Grenoble*, the Roman Cularo or Gratianopolis, and joins the Rhone a few miles north of Valentia (*Valence*). Its whole course is estimated at about 160 miles. Hannibal, after staying a short time in the country about the junction of the Rhone and the *Isère*, commenced his march over the Alps. It is not material to decide whether his whole army crossed over into the Insula or not, or whether he did himself, though the words of Polybius imply that he did. It is certain that he marched up the valley of the *Isère* towards the Alps; and the way to find out where he crossed the Alps is by following the valley of the *Isère.* [G. L.]

INSURA. [MYLAE.]

INTELE'NE (Ἰντηλήνή), one of the five provinces W. of the Tigris, ceded, in A. D. 297, by Narses to Galerius and the Romans. (Petr. Patr. *Fr.* 14, *Fragm. Hist. Graec.* ed. Müller; Gibbon, c. xiii.) St. Martin, in his note to Le Beau (*Bas Empire*, vol. i. p. 380), would read for Intelene

Ingilene (Ἰγγιλήνη), the name of a small province of Armenia near the sources of the Tigris mentioned by Epiphanius (*Haeres. LX.* vol. i. p. 505, ed Valesius; comp. St. Martin, *Mém. sur l'Armenie*, vol. i. pp. 23, 97.) [E. B. J.]

INTEME'LII (Ἰντεμέλιοι), a maritime people of Liguria, situated to the W. of the Ingauni, at the foot of the Maritime Alps. They are but little known in history, being only once mentioned by Livy, in conjunction with their neighbours, the Ingauni, as addicted to piratical habits, to repress which their coast was visited by a Roman squadron in B. C. 180. (Liv. xl. 41.) Strabo speaks of them as a still existing tribe (Strab. iv. p. 202); and their capital, called Albium Intemelium or Albintemelium, now corrupted into *Vintimiglia*, was in his time a considerable city. [ALBIUM INTEMELIUM.] We have no means of determining the extent or limits of their territory; but it seems to have bordered on that of the Ingauni on the E., and the Vediantii on the W.: at least, these are the only tribes mentioned as existing in this part of Liguria by writers of the Roman Empire. It probably comprised also the whole valley of the RUTUBA or *Roja*, one of the most considerable of the rivers, or rather mountain torrents, of Liguria, which rises at the foot of the *Col di Tenda*, and falls into the sea at *Vintimiglia*. [E. H. B.]

INTERAMNA (Ἰντέραμνα: *Eth.* Interamnas, -ātis), was the name of several cities in different parts of Italy. Its obvious etymology, already pointed out by Varro and Festus, indicates their position at the confluence of two streams ("inter amnes," Varr. *L. L.* v.28, Fest. *v. Amnes*, p. 17, Müll.); which is, however, but partially borne out by their actual situation. The form INTERAMNIUM (Ἰντεράμνιον), and the ethnic form Interamnis, are also found, but more rarely.

1. A Roman colony on the banks of the Liris, thence called, for distinction's sake, INTERAMNA LIRINAS. It was situated on the left or northern bank of the Liris, near the junction of the little river which flows by Aquinum (confounded by Strabo with the Melpis, a much more considerable stream), and was distant 6 miles from the latter city, and 7 from Casinum. Its territory, which was included in Latium, according to the more extended use of that name, must have originally belonged to the Volscians, but we have no mention of Interamna as a Volscian city, nor indeed any evidence of its existence previous to the establishment of the Roman colony there, in B. C. 312. This took place at the same time with that at the neighbouring town of Casinum, the object of both being obviously to secure the fertile valley of the Liris from the attacks of the Samnites. (Liv. ix. 28; Diod. xix. 105; Vell. Pat. i. 14.) Hence we find, in B. C. 294, the territory of Interamna ravaged by the Samnites, who did not, however, venture to attack the city itself; and, at the opening of the following campaign, it was from Interamna that the consul Sp. Carvilius commenced his operations against Samnium. (Liv. x. 36, 39.) Its territory was at a later period laid waste by Hannibal during his march by the Via Latina from Capua upon Rome, B. C. 212 (Liv. xxvi. 9): and shortly afterwards the name of Interamna appears among the twelve refractory colonies which declared themselves unable to furnish any further supplies, and were subsequently (B. C. 204) loaded with heavier burdens in consequence (Id. xxvii. 9, xxix. 15). After the Social War it passed, in common with the other Latin colonies, into the state of a municipium; and we find repeated mention of it as a municipal town, apparently of some consequence. (Cic. *Phil.* ii. 41, *pro Mil.* 17; Strab. v. p. 237; Plin. iii. 5. s. 9.) It received a colony under the Second Triumvirate, but does not appear to have enjoyed colonial rank, several inscriptions of imperial times giving it only the title of a municipium. (*Lib. Col.* p. 234; Orell. *Inscr.* 2357, 3828.) Its position at some distance from the line of the Via Latina was probably unfavourable to its prosperity in later times: from the same cause its name is not found in the Itineraries, and we have no means of tracing its existence after the fall of the Roman Empire. The period at which it was ruined or deserted is unknown; but mention is found in documents of the middle ages of a "Castrum Terame," and the site of the ancient city, though now entirely uninhabited, is still called *Terame*. It presents extensive remains of ancient buildings, with vestiges of the walls, streets, and aqueducts; and numerous inscriptions and other objects of antiquity have been discovered there, which are preserved in the neighbouring villages. (Romanelli, vol. iii. p. 384; Cluver, *Ital.* p. 1039. The inscriptions are given by Mommsen, *Inscr. Regn. Neap.* pp. 221, 222.)

Pliny calls the citizens of *this* Interamna "Interamnates Succasini, qui et Lirinates vocantur." The former appellation was evidently bestowed from their situation in the neighbourhood of Casinum, but is not adopted by any other author. They are called in inscriptions "Interamnates Lirinates," and sometimes "Lirinates" alone: hence it is probable that we should read "Lirinatum" for "Larinatum" in Silius Italicus (viii. 402), where he is enumerating *Volscian* cities, and hence the mention of Larinum would be wholly out of place.

2. (*Terni*), a city of Umbria, situated on the river Nar, a little below its confluence with the Velinus, and about 8 miles E. from Narnia. It was surrounded by a branch of the river, so as to be in fact situated on an island, whence it derived its name. The inhabitants are termed by Pliny "Interamnates cognomine Nartes," to distinguish them from those of the other towns of the name; and we find them designated in inscriptions as Interamnates Nartes and Nahartes; but we do not find this epithet applied to the city itself. No mention is found of Interamna in history previous to its passing under the Roman yoke; but there is no doubt that it was an ancient Umbrian city, and an inscription of the time of Tiberius has preserved to us the local tradition that it was founded in B. C. 672, or rather more than 80 years after Rome. (Orell. *Inscr.* 689.) When we first hear of Interamna in history it appears as a flourishing municipal town, deriving great wealth from the fertility of its territory, which was irrigated by the river Nar. Hence it is said to have been, as early as the civil wars of Marius and Sulla, one of the "florentissima Italiae municipia" (Florus, iii. 21); and though it suffered a severe blow upon that occasion, its lands being confiscated by Sulla and portioned out among his soldiers, we still find it mentioned by Cicero in a manner that proves it to have been a place of importance (Cic. *ad Att.* iv. 15). Its inhabitants were frequently engaged in litigation and disputes with their neighbours of Reate, on account of the regulation of the waters of the Velinus, which joins the Nar a few miles above Interamna; and under the reign of Tiberius they were obliged to enter an energetic protest against a project that had been started for turning aside the

course of the Nar, so that it should no longer flow into the Tiber. (Tac. *Ann.* i. 79.) In the civil war between Vitellius and Vespasian it was occupied by the troops of the former while their head-quarters were at Narnia, but was taken with little resistance by Arrius Varus. (Id. *Hist.* iii. 61, 63.) Inscriptions sufficiently attest the continued municipal importance of Interamna under the Roman empire; and, though its position was some miles to the right of the great Flaminian highway, which proceeded from Narnia direct to Mevania (Strab. v. p. 227; Tac. *Hist.* ii. 64), a branch line of road was carried from Narnia by Interamna and Spoletium to Forum Flaminii, where it rejoined the main highroad. This line, which followed very nearly that of the present highroad from Rome to *Perugia*, appears to have latterly become the more important of the two, and is given in the Antonine and Jerusalem Itineraries to the exclusion of the true Via Flaminia. (*Itin. Ant.* p. 125; *Itin. Hier.* p. 613; *Tab. Peut.*) The great richness of the meadows belonging to Interamna on the banks of the Nar is celebrated by Pliny, who tells us that they were cut for hay no less than four times in the year (Plin. xviii. 28. s. 67); and Tacitus also represents the same district as among the most fertile in Italy (Tac. *Ann.* i. 79). That great historian himself is generally considered as a native of Interamna, but without any distinct authority: it appears, however, to have been subsequently the patrimonial residence, and probably the birthplace, of his descendants, the two emperors Tacitus and Florianus. (Vopisc. *Florian.* 2.) In A. D. 193, it was at Interamna that a deputation from the senate met the emperor Septimius Severus, when on his march to the capital (Spartian. *Sever.* 6); and at a later period (A. D. 253) it was there that the two emperors, Trebonianus Gallus and his son Volusianus, who were on their march to oppose Aemilianus in Moesia, were put to death by their own soldiers. (Eutrop. ix. 5; Vict. *Caes.* 31, *Epit.* 31.)

Interamna became the see of a bishop in very early times, and has subsisted without interruption through the middle ages on its present site; the name being gradually corrupted into its modern form of *Terni*. It is still a flourishing city, and retains various relics of its ancient importance, including the remains of an amphitheatre, of two temples supposed to have been dedicated to the sun and to Hercules, and some portions of the ancient Thermae. None of these ruins are, however, of much importance or interest. Many inscriptions have also been discovered on the site, and are preserved in the *Palazzo Publico*.

About 3 miles above *Terni* is the celebrated cascade of the Velinus, which owes its origin to the Roman M'. Curius; it is more fully noticed under the article VELINUS.

3. (*Teramo*), a city of Picenum, in the territory of the Praetutii, and probably the chief place in the district of that people. The name is omitted by Pliny, but is found in Ptolemy, who distinctly assigns it to the Praetutii; and it is mentioned also in the Liber Coloniarum among the "Civitates Piceni." It there bears the epithet of "Palestina," or, as the name is elsewhere written, "Paletina;" the origin and meaning of which are wholly unknown. (Ptol. iii. 1. § 58; *Lib. Col.* pp. 226, 259.) In the genuine fragments of Frontinus, on the other hand, the citizens are correctly designated as "Interamnates Praetutiani." (Frontin. i. p. 18, ed. Lachm.) Being situated in the interior of the country, at a distance from the highroads, the name is not found in the Itineraries, but we know that it was an episcopal see and a place of some importance under the Roman empire. The name is already corrupted in our MSS. of the Liber Coloniarum into Teramne, whence its modern form of *Teramo*. But in the middle ages it appears to have been known also by the name of Aprutium, supposed to be a corruption of Praetutium, or rather of the name of the people Praetutii, applied (as was so often the case in Gaul) to their chief city. Thus we find the name of Abrutium among the cities of Picenum enumerated by the Geographer of Ravenna (iv. 31); and under the Lombards we find mention of a "comes Aprutii." The name has been retained in that of *Abruzzo*, now given to the two northernmost provinces of the kingdom of Naples, of one of which, called *Abruzzo Ulteriore*, the city of *Teramo* is still the capital. Vestiges of the ancient theatre, of baths and other buildings of Roman date, as well as statues, altars, and other ancient remains, have been discovered on the site: numerous inscriptions have been also found, in one of which the citizens are designated as "Interamnites Praetutiani." (Romanelli, vol. iii. pp. 297—301; Mommsen, *I. R. N.* pp. 329—331.)

There is no foundation for the existence of a fourth city of the name of Interamna among the Frentani, as assumed by Romanelli, and, from him, by Cramer, on the authority of a very apocryphal inscription. [FRENTANI.] [E. H. B.]

INTERAMNE'SIA (Phlegon. *de Longaev.* 1: *Eth.* Interamnienses, Plin. iv. 21. s. 35), a stipendiary town of Lusitania, named in the inscription of *Alcantara*, and supposed by Ukert to have been situated between the *Coa* and *Touroes*, near *Castel Rodrigo* and *Almeida*. (Ukert, vol. ii. pt. 1. p. 398.) [P. S.]

INTERAMNIUM. [ASTURES.]

INTERCA'TIA. [VACCAEI.]

INTERCISA or AD INTERCISA, is the name given in the Itineraries to a station on the Via Flaminia, which evidently derives this name from its being situated at the remarkable tunnel or gallery hewn through the rock, now known as the *Passo del Furlo*. (*Itin. Hier.* p. 614; *Tab. Peut.*) This passage, which is still traversed by the modern highway from Rome to *Fano*, is a work of the emperor Vespasian, as an inscription cut in the rock informs us, and was constructed in the seventh year of his reign, A. D. 75. (Inscr. *ap.* Cluver, *Ital.* p. 619.) It is also noticed among the public works of that emperor by Aurelius Victor, who calls it Petra Pertusa; and the same name (Πέτρα περτοῦσα) is given to it by Procopius, who has left us a detailed and accurate description of the locality. (Vict. *Caes.* 9, *Epit.* 9; Procop. *B. G.* ii. 11.)

The valley of the *Cantiano*, a tributary of the Metaurus, which is here followed by the Flaminian Way, is at this point so narrow that it is only by cutting the road out of the solid rock that it can be carried along the face of the precipice, and, in addition to this, the rock itself is in one place pierced by an arched gallery or tunnel, which gave rise to the name of Petra Pertusa. The actual tunnel is only 126 feet long, but the whole length of the pass is about half a mile. Claudian alludes to this remarkable work in terms which prove the admiration that it excited. (Claud. *de VI. Cons. Hon.* 502.) At a later period the pass was guarded by a fort, which, from its completely commanding the Flaminian Way, became a military post of importance, and is repeatedly mentioned during the wars of the Goths

with the generals of Justinian. (Procop. *B. G.* ii. 11, iii. 6, iv. 28, 34.) The Jerusalem Itinerary places the station of Intercisa 9 M. P. from Calles (*Cagli*), and the same distance from Forum Sempronii (*Fossombrone*), both of which distances are just about correct. (D'Anville, *Analyse de l'Italie*, p. 155.) [E. H. B.]

INTERNUM MARE, the great inland or *Mediterranean Sea*, which washes the coasts of Southern Europe, Northern Africa, and Asia Minor.

1. *Name.*— In the Hebrew Scriptures, this sea, on the W. of Palestine, and therefore behind a person facing the E., is called the "Hinder Sea" (*Deut.* xi. 24; *Joel*, ii. 20), and also the "Sea of the Philistines" (*Exod.* xxiii. 31), because that people occupied the largest portion of its shores. Pre-eminently it was "the Great Sea" (*Num.* xxxiv. 6, 7; *Josh.* i. 4, ix. 1, xv. 47; *Ezek.* xlvii. 10, 15, 20), or simply "the Sea" (1 *Kings*, v. 9; comp. 1 *Macc.* xiv. 34. xv. 11). In the same way, the Homeric poems, Hesiod, the Cyclic poets, Aeschylus, and Pindar, call it emphatically "the Sea." The logographer Hecataeus speaks of it as "the Great Sea" (*Fr.* 349, ed. Klausen). Nor did the historians and systematic geographers mark it off by any peculiar denomination. The Roman writers call it MARE INTERNUM (Pomp. Mela, i. 1. § 4; Plin. iii. 3) or INTESTINUM (Sall. *Jug.* 17; Flor. iv. 2; *ἡ ἔσω θάλαττα*, Polyb. iii. 39; *ἡ ἐντὸς θάλ.*, Strab. ii. p. 121, iii. p. 139; *ἡ ἐντὸς Ἡρακλείων στηλῶν θάλ.*, Arist. *Met.* ii. 1), or more frequently, MARE NOSTRUM (Sall. *Jug.* 17, 18; Caes. *B. G.* v. 1; Liv. xxvi. 42; Pomp. Mela, i. 5. § 1; *ἡ καθ' ἡμᾶς θάλ.*, Strab. ii. p. 121). The epithet "Mediterranean" is not used in the classical writers, and was first employed for this sea by Solinus (c. 22; comp. Isid. *Orig.* xiii. 16). The Greeks of the present day call it the "White Sea" (*'Ασώρι Θάλασσα*), to distinguish it from the *Black Sea*. Throughout Europe it is known as the *Mediterranean*.

2. *Extent, Shape, and Admeasurements.*— The Mediterranean Sea extends from 6° W. to 36° E. of Greenwich, while the extreme limits of its latitude are from 30° to 46° N.; and, in round numbers, its length, from *Gibraltar* to its furthest extremity in Syria, is about 2000 miles, with a breadth varying from 80 to 500 miles, and, including the Euxine, with a line of shore of 4500 leagues. The ancients, who considered this sea to be a very large portion of the globe, though in reality it is only equal to one-seventeenth part of the Pacific, assigned to it a much greater length. As they possessed no means for critically measuring horizontal angles, and were unaided by the compass and chronometer, correctness in great distances was unattainable. On this account, while the E. shores of the Mediterranean approached a tolerable degree of correctness, the relative positions and forms of the W. coasts are erroneous. Strabo, a philosophical rather than a scientific geographer, set himself to rectify the errors of Eratosthenes (ii. pp. 105, 106), but made more mistakes: though he drew a much better "contour" of the Mediterranean, yet he distorted the W. parts, by placing Massilia 13¼° to the S. of Byzantium, instead of 2¼° to the N. of that city. Ptolemy also fell into great errors, such as the flattening-in of the N. coast of Africa, to the amount of 4½° to the S., in the latitude of Carthage, while Byzantium was placed 2° to the N. of its true position; thus increasing the breadth in the very part where the greatest accuracy might be expected. Nor was this all; for the extreme length of the Internal Sea was carried to upwards of 20° beyond its true limits. The maps of Agathodaemon which accompany the Geography of Ptolemy, though indifferently drawn, preserve a much better outline of this sea than is expressed in the Theodosian or Peutingerian Table, where the Mediterranean is so reduced in breadth as to resemble a canal, and the site, form, and dimensions of its islands are displaced and disfigured.

The latitudes were estimated by the ancient observers in stadia reckoned from the equator, and are not so discordant as might be expected from such a method. The length between the equinoctial line and Syracuse, or rather the place which they called the "Strait of Sicily," is given as follows:—

	Stadia
Eratosthenes - - - -	25,450
Hipparchus - - - -	25,600
Strabo - - - - - - -	25,400
Marinus of Tyre - - -	26,075
Ptolemy - - - - -	26,833

Their longitudes run rather wild, and are reckoned from the "Sacrum Promontorium" (*Cape St. Vincent*), and the numbers given are as the arc from thence to Syracuse:—

	Stadia
Eratosthenes - - - -	11,800
Hipparchus - - - -	16,300
Strabo - - - - - - -	14,000
Marinus of Tyre - - -	18,583
Ptolemy - - - - -	29,000

In Admiral Smyth's work (*The Mediterranean*, p. 375) will be found a tabular view of the above-mentioned admeasurements of the elder geographers, along with the determination resulting from his own observations; assuming, for a reduction of the numbers, 700 stadia to a degree of latitude, for a plane projection in the 36° parallel, and 555 for the corresponding degree of longitude. (Comp. Gosselin, *Geographie des Grecs*, 1 vol. Paris, 1780; *Geographie des Anciens*, 3 vols. Paris, 1813; *Mesures Itinéraires*, 1 vol. Paris, 1813.)

3. *Physical Geography.* — A more richly-varied and broken outline gives to the N. shores of the Mediterranean an advantage over the S. or Libyan coast, which was remarked by Eratosthenes. (Strab. ii. p. 109.) The three great peninsulas, — the Iberian, the Italic, and the Hellenic, — with their sinuous and deeply indented shores, form, in combination with the neighbouring islands and opposite coasts, many straits and isthmuses. Exclusive of the Euxine (which, however, must be considered as part of it), this sheet of water is naturally divided into two vast basins; the barrier at the entrance of the straits marks the commencement of the W. basin, which descends to an abysmal depth, and extends as far as the central part of the sea, where it flows over another barrier (the subaqueous *Adventure Bank*, discovered by Admiral Smyth), and again falls into the yet unfathomed Levant basin.

Strabo (ii. pp. 122—127) marked off this expanse by three smaller closed basins. The westernmost, or Tyrrhenian basin, comprehended the space between the Pillars of Hercules and Sicily, including the Iberian, Ligurian, and Sardinian seas; the waters to the W. of Italy were also called, in reference to the Adriatic, the "Lower Sea," as that gulf bore the name of the "Upper Sea." The second was the Syrtic basin, E. of Sicily, including the Ausonian or Siculian, the Ionian, and the Libyan seas: on the N. this basin runs up into the Adriatic, on the S. the gulf of Libya penetrates deeply into

the African continent. The E. part of this basin is interrupted by Cyprus alone, and was divided into the Carpathian, Pamphylian, Cilician, and Syrian seas.

The third or Aegean portion is bounded to the S. by a curved line, which, commencing at the coast of Caria in Asia Minor, is formed by the islands of Rhodes, Crete, and Cythera, joining the Peloponnesus not far from Cape Malea, with its subdivisions, the Thracian, Myrtoan, Icarian, and Cretan seas.

From the Aegean, the "White Sea" of the Turks, the channel of the Hellespont leads into the Propontis, connected by the Thracian Bosporus with the Euxine: to the NE. of that sheet of water lies the Palus Maeotis, with the strait of the Cimmerian Bosporus. The configuration of the continents and of the islands (the latter either severed from the main or volcanically elevated in lines, as if over long fissures) led in very early times to cosmological views respecting eruptions, terrestrial revolutions, and overpourings of the swollen higher seas into those which were lower. The Euxine, the Hellespont, the straits of Gades, and the Internal Sea, with its many islands, were well fitted to originate such theories. Not to speak of the floods of Ogyges and Deucalion, or the legendary cleaving of the pillars of Hercules by that hero, the Samothracian traditions recounted that the Euxine, once an inland lake, swollen by the rivers that flowed into it, had broken first through the Bosporus and afterwards the Hellespont. (Diod. v. 47.) A reflex of these Samothracian traditions appears in the "Sluice Theory" of Straton of Lampsacus (Strab. i. pp. 49, 50), according to which, the swellings of the waters of the Euxine first opened the passage of the Hellespont, and afterwards caused the outlet through the Pillars of Hercules. This theory of Straton led Eratosthenes of Cyrene to examine the problem of the equality of level of all external seas, or seas surrounding the continents. (Strab. *l. c.*; comp. ii. p. 104.) Strabo (i. pp. 51, 54) rejected the theory of Straton, as insufficient to account for all the phenomena, and proposed one of his own, the profoundness of which modern geologists are only now beginning to appreciate. "It is not," he says (*l. c.*), "because the lands covered by seas were originally at different altitudes, that the waters have risen, or subsided, or receded from some parts and inundated others. But the reason is, that the same land is sometimes raised up and sometimes depressed, so that it either overflows or returns into its own place again. We must therefore ascribe the cause to the ground, either to that ground which is under the sea, or to that which becomes flooded by it; but rather to that which lies beneath the sea, for this is more moveable, and, on account of its wetness, can be altered with greater quickness." (Lyell, *Geology*, p. 17; Humboldt, *Cosmos*, vol. ii. p. 118, trans., *Aspects of Nature*, vol. ii. pp. 73—83, trans.)

The fluvial system of the Internal Sea, including the rivers that fall into the Euxine, consists, besides many secondary streams, of the Nile, Danube, Borysthenes, Tanais, Po, Rhone, Ebro, and Tyras. The general physics of this sea, and their connection with ancient speculations, do not fall within the scope of this article; it will be sufficient to say that the theory of the tides was first studied on the coast of this, which can only in poetical language be called "a tideless sea." The mariner of old had his charts and sailing directories, was acquainted with the bewildering currents and counter-currents of this sea, — the "Typhon" (τυφών), and the "Prester" (πρηστήρ), the destroyer of those at sea, of which Lucretius (vi. 422—445) has given so terrific a description, — and hailed in the hour of danger, as the "Dioscuri" who played about the mast-head of his vessel (Plin. ii. 437; Sen. *Nat. Quaest.* ii.), the fire of St. Elmo, "sacred to the seaman." Much valuable information upon the winds, climate, and other atmospheric phenomena, as recorded by the ancients, and compared with modern investigations, is to be found in Smyth (*Mediterranean*, pp. 210—302). Forbiger's section upon Physical Geography (vol. i. pp. 576—655) is useful for the references to the Latin and Greek authors. Some papers, which appeared in *Fraser's Magazine* for the years 1852 and 1853, upon the fish known to the ancients, throw considerable light upon the ichthyology of this sea. Recent inquiry has confirmed the truth of many instructive and interesting facts relating to the fish of the Mediterranean which have been handed down by Aristotle, Pliny, Archestratus, Aelian, Ovid, Oppian, Athenaeus, and Ausonius.

4. *Historical Geography.*—To trace the progress of discovery on the waters and shores of this sea would be to give the history of civilisation,—"nullum sine nomine saxum." Its geographical position has eminently tended towards the intercourse of nations, and the extension of the knowledge of the world. The three peninsulas — the Iberian, Italic, and Hellenic—run out to meet that of Asia Minor projecting from the E. coast, while the islands of the Aegean have served as stepping stones for the passage of the peoples from one continent to the other; and the great Indian Ocean advances by the fissure between Arabia, Aegypt, and Abyssinia, under the name of the Red Sea, so as only to be divided by a narrow isthmus from the Delta of the Nile valley and the SE. coast of the Mediterranean.

"We," says Plato in the Phaedo (p. 109, b.), "who dwell from the Phasis to the Pillars of Hercules, inhabit only a small portion of the earth in which we have settled round the (Interior) sea, like ants or frogs round a marsh." And yet the margin of this contracted basin has been the site where civilisation was first developed, and the theatre of the greatest events in the early history of the world. Religion, intellectual culture, law, arts, and manners — nearly everything that lifts us above the savage, have come from these coasts.

The earliest civilisation on these shores was to the S., but the national character of the Aegyptians was opposed to intercourse with other nations, and their navigation, such as it was, was mainly confined to the Nile and Arabian gulf. The Phoenicians were the first great agents in promoting the communion of peoples, and their flag waved in every part of the waters of the Internal Sea. Carthage and Etruria, though of less importance than Phoenicia in connecting nations and extending the geographical horizon, exercised great influence on commercial intercourse with the W. coast of Africa and the N. of Europe. The progressive movement propagated itself more widely and enduringly through the Greeks and Romans, especially after the latter had broken the Phoenico-Carthaginian power.

In the Hellenic peninsula the broken configuration of the coast-line invited early navigation and commercial intercourse, and the expeditions of the Samians (Herod. iv. 162) and Phocaeans (Herod.

i. 163) laid open the W. coast of this sea. During the period of the Roman Universal Empire, the Mediterranean was the lake of the imperial city. Soon after the conclusion of the First Mithridatic War, piracy, which has always existed from the earliest periods of history to the present day in the Grecian waters, was carried on systematically by large armies and fleets, the strongholds of which were Cilicia and Crete. From these stations the pirates directed their expeditions over the greater part of the Mediterranean. (Appian, *Bell. Mithr.* 92; Plut. *Pomp.* 24.) Piracy, crushed by Pompeius, was never afterwards carried on so extensively as to merit a place in history, but was not entirely extirpated even by the fleet which the Roman emperors maintained in the East, and that cases still occurred is proved by inscriptions. (Böckh, *Corp. Inscr. Graec.* nn. 2335, 2347.) The Romans despised all trade, and the Greeks, from the time of Hadrian, their great patron, till the extinction of the Roman power in the East, possessed the largest share of the commerce of the Mediterranean. Even after the Moslem conquests, the Arabs, in spite of the various expeditions which they fitted out to attack Constantinople, never succeeded in forming a maritime power; and their naval strength declined with the numbers and wealth of their Christian subjects, until it dwindled into a few piratical squadrons. The emperors of Constantinople really remained masters of the sea. On all points connected with this sea, see Admiral Smyth, *The Mediterranean*, London, 1854. [E. B. J.]

INTEROCREA (Ἰντεροκρέα, Strab.), a small town or village of the Sabines, between Amiternum and Reate. It was placed on the Via Salaria, at the junction of its two branches, one of which led eastwards to Amiternum, the other, and principal one, up the valley of the Velinus, to Asculum. It is now called *Antrodoco*, and is a position of great military importance, from its commanding the entrance to the two passes just mentioned, which must in all ages have formed two of the principal lines of communication across the Apennines. It seems, however, to have been in ancient times but a small place: Strabo calls it a village; and its name is otherwise found only in the Itineraries, which place it at 14 M. P. from Reate, a distance that coincides with the position of *Antrodoco*. (Strab. v. p. 228; *Itin. Ant.* p. 307; *Tab. Peut.*) Its ancient name is evidently derived from its position in a deep valley between rugged mountains; for we learn from Festus (p. 181, ed. Müll.) that Ocris was an ancient word for a mountain: and it is interesting to find this form still preserved in the name of the *Montagne di Ocra*, a lofty and rugged group of the Apennines, near *Aquila*. (Zannoni, *Carta del Regno di Napoli*, 3. fol.) [E. H. B.]

INTERPROMIUM, a village of the Marrucini, forming a station on the Via Claudia Valeria between Corfinium and Teate. It is repeatedly mentioned in the Itineraries, but the distances are variously given. (*Itin. Ant.* pp. 102, 310; *Tab. Peut.*) The line of the ancient highroad is, however, well ascertained, and the position of Interpromium is fixed by ancient remains, as well as mediaeval records, at a place on the right bank of the Aternus, just below the narrow gorge through which that river flows below *Popoli*. The site is now marked only by a tavern called the *Osteria di S. Valentino*, from the little town of that name on the hill above; it is distant 12 Roman miles from Corfinium (*S. Pellino*), and 13 from Teate (*Chieti*), or 21 from *Pescara*, at the mouth of the Aternus. (Holsten. *Not. ad Cluv.* p. 143; D'Anville, *Analyse de l'Italie*, p. 178; Romanelli, vol. iii. p. 117.) An inscription also mentions Interpromium under the name of Pagus Interprominus (Orell. *Inscr.* 144; Romanelli, *l. c.*); it is called "Interpromium vicus" in the Itinerary of Antoninus (p. 102), and was evidently a mere village, probably a dependency of Teate. [E.H.B.]

INTI'BILI. 1. [EDETANI.] 2. A town of Hispania Baetica, near Illiturgis, the scene of a battle gained by the Romans over the Carthaginians in the Second Punic War. (Liv. xxiii. 49; Frontin. *Stratag.* iii. 3.) [P. S.]

INUI CASTRUM. [CASTRUM INUI.]

INYCUM or INYCUS (Ἴνυκον, Steph. B., but ἡ Ἴνυκος, Herod.: *Eth.* Ἰνυκῖνος), a town of Sicily, situated in the SW. of the island, on the river Hypsas. It is principally known from its connection with the mythical legends concerning Minos and Daedalus; the capital of the Sicanian prince Cocalus, who afforded a shelter to the fugitive Daedalus against the Cretan monarch, being placed by some writers at Inycum, and by others at Camicus. (Paus. vii. 4. § 6; Charax, *ap. Steph. B. v.* Καμικός.) It is mentioned in historical times by Herodotus as the place of confinement to which Scythes, the ruler of Zancle, was sent by Hippocrates, who had taken him prisoner. (Herod. vi. 23, 24.) Aelian, who copies the narrative of Herodotus, represents Scythes as a native of Inycum; but this is probably a mistake. (Ael. *V. H.* viii. 17.) Plato speaks of Inycum as still in existence in his time, but quite a small place (χωρίον πάνυ σμικρόν); notwithstanding which he makes the sophist Hippias boast that he had derived from it a sum of 20 minae. (Plat. *Hipp. M.* p. 282, e.) It is evident that it always continued to be an inconsiderable place, and was probably a mere dependency of Selinus. Hence we never again meet with its name, though Stephanus tells us that this was still preserved on account of the excellence of its wine. (Steph. B. *s. v.* Ἴνυκον; Hesych. *s. v.*) Vibius Sequester is the only author that affords any clue to its position, by telling us that the river Hypsas (the modern *Belici*) flowed by it (Vib. Sequest. p. 12, according to Cluver's emendation); but further than this its site cannot be determined. [E. H. B.]

IOBACCHI. [MARMARICA.]

IOL, afterwards CAESARE'A (Ἰὼλ Καισάρεια, Ptol. ii 4. § 5; ἡ Καισάρεια, Strab., &c.), originally an obscure Phoenician settlement on the N. coast of Africa, became afterwards famous as the capital of Bocchus and of Juba II. [MAURETANIA.] The latter king enlarged and adorned the city, and gave it the name of Caesarea, in honour of his patron Augustus. Under the Romans it gave its name to the province of Mauretania Caesariensis, of which it was the capital. It was made a colony by the emperor Claudius. Under Valens it was burnt by the Moors; but it was again restored; and in the 6th century it was a populous and flourishing city. It occupied a favourable position midway between Carthage and the Straits, and was conveniently situated with reference to Spain, the Balearic islands, and Sardinia; and it had a natural harbour, protected by a small island. To the E. of the city stood the royal mausoleum. (Strab. xvii. p. 831; Dion Cass. lx. 9; Mela, i. 6. § 1; Plin. v. 2. s. 1; Eutrop. vii. 5; *Itin. Ant.* pp. 5, 15, 25, 31; Oros. vii. 33; Ammian. xxix. 5; Procop. *B. Vand.* ii. 5.)

Caesarea is now identified, beyond all doubt, with the magnificent ruins at *Zershell* on the coast of *Algier*, in a little more than 2° E. long. The Arabic name is simply an abbreviation of *Caesarea Iol*; a fact clear to the intuitive sagacity of Shaw, and which, in connection with the statements of the ancients, led that incomparable traveller to the truth. Unfortunately, however, nearly all subsequent writers preferred to follow the thick-headed Mannert, who was misled by an error in the Antonine Itinerary, whereby all the places along this coast, for a considerable distance, are thrown too far to the W.; until the researches which followed the French conquest of the country revealed inscriptions which set the question at rest for ever. There exist few stronger examples of that golden rule of criticism :— "*Ponderanda* sunt testimonia, non *numeranda*." (Shaw, *Travels*, vol. i. pt. 1. c. 3; Barth, *Wanderungen*, p. 56; Pellissier, in the *Exploration Scientifique de l'Algérie*, vol. vi. p. 349.) [P. S.]

IOLAI or IOLAENSES (Ἰόλαοι, Paus.; Ἰολάειοι, Diod.; Ἰολαεῖς, Strab. v. p. 225), a people of Sardinia, who appear to have been one of the indigenous or native tribes of the island. According to Strabo, they were the same people who were called in his day Diagesbians or Diagebrians (Διαγηβρεῖς or Διαγησβεῖς), a name otherwise unknown: and he adds that they were a Tyrrhenian people, a statement in itself not improbable. The commonly received tradition, however, represented them as a Greek race, composed of emigrants from Attica and Thespiae, who had settled in the island under the command of Iolaus, the nephew of Hercules. (Paus. x. 17. § 5; Diod. iv. 30, v. 15.) It is evident that this legend was derived from the resemblance of the name (in the form which it assumed according to the Greek pronunciation) to that of Iolaus: what the native form of the name was, we know not; and it is not mentioned by any Latin author, though both Pausanias and Diodorus affirm that it was still retained by the part of the island which had been inhabited by the Iolai. Hence, modern writers have assumed that the name is in reality the same with that of the Ilienses, which would seem probable enough; but Pausanias, the only writer who mentions them both, expressly distinguishes the two. That author speaks of Olbia, in the NE. part of the island, as one of their chief towns. Diodorus represents them, on the contrary, as occupying the plains and most fertile portions of the island, while the district adjoining Olbia is one of the most rugged and mountainous in Sardinia. [E. H. B.]

IOLCUS (Ἰωλκός, Ep. Ἰαωλκός, Dor. Ἰαλκός: *Eth.* Ἰώλκιος, fem. Ἰωλκίς, Ἰωλκίας), an ancient city of Magnesia in Thessaly, situated at the head of the Pagasaean gulf and at the foot of Mt. Pelion (Pind. *Nem.* iv. 88), and celebrated in the heroic ages as the residence of Jason, and the place where the Argonauts assembled. [See *Dict. of Biogr.* artt. JASON and ARGONAUTAE.] It is mentioned by Homer, who gives it the epithets of ἐϋκτιμένη and εὐρύχορος (*Il.* ii. 712, *Od.* xi. 256). It is said to have been founded by Cretheus (Apollod. i. 9. § 11), and to have been colonised by Minyans from Orchomenos. (Strab. ix. p. 414.) Iolcus is rarely mentioned in historical times. It was given by the Thessalians to Hippias, upon his expulsion from Athens. (Herod. v. 94.) The town afterwards suffered from the dissensions of its inhabitants, but it was finally ruined by the foundation of Demetrias in B. C. 290, when the inhabitants of Iolcos and of other adjoining towns were removed to this place. (Strab. ix. p. 436.) It seems to have been no longer in existence in the time of Strabo, since he speaks of the place where Iolcos stood (ὁ τῆς Ἰωλκοῦ τόπος, ix. p. 438).

The position of Iolcos is indicated by Strabo, who says that it was on the road from Boebe to Demetrias, and at the distance of 7 stadia from the latter (ix. p. 438). In another passage he says that Iolcos is situated above the sea at the distance of 7 stadia from Demetrias (ix. p. 436). Pindar also, as we have already seen, places Iolcos at the foot of Mt. Pelion, consequently a little inland. From these descriptions there is little doubt that Leake is right in placing Iolcos on the steep height between the southernmost houses of *Volo* and *Vlakho-makhalá*, upon which stands a church called *Episkopí*. There are at present no ancient remains at this place; but some large squared blocks of stone are said to have formerly existed at the foot of the height, and to have been carried away for the construction of buildings elsewhere. Moreover, it is the only spot in the neighbourhood which has any appearance of being an ancient site. It might indeed appear, from Livy (xliv. 12, 13), that Iolcus was situated upon the coast; but in this passage, as well as in Strabo (ix. p. 436), the name of Iolcos seems to have been given to this part of the coast as well as to the city itself. (Leake, *Northern Greece*, vol. iv. p. 379; Mézières, *Mémoire sur le Pelion et l'Ossa*, p. 11.)

JOMANES (Plin. vi. 17. s. 21), the most important of the affluents of the Ganges, into which it flows near the city of *Allahabad* (Pratishthána). There can be no doubt that Arrian means the same river when he speaks of Iobares (*Ind.* c. 8); and Ptolemy expresses nearly the same sound, when he names the Diamuna (vii. 1. § 29). It is now called the *Jamúna* or *Jumna*. The *Jumna* rises in the highest part of the *Himálaya*, at no great distance from the sources of the *Sutledge* and *Ganges*, respectively, in the neighbourhood of *Iamunávatári* (*Jumnotri*), which is probably the most sacred spot of Hindu worship. It enters the Indian plain country at *Fyzabad*, and on its way to join the Ganges it passes the important cities of *Dehli* (Indraprastha) and *Agra* (Crishmapura), and receives several large tributaries. These affluents, in order from W. to E., are the Sambus (Arrian, *Ind.* c. 4), (probably the *Carmanvati* or *Cambal*), the Betwa (or Vetravati), and the Cainas (Arrian, *l. c.*; Plin. vi. 19. s. 21: now *Cáyana* or *Céna*). The last has been already mentioned as one of the tributaries of the Ganges. [V.]

IOMNIUM. [MAURETANIA.]

ION (Ἴων), a river of Tymphaea in Thessaly, rising in the Cambunian mountains, and flowing into the Peneius: now river of *Krátzova*. (Strab. vii. p. 327; Leake, *Northern Greece*, vol. iv. p. 546.)

ION MONS. [LIBYA.]

IONES. [IONIA.]

IO'NIA (Ἰωνία), also called Ionis, the country of Asia Minor inhabited by Ionian Greeks, and comprising the western coast from Phocaea in the north to Miletus in the south. (Herod. i. 142; Strab. xiv. init.; Plin. v. 31.) Its length from north to south, in a straight line, amounted to 800 stadia, while the length of its much indented coast amounted to 3430; and the distance from Ephesus to Smyrna, in a straight line, was only 320 stadia, while along the coast it reached the large number of 2200. (Strab.

xiv. pp. 632, 665.) Towards the inland, or the east, Ionia extended only a few miles, the towns of Magnesia, Larissa, Tralles, Alabanda, and others, not belonging to it. Ptolemy (v. 2) assigns much narrower limits to Ionia than his predecessors, for, according to him, it extended only from the Hermus in Lydia to the Maeander in Caria; so that Phocaea and Miletus would not belong to Ionia. According to a generally received tradition, the Ionian colonies on the west coast of Asia were founded after the death of Codrus, the last king of Attica, about B. C. 1044, or, according to others, as early as B. C. 1060, about 60 years after the conquest of Peloponnesus by the Dorians. The sons of Codrus, Neleus and Androclus, it is said, being dissatisfied with the abolition of royalty and the appointment of their eldest brother Medon to the archonship, emigrated, with large numbers of Attic Ionians and bands from other parts of Greece, into Asia Minor. (Strab. xiv. p. 633, foll.; Paus. vii. 2.) Here, in one of the most beautiful and fertile parts of the earth, they founded a number of towns,—partly expelling and partly subduing the ancient inhabitants, who consisted mainly of Maeonians, Carians, and Pelasgians. (Herod. i. 142; Paus. vii. 2; Pherecyd. *Fragm.* 26; Dionys. Per. 822, &c.) As a great many of the original inhabitants remained in the country as subjects of the conquerors, and as the latter had gone to Asia as warriors, without women, the new colonies were not pure Greek; but still the subdued nations were not so completely different as to render an amalgamation into one nation impossible, or even very difficult. This amalgamation with different tribes also accounts for the fact that four different dialects were spoken by the Ionians. (Herod. *l. c.*)

The towns founded by the Ionians — which, though independent of one another, yet formed a kind of confederacy for common purposes—amounted to twelve (δωδεκάπολις), a number which must not be regarded as accidental. These towns, of which accounts are given in separate articles, were: PHOCAEA, ERYTHRAE, CLAZOMENAE, TEOS, LEBEDOS, COLOPHON, EPHESUS, PRIENE, MYUS, MILETUS, and SAMOS and CHIOS in the neighbouring islands. (Strab. xiv. p. 633; Aelian, *V. H.* viii. 5.) Subsequently, about B. C. 700, Smyrna, which until then had belonged to Aeolis, became by treachery a member of the Ionian confederacy, which henceforth consisted of thirteen cities. (Herod. i. 149; Paus. vii. 5; Strab. *l. c.*) These Ionian colonies soon rose to a high degree of prosperity, and in many respects outstripped the mother-country; for poets, philosophers, historians, and artists flourished in the Ionian cities long before the mother-country attained to any eminence in these intellectual pursuits. All the cities of Ionia formed independent republics, with democratical constitutions; but their common affairs were discussed at regular meetings held at Panionium (Πανιώνιον), the common centre of all the Ionian cities, on the northern slope of Mount Mycale, near Priene, and about three stadia from the coast. (Herod. i. 141, 148; Strab. xiv. p. 639; Mela, i. 17; Plin. v. 29.) These meetings at Panionium appear to have given rise to a permanent town, with a Prytaneum, in which the meetings were held. (Steph. B. *s. v.*) The political bond which held the Ionian cities together appears to have been rather loose, and the principal objects of the meetings, at least in later times, were religious worship and the celebration of games. The cities continued to enjoy their increasing prosperity and their independence until the establishment of the Lydian monarchy. The attacks upon the Ionian colonies began even in the reign of Gyges, so that one city after another was conquered, until, in the reign of Croesus, all of them became subject to the Lydians. When Lydia became the prey of the Persian conqueror Cyrus, in B. C. 557, Ionia also was obliged to acknowledge the supremacy of Persia; but the new rulers scarcely interfered with the internal affairs of the cities and their confederacy; all they had to do was to pay tribute, to send their contingents to the Persian armies, and to submit to satraps and tyrants, the latter of whom were Greek usurpers who set themselves up in their native cities, and were backed by the Persian monarchs. But the Ionians, accustomed to liberty, were unable to bear even this gentle yoke for any length of time, and in B. C. 500 a general insurrection broke out against Persia, in which the Athenians and Eretrians also took part. The revolt had been planned and organised by Histiaeus, tyrant of Miletus, and Aristagoras, his son-in-law. The Ionians burned and destroyed Sardes, the residence of the Persian satraps, but were then routed and defeated in a bloody battle near Ephesus. In B. C. 496 all the Ionians were again reduced, and compelled to assist the Persians with men and ships in the war against Greece. In the battle of Mycale, B. C. 479, the Ionians deserted from the ranks of the Persians and joined their kinsmen, and thus took the first step to recover their independence, which ten years later was fully secured by the battle on the Eurymedon. They then entered into a relation with the Athenians, who were to protect them against any further aggression from the Persians; but in consequence of this they became more or less dependent upon their protectors. In the unfortunate peace of Antalcidas, the Ionians, with the other Asiatic Greeks, were again made over to Persia, B. C. 387; and when the Persian monarchy was destroyed by Alexander, they became a part of the Macedonian empire, and finally fell into the hands of the Romans. The highest prosperity of Ionia belongs to the period of the Lydian supremacy; under the rule of Macedonia it somewhat recovered from its previous sufferings. Under the Romans the Ionian cities still retained their importance as commercial places, and as seats of art and literature; but they lost their political life, and sank down to the condition of mere provincial towns. The last traces of their prosperity were destroyed under the barbarous rule of the Turks in the middle ages. During the period of their greatest prosperity and independence, the Ionian cities sent out numerous colonies to the shores of the Black sea and to the western coasts and islands of the Mediterranean. (Comp. Thirlwall, *Hist. of Greece*, vol. ii. chap. 12, pp. 94, 115, 120, &c.; Grote, *Hist. of Greece*, vol. ii. pp. 229—253.) [L. S.]

IO'NIUM MARE (Ἰόνιον πέλαγος, Ptol.), was the name given by geographers to the sea which bathed the western shores of Greece, and separated them from those of Sicily and Southern Italy. The appellation would seem to date from a very early period, when the Ionians still inhabited the shores of the Corinthian gulf, and the part of the Peloponnese subsequently known as Achaia; but we have no evidence of its employment in early times. The legends invented by later writers, which derived it from a hero of the name of Ionius or Ion, or from the wanderings of Io (Aesch. *Prom.* 840; Tzetz. *ad Lycophr. Alex.* 630; Steph. B. *s. v.*; Eustath. *ad Dionys.*

Per. 92), are obviously mere etymological fancies. No trace of the name is found in the Homeric poems; and it occurs for the first time in Aeschylus, though, from the poetic diction of that writer, it is not clear in what precise sense he employs the term πόντιος μυχὸς Ἰόνιος. (Aesch. *l. c.*) Herodotus evidently employs the name Ἰόνιος κόλπος, the *Ionian gulf*, as synonymous with the Adriatic; and Thucydides likewise uses the term in the same sense, as is evident from his expression, that "Epidamnus is a city on the right hand as you sail *into* the Ionian gulf" (i. 24). He also repeatedly uses the term ὁ Ἰόνιος (with κόλπος understood) in speaking of the passage from Corcyra to the Iapygian promontory (vi. 30, 34, vii. 33); but in all these cases he refers only to the narrow sea, which might be considered as part of the same gulf or inlet with the entrance of the Adriatic. Scylax also, and even Scymnus Chius, employ the name of the Ionian gulf in the same sense, as synonymous with the Adriatic, or at least with the southern part of it (Scyl. §§ 14, 27; Scymn. Ch. 133, 361) [ADRIATICUM MARE]; while the name of the Ionian *sea*, in the more extended sense given to it by later geographers, as indicated at the commencement of this article, is not found in any early Greek writer. Polybius is the first extant author who uses the term in this sense, and gives the name of Ἰόνιος πόρος to the sea which extended from the entrance of the Adriatic along the coast of Italy as far as the promontory of Corinthus, which he considers as its southern limit. (Pol. ii. 14, v. 110.) Even here the peculiar expression of the Ionian *strait* sufficiently shows that this was a mere extension of the name from the narrow sea or strait at the entrance of the Adriatic to the more open sea to the S. of it. Hence we have no proof that the name was ever one in common use among the Greeks until it came to be established by the geographers; and even Strabo, who on these points often follows earlier authors, gives the name only of the Ionian gulf to the part of the sea near the entrance of the Adriatic, while he extends the appellation of the Sicilian sea (Σικελικὸν πέλαγος) from the eastern shores of Sicily to those of the Peloponnese. He, as well as Polybius and Scymnus Chius, fixes the Acroceraunian promontory as the limit between the Ionian and the Adriatic seas. (Strab. ii. p. 123, vii. pp. 316, 317.) Pliny uses the name of Ionium Mare very widely, or rather very vaguely; including under that appellation the Mare Siculum and Creticum of the Greeks, as well as apparently the lower part of the Adriatic (Plin. iii. 8. s. 14, 26. s. 29, 30, iv. 11. s. 18), and this appears to have been the usage common in his day, and which is followed by the Latin poets. (Virg. *Aen.* iii. 211, 671; Ovid, *Fast.* iv. 565, &c.) Mela distinguishes the Ionian sea from the Sicilian, and applies the former name, in the sense now generally adopted by geographers, as that portion of the broad sea between the shores of Greece and those of Sicily, which lay nearest to the former. (Mel. ii. 4. § 1.) But all these names, given merely to portions of the Mediterranean which had no natural limits, were evidently used very vaguely and indefinitely; and the great extension given at a later period to the name of the Adriatic swallowed up altogether those of the Ionian and Sicilian seas [ADRIATICUM MARE], or led to the employment of the former name in a vague and general sense, wholly different from that in which it was originally applied. Thus Servius, commenting on the expression of Virgil, "Insulae Ionio in magno," where the true Ionium Mare is meant by the poet, says:— "Sciendum, Ionium sinum esse immensum, ab Ionia usque ad Siciliam, et hujus partes esse Adriaticum, Achaicum et Epiroticum." (Serv. *ad Aen.* iii. 211.) On the other hand, the name of the Ionian gulf (ὁ Ἰόνιος κόλπος) was still given in late times (at least by geographers), in a very limited sense, to that portion of the Adriatic immediately within the strait at its entrance. (Eustath. *ad Dionys. Per.* 92, 389.) Ptolemy even applies the name of the Ionian sea (Ἰώνιον πέλαγος, iii. 1. §§ 14, 15) in the same restricted manner.

From the name of the Ionian sea has been derived that of the Ionian islands, now given to the group of seven principal islands (besides several smaller ones) which constitute an independent republic under the protectorate of Great Britain; but there is no ancient authority for this appellation. [E. H. B.]

JOPPA (Ἰόππη, LXX.; Strab. xvi. p. 759; Ptol. v. 16. § 2. The form Ἰόπη, Steph B.; Dionys. v. 910; Joseph. *Antiq.* ix. 10. § 2; Solin. 34, better suits the Phoenician original, which signifies "an eminence;" comp. Mover's *Phönizier*, pt. ii. p. 177; Hitzig, *Die Philistäer*, pp. 131—134: *Eth.* Ἰοπίτης, Ἰοπείτης, Ἰοππία, Ἰόπεια, Ἰοπεύς, Ἰοπίς. The Hebrew name JAPHO is still preserved in the Arabic *Yáfa* or *Jaffa*). A seaport town and haven on the coast of Palestine, situated on an eminence. The ancients asserted that it had existed before the Deluge (Pomp. Mela, i. 11. § 3; Plin. v. 14), and according to legend it was on this shore that Andromeda was rescued by Perseus (Strab. *l. c.*; Plin. *l. c.*; comp. Hieron. *in Jon.* i.) from the monster, whose skeleton was exhibited at Rome by M. Aemilius Scaurus during his famous curule aedileship (Plin. ix. 4). When the Israelites invaded Canaan it is mentioned as lying on the border of the tribe of Dan (*Josh.* xix. 40), and was the only port possessed by the Jewish people, till Herod made the harbour at Caesarea. The timber from Lebanon intended for both the first and second temples was landed here (1 *Kings*, v. 9; 2 *Chron.* ii. 16; *Ezra*, iii. 7); and Jonah went to Joppa to find a ship going to Tarshish (*Jon.* i. 3). Judas Maccabaeus set the shipping on fire, because of the inhabitants having drowned 200 Jews (2 *Macc.* xii. 3—7). The town was afterwards taken by Jonathan (1 *Macc.* x. 74—76), but was not long retained, as it was again captured by Simon (xii. 34), and was strongly fortified by him (xiv. 5, xv. 28). It was annexed by Pompeius to the Roman province of Syria, along with other towns which the Jews had held by grants from the predecessors of Antiochus (Joseph. *Antiq.* xiv. 4. § 4, comp. xiii. 9. § 2), and was afterwards given to Herod by Julius Caesar (xv. 7. § 3), and remained part of the dominions of Archelaus (xvii. 11. § 4).

In the New Testament Joppa is mentioned in connection with the Apostle Peter (*Acts*, ix. 36—43, x. 5, 18, xi. 5). During the Jewish war, this place, which had become a receptacle for pirates (Strab. xvi. p. 759), was taken by Cestius, and 8400 of the inhabitants were put to the sword. (Joseph. *B. J.* ii. 18. § 10.) Vespasian afterwards utterly demolished the ruins of Joppa, to which great numbers of persons had fled, and taken to piracy for subsistence. (*B. J.* iii. 9. §§ 2—5.) In the time of Constantine Joppa was the seat of a bishop, as well as when taken by the Arabians under Omar, A. D. 636; the name of a bishop occurs in the council held at Jerusalem A. D. 536. At the period

of the Crusades, Joppa, which had already taken the name of *Jaffa* (Ἰάφα, Anna Comn. *Alex.* xi. p. 328), was alternately in the hands of the Christians and Moslems. After its capture by Saladin (Wilken, *Die Kreuzz*, vol. iv. pp. 537, 539) it fell into the hands of our own Richard (p. 545), was then sacked by Malek-al-Adel (vol. v. p. 25), was rebuilt by Frederick II. (vol. vi. p. 471) and Louis IX. (vol. vii. p. 316), when it was taken by Sultan Bibars (vol. vii. p. 517). As the landing-place for pilgrims to Jerusalem, from the first Crusade to our own day, it occurs in all the Itineraries and books of travels, which describe the locality and natural unfitness of *Jaffa* for a haven, in terms very similar to those employed by the ancients. For coins of Joppa see Eckhel, vol. iii. p. 433. (Reland, *Palaest.* p. 864; Von Raumer, *Palestina*, p. 201; Winer, *Realwörterbuch*, *s. v.*; Robinson, *Researches*, vol. iii. p. 31; Ritter, *Erdkunde*, vol. xvi. pt. i. pp. 574—580, Berlin, 1852.) [E. B. J.]

JORDANES. [PALAESTINA.]

IOS (Ἴος: *Eth.* Ἰήτης, Ἰέτης), an island in the Aegaean sea, one of the Sporades, and falsely called by Stephanus one of the Cyclades, lay north of Thera and south of Paros and Naxos. According to Pliny, it was 25 miles in length, and was distant 18 miles from Naxos and 25 from Thera. (Plin. iv. 12. s. 23.) Both Pliny and Stephanus state that it was originally called Phoenice. It possessed a town of the same name (Ptol. iii. 15. § 28), situated upon a height on the western side of the island. It has an excellent harbour, of a circular form, like the Peiraeeus: its mouth faces the south-west, and is opposite the island of Sicinus. The island is now called *Nio* (ἐν Ἴῳ); and when Ross visited it, in 1836, it contained 505 families or 2500 souls. The modern town is built upon the site of the ancient one, of which there are still remains.

Ios was celebrated in antiquity as the burial-place of Homer, who is said to have died here on his voyage from Smyrna to Athens. Long afterwards, when the fame of the poet had filled the world, the inhabitants of Ios are reported to have erected the following inscription upon his tomb:—

> Ἐνθάδε τὴν ἱερὴν κεφαλὴν κατὰ γαῖα καλύπτει
> Ἀνδρῶν ἡρώων κοσμήτορα, θεῖον Ὅμηρον.

(Pseudo-Herod. *Vit. Homer.* 34, 36; comp. Scylax, p. 22; Strab. x. p. 484; Paus. x. 24. § 2; Plin., Steph. *ll. cc.*) It was also stated that Clymene, the mother of Homer, was a native of Ios, and that she was buried in the island (Paus., Steph. B., *ll.cc.*); and, according to Gellius (iii. 11), Aristotle related that Homer himself was born in Ios. In 1771 a Dutch nobleman, Graf Pasch van Krienen, asserted that he had discovered the tomb of Homer in the northern part of the island; and in 1773 he published an account of his discovery, with some inscriptions relating to Homer which he said he had found upon the tomb. Of this discovery a detailed account is given by Ross, who is disposed to believe the account of Pasch van Krienen; but the original inscriptions have never been produced, and most modern scholars regard them as forgeries. (Ross, *Reisen auf den Griech. Inseln*, vol. i. pp. 54, 154, seq.; Welcker, in *Zeitschrift für die Alterthumswissenschaft*, 1844, p. 290, seq.)

COIN OF IOS.

JOTABE (Ἰωτάβη), an island in the Erythraean Sea, not less than 1000 stadia from the city of AELANA, inhabited by Jews who, formerly independent, accepted the yoke of the Empire during the reign of Justinian (Procop. *B. P.* i. 19). It is now called *Tiran*, or *Djeziret Tyran* of Burkhardt (*Trav.* p. 531), the island at the entrance of the *Gulf of Akabah.* (Comp. *Journ. of Geog. Soc.* vol. vi. pp. 54, 55.) The modern name recalls the "Gens Tyra" of Pliny (vi. 33), placed by him in the interior of the Arabian gulf. (Ritter, *Erdkunde*, vol. xiii. pp. 223—225, vol. xiv. pp. 19, 262.) [E. B. J.]

JOTA'PATA (Ἰωτάπατα: *Eth.* Ἰωταπατηνός, Steph. B. *s. v.*), a city of Galilee, standing on the summit of a lofty hill, rising abruptly on three sides, from the deep and impassable ravines which surrounded it. Josephus, who manfully defended it against Vespasian, has told the story of its siege and capture: 1200 prisoners were taken, and 40,000 men fell by the sword during its protracted siege: Vespasian gave orders that the city should be razed to the ground, and all the defences burnt. Thus perished Jotapata on the first day of Panemus (July) (*B. J.* iii. pp. 6—8; comp. Reland, *Palaest.* p. 867; Milman, *Hist. of Jews*, vol. ii. pp. 287—309). Mr. Bankes (Irby and Mangles, *Trav.* p. 299) has fixed the site at the singular remains of *Kŭl'at Ibn Ma'an*, in the *Wady-el-Hamâm* (comp. Burkhardt, *Trav.* p. 331; Ritter, *Erdkunde*, vol. xv. pt. i. p. 327), but Robinson (*Researches*, vol. iii. pp. 279—282) identifies these ruins with the ARBELA of Galilee and its fortified caverns. [E. B. J.]

JO'TAPE (Ἰωτάπη: *Eth.* Ἰωταπείτης), a small town of Cilicia, in the district called Selenitis, not far from Selinus. It is perhaps the same place as Laerte, the native city of Diogenes Laertius. It is identified with the modern fort *Lambardo.* (Ptol. v. 8. § 2; Plin. v. 22; *Concil. Chalced.* p. 659; Hierocl. p. 709, where it is called Ἰοτάπη; comp. LAERTE.) The coins of Iotape belong to the emperors Philip and Valerian. [L. S.]

JOVA'LIA, a town of Lower Pannonia, on the southern bank of the river Dravus. (*Itin. Hieros.* p. 562.) In the Peut. Tab. it is called Iovallium, while Ptolemy (ii. 16. § 6.) calls it Ἰούολλον or Ἰούβολον, and the Geog. Rav. (iv. 19), Ioballios. It occupied, in all probability, the site of the modern village of *Valpo.* [L. S.]

JOVEM, AD, in Gallia Aquitania, a Mutatio on the road from Burdigala (*Bordeaux*) to Tolosa (*Toulouse*); and between Bucconis and Tolosa. This Mutatio was seven leagues from Tolosa. D'Anville conjectures it to be at a place which he names *Guevin* or *Guerin.* Walckenaer fixes the Mutatio of Bucconis near the *Bois du Bouconne.* [G. L.]

JO'VIA, a town in Lower Pannonia, south of the river Dravus, on the road from Poetovium to Mursa. (*Itin. Hieros.* p. 561; *Itin. Ant.* p. 130; *Tab. Peut.*) The site is generally identified with some ruins found at *Toplika.* Another place of the same name is mentioned in Upper Pannonia, on the same road (*Itin. Ant.* p. 264), and is identified with some ruins found at *Iovincee.* [L. S.]

JOVI'ACUM, a town in Noricum, where a "praefectus secundae Italicae militum Liburnariorum" had his head-quarters; a circumstance suggesting that the town, though situated some distance from the Danube, was yet connected with its navigation. (*Itin. Ant.* p. 249; *Not. Imp.*; *Tab. Peut.*) [L. S.]

JOVIS MONS (*Mongri*, near *Ampurias*), a spur of the Pyrenees in Spain, running out into the Mediterranean near the frontier of Gaul. The step-like terraces which its face presented were called Scalae Herculis. (Mela, ii. 6. § 5.) [P. S.]

JOVIS MONS (τὸ Διὸς ὄρος, Ptol. iv. 3. § 18; *Zowan*), a mountain of Africa Propria, between the rivers Bagradas and Triton, apparently containing the sources of the river Catada. [P. S.]

JOVIS PAGUS, a town in the interior of Moesia, on the eastern bank of the Margus. (*Itin. Hieros.* p. 565; *Tab. Peut.*; Geog. Rav. iv. 7, where it is called simply Pagus.) Some identify it with the modern *Glagovacz.* [L. S.]

JOVIS PROMONTORIUM (Διὸς ἄκρα, Ptol. vii. 4. § 4), a promontory mentioned by Ptolemy, at the S. end of the island of Taprobane (*Ceylon*). Its exact position cannot be identified, but it must have been in the neighbourhood of the present *Point du Galle*, if it be not the same. [V.]

IPAGRO or IPAGRUM (*Aguilar*, on the *Cabra*), a city of Hispania Baetica, 28 M. P. south of Corduba, on the road to Gades. (*Itin. Ant.* p. 412; Inscr. *ap.* Muratori, p. 1052, No. 3; Florez, *Esp. S.* vol. xii. p. 2; Coins, *ap.* Florez, *Med.* vol. ii. p. 647; Mionnet, vol. i. p. 17, Suppl. vol. i. p. 29; Sestini, pp. 28, 29; Eckhel, vol. i. p. 23.) [P. S.]

IPASTURGI. [ISTURGI.]

IPHISTIADAE. [ATTICA, p. 326, b.]

IPNI (Ἰπνοί), on the coast of Magnesia, in Thessaly, at the foot of Mount Pelion, where part of the fleet of Xerxes was wrecked, seems to have been the name of some rocks. (Herod. vii. 188; Strab. ix. p. 443.)

IPNUS (Ἴπνος: *Eth.* Ἰπνεύς), a town of the Locri Ozolae, of uncertain site. (Thuc. iii. 101; Steph. B. *s. v.*)

IPSUS (Ἴψους or Ἴψος), a small town of Phrygia, a few miles below Synnada. The place itself never was of any particular note, but it is celebrated in history for the great battle fought in its plains, B. C. 301, by the aged Antigonus and his son Demetrius against the combined forces of Cassander, Lysimachus, Ptolemy, and Seleucus, in which Antigonus lost his conquests and his life. (Plut. *Pyrrh.* 4; Appian, *Syriac.* 55.) From Hierocles (p. 677) and the Acts of Councils (*Concil. Nicaen*, ii. p. 161), we learn that in the seventh and eighth centuries it was the see of a Christian bishop. Some moderns identify Ipsus with *Ipsili Hissar.* [L. S.]

IRA (Ἰρά). 1. A town of Messenia, mentioned by Homer (*Il.* ix. 150, 292), usually identified with the later Abia on the Messenian gulf. [ABIA.]

2. Or EIRA (Εἶρα), a mountain in Messenia, which the Messenians fortified in the Second Messenian War, and which Aristomenes defended for ten years against the Spartans. It was in the north of Messenia, near the river Neda. Leake places it at no great distance from the sea, under the side of the mountain on which now stands *Sidherókastro* and *Mármaro*; but there are no ancient remains in this spot. More to the east, on the left bank of the Neda, near *Kakalétri*, are the remains of an ancient fortress, which was, in all probability, Eira; and the lofty mountain above, now called *Tetrázi*, was probably the highest summit of Mount Eira. (Paus. iv. 17. § 10, iv. 20. §§ 1. 5; Strab. viii. p. 360; Steph. B. *s. v.* Ἰρά; Leake, *Morea*, vol. i. p. 486; Gell, *Itiner. of the Morea*, p. 84; Ross, *Reisen im Peloponnes*, p. 95, seq.)

IRENO'POLIS (Εἰρηνόπολις), a town of the district Lacunitis, in the north-east of Cilicia. It was situated not far from the river Calycadnus, and is said to have once borne the name of Neronias (Νερωνίας). (Theodoret. *Hist. Eccles.* i. 7, ii. 8; Socrat. ii. 26; Ptol. v. 8. § 6.) [L. S.]

IRENO'POLIS. [BEROEA.]

IRE'SIAE. [ASTERIUM.]

IRIA FLAVIA. [GALLAECIA.]

IRIA (Εἰρία, Ptol.: *Eth.* Iriensis: *Voghera*), a considerable town of the interior of Liguria, mentioned both by Pliny and Ptolemy, as well as in the Itineraries, which place it 10 miles from Dertona, on the road to Placentia. (Plin. iii. 5. s. 7; Ptol. iii. 1. § 35; *Itin. Ant.* p. 288; *Tab. Peut.*) This distance agrees with the site of the modern town of *Voghera*, which appears to have been called in the middle ages *Vicus Iriae*, a name gradually corrupted into its modern appellation. It is situated on the little river *Staffora*, which would seem to have borne in ancient times the same name with the city: it is called Hiria or Iria by P. Diaconus, who tells us that the emperor Majorianus was put to death on its banks. (*Hist. Miscell.* xvi. p. 554.) Ptolemy includes Iria, as well as Dertona, in the territory of the Taurini; but this would seem to be certainly a mistake: that people could never have extended so far to the eastward. An inscription (of which the reading is, however, a matter of controversy) has "Coloniae Foro Juli Iriensium," from which it would seem that Iria, as well as the neighbouring Dertona, became a colony after the death of Caesar, and obtained the name of Forum Julii; but this is very doubtful. No other trace is found either of the name or the colony. (Maffei, *Mus. Ver.* p. 371. 4: Murat. *Inscr.* p. 1108. 4; Orell. *Inscr.* 73.) [E. H. B.]

IRINE, an island in the Argolic gulf, supposed by Leake to be *Ypsili.* (Plin. iv. 12. s. 19; Leake, *Peloponnesiaca*, p. 294.)

IRINUS SINUS. [CANTHI SINUS.]

IRIPPO, a town of Hispania Baetica (Plin. iii. 1. s. 3), which Ukert supposes to have been situated in the *Sierra de Ronda*, near *Zara* or *Pinal.* (Florez, *Esp. S.* vol. xii. p. 303; Coins, *ap.* Florez, *Med.* vol. ii. p. 474, vol. iii. p. 85; Mionnet, vol. i. p. 56, Suppl. vol. i. p. 113; Sestini, *Med. Isp.* p. 61; Ukert, vol. ii. pt. 1. p. 358.) [P. S.]

IRIS (ὁ Ἶρις: *Kasalmak*), a considerable river of Pontus, which has its sources in the heights of Antitaurus in the south of Pontus. It flows at first in a north-western direction, until reaching Comana it takes a western turn: it thus passes by the towns of Mesyla and Gaziura. A little above Amisus it receives the Scylax, and turns eastward; near Eupatoria the Lycus empties itself into it. After this it flows due north, and, traversing the plain of Themiscyra, it empties itself into the Euxine by four mouths, the westernmost of which is the most important. (Strab. xii. p. 556.) The Iris is smaller than the Halys (Apollon. Rhod. ii. 368), but still a considerable river, flowing through a vast extent of country, and, according to Xenophon (*Anab.* v. 6. § 3), was three plethra in breadth. (Comp. Strab. i. p. 52, xii. 547; Scylax, p. 32; Ptol. v. 6. § 2; Xenoph. v. 6. § 9, vi. 2. § 1; Apollon. Rhod. ii. 965; Dionys. Per. 783; Plin. vi. 3, 4.) The part near its mouth is

now called *Yeckil* or *Yekil Irmak*. (Hamilton, *Researches*, vol. i. p. 340.) [L. S.]

IRIS. [IERNE.]

IRUS or IRA (Ἶρος or Ἰρά), a town of Malis, of uncertain site. (Steph. B. *s. vv.*; Lycophr. 903.)

IS (Ἴς, Herod. i. 179), a town of Mesopotamia, eight days' journey N. of Babylon, situated, according to Herodotus, on a stream of the same name, which brought down the bitumen which was used in the construction of the walls of Babylon. There is no reason to doubt that it is represented by the modern *Hit*. There does not appear to be any river at present at *Hit*, but a small stream may have been easily blocked up by the sand of ages. There are still bitumen springs in the neighbourhood of this place. It has been conjectured that the Ἰζαννησόπολις of Isidorus (p. 5) refers to the same town. (Ritter, *Erdkunde*, vol. ii. p. 148; Rennell, *Geogr. of Herod.* p. 552.) [V.]

ISACA, in Britain, a river mentioned by Ptolemy (ii. 3. § 4) as lying west of the *outlet of the Tamarus* (*Tamar*). In the Monumenta Britannica, Isacae ostia are identified with *Weymouth*, and also with *Exmouth*; most probably the latter, name for name, as well as place for place. In the Geographer of Ravenna the form is Isca, which is preferable. [ISCA.] [R. G. L.]

ISADICI (Εἰσάδικοι), a people whom Strabo (xi. p. 506) couples with the Troglodytae and other tribes of the Caucasus. The name may imply some Hellenic fancy about savage justice and virtue. (Comp. Groskurd, *ad loc.*) [E. B. J.]

ISAMNIUM, in Ireland, mentioned by Ptolemy (ii. 2. § 8) as a promontory north of the *Bubinda* (river *Boyne*) = *St. John's Foreland*, *Clogher Head*, *Dunany Point*, *Ballashan Point* (?). [R. G. L.]

ISANNAVATIA, in Britain, mentioned in the 6th Itinerary as lying between Lactodurum and Tripontium. It is a name of some difficulty, since neither of the places on each side of it has been identified. (See *vv.*) In the Geographer of Ravenna we find a Bannovallum, and in the 8th Itinerary a Bannovantum. Probably these two names are identical. At any rate, Bannovantum = Isannavatia, since each is 28 miles from Magiovinium. Thus, in the 6th Itinerary, we have:—

	M. P.
Magiovinio	
Lactodoro - -	xvi.
Isannavatia - -	xii=xxviii.

And in the 8th:—

	M. P.
Bannavanto	
Magiovinio - -	xxviii.

It is only safe to say that Isannavatia was a town in the southern part of Northamptonshire, probably *Daventry*. The Itinerary in which it occurs has only two names beyond doubt, viz. Verulamium and Lindum (*St. Alban's* and *Lincoln*). *Daventry*, however, is Horsley's identification. In more than one map of Roman Britain, Bannovallum is placed in Lincolnshire. This is because it is, in the first place, separated from Bannovantum, and then fixed on the river *Bain*, a Lincolnshire river. This is the meaning of *Horncastle* being given as its equivalent. The change, however, and the assumption, are equally gratuitous. [R. G. L.]

I'SARA, the river. 1. [INSULA.]

2. The Isara, which was a branch of the Sequana, has its name preserved in the Celtic name of a place which was on it, named Briva Isarae. [BRIVA ISARAE.] The Celtic element *Is* has become *Oise*, the modern name of the river, which is the same word as the English *Ouse*. D'Anville says that the name Isara in the middle ages became *Esia* or *Aesia*. Vibius Sequester mentions a river Esia which flows into the Sequana; but D'Anville suspects the passage to be an interpolation, though it is impossible to judge what is interpolation in such a strange book as Vibius Sequester. Oberlin, the editor of Vibius Sequester, maintains the passage to be genuine (p. 110). [G. L.]

3. [LURA.]

ISARCI, a Rhaetian tribe dwelling about the mouth of the river Isarus (Plin. iii. 24), from which it appears to have derived its name. [L. S.]

ISARGUS. [ILARGUS.]

ISARUS (Ἴσαρος: the *Isar*), a river of the Rhaetian Alps, flowing from an Alpine lake, and in a southern direction until it joins the Athesis near Pons Drusi. (Strab. iv. p. 207, where the Ἴσαρος (or α) is said to receive the Atagis (Athesis); either a mistake of Strabo himself, or by a transcriber transposing the names. Comp. ILARUS.) [L. S.]

ISAURA (τὰ Ἴσαυρα: *Eth.* Ἰσαυρεύς), the capital of Isauria, situated in the south-west of the country; it was a wealthy, populous, and well-fortified city at the foot of Mount Taurus. Of its earlier history nothing is known; but we learn from Diodorus (xviii. 22) that when it was besieged by Perdiccas, and the inhabitants were no longer able to hold out, they set fire to the city, and destroyed themselves with all they possessed. Large quantities of molten gold were found afterwards by the Macedonians among the ashes and ruins. The town was rebuilt, but was destroyed a second time by the Roman Servilius Isauricus, and thenceforth it remained a heap of ruins. Strabo (xii. p. 568) states that the place was ceded by the Romans to Amyntas of Galatia, who built out of the ruins of the ancient city a new one in the neighbourhood, which he surrounded with a wall; but he did not live to complete the work. In the third century of our aera Isaura was the residence of the rival emperor Trebellianus (Trebell. Poll. *XXX. Tyran.* 25); but in the time of Ammianus Marcellinus (xiv. 8) nearly all traces of its former magnificence had vanished. At a later period it is still mentioned, under the name Isauropolis, as a town in the province of Lycaonia. (Hierocl. p. 675; *Concil. Chalced.* p. 673; comp. Strab. xiv. p. 665; Ptol. v. 4. § 12; Steph. B. *s. v.*; Plin. v. 27.) Of Old Isaura no ruins appear to be found, though D'Anville and others have identified it with the modern *Bei Sheher;* they also believe that *Seïdi Sheher* occupies the site of New Isaura, while some travellers regard *Serki Serai* as the representative of New Isaura; but Hamilton (*Researches*, vol. ii. pp. 330, foll.) has given good reasons for thinking that certain ruins, among which are the remains of a triumphal arch of the emperor Hadrian and a gateway, on a hill near the village of *Olou Bounar* mark the site of New Isaura. The walls of the city can still be traced all around the place. The Isaurians were a people of robbers, and the site of their city was particularly favourable to such a mode of life. [ISAURIA.] [L. S.]

ISAU'RIA (ἡ Ἰσαυρία), a district in Asia Minor, bordering in the east on Lycaonia, in the north on Phrygia, in the west on Pisidia, and in the south on Cilicia and Pamphylia. Its inhabitants, living in a wild and rugged mountainous country, were little known to the civilised nations of antiquity. The country contained but few towns, which existed especially in the northern part, which was less

mountainous, though the capital, Isaura, was in the south. Strabo, in a somewhat obscure passage (xii. p. 568), seems to distinguish between Ἰσαυρία, the northern part, and Ἰσαυρική, the southern and less known part, which he regards as belonging to Lycaonia. Later writers, too, designate by the name Isauria only the northern part of the country, and take no notice of the south, which was to them almost a terra incognita. The inhabitants of that secluded mountainous region of Asia, the Isauri or Isaurica gens, appear to have been a kindred race of the Pisidians. Their principal means of living were derived from plunder and rapine; from their mountain fastnesses they used to descend into the plains, and to ravage and plunder wherever they could overcome the inhabitants of the valleys in Cilicia, Phrygia, and Pisidia. These marauding habits rendered the Isaurians, who also took part in the piracy of the Cilicians, so dangerous to the neighbouring countries that, in B. C. 78, the Romans sent against them an army under P. Servilius, who, after several dangerous campaigns, succeeded in conquering most of their strongholds and reducing them to submission, in consequence of which he received the surname of Isauricus. (Strab. *l. c.*; Diod. Sic. xviii. 22; Zosim. v. 25; Mela, i. 2; Plin. v. 23; Eutrop. vi. 3; Liv. *Epit.* 93; Dion Cass. xlv. 16; Flor. iii. 6; Ptol. v. 4. § 12; Oros. v. 23; Amm. Marc. xiv. 2, xxv. 9.) The Isaurians after this were quite distinct from the Lycaonians, for Cicero (*ad Att.* v. 21; comp. *ad Fam.* xv. 2) distinguishes between the Forum Lycaonium and the Isauricum. But notwithstanding the severe measures of Servilius, who had destroyed their strongholds, and even their capital of Isaura, they subsequently continued to infest their neighbours, which induced the tetrarch Amyntas to attempt their extirpation; but he did not succeed, and lost his life in the attempt. Although the glorious victory of Pompey over the pirates had put an end to such practices at sea, the Isaurians, who in the midst of the possessions of Rome maintained their independence, continued their predatory excursions, and defied the power of Rome; and the Romans, unable to protect their subjects against the bold mountaineers in any other way, endeavoured to check them by surrounding their country with a ring of fortresses. (Treb. Poll. *XXX. Tyr.* 25.) In this, however, the Romans succeeded but imperfectly, for the Isaurians frequently broke through the surrounding line of fortifications; and their successes emboldened them so much that, in the third century of our aera, they united themselves with their kinsmen, the Cilicians, into one nation. From that time the inhabitants of the highlands of Cilicia also are comprised under the name of Isauri, and the two, united, undertook expeditions on a very large scale. The strongest and most flourishing cities were attacked and plundered by them, and they remained the terror of the surrounding nations. In the third century, Trebellianus, a chief of the Cilician Isaurians, even assumed the title and dignity of Roman emperor. The Romans, indeed, conquered and put him to death; but were unable to reduce the Isaurians. The emperor Probus, for a time, succeeded in reducing them to submission; but they soon shook off the yoke. (Vopisc. *Prob.* 16; Zosim. i. 69, 70.) To the Greek emperors they were particularly formidable, for whole armies are said to have been cut to pieces and destroyed by them. (Suid. *s. v.* Βρύχιος and Ἡοδκλειος; Philostorg. *Hist. Eccles.* xi. 8.) Once the Isaurians even had the honour of giving an emperor to the East in the person of Zeno, surnamed the Isaurian; but they were subsequently much reduced by the emperor Anastasius, so that in the time of Justinian they had ceased to be formidable. (Comp. Gibbon, *Hist. of the Decline, &c.*, chap. xl.) The Isaurians are described as an ugly race, of low stature, and badly armed; in the open field they were bad soldiers, but as hardened mountaineers they were irresistible in what is called guerilla warfare. Their country, though for the most part consisting of rugged mountains, was not altogether barren, and the vine was cultivated to a considerable extent. (Amm. Marc. xiv. 8.) Traditions originating in the favourite pursuits of the ancient Isaurians are still current among the present inhabitants of the country, and an interesting specimen is related in Hamilton's *Researches*, vol. ii. p. 331. [L. S.]

ISCA, the name of two towns in Britain. The criticism of certain difficulties connected with their identification is given under MURIDUNUM. Here it is assumed that one is *Exeter*, the other *Caerleon-on-Usk*.

1. ISCA = *Ex*-eter, mentioned by Ptolemy (ii. 3. § 30). In the 12th and 15th Itineraries this appears as Isca Dumnoniorum, 15 miles from Muridunum. The word Dumnoniorum shows that *Devonshire* is the county in which it is to be sought. Name for name, *Exeter* suggests itself. Nevertheless, Horsley gives Uxela as the Roman name for Exeter, and placed *Isca D.* at *Chiselboro'*. After remarking on Isaca, that "it is universally supposed to be the river *Exe* in Devonshire," and that "Isacae ostia must, therefore, be *Exmouth*," he adds, "Isca Dumnoniorum has been universally taken for *Exeter;* I have placed it near *Chiselboro'* and *South Petherton*, near the borders of Somersetshire" (p. 371). His objections (p. 462) lie in the difficulty of fixing Muridunum (*q. v.*); but, beyond this, he considers himself free to claim Uxela (*q. v.*) as *Exeter*. For considering Isca Dumnoniorum to be *Exeter*, he sees no better reason than "general opinion and some seeming affinity of names." Yet the "affinity of names" has been laid great stress on in the case of Isacae ostia. The Isca of Ptolemy must be about 20 or 30 miles north-east of the mouth of the *Exe*, "on which river Exeter stands. This reaches to the *Ax*." Hence he suggests *Ilchester* as Isca Dumn.; but, as he admits that that town has a claim to be considered Ischalis (*q. v.*), he also admits that some of the localities about *Hampden Hill* (where there are the remains of a Roman camp), *South Petherton* (where Roman coins have been found), and *Chiselboro'* (not far from the *Axe*), have better claims. Hence, in his map, Uxela = *Exeter*, and Isca D. = *Chiselboro'*. Assuming that some, if not all, these difficulties are explained under UXELA and MURIDUNUM, the positive evidence in favour of Exeter is something more than mere opinion and similarity of name.

(1) The form Isca is nearer to *Ex* than *Ax*, and that Isaca = *Exe* is admitted. The *Ux*- in *Ux*-ela may better = *Ax*.

(2) There is no doubt as to the other Isca = *Caerleon-on-Usk*. Now, Roger Hoveden, who wrote whilst the Cornish was a spoken language, states that the name of *Exeter* was the same as that of *Caerleon*, in British, i. e. *Caerwisc* = civitas aquae.

(3) The statement of Horsley, that "he could never hear of any military way leading to or from" Exeter, misleads. In Polwhele (p. 182) we have a

most distinct notice of the road from Seaton, and, nine miles from Exeter, the locality called *Street*-way Head; the name *street*=*road* (*when not through a town or village*) being strong evidence of the way being Roman. Tesselated pavements and the foundations of Roman walls have been found at Exeter, as well as other remains, showing that it was not only a Roman town, but a Roman town of importance, as it continued to be in the Saxon times, and as it had probably been in the British.

2. Isca Legionis = *Caerleon-on-Usk*, is mentioned in the 12th Itinerary, i. e. in the one where Isca Dumnoniorum occurs. The only town given by Ptolemy to the Silures, the population of the parts to which Isca (sometimes called by *later* writers Isca Silurum) belongs, is Bullaeum. This = Burrium of the Itinerary, 8 Roman miles from Isca (= *Usk*, about 6 English miles from *Caerleon*.) Hence, Isca may have been a military station of comparatively recent date. But there is a further complication. It is the Devonshire Isca to which Ptolemy gives the Second Legion (Λεγίων δευτέρα Σεβαστή). "This," remarks Horsley (and, perhaps, with truth), on the part of Ptolemy, is, "in my opinion, the only manifest and material error committed by him in this part of England" (p. 462).

Again: several inscriptions from the *Wall* (*per lineam Valli*) show that, when that was built, the second Legion was on the Scottish border, taking part in the work; the previous history of the legion being, that it came into Britain under the reign of Claudius, commanded by Vespasian. (Tac. *Hist.* iii. 44.) On the other hand, an inscription mentioned by Horsley, but now lost (p. 78), indicates their presence at *Caerleon* in the time of Severus. As the Itinerary places them there also, we must suppose that this was their quarters until the times approaching the evacuation of Britain. When the *Notitia* was made, they were at Rutupiae (*Richboro'*): PRAEPOSITUS LEGIONIS II. AUGUST. RUTUPIS.

The Roman remains found at *Caerleon* are considerable. A late excavation for the parts about the *Castle Mound* gave the remains of a Roman villa, along with those of a medieval castle, built, to a great extent, out of the materials of the former. In some cases the stucco preserved its colour. There was abundance of pottery,—Samian ware, ornamented with figures of combatant gladiators, keys, bowls, bronze ornaments, and implements. At *Pil Bach*, near *Caerleon*, tesselated pavements have been found, along with the following inscription:—DIIS MANIBVS TADIA VELLAVIVS . VIXIT ANNOS SEXAGINTA QVINQVE . ET TADIVS EXUPERTVS FILIVS VIXIT ANNOS TRIGINTA SEPTEM . DEFVNTVS (*sic*) EXPEDITIONE GERMANICA . TADIA EXUPERATA FILIA MATRI ET PATRI PIISSIMA SECVS TVMVLVM PATRIS POSVIT. Others, of less length, to the number of twenty, have also been found in the neighbourhood. (See *Archaeologia Cambrensis*; *Journal of British Archaeological Association* (*passim*); and *Delineations of Roman Antiquities found at Caerleon*, J. E. Lee.) [R. G. L.]

ISCA, river. [Isaca.]

ISCA'DIA (Εἰσκαδία), a town in the W. of Baetica, between the Baetis and the Anas, not far from Tucci. (Appian, *Hisp.* 68.) [P. S.]

ISCHALIS, in Britain, mentioned by Ptolemy (ii. 3. § 28) as one of the towns of the Belgae, *Bath* and *Winchester* (Ὕδατα Θερμά, or Aquae Solis, and Venta) being the other two; identified, in the Monumenta Britannica, with *Ilchester*. [Isca Dumnoniorum.] [R. G. L.]

ISCHO'POLIS (Ἰσχόπολις), a small town on the coast of Pontus near Pharnacia, was in ruins even in the time of Strabo (xii. p. 548), but is still noticed by Ptolemy (v. 6. § 5). [L. S.]

ISIACO'RUM PORTUS (Ἰσιακῶν λιμήν, Arrian, *Peripl.* p. 21, *Anon. Peripl.* p. 9), a harbour on the Euxine sea, 380 stadia from the island at the mouth of the Borysthenes, and 1200 stadia from the Psilon (*Sulina*) mouth of the Danube. (Arrian, *l. c.*) It has been identified by Rennell (*Comp. Geog.* vol. ii. p. 360) with *Odessa*. There is some difficulty in adjusting the discrepancies in detail; but the aggregate distance appears to be clearly enough made out. Thus, from the island to Odessus Arrian allows a distance of 80 stadia, and from Odessus to the port of the Istrians (Ἰστριανῶν λιμήν) 250 stadia, and thence to that of the Isiaci 50 stadia. The Odessus (Ὀδησσός) of Arrian (for he places Odessus at *Varna*) is probably a false reading, and is the same as the Ordesus (Ὀρδησός) of Ptolemy (iii. 5. § 29) and Pliny (iv. 12), situated upon the river Axiaces, or the modern *Teligul*, a large estuary which receives a river of the same name. As the interval in Arrian between Odessus (*Ordesus*) and the island is too short, so the next is too large; but the errors balance one another, and the harbour of the Isiaci agrees with that of *Odessa* within three quarters of a mile; the port of the Istrians may have lain to the N. of the bay of Odessa. [E. B. J.]

ISIDIS OPPIDUM (Plin. v. 10. s. 11). Near the city of Busiris, in the Aegyptian Delta, was situated a splendid temple of Isis, around which, besides the ordinary dwellings of the priests within the sacred precincts, gradually clustered a large and flourishing village, inhabited by the artisans and husbandmen who supplied the wants or tilled the lands of the inmates of the temple. These buildings formed probably the hamlet or town of Isis mentioned by Pliny. The modern village of *Bahbeyt*, N. of the ancient city of Busiris, is supposed to cover the ruins of the Templum Isidis. (Pococke, *Travels in the East*, vol. i. p. 34; Minutoi, p. 304.) [Busiris.] [W. B. D.]

ISINISCA, a place in Rhaetia Secunda, on the ancient road between *Augsburg* and *Salzburg*. (*Itin. Ant.* pp. 236, 251, 257; *Tab. Peut.*, where it is called Isunisca.) It is identified by some with *Isen*, and by others with a place near *Helfendorf*. [L. S.]

ISIONDA (Ἰσιόνδα), a town in the south-west of Pisidia, a few miles to the north-west of Termessus. (Polyb. *Exc. de Leg.* 31; Liv. xxxviii. 15.) Strabo (xii. p. 570), in enumerating the Pisidian towns, mentions one which he calls Sinda, a name which some editors believe to be a corrupt reading for Isionda; but, as there existed a town of the name of Sinda near Cibyra in Pisidian Phrygia, it would be hazardous to decide anything. (See Kramer's note on Strab. *l. c.*) Sir C. Fellowes (*Asia Minor*, p. 194) found extensive remains of an ancient town on the top and side of one of the many isolated hills of the district, which he supposes to be the ruins of Isionda, but he does not mention any coins or inscriptions in support of his conjecture. [L. S.]

ISIS (ὁ Ἶσις), a navigable river on the east coast of the Euxine between the Acinasis and Mogrus, from each of which its distance amounted to 90 stadia, while its mouth was 180 stadia south of that of the Phasis. (Arrian, *Peripl.* p. 7; Plin. vi. 4;

Scylax, p. 32, where the common reading Ἶρις has been corrected by Gail.) This river is believed to be the modern *Tshorok*. [L. S.]

I'SIUM (Isiu, *Itin. Anton.* p. 167; Isui, Not. Imp.), was a fort situated on the borders of the Thebaid and Heptanomis in Egypt, in lat. 27° 5′ N., and on the eastern bank of the Nile. Isium was about 20 miles SE. from the castle of Hieracon, and nearly 24 miles NE. from that of Muthis. Under the Roman empire a troop of British infantry (ala Britonum) was stationed there. [W. B. D.]

ISIUS MONS (τὸ Ἴσιον ὄρος, Ptol. iv. 7. § 5), a mountain, or rather a ridge of highlands rising gradually on its western side, but steep and escarped towards the east, on the coast of Aethiopia, and in the Regio Troglodytica. It was seated in lat. 20° 1′ N., a little to the southward of the headland Mnemium (Μνημεῖον ἄκρον, Ptol. iv. 5. § 7), and SW. of Berenice and the Sinus Immundus (*Foul Bay*). Mons Isius answers to the modern *Ras-el-Dwaer*. Strabo, indeed (xvii. p. 770), places this eminence further to the south, and says that it was so called from a temple of Isis near its summit. [W. B. D.]

ISMARIS (Ἰσμαρὶς λίμνη), a small lake on the south coast of Thrace, a little to the east of Maronea. (Herod. vii. 169; Steph. B. *s. v.* Ἴσμαρος.) On its eastern side rises Mt. Ismarus. [ISMARUS.] [L. S.]

I'SMARUS (Ἴσμαρος), a mountain rising on the east of lake Ismaris, on the south coast of Thrace (Virg. *Ecl.* vi. 30, *Georg.* ii. 37; Propert. ii. 13. 5. iii. 12. 25; Lucret. v. 31, where it is called Ismara, as in Virg. *Aen.* x. 351.) Homer (*Od.* ix. 40, 198) speaks of Ismarus as a town of the Cicones, on or at the foot of the mountain. (Comp. Marc. Heracl. 28.) The name of the town also appears in the form Ismaron. (Plin. iv. 18.) The district about Ismarus produced wine which was highly esteemed. (Athen. i. p. 30; Ov. *Met.* ix. 641; Steph. B. *s. v.*) [L. S.]

ISME'NUS. [THEBAE.]

ISONDAE (Ἰσόνδαι, Ptol. v. 9. § 23), a people whose position must be sought for in the valley of the river *Terek* or *Kúma*, in *Lezgéstán*, to the W. of the Caspian. [E. B. J.]

ISPI'NUM. [CARPETANI.]

ISRAEL. [PALAESTINA.]

ISSA (Ἴσσα, Ptol. ii. 16. § 14; Agathem. i. 5; Pomp. Mela, ii. 7. § 13; Plin. iii. 26; Steph. B.; *Itin. Anton.*; *Peut. Tab.*; Isia, Geog. Rav.; Ἴης, Const. Porph. *de Adm. Imp.* 36: *Eth.* and *Adj.* Ἰσσαεύς, Issaeus, Issensis, Issaicus: *Lissa*), one of the most well known of the islands in the Adriatic, off the coast of Liburnia. (Strab. vii. p. 315.) It is mentioned by Scylax (p. 8) as a Grecian colony, which, according to Scymnus of Chios (l. 412), was sent from Syracuse. Diodorus (xv. 13) relates that in B. C. 387 Dionysius the elder, in his attempts to secure to himself the sovereignty of the Adriatic, assisted the Parians in founding colonies at Issa and Pharos. The island was besieged by Agron, king of Illyria, and the inhabitants applied to Rome for protection, when a message was sent by the Romans to Agron, requiring him to desist from molesting the friends of the republic. In the mean time, B. C. 232, Agron died; and his widow Teuta, having succeeded to the throne, resolved on pressing the siege of Issa. The Roman envoys required her to cease from hostilities, when, in defiance of the law of nations, she put one of them to death. This brought on the First Illyrian War, B. C. 229; one of the consequences of which was the liberation of Issa. (Polyb. ii. 8; App. *Illyr.* 7.) That Issa remained free for a long time is proved by its coins, which also show that the island was famous for its wine (comp. Athen. i. p. 22), bearing, as they do, an "amphora" on one side, and on the other a vine with leaves. (Eckhel, vol. ii. p. 159.) The inhabitants were expert seamen, and their beaked ships, "Lembi Issaici," rendered the Romans especial service in the war with Philip of Macedon. (Liv. xxxi. 45, xxxvii. 16, xlii. 48.) They were exempted from the payment of tribute (Liv. xlv. 8), and were reckoned as Roman citizens (Plin. iii. 21). In the time of Caesar the chief town of this island appears to have been very flourishing.

The island now called *Lissa* rises from the sea, so that it is seen at a considerable distance; it has two ports, the larger one on the NE. side, with a town of the same name: the soil is barren, and wine forms its chief produce. *Lissa* is memorable in modern times for the victory obtained by Sir W. Hoste over the French squadron in 1811. (Sir G. Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 110; Neigebaur, *Die Sudslavem*, pp. 110—115.) [E. B. J.]

COIN OF ISSA.

ISSA. [LESBOS.]

ISSACHAR. [PALAESTINA.]

ISSE'DONES (Ἰσσηδόνες, Steph. B. *s. v.*; in the Roman writers the usual form is "Essedones"), a people living to the E. of the Argippaei, and the most remote of the tribes of Central Asia with whom the Hellenic colonies on the Euxine had any communication. The name is found as early as the Spartan Alcman, B. C. 671—631, who calls them "Assedones" (*Fr.* 94, ed. Welcker), and Hecataeus (*Fr.*168, ed. Klausen). A great movement among the nomad tribes of the N. had taken place in very remote times, following a direction from NE. to SW.; the Arimaspi had driven out the Issedones from the steppes over which they wandered, and they in turn drove out the Scythians, and the Scythians the Cimmerians. Traces of these migrations were indicated in the poem of Aristeas of Proconnesus, a semi-mythical personage, whose pilgrimage to the land of the Issedones was strangely disfigured after his death by the fables of the Milesian colonists. (Herod. iv. 13.) The Issedones, according to Herodotus (iv. 26), have a custom, when any one loses his father, for the kinsfolk to kill a certain number of sheep, whose flesh they hash up together with that of the dead man, and make merry over it. This done, they peel and clean out his skull, which after it has been gilded becomes a kind of idol to which yearly sacrifices are offered. In all other respects they are a righteous people, submitting to the rule of women equally with that of men; in other words, a civilised people.

Heeren (*Asiat. Nat.* vol. ii. p. 15, trans.), upon Dr. Leyden's authority (*Asiat. Res.* vol. ix. p. 202), illustrates this way of carrying out the duties of

filial piety by the practice of the Battas of Sumatra. It may be remarked that a similar story is told of the Indian Padaei. (Herod. iii. 99.) Pomponius Mela (ii. 1. § 13) simply copies the statement of Herodotus, though he alters it so far as to assert that the Issedones used the skull as a drinking cup. The name occurs more than once in Pliny (iv. 26, vi. 7, 19); and Ptolemy, who has a town ISSEDON in Serica (Ἰσσηδών, vi. 16. § 7, viii. 24. § 5), mentions in another place (viii. 24. § 3) the Scythian Issedon. (Comp. Steph. B. *s. v.*; Amm. Marc. xxiii. 6 § 66.

Von Humboldt (*Asie Centrale*, vol. i. pp. 390—412) has shown that, if the relief of the countries between the *Don* and the *Irtysh* be compared with the itinerary traced by Herodotus from the Thyssagetae to the Issedones, it will be seen that the Father of History was acquainted with the existence of vast plains separating the *Ural* and *Altaï*, chains which modern geographers have been in the habit of uniting by an imaginary range passing through the steppe of the *Kirghiz*. This route (Herod. iv. 23, 24) recognises the passage of the *Ural* from W. to E., and indicates another chain more to the E. and more elevated — that of the *Altaï*. These chains, it is true, are not designated by any special names, but Herodotus was not acquainted even in Europe with the names of the Alps and Rhipaean mountains; and a comparison of the order in which the peoples are arranged, as well as the relief and description of the country, shows that much definite information had been already attained. Advancing from the Palus Maeotis, which was supposed to be of far larger dimensions than it really is, in a central direction towards the NE., the first people found occupying the plains are the "Black-clothed" MELANCHLAENI, then the BUDINI, THYSSAGETAE, the IURCAE (who have been falsely identified with the Turks), and finally, towards the E., a colony of Scythians, who had separated themselves from the "Royal Scythians" (perhaps to barter gold and skins). Here the plains end, and the ground becomes broken (λιθώδης καὶ τρηχέη), rising into mountains, at the foot of which are the ARGIPPAEI, who have been identified from their long chins and flat noses with the Kalmucks or Mongolians by Niebuhr, Böckh, and others, to whom reference is made by Mr. Grote. (*Hist. of Greece*, vol. iii. p. 320.) This identification has been disputed by Humboldt (comp. *Cosmos*, vol. i. p. 353 note, 440, vol. ii. p. 141 note, 202, trans.), who refers these tribes to the Finnish stock, assuming as a certain fact, on evidence which it is difficult to make out, that the Mongolians who lived around *Lake Baikal* did not move into Central Asia till the thirteenth century. Where the data are so few, for the language (the principle upon which the families of the human race are marked off) may be said to be unknown, ethnographic analogies become very hazardous, and the more so in the case of nomad tribes, the same under such wide differences of time and climate. But if there be considerable difficulty in making out the analogy of race, the local bearings of these tribes may be laid down with tolerable certainty. The country up to the Argippaei was well known to the traders; a barrier of impassable mountains blocked up the way beyond. [HYPERBOREI.] The position of the Issedones, according to the indications of the route, must be assigned to the E. of *Ichim* in the steppe of the central horde of the *Kirghiz*, and that of the Arimaspi on the N. declivity of the *Altaï*. The communication between the two peoples for the purpose of carrying on the gold trade was probably made through the plains at the NW. extremity of the *Altaï*, where the range juts out in the form of a huge promontory. [E. B. J.]

ISSICUS SINUS. [ISSUS.]

ISSUS (Ἰσσός and Ἰσσοί, Xen. *Anab.* i. 2. § 24, and i. 4. § 1), a town of Cilicia, on the gulf of Issus (Ἰσσικὸς κόλπος). Herodotus calls the gulf of Issus the gulf of Myriandros (iv. 38), from the town of Myriandros, which was on it.

The gulf of Issus is now named the gulf of *Iskenderun* or *Scanderoon*, from the town of *Scanderoon*, formerly Alexandria ad Issum, on the east side. It is the only large gulf on the southern side of Asia Minor and on the Syrian coast, and it is an important place in the systems of the Greek geographers. This gulf runs in a NE. direction into the land to the distance of 47 miles, measured nearly at right angles to a line drawn from the promontory Megarsus (*Cape Karadash*), on the Cilician coast, to the Rhosicus Scopulus (*Rás-el-Khánzir*, or *Hynzyr*, as it has sometimes been written), on the Syrian coast; for these two capes are respectively the limits of the gulf on the west and east, and 25 miles from one another. The width immediately north of the capes is somewhat less than 25 miles, but it does not diminish much till we approach the northern extremity of the gulf. It seems certain that the ancient outlet of the Pyramus was west of and close to *Cape Karadash*, where Beaufort supposes it to have been; and this is consistent with the old prophecy [Vol. I. p. 620], that the alluvium of the Pyramus would some time reach to the shore of Cyprus; for if the river had entered the gulf where it does now, 23 miles further east, the prophecy would have been that it would fill up the gulf of Issus. For the earth that the river formerly discharged into the sea is now sent into the gulf, where it "has produced a plain of sand along the side of the gulf, somewhat similar in shape, and equal in size, to that formed by the *Ghiuk Sooyoo* [CALYCADNUS, Vol. I. p. 483]; but the elbow where the current that sets round the gulf quits it, is obtuse and without any shoals. Perhaps the disappearance of the Serrepolis of Ptolemy from the coast, may be accounted for by the progressive advance of the shore into the gulf, which has left the ruins of that town some miles inland" (Beaufort, *Caramania*, p. 296). Ptolemy's Serraepolis (Σεῤῥαίπολις), which he calls a small place (κώμη), is between Mallus, which is a little east of Cape Megarsus, and Aegae or *Ayaz*. [AEGAE.] The next city to Aegae on the coast is Issus, and this is the remotest city in this part of Cilicia which Ptolemy mentions. Xenophon also speaks of it as the last city of Cilicia on the road to Syria.

The mountains which bound the gulf of Issus are described in the article AMANUS. The bold Rhosicus Scopulus (5400 feet high), where the Syrian Amanus terminates on the coast, may be distinctly seen by the sailor when he is abreast of Seleuceia (*Selefkeh*), at the mouth of the Calycadnus, a distance of 85 geographical miles (Beaufort). A small stream flows into the head of the gulf of Issus, and a few from the Amanus enter the east side, one of which, the Pinarus, is the *Deli Tschai*; and the other, the Carsus of Xenophon, is the *Merkes*. The Amanus which descends to the Rhosicus Scopulus, and the other branch of the Amanus which shuts in the gulf of Issus on the

NW. and forms Strabo's Amanides Pylae, unite in the interior, as Strabo says (p. 535); and our modern maps represent it so. There is a plain at the head of the gulf. Strabo gives a greater extent to the Issic gulf than we do to the gulf of *Scanderoon*, for he makes it extend along the Cilician coast as far as Cilicia Trachea, and certainly to Soli (pp. 534, 664). In another passage (p. 125) he shows what extent he gives to the gulf of Issus, by placing Cyprus in the Pamphylian sea and in the gulf of Issus,—the west part of the island being in the Pamphylian, and the east in the Issic gulf. The gulf of *Iskenderum* was surveyed by Lt. Murphy in the Euphrates expedition under the command of Colonel Chesney.

The ancient geographers did not agree about the position of the isthmus of the country which we call Asia Minor; by which isthmus they meant the shortest distance across the eastern part of the peninsula from the Euxine to the Mediterranean. Strabo (p. 673) makes this shortest distance lie along a line joining Amisus and Tarsus. If he had said Amisus and the head of the gulf of Issus, he would have been quite right. He was nearly correct as to the longitude of the head of the gulf of Issus, which he places in the meridian of Amisus and Themiscyra (p. 126); and in another passage he says that the head of the gulf of Issus is a little more east than Amisus, or not at all more east (p. 519). Amisus is, in fact, a little further east than the most eastern part of the gulf of Issus. The longest direction of the inhabited world, according to Strabo's system (p. 118), from west to east, is measured on a line drawn through the Stelae (*Straits of Gibraltar*), and the Sicilian strait (*Straits of Messina*), to Rhodus and the gulf of Issus, whence it follows the Taurus, which divides Asia into two parts, and terminates on the eastern sea. Those ancient geographers who made the isthmus of the Asiatic peninsula extend from Issus to the Euxine, considered the shortest line across the isthmus to be a meridian line, and the dispute was whether it ran to Sinope or Amisus (Strab. p. 678). The choice of Issus as the point on the Mediterranean to reckon from, shows that Issus was the limit, or most eastern point, on the south coast of the peninsula, and that it was not on that part of the bay of Issus where the coast runs south. Consequently Issus was on or near the head of the gulf. Herodotus (iv. 38) makes the southern side of this peninsula, or Acte, as he calls it, extend from the Myriandric gulf (gulf of Issus) to the Triopian promontory, which is quite correct. On the north side he makes it extend from the mouth of the Phasis to the promontory Sigeum, which is correct as to the promontory; but he carries the neck too far east, when he makes it begin at the Phasis. This mistake, however, shows that he knew something of the position of the mouth of the Phasis, for he intends to make the Acte begin at that part where the coast of the Euxine begins to lie west and east; and though the mouth of the Phasis is not exactly at this point, it was the best known river of any near it. In another passage (i. 72), which, like many others in his history, is obscurely expressed, he describes the neck (αὐχὴν) of this Acte as nearly cut through by the river Halys; and he makes its width from the sea opposite to Cyprus to the Euxine to be five days' journey for an active man,—an estimate very much short of the truth, even if we allow Greek activity to walk 30 miles a day through a rough country. Strabo's report from hearsay (vol. i. p. 538), that the bay of Issus can be seen from the summit of Argaeus [ARGAEUS], is very improbable.

Xenophon says that Cyrus marched 15 parasangs from the Pyramus (*Jaihan*) "to Issi, the uttermost city of Cilicia, on the sea, great and prosperous." From Issus to the Pylae of Cilicia and Syria, the boundary between Syria and Cilicia, was five parasangs, and here was the river Carsus (Xen. *Anab.* i. 4. § 4). The next stage was five parasangs to Myriandrus, a town in Syria on the sea, occupied by Phoenicians, a trading place (ἐμπόριον), where many merchant ships were lying. Carsten Niebuhr, who went through the Pylae Ciliciae to Tarsus, has some remarks on the probable site of Issus, but they lead to no conclusion (vol. i. p. 116), except that we cannot certainly determine the site of Issus from Xenophon; and yet he would give us the best means of determining it, if we knew where he crossed the Pyramus, and if we were also certain that the numbers in the Greek text are correct.

The nearest road to Susa from Sardis was through the Cilician plains. The difficulties were the passage into the plains by the Ciliciae Pylae or pass [Vol. I. p. 619], and the way out of the plains along the gulf of Issus into Syria. The great road to Susa which Herodotus describes (v. 49, 52), went north of the Taurus to the Euphrates. The land forces in the expedition of Datis and Artaphernes, B.C. 490, crossed the Syrian Amanus, and went as far as the Aleian plain in Cilicia; and there they embarked. (Herod. vi. 95.) They did not march by land through the Cilician Pylae over the Taurus into the interior of the peninsula; but Mardonius (Herod. vi. 43), in the previous expedition had led his troops into Cilicia, and sent them on by land to the Hellespontus, while he took ship and sailed to Ionia. The land force of Mardonius must have passed out of Cilicia by the difficult pass in the Taurus. [Vol. I. p. 619.]

Shortly before the battle of Issus (B.C. 333) Alexander was at Mallos, when he heard that Darius with all his force was at Sochi in Assyria; which place was distant two marches from the Assyrian Pylae. (Arrian, *Anab.* ii. 6.) "Assyria" and "Assyrian" here mean "Syria" and "Syrian." Darius had crossed the Euphrates, probably at Thapsacus, and was encamped in an open country in Syria, which was well suited for his cavalry. The place Sochi is unknown: but it may be the place which Curtius calls Unchae. (Q. Curt. iv. 1.) Arrian says that Alexander left Mallos, and on the second day he passed through the Pylae and reached Myriandrus: he does not mention Issus on this march. Now the shortest distance that Alexander could march from Mallos to *Scanderoon* is at least 70 miles, and if Myriandrus was south of *Scanderoon*, it was more than 70 miles. This statement of Arrian as to time is therefore false. Curtius (iii. 8) says that Alexander only reached Castabalum [CASTABALUM] on the second day from Mallos; that he went through Issus, and there deliberated whether he should go on or halt. Darius crossed the Amanus, which separates Syria from the bay of Issus, by a pass called the Amanicae Pylae (Arrian, ii. 7), and advancing to Issus, was in the rear of Alexander, who had passed through the Cilician and Syrian Pylae. Darius came to the pass in the Amanus, says Curtius, on the same night that Alexander came to the pass (fauces) by which Syria is entered. The place where Darius crossed the Amanus was

so situated that he came to Issus first, where he shamefully treated the sick of the Macedonians who had been left there. The next day he moved from Issus to pursue Alexander (Arrian; Curtius, iii. 8); that is, he moved towards the Pylae, and he came to the banks of the river Pinarus, where he halted. Issus was, therefore, north of the Pinarus, and some little distance from it. Kiepert's map of Asia Minor marks a pass in the range of the Syrian Amanus, which is north of the pass that leads over the same mountains from the east to Baiae (*Bayas*), and nearly due east of the head of the gulf of Issus. He calls it Pylae Amanides, by which he means the Pylae Amanicae of Arrian, not the Amanides of Strabo; and he takes it to be the pass by which Darius crossed the Syrian Amanus and came down upon the gulf. This may have been his route, and it would bring him to Issus at the head of the gulf, which he came to before turning south to the Pinarus (*Deli Tschai*). It is certain that Darius crossed by some pass which brought him to Issus before he reached the Pinarus. Yet Kiepert has placed Issus south of the Pinarus, or rather between the two branches of this river, which he represents as uniting near the coast. Kiepert also marks a road which passes over the junction of the two branches of the Amanus [AMANUS, Vol. I. p. 114] and runs to *Marash*, which he supposes to be Germanicia. This is the dotted road marked as running north from the head of the gulf of Issus in the plan [Vol. I. p. 115]; but even if there be such a road, it was not the road of Darius, which must have been the pass above mentioned, in the latitude of the head of the gulf of Issus; which is not marked in the above plan, but ought to be. This pass is probably the Amanicae Pylae of Ptolemy, which he places 5′ further south than Issus, and 10′ east of Issus.

Alexander, hearing that the Persians were in his rear, turned back to the Pylae, which he reached at midnight, and halted till daybreak, when he moved on. (Arrian, *Anab.* ii. 8.) So long as the road was narrow, he led his army in column, but as the pass widened, he extended his column into line, part towards the mountain and part on the left towards the sea. When he came to the wide part (εὐρυχωρία), he arranged his army in order of battle, which Arrian describes very particularly. Darius was posted on the north side of the Pinarus. It is plain, from this description, that Alexander did not march very far from the Pylae before he reached the wider part of the valley, and the river. As the sea was on his left, and the mountains on his right, the river was a stream which ran down from the Syrian Amanus; and it can be no other than the *Deli Tschai*, which is about 13 miles north of the Carsus (*Merkes*), direct distance. Polybius (xii. 17), who criticises Callisthenes's description of the battle, states, on his authority, that Darius descended into Cilicia through the Pylae Amanides, and encamped on the Pinarus, at a place where the distance between the mountains and the sea was not more than 14 stadia; and that the river ran across this place into the sea, and that in its course through the level part "it had abrupt and difficult eminences (λόφους)." This is explained by what Arrian says of the banks of the river being steep in many parts on the north side. (*Anab.* ii. 10.) Callisthenes further said, that when Alexander, after having passed the defile (τὰ στενὰ), heard of Darius being in Cilicia, he was 100 stadia from him, and, accordingly, he marched back through the defile. It is not clear, from the extract in Polybius, whether the 100 stadia are to be reckoned to Issus or to the Pinarus. According to Arrian, when Alexander heard of Darius being behind him, he sent some men in a galley back to Issus, to see if it was so; and it is most consistent with the narrative to suppose that the men saw the Persians at Issus before they had advanced to the river; but this is not quite certain. The Persian army was visible, being near the coast, as it would be, if it were seen at Issus.

Strabo (p. 676), following the historians of Alexander, adds nothing to what Arrian has got from them. Alexander, he says, led his infantry from Soli along the coast and through the Mallotis to Issus and the forces of Darius; an expression which might mislead, if we had no other narrative. He also says, after Mallus is Aegae, a small town with a harbour, then the Amanides Pylae [AMANIDES PYLAE], where there is a harbour; and after Aegae is Issus, a small town with a harbour, and the river Pinarus, where the fight was between Alexander and Darius. Accordingly he places Issus north of the Pinarus. Cicero, during his proconsulship of Cilicia, led his forces against the mountaineers of the Amanus, and he was saluted as imperator at Issus, "where," he says, "as I have often heard from you, Clitarchus told you that Darius was defeated by Alexander." There is nothing to be got from this. (*Ad Fam.* ii. 10.) In another passage, he says that he occupied for a few days the same camp that Alexander had occupied at Issus against Darius. (*Ad Att.* v. 20.) And again (*ad Fam.* xiv. 20), he says that, "he encamped for four days at the roots of the Amanus, at the Arae Alexandri." If this is the same fact that he mentions in his letter to Atticus, the Arae were at Issus, and Issus was near the foot of the Amanus.

The battle between Septimius Severus and Niger was fought (A. D. 194) somewhere about Issus; but nothing can be collected from the description of Herodian (iii. 12), except that the battle was not fought on the same ground as Alexander's, though it was fought on the gulf of Issus. Stephanus (*s. v.* Ἰσσός) describes it as "a city between Syria and Cilicia, where Alexander defeated Darius, which was called, for this reason, Nicopolis by him; and there is the bay of Issus; and there, also, is a river named Pinarus." Strabo, after speaking of Issus, mentions, on the Issic gulf, Rhosus, and Myriandrus, and Alexandria, and Nicopolis, and Mopsuestia, in which description he proceeds from the Syrian side of the gulf, and terminates with Mopsuestia on the Pyramus. According to this enumeration, Nicopolis would be between Alexandria (*Scanderoon*) and Mopsuestia; and it may be near Issus, or it may not. Ptolemy (v. 8. § 7, 15. § 2) places Nicopolis exactly one degree north of Alexandria and 50′ north of Issus. He places Issus and Rhosus in the same longitude, and Nicopolis, Alexandria, and Myriandrus 10′ further east than Issus. The absolute truth of his numbers is immaterial. A map constructed according to Ptolemy would place Issus at the head of the gulf, and Nicopolis inland. Nicopolis is one of the cities which he enumerates among the inland cities of Cilicia Proper.

Issus, then, being at the head of the gulf, and Tarsus being a fixed point in the march of Cyrus, we may now see how the matter stands with Xenophon's distances. Cyrus marched 10 parasangs from Tarsus to the river Psarus (Sarus), *Sihun*, and crossed at a place where it was 300 feet wide

From the Sarus the army marched 5 parasangs to the Pyramus, which was crossed where it was 600 Greek feet wide; and the march from the Pyramus to Issus was 15 parasangs. Accordingly, the whole distance marched from Tarsus to Issus was 30 parasangs. The direct distance from Tarsus to the head of the gulf is about 56 geographical miles; and these two points are very nearly in the same latitude. The modern road from Tarsus, through Adana on the Sarus, and Mopsuestia on the Pyramus, to the head of the gulf, has a general direction from W. to E. The length of Cyrus's march, from Tarsus to the Sarus, exceeds the direct distance on the map very much, if we reckon the parasang at 3 geographical miles; for 10 parasangs are 30 geographical miles, and the direct distance to Adana is not more than 16 miles. Mr. Ainsworth informs us that the Sarus is not fordable at Adana; and Cyrus probably crossed at some other place. The march from the Sarus to the Pyramus was 5 parasangs, or 15 geographical miles; and this appears to be very nearly the direct distance from Adana to Mopsuestia (*Misis*). But Cyrus may have crossed some distance below Mopsuestia, without lengthening his march from the Sarus to the Pyramus; and he may have done this even if he had to go lower down the Sarus than Adana to find a ford. If he did not go higher up the Pyramus to seek a ford, for the reasons which Mr. Ainsworth mentions, he must have crossed lower down than Mopsuestia. The distance from the point where the supposed old bed begins to turn to the south, to the NE. end of the gulf of Issus, is 40 geographical miles; and thus the distance of 15 parasangs from the passage of the Pyramus to Issus, is more easily reconciled with the real distance than the measurement from Tarsus to the Sarus.

The places not absolutely determined on or near the gulf of Issus, are: Myriandrus, Nicopolis, Epiphaneia [EPIPHANEIA], Arae Alexandri, and Issus, though we know that Issus, must have been at the head of the gulf and on it. The following extract from Colonel Chesney contains the latest information on these sites:—"About 7 miles south-eastward from the borders of Syria are the remains of a considerable city, probably those of Issus or Nicopolis, with the ruins of a temple, a part of the Acropolis, an extensive aqueduct, generally with a double row of arches, running ESE. and WNW. These, in addition to the walls of the city itself, are entirely built of lava, and still exist in considerable perfection. Nearly 14 miles southward from thence, the Delí Cháï quits the foot of the Amanus in two branches, which, after traversing the Issic plain, unite at the foot of the mountain just previously to entering the sea. The principal of these branches makes a deep curve towards the NE., so that a body of troops occupying one side might see behind and outflank those posted on the opposite side, in which, as well as in other respects, the stream appears to answer to the Pinarus of Alexander's historians. A little southward of this river are the castle, khán, bázár, baths, and other ruins of Báyás, once Baiae, with the three villages of Kuretur in the neighbourhood, situated in the midst of groves of orange and palm trees. Again, 5 miles southward, is the pass, above noticed, of Súkál-tútán, and at nearly the same distance onward, the fine bay and anchorage of Iskenderún, with an open but convenient landing-place on a bold beach; but, in consequence of the accumulation of the sand by which the mouths of the streams descending from this part of the Amanus are choked, a pestilential swamp extends from the very edge of the sea almost to the foot of the mountain. In the marsh towards the latter are some trifling ruins, which may possibly be the site of ancient Myriandrus; and within a mile of the shore are the remains of a castle and bridge constructed by Godfrey of Bouillon." (*Expedition for the Survey of the Rivers Euphrates and Tigris*, vol. i. p. 408.)

There is no direct proof here that these remains are those of Issus. The aqueduct probably belongs to the Roman period. It seems most likely that the remains are those of Nicopolis, and that Issus on the coast has disappeared. Colonel Chesney's description of the bend of one of the branches of the *Deli Tschai* corresponds to Arrian's (ii. 2. § 10), who says, "Darius placed at the foot of the mountain, which was on the Persian left and opposite to Alexander's right, about 20,000 men; and some of them were on the rear of Alexander's army. For the mountain where they were posted in one place opened to some depth, and so a part became of the form of a bay on the sea. Darius then, by advancing further to the bend, brought the men who were posted at the foot of the mountain, in the rear of the right wing of Alexander."

There still seems some doubt about the site of Myriandrus, which Mr. Ainsworth (*Travels in the Track of the Ten Thousand, &c.* p. 60) places about half way between *Scanderoon* and Rhosus (Arsus); and he has the authority of Strabo, in his enumeration of the places on this coast, and that of Ptolemy, who places Myriandrus 15′ south of Alexandria ad Issum. As to Arsus, he observes,—"there are many ruins, and especially a long aqueduct leading from the foot of the mountains." [G. L.]

ISTAEVONES. [GERMANIA and HILLEVIONES.]

ISTER. [DANUBIUS.]

I'STHMIA, a small district in Thessaly. [ZELASIUM.]

ISTHMUS. [CORINTHUS, p. 682, seq.]

ISTO'NE. [CORCYRA.]

ISTO'NIUM. [CELTIBERIA.]

I'STRIA (Ἰστρία) or HI'STRIA, was the name given by the Greeks and Romans to the country which still bears the same appellation, and forms a peninsula of somewhat triangular form near the head of the Adriatic sea, running out from the coast of Liburnia, between Tergeste (*Trieste*) and the Sinus Flanaticus, or *Gulf of Quarnero*. It is about 50 G. miles in length, and 35 in breadth, while the isthmus or strip of land between the two gulfs of *Trieste* and *Quarnero*, by which it is united to the mainland, is about 27 G. miles across. The name is derived both by Greek and Latin authors from the fabulous notion entertained at a very early period that one branch or arm of the Danube (the Ister of the Greeks) flowed into the Adriatic sea near its head. (Strab. i. p. 57; Plin. iii. 18. s. 22.) The deep inlets and narrow channels with which the coasts of the Adriatic are intersected for a considerable distance below the peninsula of Istria may have contributed to favour this notion so long as those coasts were imperfectly known; and hence we cannot wonder at Scylax speaking of a river named Istrus (which he identifies with the Danube) as flowing through the land of the Istrians (Scyl. p. 6. § 20); but it seems incredible that an author like Mela, writing in the days of Augustus, should not only speak of a river Ister as flowing into this part of the

Adriatic but should assert that its waters entered that sea with a turbulence and force similar to those of the Padus. (Mel. ii. 3. § 13, 4. § 4.) In point of fact, there is no river of any magnitude flowing into the upper part of the Adriatic on its eastern shore which could afford even the slightest countenance to such a notion; the rivers in the peninsula of Istria itself are very trifling streams, and the dry, calcareous ridges which hem in the E. shore of the Adriatic, all the way from *Trieste* to the southern extremity of Dalmatia, do not admit either of the formation or the outlet of any considerable body of water. It is scarcely possible to account for the origin of such a fable; but if the inhabitants of Istria were really called ISTRI (Ἴστροι), as their native name, which is at least highly probable, this circumstance may have first led the Greeks to assume their connection with the great river Ister, and the existence of a considerable amount of traffic up the valley of the Savus, and from thence by land across the Julian Alps, or Mount Ocra, to the head of the Adriatic (Strab. vii. p. 314), would tend to perpetuate such a notion.

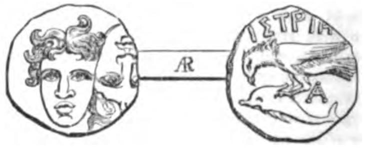
The Istrians are generally considered as a tribe of Illyrian race (Appian, *Illyr.* 8; Strab. vii. p. 314; Zeuss, *Die Deutschen*, p. 253), and the fact that they were immediately surrounded by other Illyrian tribes is in itself a strong argument in favour of this view. Scymnus Chius alone calls them a Thracian tribe, but on what authority we know not. (Scymn. Ch. 398.) They first appear in history as taking part with the other Illyrians in their piratical expeditions, and Livy ascribes to them this character as early as B. C. 301 (Liv. x. 2); but the first occasion on which they are distinctly mentioned as joining in these enterprises is just before the Second Punic War. They were, however, severely punished; the Roman consuls M. Minucius Rufus and P. Cornelius were sent against them, and they were reduced to complete submission. (Eutrop. iii. 7; Oros. iv. 13; Zonar. viii. 20; Appian, *Illyr.* 8.) The next mention of them occurs in B. C. 183, when the consul M. Claudius Marcellus, after a successful campaign against the Gauls, asked and obtained permission to lead his legions into Istria. (Liv. xxxix. 55.) It does not, however, appear that this invasion produced any considerable result; but their piratical expeditions, together with the opposition offered by them to the foundation of the Roman colony of Aquileia, soon became the pretext of a fresh attack. (Id. xl. 18, 26, xli. 1.) In B. C. 178 the consul A. Manlius invaded Istria with two legions; and though he at first sustained a disaster, and narrowly escaped the capture of his camp, he recovered his position before the arrival of his colleague, M. Junius, who had been sent to his support. The two consuls now attacked and defeated the Istrians; and their successor, C. Claudius, following up this advantage, took in succession the towns of Nesactium, Mutila, and Faveria, and reduced the whole people to submission. For this success he was rewarded with a triumph, B. C. 177. (Liv. xli. 1—5, 8—13; Flor. ii. 10.) The subjection of the Istrians on this occasion seems to have been real and complete; for, though a few years after we find them joining the Carni and Iapydes in complaining of the exactions of C. Cassius (Liv. xliii. 5), we hear of no subsequent revolts, and the district appears to have continued tranquil under the Roman yoke, until it was incorporated by Augustus, together with Venetia and the land of the Carni, as a portion of Italy. (Strab. v. p. 215; Plin. iii. 19. s. 23.) It continued thenceforth to be always included under that name, though geographically connected much more closely with Dalmatia and Illyricum. Hence we find, in the Notitia Dignitatum, the "Consularis Venetiae et Histriae" placed under the jurisdiction of the Vicarius Italiae. (*Not. Dign.* ii. pp. 5, 65.)

The natural limits of Istria are clearly marked by those of the peninsula of which it consists, or by a line drawn across from the Gulf of *Trieste* to that of *Quarnero*, near *Fiume;* but the political boundary was fixed by Augustus, when he included Istria in Italy, at the river Arsia or *Arsa*, which falls into the Gulf of *Quarnero* about 15 miles from the southern extremity of the peninsula. This river has its sources in the group of mountains of which the *Monte Maggiore* forms the highest point, and which constitutes the heart or nucleus of the peninsula, from which there radiate ranges of great calcareous hills, gradually declining as they approach the western coast, so that the shore of Istria along the Adriatic, though hilly and rocky, is not of any considerable elevation, or picturesque in character. But the calcareous rocks of which it is composed are indented by deep inlets, forming excellent harbours; of these, the beautiful land-locked basin of Pola is particularly remarkable, and was noted in ancient as well as modern times. The northern point of Istria was fixed by Augustus at the river Formio, a small stream falling into the Gulf of *Trieste* between that city and *Capo d'Istria.* Pliny expressly excludes Tergeste from Istria; but Ptolemy extends the limits of that province so as to include both the river Formio and Tergeste (Ptol. iii. 1. § 27); and Strabo also appears to consider the Timavus as constituting the boundary of Istria (Strab. v. p. 215), though he elsewhere calls Tergeste "a village of the Carni" (vii. p. 314). Pliny, however, repeatedly alludes to the Formio as having constituted the boundary of Italy before that name was officially extended so as to include Istria also, and there can be no doubt of the correctness of his statement. Istria is not a country of any great natural fertility; but its calcareous rocky soil was well adapted for the growth of olives, and its oil was reckoned by Pliny inferior only to that of Venafrum. (Plin. xv. 2. s. 3.) In the later ages of the Roman empire, when the seat of government was fixed at Ravenna, Istria became of increased importance, from its facility of communication by sea with that capital, and furnished considerable quantities of corn, as well as wine and oil. (Cassiod. *Varr.* xii. 23, 24.) This was probably the most flourishing period of its history. It was subsequently ravaged in succession by the Lombards, Avars, and Sclavi (P. Diac. iv. 25, 42), but appears to have continued permanently subject to the Lombard kingdom of Italy, until its destruction in A. D. 774.

The towns in Istria mentioned by ancient writers are not numerous. Much the most important was POLA, near the extreme southern promontory of the peninsula, which became a Roman colony under Augustus. Proceeding along the coast from Tergeste to Pola, were AEGIDA (*Capo d'Istria*), subsequently called Justinopolis, and PARENTIUM (*Parenzo*); while on the E. coast, near the mouth of the river Arsia, was situated NESACTIUM, already noticed by Livy among the towns of the independent Istrians. The two other towns, Mutila and Faveria, mentioned by him in the same passage (xli. 11), are otherwise unknown, and cannot be identified. Pto-

lemy also mentions three towns, which he places in the interior of the country, and names Pucinum, Piquentum (Πικούεντον), and Alvum or Alvon (Ἀλοῦον). Of these, Piquentum may be probably identified with *Pinguente*, a considerable place in the heart of the mountain district of the interior; and Alvon with *Albona* (called Alvona in the Tabula), which is, however, E. of the *Arsa*, and therefore not strictly within the Roman province of Istria. In like manner the Pucinum of Ptolemy is evidently the same place with the "castellum, nobile vino, Pucinum" of Pliny (vii. 18. s. 22), which the latter places in the territory of the Carni, between the Timavus and Tergeste, and was perhaps the same with the modern *Duino*. Ningum, a place mentioned in the Antonine Itinerary (p. 271) between Tergeste and Parentium, cannot be determined with any certainty. The Tabula also gives two names in the NW. part of the peninsula, Quaeri and Silvo (Silvum), both of which are wholly unknown. The same authority marks three small islands off the coast of Istria, to which it gives the names of Sepomana (?), Orsaria, and Pullaria: the last is mentioned also by Pliny (iii. 26. s. 30), and is probably the rocky island, or rather group of islets, off the harbour of Pola, now known as *Li Brioni*. The other two cannot be identified, any more than the Cissa of Pliny (*l. c.*): the Absyrtides of the same author are the larger islands in the *Golfo di Quarnero*, which belong rather to Liburnia than to Istria. [ABSYRTIDES.]

The extreme southern promontory of Istria, now called *Punta di Promontore*, seems to have been known in ancient times as the PROMONTORIUM POLATICUM (ἀκρωτήριον Πολατικόν, Steph. B. *s. v.* Πόλα). Immediately adjoining it is a deep bay or harbour, now known as the *Golfo di Medolino*, which must be the Portus Planaticus (probably a corruption of Flanaticus) of the Tabula.



The Geographer of Ravenna, writing in the seventh century, but from earlier authorities, mentions the names of many towns in Istria unnoticed by earlier geographers, but which may probably have grown up under the Roman empire. Among these are Humago, still called *Umago*, Neapolis (*Città Nuova*), Ruvignio (*Rovigno*), and Piranon (*Pirano*), all of them situated on the W. coast, with good ports, and which would naturally become places of some trade during the flourishing period of Istria above alluded to. (Anon. Ravenn. iv. 30, 31.) [E. H. B.]

ISTRIANORUM PORTUS. [ISIACORUM PORTUS.]

ISTRIA'NUS (Ἰστριανός, Ptol. iii. 6. § 3), a river of the Tauric Chersonese, which has been identified with the *Küük Tep*. (Forbiger, vol. iii. pp. 1117, 1121.) [E. B. J.]

ISTRO'POLIS, ISTRIO'POLIS, HISTRIO'POLIS (Ἰστρόπολις, Ἰστρία πόλις, or simply Ἴστρος: *Istere*), a town of Lower Moesia, at the southern extremity of lake Halmyris, on the coast of the Euxine. It was a colony of Miletus, and, at least in Strabo's time, a small town. (Strab. vii. p. 319; Plin. iv. 18. 24; Mela, ii. 2; Eutrop. vi. 8; Herod. ii. 33; Arrian, *Perip. Eux.* p. 24; Geog. Rav. iv. 6; Lycoph. 74; Ptol. iii. 10. § 8; Scymn. *Fragm.* 22; Steph. B. *s. v.*; Amm. Marc. xxii. 8; Hierocl. p. 637.) But the frequent mention of the place shows that it must have been a commercial town of some importance; of its history, however, nothing is known. Some modern writers have identified it with *Kiustenza* or *Kostendsje*, the ancient Constantiana, which, however, was in all probability situated to the south of Istropolis. [L. S.]

ISTRUS (Ἴστρος), a Cretan town which Artemidorus also called ISTRONA. (Steph. B. *s. v.*) The latter form of the name is found in an inscription (*ap. Chishull, Antiq. Asiat.* p. 110). The site is placed near Minoa: "Among the ruined edifices and columns of this ancient city are two immense marble blocks, half buried in the earth, and measuring 54 by 15 feet." (Cornelius, *Creta Sacra*, vol. i. p. 11; *ap. Mus. Class. Antiq.* vol. ii. p. 273; comp. Höck, *Kreta*, vol. i. pp. 17, 421.) [E. B. J.]

COIN OF ISTRUS.

ISTURGI (*Andujar la Vieja*), a city of Hispania Baetica, in the neighbourhood of ILLITURGIS. (Inscr. *ap.* Florez, *Esp. S.* vol. vii. p. 137.) The IPASTURGI TRIUMPHALE of Pliny (iii. 1. s. 3) is probably the same place. (Ukert, vol. ii. pt. 1. pp. 380, 381.) [P. S.]

ISUBRIGANTUM. [ISURIUM.]

ISU'RIUM, in Britain, first mentioned by Ptolemy (ii. 3. § 16) as a town of the Brigantes. It then occurs in two of the Itineraries, the 1st and 2nd. In each, it lies between Cataractonium and Eboracum (*Catterick Bridge* and *York*). Isubrigantum, in the 5th Itinerary, does the same.

In the time of the Saxons Isurium had already taken the name of *Eald-burg* (*Old Town*), out of which has come the present name *Aldborough*, near *Boroughbridge*, with which it is undoubtedly identified.

Roman remains, both within and without the walls, are abundant and considerable at *Aldborough*; the Stodhart (or Studforth), the Red Hill, and the Borough Hill, being the chief localities. Tesselated pavements, the foundations of large and spacious buildings, ornaments, implements, Samian ware, and coins with the names of nearly all the emperors from Vespasian to Constantine, have given to Isurium an importance equal to that of York, Cirencester, and other towns of Roman importance. [R. G. L.]

ISUS (Ἶσος), a spot in Boeotia, near Anthedon, with vestiges of a city, which some commentators identified with the Homeric Nisa. (Strab. ix. p. 405; Hom. *Il.* ii. 508.) There was apparently also a town Isus in Megaris; but the passage in Strabo in which the name occurs is corrupt. (Strab. *l. c.*)

ITA'LIA (Ἰταλία), was the name given in ancient as well as in modern times to the country still called *Italy*; and was applied, from the time of Augustus, both by Greek and Latin writers, in almost exactly the same sense as at the present day. It was, however, at first merely a geographical term; the countries comprised under the name, though strongly defined by natural limits, and common natural features, being from the earliest ages peopled by different races, which were never politically united, till they all fell under the Roman yoke, and were gradually blended, by the pervading influence of Roman institutions and the Latin language, into one common nationality.

I. Name.

The name of Italy was very far from being originally applied in the same extensive signification which it afterwards obtained. It was confined, in the first instance, to the extreme southern point of the Italian peninsula, not including even the whole of the modern *Calabria*, but only the southern peninsular portion of that country, bounded on the N. by the narrow isthmus which separates the Terinaean and Scylletian gulfs. Such was the distinct statement of Antiochus of Syracuse (*ap. Strab.* vi. p. 255); nor have we any reason to reject his testimony upon this point, though it is certain that this usage must have ceased long before the time of that historian, and is not found in any extant ancient author. At a subsequent period, but still in very early times, the appellation was extended to the whole tract along the shores of the Tarentine gulf, as far as Metapontum, and from thence across to the gulf of Posidonia on the western sea; though, according to other statements, the river Laüs was its northern limit on this side. (Strab. v. p. 209, vi. p. 254; Antiochus, *ap. Dionys.* i. 73.) This appears to have been the established usage among the Greeks in the fifth century B. C. Antiochus expressly excluded the Iapygian peninsula from Italy, and Thucydides clearly adopts the same distinction (vii. 33). The countries on the shores of the Tyrrhenian sea, north of the Posidonian gulf, were then known only by the names of Opica and Tyrrhenia; thus Thucydides calls Cumae a city in Opicia, and Aristotle spoke of Latium as a district of Opica. Even Theophrastus preserves the distinction, and speaks of the pine-trees *of Italy*, where those of the Bruttian mountains only can be meant, as opposed to those of Latium. (Thuc. vi. 4; Arist. *ap. Dionys.* i. 72; Theophr. *H. P.* v. 8.)

The name of Italia, as thus applied, seems to have been synonymous with that of Oenotria; for Antiochus, in the same passage where he assigned the narrowest limits to the former appellation, confined that of Oenotria within the same boundaries, and spoke of the Oenotri and Itali as the same people (*ap. Strab.* vi. p. 254; *ap. Dionys.* i. 12). This is in perfect accordance with the statements which represent the Oenotrians as assuming the name of Italians (Itali) from a chief of the name of Italus (Dionys. i. 12, 35; Virg. *Aen.* i. 533; Arist. *Pol.* vii. 10), as well as with the mythical genealogy according to which Italus and Oenotrus were brothers. (Serv. *ad Aen. l. c.*). Thucydides, who represents Italus as coming from Arcadia (vi. 2), probably adopted this last tradition, for the Oenotrians were generally represented as of Arcadian origin. Whether the two names were originally applied to the same people, or (as is perhaps more probable) the Itali were merely a particular tribe of the Oenotrians, whose name gradually prevailed till it was extended to the whole people, we have no means of determining. But in this case, as in most others, it is clear that the name of the people was antecedent to that of the country, and that Italia, in its original signification, meant merely the land of the Itali; though at a later period, by its gradual extension, it had altogether lost this national meaning. It is impossible for us to trace with accuracy the successive steps of this extension, nor do we know at what time the Romans first adopted the name of Italia as that of the whole peninsula. It would be still more interesting to know whether they received this usage from the Greeks, or found it already prevalent among the nations of Italy; but it is difficult to believe that tribes of different races, origin, and language, as the Etruscans, Umbrians, Sabellians, and Oenotrians, would have concurred in calling the country they inhabited by one general appellation. If the Greek account already given, according to which the name was first given to the Oenotrian part of the peninsula, is worthy of confidence, it must have been a word of Pelasgic origin, and subsequently adopted by the Sabellian and Oscan races, as well as by the Romans themselves.

The etymology of the name is wholly uncertain. The current tradition among the Greeks and Romans, as already noticed, derived it from an Oenotrian or Pelasgic chief, Italus; but this is evidently a mere fiction, like that of so many other eponymous heroes. A more learned, but scarcely more trustworthy, etymology derived the name from Italos or Itulos, which, in Tyrrhenian or old Greek, is said to have signified an ox; so that Italia would have meant "the land of cattle." (Timaeus, *ap. Gell.* xi. 1; Varr. *R. R.* ii. 1. § 9.) The ancient form here cited is evidently connected with the Latin "vitulus;" and it is probable that the name of the people was originally Vitulos, or Vitalos, in its Pelasgic form; we find the same form retained by the Sabellian nations as late as the first century B. C., when the Samnite denarii (struck during the Social War. B. C. 90—88) have the inscription "Vitelu" for Italia.

It is probable that the rapid extension of the Roman power, and the successive subjugation of the different nations of Central and Southern Italy by its victorious arms, tended also to promote the extension of the one common name to the whole; and there seems little doubt that as early as the time of Pyrrhus, this was already applied in nearly the same sense as afterwards continued to be the usage,—as comprising the whole Italian peninsula to the frontiers of Cisalpine Gaul, but excluding the latter country, as well as Liguria. This continued to be the customary and official meaning of the name of Italy from this time till the close of the Republic; and hence, even after the First Triumvirate, Gallia Cisalpina, as well as Transalpina, was allotted to Caesar as his *province*, a term which was never applied but to countries out of Italy; but long before the close of this period, the name of Italy would seem to have been often employed in its more extensive, and what may be termed its geographical, meaning, as including the whole land from the foot of the Alps to the Sicilian straits. Polybius certainly uses the term in this sense, for he speaks of the Romans as having subdued *all Italy, except the land of the Gauls* (Gallia Cisalpina), and repeatedly describes Hannibal as crossing the Alps *into Italy*, and designates the plains on the banks of the Padus as *in Italy*. (Pol. i. 6, ii. 14, iii. 39, 54.) The natural limits of Italy are indeed so clearly marked and so obvious, that as soon as the name came to be once received as the designation of the country in general, it was almost inevitable that it should acquire this extension; hence, though the official distinction between Italy and Cisalpine Gaul was retained by the Romans to the very end of the Republic, it is clear that the more extended use of the name was already familiar in common usage. Thus, already in B. C. 76, Pompeius employs the expression "in cervicibus Italiae," of the passes of the Alps into Cisalpine Gaul (Sall. *Hist.* iii. 11); and Decimus Bru-

us, in B. C. 43, distinctly uses the phrase of *quitting Italy*, when he crosses the Alps. (Cic. *ad Fam.* xi. 20.) So also both Caesar and Cicero, in his Philippics, repeatedly use the name of Italy in the wider and more general sense, though the necessity of distinguishing the province of Cisalpine Gaul, leads the latter frequently to observe the official distinction. (Caes. *B. G.* v. 1, vi. 44, vii. 1; Cic. *Phil.* iv. 4, v. 12.) But, indeed, had not this use of the name been already common, before it came to be officially adopted, that circumstance alone would scarcely have rendered it so familiar as we find it in the Latin writers of the Augustan age. Virgil, for instance, in celebrating the praises of Italy, never thought of excluding from that appellation the plains of Cisalpine Gaul, or the lakes at the foot of the Alps. From the time, indeed, when the rights of Roman citizens were extended to all the Cisalpine Gauls, no real distinction any longer subsisted between the different parts of Italy; but Cisalpine Gaul still formed a separate province under D. Brutus in B. C. 43 (Cic. *Phil.* iii. 4, 5, iv. 4, v. 9, &c.), and it is probable, that the union of that province with Italy took place in the following year. Dion Cassius speaks of it, in B. C. 41, as an already established arrangement. (Dion Cass. xlviii. 12; Savigny, *Verm. Schr.* iii. p. 318.)

From the time of Augustus onwards, the name of Italia continued to be applied in the same sense throughout the period of the Roman empire, though with some slight modifications of its frontiers on the side of the Alps; but during the last ages of the Western empire, a singular change took place, by which the name of Italia came to be specially applied (in official language at least) to the *northern* part of what we now call Italy, comprising the five provinces of Aemilia, Flaminia, Liguria, Venetia, and Istria, together with the Cottian and Rhaetian Alps, and thus *excluding* nearly the whole of what had been *included* under the name in the days of Cicero. This usage probably arose from the division of the whole of Italy for administrative purposes into two great districts, the one of which was placed under an officer called the "Vicarius Urbis Romae," while the other, or northern portion, was subject to the "Vicarius Italiae." (*Not. Dig.* ii. 18; Gothofr. *ad Cod. Theod.* xi. 1, leg. 6; Niebuhr, vol. i. p. 21.) The practice was confirmed for a time by the circumstance that this part of Italy became the seat of the Lombard monarchy, which assumed the title of the kingdom of Italy ("Regnum Italiae"); but the ancient signification still prevailed, and the name of Italy was applied throughout the middle ages, as it still is at the present day, within the boundaries established by Augustus.

The other names applied by ancient writers, especially by the Latin and later Greek poets, to the Italian peninsula, may be very briefly disposed of. Dionysius tells us that in very remote ages Italy was called by the Greeks Hesperia, or Ausonia, and by the natives Saturnia. (Dionys. i. 35.) Of these three names, HESPERIA (Ἑσπερία), or "the Land of the West," was evidently a mere vague appellation, employed in the infancy of geographical discovery, and which was sometimes limited to Italy, sometimes used in a much wider sense as comprising the whole West of Europe, including Spain. [HISPANIA.] But there is no evidence of its having been employed in the more limited sense, at a very early period. The name is not found at all in Homer or Hesiod; but, according to the Iliac Table, Stesichorus represented Aeneas as departing from Troy *for Hesperia*, where in all probability Italy is meant; though it is very uncertain whether the poet conducted Aeneas to *Latium*. (Schwegler, *Röm. Gesch.* vol. i. p. 298.) But even in the days of Stesichorus the appellation was probably one confined to the poets and logographers. At a later period we can trace it as used by the Alexandrian poets, from whom in all probability it passed to the Romans, and was adopted, as we know, by Ennius, as well as by Virgil and the writers of the Augustan age. (Agathyllus, *ap. Dionys.* i. 49; Apollon. Rhod. iii. 311; Ennius, *Ann. Fr.* p. 12; Virg. *Aen.* i. 530, iii. 185, &c.)

The name of AUSONIA, on the contrary, was one derived originally from one of the races which inhabited the Italian peninsula, the Aurunci of the Romans, who were known to the Greeks as the Ausones. These Ausonians were a tribe of Opican or Oscan race, and it is probable that the name of Ausonia was at first applied much as that of Opicia or Opica was by Thucydides and other writers of the fifth century B. C. But, as applied to the whole peninsula of Italy, the name is, so far as we know, purely poetical; nor can it be traced farther back than the Alexandrian writers Lycophron and Apollonius Rhodius, who employed it familiarly (as did the Latin poets in imitation of them) as a poetical equivalent for Italy. [AUSONES.]

As for the name of SATURNIA, though it is found in a pretended Greek oracle cited by Dionysius (Σατορνίαν αἶαν, Dionys. i. 19), it may well be doubted whether it was ever an ancient appellation at all. Its obvious derivation from the name of the Latin god Saturnus proves it to have been of native Italian, and not of Greek, invention, and probably this was the only authority that Dionysius had for saying it was the native name of Italy. But all the traditions of the Roman mythology connect Saturnus so closely with Latium, that it seems almost certain the name of Saturnia (if it was ever more than a poetical fabrication) originally belonged to Latium only, and was thence gradually extended by the Romans to the rest of Italy. Ennius seems to have used the phrase of "Saturnia terra" only in reference to Latium; while Virgil applies it to the whole of Italy. (Ennius, *ap. Varr. L. L.* v. 42; Virg. *Georg.* ii. 173.) It is never used in either sense by Latin prose writers, though several authors state, as Dionysius does, that it was the ancient name of Italy. (Festus, *v. Saturnia*, p. 322; Justin. xliii. 1.)

II. BOUNDARIES AND PHYSICAL GEOGRAPHY.

There are few countries of which the boundaries are more clearly marked out by nature than those of Italy. It is well described by one of its modern poets as the land

"Ch' Apennin parte e 'l mar circonda e l'Alpe;"

and this single line at once enumerates all the principal physical features that impart to the country its peculiar physiognomy. Italy consists of a great peninsula, projecting in a SE. direction into the Mediterranean sea, and bounded on the W. by the portions of that sea commonly known as the Tyrrhenian and Sicilian seas, but comprised by the Romans under the name of Mare Inferum, or the Lower Sea; on the E. by the Adriatic, or the Upper Sea (Mare Superum), as it was commonly termed by the Romans; while to the N. it spreads out into a broad expanse, forming, as it were, the base or root by which it adheres to the continent of Europe, and

around which sweeps the great chain of the Alps, forming a continuous barrier from the shores of the Mediterranean near Massilia to the head of the Adriatic at *Trieste* (Tergeste). From the western extremity of this vast mountain chain, where the ranges of the Maritime Alps abut immediately on the sea-shore, branches off the inferior, but still very considerable, chain of the Apennines, which, after sweeping round the Ligurian gulf, stretches in an unbroken line directly across to the shores of the Adriatic, and then, turning abruptly to the SE., divides the whole peninsula throughout its entire length, until it ends in the promontory of Leucopetra, on the Sicilian sea. [APENNINUS.]

The precise limits of Italy can thus only be doubtful on its northern frontier, where the massive ranges of the Alps, though presenting, when viewed on the large scale, a vast natural barrier, are in fact indented and penetrated by deep and irregular valleys, which render it often difficult to determine the natural boundary; nor has this been always adopted as the political one. Along the coast of Liguria, between Massilia and Genua, the Maritime Alps send down successive ranges to the sea, forming great headlands, of which the most striking are: that between *Noli* and *Finale*, commonly regarded by modern geographers as the termination of the Maritime Alps; and the promontory immediately W. of *Monaco*, which still bears the remains of the Tropaea Augusti, and the passage of which presents the greatest natural difficulties to the construction of a road along this coast. This mountain headland would probably be the best point to fix as the natural limit of Italy on this side, and appears to have been commonly regarded in ancient times as such; but when Augustus first extended the political limits of Italy to the foot of the Alps, he found it convenient to carry them somewhat further W., and fixed on the river Varus as the boundary; thus including Nicaea, which was a colony of Massilia, and had previously been considered as belonging to Gaul. (Strab. iv. pp. 178, 184, v. p. 209; Plin. iii. 4. s. 5, 5. s. 6, 7; Mela, ii. 4. § 9; Ptol. iii. 1. § 1; Lucan, i. 404.) Though this demarcation does not appear to have been always followed; for in the Itinerary of Antoninus (p. 296) we again find the Alpis Maritima (meaning the mountain headland above described) fixed as the boundary between Italy and Gaul: it was generally adopted, and has continued without alteration to the present day.

The extreme NE. limit of Italy, at the head of the Adriatic Gulf, is equally susceptible of various determination, and here also Augustus certainly transgressed the natural limits by including Istria within the confines of Italy. (Plin. iii. 18. s. 22; Strab. v. p. 209, vii. p. 314.) But here, also, the reasons of political convenience, which first gave rise to this extension, have led to its subsequent adoption, and Istria is still commonly reckoned a part of Italy. The little river Formio, which flows into the Adriatic between *Trieste* and *Capo d'Istria*, was previously established as the boundary of Italy on this side: but the range of the Julian Alps, which, after sweeping round the broad plain of the *Frioul*, suddenly approaches close to the Adriatic, near the sources of the Timavus, and presents a continuous mountain barrier from thence to *Trieste*, would seem to constitute the true natural limit.

Even between these two extremities, the chain of the Alps does not always form so simple and clearly-marked a frontier as might at first be expected. It would not, indeed, be difficult to trace geographically such a line of boundary, by following the water-shed or line of highest ridge, throughout: but the imperfect knowledge of the Alps possessed by the ancients was scarcely sufficient for such a purpose; and this line was not, in ancient, any more than in modern times, the actual limit of different nationalities. Thus, the Rhaetians, who in the days of Strabo and Pliny were not comprised in Italy, inhabited the valleys and lower ridges of the Alps on the S. side of the main chain, down quite to the borders of the plains, as well as the northern declivities of the same mountains. Hence, a part of the *Southern Tirol*, including the valley of the *Adige* above *Trent*, and apparently the whole of the *Valteline*, though situated on the southern side of the Alps, were at that time excluded from Italy: while, at a later period, on the contrary, the two provinces of Rhaetia Prima and Rhaetia Secunda were both incorporated with Italy, and the boundary, in consequence, carried far to the N. of the central line of geographical limit. In like manner the Cottian Alps, which formed a separate district, under a tributary chieftain, in the days of Augustus, and were only incorporated with Italy by Nero, comprised the valleys on both sides of the main chain; and the provinces established in the latter periods of the Empire under the names of the Alpes Cottiae and Alpes Maritimae, appear to have been constituted with equally little reference to this natural boundary. (Walckenaer, *Géogr. des Gaules*, vol. ii. pp. 21—36, 361, 395.)

While Italy is bounded on the N. by the great natural barrier of the Alps, it is to the chain of the Apennines, by which it is traversed in its entire length, that it mainly owes its peculiar configuration. This great mountain chain may be considered as the back-bone or vertebral column of the Italian peninsula, which sends down offsets or lateral ridges on both sides to the sea, while it forms, throughout its long course, the water-shed or dividing ridge, from which the rivers of the peninsula take their rise. A detailed description of the Apennines has already been given under the article APENNINUS: they are here noticed only as far as they are connected with the general features of the physical geography of Italy.

1. NORTHERN ITALY.—The first part of the chain of the Apennines, which extends from the point of their junction with the Maritime Alps along the N. shore of the *Gulf of Genoa*, and from thence across the whole breadth of Italy to the Adriatic near Ariminum, constitutes the southern boundary of a great valley or plain, which extends, without interruption, from the foot of the Apennines to that of the Alps. This broad expanse of perfectly level country, consisting throughout of alluvial soil, is watered by the great river Padus, or *Po*, and its numerous tributaries, which bring down the waters from the flanks both of the Alps and Apennines, and render this extensive plain one of the most fertile tracts in Europe. It extends through a space of above 200 geog. miles in length, but does not exceed 50 or 60 in breadth, until it approaches the Adriatic, where the Alps beyond *Vicenza* trend away rapidly to the northward, sweeping in a semicircle round the plains of the *Friuli* (which are a mere continuation of the great plain of the *Po*), until they again approach the Adriatic near *Trieste*. At the same time the Apennines also, as they approach towards the Adriatic, gradually recede from the

banks of the Padus; so that Ariminum (*Rimini*), where their lowest slopes first descend to the seashore, is distant nearly 60 geog. miles from the mouth of that river, and it is almost as much more from thence to the foot of the Alps. It is this vast plain, together with the hill-country on each side of it, formed by the lower slopes of the mountains, that constituted the country of the Cisalpine Gauls, to which the Romans gave the name of GALLIA CISALPINA. The westernmost part of the same tract, including the upper basin of the *Po*, and the extensive hilly district, now called the *Monferrato*, which stretches from the foot of the Apennines to the south bank of the *Po*, was inhabited from the earliest periods by Ligurian tribes, and was included in LIGURIA, according to the Roman use of the name. At the opposite extremity, the portion of the great plain E. and N. of the *Adige* (Athesis), as well as the district now called the *Friuli*, was the land of the Veneti, and constituted the Roman province of VÉNETIA. The Romans, however, appear to have occasionally used the name of Gallia Cisalpina, in a more lax and general sense, for the whole of Northern Italy, or everything that was not comprised within the limits of Italy as that name was understood prior to the time of Augustus. At the present day the name of *Lombardy* is frequently applied to the whole basin of the *Po*, including both the proper Gallia Cisalpina, and the adjacent parts of Liguria and Venetia.

The name of NORTHERN ITALY may be conveniently adopted as a geographical designation for the same tract of country; but it is commonly understood as comprising the whole of Liguria, including the sea-coast; though this, of course, lies on the S. side of the dividing ridge of the Apennines. In this sense, therefore, it comprises the provinces of Liguria, Gallia Cisalpina, Venetia and Istria, and is limited towards the S. by the Macra (*Magra*) on the W. coast, and by the Rubicon on that of the Adriatic. In like manner, the name of CENTRAL ITALY is frequently applied to the middle portion, comprising the northern half of the peninsula, and extending along the W. coast from the mouth of the Macra to that of the Silarus, and on the E. from the Rubicon to the Frento: while that of SOUTHERN ITALY is given to the remaining portion of the peninsula, including Apulia, Calabria, Lucania, and Bruttium. But it must be borne in mind that these names are merely geographical distinctions, for the convenience of description and reference, and do not correspond to any real divisions of the country, either natural or political.

2. CENTRAL ITALY. — The country to which this name is applied differs essentially from that which lies to the N. of the Apennines. While the latter presents a broad level basin, bounded on both sides by mountains, and into which the streams and rivers converge from all sides, the centre of the Italian peninsula is almost wholly filled up by the broad mass of the Apennines, the offsets and lateral branches of which, in some parts, descend quite to the sea, in others leave a considerable intervening space of plain or low country: but even the largest of these level tracts is insignificant as compared with the great plains of Northern Italy. The chain of the Apennines, which from the neighbourhood of Ariminum assumes a generally SE. direction, is very far from being uniform and regular in its character. Nor can it be regarded, like the Alps or Pyrenees, as forming one continuous ridge, from which there branch off lateral arms or ranges, separated by deep intervening valleys. This is, indeed, the case, with tolerable regularity, on the eastern side of the mountains, and hence the numerous rivers which descend to the Adriatic pursue nearly parallel courses at right angles to the direction of the main chain. But the central mass of the mountains, which comprises all the loftiest summits of the Apennines, is broken up and intersected by deep longitudinal valleys, sometimes separated only by narrow ridges of moderate elevation, at others by rugged ranges rising abruptly to a height equal to that of the loftiest summits of the chain. The number of these valleys, occurring in the very heart of the Apennines, and often almost entirely enclosed by the mountains, is a feature in the physical geography of Italy which has in all ages exercised a material influence on its fortunes. The upland valleys, with their fine summer pasturages, were a necessary resource to the inhabitants of the dry plains of the south; and the peculiar configuration of these valleys opened out routes through the heart of the mountain districts, and facilitated mutual communication between the nations of the peninsula.

It is especially in the southern part of the district we are now considering that the Apennines assume this complicated and irregular structure. Between the parallels of 44° and 42° 30′ N. lat. they may be regarded as forming a broad mountain chain, which has a direction nearly parallel with the line of coast of the Adriatic, and the centre of which is nowhere distant more than 40 geog. miles from the shore of that sea, while it is nearly double the same distance from that of the Tyrrhenian. Hence there remains on the W. side of the mountains an extensive tract of country, constituting the greater part of Etruria and the S. of Umbria, which is wholly distinct from the mountain regions, and consists in part of fertile plains, in part of a hilly, but still by no means mountainous, district. The great valleys of the Arno and the Tiber, the two principal rivers of Central Italy, which have their sources very near one another, but flow the one to the W. the other to the S., may be considered as the key to the geography of this part of the peninsula. Between them lies the hilly tract of Etruria, which, notwithstanding the elevation attained by some isolated summits, has nothing of the character of a mountain country, and a large part of which, as well as the portions of Umbria bordering on the valley of the Tiber, may be deservedly reckoned among the most fertile districts in Italy. South of the Tiber, again, the broad volcanic plains of Latium expand between the Apennines and the sea; and though these are interrupted by the isolated group of the Alban hills, and still more by the rugged mountains of the Volscians, which, between *Terracina* and *Gaëta*, descend quite to the sea-shore, as soon as these are passed, the mountains again recede from the sea-coast, and leave a considerable interval which is filled up by the luxuriant plain of Campania.

Nothing can be more striking than the contrast presented by different parts of the countries thus comprised under the name of Central Italy. The snow still lingers in the upland pastures of Samnium and the *Abruzzi*, when the corn is nearly ripe in the plains of the Roman *Campagna*. The elevated districts of the Peligni, the Vestini, and the Marsi, were always noted for their cold and cheerless climate, and were better adapted for pasturage than the growth of corn. Even at Carseoli, only 40 miles

distant from the Tyrrhenian sea, the olive would no longer flourish (Ovid, *Fast.* iv. 683); though it grows with the utmost luxuriance at Tibur, at a distance of little more than 15 miles, but on the southern slope of the Apennines. The richness and fertility of the Campanian plains, and the beautiful shores of the *Bay of Naples*, were proverbial; while the Samnite valleys, hardly removed more than a day's journey towards the interior, had all the characters of highland scenery. Nor was this contrast confined to the physical characters of the regions in question: the rude and simple mountaineers of the Sabine or Marsic valleys were not less different from the luxurious inhabitants of Etruria and Campania; and their frugal and homely habits of life are constantly alluded to by the Roman poets of the empire, when nothing but the memory remained of those warlike virtues for which they had been so distinguished at an earlier period.

Central Italy, as the term is here used, comprised the countries known to the Romans as ETRURIA, UMBRIA (including the district adjoining the Adriatic previously occupied by the Galli Senones), PICENUM, the land of the SABINI, VESTINI, MARSI, PELIGNI, MARRUCINI, and FRENTANI, all SAMNIUM, together with LATIUM (in the widest sense of the name) and CAMPANIA. A more detailed account of the physical geography of these several regions, as well as of the people that inhabited them, will be found in the respective articles.

3. SOUTHERN ITALY, according to the distinction above established, comprises the southern part of the peninsula, from the river Silarus on the W., and the Frento on the E., to the Iapygian promontory on the Ionian, and that of Leucopetra towards the Sicilian, sea. It thus includes the four provinces or districts of APULIA, CALABRIA (in the Roman sense of the name), LUCANIA, and BRUTTIUM. The physical geography of this region is in great part determined by the chain of the Apennines, which, from the frontiers of Samnium, is continued through the heart of Lucania in a broad mass of mountains, which is somewhat narrowed as it enters the Bruttian peninsula, but soon spreads out again sufficiently to fill up almost the whole of that district from shore to shore. The extreme southern mass of the Apennines forms, indeed, a detached mountain range, which in its physical characters and direction is more closely connected with the mountains in the NE. of Sicily than with the proper chain of the Apennines [APENNINUS]; so that the notion entertained by many ancient writers that Sicily had formerly been joined to the mainland at Rhegium, though wholly false with reference to historical times, is undoubtedly true in a geological sense. The name of the Apennines is, however, universally given by geographers to the whole range which terminates in the bold promontory of Leucopetra (*Capo dell' Armi*).

East of the Apennines, and S. of the Frento, there extends a broad plain from the foot of the mountains to the sea, forming the greater part of Apulia, or the tract now known as *Puglia piana*; while, S. of this, an extensive tract of hilly country (not, however, rising to any considerable elevation) branches off from the Apennines near Venusia, and extends along the frontiers of Apulia and Lucania, till it approaches the sea between Egnatia and Brundusium. The remainder of the peninsula of Calabria or Messapia, though it may be considered in some degree as a continuation of the same tract, presents nothing that can be called a range of hills, much less of mountains, as it is erroneously represented on many maps. [CALABRIA.] Between the central mass of the Apennines (which occupies the heart of Lucania) and the gulf of Tarentum, is another broad hilly tract, gradually descending as it approaches the shores of the gulf, which are bordered by a strip of alluvial plain, varying in breadth, but nowhere of great extent.

The Apennines do not attain to so great an elevation in the southern part of the Italian peninsula as in its more central regions; and, though particular summits rise to a considerable height, we do not here meet with the same broad mountain tracts or upland valleys as further northward. The centre of Lucania is, indeed, a rugged and mountainous country, and the lofty groups of the *Monti della Maddalena*, S. of *Potenza*, the *Mte. Pollino*, on the frontiers of Bruttium, and the *Sila*, in the heart of the latter district, were evidently, in ancient as well as modern times, wild and secluded districts, almost inaccessible to civilisation. But the coasts both of Lucania and Bruttium were regions of the greatest beauty and fertility; and the tract extending along the shores of the Tarentine gulf, though now wild and desolate, is cited in ancient times as an almost proverbial instance of a beautiful and desirable country. (Archil. *ap. Athen.* xii. p. 523.) The peninsula of Calabria or Messapia, as already remarked by Strabo, notwithstanding the absence of streams and the apparent aridity of the soil, is in reality a district of great fertility, as is also the tract which extends along the coast of the Adriatic from Egnatia to the mouth of the Aufidus; and, though the plains in the interior of Apulia are dry and dusty in summer, they produce excellent corn, and are described by Strabo as "bringing forth all things in great abundance." (Strab. vi. p. 284.)

The general form and configuration of Italy was well known to the ancient geographers. Polybius, indeed, seems to have had a very imperfect notion of it, or was singularly unhappy in his illustration; for he describes it as of a triangular form, having the Alps for its base, and its two sides bounded by the sea, the Ionian and Adriatic on the one side, the Tyrrhenian and Sicilian on the other. (Pol. ii. 14.) Strabo justly objects to this description, that Italy cannot be called a triangle, without allowing a degree of curvature and irregularity in the sides, which would destroy all resemblance to that figure; and that it is, in fact, wholly impossible to compare it to any geometrical figure. (Strab. v. p. 210.) There is somewhat more truth in the resemblance suggested by Pliny,—and which seems to have been commonly adopted, as it is referred to also by Rutilius (Plin. iii. 5. s. 6; Rutil. *Itin.* ii. 17) —to the leaf of an oak-tree, though this would imply that the projecting portions or promontories on each side were regarded as more considerable than they really are. With the exception of the two great peninsulas or promontories of Calabria (Messapia) and Bruttium, which are attached to its lower extremity, the remainder of Italy, from the Padus and the Macra southwards, has a general oblong form; and Strabo truly enough describes it, when thus considered, as much about the same shape and size with the Adriatic Sea. (Strab. v. p. 211.)

Its dimensions are very variously stated by ancient writers. Strabo, in the comparison just cited, calls it little less than 6000 stadia (600 geog. miles) long, and about 1300 stadia in its greatest breadth;

of these the latter measurement is almost exactly correct, but the former much overstated, as he is speaking there of Italy exclusive of Cisalpine Gaul. The total length of Italy (in the wider sense of the word), from the foot of the Alps near *Aosta* (Augusta Praetoria) to the Iapygian promontory, is about 620 geog. miles, as measured in a direct line on a map; but from the same point to the promontory of Leucopetra, which is the extreme southern point of Italy, is above 660 geog. miles. Pliny states the distance from the same starting-point to Rhegium at 1020 M. P., or 816 geog. miles, which is greatly overstated, unless we suppose him to follow the windings of the road instead of measuring the distance geographically. (Plin. iii. 5. s. 6.) He also states the greatest breadth of Italy, from the Varus to the Arsia, at 410 M. P., which is very nearly correct; the actual distance from the Varus to the head of the Adriatic, measured in a straight line, being 300 geog. miles (375 M. P.), while from thence to the Arsia is about 50 geog. miles. Pliny adds, that the breadth of the peninsula, from the mouths of the Tiber to those of the Aternus, is 136 M. P., which considerably exceeds the truth for that particular point; but the widest part of the peninsula, from Ancona across to the *Monte Argentaro*, is 130 geog., or 162 Roman, miles.

III. Climate and Natural Productions.

Italy was not less renowned in ancient than in modern times for its beauty and fertility. For this it was indebted in great part to its climate, combined with the advantages of its physical configuration. Extending from the parallel of 30° N. lat. to 46° 30′, its southern extremity enjoyed the same climate with Greece, while its northern portions were on a par with the S. of France. The lofty range of Apennines extending throughout its whole length, and the seas which bathe its shores on both sides, contributed at once to temper and vary its climate, so as to adapt it for the productions alike of the temperate and the warmest parts of Europe. Hence the variety as well as abundance of its natural produce, which excited the admiration of so many ancient writers. The fine burst of enthusiasm with which Virgil sings the praises of his native land is too well known to require notice (Virg. *Georg* ii. 136—176); but even the prosaic Dionysius and Strabo are kindled into almost equal ardour by the same theme. The former writer remarks, that of all countries with which he was acquainted Italy united the most natural advantages: for that it did not, like Egypt or Babylonia, possess a soil adapted for agriculture only; but while the Campanian plains rivalled, if they did not surpass, in fertility all other arable lands, the olives of Messapia, Daunia, and the Sabines, were not excelled by any others; and the vineyards of Etruria, the Falernian and the Alban hills, produced wines of the most excellent quality, and in the greatest abundance. Nor was it less favourable to the rearing of flocks, whether of sheep or goats; while its pastures were of the richest description, and supported innumerable herds both of horses and cattle. Its mountain sides were clothed with magnificent forests, affording abundance of timber for ship-building and all other purposes, which could be transported to the coast with facility by its numerous navigable rivers. Abundance of warm springs in different parts of the country supplied not only the means of luxurious baths, but valuable medical remedies. Its seas abounded in fish, and its mountains contained mines of all kinds of metals; but that which was the greatest advantage of all was the excellent temperature of its climate, free alike from the extremes of heat and cold, and adapted for all kinds of plants and animals. (Dionys. i. 36, 37.) Strabo dwells not only on these natural resources, but on its political advantages as a seat of empire; defended on two sides by the sea, on the third by almost impassable mountains; possessing excellent ports on both seas, yet not affording too great facilities of access; and situated in such a position, with regard to the great nations of Western Europe, on the one side, and to Greece and Asia, on the other, as seemed to destine it for universal dominion. (Strab. vi. p. 286.) Pliny, as might be expected, is not less enthusiastic in favour of his native country, and Varro adds that of all countries it was that in which the greatest advantage was derived from its natural fertility by careful cultivation. (Plin. iii. 5. s. 6, xxxvii. 13. s. 77; Varr. *R. R.* i. 2.)

It is probable that the climate of Italy did not differ materially in ancient times from what it is at the present day. The praises bestowed on it for its freedom from excessive heat in summer may surprise those who compare it in this respect with more northern climates; but it is to be remembered that ancient writers spoke with reference to the countries around the Mediterranean, and were more familiar with the climate of Africa, Syria, and Egypt, than with those of Gaul or Germany. On the other hand, there are passages in the Roman writers that seem to indicate a degree of cold exceeding what is found at the present day, especially in the neighbourhood of Rome. Horace speaks of Soracte as white with snow, and the Alban hills as covered with it on the first approach of winter (Hor. *Carm.* i. 9, *Ep.* i. 7. 10); and Juvenal even alludes to the Tiber being covered with ice, as if it were an ordinary occurrence (vi. 522). Some allowance may be made for poetical exaggeration; but still it is probable that the climate of Italy was somewhat colder, or rather that the winters were more severe than they now are, though this remark must be confined within narrow limits; and it is probable that the change which has taken place is far less than in Gaul or Germany.

Great stress has also been laid by many modern writers upon the fact that populous cities then existed, and a thriving agricultural population was found, on sites and in districts now desolated by malaria; and hence it is inferred that the climate has become much more unhealthy in modern times. But population and cultivation have in themselves a strong tendency to repress the causes of malaria. The fertile districts on the coasts of Southern Italy once occupied by the flourishing Greek colonies are now pestilential wastes; but they became almost desolate from other causes before they grew so unhealthy. In the case of Paestum, a marked diminution in the effects of malaria has been perceived, even from the slight amount of population that has been attracted thither since the site has become the frequent resort of travellers, and the partial cultivation that has resulted from it. Nor can it be asserted that Italy, even in its most flourishing days, was ever free from this scourge, though particular localities were undoubtedly more healthy than at present. Thus, the *Maremma* of Tuscany was noted, even in the time of Pliny, for its insalubrity (Plin. *Ep.* v. 6); the neighbourhood of Ardea was almost uninhabited from the same cause, at a still earlier

period (Strab. v. p. 231); and Cicero even extols the situation of Rome, as compared with the rest of Latium, as "a healthy spot in the midst of a pestilential region." (Cic. *de Rep.* ii. 6.) But the imperial city itself was far from being altogether exempt. Horace abounds with allusions to the prevalence of fevers in the summer and autumn (*Ep.* i. 7, *Sat.* ii. 6. 19, *Carm.* ii. 14. 16), though the dense population must have tended materially to repress them. Even at the present day the most thickly peopled parts of Rome are wholly exempt from malaria. (This question is more fully discussed under the article LATIUM.)

The volcanic phenomena displayed so conspicuously in some parts of Italy did not fail to attract the attention of ancient writers. The eruptions of Aenaria, which had occurred soon after the first settlement of the Greek colonists there, were recorded by Timaeus (*ap. Strab.* v. p. 248); and the fables connected with the lake Avernus and its neighbourhood had evidently a similar origin. Strabo also correctly argued that Vesuvius was itself a volcanic mountain, long before the fearful eruption of A. D. 79 gave such signal proof that its fires were not, as he supposed, extinct. (Strab. v. p. 247.) This catastrophe, fearful as it was, was confined to Campania; but earthquakes (to which Italy is so subject at the present day) appear to have been not less frequent and destructive in ancient times, and were far from being limited to the volcanic regions. They are mentioned as occurring in Apulia, Picenum, Umbria, Etruria, Liguria, and other parts of Italy; and though their effects are generally noticed somewhat vaguely, yet the leading phenomena which accompany them at the present day — the subsidence of tracts of land, the fall of rocks and portions of mountains, the change of the course of rivers, the irruption of the sea, as well as the overthrow of buildings, and sometimes of whole towns and cities — are all mentioned by ancient writers. (Liv. xxii. 5; Jul. Obseq. 86, 96, 105, 106, 122, &c.) Slight shocks were not unfrequent at Rome itself, though it never suffered any serious calamity from this cause. But the volcanic action, which had at a far distant period extended over broad tracts of Central Italy, and given rise to the plains of the *Campagna* and the Phlegraean Fields, as well as to the lofty groups of the Alban and Ciminian hills, had ceased long before the age of historical record; and no Roman writer seems to have suspected that the Alban lake had once been a crater of eruption, or that the "silex" with which the Via Appia was paved was derived from a stream of basaltic lava. [LATIUM.]

The volcanic region (in this geological sense) of Central Italy consists of two separate tracts of country, of considerable extent; the one comprising the greater part of Old Latium (or what is now called the *Campagna* of Rome), together with the southern part of Etruria; and the other occupying a large portion of Campania, including not only Vesuvius and the volcanic hills around the lake Avernus, but the broad and fertile plain which extends from the *Bay of Naples* to the banks of the Liris. These two tracts of volcanic origin are separated by the Volscian mountains, a series of calcareous ranges branching off from the Apennines, and filling up the space from the banks of the Liris to the borders of the Pontine marshes, which last form a broad strip of alluvial soil, extending from the volcanic district of the Roman *Campagna* to the *Monte Circello*. The volcanic district of Rome, as we may term the more northern of the two, is about 100 miles in length, by 30 to 35 in breadth; while that of Campania is about 60 miles long, with an average, though very irregular, breadth of 20. North of the former lie the detached summits of *Mte. Amiata* and *Radicofani*, both of them composed of volcanic rocks; while at a distance of 60 miles E. of the Campanian basin, and separated from it by the intervening mass of the Apennines, is situated the isolated volcanic peak of Mt. Vultur (*Voltore*), a mountain whose regular conical form, and the great crater-shaped basin on its northern flank, at once prove its volcanic character; though this also, as well as the volcanoes of Latium and Etruria, has displayed no signs of activity within the historical era. (Daubeny, *On Volcanoes*, ch. xi.)

It is scarcely necessary to enumerate in detail the natural productions of Italy, of which a summary view has already been given in the passages cited from ancient authors, and the details will be found under the heads of the several provinces. But it is worth while to observe how large a portion of those productions, which are at the present day among the chief objects of Italian cultivation, and even impart to its scenery some of its most peculiar characters, are of quite modern introduction, and were wholly unknown when the Greek and Roman writers were extolling its varied resources and inexhaustible fertility. To this class belong the maize and rice so extensively cultivated in the plains of Lombardy, the oranges of the Ligurian coast and the neighbourhood of Naples, the aloes and cactuses which clothe the rocks on the sea-shore in the southern provinces; while the mulberry tree, though well known in ancient times, never became an important object of culture until after the introduction of the silk-worm in the 13th century. Of the different kinds of fruits known to the ancient Romans, many were undoubtedly of exotic origin, and of some the period of their introduction was recorded; but almost all of them throve well in Italy, and the gardens and orchards of the wealthy Romans surpassed all others then known in the variety and excellence of their produce. At the same time, cultivation of the more ordinary descriptions of fruit was so extensive, that Varro remarks: "Arboribus consita Italia est, ut tota pomarium videatur." (*R. R.* i. 2. § 6.)

Almost all ancient writers concur in praising the metallic wealth of Italy; and Pliny even asserts that it was, in this respect also, superior to all other lands; but it was generally believed that the government intentionally discouraged the full exploration of these mineral resources. (Plin. iii. 20. s. 24, xxxvii. 13. s. 77; Strab. vi. p. 286; Dionys. i. 37; Virg. *Georg.* ii. 166.)

It is doubtful whether this policy was really designed to husband their wealth or to conceal their poverty; but it is certain that Italy was far from being really so rich in metallic treasures as was supposed, and could bear no comparison in this respect with Spain. Gold was unquestionably found in some of the streams which flowed from the Alps, and in some cases (as among the Ictymuli and Salassi) was extracted from them in considerable quantities; but these workings, or rather washings, appear to have been rapidly exhausted, and the gold-works on the frontiers of Noricum, celebrated for their richness by Polybius, had ceased to exist in the days of Strabo. (Strab. iv. p. 208.) Silver is enumerated, also, among the metallic treasures of

Italy; but we have no specific account of its production, and the fact that silver money was unknown to the ancient nations of Italy sufficiently shows that it was not found in any great quantity. The early coinage of Italy was of copper, or rather bronze; and this metal appears to have been extracted in large quantities, and applied to a variety of purposes by the Etruscans, from a very early period. The same people were the first to explore the iron mines of Ilva, which continued to be assiduously worked by the Romans; though the metal produced was thought inferior to that of Noricum. Of other minerals, cinnabar (minium) and calamine (cadmium) are noticed by Pliny. The white marble of Luna, also, was extensively quarried by the Romans, and seems to have been recognised as a superior material for sculpture to any of those derived from Greece.

IV. Rivers, Lakes, and Mountains.

The configuration of Italy is unfavourable to the formation of great rivers. The Padus is the only stream which deserves to rank among the principal rivers of Europe: even the Arnus and the Tiber, celebrated as are their names in history, being inferior in magnitude to many of the secondary streams, which are mere tributaries of the Rhine, the Rhone, or the Danube. In the north of Italy, indeed, the rivers which flow from the perpetual snows of the Alps are furnished with a copious and constant supply of water; but the greater part of those which have their sources in the Apennines, though large and formidable streams when swollen by heavy rains or the snows of winter, dwindle into insignificance at other times, and present but scanty streams of water winding through broad beds covered with stones and shingle. It is only by comparison with Greece that Italy (with the exception of Cisalpine Gaul) could be praised for its abundance of navigable rivers.

The Padus, or *Po*, is by far the most important river of Italy, flowing from W. to E. through the very midst of the great basin or trough of Northern Italy, and receiving, in consequence, from both sides, all the waters from the southern declivities of the Alps, as well as from the northern slopes of the Apennines. Hence, though its course does not exceed 380 geog. miles in length, and the direct distance from its sources in the Mons Vesulus (*Mte. Viso*) to its mouth in the Adriatic is only 230 miles, the body of water which it brings down to the sea is very large. Its principal tributaries are as follows, beginning with those on the N. bank, and proceeding from W. to E.:—(1) the Duria Minor (*Doria Riparia*), which joins the *Po* near *Turin* (Augusta Taurinorum; (2) the Stura (*Stura*); (3) the Orgus (*Orco*); (4) the Duria Major, or *Dora Baltea*; (5) the Sessites (*Sesia*); (6) the Ticinus (*Ticino*); (7) the Lambrus (*Lambro*); (8) the Addua (*Adda*); (9) the Ollius (*Oglio*); (10) the Mincius (*Mincio*). Equally numerous, though less important in volume and magnitude, are its tributaries from the S. side, the chief of which are:—(1) the Tanarus (*Tanaro*), flowing from the Maritime Alps, and much the most considerable of the southern feeders of the *Po*; (2) the Trebia (*Trebbia*); (3) the Tarus (*Taro*); (4) the Incius (*Enza*); (5) the Gabellus (*Secchia*); (6) the Scultenna (*Panaro*); (7) the Renus (*Reno*); (8) the Vatrenus (*Santerno*). (Plin. iii. 16. s. 20.)

The first river which, descending from the Alps, does not join the Padus, is the Athesis or *Adige*, which in the lower part of its course flows nearly parallel with the greater river for a distance of above 50 miles. E. of this, and flowing from the Alps direct to the Adriatic, come in succession, the Medoacus or *Brenta*, the Plavis or *Piave*, the Tilavemptus (*Tagliamento*), and the Sontius (*Isonzo*), besides many smaller streams, which will be noticed under the article Venetia.

Liguria, S. of the Apennines, has very few streams worthy of notice, the mountains here approaching so close to the coast as to leave but a short course for their waters. The most considerable are, the Varus (*Var*), which forms the western limit of the province; the Rutuba (*Roja*), flowing through the land of the Intemelii, and the Macra (*Magra*), which divides Liguria from Etruria.

The rivers of Central Italy, as already mentioned, all take their rise in the Apennines, or the mountain groups dependent upon them. The two most important of these are the Arnus (*Arno*) and Tiberis (*Tevere*). The Ausar (*Serchio*), which now pursues an independent course to the sea a few miles N. of the Arnus, was formerly a confluent of that river. Of the smaller streams of Etruria, which have their sources in the group of hills that separate the basin of the *Arno* from that of the Tiber, the most considerable are the Caecina (*Cecina*), the Umbro (*Ombrone*), and the Arminia (*Fiora*). The great valley of the Tiber, which has a general southerly direction, from its sources in the Apennines on the confines of Etruria and Umbria to its mouth at Ostia, a distance in a direct line of 140 geog. miles, is the most important physical feature of Central Italy. That river receives in its course many tributary streams, but the only ones which are important in a geographical point of view are the Clanis, the Nar, and the Anio. Of these the Nar brings with it the waters of the Velinus, a stream at least as considerable as its own.

South of the Tiber are the Liris (*Garigliano* or *Liri*), which has its sources in the central Apennines near the lake Fucinus; and the Vulturnus (*Volturno*), which brings with it the collected waters of almost the whole of Samnium, receiving near Beneventum the tributary streams of the Calor (*Calore*), the Sabatus (*Sabbato*), and the Tamarus (*Tamaro*). Both of these rivers flow through the plain of Campania to the sea: south of that province, and separating it from Lucania, is the Silarus (*Sele*), which, with its tributaries the Calor (*Calore*) and Tanager (*Negro*), drains the western valleys of the Lucanian Apennines. This is the last river of any magnitude that flows to the western coast of Italy: further to the S. the Apennines approach so near to the shore that the streams which descend from them to the sea are mere mountain torrents of trifling length and size. One of the most considerable of them is the Laüs (*Lao*), which forms the limit between Lucania and Bruttium. The other minor streams of those two provinces are enumerated under their respective articles.

Returning now to the eastern or Adriatic coast of Italy, we find, as already noticed, a large number of streams, descending from the Apennines to the sea, but few of them of any great magnitude, though those which have their sources in the highest parts of the range are formidable torrents at particular seasons of the year. Beginning from the frontiers of Cisalpine Gaul, and proceeding from N. to S., the most important of these rivers are:—(1) the Ariminus (*Marecchia*); (2) the Crustumius (*Conca*); (3) the Pisaurus (*Foglia*); (4) the Metaurus (*Metauro*);

(5) the Aesis (*Esino*); (6) the Potentia (*Potenza*); (7) the Flusor (*Chienti*); (8) the Truentus (*Tronto*); (9) the Vomanus (*Vomano*); (10) the Aternus (*Aterno* or *Pescara*); (11) the Sagrus (*Sangro*); (12) the Trinius (*Trigno*); (13) the Tifernus (*Biferno*); (14) the Frento (*Fortore*); (15) the Cerbalus (*Cervaro*); (16) the Aufidus (*Ofanto*), which has much the longest course of all the rivers falling into the Adriatic.

Beyond this, not a single stream worthy of notice flows to the Adriatic; those which have their sources in the central Apennines of Lucania all descending towards the Tarentine gulf; these are, the Bradanus (*Bradano*), the Casuentus (*Basiento*), the Aciris (*Agri*), and the Siris (*Sinno*). The only rivers of Bruttium worthy of mention are the Crathis (*Crati*) and the Neaethus (*Neto*).

(The minor streams and those noticed in history, but of no geographical importance, are enumerated in the descriptions of the several provinces.)

The Italian lakes may be considered as readily arranging themselves into three groups:—1. The lakes of Northern Italy, which are on a far larger scale than any of the others, are all basins formed by the rivers which descend from the high Alps, and the waters of which are arrested just at their exit from the mountains. Hence they are, as it were, valleys filled with water, and are of elongated form and considerable depth; while their superfluous waters are carried off in deep and copious streams, which become some of the principal feeders of the Po. Such are the Lacus Verbanus (*Lago Maggiore*), formed by the Ticinus; the Lacus Larius (*Lago di Como*), by the Addua; the Lacus Sebinus (*Lago d'Iseo*), by the Ollius; and the Lacus Benacus (*Lago di Garda*), by the Mincius. To these Pliny adds the Lacus Eupilis, from which flows the Lamber or *Lambro*, a very trifling sheet of water (Plin. iii. 19. s. 23); while neither he, nor any other ancient writer, mentions the *Lago di Lugano*, situated between the *Lake of Como* and *Lago Maggiore*, though it is inferior in magnitude only to the three great lakes. It is first mentioned by Gregory of Tours in the 6th century, under the name of Ceresius Lacus, an appellation probably ancient, though not now found in any earlier author. 2. The lakes of Central Italy are, with few exceptions, of volcanic origin, and occupy the craters of long extinct volcanoes. Hence they are mostly of circular or oval form, of no great extent, and, not being fed by perennial streams, either require no natural outlet, or have their surplus waters carried off by very inconsiderable streams. The largest of these volcanic lakes is the Lacus Vulsiniensis, or *Lago di Bolsena*, in Southern Etruria, a basin of about 30 miles in circumference. Of similar character and origin are, the Lacus Sabatinus (*Lago di Bracciano*) and Lacus Ciminus (*Lago di Vico*), in the same district; the Lacus Albanus (*Lago d'Albano*) and Lacus Nemorensis (*Lago di Nemi*), in Latium; and the Lake Avernus in Campania. 3. Wholly differing from the preceding are the two most considerable lakes in this portion of Italy, the Lacus Trasimenus (*Lago di Perugia*) and Lacus Fucinus (*Lago Fucino* or *Lago di Celano*); both of which are basins surrounded by hills or mountains, leaving no natural outlet for their waters, but wholly unconnected with volcanic agency.

The mountains of Italy belong almost exclusively either to the great chain of the Alps, which bounds it on the N., or to that of the Apennines. The principal summits of the latter range have been already noticed under the article APENNINUS. The few outlying or detached summits, which do not properly belong to the Apennines are:—(1) the *Monte Amiata* or *Monte di Santa Fiora*, in the heart of Etruria, which rises to a height of 5794 feet above the sea; (2) the MONS CIMINUS, a volcanic group of very inferior elevation; (3) the MONS ALBANUS, rising to above 3000 feet; (4) the MONS VESUVIUS, in Campania, attaining between 3000 and 4000 feet; (5) the MONS VULTUR, on the opposite side of the Apennines, which measures 4433 feet; and (6) the MONS GARGANUS, an isolated mass, but geologically connected with the Apennines, while all the preceding are of volcanic origin, and therefore geologically, as well as geographically, distinct from the neighbouring Apennines.

To these may be added the two isolated mountain promontories of the Mons Argentarius (*Monte Argentaro*) on the coast of Etruria, and Mons Circeius (*Monte Circello*) on that of Latium,—both of them rising like rocky islands, joined to the mainland only by low strips of alluvial soil.

IV. ETHNOGRAPHY OF ANCIENT ITALY.

The inquiry into the origin and affinities of the different races which peopled the Italian peninsula before it fell altogether under the dominion of Rome, and the national relations of the different tribes with which the rising republic came successively into contact, is a problem which has more or less attracted the attention of scholars ever since the revival of letters. But it is especially of late years that the impulse given to comparative philology, combined with the spirit of historical criticism, has directed their researches to this subject. Yet, after all that has been written on it, from the time of Niebuhr to the present day, it must be admitted that it is still enveloped in great obscurity. The scantiness of the monuments that remain to us of the languages of these different nations; the various and contradictory statements of ancient authors concerning them; and the uncertainty, even with regard to the most apparently authentic of these statements, on what authority they were really founded; combine to embarrass our inquiries, and lead us to mistrust our conclusions. It will be impossible, within the limits of an article like the present, to enter fully into the discussion of these topics, or examine the arguments that have been brought forward by different writers upon the subject. All that can be attempted is to give such a summary view of the most probable results, as will assist the student in forming a connected idea of the whole subject, and enable him to follow with advantage the researches of other writers. Many of the particular points here briefly referred to will be more fully investigated in the several articles of the different regions and races to which they relate.

Leaving out of view for the present the inhabitants of Northern Italy, the Gauls, Ligurians, and Veneti, the different nations of the peninsula may be grouped under five heads:—(1) the Pelasgians; (2) the Oscans; (3) the Sabellians; (4) the Umbrians; (5) the Etruscans.

1. PELASGIANS.—All ancient writers concur in ascribing a Pelasgic origin to many of the most ancient tribes of Italy, and there seems no reason to doubt that a large part of the population of the peninsula was really of Pelasgic race, that is to say, that it belonged to the same great nation or family

which formed the original population of Greece, as well as that of Epirus and Macedonia, and of a part at least of Thrace and Asia Minor. The statements and arguments upon which this inference is based are more fully discussed under the article PELASGI. It may here suffice to say that the general fact is put forward prominently by Dionysius and Strabo, and has been generally adopted by modern writers from Niebuhr downwards. The Pelasgian population of Italy appears in historical times principally, and in its unmixed form solely, in the southern part of the peninsula. But it is not improbable that it had, as was reported by traditions still current in the days of the earliest historians, at one time extended much more widely, and that the Pelasgian tribes had been gradually pressed towards the south by the successively advancing waves of population, which appear under the name of the Oscans or Ausonians, and the Sabellians. At the time when the first Greek colonies were established in Southern Italy, the whole of the country subsequently known as Lucania and Bruttium was occupied by a people whom the Greeks called OENOTRIANS (Οἴνωτροι), and who are generally represented as a Pelasgic race. Indeed we learn that the colonists themselves continued to call this people, whom they had reduced to a state of serfdom, Pelasgi. (Steph. B. *s. v.* Χῖος.) We find, however, traces of the tradition that this part of Italy was at one time peopled by a tribe called SICULI, who are represented as passing over from thence into the island to which they gave the name of Sicily, and where alone they are found in historical times. [SICILIA.] The name of these Siculi is found also in connection with the earliest population of Latium [LATIUM]: both there and in Oenotria they are represented by some authorities as a branch of the Pelasgic race, while others regard them as a distinct people. In the latter case we have no clue whatever to their origin or national affinities.

Next to the Oenotrians come the Messapians or Iapygians, who are represented by the Greek legends and traditions as of Pelasgic or Greek descent: and there seem reasonable grounds for assuming that the conclusion was correct, though no value can be attached to the mythical legends connected with it by the logographers and early Greek historians. The tribes to whom a Pelasgic origin is thus assigned are, the Messapians and Salentines, in the Iapygian peninsula; and the Peucetians and Daunians, in the country called by the Romans Apulia. A strong confirmation of the inference derived in this case from other authorities is found in the traces still remaining of the Messapian dialect, which appears to have borne a close affinity to Greek, and to have differed from it only in much the same degree as the Macedonian and other cognate dialects. (Mommsen, *Unter Italische Dialekten*, pp. 41—98.)

It is far more difficult to trace with any security the Pelasgic population of Central Italy, where it appears to have been very early blended with other national elements, and did not anywhere subsist in an unmingled form within the period of historical record. But various as have been the theories and suggestions with regard to the population of Etruria, there seems to be good ground for assuming that one important element, both of the people and language, was Pelasgic, and that this element was predominant in the southern part of Etruria, while it was more feeble, and had been comparatively effaced in the more northern districts. [ETRURIA.] The very name of Tyrrhenians, universally given by the Greeks to the inhabitants of Etruria, appears indissolubly connected with that of Pelasgians; and the evidence of language affords some curious and interesting facts in corroboration of the same view. (Donaldson, *Varronianus*, 2d edit. pp. 166—170; Lepsius, *Tyrrhen. Pelasger*, pp. 40—43.)

If the Pelasgic element was thus prevalent in Southern Etruria, it might naturally be expected that its existence would be traceable in Latium also; and accordingly we find abundant evidence that one of the component ingredients in the population of Latium was of Pelasgic extraction, though this did not subsist within the historical period in a separate form, but was already indissolubly blended with the other elements of the Latin nationality. [LATIUM.] The evidence of the Latin language, as pointed out by Niebuhr, in itself indicates the combination of a Greek or Pelasgic race with one of a different origin, and closely akin to the other nations which we find predominant in Central Italy, the Umbrians, Oscans, and Sabines.

There seems to be also sufficient proof that a Pelasgic or Tyrrhenian population was at an early period settled along the coasts of Campania, and was probably at one time conterminous and connected with that of Lucania, or Oenotria; but the notices of these Tyrrhenian settlements are rendered obscure and confused by the circumstance that the Greeks applied the same name of Tyrrhenians to the Etruscans, who subsequently made themselves masters for some time of the whole of this country. [CAMPANIA.]

The notices of any Pelasgic population in the interior of Central Italy are so few and vague as to be scarcely worthy of investigation; but the traditions collected by Dionysius from the early Greek historians distinctly represent them as having been at one time settled in Northern Italy, and especially point to Spina on the Adriatic as a Pelasgic city. (Dionys. i. 17—21; Strab. v. p. 214.) Nevertheless it hardly appears probable that this Pelasgic race formed a permanent part of the population of those regions. The traditions in question are more fully investigated under the article PELASGI. There is some evidence also, though very vague and indefinite, of the existence of a Pelasgic population on the coast of the Adriatic, especially on the shores of Picenum. (These notices are collected by Niebuhr, vol. i. pp. 49, 50, and are discussed under PICENUM.)

2. OSCANS. — At a very early period, and certainly before the commencement of historical record, a considerable portion of Central Italy appears to have been in the possession of a people who were called by the Greeks Opicans, and by the Latins Oscans, and whom we are led to identify also with the Ausonians [AUSONES] of the Greeks, and the Auruncans of Roman writers. From them was derived the name of Opicia or Opica, which appears to have been the usual appellation, in the days both of Thucydides and Aristotle, for the central portion of the peninsula, or the country north of what was then called Italy. (Thuc. vi. 4; Arist. *Pol.* vii. 10.) All the earliest authorities concur in representing the Opicans as the earliest inhabitants of Campania, and they were still in possession of that fertile district when the Greek colonies were planted there. (Strab. v. p. 242.) We find also statements, which have every character of authenticity, that this same people then occupied the mountainous region after-

wards called Samnium, until they were expelled, or rather subdued, by the Sabine colonists, who assumed the name of Samnites. (Id. v. p. 250.) [SAMNIUM.] Whether they were more widely extended we have no positive evidence; but there seems a strong presumption that they had already spread themselves through the neighbouring districts of Italy. Thus the Hirpini, who are represented as a Samnite or Sabellian colony, in all probability found an Oscan population established in that country, as did the Samnites proper in the more northern province. There are also strong arguments for regarding the Volscians as of Oscan race, as well as their neighbours and inseparable allies the Aequians. (Niebuhr, vol. i. pp. 70—73; Donaldson, *Varronianus*, pp. 4, 5.) It was probably also an Oscan tribe that was settled in the highlands of the Apennines about Reate, and which from thence descended into the plains of Latium, and constituted one important element of the Latin nation. [LATIUM.] It is certain that, if that people was, as already mentioned, in part of Pelasgic origin, it contained also a very strong admixture of a *non-Pelasgic* race; and the analogy of language leads us to derive this latter element from the Oscan. (Donaldson, *l.c.*) Indeed the extant monuments of the Oscan language are sufficient to prove that it bore a very close relation to the oldest form of the Latin; and Niebuhr justly remarks, that, had a single book in the Oscan language been preserved, we should have had little difficulty in deciphering it. (Niebuhr, vol. i. p. 68.)

It is difficult to determine the precise relation which this primitive Oscan race bore to the Sabines or Sabellians. The latter are represented as conquerors, making themselves masters of the countries previously occupied by the Oscans; but, both in Samnium and Campania, we know that the language spoken in historical times, and even long after the Roman conquest, was still called Oscan; and we even find the Samnites carrying the same language with them, as they gradually extended their conquests, into the furthest recesses of Bruttium. (Fest. *s. v. Bilingues Brutates*, p. 35.) There seems little doubt that the Samnite conquerors were a comparatively small body of warriors, who readily adopted the language of the people whom they subdued, like the Normans in France, and the Lombards in Northern Italy. (Niebuhr, vol. i. p. 67.) But, at the same time, there are strong reasons for supposing that the language of the Sabines themselves, and therefore that of the conquering Sabellian race, was not radically distinct from that of the Oscans, but that they were in fact cognate dialects, and that the two nations were members of the same family or race. The questions concerning the Oscan language, so far as it is known to us from existing monuments, are more fully adverted to under the article OSCI*; but it must be borne in mind that all such monuments are of a comparatively late period, and represent only the Sabello-Oscan, or the language spoken by the combined people, long after the two races had been blended into one; and that we are almost wholly without the means of distinguishing what portion was derived from the one source or the other.

3. The SABELLIANS.—This name, which is sometimes used by ancient writers as synonymous with that of the Sabines, sometimes to designate the Samnites in particular (Plin. iii. 12. s. 17; Virgil, *Georg*. ii. 167; Hor. *Sat*. i. 9. 29, ii. 1. 36; Heindorf. *ad loc*.), is commonly adopted by modern historians as a general appellation, including the Sabines and all those races or tribes which, according to the distinct tradition of antiquity, derived their origin from them. These traditions are of a very different character from most of those transmitted to us, and have apparently every claim to be received as historical. And though we have no means of fixing the date of the migrations to which they refer, it seems certain that these cannot be carried back to a very remote age; but that the Sabellian races had not very long been established in the extensive regions of Central Italy, where we find them in the historical period. Their extension still further to the S. belongs distinctly to the historical age, and did not take place till long after the establishment of the Greek colonies in Southern Italy.

The Sabines, properly so called, had their original abodes, according to Cato (*ap. Dionys*. ii. 49), in the lofty ranges of the central Apennines and the upland valleys about Amiternum. It was from thence that, descending towards the western sea, they first began to press upon the Aborigines, an Oscan race, whom they expelled from the valleys about Reate, and thus gradually extended themselves into the country which they inhabited under the Romans, and which still preserves its ancient name of *La Sabina*. But, while the nation itself had thus shifted its quarters nearer to the Tyrrhenian Sea, it had sent out at different periods colonies or bodies of emigrants, which had established themselves to the E. and S. of their original abodes. Of these, the most powerful and celebrated were the Samnites (Σαυνῖται), a people who are universally represented by ancient historians as descended from the Sabines (Strab. v. p. 250; Fest. *v. Samnites*; Varr. *L. L.* vii. § 29); and this tradition, in itself sufficiently trustworthy, derives the strongest confirmation from the fact already noticed, that the Romans applied the name of Sabelli (obviously only another form of Sabini) to both nations indiscriminately. It is even probable that the Samnites called themselves Sabini, or Savini, for the Oscan name "Safinim" is found on coins struck during the Social War, which in all probability belong to the Samnites, and certainly not to the Sabines proper. Equally distinct and uniform are the testimonies to the Sabine origin of the Piceni or Picentes (Plin. iii. 13. s. 18; Strab. v. p. 240), who are found in historical times in possession of the fertile district of Picenum, extending from the central chain of the Apennines to the Adriatic. The Peligni also, as we learn from the evidence of their native poet (Ovid, *Fast*. iii. 95), claimed to be of Sabine descent; and the same may fairly be assumed with regard to the Vestini, a tribe whom we find in historical times occupying the very valleys which are represented as the original abodes of the Sabines. We know nothing historically of the origin of this people, any more than of their neighbours the Marrucini; but we find them both associated so frequently with the Peligni and the Marsi, that it is probable the four constituted a common league or confederation, and this in itself raises a presumption that they were kindred races. Cato already remarked, and without doubt correctly, that the name of the Marrucini was directly derived from that of

* See also Mommsen, *Oskische Studien*, 8vo. Berlin, 1845, and *Nachträge*, Berl. 1846, and his *Unter Italischen Dialekte*, Leipzig, 1850, pp. 99—316; Klenze, *Philologische Abhandlungen*, 8vo. Berlin, 1839.

the Marsi (Cato, *ap. Priscian.* ix. 9); and there can be no doubt that the same relation subsisted between the two nations: but we are wholly in the dark as to the origin of the Marsi themselves. Several circumstances, however, combine to render it probable that they were closely connected with the Sabines, but whether as a distinct offset from that people, or that the two proceeded from one common stock, we have no means of determining. [MARSI.]

The Frentani, on the other hand, are generally represented as a Samnite race; indeed, both they and the Hirpini were so closely connected with the Samnites, that they are often considered as forming only a part of that people, though at other times they figure as independent and separate nations. But the traditions with regard to the establishment of the Hirpini and the origin of their name [HIRPINI], seem to indicate that they were the result of a separate migration, subsequent to that of the body of the Samnites. South of the Hirpini, again, the Lucanians are universally described as a Samnite colony, or rather a branch of the Samnites, who extended their conquering arms over the greater part of the country called by the Greeks Oenotria, and thus came into direct collision with the Greek colonies on the southern coasts of Italy. [MAGNA GRAECIA.] At the height of their power the Lucanians even made themselves masters of the Bruttian peninsula; and the subsequent revolt of the Bruttii did not clear that country of these Sabellian invaders, the Bruttian people being apparently a mixed population, made up of the Lucanian conquerors and their Oenotrian serfs. [BRUTTII.] While the Samnites and their Lucanian progeny were thus extending their power on the S. to the Sicilian strait, they did not omit to make themselves masters of the fertile plains of Campania, which, together with the flourishing cities of Capua and Cumae, fell into their hands between 440 and 420 B. C. [CAMPANIA.]

The dominion of the Sabellian race was thus established from the neighbourhood of Ancona to the southern extremity of Bruttium: but it must not be supposed that throughout this wide extent the population was become essentially, or even mainly, Sabellian. That people appears rather to have been a race of conquering warriors; but the rapidity with which they became blended with the Oscan populations that they found previously established in some parts at least of the countries they subdued, seems to point to the conclusion that there was no very wide difference between the two. Even in Samnium itself (which probably formed their stronghold, and where they were doubtless more numerous in proportion) we know that they adopted the Oscan language; and that, while the Romans speak of the people and their territory as Sabellian, they designate their speech as Oscan. (Liv. viii. 1, x. 19, 20.) In like manner, we know that the Lucanian invaders carried with them the same language into the wilds of Bruttium; where the double origin of the people was shown at a late period by their continuing to speak both Greek and Oscan. (Fest. p. 35.) The relations between these Sabellian conquerors and the Oscan inhabitants of Central Italy render it, on the whole probable, that the two nations were only branches from one common stock (Niebuhr, vol. i. p. 104), related to one another very much like the Normans, Danes, and Saxons. Of the language of the Sabines themselves we have unfortunately scarcely any remains: but there are some words quoted by ancient authors as being at once Sabine and Oscan; and Varro (himself a native of Reate) bears distinct testimony to a connection between the two. (Varr. *L. L.* vii. § 28, ed. Müller.) On the other hand, there are evidences that the Sabine language had considerable affinity with the Umbrian (Donaldson, *Varron.* p. 8); and this was probably the reason why Zenodotus of Troezen (*ap. Dionys.* ii. 49) derived the Sabines from an Umbrian stock. But, in fact, the Umbrian and Oscan languages were themselves by no means so distinct as to exclude the supposition that the Sabine dialect may have been intermediate between the two, and have partaken largely of the characters of both.

4. UMBRIANS. — The general tradition of antiquity appears to have fixed upon the Umbrians as the most ancient of all the races inhabiting the Italian peninsula. (Plin. iii. 14. s. 19; Flor. i. 17; Dionys. i. 19.) We are expressly told that at the earliest period of which any memory was preserved, they occupied not only the district where we find them in historical times, but the greater part of Etruria also; while, across the Apennines, they held the fertile plains (subsequently wrested from them by the Etruscans and the Gauls) from the neighbourhood of Ravenna to that of Ancona, and apparently a large part of Picenum also. Thus, at this time, the Umbrians extended from the Adriatic to the Tyrrhenian sea, and from the mouths of the Padus nearly to those of the Tiber. Of their origin or national affinities we learn but little from ancient authors; a notion appears to have arisen among the Romans at a late period, though not alluded to by any writer of authority, that they were a Celtic or Gaulish race (Solin. 2. § 11; Serv. *ad Aen.* xii. 753; Isidor. *Orig.* ix. 2), and this view has been adopted by many modern authors. (Walckenaer, *Géogr. des Gaules*, vol. i. p. 10; Thierry, *Hist. des Gaulois*, vol. i.) But, in this instance, we have a much safer guide in the still extant remains of the Umbrian language, preserved to us in the celebrated Tabulae Engubinae [IGUVIUM]; and the researches of modern philologers, which have been of late years especially directed to that interesting monument, have sufficiently proved that it has no such close affinity with the Celtic as to lead us to derive the Umbrians from a Gaulish stock. On the other hand, these inquiries have fully established the existence of a general resemblance between the Umbrian, Oscan, and oldest Latin languages; a resemblance not confined to particular words, but extending to the grammatical forms, and the whole structure of the language. Hence we are fairly warranted in concluding that the Umbrians, Oscans, and Latins (one important element of the nation at least), as well as the Sabines and their descendants, were only branches of one race, belonging, not merely to the same great family of the Indo-Teutonic nations, but to the same subdivision of that family. The Umbrian may very probably have been, as believed by the Romans, the most ancient branch of these kindred tribes; and its language would thus bear much the same relation to Latin and the later Oscan dialects that Moeso-Gothic does to the several Teutonic tongues. (Donaldson, *Varron.* pp. 78, 104, 105; Schwegler, *Römische Geschichte*, vol. i. p. 176.)

5. ETRUSCANS.—While there is good reason to suppose a general and even close affinity between the nations of Central Italy which have just been reviewed, there are equally strong grounds for regarding the Etruscans as a people of wholly dif-

ferent race and origin from those by which they were surrounded. This strongly marked distinctness from the other Italian races appears to have been recognised both by Roman and Greek writers. Dionysius even affirms that the Etruscans did not resemble, either in language or manners, any other people whatsoever (Dionys. i. 30); and, however we may question the generality of this assertion, the fact in regard to their language seems to be borne out by the still existing remains of it. The various theories that have been proposed concerning their origin, and the views of modern philologers in regard to their language, are more fully discussed under the article ETRURIA. It may suffice here to state that two points may be considered as fairly established:— 1. That a considerable part of the population of Etruria, and especially of the more southern portions of that country, was (as already mentioned) of Pelasgic extraction, and continued to speak a dialect closely akin to the Greek. 2. That, besides this, there existed in Etruria a people (probably a conquering race) of wholly different origin, who were the proper Etruscans or Tuscans, but who called themselves Rasena; and that this race was wholly distinct from the other nations of Central Italy. As to the ethnical affinities of this pure Etruscan race, we are almost as much in the dark as was Dionysius; but recent philological inquiries appear to have established the fact that it may be referred to the same great family of the Indo-Teutonic nations, though widely separated from all the other branches of that family which we find settled in Italy. There are not wanting, indeed, evidences of many points of contact and similarity, with the Umbrians on the one hand and the Pelasgians on the other; but it is probable that these are no more than would naturally result from their close juxtaposition, and that mixture of the different races which had certainly taken place to a large extent before the period from which all our extant monuments are derived. It may, indeed, reasonably be assumed, that the Umbrians, who appear to have been at one time in possession of the greater part, if not the whole, of Etruria, would never be altogether expelled, and that there must always have remained, especially in the N. and E., a subject population of Umbrian race, as there was in the more southern districts of Pelasgian.

The statement of Livy, which represents the Rhaetians as of the same race with the Etruscans (v. 33), even if its accuracy be admitted, throws but little light on the national affinities of the latter; for we know, in fact, nothing of the Rhaetians, either as to their language or origin.

It only remains to advert briefly to the several branches of the population of Northern Italy. Of these, by far the most numerous and important were the Gauls, who gave to the whole basin of the Po the name of Gallia Cisalpina. They were universally admitted to be of the same race with the Gauls who inhabited the countries beyond the Alps, and their migration and settlement in Italy were referred by the Roman historians to a comparatively recent period. The history of these is fully given under GALLIA CISALPINA. Adjoining the Gauls on the SW., both slopes of the Apennines, as well as of the Maritime Alps and a part of the plain of the Po, were occupied by the LIGURIANS, a people as to whose national affinities we are almost wholly in the dark. [LIGURIA.] It is certain, however, from the positive testimony of ancient writers, that they were a distinct race from the Gauls (Strab. ii. p. 128), and there seems no doubt that they were established in Northern Italy long before the Gallic invasion. Nor were they by any means confined to the part of Italy which ultimately retained their name. At a very early period we learn that they occupied the whole coast of the Mediterranean, from the foot of the Pyrenees to the frontiers of Etruria, and the Greek writers uniformly speak of the people who occupied the neighbourhood of Massilia, or the modern *Provence*, as Ligurians, and not Gauls. (Strab. iv. p. 203.) At the same period, it is probable that they were more widely spread also in the basin of the Po than we find them when they appear in Roman history. At that time the Taurini, at the foot of the Cottian Alps, were the most northern of the Ligurian tribes; while S. of the Padus they extended probably as far as the Trebia. Along the shores of the Mediterranean they possessed in the time of Polybius the whole country as far as Pisae and the mouths of the Arnus, while they held the fastnesses of the Apennines as far to the E. as the frontiers of the Arretine territory. (Pol. ii. 16.) It was not till a later period that the Macra became the established boundary between the Roman province of Liguria and that of Etruria.

Bordering on the Gauls on the E., and separated from them by the river Athesis (*Adige*), were the VENETI, a people of whom we are distinctly told that their language was different from that of the Gauls (Pol. ii. 17), but of whom, as of the Ligurians, we know rather what they were *not*, than what they were. The most probable hypothesis is, that they were an Illyrian race (Zeuss, *Die Deutschen*, p. 251), and there is good reason for referring their neighbours the ISTRIANS to the same stock. On the other hand, the CARNI, a mountain tribe in the extreme NE. of Italy, who immediately bordered both on the Venetians and Istrians, were more probably a Celtic race [CARNI].

Another name which we meet with in this part of Italy is that of the EUGANEI, a people who had dwindled into insignificance in historical times, but whom Livy describes as once great and powerful, and occupying the whole tracts from the Alps to the sea. (Liv. i. 1.) Of their national affinities we know nothing. It is possible that where Livy speaks of other Alpine races besides the Rhaetians, as being of common origin with the Etruscans (v. 33), that he had the Euganeans in view; but this is mere conjecture. He certainly seems to have regarded them as distinct both from the Venetians and Gauls, and as a more ancient people in Italy than either of those races.

V. HISTORY.

The history of ancient Italy is for the most part inseparably connected with that of Rome, and cannot be considered apart from it. It is impossible here to attempt to give even an outline of that history; but it may be useful to the student to present at one view a brief sketch of the progress of the Roman arms, and the period at which the several nations of Italy successively fell under their yoke, as well as the measures by which they were gradually consolidated into one homogeneous whole, in the form that Italy assumed under the rule of Augustus. The few facts known to us concerning the history of the several nations, before their conquest by the Romans, will be found in their respective articles; that of the Greek colonies in Southern Italy, and

their relations with the surrounding tribes, are given under the head of MAGNA GRAECIA.

1. *Conquest of Italy by the Romans*, B. C. 509—264.—The earliest wars of the Romans with their immediate neighbours scarcely come here under our consideration. Placed on the very frontier of three powerful nations, the infant city was from the very first engaged in perpetual hostilities with the Latins, the Sabines, and the Etruscans. And, however little dependence can be placed upon the details of these wars, as related to us, there seems no doubt that, even under the kings, Rome had risen to a superiority over most of her neighbours, and had extended her actual dominion over a considerable part of Latium. The earliest period of the Republic, on the other hand (from the expulsion of the Tarquins to the Gaulish invasion, B. C. 509—390), when stripped of the romantic garb in which it has been clothed by Roman writers, presents the spectacle of a difficult and often dubious struggle, with the Etruscans on the one hand, and the Volscians on the other. The capture of Veii, in B. C. 396, and the permanent annexation of its territory to that of Rome, was the first decisive advantage acquired by the rising republic, and may be looked upon as the first step to the domination of Italy. Even the great calamity sustained by the Romans, when their city was taken and in part destroyed by the Gauls, B. C. 390, was so far from permanently checking their progress, that it would rather seem to have been the means of opening out to them a career of conquest. It is probable that that event, or rather the series of predatory invasions by the Gauls of which it formed a part, gave a serious shock to the nations of Central Italy, and produced among them much disorganisation and consequent weakness. The attention of the Etruscans was naturally drawn off towards the N., and the Romans were able to establish colonies at Sutrium and Nepete; while the power of the Volscians appears to have been greatly enfeebled, and the series of triumphs over them recorded in the Fasti now marks real progress. That of M. Valerius Corvus, after the destruction of Satricum in B. C. 346 (Liv. vii. 27; Fast. Capit.), seems to indicate the total subjugation of the Volscian people, who never again appear in history as an independent power. Shortly after this, in B.C. 343, the Romans for the first time came into collision with the Samnites. That people were then undoubtedly at the height of their power: they and their kindred Sabellian tribes had recently extended their conquests over almost the whole southern portion of the peninsula (see above, p. 86); and it cannot be doubted, that when the Romans and Samnites first found themselves opposed in arms, the contest between them was one for the supremacy of Italy. Meanwhile, a still more formidable danger, though of much briefer duration, threatened the rising power of Rome. The revolt of the Latins, who had hitherto been among the main instruments and supports of that power, threatened to shake it to its foundation; and the victory of the Romans at the foot of Mt. Vesuvius, under T. Manlius and P. Decius (B. C. 340), was perhaps the most important in their whole history. Three campaigns sufficed to terminate this formidable war (B. C. 340—338). The Latins were now reduced from the condition of dependent allies to that of subjects, whether under the name of Roman citizens or on less favourable terms [LATIUM]; and the greater part of Campania was placed in the same condition.

At this time, therefore, only seventy years before the First Punic War, the Roman dominion still comprised only Latium, in the more limited sense of the name (for the Aequi and Hernici were still independent), together with the southern part of Etruria, the territory of the Volscians, and a part of Campania. During the next fifty years, which was the period of the great extension of the Roman arms and influence, the contest between Rome and Samnium was the main point of interest; but almost all the surrounding nations of Italy were gradually drawn in to take part in the struggle. Thus, in the Second Samnite War (B. C. 326—304), the names of the Lucanians and Apulians — nations with which (as Livy observes, viii. 25) the Roman people had, up to that period, had nothing to do—appear as taking an active part in the contest. In another part of Italy, the Marsi, Vestini, and Peligni, all of them, as we have seen, probably kindred races with the Samnites, took up arms at one time or another in support of that people, and were thus for the first time brought into collision with Rome. It was not till B. C. 311 that the Etruscans on their side joined in the contest: but the Etruscan War at once assumed a character and dimensions scarcely less formidable than that with the Samnites. It was now that the Romans for the first time carried their arms beyond the Ciminian Hills; and the northern cities of Etruria, Perusia, Cortona, and Arretium, now first appear as taking part in the war. [ETRURIA.] Before the close of the contest, the Umbrians also took up arms for the first time against the Romans. The peace which put an end to the Second Samnite War (B. C. 304) added nothing to the territorial extent of the Roman power; but nearly contemporary with it, was the revolt of the Hernicans, which ended in the complete subjugation of that people (B.C. 306); and a few years later the Aequians, who followed their example, shared the same fate, B. C. 302. About the same time (B. C. 304) a treaty was concluded with the Marsi, Marrucini, Peligni, and Frentani, by which those nations appear to have passed into the condition of dependent allies of Rome, in which we always subsequently find them. A similar treaty was granted to the Vestini in B. C. 301.

In B. C. 298, the contest between Rome and Samnium was renewed, but in this Third Samnite War the people of that name was only one member of a powerful confederacy, consisting of the Samnites, Etruscans, Umbrians, and Gauls; nevertheless, their united forces were defeated by the Romans, who, after several successful campaigns, compelled both Etruscans and Samnites to sue for peace (B. C. 290). The same year in which this was concluded witnessed also the subjugation of the Sabines, who had been so long the faithful allies of Rome, and now appear, for the first time after a long interval, in arms: they were admitted to the Roman franchise. (Liv. *Epit.* xi.; Vell. Pat. i. 14.) The short interval which elapsed before hostilities were generally renewed, afforded an opportunity for the subjugation of the Galli Senones, whose territory was wasted with fire and sword by the consul Dolabella, in 283; and the Roman colony of Sena (Sena Gallica) established there, to secure their permanent submission. Already in B. C. 282, the war was renewed both with the Etruscans and the Samnites; but this *Fourth* Samnite War, as it is often called, was soon merged in one of a more extensive character. The Samnites were at first assisted by the Lucanians

and Bruttians, the latter of whom now occur for the first time in Roman history (Liv. *Epit.* xii.); but circumstances soon arose which led the Romans to declare war against the Tarentines; and these called in the assistance of Pyrrhus, king of Epirus. The war with that monarch (the first in which the Romans were engaged with any *non-Italian* enemy) was at the same time decisive of the fate of the Italian peninsula. It was, indeed, the last struggle of the nations of Southern Italy against the power of Rome: on the side of Pyrrhus were ranged, besides the Tarentines and their mercenaries, the Samnites, Lucanians, and Bruttians; while the Latins, Campanians, Sabines, Umbrians, Volscians, Marrucini, Peligni, and Frentani, are enumerated among the troops which swelled the ranks of the Romans. (Dionys. xx. Fr. Didot.) Hence, the final defeat of Pyrrhus near Beneventum (B. C. 275) was speedily followed by the complete subjugation of Italy. Tarentum fell into the hands of the Romans in B. C. 272, and, in the same year, the consuls Sp. Carvilius and Papirius Cursor celebrated the last of the many Roman triumphs over the Samnites, as well as the Lucanians and Bruttians. Few particulars have been transmitted to us of the petty wars which followed, and served to complete the conquest of the peninsula. The Picentes, who were throughout the Samnite wars on friendly terms with Rome, now appear for the first time as enemies; but they were defeated and reduced to submission in B. C. 268. The subjection of the Salleutines followed, B. C. 266, and the same year records the conquest of the Sarsinates, probably including the other mountain tribes of the Umbrians. A revolt of the Volsinians, in the following year (B. C. 265), apparently arising out of civil dissensions, gave occasion to the last of these petty wars, and earned for that people the credit of being the last of the Italians that submitted to the Roman power. (Florus, i. 21.)

It was not till long after that the nations of Northern Italy shared the same fate. Cisalpine Gaul and Liguria were still regarded as foreign provinces; and, with the exception of the Senones, whose territory had been already reduced, none of the Gaulish nations had been assailed in their own abodes. In B. C. 232 the distribution of the "Gallicus ager" (the territory of the Senones) became the occasion of a great and formidable war, which, however, ultimately ended in the victory of the Romans, who immediately proceeded to plant the two colonies of Placentia and Cremona in the territory of the Gauls, B. C. 218. The history of this war, as well as of those which followed, is fully related under GALLIA CISALPINA. It may here suffice to mention, that the final conquest of the Boii, in B. C. 191, completed the subjection of Gaul, south of the Padus; and that of the Transpadane Gauls appears to have been accomplished soon after, though there is some uncertainty as to the exact period. The Venetians had generally been the allies of the Romans during these contests with the Gauls, and appear to have passed gradually and quietly from the condition of independent allies to that of dependents, and ultimately of subjects. The Istrians, on the contrary, were reduced by force of arms, and submitted in B. C. 177. The last people of Italy that fell under the yoke of Rome were the Ligurians. This hardy race of mountaineers was not subdued till after a long series of campaigns; and, while the Roman arms were overthrowing the Macedonian and Syrian empires in the East, they were still constantly engaged in an inglorious, but arduous, struggle with the Ligurians, on their own immediate frontiers. Strabo observes, that it cost them eighty years of war to secure the coast-line of Liguria for the space of 12 stadia in width (iv. p. 203); a statement nearly correct, for the first triumph over the Ligurians was celebrated in B. C. 236, and the last in B. C. 158. Even after this last period it appears to have been a long time before the people were finally reduced to a state of tranquillity, and lapsed into the condition of ordinary Roman subjects.

2. *Italy under the Romans.* — It would be a great mistake to suppose that the several nations of Italy, from the periods at which they successively yielded to the Roman arms and acknowledged the supremacy of the Republic, became her subjects, in the strict sense of the word, or were reduced under any uniform system of administration. The relations of every people, and often even of every city, with the supreme head, were regulated by special agreements or decrees, arising out of the circumstances of their conquest or submission. How various and different these relations were, is sufficiently seen by the instances of the Latins, the Campanians, and the Hernicans, as given in detail by Livy (viii. 11—14, ix. 43). From the loss of the second decade of that author, we are unfortunately deprived of all similar details in regard to the other nations of Italy; and hence our information as to the relations established between them and Rome in the third century B. C., and which continued, with little alteration, till the outbreak of the Social War, B. C. 90, is unfortunately very imperfect. We may, however, clearly distinguish two principal classes into which the Italians were then divided; those who possessed the rights of Roman citizens, and were thus incorporated into the Roman state, and those who still retained their separate national existence as dependent allies, rather than subjects properly so called. The first class comprised all those communities which had received, whether as nations or separate cities, the gift of the Roman franchise; a right sometimes conferred as a boon, but often also imposed as a penalty, with a view to break up more effectually the national spirit and organisation, and bring the people into closer dependence upon the supreme authority. In these cases the citizenship was conferred without the right of suffrage; but in most, and perhaps in all such instances, the latter privilege was ultimately conceded. Thus we find the Sabines, who in B. C. 290 obtained only the "civitas sine suffragio," admitted in B. C. 268 to the full enjoyment of the franchise (Vell. Pat. i. 14): the same was the case also, though at a much longer interval, with Formiae, Fundi, and Arpinum, which did not receive the right of suffrage till B. C. 188 (Liv. viii. 41, x. 1, xxxviii. 36), though they had borne the title of Roman citizens for more than a century. To the same class belonged those of the Roman colonies which were called "coloniae civium Romanorum," and which, though less numerous and powerful than the Latin colonies, were scattered through all parts of Italy, and included some wealthy and important towns. (A list of them is given by Madvig, *de Coloniis*, pp. 295—303, and by Marquardt, *Handb. der Römischen Alterthümer*, vol. iii. pt. i. p. 18.)

To the second class, the "Socii" or "Civitates Foederatae," which, down to the period of the Social War, included by far the largest part of the Italian

people, belonged all those nations that had submitted to Rome upon any other terms than those of citizenship; and the treaties (foedera), which determined their relations to the central power, included almost every variety, from a condition of nominal equality and independence (aequum foedus), to one of the most complete subjection. Thus we find Heraclea in Lucania, Neapolis in Campania, and the Camertes in Umbria, noticed as possessing particularly favourable treaties (Cic. *pro Balb.* 8, 20, 22); and even some of the cities of Latium itself, which had not received the Roman civitas, continued to maintain this nominal independence long after they had become virtually subject to the power of Rome. Thus, even in the days of Polybius, a Roman citizen might retire *into exile* at Tibur or Praeneste (Pol. vi. 14; Liv. xliii. 2), and the poor and decayed town of Laurentum went through the form of annually renewing its treaty with Rome down to the close of the Republic. (Liv. viii. 11.) Nor was this independence merely nominal: though politically dependent upon Rome, and compelled to follow her lead in their external relations, and to furnish their contingent of troops for the wars, of which the dominant republic alone reaped the benefit, many of the cities of Italy continued to enjoy the absolute control of their own affairs and internal regulations; the troops which they were bound by their treaty to furnish were not enrolled with the legions, but fought under their own standards as auxiliaries; they retained their own laws as well as courts of judicature, and, even when the Lex Julia conferred upon all the Italian allies the privileges of the Roman civitas, it was necessary that each city should adopt it by an act of its own. (Cic. *pro Balb.* 8.) Nearly in the same position with the dependent allies, however different in their origin, were the so-called "Coloniae Latinae;" that is, Roman colonies which did not enjoy the rights of Roman citizenship, but stood in the same relation to the Roman state that the cities of the Latin League had formerly done. The name was, doubtless, derived from a period when these colonies were actually sent out in common by the Romans and Latins; but settlements on similar terms continued to be founded by the Romans alone, long after the extinction of the Latin League; and, before the Social War, the Latin colonies included many of the most flourishing and important towns of Italy. (For a list of them, with the dates of their foundation, see Madvig, *de Coloniis*, *l. c.*; Mommsen, *Römische Münz-Wesen*, pp. 230—234; and Marquardt, *l. c.* p. 33.) These colonies are justly regarded by Livy as one of the main supports of the Republic during the Second Punic War (Liv. xxvii. 9, 10), and, doubtless, proved one of the most effectual means of consolidating the Roman dominion in Italy. After the dissolution of the Latin League, B. C. 338, these Latin colonies (with the few cities of Latium that, like Tibur and Praeneste, still retained their separate organisation) formed the "nomen Latinum," or body of the Latins. The close connection of these with the allies explains the frequent recurrence of the phrase "socii et nomen Latinum" throughout the later books of Livy, and in other authors in reference to the same period.

A great and general change in the relations previously subsisting between the Italian states and Rome was introduced by the Social War (B. C. 90—89), and the settlement which took place in consequence of it. Great as were the dangers with which Rome was threatened by the formidable coalition of those who had so long been her bravest defenders they would have been still more alarming had the whole Italian people taken part in it. But the allies who then rose in arms against Rome were almost exclusively the Sabellians and their kindred races. The Etruscans and Umbrians stood aloof, while the Sabines, Latins, Volscians, and other tribes who had already received the Roman franchise, supported the Republic, and furnished the materials of her armies. But the senate hastened to secure those who were wavering, as well as to disarm a portion at least of the openly disaffected, by the gift of the Roman franchise, including the full privileges of citizens: and this was subsequently extended to every one of the allies in succession as they submitted. There is some uncertainty as to the precise steps by which this was effected, but the Lex Julia, passed in the year 90 B. C., appears to have conferred the franchise upon the Latins (the "nomen Latinum," as above defined) and all the allies who were willing to accept the boon. The Lex Plautia Papiria, passed the following year, B. C. 89, completed the arrangement thus begun. (Cic. *pro Balb.* 8, *pro Arch.* 4; A. Gell. iv. 4; Appian, *B. C.* i. 49; Vell. Pat. ii. 16.)

By the change thus effected the distinction between the Latins and the allies, as well as between those two classes and the Roman citizens, was entirely done away with; and the Latin colonies lapsed into the condition of ordinary *municipia*. At the same time that all the free inhabitants of Italy, as the term was then understood (i. e. Italy S. of the Macra and Rubicon), thus received the full rights of Roman citizens, the same boon was granted to the inhabitants of Gallia Cispadana, while the Transpadani appear to have been at the same time raised to the condition and privileges of Latins, that is to say, were placed on the same footing as if all their towns had been Latin colonies. (Ascon. *in Pison.* p. 3, ed. Orell.; Savigny, *Vermischte Schriften*, vol. iii. pp. 290—308; Marquardt, *Handb.* vol. iii. pt. i. p. 48.) This peculiar arrangement, by which the Jus Latii was revived at the very time that it became naturally extinct in the rest of Italy, is more fully explained under GALLIA CISALPINA. In B. C. 49, after the outbreak of the Civil War, Caesar bestowed the full franchise upon the Transpadani also (Dion Cass. xli. 36); and from this time all the free inhabitants of Italy became united under one common class as citizens of Rome.

The Italians thus admitted to the franchise were all ultimately enrolled in the thirty-five Roman tribes. The principle on which this was done we know not; but we learn that each municipium, and sometimes even a larger district, was assigned to a particular tribe: so that every citizen of Arpinum, for instance, would belong to the Cornelian tribe, of Beneventum to the Stellatine, of Brixia to the Fabian, of Ticinum to the Papian, and so on.* But in so doing, all regard to that geographical distribution of the tribes which was undoubtedly kept in view in their first institution was necessarily lost; and we have not sufficient materials for attempting to determine how the distribution was made. A knowledge of it must, however, have been of essential importance so long as the Republic continued; and

* This did not, however, interfere with the *personal* right, where this previously existed, so that a Roman citizen already belonging to another tribe, who settled himself in any municipium, retained his own tribe.

in this sense we find Cicero alluding to "Italia tributim descripta" as a matter of interest to the candidates for public offices. (Q. Cic. *de Petit. Cons.* 8.)

3. *Italy under the Roman Empire.*—No material change was introduced into the political condition of Italy by the establishment of the imperial authority at Rome; the constitution and regulations that existed before the end of the Republic continued, with only a few modifications, in full force. The most important of these was the system of municipal organisation, which pervaded every part of the country, and which was directly derived from the days of Italian freedom, when every town had really possessed an independent government. Italy, as it existed under the Romans, may be still regarded as an aggregate of individual communities, though these had lost all pretensions to national independence, and retained only their separate municipal existence. Every municipium had its own internal organisation, presenting very nearly a miniature copy of that of the Roman republic. It had its senate or council, the members of which were called Decuriones, and the council itself Ordo Decurionum, or often simply Ordo; its popular assemblies, which, however, soon fell into disuse under the Empire; and its local magistrates, of whom the principal were the Duumviri, or sometimes Quatuorviri, answering to the Roman consuls and praetors: the Quinquennales, with functions analogous to those of the censors; the Aediles and Quaestors, whose duties nearly corresponded with those of the same magistrates at Rome. These different magistrates were annually elected, at first by the popular assembly, subsequently by the Senate or Decurions: the members of the latter body held their offices for life. Nor was this municipal government confined to the town in which it was resident: every such Municipium possessed a territory or Ager, of which it was as it were the capital, and over which it exercised the same municipal jurisdiction as within its own walls. This district of course varied much in extent, but in many instances comprised a very considerable territory, including many smaller towns and villages, all which were dependent, for municipal purposes, upon the central and chief town. Thus we are told by Pliny, that many of the tribes that inhabited the Alpine valleys bordering on the plains of Gallia Cisalpina, were by the Lex Pompeia assigned to certain neighbouring municipia (*Lege Pompeia attributi municipiis*, Plin. iii. 20. s. 24), that is to say, they were included in their territory, and subjected to their jurisdiction. Again, we know that the territories of Cremona and Mantua adjoined one another, though the cities were at a considerable distance. In like manner, the territory of Beneventum comprised a large part of the land of the Hirpini. It is this point which gives a great importance to the distinction between municipal towns and those which were not so; that the former were not only themselves more important places, but were, in fact, the capitals of districts, into which the whole country was divided. The villages and minor towns included within these districts were distinguished by the terms "fora, conciliabula, vici, castella," and were dependent upon the chief town, though sometimes possessing a subordinate and imperfect local organisation of their own. In some cases it even happened that, from local circumstances, one of these subordinate places would rise to a condition of wealth and prosperity far surpassing those of the municipium, on which it nevertheless continued dependent. Thus, the opulent watering-place of Baiae always remained, in a municipal sense, a mere dependency of Cumae

The distinction between coloniae and municipia, which had been of great importance under the Roman republic, lost its real significance, when the citizens of both alike possessed the Roman franchise. But the title of colonia was still retained by those towns which had received fresh colonies towards the close of the Republic under Caesar or the Triumvirate, as well as under the Empire. It appears to have been regarded as an honorary distinction, and as giving a special claim upon the favour and protection of the founder and his descendants; though it conferred no real political superiority. (Gell. xvi. 13.) On the other hand, the Praefecturae—a name also derived from the early republican period—were distinguished from the colonies and municipia by the circumstance that the juridical functions were there exercised by a Praefectus, an officer sent direct from Rome, instead of by the Duumviri or Quatuorviri (whose legal title was *IIviri* or *IIIIviri Juri dicundo*) elected by the municipality. But as these distinctions were comparatively unimportant, the name of "municipia" is not unfrequently applied in a generic sense, so as to include all towns which had a local self-government. "Oppida" is sometimes employed with the same meaning. Pliny, however, generally uses "oppida" as equivalent to "municipia," but exclusive of colonies: thus, in describing the eighth region, he says, "*Coloniae* Bononia, Brixillum, Mutina, etc. . . . . *Oppida* Caesena, Claterna, Forum Clodi, etc." (iii. 15. s. 20, et passim). It is important to observe that, in all such passages, the list of "oppida" is certainly meant to include only municipal towns; and the lists thus given by Pliny, though disfigured by corruption and carelessness, were probably in the first instance derived from official sources. Hence the marked agreement which may be traced between them and the lists given in the Liber Coloniarum, which, notwithstanding the corruptions it has suffered, is unquestionably based upon good materials. (Concerning the municipal institutions of Italy, see Savigny, *Vermischte Schriften*, vol. iii. pp. 279—412, and *Gesch. des Röm. Rechts*, vol. i.; Marquardt, *Handb. d. Röm. Alterthümer*, vol. iii. pt. i. pp. 44—55; Hoeck, *Röm. Geschichte*, book 5, chap. 3; and the article GALLIA CISALPINA.)

The municipal organisation of Italy, and the territorial distribution connected with it, lasted throughout the Roman empire, though there was always a strong tendency on the part of the central authority and its officers to encroach upon the municipal powers: and in one important point, that of their legal jurisdiction, those powers were materially circumscribed. But the municipal constitution itself naturally acquired increased importance as the central power became feeble and disorganised: it survived the fall of the Western Empire, and continued to subsist under the Gothic and Lombard conquerors, until the cities of Italy gradually assumed a position of independence, and the municipal constitutions which had existed under the Roman empire, became the foundation of the free republics of the middle ages. (Savigny, *Gesch. des Römischen Rechts im Mittel Alter*, vol. i)

The ecclesiastical arrangements introduced after the establishment of Christianity in the Roman empire, appear to have stood in close connection with the municipal limits. Almost every town which was then a flourishing municipium became the see of a

bishop, and the limits of the diocese in general coincided with those of the municipal territory.* But in the period of decay and confusion that followed, the episcopal see often remained after the city had been ruined or fallen into complete decay: hence the ecclesiastical records of the early ages of Christianity are often of material assistance in enabling us to trace the existence of ancient cities, and identify ancient localities.

4 *Political and Administrative Division under the Roman Empire.* — It is not till the reign of Augustus that any division of Italy for administrative purposes occurs, and the reason is obvious. So long as the different nations of Italy preserved the semblance of independence, which they maintained till the period of the Social War, no uniform system of administration was possible. Even after that period, when they were all merged in the condition of Roman citizens, the municipal institutions, which were still in full force, appear to have been regarded as sufficient for all purposes of internal management; and the general objects of the State were confided to the ordinary Roman magistrates, or to extraordinary officers appointed for particular purposes.

The first division of Italy into eleven regions by Augustus, appears to have been designed in the first instance merely to facilitate the arrangements of the census; but, as the taking of this was closely coupled with the levying of taxes, the same divisions were soon adopted for financial and other administrative purposes, and continued to be the basis of all subsequent arrangements. The divisions established by Augustus, and which have fortunately been preserved to us by Pliny (the only author who mentions their institution), were as follows:—

I. The First Region comprised Latium (in the more extended sense of that name, including the land of the Hernicans and Volscians), together with Campania, and the district of the Picentini. It thus extended from the mouth of the Tiber to that of the Silarus; and the Anio formed its boundary on the N.

II. The Second Region, which adjoined the preceding on the SE., included Apulia, Calabria, and the land of the Hirpini, which was thus separated from the rest of Samnium.

III. The Third Region contained Lucania and Bruttium: it was bounded by the Silarus on the NW. and by the Bradanus on the NE.

IV. The Fourth Region contained all Samnium, except the Hirpini, together with the Frentani, Marrucini, Marsi, Peligni, Aequiculi, Vestini, and Sabini. It thus extended from the Anio to the frontiers of Picenum, and from the boundary of Umbria on the N. to Apulia on the S. It was separated from the latter district by the river Tifernus, and from Picenum by the Aternus.

V. The Fifth Region was composed solely of the ancient Picenum (including under that name the territory of Hadria and of the Praetutii), and extended along the Adriatic from the mouth of the Aternus to that of the Aesis.

VI. The Sixth Region contained Umbria, together with the land N. of the Apennines, once occupied by the Senonian Gauls, and which extended along the coast of the Adriatic from the Aesis to the Ariminus. On the W. it was separated from Etruria by the Tiber, along the left bank of which it extended as far as Ocriculum.

VII. The Seventh Region consisted of the ancient Etruria, and preserved the ancient limits of that country: viz. the Tiber on the E., the Apennines on the N., and the Tyrrhenian sea on the W., from the mouth of the Tiber to that of the Macra.

VIII. The Eighth Region, or Gallia Cispadana, extended from the frontiers of Liguria near Placentia, to Ariminum on the Adriatic, and was bounded by the Apennines on the S., and by the Padus on the N.

IX. The Ninth Region comprised Liguria, extending along the sea-coast from the Macra to the Varus, and inland as far as the Padus, which formed its northern boundary from the confluence of the Trebia to its sources in Mt. Vesulus.

X. The Tenth Region was composed of Venetia, including the land of the Carni, with the addition of Istria, and a part of Gallia Cisalpina, previously occupied by the Cenomani, extending as far W. as the Addua.

XI. The Eleventh Region comprised the remainder of Gallia Transpadana, or the whole tract between the Alps and the Padus, from the sources of the latter river to its confluence with the Addua.

It is probable, both from the silence of Pliny, and from the limited scope with which these divisions were first instituted, that the regions had originally no distinctive names applied to them: but these would be gradually adopted, as the division acquired increased political importance. No difficulty could arise, where the limits of the Region coincided (or nearly so) with those of a previously existing people, as in the cases of Etruria, Liguria, Picenum, &c. In other instances the name of a part was given to the whole: thus, the first region came to be called Regio Campaniae; and hence, in the Liber Coloniarum, the "Civitates Campaniae" include all Latium also. [CAMPANIA.] The name of Regio Samnii or Samnium was in like manner given to the fourth region, though perhaps not till after the northern part of it had been separated from the rest under the name of Valeria.

The division introduced by Augustus continued with but little alteration till the time of Constantine. The changes introduced by Hadrian and M. Aurelius regarded only the administration of justice in Italy generally (Spartian. *Hadr.* 22: Capit. *M. Ant.* 11); but in this, as well as in various other regulations, there was a marked approach to the assimilating the government of Italy to that of the provinces; and the term "Consularis," applied to the judicial officers appointed by Hadrian merely to denote their dignity, soon came to be used as an official designation for the governor of a district, as we find it in the Notitia. But the distinction between Italy and the provinces is still strongly marked by Ulpian, and it was not till the fourth century that the term "Provincia" came to be applied to the regions or districts of Italy (Mommsen, *ad Lib. Col.* pp. 193, 194.)

The changes introduced into the divisions of Augustus, either before the time of Constantine or under that emperor, were the following:—1. The fourth region was divided into two, the southern

* A glance at the list of bishoprics existing in any of the provinces of Central Italy (Etruria, for instance, or Umbria), as compared with the names of the towns enumerated by Pliny in the same district, will at once show the connection between the two. (Bingham's *Ecclesiastical Antiquities*, book ix. chap. v.

portion containing Samnium (to which the land of the Hirpini, included by Augustus in the second region, was reunited), together with the Frentani and Peligni; while the land of the Sabines, the Marsi, and the Vestini, constituted a separate district, which bore the name of VALERIA, from the great highway, the Via Valeria, by which it was traversed. 2. The portion of the sixth region which lay between the Apennines and the Adriatic (originally inhabited by the Gauls) was separated from Umbria properly so called, and distinguished by the name of Picenum Annonarium, while the true Picenum was called, for the sake of distinction, Picenum Suburbicarium. 3. The eighth region, or Gallia Cispadana, was divided into two, of which the westernmost portion assumed the name of AEMILIA, from the highroad of that name; an appellation which seems to have come into common use as early as the time of Martial (iii. 4, vi. 85): while the eastern portion, much the smaller of the two, received that of FLAMINIA, though the highroad of that name only extended to Ariminum, on the very frontier of this district. This new division seems to have been generally united with Picenum Annonarium, though retaining its separate name. 4. The Alpes Cottiae, a mountain district which in the time of Augustus had still retained its nominal independence, though incorporated with the Roman empire by Nero, seems to have continued to form a separate district till the time of Constantine, who united it with the ninth region, *the whole* of which now came to be known as the Alpes Cottiae: while, still more strangely, the name of Liguria was transferred from this region, to which it properly belonged, to the eleventh region, or Gallia Transpadana; so that late writers speak of Mediolanum as the capital of Liguria. [LIGURIA.] 5. The only other change that requires notice was the division of Etruria into two portions, called *Tuscia Annonaria* and *Tuscia Urbicaria*. This, as well as the similar distinction between the two Picenums, had its origin in the administrative arrangements introduced by Maximian, who, when he established the imperial residence at Milan, imposed upon the northern and adjoining provinces the task of finding supplies (annonae) for the imperial court and followers, while the other portions of Italy were charged with similar burdens for the supply of Rome. (Mommsen, *ad Lib. Col.* pp. 198—200.) Hence Trebellius Pollio, writing in the reign of Diocletian, after enumerating the districts of Southern and Central Italy, comprises all that lay N. of Flaninia and Etruria under the general appellation of "omnis annonaria regio." (Treb. Poll. *Trig. Tyr.* 24.)

In addition to these changes, Constantine, in the general reorganisation of his empire, united to Italy the two provinces of Rhaetia (including Vindelicia), as well as the three great islands of Sicily, Sardinia, and Corsica. These last, together with all the central and southern provinces of Italy, were placed under the jurisdiction of the Vicarius Urbis Romae, while all the northern provinces were subject to the Vicarius Italiae. The minor arrangements seem to have frequently varied in detail, but the seventeen provinces into which the "Dioecesis Italiae" was now divided, are thus enumerated in the Notitia Dignitatum (ii. pp. 9, 10): —

1. Venetia.
2. Aemilia.
3. Liguria (i. e. Gallia Transpadana).
4. Flaminia et Picenum Annonarium.
5. Tuscia et Umbria.
6. Picenum Suburbicarium.
7. Campania.
8. Sicilia.
9. Apulia et Calabria.
10. Lucania et Bruttii.
11. Alpes Cottiae (Liguria).
12. Raetia Prima.
13. Raetia Secunda.
14. Samnium.
15. Valeria.
16. Sardinia.
17. Corsica.

This list substantially agrees with that in the Libellus Provinciarum (published by Gronovius, Lugd. Bat. 1739), a document of the time of Theodosius I., as well as with that given by Paulus Diaconus in his geographical description of Italy (*Hist. Lang.* ii. 14—22), though he has added an eighteenth province, to which he gives the name of "Alpes Apennini;" which can be no other than the northern part of Etruria, or Tuscia Annonaria. Of the seventeen provinces enumerated in the Notitia eight were placed under governors who bore the title of Consulares, seven under Praesides, and the two southernmost under Correctores, a title which appears to have been at one time common to them all.

(For further details on the administrative divisions of Italy during the latter period of the Roman empire, see the *Notitia Dignitatum in Partibus Occidentis*, Bonn, 1840, with Böcking's valuable commentary; Mommsen, *über die Lib. Colon.* in the *Schriften der Römischen Feldmesser*, vol. ii. Berlin, 1852; Marquardt, *Handb. der Röm. Alterthümer*, vol. iii. pt. i. pp. 55—71.)

The divisions thus established before the close of the Western Empire, were continued after its fall under the Gothic monarchy, and we find them frequently alluded to as subsisting under their old names in Cassiodorus and Procopius. It was not till the establishment of the Lombards in Italy that this division gave place to one wholly different, which became the foundation of that which subsisted in the middle ages. The Lombards divided the part of Italy in which they established their power, including all the N., or what is now called *Lombardy*, together with a part of Tuscany and Umbria, into a number of military fiefs or governments, under the name of Duchies (Ducatus): the Duchy of *Friuli*, Duchy of *Verona*, Duchy of *Pavia*, &c. Besides those immediately subject to the Lombard kings, two of these were established further to the S., — the Duchy of *Spoleto* and Duchy of *Benevento*, which enjoyed a semi-independent position: and the last of these was extended by successive conquests from the Greek Empire, till it comprised almost the whole of the S. of Italy, or the modern kingdom of *Naples*. The Greek emperors, however, still retained possession of the Exarchate of Ravenna, together with the district called the Pentapolis, comprising a considerable part of Picenum, and what was called the Duchy of Rome, including a part of Etruria and Umbria, as well as Latium. In the S. also they always kept possession of some of the maritime places of Campania, *Naples*, *Gaëta*, and *Salerno*, as well as of a part of *Calabria*, and the cities of *Otranto* and *Gallipoli*. After the fall of the Lombard kingdom, in A. D. 774, though they had now lost their possessions in the N., the Exarchate and the Pentapolis, the Byzantine emperors

for a long time extended their dominion over a considerable part of the S., and wrested from the dukes of Benevento the districts to which they gave the names of the *Capitanata* and the *Basilicata* (a part of the ancient Apulia and Lucania), and of which they retained possession till the 11th century. It was then that a new enemy first appeared on the scene, and the Normans, under Robert Guiscard, completed the final expulsion of the Greek emperors from Italy. The capture of *Bari* in 1071, and of *Salerno* in 1077, destroyed the last vestiges of the dominion that had been founded by the generals of Justinian. (D'Anville, *E'tats formés en Europe après la Chute de l'Empire Romain*, 4to. Paris, 1771.)

VI. Population of Italy under the Romans.

The statements transmitted to us from antiquity concerning the amount of the population in different cities and countries are for the most part of so vague a character and such uncertain authority as to be little worthy of consideration; but we have two facts recorded in connection with that of Italy, which may lead us to form at least an approximate estimate of its numbers. The first of these data is the statement given by Polybius, as well as by several Roman writers on the authority of Fabius, and which there is every reason to believe based on authentic documents, of the total amount of the forces which the Romans and their allies were able to oppose to the threatened invasion of the Gauls in B. C. 225. According to the detailed enumeration given by Polybius, the total number of men capable of bearing arms which *appeared on the registers* of the Romans and their allies, amounted to above 700,000 foot and 70,000 horsemen. Pliny gives them at 700,000 foot and 80,000 horse; while Eutropius and Orosius state the whole amount in round numbers at 800,000. (Pol. ii. 24; Plin. iii. 20. s. 24; Eutrop. iii. 5; Oros. iv. 13.) It is evident, from the precise statements of Polybius, that this was the total amount of the free population of military age (τὸ σύμπαν πλῆθος τῶν δυναμένων ὅπλα βαστάζειν), and not that which could be actually brought into the field. If we estimate the proportion of these to the total free population as 1 to 4, which appears to have been the ratio currently adopted in ancient times, we should obtain a total of 3,200,000 for the free population of the Italian peninsula, exclusive of the greater part of Cisalpine Gaul, and the whole of Liguria*: and even if we adopt the proportion of 1 to 5, more commonly received in modern times, this would still give a total of only 4,000,000, an amount by no means very large, as the population of the same parts of Italy at the present day considerably exceeds 9,000,000. (Serristori, *Statistica d'Italia.*) Of the amount of the servile population we have no means of forming an estimate: but it was probably not large at this period of the Roman history; and its subsequent rapid increase was contemporaneous with the diminution of the free population. The complaints of the extent to which this had taken place as early as the time of the Gracchi, and their lamentations over the depopulation of Italy (Plut. *T. Gracch.* 8), would lead us to suppose that the number of free citizens had greatly fallen off. If this was the case in B. C. 133, the events of the next half century — the sanguinary struggle of the Social War, which swept off, according to Velleius Paterculus (ii. 15), more than 300,000 men in the vigour of their age, and the cruel devastation of Samnium and Etruria by Sulla—were certainly not calculated to repair the deficiency. But, notwithstanding this, we find that the census of B. C. 70 which included all the new citizens recently admitted to the Roman franchise, and did not yet comprise any population out of Italy, nor even the Transpadane Gauls, gave a result of 910,000 Roman citizens (capita civium); from which we may fairly infer a free population of at least 4,500,000 (Liv. *Epit.* xcviii. ed. Jahn, compared with Phlegon *ap. Phot. Bibl.* p. 84. ed. Bekker.) The rapid extension of a Roman population in Gallia Cispadana as well as Venetia and Liguria, had evidently more than compensated for the diminution in the central provinces of the peninsula.

Of the populousness of Italy under the Empire, we have no data on which to found an estimate. But there are certainly no reasons to suppose that it ever exceeded the amount which it had attained under the Republic. Complaints of its depopulation, of the decay of flourishing towns, and the desolation of whole districts, are frequent in the writers of the Augustan age and the first century of the Christian era. We are told that Caesar in B. C. 46, already found a dreadful diminution of the population (δεινὴν ὀλιγανθρωπίαν, Dion Cass. xliii. 25); and the period of the Triumvirate must have tended greatly to aggravate the evil. Augustus seems to have used every means to recruit the exhausted population: but that his efforts were but partially successful is evident from the picture which Strabo (writing in the reign of Tiberius) gives us of the state of decay and desolation to which the once populous provinces of Samnium, Apulia, and Lucania, were in his day reduced; while Livy confirms his statement, in regard even to districts nearer Rome, such as the land of the Aequians and Volscians. (Strab. v. p. 249, vi. pp. 253, 281; Liv. vi. 12.) Pliny, writing under Vespasian, speaks of the "latifundia" as having been "the ruin of Italy;" and there seems no reason to suppose that this evil was afterwards checked in any material degree. The splendour of many of the municipal towns, and especially the magnificent public buildings with which they were adorned, is apt to convey a notion of wealth and opulence which it seems hard to combine with that of a declining population. But it must be remembered that these great works were in many, probably in most instances, erected by the munificence either of the emperors or of private individuals; and the vast wealth of a few nobles was so far from being the sign of general prosperity, that it was looked upon as one of the main causes of decay. Many of the towns and cities of Italy were, however, no doubt very flourishing and populous; but numerous testimonies of ancient writers seem to prove that this was far from being the case with the country at large; and it is certain that no ancient author lends any countenance to the notion entertained by some modern writers, of "the incredible multitudes of people with which Italy abounded during the reigns of the Roman emperors" (A

* The Cenomani and Veneti were among the allies who sent assistance to the Romans on this occasion, but their actual contingent of 20,000 men is all that is included in the estimate of Polybius. They did not, like the Italian allies, and doubtless could not, send registers of their total available resources.

dison, *Remarks on Italy*). (See this question fully discussed and investigated by Zumpt, *über den Stand der Bevölkerung im Alterthum.* 4to. Berlin, 1841.)

Gallia Cisalpina, including Venetia and the part of Liguria N. of the Apennines, seems to have been by far the most flourishing and populous part of Italy under the Roman empire. Its extraordinary natural resources had been brought into cultivation at a comparatively late period, and were still unexhausted: nor had it suffered so much from the civil wars which had given a fatal blow to the prosperity of the rest of Italy. It would appear also to have been comparatively free from the system of cultivation by slave labour which had proved so ruinous to the more southern regions. The younger Pliny, indeed, mentions that his estate near Comum, and all those in its neighbourhood, were cultivated wholly by free labourers. (Plin. *Ep.* iii. 19.) In the latter ages of the Empire, also, the establishment of the imperial court at Mediolanum (which continued from the time of Maximian to that of Honorius) must have given a fresh stimulus to the prosperity of this favoured region. But when the Empire was no longer able to guard the barrier of the Alps against the irruptions of barbarians, it was on Northern Italy that the first brunt of their devastations naturally fell; and the numerous and opulent cities in the plains of the Padus were plundered in succession by the Goths, the Huns, and the Lombards.

VII. Authorities.

Considering the celebrity of Italy, and the importance which it enjoyed, not only under the Romans but during the middle ages, and the facility of access which has rendered it so favourite a resort of travellers in modern times, it seems strange that our knowledge of its ancient geography should be still very imperfect. Yet it cannot be denied that this is the case. The first disadvantage under which we labour is, that our ancient authorities themselves are far from being as copious or satisfactory as might be expected. The account given by Strabo, though marked by much of his usual good sense and judgment, is by no means sufficiently ample or detailed to meet all our requirements. He had also comparatively little interest in, and was probably himself but imperfectly acquainted with, the early history of Rome, and therefore did not care to notice, or inquire after, places which had figured in that history, but were in his time sunk into decay or oblivion. Mela dismisses the geography of Italy very hastily, as being too well known to require a detailed description (ii. 4. § 1): while Pliny, on the contrary, apologises for passing but lightly over so important and interesting a subject, on account of the impossibility of doing it justice (iii. 5. s. 6). His enumeration of the different regions and the towns they contained is nevertheless of the greatest value, and in all probability based upon authentic materials. But he almost wholly neglects the physical geography, and enumerates the inland towns of each district in alphabetical order, so that his mention of them gives us no assistance in determining their position. Ptolemy's lists of names are far less authentic and trustworthy than those of Pliny; and the positions which he professes to give are often but little to be depended on. The Itineraries afford valuable assistance, and perhaps there is no country for which they are more useful and trustworthy guides; but they fail us exactly where we are the most in want of assistance,—in the more remote and unfrequented parts of Italy, or those districts which in the latter ages of the Empire had fallen into a state of decay and desolation. One of the most important aids to the determination of ancient localities is unquestionably the preservation of the ancient names, which have often been transmitted almost without change to the present day; and even where the name is now altered, we are often enabled by ecclesiastical records to trace the ancient appellation down to the middle ages, and prove both the fact and the origin of its alteration. In numerous instances (such as Aletium, Sipontum, &c.) an ancient church alone records the existence and preserves the name of the decayed city. But two circumstances must guard us against too hasty an inference from the mere evidence of name: the one, that it not unfrequently happened, during the disturbed periods of the middle ages, that the inhabitants of an ancient town would migrate to another site, whether for security or other reasons, and transfer their old name to their new abode. Instances of this will be found in the cases of Abellinum, Aufidena, &c., and the most remarkable of all in that of Capua. Another source of occasional error is that the present appellations of localities are sometimes derived from erroneous traditions of the middle ages, or even from the misapplication of ancient names by local writers on the first revival of learning.

One of the most important and trustworthy auxiliaries in the determination of ancient names and localities, that of inscriptions, unfortunately requires, in the case of Italy, to be received with much care and caution. The perverted ingenuity or misguided patriotism of many of the earlier Italian antiquarians frequently led them either to fabricate or interpolate such documents, and this with so much skill and show of learning, that many such fictitious or apocryphal inscriptions have found their way into the collections of Gruter, Muratori, and Orelli, and have been cited in succession by numerous modern writers. Mommsen has conferred a great service upon the student of Italian antiquities by subjecting all the recorded inscriptions belonging to the kingdom of Naples to a searching critical inquiry, and discarding from his valuable collection (*Inscriptiones Regni Neapolitani Latinae*, fol. Lips. 1852) all those of dubious authenticity. It is much to be desired that the same task may be undertaken for those of the rest of Italy.

The comparative geography of ancient and modern Italy had more or less engaged the attention of scholars from the first revival of learning. But of the general works on the subject, those before the time of Cluverius may be regarded more as objects of curiosity than as of much real use to the student. Biondo Flavio (Blondus Flavius) is the earliest writer who has left us a complete and connected view of Italian topography, in his *Italia Illustrata* (first published in 1474, afterwards with his other works at Basle, in 1531 and 1559): after him came Leandro Alberti, whose *Descrizione di tutta Italia* (Venice, 1551) contains some valuable notices. But the great work of Cluverius (*Italia Antiqua*, 2 vols. fol. Lugd. Bat. 1624) altogether superseded those which had preceded him, and became the foundation of all subsequent inquiries. Cluverius has not only brought together, with the most praiseworthy diligence, all the passages of

ancient authors bearing upon his subject, but he had himself travelled over a great part of Italy, noting the distances and observing the remains of ancient towns. It is to be regretted that he has not left us more detailed accounts of these remains of antiquity, which have in many cases since disappeared, or have not been visited by any more recent traveller. Lucas Holstenius, the contemporary and friend of Cluver, who had also visited in person many of the more unfrequented districts of Italy, has left us, in his notes on Cluverius (*Adnotationes ad Cluverii Italiam Antiquam*, 8vo. Romae, 1666), a valuable supplement to the larger work, as well as many important corrections on particular points.

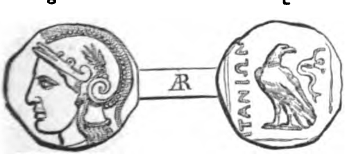
It is singular how little we owe to the researches of modern travellers in Italy. Not a single book of travels has ever appeared on that country which can be compared with those of Leake or Dodwell in Greece. Swinburne's *Travels in the Two Sicilies* is one of the best, and greatly superior to the more recent works of Keppel Craven on the same part of Italy (*Tour through the Southern Provinces of the Kingdom of Naples*, 4to. Lond. 1821; *Excursions in the Abruzzi and Northern Provinces of Naples*, 2 vols. 8vo. Lond. 1838). Eustace's well-known book (*Classical Tour through Italy in* 1802) is almost wholly worthless in an antiquarian point of view. Sir R. Hoare's *Classical Tour*, intended as a sort of supplement to the preceding, contains some valuable notes from personal observation. Dennis's recent work on Etruria (*Cities and Cemeteries of the Etruscans*, 2 vols. 8vo. Lond. 1848) contains a far more complete account of the antiquities and topography of that interesting district than we possess concerning any other part of Italy. Sir W. Gell's *Topography of Rome and its Vicinity* (2 vols. 8vo. Lond. 1834; 2nd edit. 1 vol. 1846*), taken in conjunction with the more elaborate work of Nibby on the same district (*Analisi della Carta dei Dintorni di Roma*, 3 vols. 8vo. Rome, 1849), supplies much valuable information, especially what is derived from the personal researches of the author, but is far from fulfilling all that we require. The work of Westphal on the same subject (*Die Römische Kampagne*, 4to. Berlin, 1829) is still more imperfect, though valuable for the care which the author bestowed on tracing out the direction and remains of the ancient roads throughout the district in question. Abeken's *Mittel Italien* (8vo. Stuttgart, 1843) contains a good sketch of the physical geography of Central Italy, and much information concerning the antiquities of the different nations that inhabited it; but enters very little into the topography of the regions he describes. The publications of the Instituto Archeologico at Rome (first commenced in 1829, and continued down to the present time), though directed more to archaeological than topographical researches, still contain many valuable memoirs in illustration of the topography of certain districts, as well as the still existing remains in ancient localities.

The local works and histories of particular districts and cities in Italy are innumerable. But very few of them will be found to be of any real service to the student of ancient geography. The earlier works of this description are with few exceptions characterised by very imperfect scholarship, an almost total want of criticism, and a blind credulity, or still blinder partiality to the native city of each particular author. Even on those points on which their testimony would appear most likely to be valuable,—such as notices of ruins, inscriptions, and other remains of antiquity,—it must too often be received with caution, if not with suspicion. A striking exception to this general remark will be found in the treatise of Galateo, *De Situ Iapygiae* (8vo. Basel, 1551; republished by Graevius in the *Thesaurus Antiquitatum Italiae*, vol. ix. part v.): those of Barrio on Calabria (the *modern* province of the name) and Antonini on Lucania (Barrius, *de Antiquitate et Situ Calabriae*, fol. Romae, 1737; Antonini, *La Lucania*, 4to. Naples, 1741), though not without their merit, are of far inferior value. The results of these local researches, and the conclusions of their authors, will be for the most part found, in a condensed form, in the work of the Abate Romanelli (*Antica Topografia Istorica del Regno di Napoli*, 3 vols. 4to. Naples, 1815), which, notwithstanding the defects of imperfect scholarship and great want of critical sagacity, will still be found of the greatest service to the student for the part of Italy to which it relates. Cramer, in his well-known work, has almost implicitly followed Romanelli, as far as the latter extends; as for the rest of Italy he has done little more than abridge the work of Cluverius, with the corrections of his commentator Holstenius. Mannert, on the contrary, appears to have composed his *Geographie von Italien* without consulting any of the local writers at all, and consequently without that detailed acquaintance with the actual geography of the country which is the indispensable foundation of all inquiries into its ancient topography. Reichard's work, which appears to enjoy some reputation in Germany, is liable in a still greater degree to the same charge:* while that of Forbiger is a valuable index of references both to ancient and modern writers, but aspires to little more. Kramer's monography of the Lake Fucinus (*Der Fuciner See*, 4to. Berlin, 1839) may be mentioned as a perfect model of its kind, and stands unrivalled as a contribution to the geography of Italy. Niebuhr's Lectures on the Geography of Italy (in his *Vorträge über Alte Länder u. Völker-kunde*, pp. 318—576) contain many valuable and important views, especially of the physical geography in its connection with the history of the inhabitants, and should be read by every student of antiquity, though by no means free from errors of detail. [E. H. B.]

ITA'LICA (Ἰτάλικα, Strab. iii. p. 141; Ptol. ii. 4. § 13; Ἰταλική, Appian, *Hisp.* 38; Steph. B. *s. v.*), a Roman city, in the country of the Turdetani, in Hispania Baetica, on the right bank of the Baetis, opposite HISPALIS (*Seville*), from which it was distant only 6 M. P. to the NW. (*Itin. Ant.* p. 413, comp. p. 432.) It was founded by Scipio Africanus, on the site of the old Iberian town of Sancios, in the Second Punic War (B. C. 207), and peopled with his disabled veterans; whence its name, "the Italian city." It had the rank of a municipium: it is mentioned more than once in the history of the Civil Wars: and it was the native place of the emperors Trajan, Hadrian, and Theodosius the Great, and, as some say, of the poet Silius Italicus. (See *Dict. of Greek and Rom. Biog. s. v.*)

* It is this edition which is always referred to in the present work.

* Some severe, but well merited, strictures on this work are contained in Niebuhr's *Lectures on Roman History* (vol. iii. p. xciv. 2d edit.).



Its coins, all of the imperial age, bear military emblems which attest the story of its origin, and on some of them is the title JULIA AUGUSTA. The city flourished under the Goths, and, for some time, under the Moors, who preserved the old name, in the form *Talika* or *Talca;* but, in consequence of a change in the bed of the river, its inhabitants abandoned it, and migrated to *Seville*. Hence, in contradistinction to the city which (although far more ancient, see HISPALIS) became thus its virtual successor, Italica received the name of *Old Seville* (*Sevilla la Vieja*), under which name its ruins still exist near the wretched village of *Santi Ponce*, while the surrounding country retains the ancient name, *los campos de Talca*. The chief object in the ruins is the amphitheatre, which was in good preservation till 1774, "when it was used by the corporation of *Seville* for river dikes, and for making the road to *Badajoz*." (Ford.) Mr. Ford also states, that "on Dec. 12, 1799, a fine mosaic pavement was discovered, which a poor monk, named Jose Moscoso, to his honour, enclosed with a wall, in order to save it from the usual fate in Spain. Didot, in 1802, published for Laborde a splendid folio, with engravings and description. .... Now, this work is all that remains, for the soldiers of Soult converted the enclosure into a goat-pen." The only other portion of the ruins of Italica to be seen above-ground consists of some vaulted brick tanks, called *La Casa de los Baños*, which were the reservoirs of the aqueduct brought by Adrian from *Tejada*, 7 leagues distant. (Caes. *B. C.* ii. 20; *Bell. Alex.* 53; Gell. *Noct. Att.* xv. 13; Oros. v. 23; Geog. Rav.; Florez, *Esp. S.* vol. xii. pp. 227, foll.; Coins, *ap.* Florez, *Med. de Esp.* vol. ii. p. 477; Mionnet, vol. i. p. 17, Suppl. vol. i. p. 31; Sestini, p. 61; Eckhel, vol. i. p. 23; Ukert, vol. ii. pt. 1. p. 372; Ford, *Handbook of Spain*, pp. 63, 64.) [P. S.]

ITA'LICA. [CORFINIUM.]

ITANUM PR. [ITANUS.]

ITANUS (Ἴτανος, Ptol. iii. 17. § 4; Steph. B.: *Eth.* Ἰτάνιος), a town on the E. coast of Crete, near the promontory which bore the name of Itanum. (Plin. iv. 12.) In Coronelli's map there is a place called *Itagnia*, with a *Paleokastron* in the neighbourhood, which is probably the site of Itanus; the position of the headland must be looked for near *Xacro fiume* (Höck, *Kreta*, vol. i. p. 426), unless it be placed further N. at *Capo Salomon*, in which case the *Grándes* islands would correspond with the ONISIA and LEUCE of Pliny (*l. c.*; comp. *Mus. Class. Antiq.* vol. ii. p. 303).

According to Herodotus (iv. 151), the Theraeans, when founding Cyrene, were indebted for their knowledge of the Libyan coast to Corobius, a seller of purple at Itanus. Some of the coins of this city present the type of a woman terminating in the tail of a fish. (Eckhel, vol. ii. p. 314.) This type, recalling the figure of the Syrian goddess, coupled with the trade in purple, suggests a Phoenician origin. [E. B. J.]

COIN OF ITANUS.

ITARGUS. [ILARGUS.]

I'THACA (Ἰθάκη: *Eth.* Ἰθακήσιος and Ἰθακός: Ithacensis and Ithacus: *Thiáki*, Θιάκη, vulgarly; but this is merely an alteration, by a simple metathesis of the two first letters, from Ἰθάκη, which is known to be the correct orthography by the Ithacans themselves, and is the name used by all educated Greeks. Leake, *Northern Greece*, chap. xxii.) This island, so celebrated as the scene of a large portion of the Homeric poems, lies off the coast of Acarnania, and is separated from Cephallenia by a channel about 3 or 4 miles wide. Its name is said by Eustathius (*ad Il.* ii. 632) to have been derived from the eponymous hero Ithacus, mentioned in *Od.* xviii. 207. Strabo (x. 2) reckons the circumference of Ithaca at only 80 stadia: but this measurement is very short of the truth; its extreme length from north to south being about 17 miles, its greatest breadth about 4 miles, and its area nearly 45 sq. miles. The island may be described as a ridge of limestone rock, divided by the deep and wide *Gulf of Molo* into two nearly equal parts, connected by a narrow isthmus not more than half-a-mile across, and on which stands the *Paleocastro of Aëtós* (Ἀετός), traditionally known as the "Castle of Ulysses." Ithaca everywhere rises into rugged hills, of which the chief is the mountain of *Anoge* (Ἀνωγῆ: *Ital.* Anoi), in the northern division, which is identified with the NERITOS of Virgil (*Aen.* iii. 271) and the Νήριτον εἰνοσίφυλλον of Homer (*Od.* ix. 21). Its forests have now disappeared; and this is, doubtless, the reason why rain and dew are not so common here in the present as in Homer's age, and why the island no longer abounds in hogs fattened on acorns like those guarded by Eumaeus. In all other points, the poet's descriptions (*Od.* iv. 603, seq., xiii. 242, seq., ix. 27, seq.) exhibit a perfect picture of the island as it now appears, the general aspect being one of ruggedness and sterility, rendered striking by the bold and broken outline of the mountains and cliffs, indented by numerous harbours and creeks (λιμένες πάνορμοι, *Od.* xiii. 193). The climate is healthy (ἀγαθὴ κουροτρόφος, *Od.* ix. 27). It may here be observed, that the expressions applied to Ithaca, in *Od.* ix. 25, 26, have puzzled all the commentators ancient and modern: —

αὐτὴ δὲ χθαμαλὴ πανυπερτάτη εἰν ἁλὶ κεῖται
πρὸς ζόφον, αἱ δέ τ' ἄνευθε πρὸς ἠῶ τ' ἠέλιόν τε.

(Cf. Nitzsch, *ad loc.*; also *Od.* x. 196.) Strabo (x. 2) gives perhaps the most satisfactory explanation: he supposes that by the epithet χθαμαλή the poet intended to express how Ithaca *lies under*, as it were, the neighbouring mountains of Acarnania; while by that of πανυπερτάτη he meant to denote its position at the *extremity* of the group of islands formed by Zacynthus, Cephallenia, and the Echinades. For another explanation, see Wordsworth, *Greece, Pictorial, &c.*, pp. 355, seq.

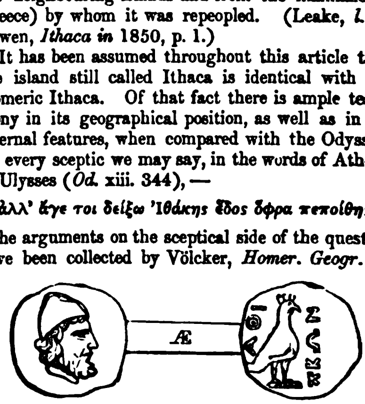
Ithaca is now divided into four districts (Βαθύ, Ἀετός, Ἀνωγῆ, Ἐξωγῆ, i. e. *Deep Bay, Eagle's Cliff, Highland, Outland*); and, as natural causes are likely to produce in all ages similar effects, Leake (*l. c.*) thinks it probable, from the peculiar conformation of the island, that the four divisions of the present day nearly correspond with those noticed by Heracleon, an author cited by Stephanus B. (*s. v.* Κροκύλειον). The name of one of these districts is lost by a defect in the text; the others were named Neïum, Crocyleium, and Aegireus. The Aegilips of Homer (*Il.* ii. 633) is probably the same with Aegireus, and is placed by Leake at the modern village of *Anoge*;

while he believes the modern capital town of *Bathý* to occupy the site of Crocyleia. (*Il. l. c.*) It is true that Strabo (pp. 376, 453) places Aegilips and Crocyleia in Leucas; but this appears inconsistent with Homer and other ancient authorities. (See Leake, *l. c.*)

Plutarch (*Quaest. Graec.* 43) and Stephanus B. (*s. v.*) state that the proper name of the ancient capital of Ithaca was Alcomenae or Alalcomenae, and that Ulysses bestowed this appellation upon it from his having been himself born near Alalcomenae in Boeotia. But this name is not found in Homer; and a passage in Strabo tends to identify it with the ruins on the isthmus of *Aëtós*, where the *fortress* and *royal residence* of the Ithacan chieftains probably stood, on account of the advantages of a position so easily accessible to the sea both on the eastern and western sides. It is argued by Leake (*l. c.*) that the Homeric *capital city* was at *Polis*, a little harbour on the NW. coast of the island, where some Hellenic remains may still be traced. For the poet (*Od.* iv. 844, seq.) represents the suitors as lying in wait for Telemachus on his return from Peloponnesus at Asteris, "a small island in the channel between Ithaca and Samos (*Cephalonia*)," where the only island is that now called Δασκάλιον, situated exactly opposite the entrance to Port *Polis*. The traditional name of *Polis* is alone a strong argument that the town, of which the remains are still visible there, was that which Scylax (*in Acarnania*), and still more especially Ptolemy (iii. 14), mentions as having borne the same name as the island. It seems highly probable that ἡ πόλις, or *the city*, was among the Ithacans the most common designation of their chief town. And if the Homeric capital was at *Polis*, it will follow that Mt. Neium, under which it stood (Ἰθάκης Ὑπονηΐου, *Od.* iii. 81), was the mountain of *Exoge* (*Ital. Exoi*), at the northern extremity of the island, and that one of its summits was the Hermaean hill (Ἑρμαῖος λόφος, *Od.* xvi. 471) from which Eumaeus saw the ship of Telemachus entering the harbour. It becomes probable, also, that the harbour Rheithrum (Ῥεῖθρον), which was "under Neium" but "apart from the city" (νόσφι πόληος, *Od.* i. 185), may be identified with either of the neighbouring bays of *Afáles* or *Frikés*. Near the village of *Exoge* may be observed the substructions of an ancient building, probably a temple, with several steps and niches cut in the rock. These remains are now called by the neighbouring peasants "the School of Homer."

The Homeric "Fountain of Arethusa" is identified with a copious spring which rises at the foot of a cliff fronting the sea, near the SE. extremity of Ithaca. This cliff is still called *Korax* (Κόραξ), and is, doubtless, that alluded to at *Od.* xiii. 407, seq., xiv. 5, seq., xiv. 398. (See, especially on this point, Leake, *l. c.*, and Mure, *Tour in Greece*, vol. i. p. 67, seq.)

The most remarkable natural feature of Ithaca is the *Gulf of Molo*, that inlet of the sea which nearly divides the island into two portions; and the most remarkable relic of antiquity is the so-called "Castle of Ulysses," placed, as has been already intimated, on the sides and summit of the steep hill of *Aëtós*, on the connecting isthmus. Here may be traced several lines of inclosure, testifying the highest antiquity in the rude structure of massive stones which compose them. The position of several gates is distinctly marked; there are also traces of a tower and of two large subterranean cisterns. There can be little doubt that this is the spot to which Cicero (*de Orat.* i. 44) alludes in praising the patriotism of Ulysses — "ut Ithacam illam in asperrimis saxis tanquam nidulam affixam sapientissimus vir immortalitati anteponeret." The name of *Aëtós*, moreover, recalls the striking scene in *Od.* ii. 146, seq. At the base of this hill there have been discovered several ancient tombs, sepulchral inscriptions, vases, rings, medals, &c. The coins of Ithaca usually bear the head of Ulysses, with the *pileus*, or conical cap, and the legend Ἰθακῶν; the reverse exhibiting a cock, an emblem of the hero's vigilance, Athena, his tutelar deity, or other devices of like import. (See Eckhel.)



The Homeric port of Phorcys (*Od.* xiii. 345) is supposed to be represented by a small creek now called *Dexia* (probably because it is on the *right* of the entrance to the harbour of *Bathý*), or by another creek now called *Skhinos*, both on the southern side of the *Gulf of Molo*. (Leake, *l. c.*) At a cave on the side of Mount *Stephanos* or *Merovugli*, above this gulf, and at some short distance from the sea, is placed the "Grotto of the Nymphs," in which the sleeping Ulysses was deposited by the Phoenicians who brought him from Scheria. (*Od.* xiii. 116, seq.) Leake (*l. c.*) considers this to be "the only point in the island exactly corresponding to the poet's data."

The modern capital of Ithaca extends in a narrow strip of white houses round the southern extremity of the horse-shoe port, or "deep" (Βαθύ), from which it derives its name, and which is itself but an inlet of the *Gulf of Molo*, often mentioned already. After passing through similar vicissitudes to those of its neighbours, Ithaca is now one of the seven Ionian Islands under the protectorate of Great Britain, and contains a population exceeding 10,000 souls, — an industrious and prosperous community. It has been truly observed that there is, perhaps, no spot in the world where the influence of classical associations is more lively or more pure; for Ithaca is indebted for no part of its interest to the rival distinctions of modern annals, — so much as its name scarcely occurring in the page of any writer of historical ages, unless with reference to its poetical celebrity. Indeed, in A. D. 1504, it was nearly, if not quite, uninhabited, having been depopulated by the incursions of Corsairs; and record is still extant of the privileges accorded by the Venetian government to the settlers (probably from the neighbouring islands and from the mainland of Greece) by whom it was repeopled. (Leake, *l. c.*; Bowen, *Ithaca in* 1850, p. 1.)

It has been assumed throughout this article that the island still called Ithaca is identical with the Homeric Ithaca. Of that fact there is ample testimony in its geographical position, as well as in its internal features, when compared with the Odyssey. To every sceptic we may say, in the words of Athena to Ulysses (*Od.* xiii. 344), —

ἀλλ' ἄγε τοι δείξω Ἰθάκης ἕδος ὄφρα πεποίθῃς.

(The arguments on the sceptical side of the question have been collected by Völcker, *Homer. Geogr.* 46

COIN OF ITHACA.

—74, but they have been successfully confuted by Rühle von Lilienstern, *Ueber das Homerische Ithaca*. The fullest authorities on the subject of this article are Gell, *Geography and Antiquities of Ithaca*, London, 1807; Leake, *Northern Greece*, vol. iii. pp. 24—55; Mure, *Tour in Greece*, vol. i. pp. 38—81; Bowen, *Ithaca in* 1850, London, 1852.) [G. F. B.]

ITHACE'SIAE INSULAE, is the name given by Pliny (iii. 7. s. 13) to some small islets opposite to Vibo on the W. coast of Bruttium. These can be no other than some mere rocks (too small to be marked on ordinary maps) which lie just opposite to the remains of *Bivona*, in the *Golfo di Sta. Eufemia*, and on which some traces of ancient buildings (probably connected with that port) were still visible in the days of Barrio. (Barrius, *de Situ Calabr.* ii. 13; Romanelli, vol. i. p. 57). [E. H. B.]

ITHO'ME (Ἰθώμη: *Eth.* Ἰθωμήτης, Ἰθωμαῖος). 1. A town of Histiaeotis in Thessaly, described by Homer as the "rocky Ithome" (Ἰθώμη κλωμακόεσσα, *Il.* ii. 729), is placed by Strabo within a quadrangle formed by the four cities, Tricca, Metropolis, Pelinnaeum, and Gomphi. (Strab. ix. p. 437.) It probably occupied the site of the castle which stands on the summit above the village of *Fanári*. Leake observed, near the north-western face of the castle, some remains of a very ancient Hellenic wall, consisting of a few large masses of stone, roughly hewn on the outside, but accurately joined to one another without cement. (Leake, *Northern Greece*, vol. iv. p. 510.)

2. A mountain fortress in Messenia, where the Messenians long maintained themselves against the Spartans in the First Messenian War. It was afterwards the citadel of Messene, when this city was founded by Epaminondas. For details, see MESSENE.

ITHO'RIA (Ἰθωρία), a town in Aetolia, near the Achelous, and a short distance south of Conope. It was situated at the entrance of a pass, and was strongly fortified both by nature and by art. It was taken by Philip V., and levelled to the ground, B. C. 219. (Pol. iv. 64.)

ITIUM PROMONTO'RIUM, is placed by Ptolemy (ii. 9. § 1) in Celtogalatia Belgica. After the mouths of the *Seine*, he mentions the outlet of the river Phrudis [FRUDIS], Icium (Ἴκιον ἄκρον), and then Gesoriacum (Γησοριακὸν ἐπίνειον), which is *Boulogne*. One of the old Latin versions of Ptolemy has Itium Promontorium, and others may have it too. He places Gesoriacum and Itium in the same latitude, and Itium due west of Gesoriacum. This is a great mistake, for, Itium being *Cap Grisnez*, the relative position of the two places is north and south, instead of east and west. There is no promontory on this part of the French coast north or south of *Boulogne* except *Grisnez*, at which point the coast changes its direction from south to north, and runs in a general ENE. direction to *Calais*, *Gravelines*, and *Dunkerque*. It is therefore certain that there is a great mistake in Ptolemy, both in the direction of the coast and the relative position of Gesoriacum and Itium. *Cap Grisnez* is a chalk cliff, the termination on the coast of the chalk hills which cross the department of *Pas de Calais*. The chalk cliffs extend a few miles on each side of *Cap Grisnez*, and are clearly seen from the English coast on a fine day. This cape is the nearest point of the French coast to the opposite coast of *Kent*. [G. L.]

ITIUS PORTUS (τὸ Ἴτιον, Strab. p. 199). When Caesar was preparing for his second British expedition (B. C. 54), he says (*B. G.* v. 2) that he ordered his forces to meet at "Portus Itius, from which port he had found that there was the most convenient passage to Britannia,—about 30,000 passus." In his first expedition, B. C. 55, he says that he marched, with all his forces, into the country of the Morini, because the passage from that coast to Britannia was the shortest (*B. G.* iv. 21); but he does not name the port from which he sailed in his first expedition; and this is an omission which a man can easily understand who has formed a correct notion of the Commentaries. It seems a plain conclusion, from Caesar's words (v. 2) that he sailed from the Itius on his first expedition; for he marched into the country of the Morini, in order to make the shortest passage (iv. 21); and he made a good passage (iv. 23). In the fifth book he gives the distance from the Itius to the British coast, but not in the fourth book; and we conclude that he ascertained this distance in his first voyage. Drumann (*Geschichte Roms*, vol. iii. p. 294) thinks that the passage in the fifth book rather proves that Caesar did not sail from Itius on his first voyage. We must accordingly suppose that, having had a good passage on his first voyage to Britannia, and back to the place from which he had sailed, he chose to try a different passage the second time, which passage he had learned (cognoverat) to be the most convenient (commodissimum). Yet he landed at the same place in Britannia in both his voyages (v. 8); and he had ascertained (cognoverat) in the first voyage, as he says, that this was the best landing-place. So Drumann, in his way, may prove, if he likes, that Caesar did not land at the same place in both voyages.

The name Itius gives some reason for supposing that Portus Itius was near the Promontorium Itium; and the opinion now generally accepted is, that Portus Itius is *Wissant* or *Witsand*, a few miles east of *Cap Grisnez*. The critics have fixed Portus Itius at various places; but not one of these guesses, and they are all guesses, is worth notice, except the guess that Itius is *Gesoriacum* or *Boulogne*. But the name Gesoriacum is not Itius, which is one objection to the supposition. The only argument in favour of *Boulogne* is, that it was the usual place from which the Romans sailed for Britannia after the time of Claudius, and that it is in the country of the Morini. Gesoriacum was the best spot that the Romans could choose for a regular place of embarkation, for it is adapted to be the site of a town and a fortified place, and has a small river. Accordingly it became the chief Roman position on this part of the French coast. [GESORIACUM.]

The distance of Portus Itius from the nearest port of Britannia, 30 M. P., is too much. It seems to be a just conclusion, that Caesar estimated the distance from his own experience, and therefore that he estimated it either to the cliffs about the *South Foreland*, where he anchored, or to the place seven or eight miles (for the MSS. of Caesar vary here) further along the coast, where he landed. It is certain that he first approached the British coast under the high chalk cliffs between *Folkestone* and *Walmer*. It is a disputed point whether he went from his anchorage under the cliffs northwards to *Deal*, or southward to *Sandgate* or *Hythe*. This matter does not affect the position of Itius, and it is not discussed here; but the writer maintains that Caesar landed on the beach at *Deal*. There are difficulties in this question, which the reader may examine by referring to the authorities mentioned at the end of this article. The pas-

sage in the fifth book (v. 8), in which Caesar describes his second voyage, shows very clearly where he landed. He sailed from Portus Itius, on his second expedition, at sunset, with a wind about SW. by W.; about midnight the wind failed him, he could not keep his course, and, being carried too far by the tide, at daybreak, when he looked about him, he saw Britannia on his left hand behind him. Taking advantage of the change of the tide, he used his oars to reach "that part of the island where he had found in the previous summer that there was the best landing." He had been carried a few miles past the Cantium Promontorium, or *North Foreland* but not out of sight, and he could easily find his way to the beach at *Deal*. There are many arguments to show that *Deal* was Caesar's landing-place, as it was for the Romans under the empire, who built near it the strong place of Rutupiae (*Richborough*), on the *Stour*, near *Sandwich*.

D'Anville makes out Caesar's distance of 30 M.P. thus. He reckons 22 or 24 M.P., at most, from Portus Itius to the English cliffs, and 8 miles from his anchorage under the cliffs to his landing-place make up 30. Perhaps Caesar means to estimate the whole distance that he sailed to his landing place; and if this is so, his estimate of "about 30 Roman miles" is not far from the truth, and quite as near as we can expect. Strabo (p. 199) makes the distance 320 stadia, or only 300, according to a note of Eustathius on Dionysius Periegetes (v. 566), who either found 300 in his copy of Strabo, or made a mistake about the number; for he derived his information about Caesar's passage only from Strabo. It may be observed here that Strabo mentions two expeditions of Caesar, and only one port of embarkation, the Itius. He understood Caesar in the same way as all people will do who can draw a conclusion from premises. But even 300 stadia is too great a distance from *Wissant* to the British coast, if we reckon 8 stadia to the Roman mile; but there is good reason, as D'Anville says, for making 10 stadia to the mile here. Pliny gives the distance from Boulogne to Britannia, that is, we must assume, to the usual landing place, Rutupiae, at 50 M.P., which is too much; but it seems to be some evidence that he could not suppose *Boulogne* to be Caesar's place of embarkation.

Caesar mentions another port near Itius. He calls it the Ulterior Portus (iv. 22, 28, 28), or Superior, and it was 8 M.P. from Itius. We might assume from the term Ulterior, which has reference to Itius, that this port was further to the north and east than Itius; and this is proved by what he says of the wind. For the wind which carried him to Britannia on his first expedition, his direct course being nearly north, prevented the ships at the Ulterior Portus from coming to the place where Caesar embarked (iv. 28). The Ulterior, or Superior, Portus is between *Wissant* and *Calais*, and may be *Sangatte*. *Calais* is too far off. When Caesar was returning from his first expedition (iv. 36, 37) two transport ships could not make the same ports—the Itius and the Ulterior or Superior—that the rest of the ships did, but were carried a little lower down (paulo infra), that is, further south, which we know to be Caesar's meaning by comparing this with another passage (iv. 28). Caesar does not say that these two ships landed at a "portus" as Ukert supposes (Gallien, p. 554), who makes a port unknown to Caesar, and gives it the name "Lower."

Du Cange, Camden, and others, correctly took Portus Itius to be *Wissant*. Besides the resemblance of name, Du Cange and Gibson have shown

MAP ILLUSTRATING THE POSITION OF PORTUS ITIUS.

A. A. *Strait of Dover*, or *Pas de Calais*. 1. Portus Itius (*Wissant*). 2. Itium Pr. (*Cap Grisnez*). 3. Gesoriacum, afterwards Bononia (*Boulogne*). 4. *Calais*. 5. *Sandgate*. 6. Portus Dubris (*Dover*). 7. Rutupiae (*Richborough*). 8. River *Stour*. 9. Cantium Pr. (*North Foreland*). 10. Regulbium (*Reculver*).

that of two middle age Latin writers who mention the passage of Alfred, brother of St. Edward, into England, one calls *Wissant* Portus Iccius, and the other Portus Wisanti. D'Anville conjectures that *Wissant* means "white sand," and accordingly the promontory Itium would be the White, a very good name for it. But the word "white," and its various forms, is Teutonic, and not a Celtic word, so far as the writer knows; and the word "Itius" existed in Caesar's time on the coast of the Morini, a Celtic people, where we do not expect to see a Teutonic name.

Wissant was known to the Romans, for there are traces of a road from it to Taruenna (*Therouenne*). It is no port now, and never was a port in the modern sense, but it was very well suited for Caesar to draw his ships up on the beach, as he did when he landed in England; for *Wissant* is a wide, sheltered, sandy bay. Froissart speaks of *Wissant* as a large town in 1346.

A great deal has been written about Caesar's voyages. The first and the best attempt to explain it, though it is not free from some mistakes, is Dr. Halley's, of which an exposition is given in the Classical Museum, No. xiii. by G. Long. D'Anville, with his usual judgment, saw that Itius must be *Wissant*, but he supposed that Caesar landed at *Hythe*, south of Dover. Walckenaer (*Géog. des Gaules*, vol. i. pp. 448, 452) has some remarks on Itius, which he takes to be *Wissant*; and there are remarks on Portus Itius in the Gentleman's Magazine for September, 1846, by H. L. Long, Esq. Perhaps the latest examination of the matter is in G. Long's edition of Caesar, *Note on Caesar's British Expeditions*, pp. 248—257. What the later German geographers and critics, Ukert and others, have said of these voyages is of no value at all. [G. L.]

ITON or ITO'NUS (Ἴτων, Hom.; Ἴτωνος, Strab.), a town of Phthiotis in Thessaly, called by Homer "mother of flocks" (*Il.* ii. 696), was situated 60 stadia from Alus, upon the river Cuarius or Coralius, and above the Crocian plain. (Strab. ix. p. 435.) Leake supposes the *Kholó* to be the Cuarius, and places Itonus near the spot where the river issues from the mountains; and as, in that case, Iton possessed a portion of the pastoral highlands of Othrys, the epithet "mother of flocks" appears to have been well adapted to it. (Leake, *Northern Greece*, vol. iv. pp. 356, 357.) Iton had a celebrated temple of Athena, whose worship, under the name of the Itonian Athena, was carried by the Boeotians, when they were expelled from Thessaly, into the country named after them. (Strab. *l. c.*; Steph. B. *s. v.*; Apollod. ii. 7. § 7.; Appollon. i. 551, with Schol.; Callim. *Hymn. in Cer.* 74.; Paus. i. 13. § 2, iii. 9. § 13, ix. 34. § 1, x. 1. § 10; Plut. *Pyrrh.* 26.)

ITO'NE (Ἰτώνη), a town in Lydia of unknown site. (Dionys. Per. 465; Steph. B. *s. v.*) [L. S.]

ITUCCI (Plin. iii. 1. s. 3), or ITUCI (Coins; Ἰτύκη, Appian, *Hisp.* 66, 68), a city in the W. of Hispania Baetica. Under the Romans, it was a *colonia immunis*, with the surname VIRTUS JULIA, and it belonged to the conventus of Hispalis. Its probable site, in the opinion of Ukert, was between *Martos* and *Espejo*, near *Valensuela*. (Ukert, vol. ii. pt. 1. p. 369; Coins, *ap.* Florez, *Med. de Esp.* vol. ii. p. 487; Mionnet, vol. i. p. 18, Suppl. vol. i. p. 32; Sestini, p. 63; Eckhel, vol. i. p. 24.) [P. S.]

ITUNA, in Britain, mentioned by Ptolemy (ii. 3. § 2) as an aestuary immediately to the north of the *Moricambe* aestuary = *Morecambe Bay.* This identifies it with the *Solway Firth.* [R. G. L.]

ITURAEA (Ἰτουραία), a district in the NE. of Palestine (Strab. xvi. p. 755; Plin. v. 19), which, with Trachonitis, belonged to the tetrarchy of Philip. (*St. Luke*, iii. 1; comp. Joseph. *Ant.* xv. 10. § 1.) The name is so loosely applied by the ancient writers that it is difficult to fix its boundaries with precision, but it may be said roughly to be traversed by a line drawn from the Lake of Tiberias to Damascus. It was a mountainous district, and full of caverns (Strab. *l. c.*): the inhabitants, a wild race (Cic. *Phil.* ii. 24), favoured by the natural features of the country, were in the habit of robbing the traders from Damascus (Strab. xvi. p. 756), and were famed as archers. (Virg. *Georg.* ii. 448; Lucan. vii. 230, 514.) At an early period it was occupied by the tribe of Jetur (1 *Chron.* v. 19; Ἰτουραῖοι, LXX.), whose name is connected with that of Jetur, a son of Ishmael. (1 *Chron.* i. 31.) The Ituraeans—either the descendants of the original possessor, or, as is more probable, of new comers, who had occupied this district after the exile, and assumed the original name—were eventually subdued by king Aristobulus, B.C. 100. who compelled them to be circumcised, and incorporated them in his dominions. (Joseph. *Ant.* xiii. 11. § 3.) The mountain district was in the hands of Ptolemaeus, tetrarch of Chalcis (Strab. xvi. p. 753); but when Pompeius came into Syria, Ituraea was ceded to the Romans (Appian. *Mithr.* 106), though probably it retained a certain amount of independence under native vassal princes: M. Antonius imposed a heavy tribute upon it. (Appian, *B. C.* v. 7.) Finally, under Claudius, it became part of the province of Syria. (Tac. *Ann.* xii. 23; Dion Cass. lix. 12.) The district *El-Djedûr*, to the E. of Hermon (*Djebel-esh-Scheikh*), and lying W. of the *Hadj* road, which according to Burckhardt (*Trav.* p. 286) now contains only twenty inhabited villages, comprehended the whole or the greater part of ancient Ituraea. (Münter, *de Reb. Ituraeor.* Havn. 1824; comp. Winer, *Realwörterbuch*, *s. v.*; Ritter, *Erdkunde*, vol. xv. pt. ii. pp. 354—357, 899.) [E. B. J.]

ITURISSA. [TURISSA.]

ITYCA. [ITUCCI.]

ITYS, in Britain, mentioned by Ptolemy (ii. 3. § 1) as a river lying north of the Epidian promontory (*Mull of Cantyre*), with the river Longus between. As this latter = *Loch Linnhe*, the *Itys* is probably the *Sound of Sleat*, between the *Isle of Skye* and the mainland. In the Monumenta Britannica we have *Loch Torridon, Loch Duich, Loch Eu.* [R. G. L.]

JUDAEA. [PALAESTINA.]

JUDAH. [PALAESTINA.]

IVERNIA. [IERNE.]

IVERNIS (Ἰουερνίς), mentioned by Ptolemy (ii. 2. § 10) as one of the *inland* towns of Ireland, the others being Rhigia, Rhaeba, Laberus, Macolicum, another Rhaeba, Dunum. Of these, Dunum has been identified with *Down*, and Macolicum with *Mallow*, on the strength of the names. Laberus, on similar but less satisfactory ground, = Kil-*lair* in *West Meath.* Ivernus is identified by O'Connor with *Dun-keron*, on the *Kenmare* river; but the grounds on which this has been done are unstated. [R. G. L.]

IVIA or JUVIA. [GALLAECIA.]

JULIA CONSTANTIA. [OSSET.]

JULIA FIDENTIA. [ULIA.]

JULIA JOZA (Ἰουλία Ἰόζα), a city on the coast of Hispania Baetica, between Gades and Belon, colonized by a population of Romans mixed with the removed inhabitants of the town of Zelis, near Tingis, on the Libyan shore of the Straits. Thus far Strabo (iii. p. 140): later writers speak of a place named JULIA TRANSDUCTA, or simply TRANSDUCTA (Ἰουλία Τρανσδοῦκτα, Ptol. ii. 4. § 6; Marcian. Heracl. p. 39; Geog. Rav.), E. of Mellaria; and coins are extant with the epigraph JULIA TRADUCTA (Florez, *Med. de Esp.* vol. ii. p. 596, *Esp. S.* vol. x. p. 50; Mionnet, vol. i. p. 26, Suppl. vol. i. pp. 19, 45; Sestini, *Med. Isp.* p. 90; Num. Goth.; Eckhel, vol. i. pp. 29—31). Mela does not mention the place by either of these names; but, after speaking of Carteia, he adds the following remarkable words: *et quam transvecti ex Africa Phoenices habitant, atque unde nos sumus, Tingentera.* (Mela, ii. 6.) It can hardly be doubted that all these statements refer to the same place; nay, the very names are identical, *Transducta* being only the Latin translation of the word *Joza* (from יצא, *egressus est*) used by the Phoenician inhabitants to describe the origin of the city. Its site must have been at or near *Tarifa*, in the middle of the European shore of the Straits, and on the S.-most point of the peninsula. (*Mém. de l'Acad. des Inscr.* p. 103; *Philos. Trans.* xxx. p. 919; Mentelle, *Geog. Comp. Esp. Anc.* p. 229; Ukert, ii. 1. p. 344.) [P. S.]

JULIA LIBYCA. [CERRETANI.]

JULIA MYRTILIS. [MYRTILIS.]

JULIA ROMULA. [HISPALIS.]

JULIA TRANSDUCTA. [JULIA JOZA.]

JULIA VICTRIX. [TARRACO.]

JULIACUM, a town in Gallia Belgica. In the Antonine Itin. a road runs from Castellum (*Cassel*) through *Tongern* to Juliacum, and thence to Colonia (*Cologne*). Juliacum is 18 leagues from Colonia. Another road runs from Colonia Trajana to

Juliacum, and from Juliacum through Tiberiacum to *Cologne*. On this road also Juliacum is placed 18 leagues from *Cologne*. Juliacum is *Juliers*, or *Jülich*, as the Germans call it, on the river *Roer*, on the carriage road from *Cologne* to *Aix-la-Chapelle*.

The first part of the word seems to be the Roman name Juli-, which is rendered more probable by finding between Juliacum and Colonia a place Tiberiacum (*Berchem* or *Berghen*). *Acum* is a common ending of the names of towns in North Gallia. [G. L.]

JULIANO'POLIS (Ἰουλιανούπολις), a town in Lydia which is not mentioned until the time of Hierocles (p. 670), according to whom it was situated close to Maeonia, and must be looked for in the southern parts of Mount Tmolus, between Philadelphia and Tralles. (Comp. Plin. v. 29.) [L. S.]

JULIAS. [BETHSAIDA.]

JULIO'BONA (Ἰουλιόβονα), a town in Gallia Belgica, is the city of the Caleti, or Caleitae as Ptolemy writes the name (ii. 8. § 5), who occupied the *Pays de Caux*. [CALETI.] The place is *Lillebone*, on the little river *Bolbec*, near the north bank of the *Seine*, between *Havre* and *Caudebec*, in the present department of *Seine Inférieuse*. The Itins. show several roads from Juliobona; one to Rotomagus (*Rouen*), through Breviodurum; and another through Breviodurum to Noviomagus (*Lisieux*), on the south side of the *Seine*. The road from Juliobona to the west terminated at Carocotinum. [CAROCOTINUM.] The place has the name Juliabona in the Latin middle age writings. It was a favourite residence of the dukes of Normandie, and William, named the Conqueror, had a castle here, where he often resided.

The name Juliobona is one of many examples of a word formed by a Roman prefix (Julio) and a Celtic termination (Bona), like Augustobona, Juliomagus. The word Divona or Bibona [DIVONA] has the same termination. It appears from a middle age Latin writer, cited by D'Anville (*Notice, &c.*, Juliobona), that the place was then called Illebona, from which the modern name *Lillebonne* has come by prefixing the article; as the river Oltis in the south of France has become *L'Olt*, and *Lot*.

The name Juliobona, the traces of the old roads, and the remains discovered on the site of *Lillebonne* prove it to have been a Roman town. A Roman theatre, tombs, medals, and antiquities, have been discovered. [G. L.]

JULIOBRI'GA (Ἰουλιόβριγα), the chief city of the Cantabri, in Hispania Tarraconensis, belonging to the conventus of Clunia, stood near the sources of the *Ebro*, on the eminence of *Retortillo*, S. of *Reyñosa*. Five stones still mark the bounds which divided its territory from that of Legio IV. It had its port, named Portus Victoriae Juliobrigensium, at *Santonna*. (Plin. iii. 3. s. 4, iv. 20. s. 34; Ptol. ii. 6. § 51; Inscr. *ap.* Gruter, p. 354; Morales, *Antig.* p. 68; Florez, *Esp. S.* vol. vi. p. 417; *Cantabr.* p. 64; Ukert, vol. ii. pt. 1. p. 443.) [P. S.]

JULIOMAGUS (Ἰουλιόμαγος), a town of the Andecavi, in Gallia Lugdunensis, and their capital. (Ptol. ii. 8. § 8.) It is named Juliomagus in the Table, and marked as a capital. It is now *Angers*. [ANDECAVI.] [G. L.]

JULIO'POLIS. [GORDIUM and TARSUS.]

JULIO'POLIS AEGYPTI. Pliny (vi. 23. s. 26) alone among ancient geographers mentions this place among the towns of Lower Aegypt. From the silence of his predecessors, and from the name itself, we may reasonably infer its recent origin. According to Pliny, Juliopolis stood about 20 miles distant from Alexandreia, upon the banks of the canal which connected that city with the Canopic arm of the Nile. Some geographers suppose Juliopolis to have been no other than Nicopolis, or the City of Victory, founded by Augustus Caesar in B. C. 29, partly to commemorate his reduction of Aegypt to a Roman province, and partly to punish the Alexandrians for their adherence to Cleopatra and M. Antonius. Mannert, on the contrary (x. i. p. 626), believes Juliopolis to have been merely that suburb of Alexandreia which Strabo (xvii. p. 795) calls Eleusis. At this place the Nile-boats, proceeding up the river, took in cargoes and passengers. [W. B. D.]

IU'LIS. [CEOS.]

JU'LIUM CA'RNICUM (Ἰούλιον Κάρνικον, Ptol: *Zuglio*), a town of the Carni, situated at the foot of the Julian Alps, which, from its name, would seem to have been a Roman colony founded either by Julius Caesar, or in his honour by Augustus. If Paulus Diaconus is correct in ascribing the foundation of Forum Julii to the dictator himself (P. Diac. *Hist. Lang.* ii. 14), there is little doubt that Julium Carnicum dates from the same period: but we have no account of its foundation. Ptolemy in one place distinctly describes it as in Noricum (viii. 7. § 4), in another more correctly as situated on the frontiers of Noricum and Italy (μεταξὺ τῆς Ἰταλίας καὶ Νωρικοῦ, ii. 13. § 4). But Pliny expressly includes it in the territory of the Carni and the tenth region of Italy ("Julienses Carnorum," iii. 19. s. 23), and its position on the S. side of the Alps clearly entitles it to be considered in Italy. Its position is correctly indicated by the Itinerary of Antoninus (p. 219), which places it 60 M. P., from Aquileia, on the road leading nearly due N. from that city over the Julian Alps. The first stage on this road, "Ad Tricesimum," still retains the name of *Trigesimo*, and the site of Julium Carnicum is marked by the village of *Zuglio* (where some Roman remains have been discovered), in a side valley opening into that of the *Tagliamento*, about 4 miles above *Tolmezzo*. The pass from thence over the *Monte di Sta. Croce* into the valley of the *Gail*, now practicable only for mules, follows the line of the ancient Roman road, given in the Itinerary, and therefore probably a frequented pass under the Romans [ALPES, p. 110, No. 7]: but the inscription on the faith of which the construction of this road has been ascribed to Julius Caesar is a palpable forgery. (Cluver. *Ital.* p. 200.) [E. H. B.]

JUNCARIA, JUNCARIUS CAMPUS. [INDIGETES.]

JUNONIA INSULA. [FORTUNATAE INS.]

JURA. [HELVETII; GALLIA, p. 951.]

JURCAE (Ἴυρκαι), mentioned by Herodotus (iv. 22) as lying contiguous to the Thyssagetae, who lay beyond the Budini, who lay beyond the Sauromatae of the Palus Maeotis and Lower Tanaïs. Their country was well-wooded. They were hunters, and had horses. This points to some portion of the lower *Uralian* range. They were probably tribes of the Ugrian stock, akin to the present *Morduins*, *Tsherimiss*, *Tshuwashes*, of which they were the most southern portion. The reason for for this lies in the probability of the name being a derivative from the root *-kr-* (as in *Ukraine* and *Carin-thia*) = *border*, or boundary, some form of which gave the Slavonic population their equivalent to the Germanic name *Marcomanni* = *March-men*. [R. G. L.]

JUSTINIA'NA. [CARTHAGO: HADRUMETUM.]

JUSTINIA'NA PRIMA. [SCUPI.]

JUSTINIANO'POLIS. 1. A city in Epeirus, formerly called Hadrianopolis. [HADRIANOPOLIS.]

2. The later name of Hadrumetum in Africa. [HADRUMETUM.]

JUTHUNGI (Ἰούθουγγοι), a German tribe dwelling on the banks of the Danube. They are described by some ancient writers as a part of the Alemanni (Amm. Marc. xvii. 6); but they belonged more probably to the Gothic race: even their name seems to be only another form for Gothi or Gothones. (Ambros. *Epist.* 20.) Dexippus, from whom we learn most about their history, calls them a Scythian tribe, which, however, clearly means that they were Goths.

In the reign of the emperor Aurelian the Juthungi invaded Italy, and, being defeated, they sued for peace, but were obliged to return without having effected their purpose: afterwards they made preparations for another invasion. (Dexip. pp. 11, 12, 18, 19, 21, ed. Niebuhr and Bekker.) In these wars, however, they never appeared alone, but always in conjunction with others, either Alemannians, Suevi, or Goths. (See Eisenschmidt, *de Origine Ostrogothorum et Visigothorum*, p. 26; Latham, Tacit. *Germ.* Epileg. p. cxiii.) [L. S.]

JUTTAH (Ἰτάν, LXX.), a town of Judah (*Josh.* xv. 55), appropriated to the priests; according to Eusebius (*Onomast. s. v.* Ἰεττάν) it was 18 M. P. from Eleutheropolis. Reland (*Palaest.* p. 870) supposes this to have been the residence of Zacharias and Elizabeth, and the birthplace of John the Baptist, — the πόλις Ἰούδα of Luke, i. 39, being so written, by a corruption or from a softer pronunciation, instead of πόλις Ἰούτα. The modern *Yŭtta*, on the site of the old town, in which there are said to be indications of old remains, preserves the ancient name. (Robinson, *Bib. Res.* vol. ii. pp. 190, 195, 628; Ritter, *Erdkunde*, vol. xv. pt. i. pp. 638, 641; Winer, *s. v.*) [E. B. J.]

JUVAVUM, JUVA'VIA, a town in the interior of Noricum, on the left bank of the river Ivarus. It is the modern city of *Salzburg*, situated in an extensive and fertile valley, on the slope of a range of a high mountain. It is chiefly known from inscriptions: one of which (Orelli, no. 496) describes the place as a colony planted by the emperor Hadrian; but its genuineness is disputed. (Orelli, *Inscript.* vol. i. p. 138.) Juvavium was the head-quarters of the fifth cohort of the first legion (*Notit. Imper.*) and the residence of the governor of the province. At an earlier period it seems to have been the residence of the native kings of Noricum. In the second half of the fifth century it was destroyed by the Heruli; but was restored as early as the seventh century, and still contains many beautiful remains of antiquity, especially mosaics. (Comp. Orelli, *Inscript.* nos. 496, 497; *Itin. Ant.* p. 235, where it bears the erroneous name of Jovavis; Eugipp. *Vit. S. Sever.* 13, 24, where it is called Iopia; *Vit. S. Ruperti*, ap. Basnage, tom. iii. pt. 2. p. 273; Eginhard, *Vit. Caroli M.* 33; *Juvavia, oder Nachrichten vom Zustande der Gegenden und Stadt Juvavia*, Salzburg, 1784, fol.) [L. S.]

K.

KADESH (Καδής, LXX), or KADESH-BARNEA, a site on the SE. of Palestine, with a fountain, EN-MISHPAT (*Gen.* xiv. 7, xvi. 14), where the Israelites encamped with the intention of entering the Promised Land (*Num.* xxxii. 8), and the point from which the spies were sent. (*Num.* xiii. xiv. 40—45, xxi. 1—3; *Deut.* i. 41—44; comp. *Judg.* i. 17.) The supposition that the Kadesh-Barnea, to which the Israelites first came, is different from the Kadesh-Meribah, which formed their later encampment, where the wants of the people were miraculously supplied from the smitten rock (*Num.* xx. 14), reconciles some difficulties. On the hypothesis that there were two places of this name, the first Kadesh and its localities agrees very well with the spring of *'Ain Kŭdēs* or *Kŭdēs*, lying to the E. of the highest part of *Djebel Halal*, towards its N. extremity, about 12 miles from *Moilâhhi Hadjar*. (Beer-lahai-roi, *Gen.* xvi. 14), and something like due S. from *Khalasa* (Chezil, *Josh.* xv. 30), which has been identified by Mr. Rowlands (Williams, *Holy City*, vol. i. App. pp. 466—468) with the rock struck by Moses.

The second Kadesh, to which the Israelites came with a view of passing through the land of Edom, coincides better with the more easterly position of *'Ain-el-Weibeh* which Dr. Robinson (*Bib. Res.* vol. ii. pp. 582, 610, 622) has assigned to it (comp. Kitto, *Scripture Lands*, p. 82). Ritter (*Erdkunde*, vol. xiv. pp. 1077—1089), who refers to the latest discoveries in this district, does not determine whether one Kadesh would sufficiently answer all the conditions required. [E. B. J.]

KADMONITES (Κεδμωναῖοι, LXX.), a nation of Canaan at the time that Abraham sojourned in the land (*Gen.* xv. 19). The name *Beni-Kedem*, "children of the East" (*Judg.* vi. 3; comp. *Isa.* xi. 14), was probably not distinctive of, but collectively applied to various peoples, like the Saracens in the middle ages, and the Beduins in later times. (Ritter, *Erdkunde*, vol. xv. pt. i. p. 138.) [E. B. J.]

KAMON (Καμών, LXX.), a town in Gilead, belonging to the tribe of Manasseh, where Jair died. (*Judges*, x. 5; comp. Joseph. *Antiq.* v. 7. § 6.) The Kamona (Καμωνά) of Eusebius, which lay 6 M. P. to the N. of Legio (*Onomast. s. v.*), must have been another place of the same name; but the city which Polybius (v. 70) calls Camus (Καμοῦς), and which was taken, with other places in Peraea, by Antiochus, is identical with the town in Gilead. (Reland, *Palaest.* 649; Winer, *s. v.*; Von Raumer, *Palest.* p. 242; Ritter, *Erdkunde*, vol. xv. p. 1026.) [E.B.J.]

KANAH (Κανά, LXX.). 1. A town in the N. district of Asher. (*Josh.* xix. 28.) Dr. Robinson recognises it in the large village of *Kâna*, on the brow of the *Wady-'Ashûr*, near Tyre.

2. A river which divided the district of Manasseh from that of Ephraim (*Josh.* xvi. 8, xvii. 9, 10), probably the river which discharges itself into the sea between Caesareia and Apollonia (Arundinetis; comp. Schultens, *Vita Salad.* pp. 191, 193), now the *Nahr Abu-Zubâra*. [E. B. J.]

KAPHARABIS (Καφαραβίς), a fortified place, in Idumaea, taken, with Kaphethra, by Cerealis, A. D. 69. (Joseph. *B. J.* iv. 9. § 9.) [E. B. J.]

KEDEMOTH (Βακεδμώθ, LXX.), a city in the tribe of Reuben (*Josh.* xiii. 18), which gave its name to the wilderness of Kedemoth, on the borders of the river Arnon, from whence Moses sent messengers of peace to Sihon king of Heshbon (*Deut.* ii. 26.) Its site has not been made out. (Ritter, *Erdkunde*, vol. xv. pt. i. pp. 574, 1208; Winer, *s. v.*) [E. B. J.]

KEDESH (Καδής, LXX.). 1. A town of Naphtali, 20 M. P. from Tyre. (Euseb. *Onomast. s. v. Cedes.*) Its Canaanitish chieftain was slain at the conquest of the land (*Josh.* xii. 22); afterwards it belonged to the Levites, and was one of the cities of refuge. (*Josh.* xx. 7, xxi. 32; 1 *Chron.* vi. 76.) Barak was born here (*Judges*, iv. 6): and Tiglath-Pileser made the conquest of it (2 *Kings*, xv. 29). It was the scene of the victory of Jonathan Maccabaeus over the princes of Demetrius (1 *Macc.* xi. 63—73), and was the birthplace of Tobias (Κύδις τῆς Νεφθαλείμ, *Tobit*, i. 2). In Josephus, Κύδισα (*Antiq.* ix. 11. § 1) or Κέδασα (*Antiq.* xiii. 5. § 1) is spoken of as the boundary between Tyre and Galilee: during the war it appears to have been hostile to Galilee (*B. J.* ii. 18. § 1). The strongly fortified place in this district, called Κυδοισσοί by the same writer (*B. J.* iv. 2. § 3), is probably the same as Kedesh. A village on the hills opposite the marshes of *Húlet-Bâniâs*, still called *Kedes*, is identified by Dr. Robinson with the ancient city. (*Bibl. Res.* vol. iii. p. 355.) *Kedes* was visited in 1844 by the Rev. Eli Smith, who has a full account of it in MS. (*Biblioth. Sacra*, vol. iii. p. 203.)

2. A town in the S. district of the tribe of Judah. (*Josh.* xv. 23.)

3. A town of Issachar, belonging to the Levites. (1 *Chron.* vi. 72; Reland, *Palaest.* p. 668; Winer, *Biblisch. Reclwört. s. v.*; Von Raumer, *Palest.* p. 129; Ritter, *Erdkunde*, vol. xv. pp. 246—252.) [E. B. J.]

KEDRON, KIDRON. [JERUSALEM.]

KEILAH (Κεϊλά, LXX.; Κίλλα, Joseph. *Antiq.* vi. 13. § 1; Κηλά, Euseb.), a city in the tribe of Judah (*Josh.* xv. 44), 8 M. P. from Eleutheropolis. (Euseb. *Onomast. s. v.*) When the city was besieged by the Philistines, David relieved it, but the thankless inhabitants would have delivered him into the hands of Saul. (1 *Sam.* xxiii. 1—13.) It assisted in the building of the walls of Jerusalem (*Neh.* iii. 17, 18); and, according to tradition, the prophet Habakkuk was buried here. (Sozomen, *H. E.* vii. 29; Niceph. *H. E.* xii. 48; Reland, *Palaest.* p. 698; Winer, *Biblisch. Realwört. s. v.*; Von Raumer, *Palest.* p. 207.) [E. B. J.]

KENITES (Κιναῖοι, LXX.), a semi-nomad tribe of Midianites, dwelling among the Amalekites. (*Gen.* xv. 19; *Num.* xxiv. 21; 1 *Sam.* xv. 6.) Hobab (Jethro), the father-in-law of Moses, and Heber, the husband of Jael, who slew Sisera (*Judg.* i. 16, iv. 11), belonged to this race. The Rechabites are mentioned, with other families, as belonging to the Kenites. (1 *Chron.* ii. 55; *Jer.* xxxv. 2; Winer, *s. v.*; Ritter, *Erdkunde*, vol. xv. pp. 135—138; Ewald, *Gesch. des Volkes Israel.* vol. i. p. 337, vol. ii. p. 31.) [E. B. J.]

KENIZZITES (Κενεζαῖοι, LXX.), a Canaanitish tribe. (*Gen.* xv. 19.) Caleb, the son of Jephunneh, is called a Kenezite (*Num.* xxxii. 12; *Josh.* xiv. 6), and Othniel, his younger brother, is also called a son of Kenaz. (*Judg.* i. 13, iii. 9; comp. *Josh.* xv. 17; 1 *Chron.* iv. 13.) Another branch of this race are referred to the Edomites. (*Gen* xxxvi. 11; Winer, *s. v.*; Ritter, *Erdkunde*, vol. xv. p. 138; Ewald, *Gesch. des Volkes Israel.* vol. i. p. 338.) [E. B. J.]

KERIOTH (Καριώθ, LXX.). 1. A town of the tribe of Judah. (*Josh.* xv. 25.) It was probably the birthplace of the traitor Judas, who owed his surname (Ἰσκαριώτης) to this place. (Comp. Winer, *s. v. Judas.*) Dr. Robinson (*Bibl. Res.* vol. ii. p. 472) has suggested that it may be represented by *El-Kŭreyetein*, situated at the foot of the mountain ridge S. of Hebron, where there are sites of ruins visible.

2. A town of Moab. (*Jer.* xlviii. 24, 41; *Amos*, ii. 2.) [E. B. J.]

KIRJATH, a word signifying in Hebrew "town," or "city;" the following are the principal places to which this term is attached.

1. KIRJATHAIM (Κιριαθαίμ, LXX.), or the "double city," one of the most ancient towns in the country E. of the Jordan, as it was in the hands of the Emims (*Gen.* xiv. 5; comp. Ewald, *Gesch. des Volkes Israel.* vol. i. p. 308), who were expelled from it by the Moabites. (*Deut.* ii. 9, 11.) Kirjathaim was afterwards assigned to the children of Reuben (*Num.* xxxii. 37; *Josh.* xiii. 19); but during the exile the Moabites recovered this and other towns. (*Jer.* xlviii. 1, 23; *Ezek.* xxv. 9.) Eusebius and Jerome (*Onomast. s. v.* Καριαθαίμ) describe it as being full of Christians, and lying 10 M. P. W. of Medeba. Burckhardt (*Trav.* p. 367) heard of ruins called *El-Teim*, half an hour W. of the site of Medeba, which he conjectures to have been this place, the last syllable of the name being retained. This does not agree with the distance in the Onomasticon, but Jerome is probably wrong in identifying the Christian town with the ancient Kirjathaim, as the former is no doubt, from the data assigned by him, the modern *Kureyeiât*, S. of the *Wady Zŭrka Maïn*, and the latter the *El-Teim* of Burckhardt, to the N. of the *Wady*. (Comp. Ritter, *Erdkunde*, vol. xv. pp. 1185, 1186.) There was another place of this name in the tribe of Naphtali. (1 *Chron.* vi. 76.)

2. KIRJATH-ARBA, the ancient name of Hebron, but still in use in the time of Nehemiah (xi. 25). [HEBRON.]

3. KIRJATH-BAAL. [KIRJATH-JEARIM.]

4. KIRJATH-HUZOTH, or "city of streets," a town of Moab. (*Num.* xxii. 39.)

5. KIRJATH-JEARIM, or "city of forests," one of the four towns of the Gibeonites (*Josh.* ix. 17), and not far distant from Beeroth (*El-Bireh*). (*Ezra*, ii. 25.) At a later period the ark was brought here from Beth-Shemesh (1 *Sam.* vii. 1, 2), and remained there till it was removed to Jerusalem (1 *Chron.* xiii. 6). The place was rebuilt and inhabited after the exile (*Ezra*, *l. c.*; *Neh.* vii. 29). Josephus (*Ant.* vi. 1. § 4) says that it was near to Beth-Shemesh, and Eusebius and Jerome (*Onomast. s. v. Baal-Carathiarim*) speak of it, in their day, as a village 9 or 10 M. P. from Jerusalem, on the way to Diospolis (*Lydda*). Dr. Robinson (*Bibl. Res.* vol. ii. pp. 334—337) has identified it with the present *Kuryet-el-'Enâb*, on the road to *Ramleh*. The monks have found the ANATHOTH of Jeremiah (i. 1; comp. Hieron. *in loc.*; *Onomast. s. v.*; Joseph. *Ant.* x. 7. § 3), which is now represented by the modern *'Anâta* at *Kŭryet-el-'Enâb*, but the ecclesiastical tradition is evidently incorrect. There was formerly here a convent of the Minorites, with a Latin church. The latter remains entirely deserted, but not in ruins; and is one of the largest and most solidly constructed churches in Palestine. (Ritter, *Erdkunde*, vol. xvi. pp. 108—110.)

6. KIRJATH-SEPHER, or "city of the book" (*Josh.* xv. 15, 16; *Judg.* i. 11), also called KIRJATH-SANNAH, "city of palms." (*Josh.* xv. 49.) Afterwards it took the name of DEBIR (Δαβίρ, LXX.), a "word" or "oracle." Debir was captured by Joshua (x. 38), but being afterwards retaken by the Canaanites, Caleb gave his daughter Achsa to Othniel, for his

bravery in carrying it by storm (*Josh.* xv. 16—20). It belonged afterwards to the priests. (*Josh.* xxi. 15; 1 *Chron.* vi. 58.) Debir is afterwards lost sight of; but from the indications already given, it appears to have been near Hebron,—but the site has not been made out. There was a second Debir in the tribe of Gad. (*Josh.* xiii. 26.) (Von Raumer, *Palest.* p. 182; Winer, *s. v.*) [E. B. J.]

KIR-MOAB (τὸ τεῖχος τῆς Μωαβίτιδος, LXX.), "the stronghold of Moab." (*Isa.* xvi.), called also KIR-HERESETH and KIR-HERES. (*Isa.* xvi. 7, 11; *Jer.* xlviii. 31.) In the Chaldee version and the Greek of the Apocrypha, it appears in the form of Kerakka-Moab, and Characa (Χάρακα, 2 *Macc.* xii. 17). Under this latter name, more or less corrupted, it is mentioned by Ptolemy (Χαράκωμα, v. 17. § 5; comp. Χαρακμῶβα, Steph. B.) and other writers, both ecclesiastical and profane, down to the centuries before the Crusades. (Abú-l-féda, *Tab. Syr.* p. 89; Schultens, *Index ad Vit. Salad. s. v.*) The Crusaders found the name extant, and erected the fortress still known as *Kerak*, which, with that of *Shôbek*, formed the centre of operations for the Latins E. of the Jordan. With the capture of these, after a long siege by Saladin, A. D. 1188, the dominion of the Franks over this territory terminated. (Wilken, *die Kreuzz*, vol. iv. pp. 244—247.) The whole of this district was unknown till A. D. 1806, when Seetzen (Zachs, *Monatl. Corr.* xviii. pp. 433, foll.) penetrated as far as *Kerak*. A fuller account of the place is given by Burckhardt (*Trav.* pp. 379—387), by whom it was next visited in 1812; and another description is furnished by Irby and Mangles (*Trav.* pp. 361—370), who followed in the same direction in 1818. (Robinson, *Bibl. Res.* vol. ii. pp. 566—571; Ritter, *Erdkunde*, vol. xv. pp. 916, 1215.) [E. B. J.]

KISHON. [CISON.]

L.

LABANAE AQUAE. [AQUAE LABANAE.]

LABEA'TES. [LABEATIS LACUS.]

LABEA'TIS LACUS, a large lake of Roman Illyricum, situated to the N. of Scodra, the chief city of the LABEATES (Liv. xliii. 21, xliv. 31, xlv. 26) or LABEATAE. (Plin. iii. 26.) It is now called the lake of *Scútari*, famous for the quantity of fish, especially of the "Cyprinus" family. The rivers, which drain the rocky district of *Monte-Negro*, discharge themselves into this lake, which communicates with the sea by the river BARBANA. (Wilkinson, *Dalmatia*, vol. i. pp. 411, 415, 476.) [E. B. J.]

LABI'CUM or LAVI'CUM, sometimes also (Liv. ii. 39, iv. 45) LAVI'CI, (τὸ Λαβικόν: *Eth.* Λαβικανός, Labicanus and Lavicanus: *La Colonna*), an ancient city of Latium, situated at the foot of the north-eastern slope of the Alban hills, and distant about 15 miles from Rome. Its foundation was ascribed, according to a tradition reported by Servius (*ad Aen.* vii. 796), to Glaucus, a son of Minos: and Virgil (*l. c.*) mentions it among the cities which sent assistance to king Latinus against Aeneas, so that he must have regarded it as more ancient than the Trojan settlement in Latium. But the current tradition, adopted by Dionysius, represented Labicum, in common with so many other Latin cities, as a colony of Alba. (Dionys. viii. 19; Diodor. *ap. Euseb. Arm.* p. 185.) Whatever was its origin, we know with certainty that it was one of the cities of the Latin League, and as such retained, down to a late period, the right of participating in the sacrifices on the Alban Mount. (Dionys. v. 61; Cic. *pro Planc.* 9.) It first appears in history as taking part in the league of the Latins against Rome previous to the battle of Regillus (Dionys. *l. c.*), and is afterwards mentioned among the cities which are represented as taken in succession by Coriolanus, during his campaign against the Romans. (Liv. ii. 39; Dionys. viii. 19.) It is not improbable that this legend represents the historical fact that Labicum, together with Bola, Pedum, and other places which figure in the same narrative, actually fell about that time into the hands of the Aequians, as Satricum, Corioli, and other towns further to the S., did into those of the Volscians. (Niebuhr, vol. ii. p. 259.) But during the subsequent wars of the Romans with the Aequians, Labicum always appears as a Latin city: and from its position on the frontier of Latium adjoining the Aequians, its name repeatedly occurs in the history of those contests. Thus, in B. C. 458, its territory was ravaged by the Aequian general Gracchus: and in 418 we find the Labicans themselves abandoning the Roman alliance, and joining the Aequians, together with whom they established a camp on Mount Algidus. Their combined forces were, however, defeated by the Roman dictator Q. Servilius Priscus, and Labicum itself was taken by storm. In order to secure their new conquest against the Aequians the Roman senate sent thither a colony of 1500 Roman citizens, which appears to have maintained itself there, though attacked the very next year by the Aequians. (Liv. iii. 25, iv. 45—47, 49.) In B. C. 383, its territory was again ravaged by the Praenestines, at that time on hostile terms with Rome (Liv. vi. 21); and after a long interval, in B. C. 211, it once more sustained the same fate from the army of Hannibal. (Liv. xxvi. 9.)

From this time the name of Labicum disappears from history, but we learn that it still existed as a municipium, though in a very poor and decayed condition, in the days of Cicero. (Cic. *pro Planc.* 9, *de Leg. Agr.* ii. 35.) Strabo, however, speaks of the town as in ruins, and Pliny mentions the population "ex agro Labicano" in a manner that seems to imply that, though they still formed a "populus" or community, the city no longer existed. (Strab. v. pp. 230, 237; Plin. iii. 5. s. 9.) In like manner we find the "ager Labicanus" elsewhere mentioned, but no further notice of the town. (Suet. *Caes.* 83.) The inhabitants seem to have, under the Roman empire, congregated together afresh in the neighbourhood of the station on the Via Labicana, called Ad Quintanas, and hence assumed the name of Lavicani Quintanenses, which we meet with in inscriptions. (Orell. *Inscr.* 118, 3997.) The territory appears to have been one of great fertility, and was noted for the excellence of its grapes. (Sil. Ital. viii. 366; Jul. Capit. *Clod. Albin.* 11.)

The position of Labicum has been a subject of much dispute, having been placed by different writers at *Valmontone*, *Zagarolo*, and *Lugnano*. But the precise statement of Strabo (v. p. 237) as to the course of the Via Labicana, together with the fact that he describes the ancient city as situated on a hill to the right of that road, about 120 stadia (15 Roman miles) from Rome, ought to have left no difficulty on the subject: and Holstenius long ago correctly placed the ancient city on the hill now

occupied by the village of *La Colonna;* a height a little in advance of the Tusculan hills, and commanding the adjoining portion of the plain. It is about a mile from the 15th milestone on the Roman road, where, as we have seen, the suburb Ad Quintanas afterwards grew up, and is certainly the only position that accords with Strabo's description. No ruins are visible; but the site is one well calculated for an ancient city, of small magnitude, and the discovery of the inscriptions already noticed in its immediate neighbourhood may be considered conclusive of the point. The modern village of *La Colonna* dates only from the 11th century. (Holsten. *Not. ad Cluv.* p. 194; Fabrett. *de Aquaeduct.* p. 182; Nibby, *Dintorni di Roma*, vol. ii. pp. 157—164.) Ficoroni, in his elaborate work (*Memorie della Prima e Seconda Città di Labico*, 4to. Roma, 1745), has laboured to prove, but certainly without success, that Labicum was situated on the *Colle dei Quadri*, near *Lugnano*, about 5 miles beyond *La Colonna*. The remains there discovered and described by him render it probable that *Lugnano* was an ancient site, probably that of Bola [BOLA]; but the distance from Rome excludes the supposition that it was that of Labicum.

The VIA LABICANA, which issued from the Porta Esquilina at Rome together with the Via Praenestina, but separated from the latter immediately afterwards, held a course nearly parallel with it as far as the station Ad Quintanas; from whence it turned round the foot of the Alban hills, and fell into the Via Latina at the station Ad Pictas, where the latter road had just descended from Mt. Algidus. (Strab. v. p. 237; *Itin. Ant.* pp. 304, 305.) It is strange that the Itinerary gives the name of Lavicana to the continuation of the road after their junction, though the Via Latina was so much the more important of the two. The course of the ancient Via Labicana may be readily traced from the gates of Rome by the *Torre Pignatara*, *Cento Celle*, *Torre Nuova*, and the *Osteria di Finocchio* to the *Osteria della Colonna*, at the foot of the hill of that name. This Osteria is 16 miles from Rome and a mile beyond the ancient station Ad Quintanas. From thence the road proceeded to *San Cesario*, and soon after, quitting the line of the modern road to *Valmontone*, struck off direct to join the Via Latina: but the exact site of the station Ad Pictas has not been determined. (Westphal, *Röm. Kampagne*, pp. 78—80; Gell's *Topogr. of Rome*, p. 279.)

On the left of the Via Labicana, about thirteen miles and a half from Rome, is a small crater-formed lake, which has often been considered as the ancient Lacus Regillus: but the similar basin of the *Lago di Cornufelle*, near Tusculum, appears to have a better claim to that celebrated name. [REGILLUS LACUS.]

The course of the Via Labicana in the immediate neighbourhood of Rome was bordered, like the other highways that issued from the city, with numerous sepulchres, many of them on a large scale, and of massive construction. Of these, the one now known as the *Torre Pignatara*, about three miles from the *Porta Maggiore*, is represented by very ancient tradition, but with no other authority, as the mausoleum of Helena, the mother of Constantine the Great. (Nibby, vol. iii. p. 243.) We learn, also, that the family tomb of the emperor Didius Julianus was situated on the same road, at the distance of 5 miles from Rome. (Spartian. *Did. Jul.* 8.)

LABISCO. [LAVISCO.]

LABISCUM. [LAVISCO.]

LABO'TAS (Λαβώτας), a small river of the plain of Antioch. (Strab. xvi. p. 751.) It runs from the north, parallel to the ARCEUTHUS, and, mixing with its waters and those of the Oenoparas coming from the east, in a small lake, they flow off in one stream and join the Orontes a little above Antioch. It is the western of the two rivers shown in map, Vol. I. p. 115, and Pagrae (*Βαγρας*) is situated on its western bank near its mouth. [G. W.]

LABRANDA (τὰ Λάβρανδα or Λάβραυνδα), a village in the west of Caria, about 60 stadia from the town of Mylasa, to which the village belonged, and with which it was connected by a road called the sacred. Labranda was situated in the mountains, and was celebrated for its sanctuary of Zeus Stratios, to which processions went along the sacred road from Mylasa. Herodotus describes (v. 119) the sanctuary as an extensive grove of plane trees, within which a body of Carians, in their war against the Persians, retreated for safety. Strabo (xiv. p. 659) speaks of an ancient temple with a ξόανον of Zeus Stratios, who was also surnamed "Labrandenus" or "Labrandeus." Aelian (*H. A.* xii. 30), who states that the temple of Labranda was 70 stadia from Mylasa, relates that a spring of clear water, within the sanctuary, contained fishes, with golden necklaces and rings. Chandler (*Antiq. of Ionia*, pt. 1. c. 4, and *Asia Minor*, c. 58) was the first who stated his belief, that the ruins at *Iakli*, south of *Kizeljik*, consisting of a theatre and a ruined temple of the Ionian order, of which 16 columns, with the entablature, were then still standing, were those of ancient Labranda and of the temple of Zeus Stratios. But Choiseul Gouffier, Barbié du Bocage, and Leake (*Asia Minor*, p. 232), agree in thinking that these ruins belong to Euromus rather than Labranda. Their view is supported by the fact that the ruins of the temple have nothing very ancient about them, but rather show that they belong to a structure of the Roman period. The remains of Labranda must be looked for in the hills to the north-east of Mylasa. Sir C. Fellows (*Journal*, p. 261), apparently not knowing what had been done by his predecessors, unhesitatingly speaks of the ruins at *Iakli* as those of Labranda, and gives an engraving of the remains of the temple under the name of the "Temple at Labranda." [L. S.]

LABRONIS PORTUS. [LIBURNUM.]

LABUS or LABU'TAS (Λάβος or Λαβούτας), a mountain range in the N. of Parthia, mentioned by Polybius (x. 29). It seems to have a part of the greater range of M. Coronus, and is probably represented now by the *Sobad-Koh*, a part of the *Elburz* mountains. [V.]

LACANI'TIS (Λακανῖτις), the name of a district in Cilicia Proper, above Tarsus, between the rivers Cydnus and Sarus, and containing the town of Irenopolis. (Ptol. v. 8. § 6.) [L. S.]

LACCU'RIS. [ORETANI.]

LACEA. [LUSITANIA.]

LACEDAEMON (Λακεδαίμων, Steph. B. *s. v.*; Eustath. *ad. Il.* ii. 582), a town in the interior of Cyprus. (Engel, *Kypros*, vol. i. p. 158.) [E. B. J.]

LACEDAEMON, LACEDAEMO'NII. [LACONIA.]

LACEREIA. [DOTIUS CAMPUS.]

LACETA'NI (Λακετανοί), one of the small peoples of Hispania Tarraconensis, who occupied the valleys at the S. foot of the Pyrenees. (*Lace-*

tania quae subjecta Pyrenaeis montibus est, Liv.). Their "pathless forests" (*devia et silvestris gens*, Liv.) lay S. of the CERRETANI, W. of the INDIGETES, and N. of the LALETANI. (It is impossible to avoid the suspicion that these names are identical, especially as we have the intermediate form LAEETANI, and that Lacetania is only the N. part of Laletania. Moreover, the name is confounded with the JACETANI in the MSS. of Caes. *B. C.* i. 60.) Only one town is mentioned as belonging to them, and that without a name, but simply as having been taken by M. Cato. (Plut. *Cat. Maj.* 11; Liv. xxi. 23, 26, 60, et seq., xxviii. 24, 26, et seq., xxxiii. 34, xxxiv. 20; Dion Cass. xlv. 10; Martial, i. 49. 22.) [P. S.]

LACHISH (Λαχίς, LXX.; Λάχεις, Λαχεῖσα, Joseph.), a city to the south of the tribe of Judah (*Josh.* xv. 39), the capital of one of the petty kings or sheikhs of the Canaanites (x. 3). It was taken and destroyed by Joshua (iv. 31—33), and is joined with Adoraim and Azekah (2 *Chron.* xi. 9) as one of the cities built, or rather fortified, by Rehoboam. It was besieged by Sennacherib on his invasion of Judaea, B. C. 713. (2 *Kings*, xviii. 14, 17, xix. 8.) It is placed by Eusebius and St. Jerome (*Onomast.* *s. v.*) seven miles south of Eleutheropolis, in Daroma or "the valley." (*Josh.* xv. 39.) But for this it might have been identified with *Um Lâkis*, on the left of the road between Gaza and Hebron, about five hours from the former, where is an ancient site "now covered confusedly with heaps of small round stones, among which are seen two or three fragments of marble columns." (Robinson, *Bibl. Res.* vol. ii. p. 388.) The objections to the identification are not, perhaps, so great as is represented: the title *Um*, equivalent to metropolis, would seem to mark it as a place of importance; and there is no other vestige of a town in those parts that can be referred to Lachish. It is considerably south of west from *Beit Jebrin* (Eleutheropolis), which is near enough to satisfy the description of Eusebius, who is not remarkable for precise accuracy in his bearings, nor, indeed, in his distances, except in the parts with which he was familiar, and on the more frequented thoroughfares. No argument can be drawn from its juxtaposition with Adoraim and Azekah, in 2 *Chron.* xi. 9, as it might be near enough to group with them in a list of names which, it is evident, does not pretend to geographical precision. [G. W.]

LACIACA or LACIACUM (in the Peut. Table it is called *Laciacis*), a town in the north-west of Noricum (*It. Ant.* pp. 235, 258). The name seems to be connected with "lacus," and thus to point to the lake district in upper Austria; hence some have identified the place with *Seewalchen*, or *St. Georgen* on the *Attersee*. But Muchar (*Noricum*, p. 267) is probably right in identifying it with *Frankenmarkt*. [L. S.]

LA'CIBI (Plin. iii. 1. s. 3; Λακιβίς, Ptol. ii. 4. § 11), a tributary town of Hispania Baetica, which Pliny assigns to the conventus of Gades, while Ptolemy places it among the cities of the Turduli, in in the neighbourhood of Hispalis. [P. S.]

LACIBU'RGIUM (Λακιβούργιον), a German town on the south coast of the Baltic, between the rivers Chalusus, and Suevus or Suebus. It is mentioned only by Ptolemy (ii. 11. § 27). and it is certain that its site must be looked for to the west of *Warnemünde*, but the precise spot cannot be ascertained, whence some have identified it with *Wismar*, others with *Ratzeburg*, and others again with *Lauenburg*. [L.S.]

LACIDAE. [ATTICA, p. 326, a.]

LACI'NIA. [IAPYDIA.]

LACI'NIUM (τὸ Λακίνιον ἄκρον: *Capo delle Colonne*), a promontory on the E. coast of the Bruttian peninsula, about 6 miles S. of Crotona. It formed the southern limit of the gulf of Tarentum, as the Iapygian promontory did the northern one: the distance between the two is stated by Strabo, on the authority of Polybius, at 700 stadia, while Pliny apparently (for the passage in its present state is obviously corrupt) reckons it at 75 Roman miles, or 600 stadia; both of which estimates are a fair approximation to the truth, the real interval being 65 geog. miles, or 650 stadia. (Strab. vi. p. 261; Plin. iii. 11. s. 15; Mel. ii. 4. § 8.) The Lacinian promontory is a bold and rocky headland, forming the termination of one of the offshoots or branches of the great range of the Apennines (Lucan. ii. 434; Plin. iii. 5. s. 6): it was crowned in ancient times by the celebrated temple of the Lacinian Juno, the ruins of which, surviving through the middle ages, have given to the promontory its modern appellation of *Capo delle Colonne*. It is also known by that of *Capo Nau*, a name evidently derived from the Greek Ναός, a temple; and which seems to date from an early period, as the promontory is already designated in the Maritime Itinerary (p. 490) by the name of Naus. That Itinerary reckons it 100 stadia from thence to Crotona: Strabo gives the same distance as 150 stadia; but both are greatly overrated. Livy correctly says that the temple (which stood at the extreme point of the promontory) was only about 6 miles from the city. (Liv. xxiv. 3.) For the history and description of this famous temple, see CROTONA.

Pliny tells us (iii. 10. s. 15) that opposite to the Lacinian promontory, at a distance of 10 miles from the land, was an island called Dioscoron (the island of the Dioscuri), and another called the island of Calypso, supposed to be the Ogygia of Homer. Scylax also mentions the island of Calypso immediately after the Lacinian promontory (§ 13, p. 5). But there is at the present day no island at all that will answer to either of those mentioned by Pliny: there is, in fact, no islet, however small, off the Lacinian cape, and hence modern writers have been reduced to seek for the abode of Calypso in a small and barren rock, close to the shore, near *Capo Rizzuto*, about 12 miles S. of Lacinium. Swinburne, who visited it, remarks how little it corresponded with the idea of the Homeric Ogygia: but it is difficult to believe that so trifling a rock (which is not even marked on Zannoni's elaborate map) could have been that meant by Scylax and Pliny.* The statement of the latter concerning the island which he calls Dioscoron is still more precise, and still more difficult to account for. On the other hand, he adds the names of three others, Tiris, Eranusa, and Meloessa, which he introduces somewhat vaguely, as if he were himself not clear of their position. Their names were probably taken from some poet now lost to us. [E. H. B.]

LACIPEA. [LUSITANIA.]

LACIPPO (Λακίππω, Ptol. ii. 4. § 11; LACIPO, coin *ap.* Sestini, *Med. Isp.* p. 57; Mionnet, Suppl.

* The different positions that have been assigned to the island of Calypso, and the degree of probability of their claims, will be discussed under the article OGYGIA.

vol. i. p. 34), a tributary town of the Turduli in Hispania Baetica, near the shore of the Mediterranean, where its ruins are still seen at *Alecippe*, near *Casares*. Ptolemy places it too far inland. (Mela, ii. 6. § 7; Plin. iii. 1. s. 3; Carter, *Travels*, p. 128; Ukert, vol. ii. pt. 1. p. 348.) [P. S.]

LACMON (Λάκμων, Hecat. *Fr.* 70; Herod. ix. 92; Steph. B. *s. v.*) or LACMUS (Λάκμος, Strab. vi. p. 271, vii. p. 316), the highest summit of Mount Pindus, the *Zygós* or ridge of *Métzovo*. This is geographically the most remarkable mountain in Greece; situated in the heart of Pindus as to its breadth, and centrally also in the longitudinal chain which pervades the continent from N. to S.: it gives rise to five principal rivers, in fact to all the great streams of Northern Greece except the Spercheius; north-eastward to the Haliacmon, south-eastward to the Peneius, southward to the Achelous, south-westward to the Arachthus, and north-westward to the Aous. (Leake, *Northern Greece*, vol. i. pp. 294, 411—415, vol. iv. pp. 240, 261, 276.) [E. B. J.]

LACOBRI'GA. [1. LUSITANIA; 2. VACCAEI.]

LACO'NIA, LACO'NICA, or LACEDAEMON, the south-easterly district of Peloponnesus.

I. NAME.

Its most ancient name was *Lacedaemon* (Λακεδαίμων), which is the only form found in Homer, who applies this name as well to the country, as to its capital. (*Il.* ii. 581, iii. 239, 244, &c.) The usual name in the Greek writers was *Laconica* (ἡ Λακωνική, sc. γῆ), though the form Lacedaemon still continued to be used. (Herod. vi. 58.) The Romans called the country LACONICA (Plin. xxv. 8. s. 53; Laconice, Mela, ii. 3) or LACONIA (Plin. vi. 34. s. 39, xvii. 18. s. 30), the latter of which is the form usually employed by modern writers. Mela (*l. c.*) also uses LACONIS, which is borrowed from the Greek (ἡ Λακωνὶς γαῖα, Hom. *Hymn. in Apoll.* 410.) The Ethnic names are Λάκων, -ωνος, Λακεδαιμόνιος, Lat. Laco or Lacon, -nis, Lacedaemonius; fem. Λάκαινα, Λακωνίς, Laconis. These names are applied to the whole free population of Laconia, both to the Spartan citizens and to the Perioeci, spoken of below (for authorities, see Clinton, *F. H.* vol. ii. pp. 405, 406). They are usually derived from a mythical hero, Lacon or Lacedaemon; but some modern writers think that the root LAC is connected with λάκος, λάκκος, *lacus*, *lacuna*, and was given originally to the central district from its being deeply sunk between mountains. (Curtius, *Peloponnesos*, vol. ii. p. 309.)

II. GENERAL DESCRIPTION OF THE COUNTRY.

The natural features of Laconia are strongly marked, and exercised a powerful influence upon the history of the people. It is a long valley, surrounded on three sides by mountains, and open only on the fourth to the sea. On the north it is bounded by the southern barrier of the Arcadian mountains, from which run in a parallel direction towards the south, the two lofty mountain ranges of Taÿgetus and Parnon, — the former dividing Laconia and Messenia, and terminating in the promontory of Taenarum, now *C. Matapan*, the southernmost extremity of Greece and of Europe, the latter stretching along the eastern coast, and terminating in the promontory of Malea. The river Eurotas flows through the entire length of the valley lying between these mountain masses, and falls into the sea, which was called the Laconian gulf. Laconia is well described by Euripides as a country "hollow, surrounded by mountains, rugged, and difficult of access to an enemy" (ap. Strab. viii. p. 366); and the difficulty of invading it made even Epaminondas hesitate to enter it with his army. (Xen. *Hell.* v. 5. § 10.) On the northern side there are only two natural passes by which the plain of Sparta can be invaded. (See below.) On the western side the lofty masses of Taÿgetus form an almost insurmountable barrier; and the pass across them, which leads into the plain of Sparta, is so difficult as scarcely to be practicable for an army. On the eastern side the rocky character of the coast protects it from invasion by sea.

III. MOUNTAINS, RIVERS, AND PLAINS.

MOUNT TAŸGETUS (Ταΰγετον, τὸ Τηΰγετον ὄρος, the common forms; Ταΰγετος, Lucian, *Icarom.* 19; τὰ Ταΰγετα, Polyaen. vii. 49; Taÿgeta, Virg. *Georg.* ii. 487: the first half of this word is said by Hesychius to signify great). This mountain is the loftiest in Peloponnesus, and extends in an almost unbroken line for the space of 70 miles from *Leondari* in Arcadia to *C. Matapan*. Its vast height, unbroken length, and majestic form, have been celebrated by both ancient and modern writers. Homer gives it the epithet of περιμήκετον (*Od.* vi. 103), and a modern traveller remarks that, "whether from its real height, from the grandeur of its outline, or the abruptness of its rise from the plain, it created in his mind a stronger impression of stupendous bulk and loftiness than any mountain he had seen in Greece, or perhaps in any other part of Europe." (Mure, *Tour in Greece*, vol. ii. p. 221.) Taÿgetus rises to its greatest height immediately above Sparta. Its principal summit was called TALETUM (Ταλετόν) in antiquity: it was sacred to the Sun, and horses and other victims were here sacrificed to this god. (Paus. iii. 20. § 4.) It is now called *S. Elias*, to whose chapel on the summit an annual pilgrimage is made in the middle of the summer. Its height has been ascertained by the French Commission to be 2409 metres, or 7902 English feet. Another summit near Taletum was called EVORAS (Εὐόρας, Belvedere, Paus. *l. c.*), which Leake identifies with Mt. *Paximádhi*, the highest summit next to *St. Elias*, from which it is distant 5½ geographical miles. The ancient names of none of the other heights are mentioned.

By the Byzantine writers Taÿgetus was called PENTEDACTYLUM (τὸ Πεντεδάκτυλον), or the "Five Fingers," on account of its various summits above the Spartan plain. (Constant. Porphyr. *de Adm. Imp.* c. 50.) In the 13th century it bore the name of *Melingús* (ὁ ζυγὸς τοῦ Μελιγγοῦ, see Leake, *Peloponnesiaca*, p. 138). At the base of Taÿgetus, immediately above the Spartan plain, there is a lower ridge running parallel to the higher summits. This lower ridge consists of huge projecting masses of precipitous rocks, some of which are more than 2000 feet high, though they appear insignificant when compared with the lofty barrier of Taÿgetus behind them. After attaining its greatest elevation, Mt. Taÿgetus sinks gradually down towards the south, and sends forth a long and lofty counterfork towards the Eurotas, now called *Lykobúni* (Λυκοβοῦνι, Wolfs-mountain), which bounds the Spartan plain on the south. It there contracts again, and runs down, as the backbone of a small peninsula, to the southernmost ex-

tremity of Greece. This mountainous district between the Laconian and Messenian gulfs is now called *Mani*, and is inhabited by the Maniátes, who always maintained their independence, while the rest of Greece was subject to the Turks: the southern part of the peninsula, as well as the promontory, bore the name of Taenarum in antiquity. [TAENARUM.] Although there is no trace of any volcanic action in Mt. Taÿgetus, many of its chasms and the rent forms of its rocks have been produced by the numerous and violent earthquakes to which the district has been subjected. Hence Laconia is called by Homer "full of hollows" (κητώεσσα, *Il.* ii. 581, *Od.* iv. 1), and Strabo describes it as a country easily shaken by earthquakes (Strab. viii. p. 367). In the fearful earthquake, which laid Sparta in ruins in B. C. 464, and killed more than 20,000 Lacedaemonians, huge masses of rocks were rolled down from the highest peaks of Taÿgetus. (Plut. *Cim.* 16.)

On the sides of Mt. Taÿgetus are forests of deep green pine, which abounded in ancient times with game and wild animals, among which Pausanias mentions wild goats, wild boars, stags, and bears. The district between the summits of Taletum and Evoras was called THERAS (Θήρας), or the hunting ground. (Paus. iii. 20. §§ 4, 5.) Hence Taÿgetus was one of the favourite haunts of the huntress Artemis (*Od.* vi. 103), and the excellence of the Laconian dogs was proverbial in antiquity. (Aristot. *Hist. An.* vi. 20; Xen. *de Ven.* 10. § 1; Virg. *Georg.* iii. 405; Hor. *Epod.* vi. 5.) Modern travellers tell us that the dogs of the country still support their ancient character for ferocity and courage. (Mure, vol. ii. p. 231.)

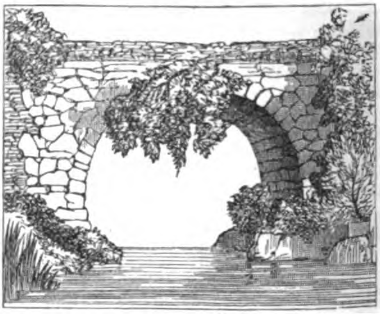
The southern part of Mount Taÿgetus is rich in marble and iron. Near Croceae there were quarries of green porphyry, which was extensively employed by the Romans. [CROCEAE.] There was also another kind of marble obtained from quarries more to the south, called by the Romans Taenarian marble. The whetstones of Mount Taÿgetus were likewise in much request. (Strab. viii. p. 367; "Taenarius lapis," Plin. xxxvi. 22. s. 43; "cotes Laconicae ex Taygeto monte," Plin. xxxvi. 22. s. 47.) The iron found in the mountain was considered very good, and was much used in the manufacture of warlike weapons and agricultural instruments. (Steph. B. *s. v.* Λακεδαίμων; Xen. *Hell.* iii. 3. § 7; Plin. vii. 57; Eustath. *ad Il.* p. 298, ed. Rom.)

MOUNT PARNON (ὁ Πάρνων, Paus. ii. 38. § 7) is of an entirely different character from the opposite range of Taÿgetus. It does not form one uninterrupted line of mountains, but is broken up into various detached masses of less elevation, which form a striking contrast to the unbroken and majestic barrier of Taÿgetus. The mass to which the name of Parnon was more especially applied was the range of mountains, now called *Malevó*, forming the natural boundary between Arcadia, Laconia, and Argolis. It is 6355 feet high, and its summit is nearly equidistant from the Eurotas and the eastern coast. This mountain is continued in a general south-easterly direction, but how far southwards it continued to bear the name of Parnon is unknown. Its eastern declivities, which extend as far as the coast at a considerable elevation, contain the district now called *Tzakonia*, a corruption of the word Laconia, the inhabitants of which speak a dialect closely resembling the ancient Greek: of this an account has been given elsewhere. [Vol. I. p. 728.] On its western side Mt. Parnon sinks down more rapidly, and divides itself into separate hills, which bear the names of BARBOSTHENES OLYMPUS, OSSA, THORNAX, and MENELAIUM; the two last are opposite Sparta, and a modern observer describes Menelaium as not remarkable either for height or variety of outline, but rising gradually in a succession of gentle ridges. (Mure, vol. ii. p. 223.) In its southern continuation, Mt. Parnon still continues of moderate height till near the commencement of the peninsula between the Myrtoan and Laconian gulfs, where it rises under the name of Mount ZARAX (Ζάραξ) to a height of 3500 feet, and runs along the eastern coast at a considerable elevation, till it reaches the promontory of Malea.

The EUROTAS (Εὐρώτας) flows, as already observed, throughout the entire length of the valley between the ranges of Taÿgetus and Parnon. Its more ancient names were BOMYCAS (Βωμύκας, Etym. M. *s. v.*) and HIMERUS (Ἵμερος, Plut. *de Fluv.* 17): it is now called *Iris* and *Niris* in its upper and middle course, and *Basili-potamó* from the time it leaves the Spartan plain till it reaches the sea. In its course three districts may be distinguished;—the vale of the upper Eurotas; the vale of the middle Eurotas, or the plain of Sparta; and the vale of the lower Eurotas, or the maritime plain. 1. *The Vale of the Upper Eurotas.* The river Eurotas rises in the mountains which form the southern boundary of the Arcadian plains of Asea and Megalopolis. It was believed by both Pausanias and Strabo that the Alpheius and the Eurotas had a common origin, and that, after flowing together for a short distance, they sank under ground; the Alpheius reappearing at Pegae, in the territory of Megalopolis in Arcadia, and the Eurotas in the Bleminatis in Laconia; but for a fuller account of their statements upon this subject the reader is referred to the article ALPHEIUS. All that we know for certain is that the Eurotas is formed by the union of several copious springs rising on the southern side of the mountain above mentioned, and that it flows from a narrow glen, which gradually opens towards the SSW. On the eastern side it keeps close to the mountains, while on the western side there is a little level ground and some mountain slopes between the river and the heights of Taÿgetus. At the distance of little more than a mile from Sparta, the Eurotas receives the OENUS (Οἰνοῦς, Polyb. ii. 65, 66; Athen. i. p. 31; Liv. xxxiv. 28), now called *Kelefína*, which rises in the watershed of Mt. Parnon, and flows in a general south-westerly direction: the principal tributary of the Oenus was the GORGYLUS (Γόργυλος, Polyb. ii. 66), probably the river of *Vrestená*. (Leake, *Peloponnesiaca*, p. 347.) Nearly opposite the union of the Oenus and the Eurotas, the mountains of Taÿgetus press close upon the river, but again almost immediately withdraw to a greater distance than before, and the river emerges into the Spartan plain.

2. *The Vale of the Middle Eurotas.* Sparta is situated at the commencement of this vale on the right bank of the Eurotas. Between the river and Mt. Taÿgetus the plain is of considerable extent. Its soil is particularly adapted for the growth of olives, which are in the present day preferred to those of Athens; and the silk of the Spartan plain is superior to the silk of every other district of Greece. (Mure, vol. ii. p. 224.) The soil, however, cannot be compared with that of the rich Messenian

plain, and hence Euripides, in contrasting the two countries, describes Laconia as a poor land, in which there is a large tract of arable, but of laborious tillage (ap. Strab. viii. p. 366). This is in accordance with the account of Leake, who says that the soil of the plain is in general a poor mixture of white clay and stones, difficult to plough, and better suited to olives than corn. (*Morea*, vol. i. p. 148.) The vale, however, possesses a genial climate, being sheltered on every side by mountains, and the scenery is of the most beautiful description. Hence Lacedaemon has been aptly characterised by Homer as "a hollow pleasant valley" (κοίλη ἐρατεινή, *Il.* ii. 581, iii. 443, *Od.* iv. 1). The climate is favourable to beauty; and the women of the Spartan plain are at present taller and more robust than the other Greeks, have more colour in general, and look healthier; which agrees also with Homer's Λακεδαίμονα καλλιγύναικα (Leake, *Morea*, vol. iii. p. 149). The security of the Spartan plain against hostile attacks has been briefly alluded to. There were only two roads practicable for an invading army; one by the upper Eurotas, leading from southern Arcadia and Stenyclarus; the other by the long and narrow valley of the Oenus, in which the roads from Tegea and Argos united near Sellasia.



3. *Vale of the Lower Eurotas.* At the southern extremity of the Spartan plain, the mountains again approach so close, as to leave scarcely space for the passage of the Eurotas. The mountains on the western side are the long and lofty counterfork of Mt. Taÿgetus, called *Lykobúni*, which has been already mentioned. This gorge, through which the Eurotas issues from the vale of Sparta into the maritime plain, is mentioned by Strabo (ὁ Εὐρώτας — διεξιὼν αὐλῶνά τινα μακρὸν, viii. p. 343). It is about 12 miles in length. The maritime plain, which is sometimes called the plain of Helos, from the town of this name upon the coast, is fertile and of some extent. In the lower part of it the Eurotas flows through marshes and sandbanks into the Laconian gulf.

The banks of the Eurotas and the dry parts of its bed are overgrown with a profusion of reeds. Hence the epithets of δονακοτρόφος and δονακόεις are frequently given to it by the poets. (Theogn. 785; Eurip. *Iphig. in Aul.* 179, *Helen.* 207.)

The only tributary of the Eurotas, which possesses an independent valley, is the Oenus already mentioned. The other tributaries are mere mountain torrents, of which the two following names have been preserved, both descending from Mt. Taÿgetus through the Spartan plain: Tiasa (Τίασα, Paus. iii. 18. § 6; Athen. iv. p. 139), placed by Pausanias on the road from Amyclae to Sparta, and hence identified by Leake with the *Pandeleimona*; Phellia (Φέλλια, iii. 20. § 3), the river between Amyclae and Pharis. The Cnacion (Κνακίων), mentioned in one of the ordinances of Lycurgus, was identified by later writers with the Oenus. (Plut. *Lyc.* 6.)

The streams Smenus and Scyras, flowing into the sea on the western side of the Laconian gulf, are spoken of below. [See p. 114, b.]

Before leaving the rivers of Laconia, a few words must be said respecting an ancient Laconian bridge still existing, which has been assigned to the remotest antiquity. This is the bridge of *Xerókampo*, built over a tributary of the Eurotas, about three hours' ride to the south of Sparta, just where the stream issues from one of the deepest and darkest gorges of Taÿgetus. It was first discovered by Ross, and has been described by Mure, who supposes it to belong to the same period as the monuments of Mycenae. Even if it does not belong to so early a date, but is a genuine Hellenic work, it would establish the fact that the Greeks were acquainted with the use of the concentric arch at a very early period; whereas it has been usually supposed that it was not known to them till the time of Alexander the Great. The general appearance and character of this structure will be best seen from the annexed drawing taken from Mure. The masonry is of the polygonal species: the largest stones are those of the arch, some of which are from four to five feet long, from two to three in breadth, and between one and two in thickness. From the character of the structure, and from its remote situation, Mure concludes that it cannot be a Roman work; and there are strong reasons for believing that the Greeks were acquainted with the use of the arch at a much earlier period than has been usually supposed. (Mure, vol. ii. p. 247, seq.; comp. Leake, *Peloponnesiaca*, p. 116, seq.)

BRIDGE OF XEROKAMPO.

There are no other plains in Laconia except the three above mentioned in the valley of the Eurotas; but on the slopes of the mountains, especially on those of Parnon, there is a considerable quantity of arable as well as pasture ground. The whole area of Laconia is computed to contain 1896 English square miles.

IV. History.

The political history of the country forms a prominent part of Grecian history, and cannot be narrated in this place at sufficient length to be of value to the student. But as the boundaries of Laconia differed considerably at various periods, it is necessary to mention briefly those facts in the history of the country which produced those changes.

It will be seen from the preceding description of the physical features of Laconia, that the plain of Sparta forms the very kernel and heart of the country. Accordingly, it was at all times the seat of the ruling class; and from it the whole country received its appellation. This place is said to have been originally inhabited by the Leleges, the most ancient inhabitants of the country. According to tradition, Lelex, the first king, was succeeded by his son Myles, and the latter by his son Eurotas, who collected into a channel the waters which were spread over the plain, and gave his own name to the river which he had thus formed. He died without male offspring, and was succeeded by Lacedaemon, the son of Zeus and Taÿgeta, who married Sparta,

the daughter of his predecessor. Lacedaemon gave to the people and the country his own name, and to the city which he founded the name of his wife. Amyclas, the son of Lacedaemon, founded the city called after him Amyclae. (Paus. iii. 1.) Subsequently Lacedaemon was ruled by Achaean princes, and Sparta was the residence of Menelaus, the brother of Agamemnon. Menelaus was succeeded by Orestes, who married his daughter Hermione, and Orestes by his son Tisamenus, who was reigning when the Dorians invaded the country under the guidance of the Heracleidae. In the threefold division of Peloponnesus among the descendants of Hercules, Lacedaemon fell to the share of Eurysthenes and Procles, the twin sons of Aristodemus. According to the common legend, the Dorians conquered the Peloponnesus at once; but there is sufficient evidence that they only slowly became masters of the countries in which we afterwards find them settled; and in Laconia it was some time before they obtained possession even of all the places in the plain of Sparta. According to a statement in Ephorus, the Dorian conquerors divided Laconia into six districts; Sparta they kept for themselves; Amyclae was given to the Achaean Philonomus, who betrayed the country to them; while Las, Pharis, Aegys, and a sixth town the name of which is lost, were governed by viceroys, and were allowed to receive new citizens. (Ephor. *ap. Strab.* viii. p. 364; on this corrupt passage, which has been happily restored, see Müller, *Dorians*, vol. i. p. 110, transl.; Niebuhr, *Ethnograph.* vol. i. p. 56, transl.; Kramer, *ad Strab. l. c.*) It is probable that this division of Laconia into six provinces was not actually made till a much later period; but we have sufficient evidence to show that, for a long time after the Dorian conquest, the Dorians possessed only a small portion of Laconia. Of this the most striking proof is that the Achaean city of Amyclae, distant only 2½ miles from Sparta, maintained its independence for nearly three centuries after the Dorian conquest, for it was only subdued shortly before the First Messenian War by the Spartan king Teleclus. The same king took Pharis and Geronthrae, both Achaean cities; and his son and successor, Alcamenes, conquered the town of Helos, upon the coast near the mouth of the Eurotas. (Paus. iii. 2. §§ 6, 7.) Of the subjugation of the other Achaean towns we have no accounts; but there can be little doubt that they were mainly owing to the military organisation and martial spirit which the Spartans had acquired by the institutions of Lycurgus.

By the middle of the eighth century the Dorians of Sparta had become undisputed masters of the whole of Laconia. They now began to extend their dominions at the expense of their neighbours. Originally Argos was the chief Dorian power in the Peloponnesus, and Sparta only the second. In ancient times the Argives possessed the whole eastern coast of Laconia down to Cape Malea, and also the island of Cythera (Herod. i. 82); and although we have no record of the time at which this part of Laconia was conquered by the Spartans, we may safely conclude that it was before the Messenian wars. The Dorians in Messenia possessed a much more fertile territory than the Spartans in Laconia, and the latter now began to cast longing eyes upon the richer fields of their neighbours. A pretext for war soon arose; and, by two long protracted and obstinate contests, usually called the First and Second Messenian wars (the first from B. C. 743 to 724, and the second from B. C. 685 to 668), the Spartans conquered the whole of Messenia, expelled or reduced to the condition of Helots the inhabitants, and annexed their country to Laconia. The name of Messenia now disappears from history; and, for a period of three centuries, from the close of the Second Messenian War to the restoration of the independence of Messenia by Epaminondas, the whole of the southern part of Peloponnesus, from the western to the eastern sea, bore the appellation of Laconia.

The upper parts of the valleys of the Eurotas and the Oenus, the districts of Sciritis, Beleminatis, Maleatis, and Caryatis, originally belonged to the Arcadians, but they were all conquered by the Spartans and annexed to their territory before B. C. 600. (Grote, *Hist. of Greece*, vol. ii. p. 588.) They thus extended their territories on the north to what may be regarded as the natural boundaries of Laconia, the mountains forming the watershed between the Eurotas and the Alpheius; but when they crossed these limits, and attempted to obtain possession of the plain of Tegea, they met with the most determined opposition, and were at last obliged to be content with the recognition of their supremacy by the Tegeatans, and to leave the latter in the independent enjoyment of their territory.

The history of the early struggles between the Spartans and Argives is unknown. The district on the coast between the territories of the two states, and of which the plain of Thyreatis was the most important part, inhabited by the Cynurians, a Pelasgic people, was a frequent object of contention between them, and was in possession, sometimes of the one, and sometimes of the other power. At length, in B. C. 547, the Spartans obtained permanent possession of it by the celebrated battle fought by the 300 champions from either nation. [CYNURIA.] The dominions of the Spartans now extended on the other side of Mount Parnon, as far as the pass of Anigraea.

The population of Sparta was divided into the three classes of Spartans, Perioeci, and Helots. Of the condition of these classes a more particular account is given in the *Dictionary of Antiquities;* and it is only necessary to remark here that the Spartans lived in Sparta itself, and were the ruling Dorian class; that the Perioeci lived in the different townships in Laconia, and, though freemen, had no share in the government, but received all their orders from the ruling class at Sparta; and that the Helots were serfs bound to the soil, who cultivated it for the benefit of the Spartan proprietors, and perhaps of the Perioeci also. After the extension of the Spartan dominions by the conquest of Messenia and Cynuria, Laconia was said to possess 100 townships (Strab. viii. p. 362), among which we find mentioned Anthana in the Cynurian Thyreatis, and Aulon in Messenia, near the frontiers of Elis. (Steph. B. *s. vv.* Ἀνθάνα, Αὐλών.)

According to the common story, Lycurgus divided the territory of Laconia into a number of equal lots, of which 9000 were assigned to the Spartans, and 30,000 to the Perioeci. (Plut. *Lyc.* 8.) Some ancient critics, however, while believing that Lycurgus made an equal division of the Laconian lands, supposed that the above numbers referred to the distribution of the Lacedaemonian territory after the incorporation of Messenia. And even with respect to the latter opinion, there were two different statements; some maintained that 6000 lots had been

given by Lycurgus, and that 3000 were added by king Polydorus at the end of the First Messenian War; others supposed that the original number of 4500 was doubled by Polydorus. (Plut. *l. c.*) From these statements attempts have been made by modern writers to calculate the population of Laconia, and the relative numbers of the Spartans and the Perioeci; but Mr. Grote has brought forward strong reasons for believing that no such division of the landed property of Laconia was ever made by Lycurgus, and that the belief of his having done so arose in the third century before the Christian era, when Agis attempted to make a fresh division of the land of Laconia. (Grote, *Hist. of Greece*, vol. ii. p. 521.) In any case, it is impossible to determine, as some writers have attempted, the lands which belonged respectively to the Spartans and the Perioeci. All that we know is, that, in the law proposed by Agis, the land bound by the four limits of Pellene, Sellasia, Malea, and Taÿgetus, was divided into 4500 lots, one for each Spartan; and that the remainder of Laconia was divided into 15,000 lots, one for each Perioecus (Plut. *Agis*, 8.)

With respect to the population of Laconia, we have a few isolated statements in the ancient writers. Of these the most important is that of Herodotus, who says that the citizens of Sparta at the time of the Persian wars was about 8000 (vii. 234). The number of the Perioeci is nowhere stated; but we know from Herodotus that there were 10,000 of them present at the battle of Plataea, 5000 heavy-armed, and 5000 light-armed (ix. 11, 29); and, as there were 5000 Spartans at this battle, that is five-eighths of the whole number of citizens, we may venture to assume as an approximate number, that the Perioeci at the battle may have been also five-eighths of their whole number, which would give 16,000 for the males of full age. After the time of the Persian wars the number of the Spartan citizens gradually but steadily declined; and Clinton is probably right in his supposition that at the time of the invasion of Laconia, in B. C. 369, the total number of Spartans did not exceed 2000; and that Isocrates, in describing the original Dorian conquerors of Laconia as only 2000, has probably adapted to the description the number of Spartans in his own time. (Isocr. *Panath.* p. 286, c.) About 50 years after that event, in the time of Aristotle, they were scarcely 1000 (Aristot. *Pol.* ii. 6. § 11); and eighty years still later, in the reign of Agis, B. C. 244, their number was reduced to only 700 (Plut. *Agis*, 5.) The number of Helots was very large. At the battle of Plataea there were 35,000 light-armed Helots, that is seven for every single Spartan (Herod. ix. 28.) On the population of Laconia, see Clinton, *F. H.* vol. ii. p. 407, seq.

From B. C. 547 to B. C. 371, the boundaries of Laconia continued to be the same as we have mentioned above. But after the overthrow of her supremacy by the fatal battle of Leuctra, the Spartans were successively stripped of the dominions they had acquired at the expense of the Messenians, Arcadians, and Argives. Epaminondas, by establishing the independent state of Messenia, confined the Spartans to the country east of Mount Taÿgetus; and the Arcadian city of Megalopolis, which was founded by the same statesman, encroached upon the Spartan territory in the upper vale of the Eurotas. While the Thebans were engaged in the Sacred War, the Spartans endeavoured to recover some of their territory which they had thus lost; but it was still further circumscribed by Philip, the father of Alexander the Great, who deprived the Spartans of several districts, which he assigned to the Argives, Arcadians, and Messenians. (Polyb. ix. 28; Paus. iv. 28. § 2.) After the establishment of the Achaean League their influence in the Peloponnesus sank lower and lower. For a short time they showed unwonted vigour, under their king Cleomenes, whose resolution had given new life to the state. They defeated the Achaeans in several battles, and seemed to be regaining a portion at least of their former power, when they were checked in their progress by Antigonus Doson, whom the Achaeans called in to their assistance, and were at length completely humbled by the fatal battle of Sellasia, B. C. 221. (*Dict. of Biogr.* art. *Cleomenes.*) Soon afterwards Sparta fell into the hands of a succession of usurpers; and of these Nabis, one of the most sanguinary, was compelled by T. Quinctius Flamininus, to surrender Gythium and the other maritime towns, which had sided with the Romans, and were now severed from the Spartan dominion and placed under the protection of the Achaean League, B. C. 195. (Strab. viii. p. 366; Thirlwall, *Hist. of Greece*, vol. viii. p. 326.) The Spartans were thus confined almost to the valley in which their Dorian ancestors had first settled, and, like them, were surrounded by a number of hostile places. Seven years afterwards, B. C. 188, Sparta itself was taken by Philopoemen, and annexed to the Achaean League (Plut. *Phil.* 16; Liv. xxxviii. 32—34); but this step was displeasing to the Romans, who viewed with apprehension the further increase of the Achaean League, and accordingly encouraged the party at Sparta opposed to the interests of the Achaeans. But the Roman conquest of Greece, which soon followed, put an end to these disputes, and placed Laconia, together with the rest of Greece, under the immediate government of Rome. Whether the Lacedaemonian towns to which Flamininus had granted independence were placed again under the dominion of Sparta, is not recorded; but we know that Augustus guaranteed to them their independence, and they are henceforth mentioned under the name of Eleuthero-Lacones. Pausanias says there were originally 24 towns of the Eleuthero-Lacones, and in his time there were still 18, of which the names were Gythium, Teuthrone, Las, Pyrrhicus, Caenepolis, Oetylus, Leuctra, Thalamae, Alagonia, Gerenia, Asopus, Acriae, Boeae, Zarax, Epidaurus Limera, Brasiae, Geronthrae, Marios. (Paus. iii. 21. § 7.) Augustus showed favour to the Spartans as well as to the Lacedaemonians in general; he gave to Sparta the Messenian town of Cardamyle (Paus. iii. 26. § 7); he also annexed to Laconia the Messenian town of Pharae (Paus. iv. 30. § 2), and gave to the Lacedaemonians the island of Cythera. (Dion Cass. liv. 7.)

At the end of the fourth century of the Christian era, Laconia was devastated by the Goths under Alaric, who took Sparta (Zosim. v. 6). Subsequently Slavonians settled in the country, and retained possession of it for a long time; but towards the end of the eighth century, in the reign of the empress Irene, the Byzantine court made an effort to recover their dominions in Peloponnesus, and finally succeeded in reducing to subjection the Slavonians in the plains, while those in Laconia who would not submit were obliged to take refuge in the fastnesses of Mt. Taÿgetus. When the Franks became masters of Laconia in the 13th century, they found upon

the site of ancient Sparta a town still called *Lacedaimonia;* but in A. D. 1248, William Villehardoin built a fortress on one of the rocky hills at the foot of Mt. Taÿgetus, about three miles from the city of Lacedaemonia. Here he took up his residence; and on this rock, called *Misithra*, usually pronounced *Mistrá*, a new town arose, which became the capital of Laconia, and continued to be so till Sparta began to be rebuilt on its ancient site by order of the present Greek government. (Finlay, *Medieval Greece*, p. 230; Curtius, *Peloponnesos*, vol. ii. p. 214.)

V. Towns.

1. *In the Spartan Plain.* — The three chief towns were SPARTA, AMYCLAE, and PHARIS, all situated near one another, and upon some of the lower heights close to the Eurotas. Their proximity would seem to show that they did not arise at the same time. Amyclae lay only 2½ miles south of Sparta, and appears to have been the chief place in the country before the Dorian invasion. South of Amyclae, and on the road from this town to the sea, was Pharis, also an Achaean town in existence before the Dorian conquest. THERAPNE may be regarded as almost a part of Sparta. [SPARTA.] On the slopes of Mt. Taÿgetus, above the plain, there were several places. They were visited by Pausanias (iii. 20. §§ 3—7), but it is difficult to determine the road which he took. After crossing the river Phellia, beyond Amyclae, he turned to the right towards the mountain. In the plain was a sanctuary of Zeus Messapeus, belonging, as we learn from Stephanus, to a village called MESSAPEAE (Μεσσαπέαι), and beyond it, at the entrance into the mountains, the Homeric city of BRYSEAE. In the mountains was a sanctuary of Demeter Eleusinia, and 15 stadia from the latter LAPITHAEUM, near which was DERRHIUM, where was a fountain called Anoeus. Twenty stadia from Derrhium was HARPLEIA, which borders upon the plain. Pausanias gives no information of the direction in which he proceeded from the Eleusinium to Harpleia. Leake supposes that he turned to the south, and accordingly places Harpleia at the entrance into the plain by the bridge of *Xerókampo;* while Curtius, on the contrary, imagines that he turned to the north, and came into the plain at *Mistrá*, which he therefore identifies with Harpleia. It is impossible to determine which of these views is the more correct. The antiquities and inscriptions discovered at *Mistrá* prove that it was the site of an ancient town, and Leake conjectures that it represents the Homeric MESSE.

2. *In the Vale of the Upper Eurotas.* — The road from Sparta to Megalopolis followed the vale of the Eurotas. On this road Pausanias mentions first several monuments, the position of one of which, the tomb of Ladas, may still be identified. This tomb is described as distant 50 stadia from Sparta, and as situated above the road, which here passes very near to the river Eurotas. At about this distance from Sparta, Leake perceived a cavern in the rocks, with two openings, one of which appeared to have been fashioned by art, and a little beyond a semicircular sepulchral niche: the place is called by the peasants στοὺς Φούρνους. (Leake, *Morea*, vol. iii. p. 13.) Further on was the Characoma (Χαράκωμα), a fortification, probably, in the narrow part of the valley; above it the town PELLANA, the frontier-fortress of Sparta in the vale of the Eurotas; and 100 stadia from Pellana, BELEMINA. (Paus. iii. 20. § 8—21. § 3.) In the neighbourhood of Belemina was AEGYS, originally an Arcadian town, which was conquered at an early period by the Spartans, and its territory annexed to Laconia. In the upper vale of the Eurotas was the Lacedaemonian TRIPOLIS. (Liv. xxxv. 27.) Pellana was one of the three cities (Polyb. iv. 81); Belemina was undoubtedly another; and the third was either Aegys or Carystus.

The road to Tegea and Argos ran along the vale of the Oenus. (Paus. iii. 10. §§ 6—8.) After crossing the bridge over the Eurotas, the traveller saw on his right hand Mount Thornax, upon which stood a colossal statue of Apollo Pythaeus, guarding the city of Sparta, which lay at his feet. (Comp. Herod. i. 69; Xen. *Hell.* vi. 5. § 27.) A little further on in the vale of the Oenus, was SELLASIA, which was the bulwark of Sparta in the vale of the Oenus, as Pellana was in that of the Eurotas. Above Sellasia was a small plain, the only one in the vale of the Oenus, bounded on the east by Mt. Olympus and on the west by Mt. Evas: a small stream, called Gorgylus, flowed through the western side of the plain into the Oenus. This was the site of the celebrated battle in which Cleomenes was defeated by Antigonus. [SELLASIA.] In this plain the road divided into two, one leading to Argos and the other to Tegea. The road to Argos followed the Oenus; and to the west of the road, about an hour distant from the modern *Arákhova*, lay CARYAE. From this place to the confines of the Thyreatis in Argolis, was a forest of oaks, called SCOTITAS (Σκοτίτας), which derived its name from a temple of Zeus Scotitas, about 10 stadia west of the road. (Paus. iii. 10. § 6; Polyb. xvi. 37.) On the ridge of Mt. Parnon the boundaries of Argolis and Laconia were marked by Hermae, of which, three heaps of stones, called οἱ φονευμένοι (the slain), may perhaps be the remains. (Ross, *Reisen im Peloponnes*, p. 173.) There was also a town OENUS, from which the river derived its name.

The road to Tegea, which is the same as the present road from Sparta to *Tripolitzá*, after leaving the plain of Sellasia, passes over a high and mountainous district, called SCIRITIS in antiquity. The territory of Laconia extended beyond the highest ridge of the mountain; and the chief source of the Alpheius, called *Sarantopótamos*, formed the boundary between Laconia and the Tegeatis. Before reaching the Arcadian frontier, the road went through a narrow and rugged pass, now called *Klisúra*. The two towns in Sciritis were SCIRUS and OEUM, called Ium by Xenophon.

3. *In the southern part of Laconia.* — On the road from Sparta to Gythium, the chief port of the country, Pausanias (iii. 21. § 4) first mentions CROCEAE, distant about 135 stadia from Sparta, and celebrated for its quarries. GYTHIUM was 30 stadia beyond Croceae. Above Gythium, in the interior, was AEGIAE, to which a road also led from Croceae. Opposite Gythium was the island CRANAE. After giving an account of Gythium, Pausanias divides the rest of Laconia, for the purposes of his description, into what lies left and what lies right of Gythium (ἐν ἀριστερᾷ Γυθίου, iii. 22. § 3 —— τὰ ἐν δεξιᾷ Γυθίου, iii. 24. § 6).

Following the order of Pausanias, we will first mention the towns to the left or east of Gythium. Thirty stadia above Gythium was TRINASUS, situated upon a promontory, which formed the NE extremity of the peninsula terminating in Cape

Taenarum. Eighty stadia beyond Trinasus was HELOS, also upon the coast. The road from Sparta to Helos followed the Eurotas the greater part of the way; and Leake noticed in several parts of the rock ruts of chariot wheels, evidently the vestiges of the ancient carriage-road. (Leake, *Morea*, vol. i. p. 194.) Thirty stadia south of Helos on the coast was ACRIAE; and sixty stadia south of Acriae, ASOPUS, the later name of CYPARISSIA. Between Acriae and Asopus, Ptolemy mentions a town BIANDINA (Βιάνδινα, iii. 16. § 9), the name of which occurs in an inscription in the form of Biadinupolis (Βιαδ[ιν]ουπολείταν, Böckh, *Insc.* No. 1336). Between Asopus and Acriae was an inland plain, called LEUCE, containing in the interior a town of this name, and in the same neighbourhood was PLEIAE. Returning to the coast, 50 stadia south of Asopus, was a temple of Asclepius, in a spot called HYPERTELEATUM. Two hundred stadia south of Asopus was the promontory and peninsula ONUGNATHUS, connected with the mainland by a narrow isthmus, which is, however, generally covered with water. Between Onugnathus and Malea is a considerable bay, called Boeaticus Sinus, from the town of BOEAE, situated at its head. In this neighbourhood were three ancient towns, called ETIS, APHRODISIAS, and SIDE, which were founded by the Dorians; the two former on the Boeaticus Sinus, and the other on the eastern sea north of Cape Malea. Between Boeae and Malea was NYMPHAEUM (Νύμφαιον or Νύμβαιον), with a cave near the sea, in which was a fountain of sweet water. Pausanias (iii. 23. § 2) calls Nymphaeum a λίμνη, but, as there is no lake in this neighbourhood, Boblaye conjectures (*Recherches, &c.* p. 99) that we should read λιμήν, and places Nymphaeum at the harbour of *Santa Marina*, where a fountain of water issues from a grotto. The promontory MALEA (Μαλέα, Steph. B. *s. v.* et alii; Μαλέαι, Herod. i. 82; Strab. viii. p. 368), still called *Malià*, the most southerly point in Greece with the exception of Taenarum, was much dreaded by the ancient sailors on account of the winds and waves of the two seas, which here meet together. Hence arose the proverb, "after doubling Malea, forget your country" (Strab. viii. p. 378), and the epithet of Statius, "formidatum Maleae caput" (*Theb.* ii. 33). On the promontory there was a statue of Apollo. (Steph. B. *s. v.* Αἰθήσιος; Ἀπόλλων Μαλεάτης, Paus. iii. 12. § 8.) South of Malea was the island CYTHERA. Following the eastern coast we first come to SIDE, already mentioned; then to EPIDELIUM, 100 stadia from Malea; next to EPIDAURUS LIMERA, and successively to ZARAX, CYPHANTA, and PRASIAE or Brasiae, of which the last is near the confines of Argolis. The numbers in Pausanias, giving the distances of these places from one another, are corrupt: see CYPHANTA. In the interior, between the Eurotas and the south-western slopes of Parnon, Pausanias mentions GERONTHRAE, situated 120 stadia north of Acriae; MARIUS, 100 stadia east of Geronthrae; GLYPPIA, also called Glympia, north of Marius; and SELINUS, 20 stadia from Geronthrae.

Returning now to Gythium, we proceed to enumerate the towns to the right, that is, west and south, of this place, according to the plan of Pausanias (iii. 24. § 6, seq.); in other words, the towns in the peninsula through which Mount Taÿgetus runs. Forty stadia south of Gythium was LAS upon the coast, which some writers call Asine. Thirty stadia from a hill near Las was HYPSI, in the interior; and a little below Las was the river Smenus (Σμῆνος), rising in Mt. Taÿgetus, which Pausanias praises for the excellence of its water, now the river of *Passavá*. Immediately south of this river was the temple of Artemis Dictynna, on a promontory now called *Aghéranos*; and in the same neighbourhood was a village called by Pausanias Araenus or Araenum, where Las, the founder of the city of Las, was said to have been buried. South of the promontory of *Aghéranos* is a stream, now called the river of *Dhíkova*, the SCYRAS (Σκύρας) of Pausanias (iii. 25. § 1), beyond which were an altar and temple of Zeus: there are still some ancient remains on the right side of the river near its mouth. Further south is the peninsula of *Skutári*, inclosing a bay of the same name, which is conjectured to be the Sinus Aegilodes of Pliny (iv. 5. s. 8); if so, we must place here Aegila, which is mentioned incidentally by Pausanias (iv. 17. § 1) as a town of Laconia. Inland 40 stadia from the river Scyras lay PYRRHICHUS. SE. of Pyrrhichus on the coast was TEUTHRONE. Between Teuthrone and the Taenarian peninsula no town is mentioned, but at a place on the coast called *Kikonia* there are considerable remains of two temples. The Taenarian peninsula is connected with that of Taÿgetus by an isthmus half a mile across, and contains two harbours, named PSAMATHUS and ACHILLEIUS PORTUS [see TAENARUM]: the extremity of the peninsula is *C. Matapán.* Rounding the latter point, and ascending southwards, we come to the town of TAENARUM, afterwards called CAENEPOLIS, 40 stadia above the Taenarian isthmus. Thirty stadia N. of Caenepolis was the commencement of the promontory THYRIDES, nearly as large as the Taenarian peninsula, but connected with the mainland by a much wider isthmus. On this promontory were the towns of HIPPOLA and MESSA. North of Messa was OETYLUS; but the distance of 150 stadia, assigned by Pausanias between the two places, is too much. [OETYLUS.] Eighty stadia north of Oetylus was THALAMAE, situated inland, and 20 stadia from Thalamae was PEPHNUS, upon the coast. Both these towns were upon the lesser PAMISUS, now called the *Miléa*, which the Messenians said was originally the boundary of their territory. (Strab. viii. p. 361; Paus. iii. 26. § 3.) The districts north of this river were taken away from the Lacedaemonians by Philip in B.C. 338, and granted to the Messenians; but it is probable that the latter did not long retain possession of them. In the time of the Roman empire they formed part of Eleuthero-Laconia. (Leake, *Peloponnesiaca*, p. 179.) Twenty stadia north of Pephnus, upon the coast, was LEUCTRA or LEUCTRUM; and 60 stadia north of the latter, CARDAMYLE, at the distance of 8 stadia from the sea. North of Cardamyle was GERENIA, the most northerly of the Eleuthero-Laconian towns. Thirty stadia from Gerenia, in the interior, was ALAGONIA.

(On the geography of Laconia, see Leake, *Morea* and *Peloponnesiaca;* Boblaye, *Récherches, &c.*; Ross, *Reisen im Peloponnes* and *Wanderungen in Griechenland;* Curtius, *Peloponnesos.*)

LACO'NICUS SINUS. [LACONIA.]

LACONIMURGI. [CELTICA; VETTONES.]

LACRINGI, mentioned by Capitolinus (*M. Antonin.* c. 22), by Dion Cassius (lxxxi. 12), and by Petrus Patricius (*Excerpt. Legat.* p. 124, ed. Bonn), along with the ASTINGI and BURI. They were either Dacian or on the Dacian frontier, and

are known only from having, in the Marcomannic war, opposed a body of invading *Astings*, and, having so done, contracted an alliance with Rome. [R. G. L.]

LACTA'RIUS MONS (Γάλακτος ὄρος: *Monte S. Angelo*), was the name given by the Romans to a mountain in the neighbourhood of Stabiae in Campania. It was derived from the circumstance that the mountain abounded in excellent pastures, which were famous for the quality of the milk they produced; on which account the mountain was resorted to by invalids, especially in cases of consumption, for which a milk diet was considered particularly beneficial. (Cassiod. *Ep.* xi. 10; Galen, *de Meth. Med.* v. 12.) It was at the foot of this mountain that Narses obtained a great victory over the Goths under Teias in A. D. 553, in which the Gothic king was slain. (Procop. *B. G.* iv. 35, 36.) The description of the Mons Lactarius, and its position with regard to Stabiae, leave no doubt that it was a part of the mountain range which branches off from the Apennines near *Nocera* (Nuceria), and separates the *Bay of Naples* from that of Paestum. The highest point of this range, the *Monte S. Angelo*, attains a height of above 5000 feet; the whole range is calcareous, and presents beautiful forests, as well as abundant pastures. The name of *Lettere*, still borne by a town on the slope of the mountain side, a little above Stabiae, is evidently a relic of the ancient name. [E. H. B.]

LACTORA, in Gallia Aquitania, is placed by the Antonine Itin. on the road between Aginnum (*Agen*) and Climberrum (*Auch*), and 15 Gallic leagues from each. The distance and name correspond to the position and name of *Lectoure*. Several Roman inscriptions have been discovered with the name Lactorates, and Civitas Lactorensium; but the place is not mentioned by any extant writer. [G. L.]

LACUS FELICIS, a place in Noricum, on the south of the Danube, 25 miles west of Arelape, and 20 miles east of Laureacum (*It. Ant.* pp. 246, 248). According to the Not. Imper., where it is called Lacufelicis, it was the head-quarters of Norican horse archers. It is now generally identified with the town of *Niederwallsee*, on the Danube. [L. S.]

LACYDON. [MASSILIA.]

LADE (Λάδη), the largest of a group of small islands in the Sinus Latmicus, close by Miletus, and opposite the mouth of the Maeander. It was a protection to the harbours of Miletus, but in Strabo's time it was one of the haunts and strongholds of pirates. Lade is celebrated in history for the naval defeat sustained there by the Ionians against the Persians in B. C. 494. (Herod. vi. 8; Thucyd. viii. 17, 24; Strab. xiv. p. 635; Paus. i. 35. § 6; Steph. B. s. v.; Plin. v. 37.) That the island was not quite uninhabited, is clear from Strabo, and from the fact of Stephanus B. mentioning the ethnic form of the name, Λαδαῖος. [L. S.]

LADICUS, a mountain of Gallaecia, the name of which occurs in ancient inscriptions, and is still preserved in that of the *Codos de Ladoco*, near *Monteferrado* on the *Sil*. (Florez, *Esp. S.* vol. xv. p. 63; Ukert, vol. ii. pt. 1. p. 278.) [P. S.]

LADOCEIA (τὰ Λαδόκεια), a place in Arcadia, in the district Maenalia, and, after the building of Megalopolis, a suburb of that city, was situated upon the road from the latter to Pallantium and Tegea. Here a battle was fought between the Mantineians and Tegeatae, B. C. 423, and between the Achaeans and Cleomenes, B. C. 226. Thucydides calls it Laodicium (Λαοδίκιον) in Oresthis. (Paus. viii. 44. § 1; Thuc. iv. 134; Pol. ii. 51, 55.) [ORESTHASIUM.]

LADON (Λαδών). 1. A river of Elis, flowing into the Peneius. [ELIS, p. 817, a.]

2. A river of Arcadia, flowing into the Alpheius. [ALPHEIUS.]

LAEAEI (Λαιαῖοι), a Paeonian tribe in Macedonia, included within the dominion of Sitalces, probably situated to the E. of the Strymon. (Thuc. ii. 96.) [E. B. J.]

LAEAETA'NI or LEË'TA'NI (Λαιαιτανοί, Ptol. ii. 6. §§ 18, 74; Λεηταvοί, Strab. iii. p. 159), a people on the N. part of the E. coast of Hispania Tarraconensis, above the Cosetani. Strabo merely speaks vaguely of the sea-coast between the Ebro and the Pyrenees as belonging to "the Leëtani and the Lartolaeëtae, and other such tribes" (τῶν τε Λεηταvῶν καὶ Λαρτολαιητῶν καὶ ἄλλων τοιούτων), as far as Emporium, while Ptolemy places them about Barcino (*Barcelona*) and the river Rubricatus (*Llobregat*); whence it appears that they extended from below the Rubricatus on the SW. up to the borders of the Indigetes, upon the bay of Emporiae, on the NE. They are undoubtedly the same people as the LALETANI of Pliny (iii. 3. s. 4; comp. Inscr. *ap.* Gruter. p. cdxxx.), who speaks of their country (Laletania) as producing good wine in abundance. (Plin. xiv. 6. s. 8; comp. Martial, i. 27, 50, vii. 52; Sil. Ital. iii. 369, xv. 177.) Strabo describes it as a fertile country, well furnished with harbours. Besides their capital BARCINO (*Barcelona*), they had the following towns: (1.) On the sea coast, from SW. to NE.: BAETULO (Βαιτουλών, Ptol. ii. 6. § 19: *Badelona;* Muratori, p. 1033, no. 3; Florez, *Esp. S.* vol. xxiv. p. 56, vol. xxix. p. 31; Marca, *Hisp.* ii. 15, p. 159), with a small river of the same name (*Besos*: Mela, ii. 6); ILURO or ELURO, a city of the conventus of Tarraco, with the *civitas Romana* (Mela, ii. 6; Plin. iii. 3. s. 4; Αἰλουρών, Ptol. ii. 6. § 19, where the vulgar reading is Διλουρῶν; prob. *Mataro*, Marca, *Hisp.* ii. 15, p. 159; Florez, *Esp. S.* vol. xxix. p. 34); BLANDA (Βλάνδα, Ptol. *l. c.*: *Blanes*), on a height, NE. of the mouth of the little river LARNUM (*Tordera*: Plin. iii. 3. s. 4): between Baetulo and Iluro Ptolemy places the LUNARIUM PR. (Λουνάριον ἄκρον; probably the headland marked by the *Torre de Mongat*). (2.) On the high road from Tarraco to Narbo Martius in Gaul (*Itin. Ant.* p. 398): FINES, 20 M. P. W. of Barcino (near *Martorell*, on the right bank of the *Llobregat*), marking doubtless the borders of the Laeëtani and the Cosetani; then BARCINO; next PRAETORIUM, 17 M. P. (near *Hostalrich* or *La Roca*, where are great ruins; Marca, *Hisp.* ii. 20); SETERRAE or SECERRAE, 15 M. P. (prob. *S. Pere de Sercada* or *San Seloni*); AQUAE VOCONIAE, 15 M. P. (*Caldas de Malavella*). (3.) Other inland towns: RUBRICATA (Ptol.); EGARA, a municipium, whose site is unknown (Inscr. *ap.* Muratori, p. 1106, no. 7, p. 1107, no. 1); AQUAE CALIDAE, a *civitas stipendiaria*, in the *conventus* of Tarraco (Plin. iii. 3. s. 4, Aquicaldenses: *Caldas de Mombuy*, N. of *Barcelona*, Marca, *Hisp.* ii. 16, p. 167; Florez, *Esp. S.* vol. xxix. p. 37; Ukert, vol. ii. pt. 1. pp. 423, 424.) [P. S.]

LAEDERATA (Λεδεράτα or Λιτεράτα, Procop. *de Aed.* iv. 6), a town in the north of Moesia, on the Danube, and a few miles east of Viminacium. In the Notitia its name is Laedenata; it must have been near the modern *Rama*. [L. S.]

LAE'LIA (Λαιλία, Ptol. ii. 4. § 12: *Aracnea* or *El Berrocal*), an inland city of the Turdetani, in the W. of Hispania Baetica, not far from Italica, is one of the Spanish cities of which we have several coins, belonging to the period of its independence, as well as to the early Roman empire. Their types are, an armed horseman, at full speed, with ears of corn, boughs, and palm-trees. (Florez, *Esp. S.* vol. xii. pp. 256—258; *Med.* vol. ii. p. 489, vol. iii. p. 92; Mionnet, vol. i. p. 19, Suppl. vol. i. p. 35; Sestini, *Med.* pp. 20, 65; Num. Goth.; Eckhel, vol. i. p. 25; Ukert, vol. ii. pt. 1. p. 373.) [P. S.]

LAEPA (*Lepe*, near *Ayamonte*), a city of the Turdetani, on the coast of Baetica, a little E. of the mouth of the Anas (*Guadalquivir*: Mela, iii. 1; comp. Plin. iii. 1. s. 3, where, however, the reading is doubtful; *Bell. Alex.* 57, where *Laepam* should probably be substituted for the MS. readings of *Leptim* or *Leptum*; Florez, *Esp. S.* vol. x. p. 45, vol. xii. pp. 56, 57; Ukert, vol. ii. pt. 1. p. 339. This place must not be confounded with Ptolemy's LAEPA, which is only a various reading for ILIPA). [P. S.]

LAERON FL. [GALLAECIA.]

LAESTRY'GONES (Λαιστρυγόνες), a fabulous people of giants, who are mentioned by Homer in the Odyssey (x. 80—132), and described as governed by a king named Lamus. They were a pastoral people, but had a city (ἄστυ) which Homer calls Λαιστρυγονίη, with a port, and a fountain named Artacia. It may well be doubted whether Homer meant to assign any definite locality to this people, any more than to the Cyclopes; but later Greek writers did not fail to fix the place of their abode, though opinions were much divided on the subject. The general tradition, as we learn from Thucydides (vi. 2), placed them in Sicily, though that historian wisely declares his total ignorance of everything concerning them. Other writers were less cautious; some fixed their abodes in the W. or NW. part of the island, in the country subsequently occupied by the Elymi (Lycophr. *Alex.* 956); but the more prevalent opinion, at least in later times, seems to have been that they dwelt in the neighbourhood of Leontini, whence the name of LAESTRYGONII CAMPI was given to the fertile plain in the neighbourhood of that city. (Strab. i. p. 20; Plin. iii. 8. s. 14; Tzetz. *ad Lycophr.* 662, 956; Sil. Ital. xiv. 126.) A wholly different tradition, with the origin of which we are unacquainted, but which is very generally adopted by Roman writers, represented Formiae on the coast of Italy as the abode of the Laestrygones, and the city of their king Lamus. The noble family of the Lamiae, in the days of Augustus, even pretended to derive their descent from the mythical king of the Laestrygones. (Cic. *ad Att.* ii. 13; Hor. *Carm.* iii. 17; Plin. iii. 5. s. 9; Sil. Ital. vii. 410.) [E. H. B.]

LAEVI or LAÏ (Λᾶοι), a tribe of Cisalpine Gauls, who dwelt near the sources of the river Padus. This is the statement of Polybius (ii. 17), who associates them with the Libicii (Λεβέκιοι), and says that the two tribes occupied the part of the plains of Cisalpine Gaul nearest to the sources of the Padus, and next to them came the Insubres. He distinctly reckons them among the *Gaulish* tribes who had crossed the Alps and settled in the plains of Northern Italy: on the other hand, both Livy and Pliny call them Ligurians. (Liv. v. 35; Plin. iii. 17. s. 21.) The reading in the passage of Livy is, indeed, very uncertain; but he would appear to agree with Pliny in placing them in the neighbourhood of Ticinum. Pliny even ascribes the foundation of that city to the Laevi, in conjunction with the Marici, a name otherwise wholly unknown, but apparently also a Ligurian tribe. There can be no doubt that in this part of Italy tribes of Gaulish and Ligurian origin were very much intermixed, and probably the latter were in many cases confounded with the Gauls. [LIGURIA.]

LAGANIA (Λαγανία), a village of the Tectosagae in Galatia, 24 miles to the east of Juliopolis. It is not mentioned by any of the classical writers, but it must afterwards have increased in importance, for during the Christian period, it was the see of a bishop, and took the name of Anastasiopolis (*Concil. Chalc.* p. 662, and p. 95, where the name is misspelt Λασανία; *Itin. Ant.* p. 142, where the name is *Laganeos*; *It. Hieros.* p. 574, where we read *Agannia*). There is little doubt that the *Latania* in Ptolemy (v. 1. § 14) and the *Rheganagalia* of Hierocles (p. 697) are the same as Lagania (comp. Theod. Syc. c. 2). Kiepert, in his map of Asia Minor, identifies it with *Beg Basar.* [L. S.]

LAGA'RIA (Λαγαρία: *Eth.* Λαγαριτανός, Lagarinus), a small town of Lucania, situated between Thurii and the river Sybaris; which, according to the commonly received legend, was founded by a colony of Phocians under the command of Epeius, the architect of the wooden horse. (Strab. vi. p. 263; Lycophr. *Alex.* 930; Tzetz. *ad loc.*) Strabo, the only geographical writer who mentions it, calls it only a fortress (φρούριον), and it was probably never a place of any importance; though deriving some celebrity in after times from the excellence of its wine, which was esteemed one of the best in Italy. (Strab. *l. c.*; Plin. xiv. 6. s. 8.) The statement of Strabo, above quoted, is the only clue to its position, which cannot therefore be determined with any certainty. Cluverius placed it at *Nocara*, about 10 miles from the sea, and this conjecture (for it is nothing more) has been adopted by Romanelli. The wines of this neighbourhood are said still to preserve their ancient reputation. (Cluver. *Ital.* p. 1272; Romanelli, vol. i. p. 248.) [E. H. B.]

LAGECUM. [LEGEOLIUM.]

LAGINA (τὰ Λάγινα), a place in the territory of Stratoniceia, in Caria, contained a most splendid temple of Hecate, at which every year great festivals were celebrated. (Strab. xiv. p. 660.) Tacitus (*Ann.* iii. 62), when speaking of the worship of Trivia among the Stratoniceians, evidently means Hecate. The name of Lagina is still preserved in the village of *Lakena*, not far from the sources of the *Tshina*. Laginia, mentioned by Steph. B. as a πολίχνιον Καρίας, seems to be the same as the Lagina of Strabo. [L. S.]

LAGNI (Λαγνί), a town of the Arevacae, in Hispania Tarraconensis, mentioned only by Diodorus Siculus (*Excerpt.* vol. ii. p. 596). [P. S.]

LAGOS, a town in Phrygia, on the north-east of Mandropolis. (Liv. xxxviii. 15.) The town is mentioned only by Livy in his account of the progress of the Roman consul Cn. Manlius in Asia Minor, when Lagos was found deserted by its inhabitants, but well provided with stores of every description, whence we may infer that it was a town of some consequence. [L. S.]

LAGU'SA (Λάγουσα, Λαγοῦσσα), an island in the Aegaean sea, the name of which occurs in Strabo between those of Sicinus and Pholegandrus. Hence it is probably the same as *Kardiótissa*, a rocky islet between the two latter islands. But Kiepert

in his map, identifies it with Polyaegus. (Strab. x. p. 484; Steph. B. *s. v.*; Eustath. *ad Il.* ii. 625, p. 306.)

LAGU'SA (Λάγουσα), one of a group of small islands in the bay of Telmissus in Lycia, 5 stadia from Telmissus, and 80 from Cissidae. (Plin. v. 35; Steph. B. *s. v.*; *Stadiasm. Mar. Mag.* § 226, foll.) This island is generally considered to be the same as the modern *Panagia di Cordialissa*. [L. S.]

LAGUSSAE, a group of small islands off the coast of Troy, to the north of Tenedos (Plin. v. 38; comp. Eustath. *ad Hom. Il.* ii. p. 306). Their modern name is *Taochan Adassi*. [L. S.]

LAISH, the more ancient name of Dan. [DAN.]

LALASIS (Λαλασίς, Ptol. v. 8. § 6, where some MSS. have Δαλασίς), a district in Cilicia, extending along Mount Taurus, above the district called Selentis. Pliny (v. 23) also mentions a town Lalasis in Isauria, and this town accordingly seems to have been the capital of the district Lalasis, which may have extended to the north of Mount Taurus. It is probable, moreover, that the Isaurian town of *Lalisanda*, mentioned by Stephanus B., and which, he says, was in his day called *Dalisanda*, is the same as Lalasis; and if so, it is identical with the Dalisanda of Hierocles (p. 710). Basilius of Seleucia informs us that the town stood on a lofty height, but was well provided with water, and not destitute of other advantages. (Wesseling, *ad Hierocl. l. c.*). From all these circumstances, we might be inclined to consider the reading Δαλασίς in Ptolemy the correct one, were it not that the coins of the place all bear the inscription Λαλασσέων. (Sestini, p. 96.) [L. S.]

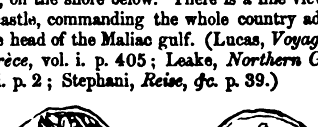
LALENESIS (Λαληνεσίς or Λαδοινερίς, Ptol. v. 7. § 6), a small town in the district of Melitene in Armenia Minor, on the east of Zoropassus. Its site is unknown, and no ancient writer besides Ptolemy mentions it. [L. S.]

LALETA'NI. [LAEETANI.]

LAMA. [VETTONES.]

LAMASBA (*Itin. Ant.* pp. 35, ter, 40: *Lamasbua*, *Tab. Peut.*), a city of the Massylii, in the interior of Numidia, near the confines of Mauretania, 62 M. P. from SITIFI, and 62 from TAMUGADI. Lapie and D'Avezac identify it with *Ain-Hasel*, at the N. foot of the mountains of the *Welled-Abd-en-Nour*; but its site seems to agree better with the considerable ruins at *Baitna*, on the S. of those mountains, and W. of the M. Aurasius (*Jebel-Auress*: Shaw, *Travels, &c.* p. 52; Pellissier, *Exploration Scientifique de l'Algérie*, vol. vi. p. 389). [P. S.]

LAMBER or LAMBRUS, a river of Northern Italy, in Gallia Transpadana, noticed by Pliny among the affluents of the Padus which join that river on its left or northern bank. (Plin. iii. 19. s. 23.) It is still called the *Lambro*, and rises in a small lake called the *Lago di Pusiano* (the Eupilis Lacus of Pliny), from whence it flows within 3 miles of *Milan*, and enters the *Po* about midway between the *Ticino* and the *Adda*. Sidonius Apollinaris contrasts its stagnant and weedy stream (*ulvosum Lambrum*) with the blue waters of the Addua. (*Ep.* i. 5.) The Tabula as well as the Geographer of Ravenna give a town of the name of Lambrum, of which no trace is found elsewhere. It is probably a corruption of a station, Ad Lambrum, at the passage of the river of that name, though the Tabula erroneously transfers it to the S. side of the Padus. (*Tab. Peut.*; Geogr. Rav. iv. 30.) [E. H. B.]



LAMBE'SE (*Itin. Ant.* pp. 32, 33, 34, 40: *Tab. Peut.*; Λάμβαισα, Ptol. iv. 3. § 29; LAMBAESA, Inscr.; Lambaese, Augustin. *adv. Donat.* vi. 13; Lambesitana Colonia, Cyprian. *Epist.* 55: *Lemba* or *Tezzout*, large Ru.), one of the most important cities in the interior of Numidia, belonging to the Massylii. It lay near the confines of Mauretania, at the W. foot of M. Aurasius (*Jebel Auress*), 102 M. P. from SITIFI, 118 from THEVESTE, and 84 from CIRTA. It was the station of an entire legion, the Legio III. Augusta (Λεγεὼν τρίτη σεβαστή, Ptol. *l. c.*; and Inscr.). Its importance is attested by its magnificent ruins, among which are seen the remains of an amphitheatre, a temple of Aesculapius, a triumphal arch, and other buildings, enclosed by a wall, in the circuit of which 40 gates have been traced, 15 of them still in a good state of preservation. The silence of Procopius respecting such a city seems to imply that it had been destroyed before the age of Justinian. (Shaw, *Travels*, p. 57; Bruce; Peysonnel; Pellissier, *Exploration Scientifique de l'Algérie*, vol. vi. pp. 388, 389.) [P. S.]

LAMBRI'ACA or LAMBRI'CA, a town of the Callaïci Lucenses in Gallaecia, near the confluence of the rivers Laeron and Ulla, not far from *El-Padron*. (Mela, iii. 1. § 8; Ukert, vol. ii. pt. 1. p. 439.) [P. S.]

LAMETI'NI (Λαμητῖνοι), a city of Bruttium, mentioned only by Stephanus of Byzantium (*s. v.*), on the authority of Hecataeus, who added that there was a river also of the name of LAMETUS (Λάμητος). We find this again alluded to by Lycophron. (*Alex.* 1085.) There can be no doubt that this is the stream still called *Lamato*, which flows into the gulf of *Sta. Eufemia*: and this is confirmed by the authority of Aristotle, who gives to that gulf, otherwise known as the SINUS TERINAEUS or HIPPONIATES, the name of the LAMETINE GULF (ὁ Λαμητῖνος κόλπος, Arist. *Pol.* vii. 10). Hence there can be little doubt that the city of Lametini also was situated on the shores of the same bay, though Stephanus vaguely calls it "near Crotona." (Steph. B. *l. c.*) No other writer mentions the name (which is evidently an ethnic form like Leontini), and it is probable that the town was destroyed or sunk into a dependent condition at an early period. An inscription, which records it as an existing municipal town in the time of Trajan, is almost certainly spurious. (Mommsen, *Inscr. Regn. Neap. App.* No. 936.) It is generally supposed to have been situated either at or near the modern village of *Sta. Eufemia*, but this is mere conjecture. [E.H.B.]

LA'MIA (Λαμία: *Eth.* Λαμιεύς: *Zitúni*), a town of the Malienses, though afterwards separated from them, situated in the district Phthiotis in Thessaly. Strabo describes Lamia as situated above the plain which lies at the foot of the Maliac gulf, at the distance of 30 stadia from the Spercheius, and 50 stadia from the sea (ix. pp. 433, 435). Livy says that it was placed on a height distant seven miles from Heracleia, of which it commanded the prospect (xxxvi. 25), and on the route which led from Thermopylae through the passes of Phthiotis to Thaumaci (xxxii. 4). Strabo further relates that it was subject to earthquakes (i. p. 60). Lamia is celebrated in history on account of the war which the Athenians and the confederate Greeks carried on against Antipater in B.C. 323. Antipater was at first unsuccessful, and took refuge in Lamia, where he was besieged for some time by the allies. From this circumstance this contest is usually called

the Lamian war. Having afterwards received succours from Craterus, Antipater retreated northwards, and defeated the allies at the battle of Crannon in the following year. (Diod. xviii. 9, seq.; Polyb. ix. 29.) In B. C. 208 Philip, son of Demetrius, defeated the Aetolians near Lamia. (Liv. xxvii. 30.) In 192 Lamia opened its gates to Antiochus (Liv. xxxv. 43), and was in consequence besieged in the following year by Philip, who was then acting in conjunction with the Romans. (Liv. xxxvi. 25.) On this occasion Livy mentions the difficulty which the Macedonians experienced in mining the rock, which was siliceous ("in asperis locis silex saepe impenetrabilis ferro occurrebat"). In 190 the town was taken by the Romans. (Liv. xxxvii. 4, 5.) Lamia is mentioned by Pliny (iv. 7. s. 14), and was also in existence in the sixth century. (Hierocl. p. 642, ed. Wesseling.) The site of Lamia is fixed at *Zitúni*, both by the description of the ancient writers of the position of Lamia, and by an inscription which Paul Lucas copied at this place. *Zitúni* is situated on a hill, and is by nature a strongly fortified position. The only remains of the ancient city which Leake discovered were some pieces of the walls of the Acropolis, forming a part of those of the modern castle, and some small remains of the town walls at the foot of the hill, beyond the extreme modern houses to the eastward. On the opposite side of the town Leake noticed a small river, which, we learn from Strabo (ix. p. 434, 450), was called Achelous. The port of Malia was named PHALARA (τὰ Φάλαρα, Strab. ix. p. 435; Polyb. xx. 11; Liv. xxvii. 30, xxxv. 43; Plin. iv. 7. s. 12), now *Stylidha*. *Zitúni* has been compared to Athens, with its old castle, or acropolis, above, and its Peiraeeus at *Stylidha*, on the shore below. There is a fine view from the castle, commanding the whole country adjacent to the head of the Maliac gulf. (Lucas, *Voyage dans la Grèce*, vol. i. p. 405; Leake, *Northern Greece*, vol. ii. p. 2; Stephani, *Reise*, *&c.* p. 39.)

COIN OF LAMIA.

LAMIACUS SINUS (ὁ Λαμιακὸς κόλπος), a name given by Pausanias to the Maliac gulf, from the important town of Lamia. (Paus. i. 4. § 3, vii. 15. § 2, x. 1. § 2.) In the same way the gulf is now called *Zitúni*, which is the modern name of Lamia.

LAMI'NIUM (Λαμίνιον: *Eth.* Laminitani: near *Fuenllana*, between *Montiel* and *Alcaraz*), a town of the Carpetani (according to Ptolemy, though some suppose it to have belonged rather to the Oretani), in Hispania Tarraconensis. It was a stipendiary town of the conventus of New Carthage, and stood on the high road from Emerita to Caesaraugusta. The river ANAS (*Guadiana*) rose in the lands of Laminium, 7 M. P. E. of the town. (Plin. iii. 1. s. 2, 3. s. 4; *Itin. Ant.* pp. 445, 446; Ptol. ii. 6. § 57; Inscr. *ap.* Florez, *Esp. S.* vol. iv. p. 38, vol. v. pp. 22, 122, vol. vii. p. 140; Ukert, vol. ii. pt. 1. p. 411: in Plin. xxxvi. 21. s. 47, where Pliny speaks of the whetstones found in Hither Spain as *Cotes Flaminitanae*, Ukert supposes we ought to read *Cotes Laminitanae*.) [P. S.]

LAMO'TIS (Λαμῶτις), a district on the eastern coast of Cilicia Aspera, between the rivers Calycadnus and Lamus. Its capital bore the name of Lamus, from which that of the district was derived. (Ptol. v. 8. § 6; comp. LAMUS.) [L. S.]

LAMPAS (Λαμπάς), a harbour on the E. coast of the Tauric Chersonese, 800 stadia from Theodosia, and 220 stadia from Criu-Metopon. (Arrian, *Peripl.* p. 20; Anon. *Peripl.* p. 6.) Arrian uses the two names Lampas and Halmitis as if they belonged to the same place, but the Anonymous Coast-describer speaks of Lampas alone. Halmitis probably took its name from being a place for salting fish. The name is preserved in the places now called *Biouk-Lambat* and *Koutchouk-Lambat*, Tartar villages at the end of a bay defended by the promontory of *Plaka*, near which ancient ruins have been found. (Dubois de Montpereux, *Voyage autour du Caucase*, vol. v. p. 713, vol. vi. p. 460; Rennell, *Compar. Geog.* vol. ii. p. 340.) [E. B. J.]

LAMPATAE or LAMPAGAE (Λαμπάται or Λαμπᾶγαι, Ptol. vii. 1. § 42), a small tribe who lived among the offshoots of the Imaus, in the NW. part of India, about the sources of the Choes (now *Kameh*), which is itself a tributary of the *Kábul* river. [V.]

LAMPE (Λαμπή), a town in Crete, also called Lappa. [LAPPA.] Besides this town Stephanus B. (*s. v.*) mentions two other towns of this name, otherwise unknown, one in Arcadia and the other in Argolis.

LAMPEIA. [ERYMANTHUS.]

LAMPE'TIA. [CLAMPETIA.]

LAMPONEIA or LAMPO'NIUM (Λαμπώνεια, Λαμπώνιον), an Aeolian town in the south-west of Troas, of which no particulars are known, except that it was annexed to Persia by the satrap Otanes in the reign of Darius Hystaspis. It is mentioned only by the earliest writers. (Herod. v. 26; Strab. xiii. p. 610; Steph. B. *s. v.*) [L. S.]

LAMPRA. [ATTICA, p. 331, a.]

LA'MPSACUS (Λάμψακος: *Eth.* Λαμψακηνός), sometimes also called Lampsacum (Cic. *in Verr.* i. 24; Pomp. Mela, i. 19), was one of the most celebrated Greek settlements in Mysia on the Hellespont. It was known to have existed under the name of Pityusa or Pityussa before it received colonists from the Ionian cities of Phocaea and Miletus. (Strab. xiii. p. 589; Steph. B. *s. v.*; Plin. v. 40; Hom. *Il.* ii. 829; Plut. *de Virt. Mul.* 18.) It was situated, opposite to Callipolis, in the Thracian Chersonesus, and possessed an excellent harbour. Herodotus (vi. 37) relates that the elder Miltiades, who was settled in the Thracian Chersonesus, made war upon the Lampsaceni, but that they took him by surprise, and made him their prisoner. Being threatened, however, by Croesus, who supported Miltiades, they set him free. During the Ionian revolt, the town fell into the hands of the Persians. (Herod. v. 117.) The territory about Lampsacus produced excellent wine, whence the king of Persia bestowed it upon Themistocles, that he might thence provide himself with wine. (Thucyd. i. 138; Athen. i. p. 29; Diod. xi. 57; Plut. *Them.* 29; Nepos, *Them.* 10; Amm. Marc. xxii. 8.) But even while Lampsacus acknowledged the supremacy of Persia, it continued to be governed by a native prince or tyrant, of the name of Hippocles. His son Aeantides married Archedice, a daughter of Pisistratus, whose tomb, commemorating her virtues, was seen there in the time of Thucydides (vi. 59). The attempt of

Euagon to seize the citadel, and thereby to make himself tyrant, seems to belong to the same period. (Athen. xi. p. 508.) After the battle of Mycale, in B. C. 479, Lampsacus joined Athens, but revolted after the failure of the great Athenian expedition to Sicily; being, however, unfortified, it was easily reconquered by a fleet under Strombichides. (Thuc. viii. 62.) After the time of Alexander the Great, the Lampsaceni had to defend their city against the attacks of Antiochus of Syria; they voted a crown of gold to the Romans, and were received by them as allies. (Liv. xxxiii. 38, xxxv. 42, xliii. 6; Polyb. xxi. 10.) In the time of Strabo, Lampsacus was still a flourishing city. It was the birthplace of many distinguished authors and philosophers, such as Charon the historian, Anaximenes the orator, and Metrodorus the disciple of Epicurus, who himself resided there for many years, and reckoned some of its citizens among his intimate friends. (Strab. *l. c.*; Diog. Laërt. x. 11.) Lampsacus possessed a fine statue by Lysippus, representing a prostrate lion, but it was removed by Agrippa to Rome to adorn the Campus Martius. (Strab. *l. c.*) Lampsacus, as is well known, was the chief seat of the obscene worship of Priapus, who was believed to have been born there of Aphrodite. (Athen. i. p. 30; Paus. ix. 31. § 2; Apollon. Rhod. i. 983; Ov. *Fast.* vi. 345; Virg. *Georg.* iv. 110.) From this circumstance the whole district was believed to have derived the name of Abarnis or Aparnis (ἀπαρνεῖσθαι), because Aphrodite denied that she had given birth to him. (Theophr. *Hist. Plant.* i. 6, 13.) The ancient name of the district had been Bebrycia, probably from the Thracian Bebryces, who had settled there. (Comp. Hecat. *Fragm.* 207; Charon, *Fragm.* 115, 119; Xenoph. *Anab.* vii. 8. § 1; Polyb. v. 77; Plin. iv. 18, v. 40; Ptol. v. 2. § 2; Steph. B. *s. v.*) The name of *Lamsaki* is still attached to a small town, near which Lampsacus probably stood, as *Lamsaki* itself contains no remains of antiquity. There are gold and silver staters of Lampsacus in different collections; the imperial coins have been traced from Augustus to Gallienus. (Sestini, *Mon. Vet.* p. 73.) [L. S.]

COIN OF LAMPSACUS.

LAMPSUS, a town of Histiaeotis in Thessaly, on the borders of Athamania. (Liv. xxxii. 14.)

LAMPTRA. [ATTICA, p. 331, a.]

LAMUS (Λάμος), a village of Cilicia, at the mouth of the river Lamus, from which the whole district derived the name of Lamotis. The river is mentioned by Stephanus B. (from Alexander Polyhistor), and both the river and the village by Strabo (xiv. p. 671) and Ptolemy (v. 8. §§ 4, 6). The river, which is otherwise of no importance, formed the boundary between Cilicia Aspera and Cilicia Propria, and still bears the name of *Lamas* or *Lamuzo*. About the village of Lamus no particulars are known. (Comp. Nonnus, *Dionys.* xxiv. 50; Hierocl. p. 709.) [L. S.]

LAMYRON (Λαμυρόν), a great harbour near Cape Heraclium, on the coast of Pontus, not far from Themiscyra. (Anonym. *Peripl. Pont. Eux.* p. 10.) [L. S.]

LANCE (*Itin. Ant.* p. 395), or LA'NCIA (Λαγκία, Dion Cass. liii. 25, 29; Flor. iv. 12; Oros. vi. 21), or LANCIATUM (Λαγκίατον, Ptol. ii. 6. § 29), the chief city of the LANCEATI (Λαγκίατοι, Ptol. *l. c.*) or LANCIENSES (Plin. iii. 3. s. 4), a tribe of the Astures, in Hispania Tarraconensis. It was strongly fortified, and was the most important city of that region, even more so than LEGIO VII. GEMINA, at least before the settlement of the latter by the Romans, by whom Lancia was destroyed, though it was again restored. It lay on the high road from Caesaraugusta to Legio VII. (*Leon*), only 9 M. P. from the latter, where its name is still to be traced in that of *Sollanco* or *Sollancia*. (Florez, *Esp. S.* vol. xvi. p. 16; Ukert, vol. ii. pt. 1. p. 441.) [P. S.]

LA'NCIA, LANCIA'TI, LANCIA'TUM. [LANCE.]

LA'NCIA OPPIDA'NA. [VETTONES.]

LANCIENSES. [LANCE.]

LANCIENSES OCELENSES or TRANSCUDANI. [OCELUM.]

LANGOBARDI, LONGOBARDI (Λαγγοβάρδοι, Λογγοβάρδοι, also Λαγγοβάρδαι and Λογγοβάρδαι), a tribe of Germans whom we first meet with in the plain, south of the lower *Elbe*, and who belonged to the Suevi (Strab. vii. p. 290, where Kramer reads Λαγκόβαρδοι; Ptol. ii. 11. §§ 9, 17). According to Paulus Diaconus, himself a Langobard, or Lombard (*Hist. Longob.* i. 3, 8; comp. Isidor. *Orig.* ix. 2; *Etym. M. s. v.* γένειον), the tribe derived its name from the long beards, by which they distinguished themselves from the other Germans, who generally shaved their beards. But it seems to be more probable that they derived the name from the country they inhabited on the banks of the *Elbe*, where *Börde* (or *Bord*) still signifies "a fertile plain by the side of a river;" and a district near *Magdeburg* is still called the *lange Börde* (Wilhelm, *Germanien*, p. 286). According to this, Langobardi would signify "inhabitants of the long bord of the river." The district in which we first meet with them, is the left bank of the *Elbe*, from the point where the Sala empties itself into it, to the frontiers of the Chauci Minores, so that they were bounded in the north by the *Elbe*, in the east by the Semnones, in the south by the Cherusci, and in the west by the Fosi and Angrivarii. Traces of the name of the Langobardi still occur in that country in such names as *Bardengau*, *Bardewik*. The earliest writer who mentions the Langobardi as inhabiting those parts, is Velleius Paterculus (ii. 106). But notwithstanding the unanimous testimony of the ancients that they were a branch of the Suevi, their own historian (Paul. Diac. *l. c.*; comp. Euseb. *Chron.* ad an. 380) states that the Langobardi originally did not inhabit any part of Germany, but had migrated south from Scandinavia, where they had borne the name of Vinili, and that they assumed the name Langobardi after their arrival in Germany. It is impossible to say what value is to be attributed to this statement, which has found as many advocates as it has had opponents. From Strabo (*l. c.*) it is clear that they occupied the northern bank of the *Elbe*, and it is possible that they were among those Germans whom Tiberius, in the reign of Augustus drove across the *Elbe* (Suet. *Aug.* 21). In their new country they were soon reduced to submission by Maroboduus, but

afterwards they shook off the yoke, and, in conjunction with the Semnones, joined the confederacy of the Cheruscans against the Marcomanni. (Tac. *Ann.* ii. 45.) When, in consequence of the murder of Arminius, the power of the Cheruscans was decaying more and more, the Langobardi not only supported and restored Italus, the king of the Cheruscans who had been expelled, but seem to have extended their own territory in the south. so as to occupy the country between *Halle*, *Magdeburg*, and *Leipzig*. (Tac. *Ann.* xi. 17.) They were not a numerous tribe, but their want of numbers was made up for by their natural bravery (Tac. *Germ.* 40), and Velleius describes them as a "gens etiam Germana feritate ferocior." Shortly after these events the Langobardi disappear from history, until they are mentioned again by Ptolemy (*l. c.*), who places them in the extensive territory between the Rhine and *Weser*, and even beyond the latter river almost as far as the *Elbe*. They thus occupied the country which had formerly been inhabited by the tribes forming the Cheruscan confederacy. This great extension of their territory shows that their power must have been increasing ever since their liberation from the yoke of Maroboduus. After this time we again hear nothing of the Longobardi for a considerable period. They are indeed mentioned, in an excerpt from the history of Petrus Patricius (*Exc. de Legat.* p. 124), as allies of the Obii on the frontiers of Pannonia; but otherwise history is silent about them, until, in the second half of the 5th century, they appear on the north of the Danube in Upper Hungary as tributary to the Heruli (Procop. *de Bell. Goth.* ii. 15, who describes them as Christians). Whether these Langobardi, however, were the same people whom we last met with between the Rhine and the *Elbe*, or whether they were only a band of emigrants who had in the course of time become so numerous as to form a distinct tribe, is a question which cannot be answered with certainty, although the latter seems to be the more probable supposition. Their natural love of freedom could not bear to submit to the rule of the Heruli, and after having defeated the king of the latter in a great battle, they subdued the neighbouring Quadi, likewise a Suevian tribe, and henceforth they were for a long time the terror of their neighbours and the Roman province of Pannonia. (Paul. Diac. i. 22.) For, being the most powerful nation in those parts, they extended their dominion down the Danube, and occupied the extensive plains in the north of Dacia on the river Theiss, where they first came in conflict with the Gepidae, and entered Pannonia. (Paul. Diac. i. 20.) The emperor Justinian, wanting their support against the Gepidae, gave them lands and supplied them with money (Procop. *Bell. Goth.* iii. 33), and under their king Audoin they gained a great victory over the Gepidae. (Paul. Diac. i. 25; Procop. *Bell. Goth.* iii. 34, iv. 18, 25.) Alboin, Audoin's successor, after having, in conjunction with the Avari, completely overthrown the empire of the Gepidae, led the Langobardi, in A. D. 568, into Italy, where they permanently established themselves, and founded the kingdom from which down to this day the north-east of Italy bears the name of *Lombardy*. (*Exc. de Legat.* pp. 303, 304; Marius Episc. *Chron. Ronc.* ii. 412.) The occasion of their invading Italy is related as follows. When Alboin had concluded his alliance with the Avari, and had ceded to them his own dominions, Narses, to take revenge upon Justin, invited them to quit their poor country and take possession of the fertile plains of Italy. Alboin accordingly crossed the Alps, and as the north of Italy was badly defended, he succeeded in a short time in establishing his kingdom, which continued to flourish until it was overpowered and destroyed by Charlemagne. (Paul. Diac. ii. 5; Eginhard, *Vit. Carol. M.* 6.) The history of this singular people whose name still survives, has been written in Latin by Paulus Diaconus (Warnefried), in the reign of Charlemagne, and by another Lombard of the 9th century, whose name is unknown. (Comp. Wilhelm, *Germanien*, p. 281, foll.; Zeuss, *die Deutschen und die Nachbarstämme*, p. 109, foll.; F. Dufft, *Quaestiones de Antiquissima Longobardorum Historia*, Berlin, 1830, 8vo.; Koch-Sternfeld, *das Reich der Longobarden in Italien*, Munich, 1839; Latham, *Tac. Germ.* p. 139, and *Epileg.* p. lxxxiv.) [L.S.]

LANGOBRI'GA. [LUSITANIA.]

LANU'VIUM (Λανούϊον, Strab.; Λανούβιον, Ptol.: *Eth.* Λανουΐνος, Lanuvinus: *Cività Lavinia*), an ancient and important city of Latium, situated on a lofty hill forming a projecting spur or promontory of the Alban Hills towards the S. It was distant about 20 miles from Rome, on the right of the Appian Way, rather more than a mile from the road. The name is often written in inscriptions, even of a good time, *Lanivium;* hence the confusion which has arisen in all our MSS. of ancient authors between it and *Lavinium:* the two names are so frequently interchanged as to leave constant doubt which of the two is really meant, and in the middle ages they appear to have been actually regarded as the same place; whence the name of "Civitas Lavinia" by which Lanuvium is still known, and which can be traced as far back as the fourteenth century. The foundation of Lanuvium was ascribed by a tradition recorded by Appian (*B. C.* ii. 20) to Diomed; a legend probably arising from some fancied connection with the worship of Juno at Argos. A tradition that has a more historical aspect, though perhaps little more historical worth, represented it as one of the colonies of Alba. (Diod. vii. *ap. Euseb. Arm.* p. 185.) The statement of Cato (*ap. Priscian.* iv. 4. § 21) that it was one of the cities which co-operated in the consecration of the celebrated temple of Diana at Aricia, is the first fact concerning it that can be looked upon as historical, and shows that Lanuvium was already a city of consideration and power. Its name appears also in the list given by Dionysius of the cities that formed the league against Rome in B. C. 496, and there is no doubt that it was in fact one of the thirty cities of the Latin League. (Dionys. v. 61; Niebuhr, vol. ii. p. 17.) But from this time we hear little of it, except that it was the faithful ally of Rome during her long wars with the Volscians and Aequians (Liv. vi. 21): the position of Lanuvium would indeed cause it to be one of the cities most immediately interested in opposing the progress of the Volscians, and render it as it were the natural rival of Antium. We have no explanation of the causes which, in B. C. 383, led the Lanuvians suddenly to change their policy, and take up arms, together with some other Latin cities, in favour of the Volscians (Liv. vi. 21). They must have shared in the defeat of their allies near Satricum; but apparently were admitted to submission on favourable terms, and we hear no more of them till the great Latin War in B. C. 340, in which they took an active and important part. At first, indeed, they seem to have hesitated and delayed to take the field; but in the two last campaigns their forces are

particularly mentioned, both among those that fought at Pedum in B. C. 339, and the next year at Astura (Liv. viii. 12, 13).* In the general settlement of affairs at the close of the war Lanuvium obtained the Roman civitas, but apparently in the first instance without the right of suffrage; for Festus, in a well-known passage, enumerates the Lanuvini among the communities who at one time enjoyed all the other privileges of Roman citizens except the suffrage and the Jus Magistratuum (Liv. viii. 14; Festus, *v. Municipium*), a statement which can only refer to this period. We know from Cicero that they subsequently obtained the full franchise and right of suffrage, but the time when they were admitted to these privileges is unknown. (Cic. *pro Balb.* 13.)

From this time Lanuvium lapsed into the condition of an ordinary municipal town, and is mentioned chiefly in relation to its celebrated temple of Juno Sospita. It did not, however, fall into decay, like so many of the early Latin cities, and is mentioned by Cicero among the more populous and flourishing municipia of Latium, in the same class with Aricia and Tusculum, which he contrasts with such poor and decayed places as Labicum and Collatia (Cic. *de Leg. Agr.* ii. 35). Its chief magistrate retained the ancient Latin title of Dictator, which was borne by T. Annius Milo, the celebrated adversary of Clodius, in the days of Cicero. (Cic. *pro Mil.* 10; Orell. *Inscr.* 3786.) Previous to this period Lanuvium had suffered severely in the civil wars of Marius and Sulla, having been taken by the former at the same time with Antium and Aricia, just before the capture of Rome itself, B. C. 87. (Appian, *B. C.* i. 69; Liv. *Epit.* 80.) Nor did it escape in the later civil wars: the treasures of its temple were seized by Octavian, and a part at least of its territory was divided among a colony of veterans by the dictator Caesar. (Appian, *B. C.* v. 24; *Lib. Colon.* p. 235.) It subsequently received another colony, and a part of its territory was at one time allotted to the vestal virgins at Rome. (*Ibid.*) Lanuvium, however, never bore the title of a colony, but continued only to rank as a municipium, though it seems to have been a flourishing place throughout the period of the Roman Empire. It was the birthplace of the emperor Antoninus Pius, who in consequence frequently made it his residence, as did also his successors, M. Aurelius and Commodus: the last of these three is mentioned as having frequently displayed his skill as a gladiator in the amphitheatre at Lanuvium, the construction of which may probably be referred to this epoch. Inscriptions attest its continued prosperity under the reigns of Alexander Severus and Philippus. (Suet. *Aug.* 72; *Tac. Ann.* iii. 48; Capit. *Ant. Pius*, 1; Lamprid. *Commod.* 1, 8; Vict. *de Caes.* 15; Orell. *Inscr.* 884, 3740, &c.)

Lanuvium was the place from which several illustrious Roman families derived their origin. Among these were the Annia, to which Milo, the adversary of Clodius, belonged by adoption, as well as the Papia, from which he was originally descended; the Roscia, and the Thoria (Cic. *pro Mil.* 10; Ascon. *ad Milon.* pp. 32, 53; Cic. *de Divin.* i. 36, ii. 31, *de Fin.* ii. 20), to which may probably be added, on the authority of coins, the Procilia and Mettia. (Eckhel, vol. v. pp. 253, 267, 289, 293.) We learn from Cicero that not only did the Roscia Gens derive its origin from Lanuvium, but the celebrated actor Roscius was himself born in the territory of that city. (Cic. *de Div.* i. 36.)

But the chief celebrity of Lanuvium was derived from its temple of Juno Sospita, which enjoyed a peculiar sanctity, so that after the Latin War in B. C. 338 it was stipulated that the Romans should enjoy free participation with the Lanuvians themselves in her worship and sacred rites (Liv. viii. 14): and although at a later period a temple was erected at Rome itself to the goddess under the same denomination, the consuls still continued to repair annually to Lanuvium for the purpose of offering solemn sacrifices. (Liv. xxxii. 30, xxxiv. 53; Cic. *pro Muren.* 41.) The peculiar garb and attributes of the Lanuvian Juno are described by Cicero (*de Nat. Deor.* i. 29), and attested by the evidence of numerous Roman coins: she was always represented with a goat's skin, drawn over her head like a helmet, with a spear in her hand, and a small shield on the left arm, and wore peculiar shoes with the points turned up (*calceoli repandi*). On coins we find her also constantly associated with a serpent; and we learn from Propertius and Aelian that there was a kind of oracle in the sacred grove attached to her temple, where a serpent was fed with fruits and cakes by virgins, whose chastity was considered to be thus put to the test. (Propert. iv. 8; Aelian, *H. A.* xi. 16, where the true reading is undoubtedly Λανουΐῳ, and not Λαουινίῳ; Eckhel, vol. v. p. 294.)

The frequent notices in Livy and elsewhere of prodigies occurring in the temple and sacred grove of Juno at Lanuvium, as well as the allusions to her worship at that place scattered through the Roman poets, sufficiently show how important a part the latter had assumed in the Roman religion. (Liv. xxiv. 10, xxix. 14, xxxi. 12, xl. 19; Cic. *de Divin.* i. 44, ii. 27; Ovid. *Fast.* vi. 60; Sil. Ital. xiii. 364.) We learn from Appian that a large treasure had gradually accumulated in her temple, as was the case with most celebrated sanctuaries; and Pliny mentions that it was adorned with very ancient, but excellent, paintings of Helen and Atalanta, which the emperor Caligula in vain attempted to remove. (Plin. xxxv. 3. s. 6.) It appears from a passage in Cicero (*de Fin.* ii. 20) that Juno was far from being the only deity especially worshipped at Lanuvium, but that the city was noted as abounding in ancient temples and religious rites, and was probably one of the chief seats of the old Latin religion. A temple of Jupiter adjoining the forum is the only one of which we find any special mention. (Liv. xxxii. 9.)

Though there is no doubt that *Civitá Lavinia* occupies the original site of Lanuvium, the position of which is well described by Strabo and Silius Italicus (Strab. v. p. 239; Sil. Ital. viii. 360), and we know from inscriptions that the ancient city continued in a flourishing condition down to a late period of the Roman empire, it is curious that scarcely any ruins now remain. A few shapeless masses of masonry, principally substructions and foundations, of which those that crown the summit

* In the Fasti Capitolini (ad ann. cdxv.; Gruter, p. 297) the consul C. Maenius is represented as celebrating a triumph over the *Lavinians*, together with the Antiates and Veliterni, where it appears certain from Livy's narrative that the *Lanuvians* are the people really meant: a remarkable instance at how early a period the confusion between the two names had arisen.

of the hill may possibly have belonged to the temple of Juno Sospita; and a small portion of a theatre, brought to light by excavations in 1832, are all that are now visible. The inscriptions discovered on the spot belong principally to the time of the Antonines, and excavations in the last century brought to light many statues of the same period. (Nibby, *Dintorni di Roma*, vol. ii. pp. 173—187; Abeken, *Mittel Italien*, p. 215.)

Lanuvium, as already observed, was situated at a short distance from the Appian Way, on the right of that road: the station "Sub Lanuvio," marked in the Tabula Peutingeriana between Aricia and Tres Tabernae, was evidently situated on the high road, probably at the eighteenth milestone from Rome, from which point a branch road led directly to the ancient city. (Westphal, *Röm. Kamp.* p. 28; Nibby, *l. c.*)

The remains of two other ancient roads may be traced, leading from the W. and S. of the city in the direction of Antium and Astura. The existence of this line of communication in ancient times is incidentally referred to by Cicero (*ad Att.* xii. 41, 43, 46). The tract of country extending S. of Lanuvium in the direction of Antium and the Pontine marshes, was even in the time of Strabo very unhealthy (Strab. v. p. 231), and is now almost wholly depopulated. [E. H. B.]

LAODICEIA COMBUSTA (Λαοδίκεια κατακεκαυμένη or κεκαυμένη), one of the five cities built by Seleucus I., and named after his mother Seleuca. Its surname (Lat. Combusta) is derived by Strabo (xii. pp. 576, 579, xiii. pp. 626, 628, 637) from the volcanic nature of the surrounding country, but Hamilton (*Researches*, ii. p. 194) asserts that there is "not a particle of volcanic or igneous rock in the neighbourhood;" and it may be added that if such were the case, the town would rather have been called Λ. τῆς κατακεκαυμένης. The most probable solution undoubtedly is, that the town was at one time destroyed by fire, and that on being rebuilt it received the distinguishing surname. It was situated on the north-west of Iconium, on the high road leading from the west coast to Melitene on the Euphrates. Some describe it as situated in Lycaonia (Steph. B. *s. v.*; Strab. xiv. p. 663), and others as a town of Pisidia (Socrat. *Hist. Eccl.* vi. 18; Hierocl. p. 672), and Ptolemy (v. 4. § 10) places it in Galatia; but this discrepancy is easily explained by recollecting that the territories just mentioned were often extended or reduced in extent, so that at one time the town belonged to Lycaonia, while at another it formed part of Pisidia. Its foundation is not mentioned by any ancient writer.

Both Leake (*Asia Minor*, p. 44) and Hamilton identify Laodiceia with the modern *Ladik*; and the former of these geographers states that at *Ladik* he saw more numerous fragments of ancient architecture and sculpture than at any other place on his route through that country. Inscribed marbles, altars, columns, capitals, friezes, cornices, were dispersed throughout the streets, and among the houses and burying grounds. From this it would appear that Laodiceia must once have been a very considerable town. There are a few imperial coins of Laodiceia, belonging to the reigns of Titus and Domitian. (Sestini, *Mon. Ant.* p. 95; comp. Droysen, *Gesch. des Hellen.* i. p. 663, foll.) [L. S.]

LAODICEIA AD LYCUM (Λαοδίκεια πρὸς τῷ Λύκῳ: *Eski Hissar*), a city in the south-west of Phrygia*, about a mile from the rapid river Lycus, is situated on the long spur of a hill between the narrow valleys of the small rivers Asopus and Caprus, which discharge their waters into the Lycus. The town was originally called Diospolis, and afterwards Rhoas (Plin. v. 29), and Laodiceia, the building of which is ascribed to Antiochus Theos, in honour of his wife Laodice, was probably founded on the site of the older town. It was not far west from Colossae, and only six miles to the west of Hierapolis. (*It. Ant.* p. 337; *Tab. Peut.*; Strab. xiii. p. 629.) At first Laodiceia was not a place of much importance, but it soon acquired a high degree of prosperity. It suffered greatly during the Mithridatic War (Appian, *Bell. Mithr.* 20; Strab. xii. p. 578), but quickly recovered under the dominion of Rome; and towards the end of the Republic and under the first emperors, Laodiceia became one of the most important and flourishing commercial cities of Asia Minor, in which large money transactions and an extensive trade in wood were carried on. (Cic. *ad Fam.* ii. 17, iii. 5; Strab. xii. p. 577; comp. Vitruv. viii. 3.) The place often suffered from earthquakes, especially from the great shock in the reign of Tiberius, in which it was completely destroyed. But the inhabitants restored it from their own means. (Tac. *Ann.* xiv. 27.) The wealth of its inhabitants created among them a taste for the arts of the Greeks, as is manifest from its ruins; and that it did not remain behind-hand in science and literature is attested by the names of the sceptics Antiochus and Theiodas, the successors of Aenesidemus (Diog. Laërt. ix. 11. § 106, 12. § 116), and by the existence of a great medical school. (Strab. xii. p. 580.) During the Roman period Laodiceia was the chief city of a Roman conventus. (Cic. *ad Fam.* iii. 7, ix. 25, xiii. 54, 67, xv. 4, *ad Att.* v. 15, 16, 20, 21, vi. 1, 2, 3, 7, *in Verr.* i. 30.) Many of its inhabitants were Jews, and it was probably owing to this circumstance, that at a very early period it became one of the chief seats of Christianity, and the see of a bishop. (St. Paul, *Ep. ad Coloss.* ii. 1, iv. 15, foll.; *Apocal.* iii. 14, foll.; Joseph. *Ant. Jud.* xiv. 10, 20; Hierocl. p. 665.) The Byzantine writers often mention it, especially in the time of the Comneni; and it was fortified by the emperor Manuel. (Nicet. Chon. *Ann.* pp. 9, 81.) During the invasion of the Turks and Mongols the city was much exposed to ravages, and fell into decay, but the existing remains still attest its former greatness. The ruins near *Denisli* are fully described in Pococke's, Chandler's, Cockerell's, Arundel's and Leake's works. "Nothing," says Hamilton (*Researches*, vol. i. p. 515), "can exceed the desolation and melancholy appearance of the site of Laodiceia; no picturesque features in the nature of the ground on which it stands relieve the dull uniformity of its undulating and barren hills; and with few exceptions, its grey and widely scattered ruins possess no architectural merit to attract the attention of the traveller. Yet it is impossible to view them without interest, when we consider what Laodiceia once was, and how it is connected with the early history of Christianity. . . . . Its stadium, gymnasium, and theatres (one of which is in a state of great preservation, with its

* Ptolemy (v. 2. § 18) and Philostratus (*Vit. Soph.* i. 25) call it a town of Caria, while Stephanus B. (*s. v.*) describes it as belonging to Lydia; which arises from the uncertain frontiers of these countries.

seats still perfectly horizontal, though merely laid upon the gravel), are well deserving of notice. Other buildings, also, on the top of the hill, are full of interest; and on the east the line of the ancient wall may be distinctly traced, with the remains of a gateway; there is also a street within and without the town, flanked by the ruins of a colonnade and numerous pedestals, leading to a confused heap of fallen ruins on the brow of the hill, about 200 yards outside the walls. North of the town, towards the Lycus, are many sarcophagi, with their covers lying near them, partly imbedded in the ground, and all having been long since rifled.

"Amongst other interesting objects are the remains of an aqueduct, commencing near the summit of a low hill to the south, whence it is carried on arches of small square stones to the edge of the hill. The water must have been much charged with calcareous matter, as several of the arches are covered with a thick incrustation. From this hill the aqueduct crossed a valley before it reached the town, but, instead of being carried over it on lofty arches, as was the usual practice of the Romans, the water was conveyed down the hill in stone barrel-pipes; some of these also are much incrusted, and some completely choked up. It traversed the plain in pipes of the same kind; and I was enabled to trace them the whole way, quite up to its former level in the town. . . . . . The aqueduct appears to have been overthrown by an earthquake, as the remaining arches lean bodily on one side, without being much broken. . . . .

"The stadium, which is in a good state of preservation, is near the southern extremity of the city. The seats, almost perfect, are arranged along two sides of a narrow valley, which appears to have been taken advantage of for this purpose, and to have been closed up at both ends. Towards the west are considerable remains of a subterranean passage, by which chariots and horses were admitted into the arena, with a long inscription over the entrance. . . . . The whole area of the ancient city is covered with ruined buildings, and I could distinguish the sites of several temples, with the bases of the columns still *in situ*. . . . . The ruins bear the stamp of Roman extravagance and luxury, rather than of the stern and massive solidity of the Greeks. Strabo attributes the celebrity of the place to the fertility of the soil and the wealth of some of its inhabitants: amongst whom Hiero, having adorned the city with many beautiful buildings, bequeathed to it more than 2000 talents at his death." (Comp. Fellows, *Journal written in Asia Minor*, p. 280, foll.; Leake, *Asia Minor*, p. 251, foll.) [L. S.]

LAODICEIA AD LIBANUM (Λαοδίκεια ἡ πρὸς Λιβάνῳ), mentioned by Strabo (xvi. p. 755) as the commencement of the Marsyas Campus, which extended along the west side of the Orontes, near its source. [MARSYAS CAMPUS.] It is called Cabiosa Laodiceia by Ptolemy (Καβίωσα Λαοδίκεια, v. 15), and gives its name to a district (Λαοδικηνή), in which he places two other towns, Paradisus (Παράδεισος) and Jabruda (Ἰάβρουδα). Pliny (v. 23), among other people of Syria, reckons "ad orientem Laodicenos, qui ad Libanum cognominantur." [G.W.]

LAODICEIA AD MARE, a city of Syria, south of HERACLEIA [Vol. I. p. 1050], described by Strabo (xvi. pp. 751, 752) as admirably built, with an excellent harbour, surrounded by a rich country specially fruitful in vines, the wine of which furnished its chief supply to Alexandria. The vineyards were planted on the sides of gently-sloping hills, which were cultivated almost to their summits, and extended far to the east, nearly to Apameia. Strabo mentions that Dolabella, when he fled to this city before Cassius, distressed it greatly, and that, being besieged there until his death, he destroyed many parts of the city with him, A. D. 43. [*Dict. of Biog.* Vol. I. p. 1059.] It was built by Seleucus Nicator, and named after his mother. It was furnished with an aqueduct by Herod the Great (Joseph. *B. J.* i. 21. § 11), a large fragment of which is still to be seen. (Shaw, *Travels*, p. 262.)

The modern city is named *Ladikiyéh*, and still exhibits faint traces of its former importance, notwithstanding the frequent earthquakes with which it has been visited. Irby and Mangles noticed that "the Marina is built upon foundations of ancient columns," and "there are in the town, an old gateway and other antiquities," as also sarcophagi and sepulchral caves in the neighbourhood. (*Travels*, p. 223.) This gateway has been more fully described by Shaw (*l. c.*) and Pococke, as "a remarkable triumphal arch, at the SE. corner of the town, almost entire: it is built with four entrances, like the *Forum Jani* at Rome. It is conjectured that this arch was built in honour of Lucius Verus, or of Septimius Severus." (*Description of the East*, vol. ii. p. 197.) Shaw noticed several fragments of Greek and Latin inscriptions, dispersed all over the ruins, but entirely defaced. Pococke states that it was a very inconsiderable place till within fifty years of his visit, when it opened a tobacco trade with *Damietta*, and it has now an enormous traffic in that article, for which it is far more celebrated than ever it was for its wine. The port is half an hour distant from the town, very small, but better sheltered than any on the coast. Shaw noticed, a furlong to the west of the town, "the ruins of a beautiful *cothon*, in figure like an amphitheatre, and capacious enough to receive the whole British navy. The mouth of it opens to the westward, and is about 40 feet wide." [G. W.]

COIN OF LAODICEIA AD MARE.

LAODICEIA (Λαοδίκεια). 1. A town in Media, founded by Seleucus Nicator, along with the two other Hellenic cities of Apameia and Heracleia. (Strab. xi. p. 524; Steph. B. *s. v.*) Pliny (vi. 29) describes it as being in the extreme limits of Media, and founded by Antiochus. The site has not yet been identified. (Ritter, *Erdkunde*, vol. viii. p. 599.)

2. A town which Pliny (vi. 30) places along with Seleuceia and Artemita in Mesopotamia. [E. B. J.]

LAPATHUS, a fortress near Mount Olympus. [ASCURIS.]

LAPATHUS, LAPETHUS (Λάπαθος, Strab. xiv. p. 682; Λάπηθος, Ptol. v. 14. § 4; Plin. v. 31; Λαπηθίς, Scyl. p. 41; Λάπιθος, Hierocl.: *Eth.* Λαπηθεύς, Λαπήθιος: *Lapitho*, *Lapta*), a town of Cyprus, the foundation of which was assigned to the Phoenicians (Steph. B. *s. v.*), and which, according to Nonnus

(*Dionys.* xiii. 447), owed its name to the legendary Lapathus, a follower of Dionysus. Strabo (*l. c.*) says that it received a Spartan colony, headed by Praxander. He adds, that it was situated opposite to the town of Nagidus, in Cilicia, and possessed a harbour and docks. It was situated in the N. of the island, on a river of the same name, with a district called LAPETHIA (Λαπηθία, Ptol. v. 14. § 5). In the war between Ptolemy and Antigonus, Lapathus, with its king Praxippus, sided with the latter. (Diod. xix. 59.) The name of this place was synonymous with stupidity. (Suid. *s. v.* Λαπάθιοι.) Pococke (*Trav. in the East*, vol. ii. pt. 1. p. 223) saw at *Lapitho* several walls that were cut out of the rock, and one entire room, over the sea: there were also remains of some towers and walls. (Mariti, *Viaggi*, vol. i. p. 125; Engel, *Kypros*, vol. i. pp. 37, 78, 174, 224, 364, 507.) [E. B. J.]

LAPATHUS, a fortress in the north of Thessaly, near Tempe, which Leake identifies with the ancient castle near *Rápsani*. (Liv. xliv. 2, 6; Leake, *Northern Greece*, vol. iii. pp. 397, 418.)

LAPHY'STIUM. [BOEOTIA, p. 412, b.]

LAPIDEI CAMPI or LAPIDEUS CAMPUS (πεδίον λιθῶδες, λίθινον πεδίον), in Gallia Narbonensis. Strabo (p. 182) says: "Between Massalia and the mouths of the Rhone there is a plain, about 100 stadia from the sea, and as much in diameter, being of a circular form; and it is called the Stony, from its character; for it is full of stones, of the size of a man's fist, which have grass growing among them, which furnishes abundant food for animals: and in the middle there is standing water, and salt springs, and salt. Now all the country that lies above is windy, but on this plain especially the Melamborian (*La Bise*) comes down in squalls, — a violent and chilling wind: accordingly, they say that some of the stones are moved and rolled about, and that men are thrown down from vehicles, and stripped both of arms and clothing by the blast." This is the plain called *La Crau*, near the east side of the east branch of the delta of the Rhone, and near the *E'tang de Berre*. It is described by Arthur Young (*Travels, &c.* vol. i. p. 379, 2nd ed.), who visited and saw part of the plain. He supposed that there might be about 136,780 English acres. "It is composed entirely of shingle—being so uniform a mass of round stones, some to the size of a man's head, but of all sizes less, that the newly thrown up shingle of a sea-shore is hardly less free from soil. Beneath these surface-stones is not so much a sand as a kind of cemented rubble, a small mixture of loam with fragments of stone. Vegetation is rare and miserable." The only use that the uncultivated part is turned to, he says, is to feed, in winter, an immense number of sheep, which in summer feed in the Alps towards *Barcelonette* and *Piedmont*. When he saw the place, in August, it was very bare. The number of sheep said to be fed there is evidently an exaggeration. Some large tracts of the *Crau* had been broken up when he was there, and planted with vines, olives, and mulberries, and converted into corn and meadow. Corn had not succeeded; but the meadows, covered richly with "clover, chicory, rib-grass, and *avena elatior*," presented an extraordinary contrast to the soil in its natural state. The name *Crau* is probably a Celtic word. In the *Statistique du Départ. des Bouches du Rhone* (tom. ii. p. 190, quoted in Ukert's *Gallien*, 425) it is supposed that *Craou*, as it is there written, is a Ligurian word; which may be true, or it may not. What is added is more valuable information: "There is in Provence a number of places which have this name; and one may even say that there is not a village which has not in its territory a *Craou*."

Aristotle (Strabo, p. 182) supposed that earthquakes, of the kind named Brastae threw up these stones to the earth's surface, and that they rolled down together to the hollow places in these parts. Posidonius, who, having travelled in Gallia, had probably seen the *Crau*, supposed that the place was once a lake. Here the text in Strabo is obscure, and perhaps corrupt; but he seems to mean that the action of water rounded the stones, for he adds, after certain words not easy to explain, that (owing to this motion of the water?) "it was divided into many stones, like the pebbles in rivers and the shingle on the sea-shore." Strabo (whose text is here again somewhat corrupted) considers both explanations so far true, that stones of this kind could not have been so made of themselves, but must have come from great rocks being repeatedly broken. Another hypothesis, not worth mentioning, is recorded in the notes of Eustathius (*ad Dionys. Perieg.* v. 76).

It is a proof of the early communication between the Phocaean colony of Massalia and other parts of Greece, that Aeschylus, whose geography is neither extensive nor exact, was acquainted with the existence of this stony plain; for in the *Prometheus Unbound* (quoted by Strabo) he makes Prometheus tell Hercules that when he comes into the country of the Ligyes, Zeus will send him a shower of round stones, to defeat the Ligurian army with. This stony plain was a good ground for mythological figments. (The following passages of ancient authors refer to this plain: Mela, ii. 5; Plin. iii. 4, xxi. 10; Gellius, ii. 22, and Seneca, *Nat. Quaest.* v. 17, who speak of the violent wind in this part of Gallia; and Dionys. Halicarn. i. 41, who quotes part of the passage from the *Prometheus Unbound.*)

This plain of stones probably owes its origin to the floods of the Rhone and the *Durance*, at some remote epoch when the lower part of the delta of the Rhone was covered by the sea. [G. L.]

LA'PITHAE (Λαπίθαι), a mythical race in Thessaly. See *Dict. of Biogr. and Myth.* Vol. II. p. 721.

LAPITHAEUM. [LACONIA, p. 113, a.]

LAPITHAS. [ELIS, p. 817, b.]

LAPPA, LAMPA (Λάππα, Ptol. iii. 17. § 10; Λάμπα, Λάμπαι, Hierocl.; Λάμπη, Steph. B.: *Eth.* Λαππαῖος, Λαμπαῖος), an inland town of Crete, with a district extending from sea to sea (Scylax, p. 18), and possessing the port Phoenix. (Strab. x. p. 475.) Although the two forms of this city's name occur in ancient authors, yet on coins and in inscriptions the word Lappa is alone found. Stephanus of Byzantium shows plainly that the two names denote the same place, when he says that Xenion, in his *Cretica*, wrote the word Lappa, and not Lampa. The same author (*s. v.* Λάμπη) says that it was founded by Agamemnon, and was called after one Lampos, a Tarrhaean; the interpretation of which seems to be that it was a colony of Tarrha.

When Lyctus had been destroyed by the Cnossians, its citizens found refuge with the people of Lappa (Polyb. iv. 53). After the submission of Cydonia, Cnossus, Lyctus, and Eleutherna, to the arms of Metellus, the Romans advanced against Lappa, which was taken by storm, and appears to have been almost entirely destroyed. (Dion Cass. xxxvi. 1.) Augustus, in consideration of the aid rendered to him by the Lappaeans in his struggle with M. Antonius

bestowed on them their freedom, and also restored their city. (Dion Cass. li. 2.) When Christianity was established, Lappa became an episcopal see; the name of its bishop is recorded as present at the Synod of Ephesus, A. D. 431, and the Council of Chalcedon, A. D. 451, as well as on many other subsequent occasions. (Cornelius, *Creta Sacra*, vol. i. pp. 251, 252.)

Lappa was 32 M. P. from Eleutherna and 9 M. P. from Cisamus, the port of Aptera (*Peut. Tab.*); distances which agree very well with *Pólis*, the modern representative of this famous city, where Mr. Pashley (*Travels*, vol. i. p. 83) found considerable remains of a massive brick edifice, with buttresses 15 feet wide and of 9 feet projection; a circular building, 60 feet diameter, with niches round it 11 feet wide; a cistern, 76 ft. by 20 ft.; a Roman brick building, and several tombs cut in the rock. (Comp. *Mus. Class. Antiq* vol. ii. p. 293.) One of the inscriptions relating to this city mentions a certain Marcus Aurelius Clesippus, in whose honour the Lappaeans erected a statue. (Gruter, p. 1091; Chishull, *Antiq. Asiat.* p. 122; Mabillon, *Mus. Ital.* p. 33; Böckh, *Corp. Inscr. Gr.* vol. ii. p. 428.)

The head of its benefactor Augustus is exhibited on the coins of Lappa: one has the epigraph, ΘΕΩ ΚΑΙΣΑΡΙ ΣΕΒΑΣΤΩ; others of Domitian and Commodus are found. (Hardouin, *Num. Antiq.* pp. 93, 94; Mionnet, vol. ii. p. 286; *Supplém.* vol. iv. p. 326; Rasche, vol. ii. pl. ii. p. 1493.) On the autonomous coins of Lappa, from which Spanheim supposed the city to have possessed the right of asylum, like the Grecian cities enumerated in Tacitus, see Eckhel, vol. ii. p. 315. The maritime symbols on the coins of Lappa are accounted for by the extension of its territory to both shores, and the possession of the port of Phoenix. [E. B. J.]

LAPURDUM, in Gallia. This place is only mentioned in the Notitia of the Empire, which fixes it in Novempopulana; but there is neither any historical notice nor any Itinerary measurement to determine its position. D'Anville, who assumes it to be represented by *Bayonne*, on the river *Adour*, says that the name of *Bayonne* succeeded to that of Lapurdum, and the country contained between the *Adour* and the *Bidasoa* has retained the name of *Labourd*. It is said that the bishopric of *Bayonne* is not mentioned before the tenth century. The name *Bayonne* is Basque, and means "port." It seems probable that Lapurdum may have been on the site of *Bayonne*; but it is not certain. [G. L.]

LAR FLUVIUS. [CANIS FLUMEN.]

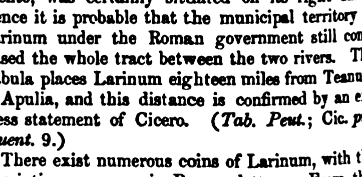
LARANDA (τὰ Λάρανδα: *Eth.* Λαρανδεύς, f. Λαρανδίς; *Larenda* or *Karaman*), one of the most important towns of Lycaonia, 400 stadia to the south-east of Iconium. Strabo (xii. p. 569) states that the town belonged to Antipater of Derbe, which shows that for a time it was governed by native princes. Respecting its history in antiquity scarcely anything is known beyond the fact that it was taken by storm, and destroyed by Perdiccas (Diod. xviii. 22); that it was afterwards rebuilt, and on account of the fertility of its neighbourhood became one of the chief seats of the Isaurian pirates. (Amm. Marc. xiv. 2; comp. Steph. B. *s. v.*; Ptol. v. 6. § 17; Hierocl. p. 675; Euseb. *Hist. Eccl.* vi. 19.) Suidas (*s. v.*) says that Laranda was the birthplace of Nestor, an epic poet, and father of Pisander, a poet of still greater celebrity; but when he calls the former Λαρανδεὺς ἐκ Λυκίας, he probably mistook Lycia for Lycaonia. Leake (*As. Min.* p. 100) states that he found no Greek remains at Laranda nor are there any coins belonging to the place. The ancient name, *Larenda*, is still in common use among the Christians, and is even retained in the firmans of the Porte; but its more general name, *Karaman*, is derived from a Turkish chief of the same name; for it was at one time the capital of a Turkish kingdom, which lasted from the time of the partition of the dominion of the Seljukian monarchs of Iconium until 1486, when it was conquered by the emperor Bayazid II. At present the town is but a poor place, with some manufactures of coarse cotton and woollen stuffs. Respecting a town in Cappadocia, called by some Laranda, see the article LEANDIS. [L. S.]

LARES (Sall. *Jug.* 90, where *Laris* is the acc. pl.: Λάρης, Ptol. iv. 3. § 28: the abl. form LARIBUS is given, not only, as is so usual, in the *Itin. Ant.* p. 26, and the *Tab. Peut.*, but also by Augustine, *adv. Donat.* vi. 20; and that this ablative was used for the nominative, as is common in the Romance languages, is shown by the Greek form Λάριβος, Procop. *B. V.* ii. 23, whence came at once the modern name, *Larbuss* or *Lorbus*). An important city of Numidia, mentioned in the Jugurthine War as the place chosen by Marius for his stores and military chest. (Sall. *Jug. l. c.*) Under the Romans it became a colony, and belonged to the province of Africa and the district of Byzacena. Ptolemy places it much too far west. It lay to the E. of the Bagradas, on the road from Carthage to Theveste, 63 M. P. from the latter. In the later period of the Empire it had decayed. (Pellissier, *Exploration Scientifique de l'Algérie*, vol. vi. p. 375.) [P. S.]

LARGA, in Gallia, is placed by the Anton. Itin. between the two known positions of Epamanduodurum (*Mandeure*) and Mons Brisiacus (*Vieux Brisach*). The distance from Epamanduodurum to Larga is 24 M. P. in the Itin., and in the Table 16 Gallic leagues, which is the same thing. Larga is *Largitzen*, on or near the *Largues*, in the French department of *Haut Rhin* and in the neighbourhood of *Altkirch*. [EPAMANDUODURUM.] [G. L.]

LA'RICA (Λαρική, Ptol. vii. 1. §§ 4, 62), a rich commercial district on the extreme of India, described by Ptolemy as being between Syrastrene and Ariaca, and having for its chief town Barygaza (*Beroach*), the emporium of all the surrounding country. It must, therefore, have comprehended considerable part of *Gúzerat*, and some of the main land of India, between the gulf of Barygaza and the Namadus or *Nerbudda*. Ptolemy considered Larice to have been part of Indo-Scythia (vii. 1. § 62), the Scythian tribes having in his day reached the sea coast in that part of India. [V.]

LARI'NUM (Λάρινον, Ptol.; Λάρινα, Steph. B.: *Eth.* Λαριναῖος, Steph. B.; but Λαρινᾶτις, Pol.; Larinās, -ātis: *Larino Vecchio*), a considerable city in the northern part of Apulia, situated about 14 miles from the sea, a little to the S. of the river Tifernus. There is much discrepancy among ancient authorities, as to whether Larinum with its territory, extending from the river Frento to the Tifernus, belonged properly to Apulia or to the land of the Frentani. Ptolemy distinctly assigns it to the latter people; and Pliny also, in one passage, speaks of the "Larinates cognomine Frentani:" but at the same time he distinctly places Larinum in Apulia, and not in the "regio Frentana," which, according to him, begins only from the Tifernus. Mela takes the same view, while Strabo, strangely enough, omits all



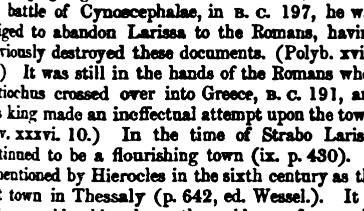
mention of Larinum. (Ptol. iii. 1. § 65; Plin. iii. 11. s. 16; Mel. ii. 4. § 6.) Caesar, on the other hand, distinguishes the territory of Larinum both from that of the Frentani and from Apulia ("per fines Marrucinorum, Frentanorum, Larinatium, in Apuliam pervenit," *B. C.* i. 23). Livy uses almost exactly the same expressions (xxvii. 43); and this appears to be the real solution, or rather the *origin* of the difficulty, that the Larinates long formed an independent community, possessing a territory of considerable extent, which was afterwards regarded by the geographers as connected with that of their northern or southern neighbours, according to their own judgment. It was included by Augustus in the Second Region of Italy, of which he made the Tifernus the boundary, and thus came to be naturally considered as an appurtenance of Apulia: but the boundary would seem to have been subsequently changed, for the Liber Coloniarum includes Larinum among the "Civitates Regionis Samnii," to which the Frentani also were attached. (*Lib. Colon.* p. 260.)

Of the early history of Larinum we have scarcely any information. Its name is not even once mentioned during the long continued wars of the Romans and Samnites, in which the neighbouring Luceria figures so conspicuously. Hence we may probably infer that it was at this period on friendly terms with Rome, and was one of those Italian states that passed gradually and almost imperceptibly from the condition of allies into that of dependents, and ultimately subjects of Rome. During the Second Punic War, on the other hand, the territory of Larinum became repeatedly the scene of operations of the Roman and Carthaginian armies. Thus in B.C. 217 it was at Gerunium, in the immediate neighbourhood of Larinum, that Hannibal took up his winter-quarters, while Fabius established his camp at Calela to watch him; and it was here that the engagement took place in which the rashness of Minucius had so nearly involved the Roman army in defeat. (Pol. iii. 101; Liv. xxii. 18, 24, &c.) Again, in B. C. 207, it was on the borders of the same territory that Hannibal's army was attacked on its march by the praetor Hostilius, and suffered severe loss (Liv. xxvii. 40); and shortly after it is again mentioned as being traversed by the consul Claudius on his memorable march to the Metaurus. (*Ibid.* 43; Sil. Ital. xv. 565.) In the Social War it appears that the Larinates must have joined with the Frentani in taking up arms against Rome, as their territory was ravaged in B. C. 89 by the praetor C. Cosconius, after his victory over Trebatius near Canusium. (Appian, *B. C.* i. 52.) During the civil wars of Caesar and Pompey, the territory of Larinum was traversed by the former general on his advance to Brundusium (Caes. *B. C.* i. 23). Pompey seems to have at one time made it his head-quarters in Apulia, but abandoned it on learning the disaster of Domitius at Corfinium. (Cic. *ad Att.* vii. 12, 13. b.)

From the repeated mention during these military operations of the territory of Larinum, while none occurs of the city itself, it would appear that the latter could not have been situated on the high road, which probably passed through the plain below it. But it is evident from the oration of Cicero in defence of A. Cluentius, who was a native of Larinum, that it was in his day a flourishing and considerable municipal town, with its local magistrates, senate, public archives, forum, and all the other appurtenances of municipal government. (Cic. *pro Cluent.* 5, 8, 13, 15, &c.) We learn from the Liber Coloniarum that it received a colony under Caesar (*Lege Julia*, *Lib. Colon.* p. 260): but it appears from inscriptions that it continued to retain its municipal rank under the Roman Empire. (Orell. *Inscr.* 142; Mommsen, *Inscr. Regn. Neap.* pp. 272, 273.) The existing remains sufficiently prove that it must have been a large and populous town: but no mention of it is found in history after the close of the Roman Republic. Its name is found in the Itineraries in the fourth century (*Itin. Ant.* p. 314, where it is corruptly written *Arenio*; *Tab. Peut.*); and there is no reason to suppose that it ever ceased to exist, as we find it already noticed as an episcopal see in the seventh century. In A. D. 842 it was ravaged by the Saracens, and it was in consequence of this calamity that the inhabitants appear to have abandoned the ancient site, and founded the modern city of *Larino*, a little less than a mile to the W. of the ancient one. The ruins of the latter, now called *Larino Vecchio*, occupy a considerable space on the summit of a hill called *Monterone*, about three miles S. of the *Biferno* (Tifernus): there remain some portions of the ancient walls, as well as of one of the gates; the ruins of an amphitheatre of considerable extent, and those of a building, commonly called *Il Palazzo*, which appears to have stood in the centre of the town, adjoining the ancient forum, and may probably have been the Curia or senate-house. (Tria, *Memorie di Larino*, i. 10.)

The territory of Larinum seems to have originally extended from the river Tifernus to the Frento (*Fortore*), and to have included the whole tract between those rivers to the sea. The town of Cliternia, which was situated within these limits, is expressly called by Pliny a dependency of Larinum ("Larinatum Cliternia," Plin. iii. 11. s. 16); and Teanum, which is placed by him to the N. of the Frento, was certainly situated on its right bank. Hence it is probable that the municipal territory of Larinum under the Roman government still comprised the whole tract between the two rivers. The Tabula places Larinum eighteen miles from Teanum in Apulia, and this distance is confirmed by an express statement of Cicero. (*Tab. Peut.*; Cic. *pro Cluent.* 9.)

There exist numerous coins of Larinum, with the inscription LADINOD in Roman letters. From this last circumstance they cannot be referred to a very early period, and are certainly not older than the Roman conquest. (Eckhel, vol. i. p. 107; Mommsen, *Röm. Münzwesen*, p. 335.) [E. H. B.]



COIN OF LARINUM.

LARISSA (Λάρισσα, but on coins and inscr Λάρισα or Λάρεισα: *Eth.* Λαρισσαῖος, Λαρισαῖος), a name common to many Pelasgic towns, and probably a Pelasgic word signifying city. (Comp. Strab. xiii. p. 620; Dionys. i. 21; Niebuhr, *Hist. of Rome*, vol. i. note 60.) Hence in mythology Larissa is represented as the daughter of Pelasgus (Paus. ii. 24

§ 1), or of Piasus, a Pelasgian prince. (Strab. xiv. p. 621.)

1. An important town of Thessaly, the capital of the district Pelasgiotis, was situated in a fertile plain upon a gently rising ground, on the right or south bank of the Peneius. It had a strongly fortified citadel. (Diod. xv. 61.) Larissa is not mentioned by Homer. Some commentators, however, suppose it to be the same as the Pelasgic Argos of Homer (*Il.* ii. 681), but the latter was the name of a district rather than of a town. Others, with more probability, identify it with the Argissa of the poet. (*Il.* ii. 738.) [See Vol. I. p. 209.] Its foundation was ascribed to Acrisius. (Steph. B. *s. v.*) The plain of Larissa was formerly inhabited by the Perrhaebi, who were partly expelled by the Larissaeans, and partly reduced to subjection. They continued subject to Larissa, till Philip made himself master of Thessaly. (Strab. ix. p. 440.) The constitution of Larissa was democratical (Aristot. *Pol.* v. 6), and this was probably one reason why the Larissaeans were allies of the Athenians during the Peloponnesian War. (Thuc. ii. 22.) During the Roman wars in Greece, Larissa is frequently mentioned as a place of importance. It was here that Philip, the son of Demetrius, kept all his royal papers during his campaign against Flamininus in Greece; but after the battle of Cynoscephalae, in B. C. 197, he was obliged to abandon Larissa to the Romans, having previously destroyed these documents. (Polyb. xviii. 16.) It was still in the hands of the Romans when Antiochus crossed over into Greece, B. C. 191, and this king made an ineffectual attempt upon the town. (Liv. xxxvi. 10.) In the time of Strabo Larissa continued to be a flourishing town (ix. p. 430). It is mentioned by Hierocles in the sixth century as the first town in Thessaly (p. 642, ed. Wessel.). It is still a considerable place, the residence of an archbishop and a pasha, and containing 30,000 inhabitants. It continues to bear its ancient name, though the Turks call it *Yenishehér*, which is its official appellation. Its circumference is less than three miles. Like other towns in Greece, which have been continually inhabited, it presents few remains of Hellenic times. They are chiefly found in the Turkish cemeteries, consisting of plain quadrangular stones, fragments of columns, mostly fluted, and a great number of ancient cippi and sepulchral stelae, which now serve for Turkish tombstones. (Leake, *Northern Greece*, vol. i. p. 439, seq.)

COIN OF LARISSA.

2. LARISSA CREMASTE (ἡ Κρεμαστὴ Λάρισσα), a town of Thessaly of less importance than the preceding one, was situated in the district of Phthiotis, at the distance of 20 stadia from the Maliac gulf, upon a height advancing in front of Mount Othrys. (Strab. ix. p. 435.) It occupied the side of the hill, and was hence surnamed Cremaste, as hanging on the side of Mt. Othrys, to distinguish it from the more celebrated Larissa, situated in a plain. Strabo also describes it as well watered and producing vines (ix. p. 440). The same writer adds that it was surnamed Pelasgia as well as Cremaste (*l. c.*). From its being situated in the dominions of Achilles, some writers suppose that the Roman poets give this hero the surname of Larissaeus, but this epithet is perhaps used generally for Thessalian. Larissa Cremaste was occupied by Demetrius Poliorcetes in B. C. 302, when he was at war with Cassander. (Diod. xx. 110.) It was taken by Apustius in the first war between the Romans and Philip, B. C. 200 (Liv. xxxi. 46), and again fell into the hands of the Romans in the war with Perseus, B. C. 171. (Liv. xlii. 56, 57.) The ruins of the ancient city are situated upon a steep hill, in the valley of *Gardhíki*, at a direct distance of five or six miles from *Khamáko*. The walls are very conspicuous on the western side of the hill, where several courses of masonry remain. Gell says that there are the fragments of a Doric temple upon the acropolis, but of these Leake makes no mention. (Gell, *Itinerary of Greece*, p. 252; Dodwell, *Travels*, vol. ii. p. 81; Leake, *Northern Greece*, vol. iv. p. 347.)

3. The citadel of Argos. [Vol. I. p. 202.]

LARISSA (Λάρισσα). 1. A town in the territory of Ephesus, on the north bank of the Caystrus, which there flows through a most fertile district, producing an excellent kind of wine. It was situated at a distance of 180 stadia from Ephesus, and 30 from Tralles. (Strab. ix. p. 440, xiii. p. 620.) In Strabo's time it had sunk to the rank of a village, but it was said once to have been a πόλις, with a temple of Apollo. Cramer (*As. Min.* i. p. 558) conjectures that its site may correspond to the modern *Tirieh*.

2. A place on the coast of Troas, about 70 stadia south of Alexandria Troas, and north of Hamaxitus. It was supposed that this Larissa was the one mentioned by Homer (*Il.* ii. 841), but Strabo (xiii. p. 620) controverts this opinion, because it is not far enough from Troy. (Comp. Steph. B. *s. v.*) The town is mentioned as still existing by Thucydides (viii. 101) and Xenophon (*Hellen.* iii. 1. § 13; comp. Scylax, p. 36; Strab. ix. p. 440, xiii. p. 604). Athenaeus (ii. p. 43) mentions some hot springs near Larissa in Troas, which are still known to exist a little above the site of Alexandria Troas. (*Voyage Pittoresque*, vol. ii. p. 438.)

3. Larissa, surnamed PHRICONIS, a Pelasgian town in Aeolis, but subsequently taken possession of by the Aeolians, who constituted it one of the towns of their confederacy. It was situated near the coast, about 70 stadia to the south-east of Cyme (ἡ περὶ τὴν Κύμην, Strab. xiii. p. 621; Herod. i. 149). Strabo, apparently for good reasons, considers this to be the Larissa mentioned in the Iliad (ii. 840). Xenophon (*Hellen.* iii. 1. § 7, comp. *Cyrop.* vii. 1. § 45) distinguishes this town from others of the same name by the epithet of "the Egyptian," because the elder Cyrus had established there a colony of Egyptian soldiers. From the same historian we must infer that Larissa was a place of considerable strength, as it was besieged in vain by Thimbrom; but in Strabo's time the place was deserted. (Comp. Plin. v. 32; Vell. Pat. i. 4; Vit. Hom. c. 11; Steph. B. *s. v.*; Ptol. v. 2. § 5.) [L. S.]

LARISSA (Λάρισσα, Xen. *Anab.* iii. 4. § 7), a town of Assyria, at no great distance from the left bank of the Tigris, observed by Xenophon on the

retreat of the Ten Thousand Greeks. It appears to have been situated a little to the north of the junction of the Lycus (*Záb*) and the Tigris. Xenophon describes it as a deserted city, formerly built by the Medes, with a wall 25 feet broad, and 100 high, and extending in circumference two parasangs. The wall itself was constructed of bricks, but had a foundation of stone, 20 feet in height (probably a casing in stone over the lower portion of the bricks). He adds, that when the Persians conquered the Medes, they were not at first able to take this city, but at last captured it, during a dense fog. Adjoining the town was a pyramid of stone, one plethron broad, and two plethra in height. It has been conjectured that this was the site of the city of Resen, mentioned in Genesis (x. 12); and there can be little doubt, that these ruins represent those of *Nimrúd*, now so well known by the excavations which Mr. Layard has conducted. [V.]

LARISSA (Λάρισσα), a city of Syria, placed by Ptolemy in the district of Cassiotis, in which Antioch was situated (v. 15. § 16), but probably identical with the place of the same name which, according to Strabo, was reckoned to Apamia (xvi. p. 572), and which is placed in the Itinerary of Antoninus 16 M. P. from Apamia, on the road to Emesa. D'Anville identifies it with the modern *Kalaat Shyzar*, on the left bank of the Orontes, between *Hamah* and *Kalaat el-Medyk* or Apamia. [G. W.]

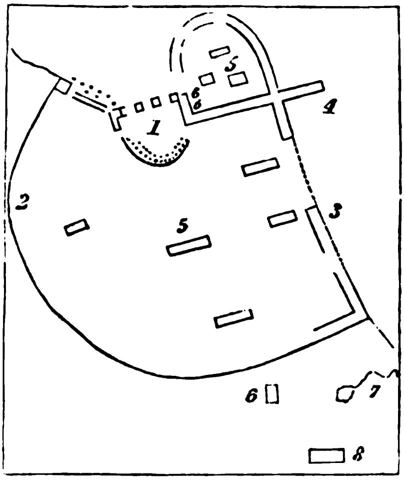
LARISSUS or LARISUS, a river of Achaia. [Vol. I. p. 14, a.]

LA'RIUS LACUS (ἡ Λάριος λίμνη: *Lago di Como*), one of the largest of the great lakes of Northern Italy, situated at the foot of the Alps, and formed by the river Addua. (Strab. iv. p. 192; Plin. iii. 19. s. 23.) It is of a peculiar form, long and narrow, but divided in its southern portion into two great arms or branches, forming a kind of fork. The SW. of these, at the extremity of which is situated the city of *Como*, has no natural outlet; the Addua, which carries off the superfluous waters of the lake, flowing from its SE. extremity, where stands the modern town of *Lecco*. Virgil, where he is speaking of the great lakes of Northern Italy, gives to the Larius the epithet of "maximus" (*Georg.* ii. 159); and Servius, in his note on the passage, tells us that, according to Cato, it was 60 miles long. This estimate, though greatly overrated, seems to have acquired a sort of traditionary authority: it is repeated by Cassiodorus (*Var. Ep.* xi. 14), and even in the Itinerary of Antoninus (p. 278), and is at the present day still a prevalent notion among the boatmen on the lake. The real distance from *Como* to the head of the lake does not exceed 27 Italian, or 34 Roman miles, to which five or six more may be added for the distance by water to *Riva*, the *Lago di Riva* being often regarded as only a portion of the larger lake. Strabo, therefore, is not far from the truth in estimating the Larius as 300 stadia (37½ Roman miles) in length, and 30 in breadth. (Strab. iv. p. 209.) But it is only in a few places that it attains this width; and, owing to its inferior breadth, it is really much smaller than the Benacus (*Lago di Garda*) or Verbanus (*Lago Maggiore*). Its waters are of great depth, and surrounded on all sides by high mountains, rising in many places very abruptly from the shore: notwithstanding which their lower slopes were clothed in ancient times, as they still are at the present day, with rich groves of olives, and afforded space for numerous villas. Among these the most celebrated are those of the younger Pliny, who was himself a native of Comum, and whose paternal estate was situated on the banks of the lake, of which last he always speaks with affection as "Larius noster." (*Ep.* ii. 8, vi. 24, vii. 11.) But, besides this, he had two villas of a more ornamental character, of which he gives some account in his letters (*Ep.* ix. 7): the one situated on a lofty promontory projecting out into the waters of the lake, over which it commanded a very extensive prospect, the other close to the water's edge. The description of the former would suit well with the site of the modern *Villa Serbelloni* near *Bellaggio;* but there are not sufficient grounds upon which to identify it. The name of *Villa Pliniana* is given at the present day to a villa about a mile beyond the village of *Torno* (on the right side of the lake going from *Como*), where there is a remarkable intermitting spring, which is also described by Pliny (*Ep.* iv. 30); but there is no reason to suppose that this was the site of either of his villas. Claudian briefly characterises the scenery of the Larius Lacus in a few lines (*B. Get.* 319—322); and Cassiodorus gives an elaborate, but very accurate, description of its beauties. The immediate banks of the lake were adorned with villas or palaces (praetoria), above which spread, as it were, a girdle of olive woods; over these again were vineyards, climbing up the sides of the mountains, the bare and rocky summits of which rose above the thick chesnut-woods that encircled them. Streams of water fell into the lake on all sides, in cascades of snowy whiteness. (Cassiod. *Var.* xi. 14.) It would be difficult to describe more correctly the present aspect of the *Lake of Como*, the beautiful scenery of which is the theme of admiration of all modern travellers.

Cassiodorus repeats the tale told by the elder Pliny, that the course of the Addua could be traced throughout the length of the lake, with which it did not mix its waters. (Plin. ii. 103. s. 106; Cassiod. *l. c.*) The same fable is told of the Lacus Lemannus, or *Lake of Geneva*, and of many other lakes formed in a similar manner by the stagnation of a large river, which enters them at one end and flows out at the other. It is remarkable that we have no trace of an ancient town as existing on the site of the modern *Lecco*, where the Addua issues from the lake. We learn, from the Itinerary of Antoninus (p. 278), that the usual course in proceeding from Curia over the Rhaetian Alps to Mediolanum, was to take boat at the head of the lake and proceed by water to Comum. This was the route by which Stilicho is represented by Claudian as proceeding across the Alps (*B. Get. l. c.*); and Cassiodorus speaks of Comum as a place of great traffic of travellers (*l. c.*) In the latter ages of the Roman empire, a fleet was maintained upon the lake, the head-quarters of which were at Comum. (*Not. Dign.* ii. p. 118.)

The name of Lacus Larius seems to have been early superseded in common usage by that of LACUS COMACINUS, which is already found in the Itinerary, as well as in Paulus Diaconus, although the latter author uses also the more classical appellation. (*Itin. Ant. l. c.*; P. Diac. *Hist.* v. 38, 39.) [E.H.B.]

LARIX or LARICE, a place on the southern frontier of Noricum, at the foot of the Julian Alps, and on the road from Aquileia to Lauriacum. The town seems to have owed its name to the forests of larch trees which abound in that district, and its site



must be looked for between *Idria* and *Krainburg*, in Illyricum. (*It. Ant.* p. 276; comp. Muchar, *Noricum*, p. 247.) [L. S.]

LARNUM (*Tordera*), a small coast river in the territory of the LAEËTANI, in Hispania Tarraconensis, falling into the sea between Iluro and Blanda. (Plin. iii. 3. s. 4.) It has been inferred that there was a town of the same name on the river, from Pliny's mention of the LARNENSES in the conventus of Caesaraugusta: but it is plain that the Laeëtani belonged to the conventus of Tarraco. (Ukert, vol. ii. pt. 1. p. 456, assigns these Larnenses to the Arevacae.) [P. S.]

LARTOLAEAETAE. [LAEËTANI.]

LARYMNA (Λάρυμνα), the name of two towns in Boeotia, on the river Cephissus, distinguished as Upper and Lower Larymna. (Strab. ix. pp. 405, 406.) Strabo relates that the Cephissus emerged from its subterranean channel at the Upper Larymna, and joined the sea at the Lower Larymna; and that Upper Larymna had belonged to Phocis until it was annexed to the Lower or Boeotian Larymna by the Romans. Upper Larymna belonged originally to the Opuntian Locris, and Lycophron mentions it as one of the towns of Ajax Oïleus. (Lycophr. 1146.) Pausanias also states, that it was originally Locrian; and he adds, that it voluntarily joined the Boeotians on the increase of the power of the Thebans. (Paus. ix. 23. § 7.) This, however, probably did not take place in the time of Epaminondas, as Scylax, who lived subsequently, still calls it a Locrian town (p. 23). Ulrichs conjectures that it joined the Boeotian league after Thebes had been rebuilt by Cassander. In B. C. 230, Larymna is described as a Boeotian town (Polyb. xx. 5, where Λάρυμναν should be read instead of Λαβρύναν); and in the time of Sulla it is again spoken of as a Boeotian town.

We may conclude from the preceding statements that the more ancient town was the Locrian Larymna, situated at a spot, called Anchoe by Strabo, where the Cephissus emerged from its subterranean channel. At the distance of a mile and a half Larymna had a port upon the coast, which gradually rose into importance, especially from the time when Larymna joined the Boeotian League, as its port then became the most convenient communication with the eastern sea for Lebadeia, Chaeroneia, Orchomenos, Copae, and other Boeotian towns. The port-town was called, from its position, Lower Larymna, to distinguish it from the Upper city. The former may also have been called more especially the Boeotian Larymna, as it became the seaport of so many Boeotian towns. Upper Larymna, though it had joined the Boeotian League, continued to be frequently called the Locrian, on account of its ancient connection with Locris. When the Romans united Upper Larymna to Lower Larymna, the inhabitants of the fomer place were probably transferred to the latter; and Upper Larymna was henceforth abandoned. This accounts for Pausanias mentioning only one Larymna, which must have been the Lower city; for if he had visited Upper Larymna, he could hardly have failed to mention the emissary of the Cephissus at this spot. Moreover, the ruins at Lower Larymna show that it became a place of much more importance than Upper Larymna. These ruins, which are called *Kastri*, like those of Delphi, are situated on the shore of the *Bay of Larmes*, on a level covered with bushes, ten minutes to the left of the mouth of the Cephissus. The circuit of the walls is less than a mile. The annexed plan of the remains is taken from Leake.

PLAN OF LARYMNA.

1. A small port, anciently closed in the manner here described.
2. The town wall, traceable all around.
3. Another wall along the sea, likewise traceable.
4. A mole, in the sea.
5. Various ancient foundations in the tower and acropolis.
6. A Sorus.
7. *Glyfonerό*, or Salt Source.
8. An oblong foundation of an ancient building.

Leake adds, that the walls, which in one place are extant to nearly half their height, are of a red soft stone, very much corroded by the sea air, and in some places are constructed of rough masses. The sorus is high, with comparison to its length and breadth, and stands in its original place upon the rocks: there was an inscription upon it, and some ornaments of sculpture, which are now quite defaced. The *Glyfonerό* is a small deep pool of water, impregnated with salt, and is considered by the peasants as sacred water, because it is cathartic. The sea in the bay south of the ruins is very deep; and hence we ought probably to read in Pausanias (ix. 23. § 7), λιμὴν δέ σφίσιν ἐστὶν ἀγχιβαθής, instead of λίμνη, since there is no land-lake at this place. The ruins of Upper Larymna lie at *Bazaráki*, on the right bank of the Cephissus, at the place where it issues from its subterranean channel. (Leake, *Northern Greece*, vol. ii. p. 287, seq.; Ulrichs, *Reisen in Griechenland*, p. 229, seq.)

LARY'SIUM. [GYTHIUM.]

LAS (Λᾶας, Hom.; Λᾶς, Scyl., Paus., Strab.; Λᾶ, Steph. B. *s. v.*: *Eth.* Λᾶος), one of the most ancient towns of Laconia, situated upon the western coast of the Laconian gulf. It is the only town on the coast mentioned by Scylax (p. 17) between Taenarus and Gythium. Scylax speaks of its port; but, according to Pausanias, the town itself was distant 10 stadia from the sea, and 40 stadia from Gythium. (Paus. iii. 24. § 6.) In the time of Pausanias the town lay in a hollow between the three mountains, Asia, Ilium, and Cnacadium; but the old town stood on the summit of Mt. Asia. The name of Las signified the rock on which it originally stood. It is mentioned by Homer (*Il.* ii.

585), and is said to have been destroyed by the Dioscuri, who hence derived the surname of Lapersae. (Strab. viii. p. 364; Steph. B. *s. v.* Λᾶ.) There was also a mountain in Laconia called Lapersa. (Steph. B. *s. v.* Λαπέρσα.) In the later period it was a place of no importance. Livy speaks of it as "vicus maritimus" (xxxviii. 30), and Pausanias mentions the ruins of the city on Mt. Asia. Before the walls he saw a statue of Hercules, and a trophy erected over the Macedonians who were a part of Philip's army when he invaded Laconia; and among the ruins he noticed a statue of Athena Asia. The modern town was near a fountain called Galaco (Γαλακώ), from the milky colour of its water, and near it was a gymnasium, in which stood an ancient statue of Hermes. Besides the ruins of the old town on Mt. Asia, there were also buildings on the two other mountains mentioned above: on Mt. Ilium stood a temple of Dionysus, and on the summit a temple of Asclepius; and on Mt. Cnacadium a temple of Apollo Carneius.

Las is spoken of by Polybius (v. 19) and Strabo (viii. p. 363) under the name of Asine; and hence it has been supposed that some of the fugitives from Asine in Argolis may have settled at Las, and given their name to the town. But, notwithstanding the statement of Polybius, from whom Strabo probably copied, we have given reasons elsewhere for believing that there was no Laconian town called Asine; and that the mistake probably arose from confounding "Asine" with "Asia," on which Las originally stood. [ASINE, No. 3.]

Las stood upon the hill of *Passavá*, which is now crowned by the ruins of a fortress of the middle ages, among which, however, Leake noticed, at the southern end of the eastern wall, a piece of Hellenic wall, about 50 paces in length, and two-thirds of the height of the modern wall. It is formed of polygonal blocks of stone, some four feet long and three broad. The fountain Galaco is the stream *Turkóvrysa*, which rises between the hill of *Passavá* and the village of *Kárvela*, the latter being one mile and a half west of *Passavá*. (Leake, *Morea*, vol. i. p. 254, seq., p. 276, seq.; *Peloponnesiaca*, p. 150; Boblaye, *Récherches, &c.* p. 87; Curtius, *Peloponnesos*, vol. ii. p. 273, seq.)

LASAEA (Λασαία), a city in Crete, near the roadstead of the "Fair Havens." (*Acts*, xxvii. 8.) This place is not mentioned by any other writer, but is probably the same as the Lisia of the Peutinger Tables, 16 M. P. to the E. of Gortyna. (Comp. Höck, *Kreta*, vol. i. pp. 412, 439.) Some MSS. have Lasea; others, Alassa. The Vulgate reads Thalassa, which Beza contended was the true name. (Comp. Coneybeare and Howson, *Life and Epist. of St. Paul*, vol. ii. p. 330.) [E. B. J.]

LA'SION (Λασίων or Λασιών), the chief town of the mountainous district of Acroreia in Elis proper, was situated upon the frontiers of Arcadia near Psophis. Curtius places it with great probability in the upper valley of the Ladon, at the *Paleokastro* of *Kúmani*, on the road from the Eleian Pylos and Ephyra to Psophis. Lasion was a frequent object of dispute between the Arcadians and Eleians, both of whom laid claim to it. In the war which the Spartans carried on against Elis at the close of the Peloponnesian War, Pausanias, king of Sparta, took Lasion (Diod. xiv. 17). The invasion of Pausanias is not mentioned by Xenophon in his account of this war; but the latter author relates that, by the treaty of peace concluded between Elis and Sparta in B.C. 400, the Eleians were obliged to give up Lasion, in consequence of its being claimed by the Arcadians. (Xen. *Hell.* iii. 2. § 30.) In B.C. 366 the Eleians attempted to recover Lasion from the Arcadians; they took the town by surprise, but were shortly afterwards driven out of it again by the Arcadians. (Xen. *Hell.* vii. 4. § 13, seq.; Diod. xv. 77.) In B.C. 219 Lasion was again a fortress of Elis, but upon the capture of Psophis by Philip, the Eleian garrison at Lasion straightway deserted the place. (Polyb. iv. 72, 73.) Polybius mentions (v. 102) along with Lasion a fortress called Pyrgos, which he places in a district named Perippia. (Leake, *Morea*, vol. ii. p. 200, seq.; Boblaye, *Récherches, &c.* p. 125; Curtius, *Peloponnesos*, vol. i. p. 41.)

LA'SSORA, a town of Galatia, mentioned in the Peut. Tab. as 25 miles distant from Eccobriga, whence we may infer that it is the same place as the Λασκορία of Ptolemy (v. 4. § 9). The Antonine Itinerary (p. 203) mentions a town Adapera in about the same site. [L. S.]

LASTI'GI, a town of Hispania Baetica, belonging to the conventus of Hispalis (Plin. iii. 1. s. 3), and one of the cities of which we have coins, all of them belonging to the period of its independence: their type is a head of Mars, with two ears of corn lying parallel to each other. The site is supposed to be at *Zahara*, lying on a height of the *Sierra de Ronda*, above the river *Guadalete*. (Carter's *Travels*, p. 171; Florez, *Esp. S.* vol. ix. pp. 18, 60, *Med.* vol. ii. p. 475, vol. iii. p. 85; Mionnet, vol. i. p. 50, Suppl. vol. i. p. 113; Sestini, *Med. Isp.* p. 61; Num. Goth.; Eckhel, vol. i. p. 25; Ukert, vol. ii. pt. 1. pp. 358, 382.) [P. S.]

LASUS, a town of Crete, enumerated by Pliny (iv. 12) among his list of inland cities. A coin with the epigraph ΛΑΤΙΩΝ, the Doric form for Λασίων, is claimed by Eckhel (vol. ii. p. 316, comp. Sestini, p. 53) for this place. [E. B. J.]

LATARA. [LEDUS.]

LATHON (Λάθων, Strab. xvii. p. 836, where the vulgar reading is Λάδων; comp. xiv. p. 647, where he calls it Ληθαῖος; Ptol. iv. 4. § 4; Λήθων, Ptol. Euerg. *ap Ath.* ii. p. 71; FLUVIUS LETHON, Plin. v. 5; Solin. 27; LETHES AMNIS, Lucan, ix. 355), a river of the Hesperidae or Hesperitae, in Cyrenaica. It rose in the Herculis Arenae, and fell into the sea a little N. of the city of HESPERIDES or BERENICE: Strabo connects it with the harbour of the city (λιμὴν Ἑσπεριδῶν: that there is not the slightest reason for altering the reading, as Groskurd and others do, into λίμνη, will presently appear); and Scylax (p. 110, Gronov.) mentions the river, which he calls Ecceius (Ἐκκειός), as in close proximity with the city and habour of Hesperides. Pliny expressly states that the river was not far from the city, and places on or near it a sacred grove, which was supposed to represent the "Gardens of the Hesperides" (Plin. v. 5: *nec procul ante oppidum fluvius Lethon, lucus sacer, ubi Hesperidum horti memorantur*). Athenaeus quotes from a work of Ptolemy Euergetes praises of its fine pike and eels, somewhat inconsistent, especially in the mouth of a luxurious king of Egypt, with the *mythical* sound of the name. That name is, in fact, plain Doric Greek, descriptive of the character of the river, like our English *Mole*. So well does it deserve the name, that it "escaped the notice" of commentators and geographers, till it was discovered by Beechey, as it still flows "concealed" from such scholars as depend on vague guesses in place of an accurate knowledge

of the localities. Thus the laborious, but often most inaccurate, compiler Forbiger, while taking on himself to correct Strabo's exact account, tells us that "the river and *lake* (Strabo's *harbour*) have now entirely vanished;" and yet, a few lines down, he refers to a passage of Beechey's work within a very few pages of the place where the river itself is actually described! (Forbiger, *Handbuch der alten Geographie*, vol. ii. p. 828, note.)

The researches made in Beechey's expedition give the following results:—East of the headland on which stands the ruins of Hesperides or Berenice (now *Bengazi*) is a small lake, which communicates with the harbour of the city, and has its water of course salt. The water of the lake varies greatly in quantity, according to the season of the year; and is nearly dried up in summer. There are strong grounds to believe that its waters were more abundant, and its communication with the harbour more perfect, in ancient times than at present. On the margin of the lake is a spot of rising ground, nearly insulated in winter, on which are the remains of ancient buildings. East of this lake again, and only a few yards from its margin, there gushes forth an abundant spring of fresh water, which empties itfelf into the lake, "running along a channel of inconsiderable breadth, bordered with reeds and rushes," and "might be mistaken by a common observer for an inroad of the lake into the sandy soil which bounds it." Moreover, this is the only stream which empties itself into the lake; and indeed the only one found on that part of the coast of Cyrenaica. Now, even without searching further, it is evident how well all this answers to the description of Strabo (xvii. p. 836):—"There is a promontory called Pseudopenias, on which Berenice is situated, beside a certain *Lake of Tritonis* (παρὰ λίμνην τινὰ Τριτωνίδα), in which there is *generally* (μάλιστα) a little island, and a temple of Aphrodite upon it: but there is (or it is) also the *Harbour of Hesperides*, and the river Lathon falls into it." It is now evident how much the sense of the description would be impaired by reading λίμνη for λίμην in the last clause; and it matters but little whether Strabo speaks of the river as falling into the harbour because it fell into the lake which communicated with the harbour, or whether he means that the lake, which he calls that of Tritonis, was actually the harbour (that is, an inner harbour) of the city. But the little stream which falls into the lake is not the only representative of the river Lathon. Further to the east, in one of the subterranean caves which abound in the neighbourhood of *Bengazi*, Beechy found a large body of fresh water, losing itself in the bowels of the earth; and the Bey of Bengazi affirmed that he had tracked its subterraneous course till he doubted the safety of proceeding further, and that he had found it as much as 30 feet deep. That the stream thus lost in the earth is the same which reappears in the spring on the margin of the lake, is extremely probable; but whether it be so in fact, or not, we can hardly doubt that the ancient Greeks would imagine the connection to exist. (Beechey, *Proceedings*, &c. pp. 326, foll.; Barth, *Wanderungen*, &c. p. 387. [P. S.]

LATHRIPPA (Λαθρίππα), an inland town of Arabia Felix, mentioned by Ptolemy (vi, 7. § 31), which there is no difficulty in identifying with the ancient name of the renowned *El-Medineh*, "*the city*," as it is called by emphasis among the disciples of the false prophet. Its ancient name, Yathrib, still exists in the native geographies and local traditions, which, with the definite article *el* prefixed, is as accurately represented by Lithrippa as the Greek alphabet would admit. "*Medineh* is situated on the edge of the great Arabian desert, close to the chain of mountains which traverses that country from north to south, and is a continuation of Libanon. The great plain of Arabia in which it lies is considerably elevated above the level of the sea. It is ten or eleven days distant from *Mekka*, and has been always considered the principal fortress of the *Hedjaz*, being surrounded with a stone wall. It is one of the best-built towns in the East, ranking in this respect next to *Aleppo*, though ruined houses and walls in all parts of the town indicate how far it has fallen from its ancient splendour. It is surrounded on three sides with gardens and plantations, which, on the east and south, extend to the distance of six or eight miles. Its population amounts to 16,000 or 20,000 — 10,000 or 12,000 in the town, the remainder in the suburbs." (Burckhardt, *Arabia*, 321—400; Ritter, *Erdkunde*, vol. i. p. 15, ii. pp. 149, &c.) [G. W.]

LATIUM (ἡ Λατίνη: *Eth.* and *Adj.* Latinus), was the name given by the Romans to a district or region of Central Italy, situated on the Tyrrhenian sea, between Etruria and Campania.

I. Name.

There can be little doubt that Latium meant originally the land of the Latini, and that in this, as in almost all other cases in ancient history, the name of the people preceded, instead of being derived from, that of the country. But the ancient Roman writers, with their usual infelicity in all matters of etymology, derived the name of the Latini from a king of the name of Latinus, while they sought for another origin for the name of Latium. The common etymology (to which they were obviously led by the quantity of the first syllable) was that which derived it from "lăteo;" and the usual explanation was, that it was so called because Saturn had there *lain hid* from the pursuit of Jupiter. (Virg. *Aen.* viii. 322; Ovid, *Fast.* i. 238.) The more learned derivations proposed by Saufeius and Varro, from the inhabitants having lived *hidden* in caves (Saufeius, *ap. Serv. ad Aen.* i. 6), or because Latium itself was as it were *hidden* by the Apennines (Varr. *ap. Serv. ad Aen.* viii. 322), are certainly not more satisfactory. The form of the name of Latium would at first lead to the supposition that the ethnic Latini was derived from it; but the same remark applies to the case of Samnium and the Samnites, where we know that the people, being a race of foreign settlers, must have given their name to the country, and not the converse. Probably Latini is only a lengthened form of the name, which was originally Latii or Latvi; for the connection which has been generally recognised between Latini and Lavinium, Latinus and Lavinus, seems to point to the existence of an old form, Latvinus. (Donaldson, *Varronianus*, p. 6; Niebuhr, *V. u. L. Kunde*, p. 352.) Varro himself seems to regard the name of Latium as derived from that of Latinus (*LL.* v. § 32); and that it was generally regarded as equivalent to "the land of the Latins" is sufficiently proved by the fact that the Greeks always rendered it by ἡ Λατίνη, or ἡ Λατίνων γῆ. The name of Λάτιον is found only in Greek writers of a late period, who borrowed it directly from the Romans. (Appian, *B. C.* ii. 26; Herodian, i. 16.) From the same cause it must have proceeded that when the Latini ceased to

have any national existence, the name of Latium is still not unfrequently used, as equivalent to "nomen Latinum," to designate the whole body of those who possessed the rights of Latins, and were therefore still called Latini, though no longer in a national sense.

The suggestion of a modern writer (Abeken, *Mittel Italien*, p. 42) that Latium is derived from "latus," broad, and means the broad plain or expanse of the *Campagna* (like Campania from "Campus"), appears to be untenable, on account of the difference in the quantity of the first syllable, notwithstanding the analogy of πλατὺς, which has the first syllable short.

II. Extent and Boundaries.

The name of Latium was applied at different periods in a very different extent and signification. Originally, as already pointed out, it meant the land of the Latini; and as long as that people retained their independent national existence, the name of Latium could only be applied to the territory possessed by them, exclusive of that of the Hernici, Aequians, Volscians, &c., who were at that period independent and often hostile nations. It was not till these separate nationalities had been merged into the common condition of subjects and citizens of Rome that the name of Latium came to be extended to all the territory which they had previously occupied; and was thus applied, first in common parlance, and afterwards in official usage, to the whole region from the borders of Etruria to those of Campania, or from the Tiber to the Liris. Hence we must carefully distinguish between Latium in the original sense of the name, in which *alone* it occurs throughout the early Roman history, and Latium in this later or *geographical* sense; and it will be necessary here to treat of the two quite separately. The period at which the latter usage of the name came into vogue we have no means of determining: we know only that it was fully established before the time of Augustus, and is recognised by all the geographers. (Strab. v. pp. 228, 231; Plin. iii. 5. s. 9; Ptol. iii. 1. §§ 5, 6.) Pliny designates the original Latium, or Latium properly so called, as Latium Antiquum, to which he opposes the newly added portions, as Latium Adjectum. It may, however, be doubted whether these appellations were ever adopted in common use, though convenient as geographical distinctions.

1. Latium Antiquum, or Latium in the original and *historical* sense, was a country of small extent, bounded by the Tiber on the N., by the Apennines on the E., and by the Tyrrhenian sea on the W.; while on the S. its limits were not defined by any natural boundaries, and appear to have fluctuated considerably at different periods. Pliny defines it as extending from the mouth of the Tiber to the Circeian promontory, a statement confirmed by Strabo (Plin. iii. 5. s. 9; Strab. v. p. 231); and we have other authority also for the fact that at an early period all the tract of marshy plain, known as the Pontine Marshes or "Pomptinus Ager," extending from Velitrae and Antium to Circeii, was inhabited by Latins, and regarded as a part of Latium. (Cato, *ap. Priscian.* v. p. 668.) Even of the adjoining mountain tract, subsequently occupied by the Volscians, a part at least must have been originally Latin, for Cora, Norba, and Setia were all of them Latin cities (Dionys. v. 61),—though, at a somewhat later period, not only had these towns, as well as the plain beneath, fallen into the hands of the Volscians, but that people had made themselves masters of Antium and Velitrae, which are in consequence repeatedly called Volscian cities. The manner in which the early Roman history has been distorted by poetical legends and the exaggerations of national vanity renders it very difficult to trace the course of these changes, and the alterations in the frontiers consequent upon the alternate progress of the Volscian and the Roman arms. But there seems no reason to doubt the fact that such changes repeatedly took place, and that we may thus explain the apparent inconsistency of ancient historians in calling the same places at one time Volscian, at another Latin, cities. We may also clearly discern two different periods, during the first of which the Volscian arms were gradually gaining upon those of the Latins, and extending their dominion over cities of Latin origin; while, in the second, the Volscians were in their turn giving way before the preponderating power of Rome. The Gaulish invasion (B.C. 390) may be taken, approximately at least, as the turning point between the two periods.

The case appears to have been somewhat similar, though to a less degree, on the northern frontier, where the Latins adjoined the Sabines. Here, also, we find the same places at different times, and by different authors, termed sometimes Latin and sometimes Sabine, cities; and though in some of these cases the discrepancy may have arisen from mere inadvertence or error, it is probable that in some instances both statements are equally correct, but refer to different periods. The circumstance that the Anio was fixed by Augustus as the boundary of the First Region seems to have soon led to the notion that it was the northern limit of Latium also; and hence all the towns beyond it were regarded as Sabine, though several of them were, according to the general tradition of earlier times, originally Latin cities. Such was the confusion resulting from this cause that Piny in one passage enumerates Nomentum, Fidenae, and even Tibur among the Sabine towns, while he elsewhere mentions the two former as Latin cities,—and the Latin origin of Tibur is too well established to admit of a doubt. (Plin. iii. 5. s. 9, 12. s. 17.)

In the absence of natural boundaries it is only by means of the names of the towns that we can trace the extent of Latium; and here fortunately the lists that have been transmitted to us by Dionysius and Pliny, as well as those of the colonies of Alba, afford us material assistance. The latter, indeed, cannot be regarded as of historical value, but they were unquestionably meant to represent the fact, with which their authors were probably well acquainted, that the places there enumerated were properly Latin cities, and not of Sabine or Volscian origin. Taking these authorities for our guides, we may trace the limits of ancient Latium as follows:—1. From the mouth of the Tiber to the confluence of the Anio, the former river constituted the boundary between Latium and Etruria. The Romans, indeed, from an early period, extended their territory beyond the Tiber, and held the Janiculum and Campus Vaticanus on its right bank, as well as the so-called Septem Pagi, which they wrested from the Veientes; and it is probable that the Etruscans, on the other hand, had at one period extended their power over a part of the district on the left bank of the Tiber, but that river nevertheless constituted the generally recognised geographical limit between Etruria and Latium. 2. North of the Anio the Latin territory

comprised Fidenae, Crustumerium, and Nomentum, all of which are clearly established as Latin towns, while Eretum, only 3 miles from Nomentum, is equally well made out to be of Sabine origin. This line of demarcation is confirmed by Strabo, who speaks of the Sabines as extending *from the Tiber and Nomentum* to the Vestini. (Strab. v. p. 228.) From Nomentum to Tibur the frontier cannot be traced with accuracy, from our uncertainty as to the position of several of the towns in this part of Latium—Corniculum, Medullia, Cameria, and Ameriola; but we may feel assured that it comprised the outlying group of the Montes Corniculani (*Mte. S. Angelo* and *Monticelli*), and from thence stretched across to the foot of *Monte Gennaro* (Mons Lucretilis), around the lower slopes of which are the ruins or sites of more than one ancient city. Probably the whole of this face of the mountains, fronting the plain of the *Campagna*, was always regarded as belonging to Latium, though the inner valleys and reverse of the same range were inhabited by the Sabines. Tibur itself was unquestionably Latin, though how far its territory extended into the interior of the mountains is difficult to determine. But if Empulum and Sassula (two of its dependent towns) be correctly placed at *Ampiglione* and near *Siciliano*, it must have comprised a considerable tract of the mountain country on the left bank of the Anio. Varia, on the other hand, and the valley of the Digentia, were unquestionably Sabine. 3. Returning to the Anio at Tibur, the whole of the W. front of the range of the Apennines from thence to Praeneste (*Palestrina*) was certainly Latin; but the limits which separated the Latins from the Aequians are very difficult to determine. We know that Bola, Pedum, Tolerium, and Vitellia, all of which were situated in this neighbourhood, were Latin cities; though, from their proximity to the frontier, several of them fell at one time or other into the hands of the Aequians; in like manner we cannot doubt that the whole group of the Alban Hills, including the range of Mount Algidus, was included in the original Latium, though the Aequians at one time were able to occupy the heights of Algidus at the opening of almost every campaign. *Valmontone*, whether it represent Tolerium or Vitellia, must have been about the most advanced point of the Latin frontier on this side. 4. The Volscian frontier, as already observed, appears to have undergone much fluctuation. On the one hand, we find, in the list of the cities forming the Latin League, as given by Dionysius (v. 61), not only Velitrae, which at a later period is called a Volscian city, but Cora, Norba, and Setia, all of which were situated on the western front of the range of mountains which formed in later times the stronghold of the Volscian nation; but looking on the Pontine Marshes. Even as late as the outbreak of the great Latin War, B. C. 340, we find L. Annius of *Setia*, and L. Numicius of *Circeii*, holding the chief magistracy among the Latins, from whom at the same time Livy expressly distinguishes the Volscians (Liv. viii. 3). These statements, combined with those of Pliny and Strabo already cited, seem to leave no doubt that Latium was properly regarded as extending as far as Circeii and the promontory of the same name, and comprising the whole plain of the Pontine Marshes, as well as the towns of Cora, Norba, and Setia, on the E. side of that plain. On the other hand, Tarracina (or Anxur) and Privernum were certainly Volscian cities; and there can be no doubt that during the period of the Volscian power they had wrested a great part of the tract just described from the dominion of the Latins. Antium, which for some reason or other did not form a member of the Latin League, was from an early period a Volscian city, and became one of the chief strongholds of that people during the fifth century B. C.

The extent of Latium Antiquum, as thus limited, was far from considerable; the coast-line, from the mouth of the Tiber to the Circeian promontory, does not exceed 52 geographical or 65 Roman miles (Pliny erroneously calls it only 50 Roman miles); while the greatest length, from the Circeian promontory to the Sabine frontier, near Eretum, is little more than 70 Roman miles; and its breadth, from the mouth of the Tiber to the Sabine frontier, is just about 30 Roman miles, or 240 stadia, as correctly stated by Dionysius on the authority of Cato. (Dionys. ii. 49.)

2. Latium Novum. The boundaries of Latium in the enlarged or geographical sense of the name are much more easily determined. The term, as thus employed, comprehended, besides the original territory of the Latins, that of the Aequians, the Hernicans, the Volscians, and the Auruncans or Ausonians. Its northern frontiers thus remained unchanged, while on the E. and S. it was extended so as to border on the Marsi, the Samnites, and Campania. Some confusion is nevertheless created by the new line of demarcation established by Augustus, who, while he constituted the first division of Italy out of Latium in this wider sense together with Campania, excluded from it the part of the old Latin territory N. of the Anio, adjoining the Sabines, as well as a part of that of the Aequians or Aequiculani, including Carseoli and the valley of the *Turano*. The upper valley of the Anio about *Subiaco*, on the other hand, together with the mountainous district extending from thence to the valley of the *Sacco*, constituting the chief abode of the Aequi during their wars with Rome, was wholly comprised in the newly extended Latium. To this was added the mountain district of the Hernici, extending nearly to the valley of the Liris, as well as that of the Volsci, who occupied the country for a considerable extent on both sides of the Liris, including the mountain district around Arpinum and Atina, where they bordered on the territory of the Samnites. The limits of Latium towards the S., where its frontiers adjoined those of Campania, are clearly marked by Strabo, who tells us that Casinum was the last Latin city on the line of the Via Latina,—Teanum being already in Campania; while on the line of the Via Appia, near the sea-coast, Sinuessa was the frontier town of Latium. (Strab. v. pp. 231, 233, 237; Plin. iii. 5. s. 9.) Pliny, in one passage, appears to speak of the Liris as constituting the boundary of this enlarged Latium (*Ib.* § 56), while shortly after (§ 59) he terms Sinuessa "oppidum extremum in adjecto Latio," whence it has been supposed that the boundary of Latium was at first extended only to the Liris, and subsequently carried a step further so as to include Sinuessa and its territory. (Cramer's *Italy*, vol. ii. p. 11.) But we have no evidence of any such successive stages. Pliny in all probability uses the term "adjectum Latium" only as contradistinguished from "Latium antiquum;" and the expression in the previous passage, "unde nomen Latii processit ad Lirim amnem," need not be construed too strictly. It is certain, at least, that, in the days of Strabo, as well as those of Pliny, Si-

nuessa was already regarded as included in Latium; and the former author nowhere alludes to the Liris as the boundary.

III. Physical Geography.

The land of the Latins, or Latium in its original sense, formed the southern part of the great basin through which the Tiber flows to the sea, and which is bounded by the Ciminian Hills, and other ranges of volcanic hills connected with them, towards the N., by the Apennines on the E., and by the Alban Hills on the S. The latter, however, do not form a continuous barrier, being in fact an isolated group of volcanic origin, separated by a considerable gap from the Apennines on the one side, while on the other they leave a broad strip of low plain between their lowest slopes and the sea, which is continued on in the broad expanse of level and marshy ground, commonly known as the Pontine Marshes, extending in a broad band between the Volscian mountains and the sea, until it is suddenly and abruptly terminated by the isolated mass of the Circeian promontory.

The great basin-like tract thus bounded is divided into two portions by the Tiber, of which the one on the N. of that river belongs to Southern Etruria, and is not comprised in our present subject. [Etruria.] The southern part, now known as the *Campagna di Roma*, may be regarded as a broad expanse of undulatory plain, extending from the sea-coast to the foot of the Apennines, which rise from it abruptly like a gigantic wall to a height of from 3000 to 4000 feet, their highest summits even exceeding the latter elevation. The *Monte Gennaro*, (4285 English feet in height) is one of the loftiest summits of this range, and, from the boldness with which it rises from the subjacent plain, and its advanced position, appears, when viewed from the *Campagna*, the most elevated of all; but, according to Sir W. Gell, it is exceeded in actual height both by the *Monte Pennecchio*, a little to the NE. of it, and by the *Monte di Guadagnolo*, the central peak of the group of mountains which rise immediately above Praeneste or *Palestrina*. The citadel of Praeneste itself occupies a very elevated position, forming a kind of outwork or advanced post of the chain of Apennines, which here trends away suddenly to the eastward, sweeping round by *Genazzano*, *Olevano*, and *Rojate*, till it resumes its general SE. direction, and is continued on by the lofty ranges of the Hernican mountains, which bound the valley of the *Sacco* on the E. and continue unbroken to the valley of the Liris.

Opposite to Praeneste, and separated from it by a breadth of nearly 5 miles of intervening plain, rises the isolated group of the Alban mountains, the form of which at once proves its volcanic origin. [Albanus Mons.] It is a nearly circular mass, of about 40 miles in circumference; and may be conceived as forming a great crater, the outer ridge of which has been broken up into numerous more or less detached summits, several of which were crowned in ancient times by towns or fortresses, such as Tusculum, Corbio, &c.; while at a lower level it throws out detached offshoots, or outlying ridges, affording advantageous sites for towns, and which were accordingly occupied by those of Velitrae, Lanuvium, Alba Longa, &c. The group of the Alban mountains is wholly detached on all sides: on the S. a strip of plain, of much the same breadth as that which separated it from the Apennines of Praeneste, divides it from the subordinate, but very lofty mass of mountains, commonly known as the *Monti Lepini*, or Volscian mountains. This group, which forms an outlying mass of the Apennines, separated from the main chain of those mountains by the broad valley of the Trerus or *Sacco*, rises in a bold and imposing mass from the level of the Pontine Marshes, which it borders throughout their whole extent, until it reaches the sea at Tarracina, and from that place to the mouth of the Liris sends down a succession of mountain headlands to the sea, constituting a great natural barrier between the plains of Latium and those of Campania. The highest summits of this group, which consists, like the more central Apennines, wholly of limestone, attain an elevation of nearly 5000 feet above the sea: the whole mass fills up almost the entire space between the valley of the Trerus and the Pontine Marshes, a breadth of from 12 to 16 miles; with a length of near 40 miles from *Monte Fortino* at its N. extremity to the sea at *Terracina*: but the whole distance, from *Monte Fortino* to the end of the mountain chain near the mouth of the Liris, exceeds 60 miles. The greater part of this rugged mountain tract belonged from a very early period to the Volscians, but the Latins, as already mentioned, possessed several towns, as Signia, Cora, Norba, &c., which were built on projecting points or underfalls of the main chain.

But though the plains of Latium are thus strongly characterised, when compared with the groups of mountains just described, it must not be supposed that they constitute an unbroken plain, still less a level alluvial tract like those of Northern Italy. The *Campagna* of Rome, as it is called at the present day, is a country of wholly different character from the ancient Campania. It is a broad undulating tract, never rising into considerable elevations, but presenting much more variety of ground than would be suspected from the general uniformity of its appearance, and irregularly intersected in all directions by numerous streams, which have cut for themselves deep channels or ravines through the soft volcanic tufo of which the soil is composed, leaving on each side steep and often precipitous banks. The height of these, and the depth of the valleys or ravines which are bounded by them, vary greatly in different parts of the *Campagna*; but besides these local and irregular fluctuations, there is a general rise (though so gradual as to be imperceptible to the eye) in the level of the plain towards the E. and SE.; so that, as it approaches Praeneste, it really attains to a considerable elevation, and the river courses which intersect the plain in nearly parallel lines between that city and the Anio become deep and narrow ravines of the most formidable description. Even in the lower and more level parts of the *Campagna* the sites of ancient cities will be generally found to occupy spaces bounded to a considerable extent—frequently on three sides out of four—by steep banks of tufo rock, affording natural means of defence, which could be easily strengthened by the simple expedient of cutting away the face of the rocky bank, so as to render it altogether inaccessible. The peculiar configuration of the *Campagna* resulting from these causes is well represented on Sir W. Gell's map, the only one which gives at all a faithful idea of the physical geography of Latium.

The volcanic origin of the greater part of Latium has a material influence upon its physical character and condition. The Alban mountains, as already mentioned, are unquestionably a great volcanic mass

which must at a distant period have been the centre of volcanic outbursts on a great scale. Besides the central or principal crater of this group, there are several minor craters, or crater-shaped hollows, at a much lower level around its ridges, which were in all probability at different periods centres of eruption. Some of these have been filled with water, and thus constitute the beautiful basin-shaped lakes of *Albano* and *Nemi*, while others have been drained at periods more or less remote. Such is the case with the Vallis Aricina, which appears to have at one time constituted a lake [ARICIA], as well as with the now dry basin of *Cornufelle*, below Tusculum, supposed, with good reason, to be the ancient Lake Regillus, and with the somewhat more considerable *Lago di Castiglione*, adjoining the ancient Gabii, which has been of late years either wholly or partially drained. Besides these distinct foci of volcanic action, there remain in several parts of the *Campagna* spots where sulphureous and other vapours are still evolved in considerable quantities, so as to constitute deposits of sulphur available for economic purposes. Such are the *Lago di Solfatara* near *Tivoli* (the Aquae Albulae of the Romans), and the *Solfatara* on the road to Ardea, supposed to be the site of the ancient Oracle of Faunus. Numerous allusions to these sulphureous and mephitic exhalations are found in the ancient writers, and there is reason to suppose that they were in ancient times more numerous than at present. But the evidences of volcanic action are not confined to these local phenomena; the whole plain of the *Campagna* itself, as well as the portion of Southern Etruria which adjoins it, is a deposit of volcanic origin, consisting of the peculiar substance called by Italian geologists *tufo*, — an aggregate of volcanic materials, sand, small stones, and scoriae or cinders, together with pumice, varying in consistency from an almost incoherent sand to a stone sufficiently hard to be well adapted for building purposes. The hardest varieties are those now called *peperino*, to which belong the Lapis Gabinus and Lapis Albanus of the ancients. But even the common tufo was in many cases quarried for building purposes, as at the Lapidicinae Rubrae, a few miles from the city near the bank of the Tiber, and many other spots in the immediate neighbourhood of Rome. (Vitruv. ii. 7.) Beds of true lava are rare, but by no means wanting: the most considerable are two streams which have flowed from the foot of the Alban Mount; the one in the direction of Ardea, the other on the line of the Appian Way (which runs along the ridge of it for many miles) extending as far as a spot called *Capo di Bove*, little more than two miles from the gates of Rome. It was extensively quarried by the Romans, who derived from thence their principal supplies of the hard basaltic lava (called by them *silex*) with which they paved their high roads. Smaller beds of the same material occur near the *Lago di Castiglione*, and at other spots in the *Campagna*. (Concerning the geological phenomena of Latium see Daubeny *On Volcanoes*, pp. 162—173; and an Essay by Hoffmann in the *Beschreibung der Stadt Rom*. vol. i. pp. 45—81.)

The strip of country immediately adjoining the sea-coast of Latium differs materially from the rest of the district. Between the borders of the volcanic deposit just described and the sea there intervenes a broad strip of sandy plain, evidently formed merely by successive accumulations of sand from the sea, and constituting a barren tract, still covered, as it was in ancient times, almost wholly with wood. This broad belt of forest region extends without interruption from the mouth of the Tiber near Ostia to the promontory of Antium. The parts of it nearest the sea are rendered marshy by the stagnation of the streams that flow through it, the outlets of which to the sea are blocked up by the accumulations of sand. The headland of Antium is formed by a mass of limestone rock, forming a remarkable break in the otherwise uniform line of the coast, though itself of small elevation. A bay of about 8 miles across separates this headland from the low point or promontory of Astura: beyond which commences the far more extensive bay that stretches from the latter point to the mountain headland of Circeii. The whole of this line of coast from Astura to Circeii is bordered by a narrow strip of sand-hills, within which the waters accumulate into stagnant pools or lagoons. Beyond this again is a broad sandy tract, covered with dense forest and brushwood, but almost perfectly level, and in many places marshy; while from thence to the foot of the Volscian mountains extends a tract of a still more marshy character, forming the celebrated district known as the Pontine Marshes, and noted in ancient as well as modern times for its insalubrity. The whole of this region, which, from its N. extremity at *Cisterna* to the sea near *Terracina*, is about 30 Roman miles in length, with an average breadth of 12 miles, is perfectly flat, and, from the stagnation of the waters which descend to it from the mountains on the E., has been in all ages so marshy as to be almost uninhabitable. Pliny, indeed, records a tradition that there once existed no less than 24 cities on the site of what was in his days an unpeopled marsh, but a careful inspection of the locality is sufficient to prove that this must be a mere fable. (Plin. iii. 5. s. 9.) The dry land adjoining the marshes was doubtless occupied in ancient times by the cities or towns of Satricum, Ulubrae, and Suessa Pometia; while on the mountain ridges overlooking them rose those of Cora, Norba, Setia and Privernum; but not even the name of any town has been preserved to us as situated in the marshy region itself. Equally unfounded is the statement hastily adopted by Pliny, though obviously inconsistent with the last, that the whole of this alluvial tract had been formed within the historical period, a notion that appears to have arisen in consequence of the identification of the Mons Circeius with the island of Circe, described by Homer as situated in the midst of an open sea. This remarkable headland is indeed a perfectly insulated mountain, being separated from the Apennines near *Terracina* by a strip of level sandy coast above 8 miles in breadth, forming the southern extremity of the plain of the Pontine Marshes; but this alluvial deposit, which alone connects the two, must have been formed at a period long anterior to the historical age.

The Circeian promontory formed the southern limit of Latium in the original sense. On the opposite side of the Pontine Marshes rises the lofty group of the Volscian mountains already described: and these are separated by the valley of the Trerus or *Sacco* from the ridges more immediately connected with the central Apennines, which were inhabited by the Aequians and Hernicans. All these mountain districts, as well as those inhabited by the Volscians on the S. of the Liris, around Arpinum and Atina, partake of the same general character: they are occupied almost entirely by masses and groups of

limestone mountains, frequently rising to a great height, and very abruptly, while in other cases their sides are clothed with magnificent forests of oak and chestnut trees, and their lower slopes are well adapted for the growth of vines, olives, and corn. The broad valley of the Trerus, which extends from the foot of the hill of Praeneste to the valley of the Liris, is bordered on both sides by hills, covered with the richest vegetation, at the back of which rise the lofty ranges of the Volscian and Hernican mountains. This valley, which is followed throughout by the course of the Via Latina, forms a natural line of communication from the interior of Latium to the valley of the Liris, and so to Campania; the importance of which in a military point of view is apparent on many occasions in Roman history. The broad valley of the Liris itself opens an easy and unbroken communication from the heart of the Apennines near the Lake Fucinus with the plains of Campania. On the other side, the Anio, which has its sources in the rugged mountains near *Trevi*, not far from those of the Liris, flows in a SW. direction, and after changing its course abruptly two or three times, emerges through the gorge at *Tivoli* into the plain of the Roman *Campagna*.

The greater part of Latium is not (as compared with some other parts of Italy) a country of great natural fertility. On the other hand, the barren and desolate aspect which the *Campagna* now presents is apt to convey a very erroneous impression as to its character and resources. The greater part of the volcanic plain not only affords good pasturage for sheep and cattle, but is capable of producing considerable quantities of corn, while the slopes of the hills on all sides are well adapted to the growth of vines, olives, and other fruit-trees. The wine of the Alban Hills was celebrated in the days of Horace (Hor. *Carm.* iv. 11. 2, *Sat.* ii. 8. 16), while the figs of Tusculum, the hazel-nuts of Praeneste, and the pears of Crustumium and Tibur were equally noted for their excellence. (Macrob. *Sat.* ii. 14, 15; Cato, *R. R.* 8.)

In the early ages of the Roman history the cultivation of corn must, from the number of small towns scattered over the plain of Latium, have been carried to a far greater extent than we find it at the present day; but under the Roman Empire, and even before the close of the Republic, there appears to have been a continually increasing tendency to diminish the amount of arable cultivation, and increase that of pasture. Nevertheless the attempts that have been made even in modern times to promote agriculture in the neighbourhood of Rome have sufficiently proved that its decline is more to be attributed to other causes than to the sterility of the soil itself. The tract near the sea-coast alone is sandy and barren, and fully justifies the language of Fabius, who called it "agrum macerrimum, littorosissimumque" (Serv. *ad Aen.* i. 3). On the other hand, the slopes of the Alban Hills are of great fertility, and are still studded, as they were in ancient times, with the villas of Roman nobles, and with gardens of the greatest richness.

The climate of Latium was very far from being a healthy one, even in the most flourishing times of Rome, though the greater amount of population and cultivation tended to diminish the effects of the malaria which at the present day is the scourge of the district. Strabo tells us that the territory of Ardea, as well as the tract between Antium and Lanuvium, and extending from thence to the Pontine Marshes, was marshy and unwholesome (v. p. 231). The Pontine plains themselves are described as "pestiferous" (Sil. Ital. viii. 379), and all the attempts made to drain them seem to have produced but little effect. The unhealthiness of Ardea is noticed both by Martial and Seneca as something proverbial (Mart. iv. 60; Seneca, *Ep.* 105): but, besides this, expressions occur which point to a much more general diffusion of malaria. Livy in one passage represents the Roman soldiers as complaining that they had to maintain a constant struggle "in arido atque pestilenti, circa urbem, solo" (Liv. vii. 38); and Cicero, in a passage where there was much less room for rhetorical exaggeration, praises the choice of Romulus in fixing his city "in a healthy spot in the midst of a pestilential region." ("Locum delegit *in regione pestilenti* salubrem," Cic. *de Rep.* ii. 6.) But we learn also, from abundant allusions in ancient writers, that it was only by comparison that Rome itself could be considered healthy; even in the city malaria fevers were of frequent occurrence in summer and autumn, and Horace speaks of the heats of summer as bringing in "fresh figs and funerals." (Hor. *Ep.* i. 7. 1—9.) Frontinus also extols the increased supply of water as tending to remove the causes which had previously rendered Rome *notorious for its unhealthy climate* ("causae gravioris coeli, quibus apud veteres urbis infamis aer fuit," Frontin. *de Aquaed.* § 88). But the great accumulation of the population at Rome itself must have operated as a powerful check; for even at the present day malaria is unknown in the most densely populated parts of the city, though these are the lowest in point of position, while the hills, which were then thickly peopled, but are now almost uninhabited, are all subject to its ravages. In like manner in the *Campagna*, wherever a considerable nucleus of population was once formed, with a certain extent of cultivation around it, this would in itself tend to keep down the mischief; and it is probable that, even in the most flourishing times of the Roman Empire, this evil was considerably greater than it had been in the earlier ages, when the numerous free cities formed so many centres of population and agricultural industry. It is in accordance with this view that we find the malaria extending its ravages with frightful rapidity after the fall of the Roman Empire and the devastation of the *Campagna;* and a writer of the 11th century speaks of the deadly climate of Rome in terms which at the present day would appear greatly exaggerated. (Petrus Damianus, cited by Bunsen.) The unhealthiness arising from this cause is, however, entirely confined to the plains. It is found at the present day that an elevation of 350 or 400 feet above their level gives complete immunity; and hence Tibur, Tusculum, Aricia, Lanuvium, and all the other cities that were built at a considerable height above the plain were perfectly healthy, and were resorted to during the summer (in ancient as well as modern times) by all who could afford to retreat from the city and its immediate neighbourhood. (See on this subject Tournon, *E'tudes Statistiques sur Rome*, liv. i. chap. 9; Bunsen, *Beschreibung der Stadt Rom.* vol. i. pp. 98—108.)

IV. History.

1. *Origin and Affinities of the Latins.*—All ancient writers are agreed in representing the Latins, properly so called, or the inhabitants of Latium in the restricted sense of the term, as a distinct people

from those which surrounded them, from the Volscians and Aequians on the one hand, as well as from the Sabines and Etruscans on the other. But the views and traditions recorded by the same writers concur also in representing them as a mixed people, produced by the blending of different races, and not as the pure descendants of one common stock. The legend most commonly adopted, and which gradually became firmly established in the popular belief, was that which represented Latium as inhabited by a people termed Aborigines, who received, shortly after the Trojan War, a colony or band of emigrant Trojans under their king Aeneas. At the time of the arrival of these strangers the Aborigines were governed by a king named Latinus, and it was not till after the death of Latinus and the union of the two races under the rule of Aeneas, that the combined people assumed the name of Latini. (Liv. i. 1, 2; Dionys. i. 45, 60; Strab. v. p. 229; Appian, *Rom.* i. 1.) But a tradition, which has much more the character of a national one, preserved to us on the authority both of Varro and Cato, represents the population of Latium, as it existed previous to the Trojan colony, as already of a mixed character, and resulting from the union of a conquering race, who descended from the Central Apennines about Reate, with a people whom they found already established in the plains of Latium, and who bore the name of Siculi. It is strange that Varro (according to Dionysius) gave the name of Aborigines, which must originally have been applied or adopted in the sense of Autochthones, as the *indigenous* inhabitants of the country [ABORIGINES], to these foreign invaders from the north. Cato apparently used it in the more natural signification as applied to the previously existing population, the same which were called by Dionysius and Varro, Siculi. (Varr. *ap. Dionys.* i. 9, 10; Cato, *ap. Priscian.* v. 12. § 65.) But though it is impossible to receive the statement of Varro with regard to the *name* of the invading population, the *fact* of such a migration having taken place may be fairly admitted as worthy of credit, and is in accordance with all else that we know of the progress of the population of Central Italy, and the course of the several successive waves of emigration that descended along the central line of the Apennines. [ITALIA, pp. 84, 85.]

The authority of Varro is here also confirmed by the result of modern philological researches. Niebuhr was the first to point out that the Latin language bore in itself the traces of a composite character, and was made up of two distinct elements; the one nearly resembling the Greek, and therefore probably derived from a Pelasgic source; the other closely connected with the Oscan and Umbrian dialects of Central Italy. To this he adds the important observation, that the terms connected with war and arms belong almost exclusively to the latter class, while those of agriculture and domestic life have for the most part a strong resemblance to the corresponding Greek terms. (Niebuhr, vol. i. pp. 82, 83; Donaldson, *Varronianus*, p. 3.) We may hence fairly infer that the conquering people from the north was a race akin to the Oscans, Sabines and Umbrians, whom we find in historical times settled in the same or adjoining regions of the Apennines: and that the inhabitants of the plains whom they reduced to subjection, and with whom they became gradually mingled (like the Normans with the Saxons in England) were a race of Pelasgic extraction. This last circumstance is in accordance with the inferences to be drawn from several of the historical traditions or statements transmitted to us. Thus Cato represented the Aborigines (whom he appears to have identified with the Siculi) as of Hellenic or Greek extraction (Cato, *ap. Dionys.* i. 11, 13), by which Roman writers often mean nothing more than Pelasgic: and the Siculi, where they reappear in the S. of Italy, are found indissolubly connected with the Oenotrians, a race whose Pelasgic origin is well established. [SICULI.]

The Latin people may thus be regarded as composed of two distinct races, both of them members of the great Indo-Teutonic family, but belonging to different branches of that family, the one more closely related to the Greek or Pelasgic stock, the other to that race which, under the various forms of Umbrian, Oscan and Sabellian, constituted the basis of the greater part of the population of Central Italy. [ITALIA.]

But whatever value may be attached to the historical traditions above cited, it is certain that the two elements of the Latin people had become indissolubly blended before the period when it first appears in history: the Latin nation, as well as the Latin language, is always regarded by Roman writers as one organic whole.

We may safely refuse to admit the existence of a third element, as representing the Trojan settlers, who, according to the tradition commonly adopted by the Romans themselves, formed an integral portion of the Latin nation. The legend of the arrival of Aeneas and the Trojan colony is, in all probability, a mere fiction adopted from the Greeks (Schwegler, *Röm. Gesch.* vol. i. pp. 310—326): though it may have found some adventitious support from the existence of usages and religious rites which, being of Pelasgic origin, recalled those found among the Pelasgic races on the shores of the Aegean Sea. And it is in accordance with this view that we find traces of similar legends connected with the worship of Aeneas and the Penates at different points along the coasts of the Aegean and Mediterranean seas, all the way from the Troad to Latium. (Dionys. i. 46—55; Klausen, *Aeneas u. die Penaten*, book 3.) The worship of the Penates at Lavinium in particular would seem to have been closely connected with the Cabeiric worship so prevalent among the Pelasgians, and hence probably that city was selected as the supposed capital of the Trojans on their first settlement in Italy.

But though these traditions, as well as the sacred rites which continued to be practised down to a late period of the Roman power, point to Lavinium as the ancient metropolis of Latium, which retained its sacred character as such long after its political power had disappeared, all the earliest traditions represent Alba, and not Lavinium, as the chief city of the Latins when that people first appears in connection with Rome. It is possible that Alba was the capital of the conquering Oscan race, as Lavinium had been that of the conquered Pelasgians, and that there was thus some historical foundation for the legend of the transference of the supreme power from the one to the other: but no such supposition can claim to rank as more than a conjecture. On the other hand, we may fairly admit as historical the fact, that, at the period of the foundation or first origin of Rome, the Latin people constituted a national league, composed of numerous independent cities, at the head of which stood Alba, which exercised a certain supremacy over the rest. This vague superiority, arising probably from its greater actual power, appears to have given rise

Another people whose name appears in all the earliest historical traditions of Latium, but who had become completely merged in the general body of the Latin nation, before we arrive at the historical period, was that of the Rutuli. Their capital was Ardea, a city to which a Greek or Argive origin was ascribed [ARDEA]; if any value can be attached to such traditions, they may be regarded as pointing to a Pelasgic origin of the Rutuli; and Niebuhr explains the traditionary greatness of Ardea by supposing it to have been the chief city of maritime Latium, while it was still in the hands of the Pelasgians. (Niebuhr, vol. i. p. 44, vol. ii. p. 21.)

One of the most difficult questions connected with the early history of Latium is the meaning and origin of the term "Prisci Latini," which we find applied by many Roman writers to the cities of the Latin League, and which occurs in a formula given by Livy that has every appearance of being very ancient. (Liv. i. 32.) It may safely be assumed that the term means "Old Latins," and Niebuhr's idea that Prisci was itself a national appellation

struggle was now at an end; the Latin cities sub-
mitted one after the other, and the Roman senate
pronounced separately on the fate of each. The
first great object of the arrangements now made
was to deprive the Latins of all bonds of national or
social unity: for this purpose not only were they
prohibited from holding general councils or assem-
blies, but the several cities were deprived of the
mutual rights of "connubium" and "commercium,"
so as to isolate each little community from its neigh-
bours. Tibur and Praeneste, the two most powerful
cities of the confederacy, and which had taken a
prominent part in the war, were deprived of a large
portion of their territory, but continued to exist as
nominally independent communities, retaining their
own laws, and the old treaties with them were re-
newed, so that as late as the time of Polybius a
Roman citizen might choose Tibur or Praeneste as a
place of exile. (Liv. xliii. 2; Pol. vi. 14.) Tus-
culum, on the contrary, received the Roman fran-
chise; as did Lanuvium, Aricia, Pedum, and No-
mentum, though these last appear to have, in the
first instance, received only the imperfect citizen-
ship without the right of suffrage. Velitrae was

...n con-

to the notion that Alba was in another sense the metropolis of Latium, and that all, or at any rate the greater part, of the cities of Latium were merely colonies of Alba. So far was this idea carried, that we find expressly enumerated in the list of such colonies places like Ardea, Tusculum, and Praeneste, which, according to other traditions generally received, were more ancient than Alba itself. (Liv. i. 52; Dionys. iii 34; Diod. vii. *ap. Euseb. Arm.* p. 185; Vict. *Orig. Gent. Rom.* 17.). [ALBA LONGA.]

Pliny has, however, preserved to us a statement of a very different stamp, according to which there were thirty towns or communities, which he terms the "populi Albenses," that were accustomed to share in the sacrifices on the Alban Mount. Many of these names are now obscure or unknown, several others appear to have been always inconsiderable places, while a few only subsequently figure among the well-known cities of Latium. It is therefore highly probable that we have here an authentic record, preserved from ancient times, of a league which actually subsisted at a very early period, before Alba became the head of the more important and better known confederacy of the Latins in general. Of the towns thus enumerated, those whose situation can be determined with any certainty were all (with the remarkable exception of Fidenae) situated in the immediate neighbourhood of the Alban Hills; and thus appear to have been grouped around Alba as their natural centre. Among them we find Bola, Pedum, Toleria, and Vitellia on the N. of the Alban Hills, and Corioli, Longula, and Pollusca on the S. of the same group. On the other hand, the more powerful cities of Aricia, Lanuvium, and Tusculum, though so much nearer to Alba, are not included in this list. But there is a remarkable statement of Cato (*ap. Priscian.* iv. p. 629), in which he speaks of the celebrated temple of Diana at Aricia, as founded in common by the people of Tusculum, Aricia, Lanuvium, Laurentum, Cora, Tibur, Pometia, Ardea, and the Rutuli, that seems to point to the existence of a separate, and, as it were, counter league, subsisting at the same time with that of which Alba was the head. All these minor unions would seem, however, to have ultimately been merged in the general confederacy of the Latins, of which, according to the tradition universally adopted by Roman writers, Alba was the acknowledged head.

Another people whose name appears in all the earliest historical traditions of Latium, but who had become completely merged in the general body of the Latin nation, before we arrive at the historical period, was that of the Rutuli. Their capital was Ardea, a city to which a Greek or Argive origin was ascribed [ARDEA]; if any value can be attached to such traditions, they may be regarded as pointing to a Pelasgic origin of the Rutuli; and Niebuhr explains the traditionary greatness of Ardea by supposing it to have been the chief city of maritime Latium, while it was still in the hands of the Pelasgians. (Niebuhr, vol. i. p. 44, vol. ii. p. 21.)

One of the most difficult questions connected with the early history of Latium is the meaning and origin of the term "Prisci Latini," which we find applied by many Roman writers to the cities of the Latin League, and which occurs in a formula given by Livy that has every appearance of being very ancient. (Liv. i. 32.) It may safely be assumed that the term means "Old Latins," and Niebuhr's idea that Prisci was itself a national appellation has been generally rejected as untenable. But it is difficult to believe that a people could ever have called themselves "the old Latins:" and yet it seems certain that the name was so used, both from its occurrence in the formula just referred to (which was in all probability borrowed from the old law books of the Fetiales), and from the circumstance that we find the name almost solely in connection with the wars of Ancus Marcius and Tarquinius Priscus (Liv. i. 32, 33, 38); and it never occurs at a later period. Hence it seems impossible to suppose that it was used as a term of distinction for the Latins properly so called, or inhabitants of Latium Antiquum, as contradistinguished from the Aequians, Volscians, and other nations subsequently included in Latium: a supposition adopted by several modern writers. On the other hand the name does not occur in the Roman history, prior to the destruction of Alba, and perhaps the most plausible conjecture is that the name was one assumed by a league or confederacy of the Latin cities, established after the fall of Alba, but who thus asserted their claim to represent the original and ancient Latin people. It must be admitted that this explanation seems wholly at variance with the statement that the Prisci Latini were the colonies of Alba, which is found both in Livy and Dionysius (Liv. i. 3; Dionys. i. 45), but this probably meant to convey nothing more than the notion already noticed, that all the cities of Latium were founded by such colonies. Livy, at least, seems certainly to regard the "Prisci Latini" as equivalent to the whole Latin nation, and not as a part contradistinguished from the rest. (Liv. i. 38.)

2. *Relations of the Latins with Rome.*—As the first historical appearance of the Latins is that of a confederation of different cities, of which Alba was the head, so the fall and destruction of Alba may be regarded as the first event in their annals which can be termed historical. The circumstances transmitted to us in connection with this are undoubtedly poetical fictions; but the main fact of the destruction of the city and downfal of its power is well established. This event must have been followed by a complete derangement in the previously existing relations. Rome appears to have speedily put forth a claim to the supremacy which Alba had previously exercised (Dionys. iii. 34); but it is evident that this was not acknowledged by the other cities of Latium; and the Prisci Latini, whose name appears in history only during this period, probably formed a separate league of their own. It was not long, however, before the Romans succeeded in establishing their superiority: and the statement of the Roman annals, that the Latin league was renewed under Tarquinius Superbus, and the supremacy of that monarch acknowledged by all the other cities that composed it, derives a strong confirmation from the more authentic testimony of the treaty between Rome and Carthage, preserved to us by Polybius (iii. 22). In this important document, which dates from the year immediately following the expulsion of the kings (B.C. 509), Rome appears as stipulating on behalf of the people of Ardea, Antium, Laurentum, Circeii, Tarracina, and the other *subject* (or dependent) cities of Latium, and even making conditions in regard to the whole Latin territory, as if it was subject to its rule. But the state of things which appears to have been at this time fully established, was broken up soon after; whether in consequence of the revolution at

Rome which led to the abolition of the kingly power, or from some other cause, we know not. The Latin cities became wholly independent of Rome; and though the war which was marked by the great battle at the lake Regillus has been dressed up in the legendary history with so much of fiction as to render it difficult to attach any historical value to the traditions connected with it, there is no reason to doubt the fact that the Latins had at this time shaken off the supremacy of Rome, and that a war between the two powers was the result. Not long after this, in B. C. 493, a treaty was concluded with them by Sp. Cassius, which determined their relations with Rome for a long period of time. (Liv. ii. 33; Dionys. vi. 96; Cic. *pro Balb.* 23.)

By the treaty thus concluded the Romans and Latins entered into an alliance as equal and independent states, both for offence and defence: all booty or conquered territory was to be shared between them; and there is much reason to believe that the supreme command of the allied armies was to be held in alternate years by the Roman and Latin generals. (Dionys. *l. c.*; Nieb. vol. ii. p. 40.) The Latin cities, which at this time composed the league or confederacy, were thirty in number: a list of them is given by Dionysius in another passage (v. 61), but which, in all probability, was derived from the treaty in question (Niebuhr, vol. ii. p. 23). They were:—Ardea, Aricia, Bovillae, Bubentum, Corniculum, Carventum, Circeii, Corioli, Corbio, Cora, Fortinei (?), Gabii, Laurentum, Lavinium, Lanuvium, Labicum, Nomentum, Norba, Praeneste, Pedum, Querquetulum, Satricum, Scaptia, Setia, Tellenae, Tibur, Tusculum, Toleria, Tricrinum (?), Velitrae. The number thirty appears to have been a recognised and established one, not dependent upon accidental changes and fluctuations: the cities which composed the old league under the supremacy of Alba are also represented as thirty in number (Dionys. iii. 34), and the "populi Albenses," which formed the smaller and closer union under the same head, were, according to Pliny's list, just thirty. It is therefore quite in accordance with the usages of ancient nations that the league when formed anew should consist as before of thirty cities, though these could not have been *the same* as previously composed it.

The object of this alliance between Rome and Latium was no doubt to oppose a barrier to the rapidly advancing power of the Aequians and Volscians. With the same view the Hernicans were soon after admitted to participate in it (B. C. 486); and from this time for more than a century the Latins continued to be the faithful allies of Rome, and shared alike in her victories and reverses during her long and arduous struggle with their warlike neighbours. (Liv. vi. 2.) A shock was given to these friendly relations by the Gaulish War and the capture of Rome in B. C. 390: the calamity which then befel the city appears to have incited some of her nearest neighbours and most faithful allies to take up arms against her. (Varr. *L. L.* vi. 18; Liv. vi. 2.) The Latins and Hernicans are represented as not only refusing their contingent to the Roman armies, but supporting and assisting the Volscians against them; and though they still avoided as long as possible an open breach with Rome, it seems evident that the former close alliance between them was virtually at an end. (Liv. vi. 6, 7, 10, 11, 17.) But it would appear that the bond of union of the Latin League itself was, by this time, very much weakened. The more powerful cities are found acting with a degree of independence to which there is no parallel in earlier times: thus, in B. C. 383, the Lanuvians formed an alliance with the Volscians, and Praeneste declared itself hostile to Rome, while Tusculum, Gabii, and Labicum continued on friendly terms with the republic. (*Id.* vi. 21.) In B. C. 380 the Romans were at open war with the Praenestines, and in B. C. 360 with the Tiburtines, but in neither instance do the other cities of Latium appear to have joined in the war. (*Id.* vi. 27—29, vii. 10—12, 18, 19.) The repeated invasions of the Gauls, whose armies traversed the Latin territory year after year, tended to increase the confusion and disorder: nevertheless the Latin League, though much disorganised, was never broken up; and the cities composing it still continued to hold their meetings at the Lucus Ferentinae, to deliberate on their common interests and policy. (*Id.* vii. 25.) In B. C. 358 the league with Rome appears to have been renewed upon the same terms as before; and in that year the Latins, for the first time after a long interval, sent their contingent to the Roman armies. (Liv. vii. 12.)

At length, in B. C. 340, the Latins, who had adhered faithfully to their alliance during the First Samnite War, appear to have been roused to a sense of the increasing power of Rome, and became conscious that, under the shadow of an equal alliance, they were gradually passing into a state of dependence and servitude. (*Id.* viii. 4.) Hence, after a vain appeal to Rome for the establishment of a more equitable arrangement, the Latins, as well as the Volscians, took part with the Campanians in the war of that year, and shared in their memorable defeat at the foot of Mount Vesuvius. Even on this occasion, however, the councils of the Latins were divided: the Laurentes at least, and probably the Lavinians also, remained faithful to the Roman cause, while Signia, Setia, Circeii, and Velitrae, though regarded as Roman colonies, were among the most prominent in the war. (*Id.* viii. 3—11.) The contest was renewed the next year with various success; but in B. C. 338 Furius Camillus defeated the forces of the Latins in a great battle at Pedum, while the other consul, C. Maenius, obtained a not less decisive victory on the river Astura. The struggle was now at an end; the Latin cities submitted one after the other, and the Roman senate pronounced separately on the fate of each. The first great object of the arrangements now made was to deprive the Latins of all bonds of national or social unity: for this purpose not only were they prohibited from holding general councils or assemblies, but the several cities were deprived of the mutual rights of "connubium" and "commercium," so as to isolate each little community from its neighbours. Tibur and Praeneste, the two most powerful cities of the confederacy, and which had taken a prominent part in the war, were deprived of a large portion of their territory, but continued to exist as nominally independent communities, retaining their own laws, and the old treaties with them were renewed, so that as late as the time of Polybius a Roman citizen might choose Tibur or Praeneste as a place of exile. (Liv. xliii. 2; Pol. vi. 14.) Tusculum, on the contrary, received the Roman franchise; as did Lanuvium, Aricia, Pedum, and Nomentum, though these last appear to have, in the first instance, received only the imperfect citizenship without the right of suffrage. Velitrae was

more severely punished; but the people of this city also were soon after admitted to the Roman franchise, and the creation shortly after of the Maecian and Scaptian tribes was designed to include the new citizens added to the republic as the result of these arrangements. (Liv. viii. 14, 17; Niebuhr, vol. iii. pp. 140—145.)

From this time the Latins as a nation may be said to disappear from history: they became gradually more and more blended into one mass with the Roman people; and though the formula of "the allies and Latin nation" (*socii et nomen Latinum*) is one of perpetual occurrence from this time forth in the Roman history, it must be remembered that this phrase includes also the citizens of the so-called Latin colonies, who formed a body far superior in importance and numbers to the remains of the old Latin people. [ITALIA, p. 90.]

In the above historical review, the history of the old Latins, or the Latins properly so called, has been studiously kept separate from that of the other nations which were subsequently included under the general appellation of Latium,—the Aequians, Hernicans, Volscians, and Ausonians. The history of these several tribes, as long as they sustained a separate national existence, will be found under their respective names. It may suffice here to mention that the Hernicans were reduced to complete subjection to Rome in B. C. 306, and the Aequians in B. C. 304; the period of the final subjugation of the Volscians is more uncertain, but we meet with no mention of them in arms after the capture of Privernum in B. C. 329; and it seems certain that they, as well as the Ausonian cities which adjoined them, had fallen into the power of Rome before the commencement of the Second Samnite War, B. C. 326. [VOLSCI.] Hence, the whole of the country subsequently known as Latium had become finally subject to Rome before the year 300 B. C.

3. *Latium under the Romans.*—The history of Latium, properly speaking, ends with the breaking up of the Latin League. Although some of the cities continued, as already mentioned, to retain a nominal independence down to a late period, and it was not till after the outbreak of the Social War, in B.C. 90, that the Lex Julia at length conferred upon all the Latins, without exception, the rights of Roman citizens, they had long before lost all traces of national distinction. The only events in the intervening period which belong to the history of Latium are inseparably bound up with that of Rome. Such was the invasion by Pyrrhus in B.C. 280, who advanced however only as far as Praeneste, from whence he looked down upon the plain around Rome, but without venturing to descend into it. (Eutrop. ii. 12; Flor. i. 18. § 24.) In the Second Punic War, however, Hannibal, advancing like Pyrrhus by the line of the Via Latina, established his camp within four miles of the city, and carried his ravages up to the very gates of Rome. (Liv. xxvi. 9—11; Pol. ix. 6.) This was the last time for many centuries that Latium witnessed the presence of a foreign hostile army; but it suffered severely in the civil wars of Marius and Sulla, and the whole tract near the sea-coast especially was ravaged by the Samnite auxiliaries of the former in a manner that it seems never to have recovered. (Strab. v. p. 232.)

Before the close of the Republic Latium appears to have lapsed almost completely into the condition of the mere suburban district of Rome. Tibur, Tusculum, and Praeneste became the favourite resorts of the Roman nobles, and the fertile slopes of the Alban Hills and the Apennines were studded with villas and gardens, to which the wealthier citizens of the metropolis used to retire in order to avoid the heat or bustle of Rome. But the plain immediately around the city, or the *Campagna*, as it is now called, seems to have lost rather than gained by its proximity to the capital. Livy, in more than one passage, speaks with astonishment of the inexhaustible resources which the infant republic appears to have possessed, as compared with the condition of the same territory in his own time. (Liv. vi. 12, vii. 25.) We learn from Cicero that Gabii, Labicum, Collatia, Fidenae, and Bovillae were in his time sunk into almost complete decay, while even those towns, such as Aricia and Lanuvium, which were in a comparatively flourishing condition, were still very inferior to the opulent municipal towns of Campania. (Cic. *pro Planc.* 9, *de Leg. Agrar.* ii. 35.) Nor did this state of things become materially improved even under the Roman Empire. The whole Laurentine tract, or the woody district adjoining the sea-coast, as well as the adjacent territory of Ardea, had already come to be regarded as unhealthy, and was therefore thinly inhabited. In other parts of the *Campagna* single farms or villages already occupied the sites of ancient cities, such as Antemnae, Collatia, Fidenae, &c. (Strab. v. p. 230); and Pliny gives a long list of cities of ancient Latium which in his time had altogether ceased to exist. (Plin. iii. 6. s. 9.) The great lines of highway, the Appian, Latin, Salarian, and Valerian Ways, became the means of collecting a considerable population along their immediate lines, but appear to have had rather a contrary effect in regard to all intermediate tracts. The notices that we find of the attempts made by successive emperors to recruit the decaying population of many of the towns of Latium with fresh colonies, sufficiently show how far they were from sharing in the prosperity of the capital; while, on the other hand, these colonies seem to have for the most part succeeded only in giving a delusive air of splendour to the towns in question, without laying the foundation of any real and permanent improvement.

For many ages its immediate proximity to the capital at least secured Latium from the ravages of foreign invaders; but when, towards the decline of the Empire, this ceased to be the case, and each successive swarm of barbarians carried their arms up to the very gates and walls of Rome, the district immediately round the city probably suffered more severely than any other. Before the fall of the Western Empire the *Campagna* seems to have been reduced almost to a desert, and the evil must have been continually augmented after that period by the long continued wars with the Gothic kings, as well as subsequently with the Lombards, who, though they never made themselves masters of Rome itself, repeatedly laid waste the surrounding territory. All the records of the middle ages represent to us the Roman *Campagna* as reduced to a state of complete desolation, from which it has never more than partially recovered.

In the division of Italy under Augustus, Latium, in the wider sense of the term, together with Campania, constituted the First Region. (Plin. iii. 5. s. 9.) But gradually, for what reason we know not, the name of Campania came to be generally employed to designate the whole region; while that of Latium fell completely into disuse. Hence the origin of the name of *La Campagna di Roma*, by

which the ancient Latium is known in modern times. [CAMPANIA, p. 494.]

V. POLITICAL AND RELIGIOUS INSTITUTIONS.

It is for the most part impossible to separate the Latin element of the Roman character and institutions from that which they derived from the Sabines: at the same time we know that the connection between the Romans and the Latins was so intimate, that we may generally regard the Roman sacred rites, as well as their political institutions, in the absence of all evidence to the contrary, as of Latin origin. But it would be obviously here out of place to enter into any detail as to those parts of the Latin institutions which were common to the two nations. A few words may, however, be added, concerning the constitution of the Latin League, as it existed in its independent form. This was composed, as has been already stated, of thirty cities, all apparently, in name at least, equal and independent, though they certainly at one time admitted a kind of presiding authority or supremacy on the part of Alba, and at a later period on that of Rome.

The general councils or assemblies of deputies from the several cities were held at the Lucus Ferentinae, in the immediate neighbourhood of Alba; a custom which was evidently connected in the first instance with the supremacy of that city, but which was retained after the presidency had devolved on Rome, and down to the great Latin War of B.C. 340. (Cincius, *ap. Fest. v. Praetor*, p. 241.) Each city had undoubtedly the sole direction of its own affairs: the chief magistrate was termed a Dictator, a title borrowed from the Latins by the Romans, and which continued to be employed as the name of a municipal magistracy by the Latin cities long after they had lost their independence. It is remarkable that, with the exception of the mythical or fictitious kings of Alba, we meet with no trace of monarchical government in Latium; and if the account given by Cato of the consecration of the temple of Diana at Aricia can be trusted, even at that early period each city had its chief magistrate, with the title of dictator. (Cato, *ap. Priscian.* iv. p. 629.) They must necessarily have had a chief magistrate, on whom the command of the forces of the whole League would devolve in time of war, as is represented as being the case with Mamilius Octavius at the battle of Regillus. But such a commander may probably have been specially chosen for each particular occasion. On the other hand, Livy speaks in B.C. 340 of C. Annius of Setia and L. Numisius of Circeii, as the two "praetors of the Latins," as if this were a customary and regular magistracy. (Liv. viii. 3.) Of the internal government or constitution of the individual Latin cities we have no knowledge at all, except what we may gather from the analogy of those of Rome or of their later municipal institutions.

As the Lucus Ferentinae, in the neighbourhood of Alba, was the established place of meeting for *political* purposes of all the Latin cities, so the temple of Jupiter, on the summit of the Alban Mount (*Monte Cavo*), was the central sanctuary of the whole Latin people, where sacrifices were offered on their behalf at the Feriae Latinae, in which every city was bound to participate, a custom retained down to a very late period by the Romans themselves. (Liv. xxxii. 1; Cic. *pro Planc.* 9; Plin. iii. 6. s. 9.) In like manner there can be no doubt that the custom sometimes adopted by Roman generals of celebrating a triumph on the Alban Mount was derived from the times of Latin independence, when the temple of Jupiter Latiaris was the natural end of such a procession, just as that of Jupiter Capitolinus was at Rome.

Among the deities especially worshipped by the Romans, it may suffice to mention, as apparently of peculiarly Latin origin, Janus, Saturnus, Faunus, and Picus. The latter seems to have been so closely connected with Mars, that he was probably only another form of the same deity. Janus was originally a god of the sun, answering to Jana or Diana, the goddess of the moon. Saturnus was a terrestrial deity, regarded as the inventor of agriculture and of all the most essential improvements of life. Hence he came to be regarded by the pragmatical mythologers of later times as a very ancient king of Latium; and by degrees Janus, Saturnus, Picus, and Faunus became established as successive kings of the earliest Latins or Aborigines. To complete the series Latinus was made the son of Faunus. This last appears as a gloomy and mysterious being, probably originally connected with the infernal deities; but who figures in the mythology received in later times partly as a patron of agriculture, partly as a giver of oracles. (Hartung, *Religion der Römer*. vol. ii.; Schwegler, *R. G.* vol. i. pp. 212—234.)

The worship of the Penates also, though not peculiar to Latium, seems to have formed an integral and important part of the Latin religion. The Penates at Lavinium were regarded as the tutelary gods of the whole Latin people, and as such continued to be the object of the most scrupulous reverence to the Romans themselves down quite to the extinction of Paganism. Every Roman consul or praetor, upon first entering on his magistracy, was bound to repair to Lavinium, and there offer sacrifices to the Penates, as well as to Vesta, whose worship was closely connected with them. (Macrob. *Sat.* iii. 4; Varr. *L.L.* v. 144.) This custom points to Lavinium as having been at one time, probably before the rise of Alba, the sacred metropolis of Latium: and it may very probably have been, at the same early period, the political capital or head of the Latin confederacy.

VI. TOPOGRAPHY.

The principal physical features of Latium have already been described; but it remains here to notice the minor rivers and streams, as well as the names of some particular hills or mountain heights which have been transmitted to us.

Of the several small rivers which have their rise at the foot of the Alban hills, and flow from thence to the sea between the mouth of the Tiber and Antium, the only one of which the ancient name is preserved is the NUMICIUS, which may be identified with the stream now called *Rio Torto*, between Lavinium and Ardea. The ASTURA, rising also at the foot of the Alban hills near *Velletri*, and flowing from thence in a SW. direction, enters the sea a little to the S. of the promontory of Astura: it is now known in the lower part of its course as the *Fiume di Conca*, but the several small streams by the confluence of which it is formed have each their separate appellation. The NYMPHAEUS, mentioned by Pliny (iii. 5. s. 9), and still called *La Ninfa*, rises immediately at the foot of the Volscian mountains, just below the city of Norba: in Pliny's time it appears to have had an independent course to the sea, but now loses itself in the Pontine Marshes,

where its waters add to the stagnation. But the principal agents in the formation of those extensive marshes are the UFENS and the AMASENUS, both of them flowing from the Volscian mountains and uniting their waters before they reach the sea. They still retain their ancient names. Of the lesser streams of Latium, which flow into the Tiber, we need only mention the celebrated ALLIA, which falls into that river about 11 miles above Rome; the ALMO, a still smaller stream, which joins it just below the city, having previously received the waters of the AQUA FERENTINA (now called the *Marrana degli Orti*), which have their source at the foot of the Alban Hills, near *Marino;* and the RIVUS ALBANUS (still called the *Rivo Albano*), which carries off the superfluous waters of the Alban lake to the Tiber, about four miles below Rome.

The mountains of Latium, as already mentioned, may be classed into three principal groups:—(1) the Apennines, properly so called, including the ranges at the back of Tibur and Praeneste, as well as the mountains of the Aequians and Hernicans; (2) the group of the Alban Hills, of which the central and loftiest summit (the *Monte Cavo*) was the proper Mons Albanus of the ancients, while the part which faced Praeneste and the Volscian Mountains was known as the MONS ALGIDUS; (3) the lofty group or mass of the Volscian Mountains, frequently called by modern geographers the *Monti Lepini*, though we have no ancient authority for this use of the word. The name of MONS LEPINUS occurs only in Columella (x. 131), as that of a mountain in the neighbourhood of Signia. The MONTES CORNICULANI (τὰ Κόρνικλα ὄρεα, Dionys. i. 16) must evidently have been the detached group of outlying peaks, wholly separate from the main range of the Apennines, now known as the *Monticelli*, situated between the Tiber and the *Monte Gennaro*. The MONS SACER, so celebrated in Roman history, was a mere hill of trifling elevation above the adjoining plain, situated on the right bank of the Anio, close to the Via Nomentana.

It only remains to enumerate the towns or cities which existed within the limits of Latium; but as many of these had disappeared at a very early period, and all trace of their geographical position is lost, it will be necessary in the first instance to confine this list to places of which the site is known, approximately at least, reserving the more obscure names for subsequent consideration.

Beginning from the mouth of the Tiber, the first place is OSTIA, situated on the left bank of the river, and, as its name imports, originally close to its mouth, though it is now three miles distant from it. A short distance from the coast, and about 8 miles from Ostia, was LAURENTUM, the reputed capital of the Aborigines, situated probably at *Torre di Paternò*, or at least in that immediate neighbourhood. A few miles further S., but considerably more inland, being near 4 miles from the sea, was LAVINIUM, the site of which may be clearly recognised at *Pratica*. S. of this again, and about the same distance from the sea, was ARDEA, which retains its ancient name: and 15 miles further, on a projecting point of the coast, was ANTIUM, still called *Porto d' Anzo*. Between 9 and 10 miles further on along the coast, was the town or village of ASTURA, with the islet of the same name; and from thence a long tract of barren sandy coast, without a village and almost without inhabitants, extended to the Circeian promontory and the town of CIRCEII, which was generally reckoned the last place in Latium Proper. Returning to Rome as a centre, we find N. of the city, and between it and the Sabine frontier, the cities of ANTEMNAE, FIDENAE, CRUSTUMERIUM, and NOMENTUM. On or around the group of the Montes Corniculani, were situated CORNICULUM, MEDULLIA, and AMERIOLA: CAMERIA, also, may probably be placed in the same neighbourhood; and a little nearer Rome, on the road leading to Nomentum, was FICULEA. At the foot, or rather on the lower slopes and underfalls of the main range of the Apennines, were TIBUR, AESULA, and PRAENESTE, the latter occupying a lofty spur or projecting point of the Apennines, standing out towards the Alban Hills. This latter group was surrounded as it were with a crown or circle of ancient towns, beginning with CORBIO (*Rocca Priore*), nearly opposite to Praeneste, and continued on by TUSCULUM, ALBA, and ARICIA, to LANUVIUM and VELITRAE, the last two situated on projecting offshoots from the central group, standing out towards the Pontine Plains. On the skirts of the Volscian mountains or *Monti Lepini*, were situated SIGNIA, CORA, NORBA, and SETIA, the last three all standing on commanding heights, looking down upon the plain of the Pontine Marshes. In that plain, and immediately adjoining the marshes themselves, was ULUBRAE, and in all probability SUESSA POMETIA also, the city which gave name both to the marshes and plain, but the precise site of which is unknown. The other places within the marshy tract, such as FORUM APPII, TRES TABERNAE, and TRIPONTIUM, owed their existence to the construction of the Via Appia, and did not represent or replace ancient Latin towns. In the level tract bordering on the Pontine Plains on the N., and extending from the foot of the Alban Hills towards Antium and Ardea, were situated SATRICUM, LONGULA, POLLUSCA and CORIOLI; all of them places of which the exact site is still a matter of doubt, but which must certainly be sought in this neighbourhood. Between the Laurentine region (Laurens tractus), as the forest district near the sea was often called, and the Via Appia, was an open level tract, to which (or to a part of which) the name of CAMPUS SOLONIUS was given; and within the limits of this district were situated TELLENAE and POLITORIUM, as well as probably APIOLAE. BOVILLAE, at the foot of the Alban hills, and just on the S. of the Appian Way, was at one extremity of the same tract, while FICANA stood at the other, immediately adjoining the Tiber. In the portion of the plain of the *Campagna* extending from the line of the Via Appia to the foot of the Apennines, between the Anio and the Alban Hills, the only city of which the site is known was GABII, 12 miles distant from Rome, and the same distance from Praeneste. Nearer the Apennines were SCAPTIA and PEDUM, as well as probably QUERQUETULA; while LABICUM occupied the hill of *La Colonna*, nearly at the foot of the Alban group. In the tract which extends southwards between the Apennines at Praeneste and the Alban Hills, so as to connect the plain of the *Campagna* with the land of the Hernicans in the valley of the Trerus or *Sacco*, were situated VITELLIA, TOLERIUM, and probably also BOLA and ORTONA; though the exact site of all four is a matter of doubt. ECETRA, which appears in history as a Volscian city, and is never mentioned as a Latin one, must nevertheless have been situated within the limits of the Latin territory, ap-

rently at the foot of the Mons Lepinus, or northern tremity of the Volscian mountains. [ECETRA.]

Besides these cities, which in the early ages of atium formed members of the Latin League, or are therwise conspicuous in Roman history, we find menion in Pliny of some smaller towns still existing in is time; of which the "Fabienses in Monte Albano" nay certainly be placed at *Rocca di Papa*, the ighest village on the Alban Mount, and the Castrinonienses at *Marino*, near the site of Alba Longa. The list of the thirty cities of the League given by Dionysius (v. 61) has been already cited (p. 139). Of the names included in it, BUBENTUM is wholly nknown, and must have disappeared at an early peiod. CARVENTUM is known only from the mention f the Arx Carventana in Livy during the wars with he Aequians (iv. 53, 55), and was probably situated omewhere on the frontier of that people; while two f the names, the Fortineii (Φορτινεῖοι) and Trinii (Τριερῖνοι), are utterly unknown, and in all proability corrupt. The former may probably be the ame with the Foretii of Pliny, or perhaps with the orentani of the same author, but both these are qually unknown to us.

Besides these Pliny has given a long list of towns r cities (clara oppida, iii. 5. s. 9. § 68) which once xisted in Latium, but had wholly disappeared in his ime. Among these we find many that are well nown in history and have been already noticed, viz. Satricum, Pometia, Scaptia, Politorium, Tellenae, Caenina, Ficana, Crustumerium, Ameriola, Medullia, Corniculum, Antemnae, Cameria, Collatia. With hese he joins two cities which are certainly of mythical character: Saturnia, which was alleged to have reviously existed on the site of Rome, and Antipolis, n the hill of the Janiculum; and adds three other names, Sulmo, a place not mentioned by any other writer, but the name of which may probably be recognised in the modern *Sermoneta;* Norbe, which seems to be an erroneous repetition of the well-known Norba, already mentioned by him among the existing cities of Latium (*Ib.* § 64); and Amitinum or Amiternum, of which no trace is found elsewhere, except the well-known city of the name in the Vestini, which cannot possibly be meant. But, after mentioning these cities as extinct, Pliny adds another list of "populi" or communities, which had been accustomed to share with them in the sacrifices on the Alban Mount, and which were all equally decayed. According to the punctuation proposed by Niebuhr and adopted by the latest editors of Pliny, he classes these collectively as "populi Albenses," and enumerates them as follows: Albani, Aesulani, Accienses, Abolani, Bubetani, Bolani, Cusuetani, Coriolani, Fidenates, Foretii, Hortenses, Latinienses, Longulani, Manates, Macrales, Mutucumenses, Munienses, Numinienses, Olliculani, Octulani, Pedani, Polluscini, Querquetulani, Sicani, Sisolenses, Tolerienses, Tutienses, Vimitellarii, Velienses, Venetulani, Vitellenses. Of the names here given, eleven relate to well-known towns (Alba, Aesula, Bola, Corioli, Fidenae, Longula, Pedum, Pollusca, Querquetula, Tolerium and Vitellia): the Bubetani are evidently the same with the Bubentani of Dionysius already noticed; the Foretii may perhaps be the same with the Fortineii of that author; the Hortenses may probably be the inhabitants of the town called by Livy Ortona; the Munienses are very possibly the people of the town afterwards called Castrimoenium: but there still remain sixteen wholly unknown. At the same time there are several indications (such as the agreement with Dionysius in regard to the otherwise unknown Bubentani, and the notice of Aesula and Querquetula, towns which do not figure in history) that the list is derived from an authentic source; and was probably copied as a whole by Pliny from some more ancient authority. The conjecture of Niebuhr, therefore, that we have here a list of the subject or dependent cities of Alba, derived from a period when they formed a separate and closer league with Alba itself, is at least highly plausible. The notice in the list of the *Velienses* is a strong confirmation of this view, if we can suppose them to be the inhabitants of the hill at Rome called the Velia, which is known to us as bearing an important part in the ancient sacrifices of the Septimontium. [ROMA.]

The works on the topography of Latium, as might be expected from the peculiar interest of the subject, are sufficiently numerous: but the older ones are of little value. Cluverius, as usual, laid a safe and solid foundation, which, with the criticisms and corrections of Holstenius, must be considered as the basis of all subsequent researches. The special works of Kircher (*Vetus Latium*, fol. Amst. 1671) and Volpi (*Vetus Latium Profanum et Sacrum*, Romae, 1704—1748, 10 vols. 4to.) contain very little of real value. After the ancient authorities had been carefully brought together and revised by Cluverius, the great requisite was a careful and systematic examination of the localities and existing remains, and the geographical survey of the country. These objects were to a great extent carried out by Sir W. Gell (whose excellent map of the country around Rome is an invaluable guide to the historical inquirer) and by Professor Nibby. (Sir W. Gell, *Topography of Rome and its Vicinity;* with a large map to accompany it, 2 vols. 8vo. Lond. 1834; 2d edit. 1 vol. Lond. 1846. Nibby, *Analisi Storico-Topografico-Antiquaria della Carta dei Dintorni di Roma*, 3 vols. 8vo. Rome, 1837; 2d edit. Ib. 1849. The former work by the same author, *Viaggio Antiquario nei Contorni di Roma*, 2 vols. 8vo. Rome, 1819, is a very inferior performance.) It is unfortunate that both their works are deficient in accurate scholarship, and still more in the spirit of historical criticism, so absolutely necessary in all inquiries into the early history of Rome. Westphal, in his work (*Die Römische Kampagne in Topographischer u. Antiquarischer Hinsicht dargestellt*, 4to. Berlin, 1829) published before the survey of Sir W. Gell, and consequently with imperfect geographical resources, attached himself especially to tracing out the ancient roads, and his work is in this respect of the greatest importance. The recent work of Bormann (*Alt-Latinische Chorographie und Städte-Geschichte*, 8vo. Halle, 1852) contains a careful review of the historical statements of ancient authors, as well as of the researches of modern inquirers, but is not based upon any new topographical researches. Notwithstanding the labours of Gell and Nibby, much still remains to be done in this respect, and a work that should combine the results of such inquiries with sound scholarship and a judicious spirit of criticism would be a valuable contribution to ancient geography. [E. H. B.]

LATMICUS SINUS (ὁ Λατμικὸς κόλπος), a bay on the western coast of Caria, deriving its name from Mount Latmus, which rises at the head of the gulf. It was formed by the mouth of the river Maeander which flowed into it from the north-east. Its breadth, between Miletus, on the southern headland, and Pyrrha in the north, amounted to 30

stadia, and its whole length, from Miletus to Heracleia, 100 stadia. (Strab. xiv. p. 635.) The bay now exists only as an inland lake, its mouth having been closed up by the deposits brought down by the Maeander, a circumstance which has misled some modern travellers in those parts to confound the lake of *Baffi*, the ancient Latmic gulf, with the lake of Myus. (Leake, *Asia Minor*, p. 239; Chandler, c. 53.) [L. S.]

LATMUS (Λάτμος), a mountain of Caria, rising at the head of the Latmic bay, and stretching along in a north-western direction. (Strab. xiv. p. 635; Apollon. Rhod. iv. 57; Plin. v. 31; Pomp. Mel. i. 17.) It is properly the western offshoot of Mount Albanus or Albacus. This mountain is probably alluded to by Homer (*Il.* ii. 868), when he speaks of the mountain of the Phthirians, in the neighbourhood of Miletus. In Greek mythology, Mount Latmus is a place of some celebrity, being described as the place where Artemis (Luna) kissed the sleeping Endymion. In later times there existed on the mountain a sanctuary of Endymion, and his tomb was shown in a cave. (Apollod. i. 7. § 5; Hygin. *Fab.* 271; Ov. *Trist.* ii. 299; Val. Flacc. iii. 28; Paus. v. 1. § 4; Stat. *Silv.* iii. 4. § 40.) [L. S.]

LATO. [CAMARA.]

LATOBRIGI When the Helvetii determined to leave their country (B. C. 58), they persuaded "the Rauraci, and Tulingi and Latobrigi, who were their neighbours, to adopt the same resolution, and after burning their towns and villages to join their expedition." (Caes. *B. G.* i. 5.) The number of the Tulingi was 36,000; and of the Latobrigi 14,000. (*B. G.* i. 29.) As there is no place for the Tulingi and Latobrigi within the limits of Gallia, we must look east of the Rhine for their country. Walckenaer (*Géog.* &c., vol. i. p. 559) supposes, or rather considers it certain, that the Tulingi were in the district of *Thiengen* and *Stühlingen* in *Baden*, and the Latobrigi about *Donaueschingen*, where the *Briggach* and the *Bregge* join the Danube. This opinion is founded on resemblance of names, and on the fact that these two tribes must have been east of the Rhine. If the Latobrigi were Celtae, the name of the people may denote a position on a river, for the Celtic word "brig" is a ford or the passage of a river. If the Latobrigi were a Germanic people, then the word "brig" ought to have some modern name corresponding to it, and Walckenaer finds this correspondence in the name *Brugge*, a small place on the *Bregge*. [G. L.]

LATO'POLIS or LATO (Λατόπολις, Strab. xvii. pp. 812, 817; πόλις Λάτων, Ptol. iv. 5. § 71; Λάττων, Hierocl. p. 732; *Itin. Antonin.* p. 160), the modern *Esneh*, was a city of Upper Egypt, seated upon the western bank of the Nile, in lat. 25° 30′ N. It derived its name from the fish Lato, the largest of the fifty-two species which inhabit the Nile (Russegger, *Reisen*, vol. i. p. 300), and which appears in sculptures, among the symbols of the goddess Neith, Pallas-Athene, surrounded by the oval shield or ring indicative of royalty or divinity (Wilkinson, *M.* and *C.* vol. v. p. 253). The tutelary deities of Latopolis seem to have been the triad, —Kneph or Chnuphis, Neith or Satè, and Hak, their offspring. The temple was remarkable for the beauty of its site and the magnificence of its architecture. It was built of red sandstone; and its portico consisted of six rows of four columns each, with lotus-leaf capitals, all of which however differ from each other. (Denon, *Voyage*, vol. i. p. 148.) But with the exception of the jamb of a gateway—now converted into a door-sill—of the reign of Thothmes IId. (xviiith dynasty), the remains of Latopolis belong to the Macedonian or Roman eras. Ptolemy Evergetes, the restorer of so many temples in Upper Egypt, was a benefactor to Latopolis, and he is painted upon the walls of its temple followed by a tame lion, and in the act of striking down the chiefs of his enemies. The name of Ptolemy Epiphanes is found also inscribed upon a doorway. Yet, although from their scale these ruins are imposing, their sculptures and hieroglyphics attest the decline of Aegyptian art. The pronaos, which alone exists, resembles in style that of Apollinopolis Magna (*Edfoo*), and was begun not earlier than the reign of Claudius (A. D. 41—54), and completed in that of Vespasian, whose name and titles are carved on the dedicatory inscription over the ent ance. On the ceiling of the pronaos is the larger Latopolitan Zodiac. The name of the emperor Geta, the last that is read in hieroglyphics, although partially erased by his brother and murderer Caracalla (A. D. 212), is still legible on the walls of Latopolis. Before raising their own edifice, the Romans seem to have destroyed even the basements of the earlier Aegyptian temple. There was a smaller temple, dedicated to the same deities, about two miles and a half N. of Latopolis, at a village now called *E'Dayr*. Here, too, is a small Zodiac of the age of Ptolemy Evergetes (B. C. 246—221). This latter building has been destroyed within a few years, as it stood in the way of a new canal. The temple of *Esneh* has been cleared of the soil and rubbish which filled its area when Denon visited it, and now serves for a cotton warehouse. (Lepsius, *Einleitung*, p. 63.)

The modern town of *Esneh* is the emporium of the Abyssinian trade. Its camel-market is much resorted to, and it contains manufactories of cottons, shawls, and pottery. Its population is about 4000. [W. B. D.]

LATOVICI (Λατόβικοι, Ptol. ii. 15. § 2), a tribe in the south-western part of Pannonia, on the river Savus. (Plin. iii. 28.) They appear to have been a Celtic tribe, and a place Praetorium Latovicorum is mentioned in their country by the Antonine Itinerary, on the road from Aemona to Sirmium, perhaps on the site of the modern *Neustädtl*, in Illyria. (Comp. Zeuss, *die Deutschen*, p. 256.) [L.S.]

LATU'RUS SINUS. [MAURETANIA.]

LA'VARA. [LUSITANIA.]

LAVATRAE, a station in Britain, on the road from Londinium to Luguvallum, near the wall of Hadrian, distant, according to one passage in the Antonine Itin., 54 miles, according to another, 59 miles, from Eboracum, and 55 miles from Longuvallum. (*Anton. Itin.* pp. 468, 476.) Perhaps the same as *Bowes*, on the river *Greta*, in the North Riding of Yorkshire. The church of *Bowes* contained in the time of Camden a hewn slab, bearing an inscription dedicatory to the Roman emperor Hadrian, and there used for the communion table. In the neighbourhood of *Bowes*, there are the remains of a Roman camp and of an aqueduct.

LAU'GONA, the modern *Lahn*, a river of Germany, on the east of the Rhine, into which it empties itself at *Lahnstein*, a few miles above *Coblenz*. The ancients praise it for its clear water (Venant. Fort. viii. 7; Geogr. Rav. iv. 24, where it is called *Logna*. [L. S.]

LAVIANESINE or LAVINIANESINE (Λα-

ουιανσηνή, Strab. xii. p. 534; Λαουινιανή, Ptol. v. 7. § 9), the name of one of the four districts into which Cappadocia was divided under the Romans. It was the part extending from the northern slope of Mount Amanus to the Euphrates, on the north of Aravene, and on the east of Muriane. [L. S.]

LAVI'NIUM (Λαουΐνιον; Λαβίνιον, Steph. B.: *Eth.* Λαβινιάτης, Laviniensis: *Pratica*), an ancient city of Latium, situated about 3 miles from the sea-coast, between Laurentum and Ardea, and distant 17 miles from Rome. It was founded, according to the tradition universally adopted by Roman writers, by Aeneas, shortly after his landing in Italy, and called by him after the name of his wife Lavinia, the daughter of the king Latinus. (Liv. i. 1; Dionys. i. 45. 59; Strab. v. p. 229; Varr. *L. L.* v. § 144; Solin. 2. § 14.) The same legendary history represented Ascanius, the son of Aeneas, as transferring the seat of government and rank of the capital city of the Latins from Lavinium to Alba, 30 years after the foundation of the former city. But the attempt to remove at the same time the Penates, or household gods of Lavinium, proved unsuccessful: the tutelary deities returned to their old abode; hence Lavinium continued not only to exist by the side of the new capital, but was always regarded with reverence as a kind of sacred metropolis, a character which it retained even down to a late period of the Roman history. (Liv. i. 8; Dionys. i. 66, 67; Strab. v. p. 229; Vict. *Orig. Gent. Rom.* 17.) It is impossible here to enter into a discussion of the legend of the Trojan settlement in Latium, a question which is briefly examined under the article LATIUM; but it may be observed that there are many reasons for admitting the correctness of the tradition that Lavinium was at one time the metropolis or centre of the Latin state; a conclusion, indeed, to which we are led by the name alone, for there can be little doubt that Latinus and Lavinus are only two forms of the same name, so that Lavinium would be merely the capital or city of the Latins. (Niebuhr, vol. i. p. 201; Donaldson, *Varronianus*, p. 6.) The circumstance that the Penates or tutelary gods of Lavinium continued down to a late period to be regarded as those not only of Rome, but of all Latium, affords a strong corroboration of this view. (Varr. *L. L.* v. § 144.) Whether Lavinium was from the first only the sacred metropolis of the Latin cities, — a kind of common sanctuary or centre of religious worship (as supposed by Schwegler, *Römische Geschichte*, vol. i. p. 319), —or, as represented in the common tradition, was the political capital also, until supplanted by Alba, is a point on which it is difficult to pronounce with certainty; but the circumstance that Lavinium appears in history as a separate political community, and one of the cities composing the Latin League, would seem opposed to the former view. It is certain, however, that it had lost all political supremacy, and that this had passed into the hands of Alba, at a very early period; nor did Lavinium recover any political importance after the fall of Alba: throughout the historical period it plays a very subordinate part. The first notice we find of it in the Roman history is in the legends concerning Tatius, who is represented as being murdered at Lavinium on occasion of a solemn sacrifice, in revenge for some depredations committed by his followers on the Lavinian territory. (Liv. i. 14; Dionys. ii. 51, 52; Plut. *Rom.* 23; Strab. v. p. 230.) It is remarkable that Livy in this passage represents the people injured as the *Laurentes*, though the injury was avenged *at Lavinium*,—a strong proof of the intimate relations which were conceived as existing between the two cities. The treaty between Rome and Lavinium was said to have been renewed at the same time (Liv. *l. c.*), and there is no doubt that both the Roman annals and traditions represented Lavinium, as well as Laurentum, as almost uniformly on friendly terms with Rome. It was, however, an independent city, as is proved by the statement that Collatinus and his family, when banished from Rome, retired into exile at Lavinium. (Liv. ii. 2.) The only interruption of these friendly relations took place, according to Dionysius, a few years after this, when he reckons the Lavinians among the Latin cities which entered into a league against Rome before the battle of Regillus. (Dionys. v. 61.) There is, however, good reason to believe that the names there enumerated are in reality only those of the cities that formed the permanent Latin League, and who concluded the celebrated treaty with Sp. Cassius in B. C. 493. (Niebuhr, vol. ii. pp. 23, 24.)

Lavinium is next mentioned during the wars of Coriolanus, who is said to have besieged and, according to Livy, reduced the city (Liv. ii. 39; Dionys. viii. 21); but, from this time, we hear no more of it till the great Latin War in B.C. 340. On that occasion, according to our present text of Livy (viii. 11), the citizens of Lavinium are represented as sending auxiliaries to the forces of the League, who, however, arrived too late to be of service. But no mention occurs of Lavinium in the following campaigns, or in the general settlement of the Latin state at the end of the war; hence it appears highly probable that in the former passage *Lanuvium*, and not Lavinium, is the city really meant; the confusion between these names in the MSS. being of perpetual occurrence. [LANUVIUM.] It is much more probable that the Lavinians were on this occasion also comprised with the Laurentes, who, as we are expressly told, took no part in the war, and in consequence continued to maintain their former friendly relations with Rome without interruption. (L. vi. *l. c.*) From this time no historical mention occurs of Lavinium till after the fall of the Roman Republic; but it appears to have fallen into decay in common with most of the places near the coast of Latium; and Strabo speaks of it as presenting the mere vestiges of a city, but still retaining its sacred rites, which were believed to have been transmitted from the days of Aeneas. (Strab. v. p. 232.) Dionysius also tells us that the memory of the three animals — the eagle, the wolf, and the fox — which were connected by a well-known legend with the foundation of Lavinium, was preserved by the figures of them still extant in his time in the forum of that town; while, according to Varro, not only was there a similar bronze figure of the celebrated sow with her thirty young ones, but part of the flesh of the sow herself was still preserved in pickle, and shown by the priests. (Dionys. i. 57, 59; Varr. *R. R.* ii. 4.) The name of Lavinium is omitted by Pliny, where we should have expected to find it, between Laurentum and Ardea, but he enumerates among the existing communities of Latium the "Ilionenses Lavini," — an appellation evidently assumed by the citizens in commemoration of their supposed Trojan descent. (Plin. iii. 5. s. 9.)

Shortly after the time of Pliny, and probably in the reign of Trajan, Lavinium seems to have re-

ceived a fresh colony, which for a short time raised it again to a degree of prosperity. On this occasion it would appear that the Laurentines and Lavinians were united into one community, which assumed the name of LAURO-LAVINIUM, and the citizens that of LAURENTES LAVINATES, names which from henceforth occur frequently in inscriptions. As a tribute to its ancient sacred character, though a fresh apportionment of lands necessarily attended the establishment of this colony, the territory still retained its old limits and regulations (*lege et consecratione veteri manet*, *Lib. Colon.* p. 234.) This union of the two communities into one has given rise to much confusion and misconception. Nor can we trace exactly the mode in which it was effected; but it would appear that Lavinium became the chief *town*, while the "populus" continued to be often called that of the Laurentes, though more correctly designated as that of the Laurentes Lavinates. The effect of this confusion is apparent in the commentary of Servius on the Aeneid, who evidently confounded the Laurentum of Virgil with the Lauro-Lavinium of his own day, and thence, strangely enough, identifies it with the Lavinium founded as the same city. (Serv. *ad Aen.* i. 2.) But, even at a much earlier period, it would seem as if the "ager Laurens," or Laurentine territory, was regarded as comprising Lavinium; and it is certainly described as extending to the river Numicius, which was situated between Lavinium and Ardea. [NUMICIUS.] Inscriptions discovered at *Pratica* enable us to trace the existence of this new colony, or revived Lavinium, down to the end of the 4th century; and its name is found also in the Itineraries and the Tabula. (*Itin. Ant.* p. 301; *Tab. Peut.*; Orell. *Inscr.* 1063, 2179, 3218, 3921.)

We learn also from a letter of Symmachus that it was still subsisting as a municipal town as late as A. D. 391, and still retained its ancient religious character. Macrobius also informs us that in his time it was still customary for the Roman consuls and praetors, when entering on their office, to repair to Lavinium to offer certain sacrifices there to Vesta and the Penates,—a custom which appears to have been transmitted without interruption from a very early period. (Macrob. *Sat.* ii. 4. § 11; Val. Max. i. 6. § 7; Symmach. *Ep.* i. 65.) The final decay of Lavinium was probably produced by the fall of paganism, and the consequent extinction of that religious reverence which had apparently been the principal means of its preservation for a long while before.

The position of Lavinium at *Pratica* may be considered as clearly established, by the discovery there of the numerous inscriptions already referred to relating to Lauro-Lavinium: in other respects also the site of *Pratica* agrees well with the data for that of Lavinium, which is placed by Dionysius 24 stadia, or 3 miles, from the coast. (Dionys. i. 56.) The Itineraries call it 16 miles from Rome; but this statement is below the truth, the real distance being little, if at all, less than 18 miles. The most direct approach to it from Rome is by the Via Ardeatina, from whence a side branch diverges soon after passing the *Solfatara*,—a spot supposed to be the site of the celebrated grove and oracle of Faunus, referred to by Virgil [ARDEA], which is about 4 miles from *Pratica*. The site of this latter village, which still possesses a baronial castle of the middle ages, resembles those of most of the early Latin towns: it is a nearly isolated hill, with a level summit of no great extent, bounded by wooded ravines, with steep banks of tufo rock. These banks have probably been on all sides more or less scarped or cut away artificially, and some slight remains of the ancient walls may be still traced in one or two places. Besides the inscriptions already noticed, some fragments of marble columns remain from the Imperial period, while broken pottery and terra cottas of a rude workmanship found scattered in the soil are the only relics of an earlier age. (Nibby, *Dintorni*, vol. ii. pp. 206—237.) [E. H. B.]

LAVISCO or LABISCO, in Gallia Narbonensis, appears on a route from Mediolanum (*Milan*) through Darantasia (*Moutiers en Tarentaise*) to Vienna (*Vienne*) on the Rhone. Lavisco is between Lemincum (*Lemens*, or *Chambéry au Mont Leminc*) and Augustum (*Aoste* or *Aouste*), and 14 M. P. from each. D'Anville supposes that Lavisco was at the ford of the little river *Laisse*, near its source; but the distance between Lemincum and Augustum, 28 M. P. is too much, and accordingly he would alter the figures in the two parts of this distance on each side of Lavisco, from xiiii. to viiii. [G. L.]

LAUMELLUM (Λαύμελλον, Ptol. iii. 1. § 36: *Lomello*), a town of Gallia Transpadana, not mentioned by Pliny, but placed by Ptolemy, together with Vercellae, in the territory of the Libici. The Itin. Ant. (pp. 282, 347) places it on the road from Ticinum to Vercellae, at 22 M. P. from the former and 26 from the latter city: these distances agree well with the position of *Lomello*, a small town on the right bank of the *Agogna*, about 10 miles from its confluence with the *Po*. According to the same Itinerary (p. 340) another road led from thence by Rigomagus and Quadratae to Augustae Taurinorum, and in accordance with this Ammianus Marcellinus (xv. 8. § 18) mentions Laumellum as on the direct road from Ticinum to Taurini. It seems not to have enjoyed municipal rank in the time of Pliny, but apparently became a place of more consideration in later days, and under the Lombard rule was a town of importance, as it continued during the middle ages; so that, though now but a poor decayed place, it still gives to the surrounding district the name of *Lumellina*. [E. H. B.]

LAUREA'TA, a place on the coast of Dalmatia, which was taken by the traitor Ilaufus, for Totila and the Goths, in A. D. 548. (Procop. *B. G.* iii. 35; Le Beau, *Bas Empire*, vol. ix. p. 182.) [E. B. J.]

LAURENTUM (Λαύρεντον, Strab. et al.; Λαυρεντόν, Dion. Hal.: *Eth.* Λαυρεντῖνος, Laurentinus: *Torre di Paternò*), an ancient city of Latium, situated near the sea-coast between Ostia and Lavinium, about 16 miles from Rome. It was represented by the legendary history universally adopted by Roman writers as the ancient capital of Latium, and the residence of king Latinus, at the time when Aeneas and the Trojan colony landed in that country. All writers also concur in representing the latter as first landing on the shores of the Laurentine territory. (Liv. i. 1; Dionys. i. 45, 53; Strab. v. p. 229; Appian. *Rom.* i. 1; Vict. *Orig. Gent. Rom.* 13; Virg. *Aen.* vii. 45, &c.) But the same legendary history related that after the death of Latinus, the seat of government was transferred first to Lavinium, and subsequently to Alba; hence we cannot wonder that, when Laurentum appears in historical times, it holds but a very subordinate place, and appears to have fallen at a very early period into a state of comparative insignificance. The historical notices of the city are indeed extremely few and scanty; the

most important is the occurrence of its name (or that of the Laurentini at least), together with those of Ardea, Antium, Circeii, and Tarracina, among the allies or dependants of Rome, in the celebrated treaty of the Romans with Carthage in B. C. 509. (Pol. iii. 22.) From this document we may infer that Laurentum was then still a place of some consideration as a maritime town, though the proximity of the Roman port and colony of Ostia must have tended much to its disadvantage. Dionysius tells us that some of the Tarquins had retired to Laurentum on their expulsion from Rome: and he subsequently notices the Laurentines among the cities which composed the Latin League in B. C. 496. (Dionys. v. 54, 61.) We learn, also, from an incidental notice in Livy, that they belonged to that confederacy, and retained, in consequence, down to a late period the right of participating in the sacrifices on the Alban Mount. (Liv. xxxvii. 3.) It is clear, therefore, that though no longer a powerful or important city, Laurentum continued to retain its independent position down to the great Latin War in B. C. 340. On that occasion the Laurentines are expressly mentioned as having been the only people who took no share in the war; and, in consequence, the treaty with them which previously existed was renewed without alteration. (Liv. viii. 11.) "From thenceforth" (adds Livy) "it is renewed always from year to year on the 10th day of the Feriae Latinae." Thus, the poor and decayed city of Laurentum continued down to the Augustan age to retain the nominal position of an independent ally of the imperial Rome.

No further notice of it occurs in history during the Roman Republic. Lucan appears to reckon it as one of the places that had fallen into decay in consequence of the Civil Wars (vii. 394), but it is probable that it had long before that dwindled into a very small place. The existence of a *town* of the name ("oppidum Laurentum") is, however, attested by Mela, Strabo, and Pliny (Mel. ii. 4. § 9; Strab. v. p. 232; Plin. iii. 5. s. 9); and the sea-coast in its vicinity was adorned with numerous villas, among which that of the younger Pliny was conspicuous. (Plin. *Ep.* ii. 17.) It is remarkable that that author, in describing the situation of his villa and its neighbourhood, makes no allusion to Laurentum itself, though he mentions the neighbouring colony of Ostia, and a village or "vicus" immediately adjoining his villa: this last may probably be the same which we find called in an inscription "Vicus Augustus Laurentium." (Gruter, *Inscr.* p. 398, No. 7.) Hence, it seems probable that Laurentum itself had fallen into a state of great decay; and this must have been the cause that, shortly after, the two communities of Laurentum and Lavinium were united into one municipal body, which assumed the appellation of Lauro-Lavinium, and the inhabitants that of Lauro-Lavinates, or Laurentes Lavinates. Sometimes, however, the united "populus" calls itself in inscriptions simply "Senatus populusque Laurens," and in one case we find mention of a "Colonia Augusta Laurentium." (Orell. *Inscr.* 124; Gruter, p. 484, No. 3.) Nevertheless it is at least very doubtful whether there was any fresh colony established on the site of the ancient Laurentum: the only one mentioned in the Liber Coloniarum is that of Lauro-Lavinium, which was undoubtedly fixed at Lavinium (*Pratica*). [LAVINIUM.] The existence of a place bearing the name of Laurentum, though probably a mere village, down to the latter ages of the Empire, is, however, clearly proved by the Itineraries and Tabula (*Itin. Ant.* p. 301; *Tab. Peut.*); and it appears from ecclesiastical documents that the locality still retained its ancient name as late as the 8th century (Anastas. *Vit. Pontif.* ap. Nibby, vol. ii. p. 201). From that time all trace of it disappears, and the site seems to have been entirely forgotten.

Laurentum seems to have, from an early period, given name to an extensive territory, extending from the mouth of the Tiber nearly, if not quite, to Ardea, and forming a part of the broad littoral tract of Latium, which is distinguished from the rest of that country by very marked natural characteristics. [LATIUM.] Hence, we find the Laurentine territory much more frequently referred to than the city itself; and the place where Aeneas is represented as landing is uniformly described as "in agro Laurenti;" though we know from Virgil that he conceived the Trojans as arriving and first establishing themselves at the mouth of the Tiber. But it is clear that, previous to the foundation of Ostia, the territory of Laurentum was considered to extend to that river. (Serv. *ad Aen.* vii. 661, xi. 316.) The name of "ager Laurens" seems to have continued in common use to be applied, even under the Roman Empire, to the whole district extending as far as the river Numicius, so as to include Lavinium as well as Laurentum. It was, like the rest of this part of Latium near the sea-coast, a sandy tract of no natural fertility, whence Aeneas is represented as complaining that he had arrived "in agrum macerrimum, littorosissimumque." (Fab. Max. *ap. Serv. ad Aen.* i. 3.) In the immediate neighbourhood of Laurentum were considerable marshes, while the tract a little further inland was covered with wood, forming an extensive forest, known as the Silva Laurentina. (Jul. Obseq. 24.) The existence of this at the time of the landing of Aeneas is alluded to by Virgil (*Aen.* xi. 133, &c.). Under the Roman Empire it was a favourite haunt of wild-boars, which grew to a large size, but were considered by epicures to be of inferior flavour on account of the marshy character of the ground in which they fed. (Virg. *Aen.* x. 709; Hor. *Sat.* ii. 4. 42; Martial, ix. 495.) Varro also tells us that the orator Hortensius had a farm or villa in the Laurentine district, with a park stocked with wild-boars, deer, and other game. (Varr. *R. R.* iii. 13.) The existence of extensive marshes near Laurentum is noticed also by Virgil (*Aen.* x. 107) as well as by Martial (x. 37. 5), and it is evident that even in ancient times they rendered this tract of country unhealthy, though it could not have suffered from malaria to the same extent as in modern times. The villas which, according to Pliny, lined the shore, were built close to the sea, and were probably frequented only in winter. At an earlier period, we are told that Scipio and Laelius used to repair to the seaside on the Laurentine coast, where they amused themselves by gathering shells and pebbles. (Cic. *de Or.* ii. 6; Val. Max. viii. 8. § 4.) On the other hand, the bay-trees (lauri) with which the Silva Laurentina was said to abound were thought to have a beneficial effect on the health, and on this account the emperor Commodus was advised to retire to a villa near Laurentum during a pestilence at Rome. (Herodian. i. 12.) The name of Laurentum itself was generally considered to be derived from the number of these trees, though Virgil would derive it from a particular and celebrated tree of the kind. (Vict

Orig. G. Rom.. 10; Varr. *L. L.* v. 152; Virg. *Aen.* vii. 59.)

The precise site of Laurentum has been a subject of much doubt; though it may be placed approximately without question between Ostia and *Pratica*, the latter being clearly established as the site of Lavinium. It has been generally fixed at *Torre di Paternò*, and Gell asserts positively that there is no other position within the required limits "where either ruins or the traces of ruins exist, or where they can be supposed to have existed." The Itinerary gives the distance of Laurentum from Rome at 16 M. P., which is somewhat less than the truth, if we place it at *Torre di Paternò*, the latter being rather more than 17 M. P. from Rome by the Via Laurentina; but the same remark applies to Lavinium also, which is called in the Itinerary 16 miles from Rome, though it is full 18 miles in real distance. On the other hand, the distance of 6 miles given in the Table between Lavinium and Laurentum coincides well with the interval between *Pratica* and *Torre di Paternò*. Nibby, who places Laurentum at *Capo Cotto*, considerably nearer to *Pratica*, admits that there are no ruins on the site. Those at *Torre di Paternò* are wholly of Roman and imperial times, and may perhaps indicate nothing more than the site of a villa, though the traces of an aqueduct leading to it prove that it must have been a place of some importance. There can indeed be no doubt that the spot was a part of the dependencies of Laurentum under the Roman Empire; though it may still be questioned whether it marks the actual site of the ancient Latin city. (Gell, *Top. of Rome*, pp. 294—298; Nibby, *Dintorni di Roma*, vol. ii. pp. 187—205; Abeken, *Mittelitalien*, p. 62; Bormann, *Alt Latin. Corographie*, pp. 94—97.)

It is hardly necessary to notice the attempts which have been made to determine the site of Pliny's Laurentine villa, of which he has left us a detailed description, familiar to all scholars (Plin. *Ep.* ii. 17). As it appears from his own account that it was only one of a series of villas which adorned this part of the coast, and many of them probably of equal, if not greater, pretensions, it is evidently idle to give the name to a mass of brick ruins which there is nothing to identify. In their zeal to do this, antiquarians have overlooked the circumstance that his villa was evidently *close* to the sea, which at once excludes almost all the sites that have been suggested for it.

The road which led from Rome direct to Laurentum retained, down to a late period, the name of VIA LAURENTINA. (Ovid, *Fast.* ii. 679; Val. Max. viii. 5. § 6.) It was only a branch of the Via Ostiensis, from which it diverged about 3 miles from the gates of Rome, and proceeded nearly in a direct line towards *Torre di Paternò*. At about 10 miles from Rome it crossed a small brook or stream by a bridge, which appears to have been called the Pons ad Decimum, and subsequently Pons Decimus: hence the name of *Decimo* now given to a *casale* or farm a mile further on; though this was situated at the 11th mile from Rome, as is proved by the discovery on the spot of the Roman milestone, as well as by the measurement on the map. Remains of the ancient pavement mark the course of the Via Laurentina both before and after passing this bridge. (Nibby, *Dintorni*, vol. i. p. 539, vol. iii. p. 621.)

Roman authors generally agree in stating that the place where the Trojans first landed and established their camp was still called Troja (Liv. i. 1; Cato, *ap. Serv. ad Aen.* i. 5; Fest. *v. Troia*, p. 367), and that it was in the Laurentine territory; but Virgil is the only writer from whom we learn that it was on the banks of the Tiber, near its mouth (*Aen.* vii. 30, ix. 469, 790, &c.). Hence it must have been in the part of the "ager Laurens" which was assigned to Ostia after the foundation of the colony; and Servius is therefore correct in placing the camp of the Trojans "circa Ostiam." (Serv. *ad Aen.* vii. 31.) The name, however, would appear to have been the only thing that marked the spot. [E. H. B.]

LAURETANUS PORTUS, a seaport on the coast of Etruria, mentioned only by Livy (xxx. 39). From this passage it appears to have been situated between Cosa and Populonium; but its precise position is unknown. [E. H. B.]

LAURI, a place in North Gallia, on a road from Lugdunum Batavorum (*Leiden*) to Noviomagus (*Nymeguen*), and between Fletio (*Vleuten*) and Niger Pullus. It is 5 M. P. from Niger Pullus to Lauri, and 12 M. P. from Lauri to Fletio. No more is known of the place. [G. L.]

LAURIACUM or LAUREACUM, a town in the north of Noricum, at the point where the river Anisius empties itself into the Danube. (Amm. Marc. xxxi. 10; *It. Ant.* pp. 231, 235, 241, 277; Gruter, *Inscr.* p. clxiv. 3; *Not. Imp.*: in the *Tab. Peut.* its name is misspelt Blaboriciacum.) In a doubtful inscription in Gruter (p. 484. 3) it is called a Roman colony, with the surname Augusta: Laureacum was the largest town of Noricum Ripense, and was connected by high roads with Sirmium and Taurunum in Pannonia. According to the Antonine Itinerary, it was the head-quarters of the third legion, for which the Notitia, perhaps more correctly, mentions the second. It was, moreover, one of the chief stations of the Danubian fleet, and the residence of its praefect, and contained considerable manufactures of arms, and especially of shields. As the town is not mentioned by any earlier writers, it was probably built, or at least extended, in the reign of M. Aurelius. It was one of the earliest seats of Christianity in those parts, a bishop of Lauriacum being mentioned as early as the middle of the third century. In the fifth century the place was still so well fortified that the people of the surrounding country took refuge in it, and protected themselves against the attacks of the Alemannians and Thuringians; but in the 6th century it was destroyed by the Avari, and although it was restored as a frontier fortress, it afterwards fell into decay. Its name is still preserved in the modern village of *Lorch*, and the celebrated convent of the same name, around which numerous remains of the Roman town may be seen extending as far as *Ens*, which is about a mile distant. (Comp. Muchar, *Noric.* i. p. 362, 268, 163, ii. p. 75.) [L.S.]

LAURIUM (Λαύρειον, Herod. vii. 144; Λαύριον, Thuc. ii. 55: *Adj.* Λαυριωτικός; hence αἱ γλαῦκες Λαυριωτικαί, Aristoph. *Av.* 1106, silver coins, with the Athenian figure of an owl), a range of hills in the south of Attica, celebrated for their silver mines. These hills are not high, and are covered for the most part with trees and brushwood. The name is probably derived from the shafts which were sunk for obtaining the ore, since λαύρα in Greek signifies a street or lane, and λαυρεῖον would therefore mean a place formed of such lanes,—i. e., a mine of shafts, cut as it were into streets, like a catacomb. (Wordsworth, *Athens and Attica*, p. 209.) The mining district extended a little way north of

Sunium to Thoricus, on the eastern coast. Its present condition is thus described by Mr. Dodwell:—"One hour from *Thorikos* brought us to one of the ancient shafts of the silver mines; and a few hundred yards further we came to several others, which are of a square form, and cut in the rock. We observed only one round shaft, which was larger than the others, and of considerable depth, as we conjectured, from the time that the stones, which were thrown in, took to reach the bottom. Near this are the foundations of a large round tower, and several remains of ancient walls, of regular construction. The traces are so extensive, that they seem to indicate, not only the buildings attached to the mines, but the town of Laurium itself, which was probably strongly fortified, and inhabited principally by the people belonging to the mines." Some modern writers doubt whether there was a town of the name of Laurium; but the grammarians (Suidas and Photius) who call Laurium a place (τόπος) in Attica appear to have meant something more than a mountain; and Dodwell is probably correct in regarding the ruins which he describes as those of the town of Laurium. Near these ruins Dodwell observed several large heaps of scoria scattered about. Dr. Wordsworth, in passing along the shore from Sunium to Thoricus, observes:—"The ground which we tread is strewed with rusty heaps of scoria from the silver ore which once enriched the soil. On our left is a hill, called *Scoré*, so named from these heaps of scoria, with which it is covered. Here the shafts which have been sunk for working the ore are visible." The ores of this district have been ascertained to contain lead as well as silver (Walpole's *Turkey*, p. 426). This confirms the emendations of a passage in the Aristotelian Oeconomics proposed by Böckh and Wordsworth, where, instead of Τυρίων in Πυθοκλῆς Ἀθηναῖος Ἀθηναίοις συνεβούλευσε τὸν μόλυβδον τὸν ἐκ τῶν Τυρίων παραλαμβάνειν, Böckh suggests *Λαυρίων*, and Wordsworth *ἀργυρίων*, which ought rather to be *ἀργυρείων*, as Mr. Lewis observes.

The name of Laurium is preserved in the corrupt form of *Legrana* or *Alegraná*, which is the name of a metókhi of the monastery of *Mendéli*.

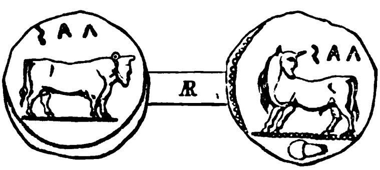
The mines of Laurium, according to Xenophon (*de Vectig.* iv. 2), were worked in remote antiquity; and there can be no doubt that the possession of a large supply of silver was one of the main causes of the early prosperity of Athens. They are alluded to by Aeschylus (*Pers.* 235) in the line—

ἀργύρου πηγή τις αὐτοῖς ἐστι, θησαυρὸς χθόνος.

They were the property of the state, which sold or let for a long term of years, to individuals or companies, particular districts, partly in consideration of a sum or fine paid down, partly of a reserved rent equal to one twenty-fourth of the gross produce. Shortly before the Persian wars there was a large sum in the Athenian treasury, arising out of the Laurian mines, from which a distribution of ten drachmae a head was going to be made among the Athenian citizens, when Themistocles persuaded them to apply the money to the increase of their fleet. (Herod. vii. 144; Plut. *Them.* 4.) Böckh supposes that the distribution of ten drachmae a head, which Themistocles persuaded the Athenians to forego, was made annually, from which he proceeds to calculate the total produce of the mines. But it has been justly observed by Mr. Grote, that we are not authorised to conclude from the passage in Herodotus that *all* the money received from the mines was about to be distributed; nor moreover is there any proof that there was a regular annual distribution. In addition to which the large sum lying in the treasury was probably derived from the original purchase money paid down, and not from the reserved annual rent.

Even in the time of Xenophon (*Mem.* iii. 6. § 12) the mines yielded much less than at an early period; and in the age of Philip, there were loud complaints of unsuccessful speculations in mining. In the first century of the Christian era the mines were exhausted, and the old scoriae were smelted a second time. (Strab. ix. p. 399.) In the following century Laurium is mentioned by Pausanias (i. 1), who adds that it had once been the seat of the Athenian silver mines. (Dodwell, *Tour through Greece*, vol. i. p. 537, seq.; Wordsworth, *Athens and Attica*, p. 208, seq.; Walpole's *Turkey*, p. 425, seq.; Fiedler, *Reise durch Griechenland*, vol. i. p. 36, seq.; Leake, *Demi of Attica*, p. 65; Böckh, *Dissertation on the Silver Mines of Laurion*, appended to the English translation of his *Public Economy of Athens;* Grote's *Greece*, vol. v. p. 71, seq.)

LAU'RIUM, a village in Etruria, more correctly written Lorium. [LORIUM.]



LAURON (Λαύρων: prob. *Laury*, W. of *Xucar*, in *Valencia*), a town of Hispania Tarraconensis, near Sucro, and not far from the sea. Though apparently an insignificant place, it is invested with great interest in history, both for the siege it endured in the Sertorian War, and as the scene of the death of Cn. Pompeius the Younger, after his flight from the defeat of Munda. (Liv. xxxiv. 17; Appian, *B. C.* i. 109; Plut. *Sert.* 18, *Pomp.* 18; Flor. iii. 22, iv. 2, comp. *Bell. Hisp.* 37; Oros. v. 23; Ukert, vol. ii. pt. 1. p. 404.) [P. S.]

LAÜS (Λᾶος: *Eth.* Λαΐνος: near *Scalea*), a city on the W. coast of Lucania, at the mouth of the river of the same name, which formed the boundary between Lucania and Bruttium. (Strab. vi. pp. 253, 254.) It was a Greek city, and a colony of Sybaris; but the date of its foundation is unknown, and we have very little information as to its history. Herodotus tells us that, after the destruction of Sybaris in B.C. 510, the inhabitants who survived the catastrophe took refuge in Laüs and Scidrus (Herod. vi. 20); but he does not say, as has been supposed, that these cities were then founded by the Sybarites: it is far more probable that they had been settled long before, during the greatness of Sybaris, when Posidonia also was planted by that city on the coast of the Tyrrhenian sea. The only other mention of Laüs in history is on occasion of a great defeat sustained there by the allied forces of the Greek cities in southern Italy, who had apparently united their arms in order to check the progress of the Lucanians, who were at this period rapidly extending their power towards the south. The Greeks were defeated with great slaughter, and it is probable that Laüs itself fell into the hands of the barbarians. (Strab. vi. p. 253.) From this time we hear no more of the city; and though Strabo speaks of it as still in existence in his time, it seems to have disappeared before the days of Pliny. The latter author, however (as well as Ptolemy), notices the river Laüs, which Pliny concurs with Strabo in fixing as the boundary between Lucania and Bruttium. (Strab. *l. c.*; Plin. iii. 5. s. 10; Ptol. iii. 1. § 9; Steph. B. *s. v.*)

The river Laüs still retains its ancient name as, the *Lao*, or *Laino:* it is a considerable stream, falling into the *Gulf of Policastro*. Near its sources

about 10 miles from the sea, is the town of *Laino*, supposed by Cluverius to represent the ancient Laüs; but the latter would appear, from Strabo's description, to have been nearer the sea. Romanelli would place it at *Scalea*, a small town with a good port, about three miles N. of the mouth of the river; but it is more probable that the ancient city is to be looked for between this and the river *Lao*. (Cluver. *Ital.* p. 1262; Romanelli, vol. i. p. 383.) According to Strabo there was, near the river and city, a temple or Heroum of a hero named Dracon, close to which was the actual scene of the great battle between the Greeks and Lucanians. (Strab. *l. c.*)

Strabo speaks of a gulf of Laüs, by which he can hardly mean any other than the extensive bay now called the *Gulf of Policastro*, which may be considered as extending from the promontory of Pynus (*Capo degli Infreschi*) to near *Cirella*. There exist coins of Laüs, of ancient style, with the inscription ΛΑΙΝΟΝ: they were struck after the destruction of Sybaris, which was probably the most flourishing time in the history of Laüs. [E. H. B.]

COIN OF LAÜS.

LAUS POMPEIA, sometimes also called simply LAUS (*Eth.* Laudensis: *Lodi Vecchio*), a city of Gallia Transpadana, situated 16 miles to the SE. of *Milan*, on the highroad from that city to Placentia. (*Itin. Ant.* pp. 98, 127.) According to Pliny it was an ancient Gaulish city founded by the Boians soon after they crossed the Alps. (Plin. iii. 17. s. 21.) It afterwards became a Roman municipal town, and probably assumed the epithet of Pompeia in compliment to Pompeius Strabo, who conferred the rights of Latin citizens upon the municipalities of Transpadane Gaul; but we find no special mention of the fact. Nor does any historical notice of Laus occur under the Roman Empire: though it seems to have been at that period a considerable town, and is termed in the Itineraries "Laude civitas," and by P. Diaconus "Laudensis civitas." (*Itin. Ant.* p. 98; *Itin. Hier.* p. 617; P. Diac. v. 2.) In the middle ages *Lodi* became an important city, and an independent republic; but was taken and destroyed in A. D. 1112 by the Milanese, and in 1158 the emperor Frederic Barbarossa having undertaken to restore it, transferred the new city to the site of the modern *Lodi*, on the right bank of the *Adda*. The ancient site is still occupied by a large village called *Lodi Vecchio*, about 5 miles due W. of the modern city. It is correctly placed by the Itineraries 16 M. P. from Mediolanum, and 24 from Placentia. (*Itin. Ant.* p. 98.) [E. H. B.]

LAUSO'NIUS LACUS, in the country of the Helvetii. The Antonine Itin. has a road from Mediolanum (*Milan*) through Geneva to Argentoratum (*Strassburg*). Sixteen Roman miles from Geneva, on the road to *Strassburg*, the Itin. has Equestris, which is Colonia Equestris or Noviodunum (*Nyon*); and the next place is Lacus Lausonius, 20 Roman miles from Equestris. To the next station, Urba (Orbe), is 18 Roman miles. In the Table the name is "Lacum Losonne," and the distances from Geneva to Colonia Equestris and Lacum Losonne are respectively 18 M. P., or 36 together. The Lacus Lausonius is supposed to be *Lausanne*, on the *Lake of Geneva*; or rather a place or district, as D'Anville calls it, named *Vidi*. The distance from Geneva to *Nyon*, along the lake, is about 15 English miles; and from *Nyon* to *Lausanne*, about 22 or 23 miles. The distance from Geneva to *Nyon* is nearly exact; but the 20 miles from Equestris to the Lacus Lausonius is not enough. If *Vidi*, which is west of *Lausanne*, is assumed to be the place, the measures will agree better. D'Anville cites M. Bochat as authority for an inscription, with the name Lousonnenses, having been dug up at *Vidi*, in 1739; and he adds that there are remains there. (Comp. Ukert's note, *Gallien*, p. 491.) [G. L.]

LAU'TULAE or AD LAU'TULAS (*αἱ Λαύτολαι*, Diod.), is the name given by Livy to the pass between Tarracina and Fundi, where the road winds round the foot of the mountains, between them and the sea, so as to form a narrow pass, easily defensible against a hostile force. This spot figures on two occasions in Roman history. In B. C. 342 it was here that the mutiny of the Roman army under C. Marcius Rutilus first broke out; one of the discontented cohorts having seized and occupied the pass at Lautulae, and thus formed a nucleus around which the rest of the malcontents quickly assembled, until they thought themselves strong enough to march upon Rome. (Liv. vii. 39.) At a later period, in B. C. 315, it was at Lautulae that a great battle was fought between the Romans, under the dictator Q. Fabius, and the Samnites. Livy represents this as a drawn battle, with no decisive results; but he himself admits that some annalists related it as a defeat on the part of the Romans, in which the master of the horse, Q. Aulius, was slain (ix. 23). Diodorus has evidently followed the annalists thus referred to (xix. 72), and the incidental remark of Livy himself shortly after, that it caused great agitation throughout Campania, and led to the revolt of the neighbouring Ausonian cities, would seem to prove that the reverse must really have been much more serious than he has chosen to represent it. (Liv. ix. 25; Niebuhr, vol. iii. pp. 228—231.) The locality is always designated by Livy as "ad Lautulas:" it is probable that this was the name of the pass, but whether there was a village or other place called Lautulae, we are unable to tell. The name was probably derived from the existence of warm springs upon the spot. (Niebuhr, *l. c.*, note 399.) It is evidently the same pass which was occupied by Minucius in the Second Punic War, in order to guard the approach to Latium from Campania (Liv. xxii. 15), though its name is not there mentioned. The spot is now called *Passo di Portella*, and is guarded by a tower with a gate, forming the barrier between the Roman and Neapolitan territories. (Eustace, vol. ii. p. 309.) [E. H. B.]

LAXTA. [CELTIBERIA.]

LAZI (*Λάζοι*, Arrian, *Peripl.* p. 11; Plin. vi. 4; *Λαζαι*, Ptol. v. 10. § 5), one among the many tribes which composed the indigenous population which clustered round the great range of the Caucasus. This people, whose original seats were, according to Procopius (*B. G.* iv. 2), on the N. side of the river Phasis, gave their name, in later times, to the country which was known to the Greeks and Romans as Colchis, but which henceforth was called "Regio Lazica." They are frequently mentioned in the

Byzantine writers; the first time that they appear in history was A. D. 456, during the reign of the emperor Marcian, who was successful against their king Gobazes. (Prisc. *Exc. de Leg. Rom.* p. 71; comp. Le Beau, *Bas Empire*, vol. vi. p. 385.) The Lazic war, the contest of Justinian and Chosroes on the banks of the Phasis, has been minutely described by contemporary historians. (Procop. *B. P.* ii. 15, 17, 28, 29, 30, *B. G.* iv. 7—16, *Agath.* ii. iii. iv. pp. 55—132, 141; Menand. Protect. *Exc. de Leg. Gent.* pp. 99, 101, 133—147; comp. Gibbon, c. xlii.; Le Beau, vol. ix. pp. 44, 133, 209—220, 312—353.) In the Atlas (pt. i. pl. xiv.) to Dubois de Montpereux (*Voyage Autour du Caucase*, comp. vol. ii. pp. 73—132) will be found a map of the theatre of this war. In A. D. 520, or 512 according to the era of Theophanes, the Lazi were converted to Christianity (Gibbon, *l. c.*; Neander, *Gesch. der Christl. Religion*, vol. iii. p. 236), and, under the name of *Lazians*, are now spread through the country near the SE. angle of the Euxine from *Guriel* to the neighbourhood of *Trebizond*. Their language, belonging to the Indo-Germanic family, appears to contain remains of the ancient Colchian idiom. (*Cosmos*, vol. ii. note 201, trans.; Prichard, *Physical Hist. of Mankind*, vol. iv. p. 263.) [E. B. J.]

LEA, an island in the Aegaean sea, mentioned only by Pliny (iv. 12. s. 23) in conjunction with Ascania and Anaphe.

LEANDIS (Λεανδίς), a town in the eastern part of the strategy of Cataonia, in Armenia Minor, 18 miles to the south of Cocusus, in a pass of Mount Taurus, on the road to Anazarbus. (Ptol. v. 7. § 7.) This town is perhaps the same as the Laranda of the Antonine Itinerary (p. 211) and of Hierocles (p. 675), which must not be confounded with the Laranda of Lycaonia or Isauria. [L. S.]

LEANI'TAE. [LEANITES SINUS.]

LEANITES SINUS (Λεανίτης κόλπος), a bay on the western side of the Persian Gulf, so named from the Arab tribe LEANITAE (Λεανῖται, Ptol. vi. 7. § 18). They are placed north of Gerrah, between the Themi and the Abucaei. Pliny states that the name was variously written: "Sinus intimus, in quo Laeanitae qui nomen ei dedere; regio eorum Agra, et in sinu Laeana, vel, at alii Aaelana; nam et ipsum sinum nostri Aelaniticum scripsere, alii Aeleniticum, Artemidorus Alaniticum, Juba Laeniticum" (vi. 28). Agra, which Pliny represents as the capital, is doubtless the "Adari civitas" (Ἀδάρου πόλις) of Ptolemy, in the country of the Leanitae. Mr. Forster regards the name as an abbreviated form of "Sinus Khaulanites" or *Bay of Khaulan*, in which he discovers an idiomatic modification of the name Haulanites, the Arabic form for Havileans, — identical with the *Beni Khaled*, — the inhabitants of the Avâl or Havilah of Scripture [HAVILAH]. (*Geography of Arabia*, vol. i. pp. 48, 52, 53, vol. ii. p. 215.) The gulf apparently extended from the Itamus Portus (*Kedema*) on the north, to the Chersonesi extrema (*Ras-el-Châr*) on the south. [G. W.]

LEBADE. [SIPYLUS.]

LEBADEIA (Λεβάδεια, Herod., Strab., et alii; Λεβαδία, Plut. *Lys.* 28: *Eth.* Λεβαδεύς: *Livadhia*), a town near the western frontier of Boeotia, described by Strabo (ix. p. 414) as lying between Mt. Helicon and Chaeroneia. It was situated at the foot of a precipitous height, which is an abrupt northerly termination of Mt. Helicon. Pausanias relates (ix. 39. § 1) that this height was originally occupied by the Homeric city of Mideia (Μίδεια, *Il.* ii. 507), from whence the inhabitants, under the conduct of Lebadus, an Athenian, migrated into the plain, and founded there the city named after him. On the other hand, Strabo maintains (ix. p. 413) that the Homeric cities Arne and Mideia were both swallowed up by the lake Copais. Lebadeia was originally an insignificant place, but it rose into importance in consequence of its possessing the celebrated oracle of Trophonius. The oracle was consulted both by Croesus (Herod. i. 46) and by Mardonius (Herod. viii. 134), and it continued to be consulted even in the time of Plutarch, when all the other oracles in Boeotia had become dumb. (Plut. *de Def. Orac.* 5.) Pausanias himself consulted the oracle, and he speaks of the town in terms which show that it was in his time the most flourishing place in Boeotia. But notwithstanding the sanctity of the oracle, Lebadeia did not always escape the ravages of war. It was taken and plundered both by Lysander and by Archelaus, the general of Mithridates. (Plut. *Lys.* 28, *Sull.* 16.) In the war against Perseus, it espoused the side of the Romans, while Thebes, Haliartus, and Coroneia declared in favour of the Macedonian king. (Polyb. xxvii. 1.) It continues to exist under the slightly altered name of *Livadhia*, and during the Turkish supremacy it gave its name to the whole province. It is still a considerable town, though it suffered greatly in the war of independence against the Turks.

The modern town is situated on two opposite hills, rising on each bank of a small stream, called Hercyna by Pausanias, but the greater part of the houses are on the western slope, on the summit of which is a ruined castle. Pausanias says that the Hercyna rose in a cavern, from two fountains, close to one another, one called the fountain of Oblivion and the other the fountain of Memory, of which the persons who were going to consult the oracle were obliged to drink. The Hercyna is in reality a continuation of an occasional torrent from Mount Helicon; but at the southern extremity of the town, on the eastern side of the castle-hill, there are some copious sources, which were evidently the reputed fountains of the Hercyna. They issue from either side of the Hercyna, those on the right bank being the most copious, flowing from under the rocks in many large streams, and forming the main body of the river; and those on the left bank being insignificant, and flowing, in the time of Dodwell, through ten small spouts, of which there are still remains. The fountains on the right bank are warm, and are called *Chiliá* (ἡ Χιλιά), and sometimes τὰ γλυφὰ νερά, or the water unfit for drinking; while the fountains on the left bank are cold and clear, and are named *Krya* (ἡ κρύα, i. e. ἡ κρύα βρύσις, the cold source, in opposition to the warm, *Chiliá*). Neither of these two sets of fountains rise out of a cave, and so far do not correspond to the description of Pausanias; but there is a cavern close to each; and in the course of ages, since the destruction of the sacred buildings of Trophonius, the caverns may easily have been choked up, and the springs have emerged in different spots. The question, however, arises, which of the caverns contained the reputed sources of the Hercyna? The answer to this must depend upon the position we assign to the sacred grove of Trophonius, in which the source of the Hercyna was situated. Leake places the sacred grove on the right or eastern bank; but Ulrichs on the left, or western bank. The latter appears more probable, on account of the passage in Pausanias, διείργει δὲ

ἀπ' αὐτῆς (i. e. τῆς πόλεως) τὸ ἄλσος τοῦ Τροφωνίου, where there is little doubt that ποταμός, or some equivalent term, must be applied as the nominative of διείργει. The ancient city would, in that case, have stood on the right or eastern bank of the river, which also appears probable from the numerous fragments of antiquity still scattered over the eminence on this side of the river; and the grove of Trophonius would have been on the western side of the stream, on which the greater part of the modern town stands.

The most remarkable object in the grove of Trophonius was the temple of the hero, containing his statue by Praxiteles, resembling a statue of Asclepius; a temple of Demeter, surnamed Europe; a statue of Zeus Hyetius (Pluvius) in the open air; and higher up, upon the mountain, the oracle (τὸ μαντεῖον). Still higher up was the hunting place of Persephone; a large unfinished temple of Zeus Basileus, a temple of Apollo, and another temple, containing statues of Cronus, Zeus, and Hera. Pausanias likewise mentions a chapel of the Good Daemon and of Good Fortune, where those who were going to consult the oracle first passed a certain number of days.

In the Turkish mosque, now converted into a church of the Panagia, on the western side of the river, three inscriptions have been found, one of which contains a dedication to Trophonius, and the other a catalogue of dedications in the temple of Trophonius. (See Böckh, *Inscr.* 1571, 1588.) Hence it has been inferred that the temple of Trophonius occupied this site. Near the fountain of *Krya*, there is a square chamber, with seats cut out of the rock, which may perhaps be the chapel of the Good Daemon and Good Fortune. Near this chamber is a cavern, which is usually regarded as the entrance to the oracle. It is 25 feet in depth, and terminates in a hollow filled with water. But this could not have been the oracle, since the latter, according to the testimony both of Pausanias and Philostratus, was not situated in the valley upon the Hercyna, but higher up upon the mountain. (Paus. ix. 39. § 4; Philostr. *Vit. Apoll.* viii. 19.) Mure justly expresses his surprise that Leake, after quoting the description of Pausanias, who says that the oracle was ἐπὶ τοῦ ὄρους, should suppose that it was situated at the foot of the hill. A person who consulted the oracle descended a well constructed of masonry, 12 feet in depth, at the bottom of which was a small opening on the side of the wall. Upon reaching the bottom he lay upon his back and introduced his legs into the hole, when upon a sudden the rest of his body was rapidly carried forward into the sanctuary. The site of the oracle has not yet been discovered, and is not likely to be, without an extensive excavation. An account of the rites observed in consulting the oracle is given in the *Dict. of Antiq.* p. 841, 2nd ed. (Dodwell, *Tour through Greece*, vol. i. p. 216, seq.; Leake, *Northern Greece*, vol. ii. p. 118, seq.; Mure, *Tour in Greece*, vol. i. p. 233, seq.; Ulrichs, *Reisen in Griechenland*, p. 164, seq.)

LEBAEA (Λεβαίη,) an ancient city in Upper Macedonia, and the residence of the early Macedonian kings, mentioned only by Herodotus (viii. 137).

LEBECII. [LIBICI.]

LEBEDO'NTIA, a town upon the coast of Hispania Tarraconensis, situated upon the mountain Sellus, at no great distance from Tarraco. It is mentioned only by Avienus (*Or. Marit.* 509), in whose time, however, it had ceased to exist.

LE'BEDOS (Λέβεδος: *Eth.* Λεβέδιος), an ancient city on the western coast of Asia Minor, 90 stadia to the east of Cape Myonnesus, and 120 to the north-west of Colophon. (Strab. xiv. p. 643.) The place was originally inhabited by Carians, until, on the immigration of the Ionians into Asia, it was taken possession of by them under the guidance of Andraemon, a son of Codrus. (Paus. vii. 3. § 2.) Strabo (xiv. p. 633), however, in speaking of the foundation of the Ionian cities, states that it was colonised by Andropompus and his followers, having previously borne the name of Artis: the tomb of Andraemon, moreover, was shown in the neighbourhood of Colophon, on the road crossing the river Hales. (Paus. *l. c.*) For a long time Lebedos continued to be a city flourishing by its commerce, the fertility of its territory, and the excellent hot mineral springs in its neighbourhood, which still exist. (Hecat. *Fragm.* 219; Herod. i. 142; Thucyd. viii. 19.) It was afterwards nearly destroyed by Lysimachus, who transplanted its population to Ephesus (Paus. *l. c.* i. 9. § 8); after which time Lebedos appears to have fallen more and more into decay, so that in the days of Horace it was more deserted than Gabii or Fidenae. (*Epist.* i. 11. 7.) It is mentioned, however, as late as the 7th century of the Christian era (Aelian, *V. H.* viii. 5; Ptol. v. 2. § 7; Mela, i. 17; Plin. *H. N.* v. 31; Hierocles, p. 660); and the Romans, in order to raise the place in some measure, established there the company of actors (τεχνῖται περὶ τὸν Διόνυσον) who had formerly dwelt in Teos, whence during a civil commotion they withdrew to Ephesus. Attalus afterwards transplanted them to Myonnesus; and the Romans, at the request of the Teians, transferred them to Lebedos, where they were very welcome, as the place was very thinly inhabited. At Lebedos the actors of all Ionia as far as the Hellespont had ever after an annual meeting, at which games were celebrated in honour of Dionysus. (Strab. xiv. p. 643.) The site of Lebedos is marked by some ruins, now called *Ecclesia* or *Xingi*, and consisting of masses of naked stone and bricks, with cement. There also exists the basement and an entire floor of a small temple; and nearer the sea there are traces of ancient walls, and a few fragments of Doric columns. (Chandler's *Asia Minor*, p. 125.) [L. S.]

LEBEN (Λέβην, Strab. x. p. 478) or LEBENA (Λέβηνα, Ptol. iii. 17. § 4; *Stadiasm.*; Plin. iv. 12; Λεβήνη, Paus. ii. 26. § 7; Ledena, *Peut. Tab.*), a maritime town of Crete, which was a harbour of Gortyna, about 70 stadia inland. (Strab. *l. c.*) It possessed a temple of Asclepius, of great celebrity (Philostrat. *Vit. Apollon.* ix. 11), and is represented by the modern hamlet of *Léda*. (Höck, *Kreta*, vol. i. pp. 8. 394. 399.) [E. B. J.]

LEBINTHUS (Λέβινθος), a small island in the Aegaean sea, one of the Sporades, NE. of Amorgus, between which and Lebinthus lies the still smaller island Cinarus. (Strab. x. p. 487; Steph. B. *s. v.* Δρεπάνη; Plin. iv. 12. s. 23; Mela, ii. 7. § 11; Ov. *Met.* viii. 222, *Ar. Am.* ii. 81; Ross, *Reisen auf den Griech. Inseln*, vol. ii. p. 56.)

LEBONAH, a town of Palestine, north of Shiloh, identified by Maundrell with *Leban*, a village 4 hours S. of *Naplus*. (*Judg.* xxi. 19; Winer, *Biblisch. Realwörterbuch*, *s. v.*)

LEBUNI. [LUSITANIA.]

LECHAEUM. [CORINTHUS, p. 682.]

LECTOCE, AD, in Gallia Narbonensis, is placed

by the Jerusalem Itin. after Arausio (*Orange*), and xiii. M.P. from it. D'Anville says that the distance is too great, for it seems that the place is at the passage of the small river *Lez*. [G. L.]

LECTUM (τὸ Λεκτόν), a promontory in the south-west of Troas, opposite the island of Lesbos. It forms the south-western termination of Mount Ida. (Hom. *Il.* xiv. 294; Herod. ix. 114; Thucyd. viii. 101; Ptol. v. 2. § 4; Plin. v. 32; Liv. xxxvii. 37.) In the time of Strabo (xiii. p. 605, comp. p. 583) there was shown on Cape Lectum an altar, said to have been erected by Agamemnon to the twelve great gods; but this very number is a proof of the late origin of the altar. Under the Byzantine emperors, Lectum was the northernmost point of the province of Asia. (Hierocl. p. 659.) Athenaeus (iii. p. 88) states that the purple shell-fish, found near Lectum as well as near Sigeum, was of a large size. The modern name of Lectum is *Baba*, or *Santa Maria*. [L. S.]

LE'CYTHUS (Λήκυθος), a town in the peninsula of Sithonia in Chalcidice, not far from Torone, with a temple to Athena. The town was attacked by Brasidas, who took it by storm, and consecrated the entire cape to the goddess. Everything was demolished except the temple and the buildings connected with it. (Thuc. iv. 115, 116.) [E. B. J.]

LEDERA'TA or LAEDERATA (Λεδεράτα and Λιτεράτα), a fortified place in Upper Moesia, on the high road from Viminacium to Dacia, on the river Morgus. It was a station for a detachment of horse archers. (Procop. *de Aed.* iv. 6; *Tab. Peut.; Notit. Imp.*, where it is called Laedenata.) Ruins of ancient fortifications, commonly identified with the site of Lederata, are found in the neighbourhood of *Rama*. [L. S.]

LEDON (Λέδων: *Eth.* Λεδόντιος), a town of Phocis, north of Tithorea, the birthplace of Philomelus, the commander of the Phocians in the Sacred War. In the time of Pausanias it was abandoned by the inhabitants, who settled upon the Cephissus, at the distance of 40 stadia from the town, but the ruins of the latter were seen by Pausanias. Leake supposes that the ruins at *Paleá Fiva* are those of Ledon. (Paus. x. 2. § 2, x. 3. § 2, x. 33. § 1; Leake, *Northern Greece*, vol. ii. p. 89.)

LEDRON (Λήδρον), a place in Cyprus, near Leucosia, which the ecclesiastical writers mention as a bishop's see. (Sozomen, *H.E.* v. 10; Niceph. Callist. viii. 42; Engel, *Kypros*, vol. i. p. 152.) [E. B. J.]

LEDUS, or LEDUM, as Mela (ii. 5) names it, a small river of Gallia Narbonensis. Festus Avienus (*Or. Marit.* 590) names it Ledus. Mela speaks of the "Stagna Volcarum, Ledum flumen, castellum Latera." The Ledus is the *Lez*, which passes by Sextantio, to the east of *Montpellier*, and flows into the *E'tang de Maguelone* or *Perols* below Latera, now *Lates* or *Latte*. Pliny (ix. 8) gives the name of Stagnum Latera to this *E'tang*, and he speaks of it as abounding in mullets, and describes the way of taking them. The mullet is still abundant there. Pliny places the Stagnum Latera in the territory of Nemausus (*Nîmes*), which is at some distance. But the *E'tang* and the Castellum Latera may be among the many small places (Plin. iii. 4) which were made dependant on Nemausus (Nemausiensibus attributa). [G. L.]

LEĔTA'NI. [LAEETANI.]

LEGAE (Λῆγαι, Strab. xi. p. 503; Λῆγες, Plut. *Pomp.* 35), a people on the shores of the Caspian, situated between Albania and the Amazones, and belonging to the Scythian stock. (Theophanes, *ap. Strab. l. c.*) The name survives, it has been conjectured, in the modern *Lesghi*, the inhabitants of the E. region of Caucasus. (Comp. Potocki, *Voyage dans les Steps d'Astrakhan*, vol. i. p. 239.) [E. B. J.]

LEGEDIA, in Gallia, is placed by the Table on a road from Condate (*Rennes*) to Coriallum, perhaps *Cherbourg*. It is 49 Gallic leagues from Condate to Legedia, and 19 from Legedia to Cosedia. None of the geographers agree about the position of Legedia. Walckenaer places it at *Villebaudon*, near *Léseau*, in support of which there is some similarity of name. [G. L.]

LEGEOLIUM, a town in Britain, mentioned in the Itinerary. At *Castleford*, in Yorkshire, the road from Isurium (*Aldborough*) crosses the river *Aire;* and in this neighbourhood coins and other antiquities have been dug up. A camp, however, has yet to be discovered. *Castleford* is generally identified with Legeolium.

Lagecium is the first station from York on the way to London, 21 miles from the former town, and 16 from Danum (= *Doncaster*). This is from the 8th Itinerary.

In the 5th Legeolium is exactly in the same position. This identifies the two. [R. G. L.]

LE'GIO (Λεγεών), a town of Palestine mentioned by Eusebius and S. Jerome. Its importance is intimated by the fact that it is assumed by them as a centre from which to measure the distance of other places. Thus they place it 15 M. P. west of Nazareth, three or four from Taanach (*Onomast. s. vv. Nazareth, Thaanach, Thanaach Camona, Aphraim.*) Reland (*Palaest. s. v.* p. 873) correctly identifies it with the modern village *Legune* or *el-Lejjûn*, "on the western border of the great plain of Esdraelon,"—which Eusebius and S. Jerome designate, from this town, μέγα πεδίον Λεγεῶνος (*Onomast. s. v.* Γαβαθών),—"where it already begins to rise gently towards the low range of wooded hills which connect Carmel and the mountains of Samaria." Its identity with the Megiddo of Scripture is successfully argued by Dr. Robinson (*Bib. Res.* vol. iii. pp. 177—180.) Megiddo is constantly joined with Taanach, and *Lejjûn* is the requisite distance from the village of *Ta'annûk*, which is directly south of it. Both were occupied by Canaanitish sheikhs (*Josh.* xii. 21), both assigned to the half-tribe of Manasseh, though lying within the borders of Issachar or Asher (xvii. 11; 1 *Chron.* vii. 29); both remained long unsubdued (*Judges*, i. 27). In the battle between Barak and Sisera "they fought in Taanach by the Waters of Megiddo,"—which waters issue from a copious fountain, the stream from which turns several mills, and is an important tributary to the Kishon (Maundrell, *Journey*, March 22, p. 57.) This is probably the place mentioned by Shaw as the *Ras-el-Kishon*, or the head of the Kishon, under the south-east brow of Mount Carmel. Three or four of its sources, he says, lie within less than a furlong of each other, and discharge water enough to form a river half as big as the Isis. (*Travels*, p. 274, 4to. ed.) It was visited and described by Mr. Wolcott in 1842. He found it to be an hour and 40 minutes from *Ta'annûk* (*Bibliotheca Sacra*, 1843, pp. 76—78.) The great caravan road between Egypt and Damascus passes through *Lejjûn*; and traces of an old Roman road are to be seen to the south of the village. [G. W.]

LEGIO VII. GE'MINA (*Itin. Ant.* p. 395; Λεγίων ζ Γερμανική, Ptol. ii. 6. § 30: *Leon*), a

Roman city of Asturia, in Hispania Tarraconensis, admirably situated at the confluence of two tributaries of the *Esla*, at the foot of the Asturian mountains, commanding and protecting the plain of *Leon*. As its name implies, it grew out of the station of the new 7th legion, which was raised by the emperor Galba in Hispania. (Dion Cass. iv. 24; Tac. *Hist.* ii. 11, iii. 25; Suet. *Galba*, 10.) Tacitus calls the legion GALBIANA, to distinguish it from the old LEGIO VII. CLAUDIA, but this appellation is not found on any *genuine* inscriptions. It appears to have received the appellation of GEMINA (respecting the use of which, and GEMELLA, see Caesar *B. C.* iii. 3) on account of its amalgamation by Vespasian with one of the German legions, not improbably the LEGIO I. GERMANICA. Its full name was VII. GEMINA FELIX. After serving in Pannonia, and in the civil wars, it was settled by Vespasian in Hispania Tarraconensis, to supply the place of the VI. Victrix and X. Gemina, two of the three legions ordinarily stationed in the province, but which had been withdrawn to Germany. (Tac. *Hist.* ii. 11, 67, 86, iii. 7, 10, 21—25, iv. 39; *Inscr.* ap. Gruter, p. 245, no. 2.) That its regular winter quarters, under later emperors, were at *Leon*, we learn from the Itinerary, Ptolemy, and the Notitia Imperii, as well as from a few inscriptions (Muratori, p. 2037, no. 8, A. D. 130; p. 335, nos. 2, 3, A. D. 163; p. 336, no. 3, A. D. 167; Gruter, p. 260, no. 1, A. D. 216); but there are numerous inscriptions to prove that a strong detachment of it was stationed at Tarraco, the chief city of the province. (The following are a selection, in order of time:—Orelli, no. 3496, A. D. 182; no. 4815; Gruter, p. 365, no. 7.) In the inscriptions the legion has the surnames of P. F. ANTONINIANA, P. F. ALEXANDRIANA, and P. F. SEVERIANA ALEXANDRIANA; and its name occurs in a Greek inscription as AET. Z. ΔΙΔύμη (*C. I.* vol. iii. no. 4022), while another mentions a χιλίαρχον ἐν Ἰσπανίᾳ λεγεῶνος ἑβδόμης. (*C. I.* vol. i. no. 1126.) There is an inscription in which is found a "Tribunus Militum LEG. VII. GEMINAE FELICIS IN GERMANIA," from a comparison of which with two inscriptions found in Germany (Lehne, *Schriften*, vol. i. nos. 11, 62; Borghesi, *sulle iscr. Rom. del Reno*, p. 26), it has been inferred that the legion was employed on an expedition into Germany under Alexander Severus, and that this circumstance gave rise to the erroneous designation of Γερμανική in the text of Ptolemy. (Böcking, *N. D.* pt. ii. pp. 1026, seq.; Marquardt's *Becker*, *Röm. Alterthum.* vol. iii. pt. 2, p. 354; Grotefend, in Pauly's *Realencyklopädie*, *s. v. Legio.*)

The station of this legion in Asturia grew into an important city, which resisted the attacks of the Goths till A. D. 586, when it was taken by Leovigildo; and it was one of the few cities which the Goths allowed to retain their fortifications. During the struggle with the Arab invaders, the same fortress, which the Romans had built to protect the plain from the incursions of the mountaineers, became the advanced post which covered the mountain, as the last refuge of Spanish independence. After yielding to the first assault of the Moors, it was soon recovered, and was restored by Ordoño I. in 850. It was again taken by Al-Mansur in 996, after a year's siege; but was recovered after Al-Mansur's defeat at *Calatañazor*, about A. D. 1000; repeopled by Alonso V., and enlarged by Alonso XI., under whose successor, Don Pedro, it ceased to be the capital of the kingdom of *Leon*, by the removal of the court to *Seville*. The greater portion of the Roman walls may still be traced. (Ford, *Handbook of Spain*, p. 318.) [P. S.]

LEHI, or more fully RAMATHLEHI, a place in the south of Palestine, the name of which is derived from one of Samson's exploits. (*Judg.* xv. 9, 14, 17; comp. Joseph. *Ant.* v. 8. § 8; Winer, *Biblisch. Realwörterbuch*, *s. v.*)

LEIMO'NE (Λειμώνη), the later name of the Homeric ELONE (Ἠλώνη), according to Strabo, was a town of Perrhaebia in Thessaly, and was situated at the foot of Mount Olympus, not far from the Titaresius or Eurotas. The Greeks of *Elassóna* report that there are some remains of this city at *Selos*. (Hom. *Il.* ii. 739; Strab. ix. p. 440; Steph. B. *s. v.* Ἠλώνη; Leake, *Northern Greece*, vol. iii. p. 345.)

LEINUM (Λήϊνον), a town of Sarmatia Europaea, which Ptolemy (iii. 5. § 29) places on an affluent of the Borysthenes, but whether on the *Beresina*, or some other, is uncertain. LIANUM (Λείανον, Ptol. iii. 5. § 12), on the Palus Maeotis, appears to be the same place repeated by an oversight. (Schafarik, *Slav. Alt.* vol. i. p. 512.) [E. B. J.]

LEIPSYDRIUM. [ATTICA, p. 326, b.]

LELAMNO'NIUS SINUS, in Britain, mentioned by Ptolemy (ii. 3) as lying between the aestuary of the Clota (*Clyde*) and the Epidian Promontory (*Mull of Cantyre*); = *Loch Fyne*. [R. G. L.]

LELANTUS CAMPUS (τὸ Λήλαντον πεδίον), a fertile plain in Euboea, between Chalcis and Eretria, which was an object of frequent contention between those cities. [CHALCIS.] It was the subject of volcanic action. Strabo relates that on one occasion a torrent of hot mud issued from it; and it contained some warm springs, which were used by the dictator Sulla. The plain was also celebrated for its vineyards; and in it there were mines of copper and iron. (Strab. i. p. 58, x. p. 447, seq.; Hom. *Hymn. in Apoll.* 219; Theogn. 888; Leake, *Northern Greece*, vol. ii. p. 265.) Pliny mentions a river Lelantus in Euboea, which must have flowed through this plain, if it really existed. (Plin. iv. 12. s. 21.)

LE'LEGES (Λέλεγες), an ancient race which was spread over Greece, the adjoining islands, and the Asiatic coast, before the Hellenes. They were so widely diffused that we must either suppose that their name was descriptive, and applied to several different tribes, or that it was the name of a single tribe and was afterwards extended to others. Strabo (vii. p. 322) regarded them as a mixed race, and was disposed to believe that their name had reference to this (τὸ συλλέκτους γεγονέναι). They may probably be looked upon, like the Pelasgians and the other early inhabitants of Greece, as members of the great Indo-European race, who became gradually incorporated with the Hellenes, and thus ceased to exist as an independent people.

The most distinct statement of ancient writers on the origin of the Leleges is that of Herodotus, who says that the name of Leleges was the ancient name of the Carians (Herod. i. 171). A later Greek writer considered the Leleges as standing in the same relation to the Carians as the Helots to the Lacedaemonians and the Penestae to the Thessalians. (Athen. vi. p. 271.) In Homer both Leleges and Carians appear as equals, and as auxiliaries of the Trojans. (*Il.* x. 428.) The Leleges are ruled by Altes, the father-in-law of Priam, and inhabit a

town called Pedasus at the foot of Mount Ida. (*Il.* xxi. 86.) Strabo relates that Leleges and Carians once occupied the whole of Ionia, and that in the Milesian territory and in all Caria tombs and forts of the Leleges were shown. He further says that the two were so intermingled that they were frequently regarded as the same people. (Strab. vii. p. 321, xiii. p. 611.) It would therefore appear that there was some close connection between the Leleges and Carians, though they were probably different peoples. The Leleges seem at one time to have occupied a considerable part of the western coast of Asia Minor. They were the earliest known inhabitants of Samos. (Athen. xv. p. 672.) The connection of the Leleges and the Carians was probably the foundation of the Megarian tradition, that in the twelfth generation after Car, Lelex came over from Egypt to Megara, and gave his name to the people (Paus. i. 39. § 6); but their Egyptian origin was evidently an invention of later times, when it became the fashion to derive the civilisation of Greece from that of Egypt. A grandson of this Lelex is said to have led a colony of Megarian Leleges into Messenia, where they founded Pylus, and remained until they were driven out by Neleus and the Pelasgians from Iolcos; whereupon they took possession of Pylus in Elis. (Paus. v. 36. § 1.) The Lacedaemonian traditions, on the other hand, represented the Leleges as the autochthons of Laconia: they spoke of Lelex as the first native of the soil, from whom the people were called Leleges and the land Lelegia; and the son of this Lelex is said to have been the first king of Messenia. (Paus. iii. 1. § 1, iv. 1. §§ 1, 5.) Aristotle seems to have regarded Leucadia, or the western parts of Acarnania, as the original seats of the Leleges; for, according to this writer, Lelex was the autochthon of Leucadia, and from him were descended the Teleboans, the ancient inhabitants of the Taphian islands. He also regarded them as the same people as the Locrians, in which he appears to have followed the authority of Hesiod, who spoke of them as the subjects of Locrus, and as produced from the stones with which Deucalion repeopled the earth after the deluge. (Strab. vii. pp. 321, 322.) Hence all the inhabitants of Mount Parnassus, Locrians, Phocians, Boeotians, and others, are sometimes described as Leleges. (Comp. Dionys. Hal. i. 17.) (See Thirlwall, *Hist. of Greece*, vol. i. p. 42, seq.)

LEMANIS PORTUS (Καινὸς λιμήν, Ptol. ii. 3. § 4), one of the chief seaports of Britain, situated in the territories of the Cantii; the site near *Lymne*, in *Kent*. The road from Durovernum to Portus Lemanis (*Itin. Anton.* iv.) is extant nearly its entire length, and known by the name of *Stone Street*.

The harbour or port is no longer to be traced, owing to the silting up of the sea; but it must have been situated opposite to *West Hythe* and *Lymne*. The remains of the castrum, called *Stutfall Castle*, to the west of *West Hythe*, and below *Lymne*, indicate the quarters of the Turnacensian soldiers stationed there in defence of the Littus Saxonicum. (*Not. Dig.*) Recent discoveries have shown that a body of marines (Classiarii Britannici) were also located at the Portus Lemanis, and at Dubris (*Dover*). An altar was also found, recording the name of a prefect of the British fleet. (*Report on Excavations made at Lymne.*) The Portus Lemanis is laid down in the Peutingerian Tables, and it is mentioned by the anonymous Geographer of Ravenna.

The Roman station was situated on the slope of a hill. Like that of *Richborough* (Rutupiae), it was walled on three sides only; the side facing the sea being sufficiently defended by nature in a steep bank, such as we see at other Roman castra where the engineers have availed themselves of a natural defence to save the expense and labour of building walls. The fortress enclosed about 10 acres. The walls, in part only now standing, were upwards of 20 ft. high, and about 10 ft. thick; they were further strengthened by semicircular solid towers. The principal entrance was on the east, facing the site of the village of *West Hythe*. It was supported by two smaller towers, and, as recent excavations prove, by other constructions of great strength. Opposite to this, on the west, was a postern gate, of narrow dimensions. At some remote period the castrum was shattered by a land-slip, and the lower part was carried away, and separated entirely from the upper wall, which alone stands in its original position. To this cause is to be ascribed the present disjointed and shattered condition of the lower part. Parts of the wall and the great gateway were completely buried. The excavations alluded to brought them to light, and enabled a plan to be made. Within the area were discovered the walls of one of the barracks, and a large house with several rooms heated by a hypocaust. [C. R. S.]

LEMANUS or LEMANNUS LACUS (Λεμάνος, Λεμάνη λίμνη: *Leman Lake* or *Lake of Geneva*). Caesar says (*B. G.* i. 8) that he drew his rampart against the Helvetii "from the Lacus Lemannus, which flows into the Rhone, as far as the Jura;" a form of expression which some of the commentators have found fault with and altered without any reason. The name Λιμένη λίμνη in Ptolemy's text (ii. 10. § 2) is merely a copyist's error In the Antonine Itin. the name Lausonius Lacus occurs; and in the Table, Losannensis Lacus. Mela (ii. 5), who supposes the Rhodanus to rise not far from the sources of the Rhenus and the Ister, says that, "after being received in the Lemannus Lacus, the river maintains its current, and flowing entire through it, runs out as large as it came in." Strabo (p. 271) has a remark to the same purpose, and Pliny (ii. 103), and Ammianus Marcellinus (xv. 11). This is not the fact, as we may readily suppose, though the current of the Rhone is perceptible for some distance after the river has entered the east end of the lake of Geneva. Ausonius (*De Clar. Urb. Narbo*) makes the lake the chief source of the Rhodanus:—

Qua rapitur praeceps Rhodanus genitore Lemanno;

but this poetical embellishment needs no remark.

The Lake of Geneva is an immense hollow filled by the Rhone and some smaller streams, and is properly described under another title. [RHODANUS.] [G. L.]

LEMA'VI. [GALLAECIA.]

LEMINCUM, in Gallia Narbonensis, is placed in the Table and the Antonine Itin. on a road from the Alpis Graia (*Little St. Bernard*) to Vienna (*Vienne*). Lemincum is *Lemens*, near *Chambery*, and there is also, according to some authorities, a *Mont Leminc*. The next station to Lemincum on the road to Vienna is Labiscum. [LABISCUM.] [G. L.]

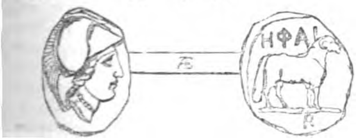
LEMNOS (Λῆμνος: *Eth.* Λήμνιος), one of the larger islands in the Aegaean sea, situated nearly midway between Mount Athos and the Hellespont. According to Pliny (iv. 12. s. 23), it lay 22 miles SW. of Imbros, and 87 miles SE. of Athos; but the

latter is nearly double the true distance. Several ancient writers, however, state that Mount Athos cast its shadow upon the island. (Soph. *ap. Schol. ad Theocr.* vi. 76; Plin. *l. c.*) Pliny also relates that Lemnos is 112 miles in circuit, which is perhaps not far from the truth, if we reckon all the windings of the coast. Its area is nearly 150 square miles. It is of an irregular quadrilateral shape, being nearly divided into two peninsulas by two deep bays, *Port Paradise* on the N., and *Port St. Antony* on the S. The latter is a large and convenient harbour. On the eastern side of the island is a bold rock projecting into the sea, called by Aeschylus Ἑρμαῖον λέπας Λήμνου, in his description of the beacon fires between Mount Ida and Mycenae, announcing the capture of Troy. (Aesch. *Agam.* 283; comp. Soph. *Philoct.* 1459.) Hills, but of no great height, cover two-thirds of the island; they are barren and rocky, and there are very few trees, except in some of the narrow valleys. The whole island bears the strongest marks of the effects of volcanic fire; the rocks, in many places, are like the burnt and vitrified scoria of furnaces. Hence we may account for its connection with Hephaestus, who, when hurled from heaven by Zeus, is said to have fallen upon Lemnos. (Hom. *Il.* i. 594.) The island was therefore sacred to Hephaestus (Nicandr. *Ther.* 458; Ov. *Fast.* iii. 82), who was frequently called the Lemnian god. (Ov. *Met.* iv. 185; Virg. *Aen.* viii. 454.) From its volcanic appearance it derived its name of Aethaleia (Αἰθάλεια, Polyb. *ap. Steph. B.*, and Etym. M. *s. v.* Αἰθάλη). It was also related that from one of its mountains, called Mosychlus (Μόσυχλος), fire was seen to blaze forth. (Antimach. *ap. Schol. ad Nicandr. Ther.* 472; Lycophr. 227; Hesych. *s. v.*) In a village in the island, named *Chorous*, there is a hot-spring, called *Thermia*, where a commodious bath has been built, with a lodging-house for strangers, who frequent it for its supposed medicinal qualities. The name of Lemnos is said to have been derived from the name of the Great Goddess, who was called Lemnos by the original inhabitants of the island. (Hecat. *ap. Steph. B. s. v.*)

The earliest inhabitants of Lemnos, according to Homer, were the Sinties (Σίντιες), a Thracian tribe; a name, however, which probably only signifies robbers (from σίνομαι). (Hom. *Il.* i. 594, *Od.* viii. 294; Strab. vii. p. 331, x. p. 457, xii. p. 549.) When the Argonauts landed at Lemnos, they are said to have found it inhabited only by women, who had murdered all their husbands, and had chosen as their queen Hypsipyle, the daughter of Thoas, the former King of the island. [See *Dict. of Biogr.* art. Hypsipyle.] Some of the Argonauts settled here, and became by the Lemnian women the fathers of the Minyae (Μινύαι), the later inhabitants of the island. The Minyae were driven out of the island by the Tyrrhenian Pelasgians, who had been expelled from Attica. (Herod. iv. 145, vi. 137; Apoll. Rhod. i. 608, seq., and Schol.; Apollod. i. 9. § 17, iii. 6. § 4.) It is also related that these Pelasgians, out of revenge, made a descent upon the coast of Attica during the festival of Artemis at Brauron, and carried off some Athenian women, whom they made their concubines; but, as the children of these women despised their half-brothers born of Pelasgian women, the Pelasgians murdered both them and their Athenian mothers. In consequence of this atrocity, and of the former murder of the Lemnian husbands by their wives, "Lemnian Deeds" (Λήμνια ἔργα) became a proverb throughout Greece for all atrocious acts. (Herod. vi. 128; Eustath. *ad Il.* p. 158. 11, *ad Dionys. Per.* 347; Zenob. iv. 91.) Lemnos continued to be inhabited by Pelasgians, when it was conquered by Otanes, one of the generals of Darius Hystaspis (Herod. v. 26); but Miltiades delivered it from the Persians, and made it subject to Athens, in whose power it remained for a long time. (Herod. vi. 137; Thuc. iv. 28, vii. 57.) In fact, it was always regarded as an Athenian possession, and accordingly the peace of Antalcidas, which declared the independence of all the Grecian states, nevertheless allowed the Athenians to retain possession of Lemnos, Imbros, and Scyros. (Xen. *Hell.* iv. 8. § 15, v. 1. § 31.) At a later period Lemnos passed into the hands of the Macedonians, but it was restored to the Athenians by the Romans. (Polyb. xxx. 18.)

In the earliest times, Lemnos appears to have contained only one town, which bore the same name as the island (Hom. *Il.* xiv. 230); but at a later period we find two towns, Myrina and Hephaestias. Myrina (Μύρινα: *Eth.* Μυριναῖος) stood on the western side of the island, as we may infer from the statement of Pliny, that the shadow of Mt. Athos was visible in the forum of the city at the time of the summer solstice. (Plin. iv. 12. s. 23; Herod. vi. 140; Steph. B. *s. v.*; Ptol. iii. 13. § 4.) On its site stands the modern *Kastro*, which is still the chief town in the place. In contains about 2000 inhabitants; and its little port is defended by a pier, and commanded by a ruinous mediaeval fortress on the overhanging rocks. Hephaestias, or Hephaestia (Ἡφαιστίας, Ἡφαιστία: *Eth.* Ἡφαιστιεύς), was situated in the northern part of the island. (Herod., Plin., Ptol. *ll. cc.*; Steph. B. *s. v.*) There are coins of Hephaestia (see below), but none of Myrina, and none bearing the name of the island. (Eckhel, vol. ii. p. 51.)

According to Pliny (xxxvi. 13. s. 19) Lemnos had a celebrated labyrinth, supported by 150 columns, and with gates so well poised, that a child could open them. Pliny adds, that there were still traces of it in his time. Dr. Hunt, who visited the island in 1801, attempted to find out the ruins of this labyrinth, and was directed to a subterraneous staircase in an uninhabited part of the island, near a bay, called *Porniah.* He here found extensive ruins of an ancient and strong building that seemed to have had a ditch round it communicating with the sea. "The edifices have covered about 10 acres of ground: there are foundations of an amazing number of small buildings within the outer wall, each about seven feet square. The walls towards the sea are strong, and composed of large square blocks of stone. On an elevated spot of ground in one corner of the area, we found a subterraneous staircase, and, after lighting our tapers, we went down into it. The entrance was difficult: it consisted of 51 steps, and about every twelfth one was of marble, the others of common stone. At the bottom is a small chamber with a well in it, by which probably the garrison was supplied: a censer, a lamp, and a few matches, were lying in a corner, for the use of the Greek Christians, who call this well an Αγιασμα, or *Holy Fountain*, and the ruins about it *Panagia Coccipée.* The peasants in the neighbourhood had no knowledge of any sculpture, or statues, or medals having ever been found there." It does not appear, however, that these ruins have any relation to the labyrinth



mentioned by Pliny; and Dr. Hunt thinks that they are probably those of the citadel of Hephaestias.

The chief production of the island, was a red earth called terra Lemnia or sigillata, which was employed by the ancient physicians as a remedy for wounds and the bites of serpents; and which is still much valued by the Turks and Greeks for its supposed medicinal virtues. It is dug out of a hill, made into small balls, and stamped with a seal containing Arabic characters.

The ordinary modern name of the island, is *Stalimene* (εἰς τὴν Λῆμνον), though it is also called by its ancient name.

There were several small islands near Lemnos, of which the most celebrated was CHRYSE (Χρυσῆ), where Philoctetes was said to have been abandoned by the Greeks. According to Pausanias, this island was afterwards swallowed up by the sea, and another appeared in its stead, to which the name of Hiera was given. (Eustath *ad Hom. Il.* ii. p. 330; Appian. *Mithr.* 77; Paus. viii. 33. § 4.)

(Rhode, *Res Lemnicae*, Vratisl. 1829; Hunt, in Walpole's *Travels*, p. 54, seq.)

COIN OF HEPHAESTIAS IN LEMNOS.

LEMOVICES (Λεμόβικες, Strab. p. 190; Λεμουίκοι, Ptol. ii. 7. § 10), a Gallic people who were bounded by the Arverni on the east, the Bituriges Cubi and the Pictones on the north, and the Santones on the west. Their chief town was Augustoritum or *Limoges*. [AUGUSTORITUM.] The diocese of *Limoges*, comprehending the diocese of *Tulle*, which has been separated from it, represents the limits of the Lemovices; but the diocese of *Limoges* extends somewhat beyond the limits of the old province of *Limousin*, which derives its name from the Lemovices, and into that province which was called *La Marche*. An inscription in Gruter, found at *Rancon*, in the diocese of *Limoges*, proves that there was included in the territory of the Lemovices a people named Andecamulenses; and another Gallic inscription shows that Mars was called Camulus. Camulogenus was a Gallic name. (Caes. *B. G.* vii. 59, 62.)

Caesar (*B. G.* vii. 4) enumerates the Lemovices among the peoples whom Vercingetorix stirred up against the Romans in B. C. 52: they are placed in the text between the Aulerci and Andes. The Lemovices sent 10,000 men to assist their countrymen at the siege of Alesia (*B. G.* vii. 75) But in the same chapter (vii. 75) the Lemovices are again mentioned: "universis civitatibus quae Oceanum attingunt quaeque eorum consuetudine Armoricae appellantur, quo sunt in numero Curiosolites, Redones, Ambibari, Caletes, Osismi, Lemovices, Veneti, Unelli, sex millia." Here the Lemovices are placed in a different position, and are one of the Armoric States. [ARMORICAE CIVITATES.] Some critics erase the name Lemovices from Caesar's text; but there is good authority for it. Davis remarks (Caes. *Oudendorp*, i. p. 427), that all the MSS. (known to him) have the reading Lemovices, and that it occurs also in the Greek translation. He also observes, that as there were three Aulerci [AULERCI], so there might be two Lemovices; and we may add that there were two Bituriges, Bituriges Cubi and Bituriges Vivisci; and Volcae Arecomici and Volcae Tectosages. If the text of Caesar then is right, there were Armoric Lemovices as well as the Lemovices of the *Limousin*; and we must either keep the name as it is, or erase it. The emendation of some critics, adopted by D'Anville, rests on no foundation. Walckenaer finds in the district which he assigns to the Lemovices Armoricani, a place named *La Limousinière*, in the arrondissement of *Nantes*, between *Machecoul*, *Nantes* and *Saint-Léger;* and he considers this an additional proof in favour of a conjecture about the text of Ptolemy in the matter of the Lemovices; as to which conjecture his own remarks may be read. (*Géog.* &c. *des Gaules*, vol. i. p. 369.) [G. L.]

LEMO'VII, a German tribe, mentioned by Tacitus (*Germ.* 43) as living with the Rugii on the coast of the Ocean, that is, the *Baltic Sea*. Tacitus mentions three peculiarities of this and the other tribes in those districts (the modern *Pommerania*), — their round shields, short swords, and obedience towards their chiefs. (Comp. Zeuss, *die Deutschen*, p. 155.) [L. S.]

LE'NTIA (*Linz*), a small place in Noricum on the Danube, on the road from Laureacum. According to the Notitia Imperii, from which alone we learn anything about this place, it appears that a prefect of the Legio Italica, and a body of horse archers, were stationed there. (Comp. Gruter, *Inscript.* p. 541. 10; Muchar, *Noricum*, i. p. 284.) [L. S.]

LENTIENSES, the southernmost branch of the Alemanni, which occupied both the northern and southern borders of the Lacus Brigantinus. They made repeated inroads into the province of Rhaetia, but were defeated by the emperor Constantius. (Amm. Marc. xv. 4, xxxi. 10; Zeuss, *die Deutschen*, p. 309, foll.) [L. S.]

LE'NTULAE or LE'NTOLAE, a place in Upper Pannonia, on the principal highroad leading through that country, and 32 Roman miles to the south-east of Jovia. (*It. Ant.* p. 130; *It. Hieros.* p. 562; Geogr. Rav. iv. 19.) Ptolemy (ii. 15. § 5) mentions a town Λέντουδον in the same neighbourhood, which is perhaps only a slip for Λέντουλον. Some identify the place with the modern *Bertzentze*, and others with *Lettichany*. [L. S.]

LEO FLUVIUS. [LEONTES.]

LEON (Λέων ἄκρα.) 1. A point on the S. coast of Crete, now *Punta di Lionda*. (Ptol. iii. 17. § 4; Höck, *Kreta*, vol. i. pp. 394, 413.) [E. B. J.]

2. A promontory of Euboea, S. of Eretria, on the καλὴ ἀκτή. (Ptol. iii. 15. § 24.)

3. A place on the E. coast of Sicily, near Syracuse, where both the Athenians and Romans landed when they were going to attack that city. (Thuc. vi. 97; Liv. xxiv. 39.) [SYRACUSAE.]

LEONICA. [EDETANI.]

LEONTES (Λέοντος ποτάμου ἐκβολαί), a river of Phoenicia, placed by Ptolemy between Berytus and Sidon (v. 15, p. 137); consistently with which notice Strabo places Leontopolis between the same two towns, the distance between which he states at 400 stadia. He mentions no river of this name, but the Tamyras (ὁ Ταμύρας ποταμός), the grove of Aesculapius, and Leontopolis, which would doubtless correspond with the Lion river of Ptolemy; for it is obviously an error of Pliny to place "Leontos oppidum" between "Berytus" and "Flumen Lycos" (v. 20). Now, as the Tamyras of Strabo is clearly

identical with *Nahr-ed-Dâmur*, half way between *Beyrût* and *Saida*, Lion's town and river should be looked for south of this, and north of Sidon. The only stream in this interval is *Nahr-el-Auly*, called also in its upper part *Nahr Barûk*, which Dr. Robinson has shown to be the Bostrenus Fluvius. [BOSTRENUS.] This, therefore, Mannert seemed to have sufficient authority for identifying with the Leontes. But the existence of the *Lîtâny*—a name supposed to be similar to the *Leontes*—between Sidon and Tyre, is thought to countenance the conjecture that Ptolemy has misplaced the Leontes, which is in fact identical with the anonymous river which Strabo mentions near Tyre (p. 758), which can be no other than the *Lîtâny* (Robinson, *Bib. Res.* vol. iii. pp. 408—410, and notes). No great reliance, however, can be placed on the similarity of names, as the form *Leontos* is merely the inflexion of Λέων, which was not likely to be adopted in Arabic. It is far more probable that the classical geographer in this, as in other cases, translated the Semitic name. [See CANIS and LYCUS.] Besides which the *Lîtâny* does not retain this name to the coast, but is here called *Nahr-el-Kâsimîyeh*, the *Casimeer* of Maundrell (March 20, p. 48; Reland, *Palaestina*, pp. 290, 291.) [G. W.]

LEONTI'NI (Λεοντῖνοι: *Eth.* Λεοντῖνος: *Lentini*), a city of Sicily, situated between Syracuse and Catana, but about eight miles from the sea-coast, near a considerable lake now known as the *Lago di Lentini*. The name of Leontini is evidently an ethnic form, signifying properly the people rather than the city itself; but it seems to have been the only one in use, and is employed both by Greek and Latin writers (declined as a plural adjective*), with the single exception of Ptolemy, who calls the city Λεόντιον or Leontium. (Ptol. iii. 4. § 13.) But it is clear, from the modern form of the name, *Lentini*, that the form Leontini, which we find universal in writers of the best ages, continued in common use down to a late period. All ancient writers concur in representing Leontini as a Greek colony, and one of those of Chalcidian origin, being founded by Chalcidic colonists from Naxos, in the same year with Catana, and six years after the parent city of Naxos, B.C. 730. (Thuc. vi. 3; Scymn. Ch. 283; Diod. xii. 53. xiv. 14.) According to Thucydides, the site had been previously occupied by Siculi, but these were expelled, and the city became essentially a Greek colony. We know little of its early history; but, from the strength of its position and the extreme fertility of its territory (renowned in all ages for its extraordinary richness), it appears to have early attained to great prosperity, and became one of the most considerable cities in the E. of Sicily. The rapidity of its rise is attested by the fact that it was able, in its turn, to found the colony of Euboea (Strab. vi. p. 272; Scymn. Ch. 287), apparently at a very early period. It is probable, also, that the three Chalcidic cities, Leontini, Naxos, and Catana, from the earliest period adopted the same line of policy, and made common cause against their Dorian neighbours, as we find them constantly doing in later times.

The government of Leontini was an oligarchy, but it fell at one time, like so many other cities of Sicily, under the yoke of a despot of the name of Panaetius, who is said to have been the first instance of the kind in Sicily. His usurpation is referred by Eusebius to the 43rd Olympiad, or B. C. 608. (Arist. *Pol.* v. 10, 12; Euseb. Arm. vol. ii. p. 109.)

Leontini appears to have retained its independence till after B. C. 498, when it fell under the yoke of Hippocrates, tyrant of Gela (Herod. vii. 154): after which it seems to have passed in succession under the authority of Gelon and Hieron of Syracuse; as we find that, in B.C. 476, the latter despot, having expelled the inhabitants of Catana and Naxos from their native cities, which he peopled with new colonists, established the exiles at Leontini, the possession of which they shared with its former citizens. (Diod. xi. 49.) We find no special mention of Leontini in the revolutions that followed the death of Hieron; but there is no doubt that it regained its independence after the expulsion of Thrasybulus, B. C. 466, and the period which followed was probably that of the greatest prosperity of Leontini, as well as the other Chalcidic cities of Sicily. (Diod. xi. 72, 76.) But its proximity to Syracuse became the source of fresh troubles to Leontini. In B. C. 427 the Leontines found themselves engaged in hostilities with their more powerful neighbour, and, being unable to cope single-handed with the Syrasans, they applied for support not only to their Chalcidic brethren, but to the Athenians also, who sent a fleet of twenty ships to their assistance, under the command of Laches and Charoeades. (Thuc. iii. 86; Diod. xii. 53.) The operations of the Athenian fleet under Laches and his successors Pythodorus and Eurymedon were, however, confined to the part of Sicily adjoining the Straits of Messana: the Leontines received no direct support from them, but, after the war had continued for some years, they were included in the general pacification of Gela, B. C. 424, which for a time secured them in the possession of their independence. (Thuc. iv. 58, 65.) This, however, did not last long: the Syracusans took advantage of intestine dissensions among the Leontines, and, by espousing the cause of the oligarchy, drove the democratic party into exile, while they adopted the oligarchy and richer classes as Syracusan citizens. The greater part of the latter body even abandoned their own city, and migrated to Syracuse; but quickly returned, and for a time joined with the exiles in holding it out against the power of the Syracusans. But the Athenians, to whom they again applied, were unable to render them any effectual assistance; they were a second time expelled, B. C. 422, and Leontini became a mere dependency of Syracuse, though always retaining some importance as a fortress, from the strength of its position. (Thuc. v. 4; Diod. xii. 54.)

In B. C. 417 the Leontine exiles are mentioned as joining with the Segestans in urging on the Athenian expedition to Sicily (Diod. xii. 83; Plut. *Nic.* 12); and their restoration was made one of the avowed objects of the enterprise. (Thuc. vi. 50.) But the failure of that expedition left them without any hope of restoration; and Leontini continued in its subordinate and fallen condition till B. C. 406, when the Syracusans allowed the unfortunate Agrigentines, after the capture of their own city by the Carthaginians, to establish themselves at Leontini. The Geloans and Camarinaeans followed their example the next year: the Leontine exiles of Syracuse at the same time took the opportunity to return to their native city, and declare themselves independent, and the treaty of peace concluded by Dionysius with Himilco, in B. C. 405, expressly stipulated for the

* Polybius uses the fuller phrase ἡ τῶν Λεοντίνων πόλις (vii. 6).

freedom and independence of Leontini. (Diod. xiii. 89, 113, 114; Xen. *Hell.* ii. 3. § 5.) This condition was not long observed by Dionysius, who no sooner found himself free from the fear of Carthage than he turned his arms against the Chalcidic cities, and, after reducing Catana and Naxos, compelled the Leontines, who were now bereft of all their allies, to surrender their city, which was for the second time deserted, and the whole people transferred to Syracuse, B. C. 403. (Id. xiv. 14, 15.) At a later period of his reign (B. C. 396) Dionysius found himself compelled to appease the discontent of his mercenary troops, by giving up to them both the city and the fertile territory of Leontini, where they established themselves to the number of 10,000 men. (Id. xiv. 78.) From this time Leontini is repeatedly mentioned in connection with the civil troubles and revolutions at Syracuse, with which city it seems to have constantly continued in intimate relations; but, as Strabo observes, always shared in its disasters, without always partaking of its prosperity. (Strab. vi. p. 273.) Thus, the Leontines were among the first to declare against the younger Dionysius, and open their gates to Dion (Diod. xvi. 16; Plut. *Dion.* 39, 40). Some years afterwards their city was occupied with a military force by Hicetas, who from thence carried on war with Timoleon (*Ib.* 78, 82); and it was not till after the great victory of the latter over the Carthaginians (B. C. 340) that he was able to expel Hicetas and make himself master of Leontini. (*Ib.* 82; Plut. *Timol.* 32.) That city was not, like almost all the others of Sicily, restored on this occasion to freedom and independence, but was once more incorporated in the Syracusan state, and the inhabitants transferred to that city. (Diod. xvi. 82.)

At a later period the Leontines again figure as an independent state, and, during the wars of Agathocles with the Carthaginians, on several occasions took part against the Syracusans. (Diod. xix. 110, xx. 32.) When Pyrrhus arrived in Sicily, B. C. 278, they were subject to a tyrant or despot of the name of Heracleides, who was one of the first to make his submission to that monarch. (Id. xxii. 8, 10, *Exc. H.* p. 497.) But not long after they appear to have again fallen under the yoke of Syracuse, and Leontini was one of the cities of which the sovereignty was secured to Hieron, king of Syracuse, by the treaty concluded with him by the Romans at the commencement of the First Punic War, B. C. 263. (Id. xxiii. *Exc. H.* p. 502.) This state of things continued till the Second Punic War, when Leontini again figures conspicuously in the events which led to the fall of Syracuse. It was in one of the long and narrow streets of Leontini that Hieronymus was assassinated by Dinomenes, B. C. 215 (Liv. xxiv. 7; Polyb. vii. 6); and it was there that, shortly after, Hippocrates and Epicydes first raised the standard of open war against Rome. Marcellus hastened to attack the city, and made himself master of it without difficulty; but the severities exercised by him on this occasion inflamed the minds of the Syracusans to such an extent as to become the immediate occasion of the rupture with Rome. (Liv. xxiv. 29, 30, 39.) Under the Roman government Leontini was restored to the position of an independent municipal town, but it seems to have sunk into a state of decay. Cicero calls it "misera civitas atque inanis" (*Verr.* ii. 66); and, though its fertile territory was still well cultivated, this was done almost wholly by farmers from other cities of Sicily, particularly from Centuripa. (*Ib.* iii. 46, 49.) Strabo also speaks of it as in a very declining condition, and though the name is still found in Pliny and Ptolemy, it seems never to have been a place of importance under the Roman rule. (Strab. vi. p. 273; Mel. ii. 7. § 16; Plin. iii. 8. s. 14; Ptol. iii. 4. § 13.) But the great strength of its position must have always preserved it from entire decay, and rendered it a place of some consequence in the middle ages. The modern city of *Lentini*, which preserves the ancient site as well as name, is a poor place, though with about 5000 inhabitants, and suffers severely from malaria. No ruins are visible on the site; but some extensive excavations in the rocky sides of the hill on which it stands are believed by the inhabitants to be the work of the Laestrygones, and gravely described as such by Fazello. (Fazell. *de Reb. Sic.* iii. 3.)

The situation of Leontini is well described by Polybius: it stood on a broken hill, divided into two separate summits by an intervening valley or hollow; at the foot of this hill on the W. side, flowed a small stream, which he calls the LISSUS, now known as the *Fiume Ruina*, which falls into the *Lake of Lentini*, a little below the town. (Pol. vii 6.) The two summits just noticed, being bordered by precipitous cliffs, formed, as it were, two natural citadels or fortresses; it was evidently one of these which Thucydides mentions under the name of PHOCEAE, which was occupied in B. C. 422 by the Leontine exiles who returned from Syracuse. (Thuc. v. 4.) Both heights seem to have been fortified by the Syracusans, who regarded Leontini as an important fortress; and we find them alluded to as "the forts" (τὰ φρούρια) of Leontini. (Diod. xiv. 58, xxii. 8.) Diodorus also mentions that one quarter of Leontini was known by the name of "The New Town" (ἡ Νέα πόλις, xvi. 72); but we have no means of determining its locality. It is singular that no ancient author alludes to the *Lake* (or as it is commonly called the *Biviere*) *of Lentini*, a sheet of water of considerable extent, but stagnant and shallow, which lies immediately to the N. of the city. It produces abundance of fish, but is considered to be the principal cause of the malaria from which the city now suffers. (D'Orville, *Sicula*, p. 168; Smyth's *Sicily*, pp. 157, 158.)

The extraordinary fertility of the territory of Leontini, or the LEONTINUS CAMPUS, is celebrated by many ancient authors. According to a tradition commonly received, it was there that wheat grew wild, and where it was first brought into cultivation (Diod. iv. 24, v. 2); and it was always regarded as the most productive district in all Sicily for the growth of corn. Cicero calls it "campus ille Leontinus nobilissimus ac feracissimus," "uberrima Siciliae pars," "caput rei frumentariae;" and says that the Romans were accustomed to consider it as in itself a sufficient resource against scarcity. (Cic. *Verr.* iii. 18, 44, 46, *pro Scaur.* 2, *Phil.* viii. 8.) The tract thus celebrated, which was known also by the name of the LAESTRYGONII CAMPI [LAESTRYGONES], was evidently the plain extending from the foot of the hills on which Leontini was situated to the river Symaethus, now known as the *Piano di Catania*. We have no explanation of the tradition which led to the fixing on this fertile tract as the abode of the fabulous Laestrygones.

Leontini was noted as the birthplace of the celebrated orator Gorgias, who in B. C. 427 was the head of the deputation sent by his native city to

implore the intervention of Athens. (Diod. xii. 53; Plat. *Hipp. Maj.* p. 282.) [E. H. B.]

COIN OF LEONTINI.

LEO'NTIUM (Λεόντιον: *Eth.* Λεοντήσιος), a town of Achaia, was originally not one of the 12 Achaean cities, though it afterwards became so, succeeding to the place of Rhypes. It is only mentioned by Polybius, and its position is uncertain. It must, however, have been an inland town, and was probably between Pharae and the territory of Aegium, since we find that the Eleians under the Aetolian general Euripidas, after marching through the territory of Pharae as far as that of Aegium, retreated to Leontium. Leake places it in the valley of the Sennus, between the territory of Tritaea and that of Aegium, at a place now called *Ai Andhrea*, from a ruined church of that saint near the village of *Guzumistra.* Callicrates, the partizan of the Romans during the later days of the Achaean League, was a native of Leontium. (Pol. ii. 41, v. 94, xxvi. 1; Leake, *Morea*, vol. iii. p. 419.)

LEONTO'POLIS. [NICEPHORIUM.]

LEONTO'POLIS. [LEONTES.]

LEONTO'POLIS (Λεόντων πόλις, Ptol. iv. 5. § 51; Strab. xvii. pp. 802, 812; Λεόντω, Hieronym. *ad Jovian.* ii. 6; Leontos Oppidum, Plin. v. 20. s. 17), the capital of the Leontopolite nome in the Delta of Egypt. It stood in lat. 30° 6′ N., about three geographical miles S. of Thmuis. Strabo is the earliest writer who mentions either this nome, or its chief town: and it was probably of comparatively recent origin and importance. The lion was not among the sacred animals of Aegypt: but that it was occasionally domesticated and kept in the temples, may be inferred from Diodorus (ii. 84). Trained lions, employed in the chase of deers, wolves, &c., are found in the hunting-pieces delineated upon the walls of the grottoes at *Benihassan.* (Wilkinson, *M.* and *C.* vol. iii. p. 16.) In the reign of Ptolemy Philometor (B. C. 180—145) a temple, modelled after that of Jerusalem, was founded by the exiled Jewish priest Onias. (Joseph. *Ant. Jud.* xiii. 3. § 3; Hieronym. *in Daniel.* ch. xi.) The Hebrew colony, which was attracted by the establishment of their national worship at Leontopolis, and which was increased by the refugees from the oppressions of the Seleucid kings in Palestine, flourished there for more than three centuries afterwards. In the reign of Vespasian the Leontopolite temple was closed, amid the general discouragement of Judaism by that emperor. (Joseph. *B. Jud.* vii. 10. § 4.) Antiquarians are divided as to the real site of the ruins of Leontopolis. According to D'Anville, they are covered by a mound still called *Tel-Essabè*, or the "Lion's Hill" (Comp. Champollion, *l'Egypte*, vol. ii. p. 110, seq.). Jomard, on the other hand, maintains that some tumuli near the village of *El-Mengaleh* in the Delta, represent the ancient Leontopolis. And this supposition agrees better with the account of the town given by Xenophon of Ephesus. (*Ephesiaca*, iv. p. 280, ed. Bipont.) [W. B. D.]

LEPETYMNUS (Λεπέτυμνος, called Lepethymnus or Lepethymus by Pliny, v. 31. s. 39; the MSS. vary), a mountain in the northern part of Lesbos, near Methymna. Plehn states (*Lesbiac. Lib.* p. 9) that it is the highest mountain in the island: but this does not appear to be consistent with modern surveys. Its present name is said to be *Mont S. Theodore.* The sepulchre and tomb of the hero Palamedes are alleged to have been here. (Tzetzes, *Lycophr. Cassandr.* 1095; Philostr. *Heroic.* p. 716, *Vit. Apollon. Tyan.* iv. 13. 150, also 16. 154.) In Antigonus of Carystus (c. 17) there is a story given, on the authority of Myrsilus the Lesbian, concerning a temple of Apollo and a shrine of the hero Lepetymnus, connected with the same mountain. Here, also, according to Theophrastus (*De Sign. Pluv. et Vent.* p. 783, ed. Schneid.), an astronomer called Matricetas made his observations. [J. S. H.]

LEPINUS MONS is the name given by Columella (x. 131), the only author in whom the name is found, to a mountain near Signia in Latium, probably one of the underfalls or offshoots of the great mass of the Volscian Apennines. The name of Montes Lepini is frequently applied by modern geographers to the whole of the lofty mountain group which separates the valley of the *Sacco* from the Pontine Marshes [LATIUM]; but there is no ancient authority for this. [E. H. B.]

LEPIDO'TON-POLIS (Λεπιδωτῶν ἢ Λεπιδωτὸν πόλις, Ptol. iv. 5. § 72), a town in Upper Egypt, situated in the Panopolite nome, and on the eastern side of the Nile. It was about four geographical miles N. of Chenoboscia. Lat. 26° 2′ N. This was doubtless, the place at which Herodotus had heard that the fish *lepidotus* was caught in great numbers, and even received divine honours (ii. 72; comp. Minutoli, p. 414; Champollion, *l'Egypte*, vol. i. p. 248). Lepidoton-Polis was probably connected with the Osirian worship, for, according to the legend, Isis, in her search for the limbs of Osiris, who had been cut into pieces by Typhon, traversed the marshes in a boat made of papyrus (*Baris*), and in whatsoever place she found a member, there she buried it. In the end she discovered all the limbs, excepting one, which had been devoured by the fishes *phagras* and *lepidotus.* No remains of Lepidoton-Polis have been discovered. [W. B. D.]

LEPO'NTII (Ληπόντιοι, Strab., Ptol.), an Alpine people, who inhabited the valleys on the south side of the Alps, about the head of the two great lakes, the *Lago di Como* and *Lago Maggiore.* Strabo tells us distinctly that they were a Rhaetian tribe (iv. p. 206), and adds that, like many others of the minor Alpine tribes, they had at one time spread further into Italy, but had been gradually driven back into the mountains. (*Ib.* p. 204.) There is some difficulty in determining the position and limits of their territory. Caesar tells us that the Rhine took its rise in the country of the Lepontii (*B. G.* iv. 10), and Pliny says that the Uberi (or Viberi), who were a tribe of the Lepontii, occupied the sources of the Rhone (Plin. iii. 20. s. 24). Ptolemy, on the contrary (iii. 1. § 38), places them in the Cottian Alps; but this is opposed to all the other statements, Strabo distinctly connecting them with the Rhaetians. Their name occurs also in the list of the Alpine nations on the trophy of Augustus (*ap. Plin. l. c.*), in a manner quite in accordance with the statements of Caesar and Pliny; and on the

whole we may safely place them in the group of the Alps, of which the *Mont St. Gothard* is the centre, and from which the Rhone and the Rhine, as well as the *Reuss* and the *Ticino*, take their rise. The name of *Val Levantina*, still given to the upper valley of the *Ticino*, near the foot of the *St. Gothard*, is very probably derived from the name of the Lepontii. Their chief town, according to Ptolemy, was Oscela or Oscella, which is generally supposed to be *Domo d' Ossola;* but, as the Lepontii are erroneously placed by him in the Cottian Alps, it is perhaps more probable that the town meant by him is the Ocelum of Caesar (now *Uxeau*), which was really situated in that district. [OCELUM.]

The name of ALPES LEPONTIAE, or Lepontian Alps, is generally given by modern geographers to the part of this chain extending from *Monte Rosa* to the *St. Gothard;* but there is no ancient authority for this use of the term. [E. H. B.]

LE'PREUM (τὸ Λέπρεον, Scyl., Strab., Polyb.; Λέπρεος, Paus., Aristoph. *Av.* 149; Λέπριον, Ptol. iii. 16. § 18: *Eth.* Λεπρεάτης), the chief town of Triphylia in Elis, was situated in the southern part of the district, at the distance of 100 stadia from Samicum, and 40 stadia from the sea. (Strab. viii. p. 344.) Scylax and Ptolemy, less correctly, describe it as lying upon the coast. Triphylia is said to have been originally inhabited by the Cauconians, whence Lepreum is called by Callimachus (*Hymn. in Jov.* 39) Καυκώνων πτολίεθρον. The Caucones were afterwards expelled by the Minyae, who took possession of Lepreum. (Herod. iv. 148.) Subsequently, and probably soon after the Messenian wars, Lepreum and the other cities of Triphylia were subdued by the Eleians, who governed them as subject places. [See Vol. I. p. 818, b.] The Triphylian cities, however, always bore this yoke with impatience; and Lepreum took the lead in their frequent attempts to shake off the Eleian supremacy. The greater importance of Lepreum is shown by the fact that it was the only one of the Triphylian towns which took part in the Persian wars. (Herod. ix. 28.) In B. C. 421 Lepreum, supported by Sparta, revolted from Elis (Thuc. v. 31); and at last, in 400, the Eleians, by their treaty with Sparta, were obliged to relinquish their authority over Lepreum and the other Triphylian towns. (Xen. *Hell.* iii. 2. § 25.) When the Spartan power had been broken by the battle of Leuctra (B. C. 371), the Spartans endeavoured to recover their supremacy over Lepreum and the other Triphylian towns; but the latter protected themselves by becoming members of the Arcadian confederacy, which had been recently founded by Epaminondas. (Xen. *Hell.* vi. 5. § 2, seq.) Hence Lepreum is called an Arcadian town by Scylax and Pliny, the latter of whom erroneously speaks both of a Leprion in Elis (iv. 5. s. 6), and of a Lepreon in Arcadia (iv. 5. s. 10). Pausanias also states that the Lepreatae in his time claimed to be Arcadians: but he observes that they had been subjects of the Eleians from ancient times,—that as many of them as had been victors in the public games were proclaimed as Eleians from Lepreus,—and that Aristophanes describes Lepreus as a city of the Eleians. (Paus. v. 5. § 3.) After the time of Alexander the Eleians again reduced the Triphylian cities, which therefore were obliged to join the Aetolian league along with the Eleians. But when Philip, in his war with the Aetolians, marched into Triphylia, the inhabitants of Lepreum rose against the Eleian garrison in their town, and declared in favour of Philip, who thus obtained possession of the place. (Polyb. iv. 77, 79, 80.) In the time of Pausanias the only monument in Lepreum was a temple of Demeter, built of brick. In the vicinity of the town was a fountain named Arene. (Paus. v. 5. § 6.) The territory of Lepreum was rich and fertile. (Χώρα εὐδαίμων, Strab. viii. p. 345.)

The ruins of Lepreum are situated upon a hill, near the modern village of *Strovitzi.* These ruins show that Lepreum was a town of some size. A plan of them is given by the French Commission, which is copied in the work of Curtius. They were first described by Dodwell. It takes half an hour to ascend from the first traces of the walls to the acropolis, which is entered by an ancient gateway. "The towers are square; one of them is almost entire, and contains a small window or arrow hole. A transverse wall is carried completely across the acropolis, by which means it was anciently divided into two parts. The foundation of this wall, and part of the elevation, still remain. Three different periods of architecture are evident in this fortress. The walls are composed of polygons: some of the towers consist of irregular, and others of rectangular quadrilaterals. The ruins extend far below the acropolis, on the side of the hill, and are seen on a flat detached knoll." (Dodwell, *Tour through Greece*, vol. ii. p. 347; Leake, *Morea*, vol. i. p. 56; Boblaye, *Récherches, &c.* p. 135; Curtius, *Peloponnesos*, vol. ii. p. 84.)

LE'PSIA (*Lipso*), a small island of the Icarian sea, in the north of Leros, and opposite to the coast of Caria. It is not mentioned by any ancient author except Pliny (*H. N.* v. 34). [L. S.]

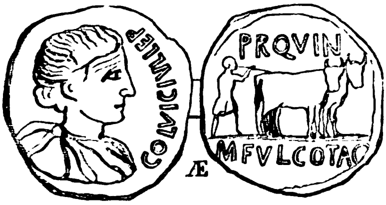
LEPTE (Λεπτικὴ ἄκρα, Ptol. iv. 5; Plin. vi. 29 s. 34), the modern *Ras-el-Auf*, in lat. 23° N., was a headland of Upper Egypt, upon the confines of Aethiopia, which projected into the Red Sea at Sinus Immundus (*Foul Bay*). It formed the extremity of a volcanic range of rocks abounding in mines of gold, copper and topaz. [W. B. D.]

LEPTIS, a town of Hispania Baetica, mentioned only in the *Bell. Alex.* 57, where the word is perhaps only a false reading for LAEPA, near the mouth of the Anas. [P. S.]

LEPTIS* (Liv. xxxiv. 62; Caes. *B. C.* ii. 38; Hirt. *Bell. Afr.* 6, 7, 9, 62; Mela, i. 7. § 2; Plin. v. 4 s. 3), also called by later writers, LEPTIS MINOR or PARVA (Λέπτις ἡ μίκρα, Ptol. iv. 3. § 10; Leptiminus or Lepte Minus, *Itin. Ant.* p. 58; *Tab. Peut.*; Geogr. Rav. iii. 5 v. 5: *Eth* Leptitani: *Lemta*, Ru.), a city on the coast of Byzacium, just within the SE. headland of the Sinus Neapolitanus, 18 M. P. SE. of Hadrumetum, and 33 M. P. NE. of Thysdrus, and one of the most flourishing of the Phoenician colonies on that coast, notwithstanding the epithet PARVA, which is merely used by late writers to distinguish it from the still more important city of LEPTIS MAGNA. It was a colony of Tyre (Sall. *Jug.* 19; Plin. *l. c.*), and, under the Carthaginians, it was the most important place in the wealthy district of EMPORIAE, and its wealth was such that it paid to Carthage the *daily* tribute of a Euboic talent. (Liv. *l. c.*) Under the Romans it was a *libera civitas*, at least in Pliny's time: whether it became a colony afterwards depends on the question, whether the coins bearing the name of LEPTIS belong to this city or to Leptis Magna.

* Derived from a Phoenician word signifying *a naval station.*

[See below, under LEPTIS MAGNA.] Its ruins, though interesting, are of no great extent. (Shaw, *Travels*, p. 109; Barth, *Wanderungen*, &c. p. 161.) [P. S.]



LEPTIS MAGNA (ἡ Λέπτις μεγάλη, Λεπτιμάγνα, Procop. *B. V.* ii. 21; also Λέπτις, simply; aft. Νεάπολις; Leptimagnensis Civitas, *Cod. Just.* i. 27. 2: *Eth.* and *Adj.* Λεπτιτανός, Leptitanus: *Lebda*, large Ru.), the chief of the three cities which formed the African Tripolis, in the district between the Syrtes (Regio Syrtica, aft. Tripolitana), on the N. coast of Africa; the other two being Oea and Sabrata. Leptis was one of the most ancient Phoenician colonies on this coast, having been founded by the Sidonians (Sall. *Jug.* 19, 78); and its site was one of the most favourable that can be imagined for a city of the first class. It stood at one of those parts of the coast where the table-land of the Great Desert falls off to the sea by a succession of mountain ridges, enclosing valleys which are thus sheltered from those encroachments of sand that cover the shore where no such protection exists, while they lie open to the breezes of the Mediterranean. The country, in fact, resembles, on a small scale, the terraces of the Cyrenaic coast; and its great beauty and fertility have excited the admiration alike of ancient and modern writers. (Ammian. Marc. xxviii. 6; Della Cella; Beechy; Barth, &c.) Each of these valleys is watered by its streamlet, generally very insignificant and even intermittent, but sometimes worthy of being styled a river, as in the case of the CINYPS, and of the smaller stream, further to the west, upon which Leptis stood. The excellence of the site was much enhanced by the shelter afforded by the promontory HERMAEUM (*Ras-al-Ashan*), W. of the city, to the roadstead in its front. The ruins of Leptis are of vast extent, of which a great portion is buried under the sand which has drifted over them from the sea. From what can be traced, however, it is clear that these remains contain the ruins of three different cities.

(1.) The original city, or Old Leptis, still exhibits in its ruins the characteristics of an ancient Phoenician settlement; and, in its site, its sea-walls and quays, its harbour, and its defences on the land side, it bears a striking general resemblance to Carthage. It was built on an elevated tongue of land, jutting out from the W. bank of the little river, the mouth of which formed its port, having been artificially enlarged for that purpose. The banks of the river, as well as the seaward face of the promontory, are lined with walls of massive masonry, serving as sea-walls as well as quays, and containing some curious vaulted chambers, which are supposed to have been docks for ships which were kept (as at Carthage) for a last resource, in case the citadel should be taken by an enemy. These structures are of a harder stone than the other buildings of the city; the latter being of a light sandstone, which gave the place a glittering whiteness to the voyager approaching it from the sea. (*Stadiasm. Mar. Mag.* p. 453, G., p. 297, H.) On the land side the isthmus was defended by three lines of massive stone walls, the position of each being admirably adapted to the nature of the ground; and, in a depression of the ground between the outmost and middle line, there seems to have been a canal, connecting the harbour in the mouth of the river with the roadstead W. of the city. Opposite to this tongue of land, on the E. side of the river, is a much lower, less projecting, and more rounded promontory, which could not have been left out of the system of external works, although no part of the city was built upon it. Accordingly we find here, besides the quays along the river side, and vaults in them, which served for warehouses, a remarkable building, which seems to have been a fort. Its superstructure is of brick, and certainly not of Phoenician work; but it probably stood on foundations coeval with the city. This is the only example of the use of brick in the ruins of Leptis, with the exception of the walls which surmount the sea-defences already described. From this eastern, as well as from the western point of land, an artificial mole was built out, to give additional shelter to the port on either side; but, through not permitting a free egress to the sand which is washed up on that coast in vast quantities with every tide, these moles have been the chief cause of the destruction, first of the port, and afterwards of the city. The former event had already happened at the date of the *Stadiasmus*, which describes Leptis as having no harbour (ἀλίμενος). The harbour still existed, however, at the time of the restoration of the city by Septimius Severus, and small vessels could even ascend to some distance above the city, as is proved by a quay of Roman work on the W. bank, at a spot where the river is still deep, though its mouth is now lost in the sand-hills.

2. The Old City (πόλις) thus described became gradually, like the Byrsa of Carthage, the citadel of a much more extensive New City (Νεάπολις), which grew up beyond its limits, on the W. bank of the river, where its magnificent buildings now lie hidden beneath the sand. This NEW CITY, as in the case of Carthage and several other Phoenician cities of like growth, gave its name to the place, which was hence called NEAPOLIS, not, however, as at Carthage [comp. CARTHAGO, Vol. I. p. 529. § i.], to the disuse of the old name, LEPTIS, which was never entirely lost, and which became the prevailing name in the later times of the ancient world, and is the name which the ruins still retain (*Lebda*). Under the early emperors both names are found almost indifferently; but with a slight indication of the preference given to NEAPOLIS, and it seems probable that the name *Leptis*, with the epithet *Magna* to distinguish it from LEPTIS PARVA, prevailed at last for the sake of avoiding any confusion with NEAPOLIS in Zeugitana. (Strab. xvii. p. 835, Νεάπολις, ἣν καὶ Λέπτιν καλοῦσιν: Mela, however, i. 7. § 5, has *Leptis* only, with the epithet *altera*: Pliny, v. 4. s. 4, misled, as usual, by the abundance of his authorities, makes Leptis and Neapolis different cities, and he distinguishes this from the other Leptis as *Leptis altera, quae cognominatur magna*: Ptolemy, iv. 3. § 13, has Νεάπολις ἡ καὶ Λέπτις μεγάλη: *Itin. Ant.* p. 63, and *Tab. Peut.* Lepti Magna Colonia; Scyl. pp. 111, 112, 113, Gronov. Νέα Πόλις; *Stadiasm.* p. 435, Λέπτις, vulg. Λέπτης, the coins all have the name LEPTIS simply, with the addition, on some of them, of the epithet COLONIA VICTRIX JULIA; but it is very uncertain to which of the two cities of the name these coins belong; Eckhel, vol. iv. pp. 130, 131; Rasche, *s. v.*) We learn from Sallust that the commercial intercourse of Leptis with the native tribes had led to a sharing of the *connubium*, and hence to an admixture of the language of the city with the Libyan dialects (*Jug.* 78). In fact, Leptis, like the neighbouring *Tripoly*, which, with a vastly inferior site, has succeeded to its position, was the great emporium for the trade with the Garamantes and Phazania and the eastern part of

Inner Libya. But the remains of the New City seem to belong almost entirely to the period of the Roman Empire, and especially to the reign of Septimius Severus, who restored and beautified this his native city. (Spart. *Sev.* 1; Aurel. Vict. *Ep.* 20.) It had already before acquired considerable importance under the Romans, whose cause it espoused in the war with Jugurtha (Sall. *Jug.* 77—79; as to its later condition see Tac. *Hist.* iv. 50); and if, as Eckhel inclines to believe, the coins with the epigraph COL. VIC. IUL. LEP. belong mostly, if not entirely, to Leptis Magna, it must have been made a colony in the earliest period of the empire. It was still a flourishing and populous fortified city in the 4th century, when it was greatly injured by an assault of a Libyan tribe, called the AURUSIANI (Ammian. xxviii. 6); and it never recovered from the blow.

3. Justinian is said to have enclosed a portion of it with a new wall; but the city itself was already too far buried in the sand to be restored; and, as far as we can make out, the little that Justinian attempted seems to have amounted only to the enclosure of a suburb, or old Libyan camp, some distance to the E. of the river, on the W. bank of which the city itself had stood. (Procop. *de Aed.* vi. 4; comp. Barth.) Its ruin was completed during the Arab conquest (Leo, *Afr.* p. 435); and, though we find it, in the middle ages, the seat of populous Arab camps, no attempt has been made to make use of the splendid site, which is now occupied by the insignificant village of *Legâtah*, and the hamlet of *El-Hush*, which consists of only four houses. (For particulars of the ruins, see Lucas, *Proceedings of the Association, &c.* vol. ii. p. 66, Lond. 1810; Della Cella, *Viaggio, &c.* p. 40; Beechey, *Proceedings, &c.* chap. vi. pp. 50, foll.; Russell's *Barbary;* Barth, *Wanderungen, &c.* pp. 305—315.) [P. S.]

COIN OF LEPTIS.

LERINA and LERON. Strabo (p. 185) says: "After the Stoechades are Planasia and Leron (ἡ Πλανασία καὶ Λήρων), which are inhabited; and in Leron there is also a Leroum of Leron, and Leron is in front of Antipolis." (*Antibes.*) Pliny (iii. 5) has "Lero, et Lerina adversus Antipolim." Ptolemy (ii. 10. § 21) places Lerone (Ληρώνη) before the mouth of the *Var.* Lerina once had a town named Vergoanum (Pliny). The Maritime Itin. places "Lero et Lerinas insulae" 11 M. P. from Antipolis.

These two islands are the *Lérins*, off the coast of the French department of *Var.* Strabo's Planasia is supposed to be Lerina, because it is flat; Leron must then be the larger island, called *Sainte Marguerite;* and D'Anville conjectures that the monastery dedicated to Sainte Marguerite took the place of the Leroum of Lero, which is mentioned by Strabo. The position of these two small islands is fixed more accurately by the Itin. than by the geographers. Lerina, from which the modern name *Lérins* comes, is very small; it is called *St. Honorat*, from a bishop of Arles in the fifth century, who was also a saint. [G. L.]

LERNA or LERNE (Λέρνα, Λέρνη), the name of a marshy district at the south-western extremity of the Argive plain, near the sea, and celebrated as the spot where Hercules slew the many-headed Hydra, or water-snake. [See *Dict. of Biogr.* Vol. II. p. 394.] In this part of the plain, there is a number of copious springs, which overflow the district and turn it into a marsh; and there can be little doubt that the victory of Hercules over the Hydra, is to be understood of a successful attempt of the ancient lords of the Argive plain to bring its marshy extremity into cultivation, by draining its sources and embanking its streams. The name of Lerna is usually given to the whole district (Paus. ii. 15. § 5, ii. 24. § 3, ii. 36. § 6, ii. 38. § 1; Plut. *Cleom.* 15), but other writers apply it more particularly to the river and the lake. (Strab. viii. p. 368.) The district was thoroughly drained in antiquity, and covered with sacred buildings, of which Pausanias has left us an account (ii. 36, 37). A road led from Argos to Lerna, and the distance from the gate of the city to the sea-coast of Lerna was 40 stadia. Above Lerna is the Mountain PONTINUS (Ποντῖνος), which according to Pausanias absorbs the rain water, and thus prevents it from running off. On its summit, on which there are now the ruins of a mediaeval castle, Pausanias saw the remains of a temple of Athena Saitis, and the foundations of the house of Hippomedon, one of the seven Argive chiefs who marched against Thebes. (Λερναῖα δ' οἰκεῖ νάμαθ' Ἱππομέδων ἄναξ, Eurip. *Phoen.* 126.) The grove of Lerna, which consisted for the most part of plane trees, extended from Mount Pontinus to the sea, and was bounded on one side by a river called Pontinus, and on the other by a river named Amymone. The grove of Lerna contained two temples, in one of which Demeter Prosymna and Dionysus were worshipped, and in the other Dionysus Saotes. In this grove a festival, called the Lernaea, was celebrated in honour of Demeter and Dionysus. Pausanias also mentions the fountain of Amphiaraus, and the Alcyonian pool (ἡ Ἀλκυονία λίμνη), through which the Argives say that Dionysus descended into Hades in order to recover Semele. The Alcyonian pool was said to be unfathomable, and the emperor Nero in vain attempted to reach its bottom with a sounding line of several fathoms in length. The circumference of the pool is estimated by Pausanias as only one-third of a stadium: its margin was covered with grass and rushes. Pausanias was told that, though the lake appeared so still and quiet, yet, if any one attempted to swim over it, he was dragged down to the bottom. Here Prosymnus is said to have pointed out to Dionysus the entrance in the lower world. A nocturnal ceremony was connected with this legend; expiatory rites were performed by the side of the pool, and, in consequence of the impurities which were then thrown into the pool, the proverb arose of a Lerna of ills. (Λέρνη κακῶν; see Preller, *Demeter*, p. 212.)

The river Pontinus issues from three sources at the foot of the hill, and joins the sea north of some mills, after a course of only a few hundred yards. The Amymone is formed by seven or eight copious sources, which issue from under the rocks, and which are evidently the subterraneous outlet of one of

the katavothra of the Arcadian vallies. The river soon after enters a small lake, a few hundred yards in circumference, and surrounded with a great variety of aquatic plants; and it then forms a marsh extending to the sea-shore. The lake is now walled in, and the water is diverted into a small stream which turns some mills standing close to the sea-shore. This lake is evidently the Alcyonian pool of Pausanias; for although he does not say that it is formed by the river Amymone, there can be no doubt of the fact. The lake answers exactly to the description of Pausanias, with the exception of being larger; and the tale of its being unfathomable is still related by the millers in the neighbourhood. Pausanias is the only writer who calls this lake the Alcyonian pool; other writers gave it the name of Lernaean; and the river Amymone, by which it is formed, is likewise named Lerna. The fountain of Amphiaraus can no longer be identified, probably in consequence of the enlargement of the lake. The station of the hydra was under a palm-tree at the source of the Amymone; and the numerous heads of the water-snake may perhaps have been suggested by the numerous sources of this river. Amymone is frequently mentioned by the poets. It is said to have derived its name from one of the daughters of Danaus, who was beloved by Poseidon; and the river gushed forth when the nymph drew out of the rock the trident of the god. (Hygin. *Fab.* 169.) Hence Euripides (*Phoen.* 188) speaks of Ποσειδώνια Ἀμυμώνια ὕδατα. (Comp. Propert. ii. 26, 47; Ov. *Met.* ii. 240.)

(Dodwell, *Classical Tour*, vol. ii. p. 225; Leake, *Morea*, vol. ii. p. 472, seq; Boblaye, *Récherches, &c.* p. 47; Mure, *Tour in Greece*, vol. ii. p. 194; Ross, *Reisen im Peloponnes*, p. 150; Curtius, *Peloponnesos*, vol. ii. p. 368, seq.)

LEROS (Λέρος: *Eth.* Λέριος: *Leros*), a small island of the Aegean, and belonging to the scattered islands called Sporades. It is situated opposite the Sinus Iassius, on the north of Calymna, and on the south of Lepsia, at a distance of 320 stadia from Cos and 350 from Myndus. (*Stadiasm. Mar. Magni*, §§ 246, 250, 252.) According to a statement of Anaximenes of Lampsacus, Leros was, like Icaros, colonised by Milesians. (Strab. xiv. p. 635.) This was probably done in consequence of a suggestion of Hecataeus; for on the breaking out of the revolt of the Ionians against Persia, he advised his countrymen to erect a fortress in the island, and make it the centre of their operations, if they should be driven from Miletus. (Herod. v. 125; comp. Thucyd. viii. 27.) Before its occupation by the Milesians, it was probably inhabited by Dorians. The inhabitants of Leros were notorious in antiquity for their ill nature, whence Phocylides sang of them:—

> Λέριοι κακοί, οὐχ ὁ μὲν, ὃς δ' οὔ,
> Πάντες, πλὴν Προκλέους· καὶ Προκλέης Λέριος.

(Strab. x. p. 487, &c.) The town of Leros was situated on the west of the modern town, on the south side of the bay, and on the slope of a hill; in this locality, at least, distinct traces of a town have been discovered by Ross. (*Reisen auf d. Griech. Inseln*, ii. p. 119.) The plan of Hecataeus to fortify Leros does not seem to have been carried into effect. Leros never was an independent community, but was governed by Miletus, as we must infer from inscriptions, which also show that Milesians continued to inhabit the island as late as the time of the Romans. Leros contained a sanctuary of Artemis Parthenos, in which, according to mythology, the sisters of Meleager were transformed into guinea fowls (μελεαγρίδες; Anton. Lib. 2; comp. Ov. *Met.* viii. 533, &c.), whence these birds were always kept in the sanctuary of the goddess. (Athen. xiv. p. 655.) In a valley, about ten minutes' walk from the sea, a small convent still bears the name of *Partheni*, and at a little distance from it there are the ruins of an ancient Christian church, evidently built upon some ancient foundation, which seems to have been that of the temple of Artemis Parthenos. "This small island," says Ross, "though envied on account of its fertility, its smiling valleys, and its excellent harbours, is nevertheless scorned by its neighbours, who charge its inhabitants with niggardliness" (*l. c.* p. 122; comp. Böckh, *Corp. Inscript.* n. 2263; Ross, *Inscript. ined.* ii. 188.) [L. S.]

LESBOS (Λέσβος: *Eth.* and *Adj.* Λέσβιος, Λεσβικός, Λεσβιακός, Lesbius, Lesbicus, Lesbiacus: *fem.* Λεσβίς, Λεσβιάς, Lesbis, Lesbias: in the middle ages it was named Mitylene, from its principal city: Geog. Rav. v. 21: Suidas. *s. v.*; Hierocl. p. 686; Eustath. *ad Il.* ix. 129, *Od.* iii. 170: hence it is called by the modern Greeks *Mitylen* or *Metelino*, and by the Turks *Medilli* or *Medellu-Adassi*.) Like several other islands of the Aegean, Lesbos is said by Strabo, Pliny and others to have had various other names, Issa, Himerte, Lasia, Pelasgia, Aegira, Aethiope, and Macaria. (Strab. i. p. 160, v. p. 128; Plin. v. 31 (39); Diod. iii. 55, v. 81.)

Lesbos is situated off the coast of Mysia, exactly opposite the opening of the gulf of Adramyttium. Its northern part is separated from the mainland near Assos [Assos] by a channel about 7 miles broad; and the distance between the south-eastern extremity and the islands of Arginusae [ARGINUSAE] is about the same. Strabo reckons the breadth of the former strait at 60 stadia, and Pliny at 7 miles: for the latter strait see Strab. xiii. pp. 616, 617, and Xen. *Hell.* i. 6. §§ 15—28. The island lies between the parallels of 38° 58′ and 39° 24′. Pliny states the circumference as 168 miles, Strabo as 1100 stadia. According to Choiseul-Gouffier, the latter estimate is rather too great. Scylax (p. 56) assigns to Lesbos the seventh rank in size among the islands of the Mediterranean sea.

In shape Lesbos may be roughly described as a triangle, the sides of which face respectively the NW., the NE., and the SW. The northern point is the promontory of Argennum, the western is that of Sigrium (still called *Cape Sigri*), the south-eastern is that of Malea (now called *Zeitoun Bouroun* or *Cape St. Mary*). But though this description of the island as triangular is generally correct, it must be noticed that it is penetrated far into the interior by two gulfs, or *sea-lochs* as they may properly be called, on the south-western side. One of these is *Port Hiero* or *Port Olivier*, "one of the best harbours of the Archipelago," opening from the sea about 4 miles to the westward of Cape Malea, and extending about 8 miles inland among the mountains. It may be reasonably conjectured that its ancient name was Portus Hieraeus; since Pliny mentions a Lesbian city called Hiera, which was extinct before his time. The other arm of the sea, to which we have alluded, is about half-way between the former and Cape Sigrium. It is the "beautiful and extensive basin, named *Port Caloni*," and anciently called Euripus Pyrrhaeus. From the extreme narrowness of the entrance, it is less adapted for the

purposes of a harbour. Its ichthyology is repeatedly mentioned by Aristotle as remarkable. (*Hist. Animal.* v. 10. § 2, v. 13. § 10, viii. 20. § 15, ix. 25. § 8.)

The surface of the island is mountainous. The principal mountains were Ordymnus in the W., Olympus in the S., and Lepethymnus in the N. Their elevations, as marked in the English Admiralty Charts, are respectively, 1780, 3080, and 2750 feet. The excellent climate and fine air of Lesbos are celebrated by Diodorus Siculus (v. 82), and it is still reputed to be the most healthy island in the Archipelago. (Purdy's *Sailing Directory*, p. 154.) Tacitus (*Ann.* vi. 3) calls it "insula nobilis et amoena." Agates were found there (Plin. xxxvii. 54), and its quarries produced variegated marble (xxxvi. 5). The wholesome Lesbian wines ("innocentis pocula Lesbii," Hor. *Carm.* i. 17, 21) were famous in the ancient world; but of this a more particular account is given under METHYMNA. The trade of the island was active and considerable; but here again we must refer to what is said concerning its chief city MYTILENE. At the present day the figs of Lesbos are celebrated; but its chief exports are oil and gall-nuts. The population was estimated, in 1816, at 25,000 Greeks and 5000 Turks.

Tradition says that the first inhabitants of Lesbos were Pelasgians: and Xanthus was their legendary leader. Next came Ionians and others, under Macareus, who is said by Diodorus (v. 80) to have introduced written laws two generations before the Trojan war. Last were the Aeolian settlers, under the leadership of Lesbus, who appears in Strabo under the name Graus, and who is said to have married Methymna, the daughter of Macareus. Mytilene was the elder daughter. This is certain, that the early history of Lesbos is identical with that of the Aeolians. Strabo regards it as their central seat (σχέδον μητρόπολις, xiii. pp. 616, 622). In mercantile enterprise, in resistance to the Persians, and in intellectual eminence, the insular Aeolians seem to have been favourably contrasted with their brethren on the continent. That which Horace calls "Aeolium carmen" and "Aeoliae fides" (*Carm.* ii. 13. 24, iii. 30. 13) was due to the genius of Lesbos: and Niebuhr's expression regarding this island is, that it was "the pearl of the Aeolian race." (*Lectures on Ancient Ethnology and Geography*, vol. i. p. 218.)

Lesbos was not, like several other islands of the Archipelago, such as Cos, Chios and Samos, the territory of one city. We read of six Aeolian cities in Lesbos, each of which had originally separate possessions and an independent government, and which were situated in the following geographical order. METHYMNA (now *Molivo*) was on the north, almost immediately opposite Assos, from which it was separated by one of the previously mentioned straits. Somewhere in its neighbourhood was ARISBA, which, however, was incorporated in the Methymnaean territory before the time of Herodotus (i. 151). Near the western extremity of the island were ANTISSA and ERESSUS. The former was a little to the north of Cape Sigrium, and was situated on a small island, which in Pliny's time (ii. 91) was connected with Lesbos itself. The latter was on the south of the promontory, and is still known under the name of *Erissi*, a modern village, near which ruins have been found. At the head of *Port Caloni* was PYRRHA, which in Strabo's time had been swallowed up by the sea, with the exception of a suburb. (Strab. xiii. p. 618; see Plin. v. 31.) The name of *Pera* is still attached to this district according to Pococke. On the eastern shore, facing the mainland, was MYTILENE. Besides these places, we must mention the following: — HIERA, doubtless at the head of *Port Olivier*, said by Pliny to have been destroyed before his day; AGAMEDE, a village in the neighbourhood of Pyrrha; NAPE, in the plain of Methymna; AEGIRUS, between Methymna and Mytilene; and POLIUM, a site mentioned by Stephanus B. Most of these places are noticed more particularly under their respective names. All of them decayed, and became unimportant, in comparison with Methymna and Mytilene, which were situated on good harbours opposite the mainland, and convenient for the coasting-trade. The annals of Lesbos are so entirely made up of events affecting those two cities, especially the latter, that we must refer to them for what does not bear upon the general history of the island.

From the manner in which Lesbos is mentioned both in the Iliad and Odyssey (*Il.* xxiv. 544, *Od.* iv. 342), it is evident that its cities were populous and flourishing at a very early period. They had also very large possessions on the opposite coast. Lesbos was not included in the conquests of Croesus. (Herod. i. 27.) The severe defeat of the Lesbians by the Samians under Polycrates (iii. 39) seems only to have been a temporary disaster. It is said by Herodotus (i. 151) that at first they had nothing to fear, when Cyrus conquered the territories of Croesus on the mainland: but afterwards, with other islanders, they seem to have submitted voluntarily to Harpagus (i. 169). The situation of this island on the very confines of the great struggle between the Persians and the Greeks was so critical, that its fortunes were seriously affected in every phase of the long conflict, from this period down to the peace of Antalcidas and the campaigns of Alexander.

The Lesbians joined the revolt of Aristagoras (Herod. vi. 5, 8), and one of the most memorable incidents in this part of its history is the consequent hunting down of its inhabitants, as well as those of Chios and Tenedos, by the Persians (Herod. vi. 31; Aesch. *Pers.* 881). After the battles of Salamis and Mycale they boldly identified themselves with the Greek cause. At first they attached themselves to the Lacedaemonian interest: but before long they came under the overpowering influence of the naval supremacy of Athens. In the early part of the Peloponnesian War, the position of Lesbos was more favourable than that of the other islands: for, like Corcyra and Chios, it was not required to furnish a money-tribute, but only a naval contingent (Thuc. ii. 9). But in the course of the war, Mytilene was induced to intrigue with the Lacedaemonians, and to take the lead in a great revolt from Athens. The events which fill so large a portion of the third book of Thucydides — the speech of Cleon, the change of mind on the part of the Athenians, and the narrow escape of the Lesbians from entire massacre by the sending of a second ship to overtake the first — are perhaps the most memorable circumstances connected with the history of this island. The lands of Lesbos were divided among Athenian citizens (κληροῦχοι), many of whom, however, according to Boeckh, returned to Athens, the rest remaining as a garrison. Methymna had taken no part in the revolt, and was exempted from the punishment After the Sicilian expedition, the Lesbians again wavered in their allegiance to Athens; but the result was unim-

portant (Thucyd. viii. 5, 22, 23, 32, 100). It was near the coast of this island that the last great naval victory of the Athenians during the war was won, that of Conon over Callicratidas at Arginusae. On the destruction of the Athenian force by Lysander at Aegospotami, it fell under the power of Sparta; but it was recovered for a time by Thrasybulus (Xen. *Hell.* iv. 8. §§ 28—30). At the peace of Antalcidas it was declared independent. From this time to the establishment of the Macedonian empire it is extremely difficult to fix the fluctuations of the history of Lesbos in the midst of the varying influences of Athens, Sparta, and Persia.

After the battle of the Granicus, Alexander made a treaty with the Lesbians. Memnon the Rhodian took Mytilene and fortified it, and died there. Afterwards Hegelochus reduced the various cities of the island under the Macedonian power. (For the history of these transactions see Arrian, *Exped. Alex.* iii. 2; Curt. *Hist. Alex.* iv. 5.) In the war of the Romans with Perseus, Labeo destroyed Antissa for aiding the Macedonians, and incorporated its inhabitants with those of Methymna (Liv. xlv. 31. Hence perhaps the true explanation of Pliny's remark, *l. c.*). In the course of the Mithridatic War, Mytilene incurred the displeasure of the Romans by delivering up M'. Aquillius (Vell. Pat. ii 18; Appian, *Mithr.* 21). It was also the last city which held out after the close of the war, and was reduced by M. Minucius Thermus,—an occasion on which Julius Caesar distinguished himself, and earned a civic crown by saving the life of a soldier (Liv. *Epit.* 89; Suet. *Caes.* 2; see Cic. *contra Rull.* ii. 16). Pompey, however, was induced by Theophanes to make Mytilene a free city (Vell. Pat. *l. c.*; Strab. xiii. p. 617), and he left there his wife and son during the campaign which ended at Pharsalia. (Appian, *B. C.* ii. 83; Plut. *Pomp.* 74, 75.) From this time we are to regard Lesbos as a part of the Roman province of Asia, with Mytilene distinguished as its chief city, and in the enjoyment of privileges more particularly described elsewhere. We may mention here that a few imperial coins of Lesbos, as distinguished from those of the cities, are extant, of the reigns of M. Aurelius and Commodus, and with the legend ΚΟΙΝΟΝ ΛΕϹΒΙΩΝ (Eckhel, vol. ii. p. 501; Mionnet, vol. iii. pp. 34, 35).

In the new division of provinces under Constantine, Lesbos was placed in the *Provincia Insularum* (Hierocl. p. 686, ed. Wesseling). A few detached notices of its fortunes during the middle ages are all that can be given here. On the 15th of August, A.D. 802, the empress Irene ended her extraordinary life here in exile. (See Le Beau, *Hist. du Bas Empire*, vol. xii. p. 400.) In the thirteenth century, contemporaneously with the first crusade, Lesbos began to be affected by the Turkish conquests: Tzachas, Emir of Smyrna, succeeded in taking Mytilene, but failed in his attempt on Methymna. (Anna Comn. *Alex.* lib. vii. p. 362, ed. Bonn.) Alexis, however, sent an expedition to retake Mytilene, and was successful (Ib. ix. p. 425). In the thirteenth century Lesbos was in the power of the Latin emperors of Constantinople, but it was recovered to the Greeks by Joannes Ducas Vatatzes, emperor of Nicaea (see his life in the *Dict. of Biography*). In the fourteenth century Joannes Palaeologus gave his sister in marriage to Francisco Gateluzzio, and the island of Lesbos as a dowry; and it continued in the possession of this family till its final absorption in the Turkish empire (Ducas, *Hist. Byzant.* p. 46, ed. Bonn). It appears, however, that these princes were tributary to the Turks (Ib. p. 328). In 1457, Mahomet II. made an unsuccessful assault on Methymna, in consequence of a suspicion that the Lesbians had aided the Catalan buccaneers (Ib. p. 338; see also Vertot, *Hist. de l'Ordre de Malte*, ii. 258). He did not actually take the island till 1462. The history of the annalist Ducas himself is closely connected with Lesbos: he resided there after the fall of Constantinople; he conveyed the tribute from the reigning Gateluzzio to the sultan at Adrianople; and the last paragraph of his history is an unfinished account of the final catastrophe of the island.

This notice of Lesbos would be very incomplete, unless something were said of its intellectual eminence. In reference to poetry, and especially poetry in connection with music, no island of the Greeks is so celebrated as Lesbos. Whatever other explanation we may give of the legend concerning the head and lyre of Orpheus being carried by the waves to its shores, we may take it as an expression of the fact that here was the primitive seat of the music of the lyre. Lesches, the cyclic minstrel, a native of Pyrrha, was the first of its series of poets. Terpander, though his later life was chiefly connected with the Peloponnesus, was almost certainly a native of Lesbos, and probably of Antissa: Arion, of Methymna, appears to have belonged to his school; and no two men were so closely connected with the early history of Greek music. The names of Alcaeus and Sappho are the most imperishable elements in the renown of Mytilene. The latter was sometimes called the tenth Muse (as in Plato's epigram, Σαπφὼ Λεσβόθεν ἡ δεκάτη); and a school of poetesses (Lesbiadum turba, Ovid, *Her.* xv.) seems to have been formed by her. Here, without entering into the discussions, by Welcker and others, concerning the character of Sappho herself, we must state that the women of Lesbos were as famous for their profligacy as their beauty. Their beauty is celebrated by Homer (*Il.* ix. 129, 271), and, as regards their profligacy, the proverbial expression λεσβιάζειν affixes a worse stain to their island than κρητίζειν does to Crete.

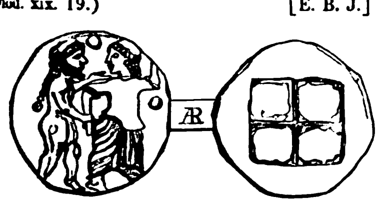
Lesbos seems never to have produced any distinguished painter or sculptor, but Hellanicus and Theophanes the friend of Pompey are worthy of being mentioned among historians; and Pittacus, Theophrastus, and Cratippus are known in the annals of philosophy and science. Pittacus was famous also as a legislator. These eminent men were all natives of Mytilene, with the exception of Theophrastus, who was born at Eresus.

The fullest account of Lesbos is the treatise of S. L. Plehn, *Lesbiacorum Liber*, Berlin, 1826. In this work is a map of the island; but the English Admiralty charts should be consulted, especially Nos. 1654 and 1665. Forbiger refers to reviews of Plehn's work by Meier in the *Hall. Allg. Lit. Zeit.* for 1827, and by O. Müller in the *Goett. Gel. Anz.* for 1828; also to Lander's *Beiträge zur Kunde der Insel Lesbos*, Hamb. 1827. Information regarding the modern condition of the island will be obtained from Pococke, Tournefort, Richter, and Prokesch. [J. S. H.]

LE'SORA MONS (*Mont Lozère*), a summit of the *Cévennes*, above 4800 feet high, is mentioned by Sidonius Apollinaris (Carm. 24, 44) as containing the source of the Tarnis (*Tarn*):—

> "Hinc te Lesora Caucasum Scytharum
> Vincens aspiciet citusque Tarnis."

The pastures on this mountain produced good cheese in Pliny's time (*H. N.* xi. 42), as they do now. *Mont Lozère* gives its name to the French department *Lozère*. [G. L.]



LESSA (Λῆσσα), a village of Epidauria, upon the confines of the territory of Argos, and at the foot of Mount Arachnaeum. Pausanias saw there a temple of Athena. The ruins of Lessa are situated upon a hill, at the foot of which is the village of *Lykurió*. On the outside of the walls, near the foot of the mountain, are the remains of an ancient pyramid, near a church, which contains some Ionic columns. (Paus. ii. 25. § 10; Leake, *Morea*, vol. ii. p. 419; Boblaye, *Récherches, &c.* p. 53; Curtius, *Peloponnesos*, vol. ii. p. 418.)

LESTADAE. [NAXOS.]

LE'SURA, a branch of the Mosella (*Mosel*), mentioned by Ausonius (*Mosella*, v. 365). He calls it "exilis," a poor, ill-fed stream. The resemblance of name leads us to conclude that it is the *Leser* or *Lisse*, which flows past *Wittlich*, and joins the *Mosel* on the left bank. [G. L.]

LETANDROS, a small island in the Aegaean sea, near Amorgos, mentioned only by Pliny (iv. 12. s. 23).

LETE (Λήτη: *Eth.* Λητοῖος), a town of Macedonia, which Stephanus B. asserts to have been the native city of Nearchus, the admiral of Alexander the Great; but in this he is certainly mistaken, as Nearchus was a Cretan. (Comp. Arrian, *Ind.* 18; Diod. xix. 19.) [E. B. J.]

COIN OF LETE.

LETHAEUS (Ληθαῖος, Strab. x. p. 478; Ptol. iii. 17. § 4; Eustath. *ad Hom. Il.* ii. 646; Solin. 17; Vib. Seq. 13), the large and important river which watered the plain of Gortyna in Crete, now the *Malogniti*. [E. B. J.]

LETHAEUS (Ληθαῖος), a small river of Caria, which has its sources in Mount Pactyes, and after a short course from north to south discharges itself into the Maeander, a little to the south-east of Magnesia. (Strab. xii. p. 554, xiv. p. 647; Athen. xv. p. 683.) Arundell (*Seven Churches*, p. 57) describes the river which he identifies with the ancient Lethaeus, as a torrent rushing along over rocky ground, and forming many waterfalls. [L. S.]

LETHES FL. [GALLAECIA.]

LETO'POLIS (Λητοῦς πόλις, Ptol. iv. 5. § 46; Λητοῦς, Steph. B. *s. v.*; Letus, *Itin. Anton.* p. 156: *Eth.* Λητοπολίτης), a town in Lower Egypt, near the apex of the Delta, the chief of the nome Letopolites, but with it belonging to the nomos or prefecture of Memphis. (Strab. xvii. p. 807.) It was probably situated on the banks of the canal of Memphis, a few miles SW. of Cercasorum. Leto, from whom the town and the nome derived their name, was an appellation of the deity Athor, one of the eight Dii Majores of Aegypt. Lat. 30° N. [W. B. D.]

LETRINI (Λέτρινοι, Paus.; Λετρίνα, Xen.), a town of Pisatis in Elis, situated near the sea, upon the Sacred Way leading from Elis to Olympia, at the distance of 180 stadia from Elis, and 120 from Olympia. It was said to have been founded by Letreus, a son of Pelops. (Paus. vi. 22. § 8.) Together with several of the other dependent townships of Elis, it joined Agis, when he invaded the territories of Elis; and the Eleians were obliged to surrender their supremacy over Letrini by the peace which they concluded with the Spartans in B. C. 400. (Xen. *Hell.* iii. 2. §§ 25, 30.) Xenophon (*l. c.*) speaks of Letrini, Amphidoli, and Marganeis as Triphylian places, although they were on the right bank of the Alpheius; and if there is no corruption in the text, which Mr. Grote thinks there is (*Hist. of Greece*, vol. ix. p. 415), the word Triphylian must be used in a loose sense to signify the dependent townships of Elis. The Λετριναῖαι γύαι are mentioned by Lycophron (158). In the time of Pausanias nothing remained of Letrini except a few houses and a temple of Artemis Alpheiaca. (Paus. *l. c.*) Letrini may be placed at the village and monastery of *St. John*, between *Pyrgo* and the port of *Katákolo*, where, according to Leake, among many fragments of antiquity, a part of a large statue was found some years ago. (Leake, *Morea*, vol. ii. p. 188; Boblaye, p. 130, &c.; Curtius, *Peloponnesos*, vol. i. p. 72.)

LEVACI, a people in Caesar's division of Gallia, which was inhabited by the Belgae. The Levaci, with some other small tribes, were dependent on the Nervii. (*B. G.* v. 39.) The position of the Levaci is unknown. [G. L.]

LEVAE FANUM, in Gallia Belgica is placed by the Table on the road from Lugdunum Batavorum (*Leiden*) to Noviomagus (*Nymegen*). Levae Fanum is between Fletio (*Vleuten*) and Carvo; 25 M. P. from Fletio and 12 from Carvo. [CARVO.] D'Anville, assuming that he has fixed Carvo right, supposes that there is some omission of places in the Table between Fletio and Carvo, and that we cannot rely upon it. He conjectures that Levae Fanum may be a little beyond *Dursteede*, on the bank opposite to that of the Batavi, at a place which he calls *Liven-dael* (vallis Levae), this Leva being some local divinity. Walckenaer fixes Levae Fanum at *Leersum*. [G. L.]

LEUCA (τὰ Λευκά, Strab.: *Leuca*), a small town of Calabria, situated close to the Iapygian promontory, on a small bay immediately to the W. of that celebrated headland. Its site is clearly marked by an ancient church still called *Sta. Maria di Leuca*, but known also as the *Madonna di Finisterra*, from its situation at the extreme point of Italy in this direction. The Iapygian promontory itself is now known as the *Capo di Leuca*. Strabo is the only author who mentions a town of this name (vi. p. 281), but Lucan also notices the "secreta littora Leucae" (v. 375) as a port frequented by shipping; and its advantageous position, at a point where so many ships must necessarily touch, would soon create a town upon the spot. It was probably never a municipal town, but a large village or *borgo*, such as now exists upon the spot in consequence of the double attraction of the port and sanctuary. (Rampoldi, *Corogr. dell' Italia*, vol. ii. p. 442.)

Strabo tells us (*l. c.*) that the inhabitants of Leuca showed there a spring of fetid water, which they pretended to have arisen from the wounds of some of the giants which had been expelled by Hercules from the Phlegraean plains, and who had taken refuge here. These giants they called Leuternii,

and hence gave the name of LEUTERNIA to all the surrounding district. The same story is told, with some variations, by the pseudo-Aristotle (*de Mirab.* 97); and the name of Leutarnia is found also in Lycophron (*Alex.* 978), whose expressions, however, would have led us to suppose that it was in the neighbourhood of Siris rather than of the Iapygian promontory. Tzetzes (*ad loc.*) calls it a *city* of Italy, which is evidently only an erroneous inference from the words of his author. The Laternii of Scylax, whom he mentions as one of the tribes that inhabited Iapygia, may probably be only another form of the same name, though we meet in no other writer with any allusion to their existence as a real people. [E. H. B.]

LEUCA, the name given by Pomponius Mela (i. 16), to a district on the west of Halicarnassus, between that city and Myndus. Pliny (*H. N.* v. 29) mentions a town, Leucopolis, in the same neighbourhood, of which, however, nothing else is known to us. [L. S.]

LEUCADIA. [LEUCAS.]

LEUCAE or LEUCE (Λεῦκαι, Λεύκη), a small town of Ionia, in the neighbourhood of Phocaea, was situated, according to Pliny (v. 31), "in promontorio quod insula fuit." From Scylax (p. 37) we learn that it was a place with harbours. According to Diodorus (xv. 18) the Persian admiral Tachos founded this town on an eminence on the sea coast, in B.C. 352; but shortly after, when Tachos had died, the Clazomenians and Cymaeans quarrelled about its possession, and the former succeeded by a stratagem in making themselves masters of it. At a later time Leucae became remarkable for the battle fought in its neighbourhood between the consul Licinius Crassus and Aristonicus, B.C. 131. (Strab. xiv. p. 646; Justin, xxxvi. 4.) Some have supposed this place to be identical with the Leuconium mentioned by Thucydides (viii. 24); but this is impossible, as this latter place must be looked for in Chios. The site of the ancient Leucae cannot be a matter of doubt, as a village of the name of *Levke*, close upon the sea, at the foot of a hill, is evidently the modern representative of its ancient namesake. (Arundell, *Seven Churches*, p. 295.) [L. S.]

LEUCAE (Λεῦκαι), a town of Laconia situated at the northern extremity of the plain Leuce, now called *Phiniki*, which extended inland between Acriae and Asopus on the eastern side of the Laconian gulf. (Polyb. v. 19; Liv. xxxv. 27; Strab. viii. p. 363; Leake, *Morea*, vol. i. p. 226, seq.; Boblaye, *Recherches*, *&c.* p. 95; Curtius, *Peloponnesos*, vol. ii. p. 290.)

LEUCARUM, a town in Britain, mentioned in the Itinerary as being 15 miles from Isca Dumnuniorum, and 15 from Nidum. The difficulties involved in this list (viz. that of the 12th Itinerary) are noticed under MURIDUNUM. The *Monumenta Britannica* suggests both *Glastonbury* in Somersetshire, and *L'wghor* in Glamorganshire. [R. G. L.]

LEUCAS (Λευκάς), a place in Bithynia, on the river Gallus, in the south of Nicaea, is mentioned only by Anna Comnena (p. 470), but can be easily identified, as its name *Lefke* is still borne by a neat little town in the middle of the beautiful valley of the Gallus. (Leake, *Asia Minor*, pp. 12, 13.) [L. S.]

LEUCAS, LEUCA'DIA (Λευκάς, Thuc., Xen., Strab.; Λευκαδία, Thuc. Liv.: *Eth.* Λευκάδιος), an island in the Ionian sea, separated by a narrow channel from the coast of Acarnania. It was originally part of the mainland, and as such is described by Homer, who calls it the Acte or peninsula of the mainland. (Ἀκτὴ ἠπείροιο, *Od.* xxiv. 377; comp. Strab. x. pp. 451, 452.) Homer also mentions its well-fortified town NERICUS (Νήρικος, *l. c.*) Its earliest inhabitants were Leleges and Teleboans (Strab. vii. p. 322), but it was afterwards peopled by Acarnanians, who retained possession of it till the middle of the seventh century B. C., when the Corinthians, under Cypselus, founded a new town near the isthmus, which they called Leucas, where they settled 1000 of their citizens, and to which they removed the inhabitants of the old town of Nericus. (Strab. *l. c.*; Scylax, p. 13; Thuc. i. 30; Plut. *Them.* 24; Scymn. Chius, 464.) Scylax says that the town was first called Epileucadii. The Corinthian colonists dug a canal through this isthmus, and thus converted the peninsula into an island. (Strab. *l. c.*) This canal, which was called Dioryctus, and was, according to Pliny, 3 stadia in length (Διόρυκτος, Polyb. v. 5; Plin. iv. 1. s. 2), was after filled up by deposits of sand; and in the Peloponnesian War, it was no longer available for ships, which during that period were conveyed across the isthmus on more than one occasion. (Thuc. iii. 81, iv. 8.) It was in the same state in B.C. 218; for Polybius relates (v. 5) that Philip, the son of Demetrius, had his galleys drawn across this isthmus in that year; and Livy, in relating the siege of Leucas by the Romans in B.C. 197, says, "Leucadia, nunc insula, et vadoso freto quod perfossum manu est, ab Acarnania divisa" (xxxiii. 17). The subsequent restoration of the canal, and the construction of a stone bridge, both of which were in existence in the time of Strabo, were no doubt the work of the Romans; the canal was probably restored soon after the Roman conquest, when the Romans separated Leucas from the Acarnanian confederacy, and the bridge was perhaps constructed by order of Augustus, whose policy it was to facilitate communications throughout his dominions.

Leucadia is about 20 miles in length, and from 5 to 8 miles in breadth. It resembles the Isle of Man in shape and size. It consists of a range of limestone mountains, terminating at its north-eastern extremity in a bold and rugged headland, whence the coast runs in a south-west direction to the promontory, anciently called Leucates, which has been corrupted by the Italians into *Cape Ducato*. The name of the cape, as well as of the island, is of course derived from its *white* cliffs. The southern shore is more soft in aspect, and more sloping and cultivated than the rugged rocks of the northern coast; but the most populous and wooded district is that opposite Acarnania. The interior of the island wears everywhere a rugged aspect. There is but little cultivation, except where terraces have been planted on the mountain sides, and covered with vineyards. The highest ridge of the mountains rises about 3000 feet above the sea.

Between the northern coast of Leucadia and that of Acarnania there is at present a lagoon about 3 miles in length, while its breadth varies from 100 yards to a mile and a half. The lagoon is in most parts only about 2 feet deep. This part of the coast requires a more particular description, which will be rendered clearer by the accompanying plan. At the north-eastern extremity of Leucadia a *lido*, or spit, of sand, 4 miles in length, sweeps out towards Acarnania. (See Plan, A.) On an isolated point opposite the extremity of this sandbank, is the fort of *Santa Maura*, erected in the middle ages by one of the Latin princes, but repaired

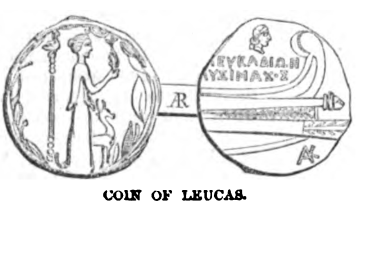
and modelled both by the Turks and Venetians. (Plan, B.) The fort was connected with the island by an aqueduct, serving also as a causeway, 1300 yards in length, and with 260 arches. (Plan, 5.) It was originally built by the Turks, but was ruined by an earthquake in 1825, and has not since been repaired. It was formerly the residence of the Venetian governor and the chief men of the island, who kept here their magazines and the cars (ἅμαξαι) on which they carried down their oil and wine from the inland districts, at the nearest point of the island. The congregation of buildings thus formed, and to which the inhabitants of the fortress gradually retired as the seas became more free from corsairs, arose by degrees to be the capital and seat of government, and is called, in memory of its origin, *Amaxichi* ('Αμαξίχιον). (Plan, C.) Hence the fort alone is properly called *Santa Maura*, and the capital *Amaxichi*; while the island at large retains its ancient name of Leucadia. The ruins of the ancient town of Leucas are situated a mile and a half to the SE. of *Amaxichi*. The site is called *Kaligóni*, and consists of irregular heights forming the last falls of the central ridge of the island, at the foot of which is a narrow plain between the heights and the lagoon. (Plan, D.) The ancient inclosure is almost entirely traceable, as well round the brow of the height on the northern, western, and southern sides, as from either end of the height across the plain to the lagoon, and along its shore. This, as Leake observes, illustrates Livy, who remarks (xxxiii. 17) that the lower parts of Leucas were on a level close to the shore. The remains on the lower ground are of a more regular, and, therefore, more modern masonry than on the heights above. The latter are probably the remains of Nericus, which continued to be the ancient acropolis, while the Corinthians gave the name of Leucas to the town which they erected on the shore below. This is, indeed, in opposition to Strabo, who not only asserts that the name was changed by the Corinthian colony, but also that Leucas was built on a different site from that of Neritus. (x. p. 452). But, on the other hand, the town continued to be called Nericus even as late as the Peloponnesian War (Thuc. iii. 7): and numerous instances occur in history of different quarters of the same city being known by distinct names. Opposite to the middle of the ancient city are the remains of the bridge and causeway which here crossed the lagoon. (Plan, 1.) The bridge was rendered necessary by a channel, which pervades the whole length of the lagoon, and admits a passage to boats drawing 5 or 6 feet of water, while the other parts of the lagoon are not more than 2 feet in depth. The great squared blocks which formed the ancient causeway are still seen above the shallow water in several places on either side of the deep channel, but particularly towards the Acarnanian shore. The bridge seems to have been kept in repair at a late period of time, there being a solid cubical fabric of masonry of more modern workmanship erected on the causeway on the western bank of the channel. Leake, from whom this description is taken, argues that Strabo could never have visited Leucadia, because he states that this isthmus, the ancient canal, the Roman bridge, and the city of Leucas were all in the same place; whereas the isthmus and the canal, according to Leake, were near the modern fort *Santa Maura*, at the distance of 3 miles north of the city of Leucas. But K. O. Müller, who is followed by Bowen and others, believe that the isthmus and canal were a little south of the city of Leucas, that is, between *Fort Alexander* (Plan, 2) on the island, and *Paleocaglia* on the mainland (Plan, 3). The channel is narrowest at this point, not being more than 100 yards across; and it is probable that the old capital would have been built close to the isthmus connecting the peninsula with the mainland. It has been conjectured that the long spit of sand, on which the fort *Santa Maura* has been built, probably did not exist in antiquity, and may have been thrown up at first by an earthquake.

Between the fort *Santa Maura* and the modern town *Amaxichi*, the Anglo-Ionian government have constructed a canal, with a towing-path, for boats drawing not more than 4 or 5 feet of water. (Plan, 4.) A ship-canal, 16 feet deep, has also been commenced across the whole length of the lagoon from *Fort Santa Maura* to *Fort Alexander*. This work, if it is ever brought to a conclusion, will open a sheltered passage for large vessels along the Acarnanian coast, and will increase and facilitate the commerce of the island. (Bowen, p. 78.)

PLAN.

A. Spit of sand, which Leake supposes to be the isthmus.
B. *Fort Santa Maura.*
C. *Amaxichi.*
D. City of Leucas.
E. Site of isthmus, according to K. O. Müller.
1. Remains of Roman bridge.
2. *Fort Alexander.*
3. *Paleocaglia.*
4. New canal.
5. Turkish aqueduct and bridge.

Of the history of the city of Leucas we have a few details. It sent three ships to the battle of Salamis (Herod. viii. 45); and as a colony of Corinth, it sided with the Lacedaemonians in the Peloponnesian War, and was hence exposed to the hostility of Athens. (Thuc. iii. 7.) In the Macedonian period Leucas was the chief town of Acarnania, and the place in which the meetings of the Acarnanian confederacy were held. In the war between Philip and the Romans, it sided with the Macedonian monarch, and was taken by the Romans after a gallant defence, B.C. 197. (Liv. xxxiii. 17.) After the conquest of Perseus, Leucas was separated by the Romans from the Acarnanian confederacy



(Liv. xlv. 31.) It continued to be a place of importance down to a late period, as appears from the fact that the bishop of Leucas was one of the Fathers of the Council of Nice in A. D. 325. The constitution of Leucas, like that of other Dorian towns, was originally aristocratical. The large estates were in the possession of the nobles, who were not allowed to alienate them; but when this law was abolished, a certain amount of property was no longer required for the holding of public offices, by which the government became democratic. (Aristot. *Pol.* ii. 4. § 4.)

Besides Leucas we have mention of two other places in the island, PHARA (Φαρά, Scylax, p. 13), and HELLOMENUM (Ἑλλόμενον, Thuc. iii. 94). The latter name is preserved in that of a harbour in the southern part of the island. Pherae was also in the same direction, as it is described by Scylax as opposite to Ithaca. It is perhaps represented by some Hellenic remains, which stand at the head of the bay called *Basilikè.*

The celebrated promontory LEUCATAS (Λευκάτας, Scylax, p. 13; Strab. x. pp. 452, 456, 461), also called LEUCATES or LEUCATE (Plin. iv. 1. s. 2; Virg. *Aen.* iii. 274, viii. 676; Claud. *Bell. Get.* 185; Liv. xxvi. 26), forming the south-western extremity of the island, is a broken white cliff, rising on the western side perpendicularly from the sea to the height of at least 2000 feet, and sloping precipitously into it on the other. On its summit stood the temple of Apollo, hence surnamed Leucatas (Strab. x. p. 452), and Leucadius (Ov. *Trist.* iii. 1. 42, v. 2. 76; Propert. iii. 11. 69). This cape was dreaded by mariners; hence the words of Virgil (*Aen.* iii. 274): —

> "Mox et Leucatae nimbosa cacumina montis,
> Et formidatus nautis aperitur Apollo."

It still retains among the Greek mariners of the present day the evil fame which it bore of old in consequence of the dark water, the strong currents, and the fierce gales which they there encounter. Of the temple of Apollo nothing but the substructions now exist. At the annual festival of the god here celebrated it was the custom to throw a criminal from the cape into the sea; to break his fall, birds of all kinds were attached to him, and if he reached the sea uninjured, boats were ready to pick him up. (Strab. x. p. 452; Ov. *Her.* xv. 165, seq., *Trist.* v. 2. 76; Cic. *Tusc.* iv. 18.) This appears to have been an expiatory rite, and is supposed by most modern scholars to have given rise to the well-known story of Sappho's leap from this rock in order to seek relief from the pangs of love. [See *Dict. of Biogr.* Vol. III. p. 708.] Col. Mure, however, is disposed to consider Sappho's leap as an historical fact. (*History of the Literature of Greece*, vol. iii. p. 285.) Many other persons are reported to have followed Sappho's example, among whom the most celebrated was Artemisia of Halicarnassus, the ally of Xerxes, in his invasion of Greece. (Ptolem. Heph. *ap. Phot.* Cod. 190. p. 153 a., ed. Bekker.)

COIN OF LEUCAS.

(Leake, *North. Greece*, vol. iii. p. 10, seq.; Bowen, *Handbook for Travellers in Greece*, p. 75, seq.)

LEUCA'SIA. [MESSENIA.]

LEUCA'SIUM. [ARCADIA, p. 193, No. 15.]

LEUCATA, a part of the coast of Gallia Narbonensis: "ultra (lacum Rubresum) est Leucata, littoris nomen, et Salsulae Fons" (Mela, ii. 5). Mela seems to mean that there is a place Leucata, and that part of the coast is also called Leucata. This coast, according to D'Anville, is that part south of Narbonne, which lies between the *Etang de Sigean* and *Salses.* He conjectures, as De Valois had done, that the name may be Greek. He quotes Roger de Hoveden, who speaks of this coast under the name Leucate: "quandam arenam protensam in mari, quae dicitur caput Leucate." The common name of this head is now *Cap de la Franqui*, which is the name of a small flat island, situated in the recess of the coast to the north of the cape. (D'Anville, *Notice, &c.*, Leucata.) [G. L.]

LEUCA'TAS PROM. [LEUCAS.]

LEUCE. 1. An island lying off Cydonia, in Crete (Plin. iv. 12), which Mr. Pashley (*Trav.* vol. i. p. 51) takes for the rock on which the fortress of *Súdha* is built. (Comp. Höck, *Kreta*, vol. i. pp. 384, 438.)

2. An island which Pliny (iv. 12) couples with ONISIA, as lying off the promontory of Itanum. These small islands are now represented by the rocks of the *Grándes.* [E. B. J.]

LEUCE ACTE (Λευκὴ ἀκτή), a port on the coast of Thrace, between Pactye and Teiristasis, which is mentioned only by Scylax of Caryanda (p. 28). [L. S.]

LEUCE PR. (Λευκὴ ἀκτή), a promontory of MARMARICA, in N. Africa, W. of the promontory Hermaeum. On the white cliff from which its name was obtained there stood a temple of Apollo, with an oracle. Its position is uncertain; but most probably it is the long wedge-shaped headland, which terminates the range of hills (Aspis) forming the Catabathmos Minor, and which is now called *Ras-al-Kanaïs.* (Strab. xvii. p. 799; Scyl. p. 44, Hudson; Ptol. iv. 5. § 8; *Stadiasm. Mar. Mag.* p. 437.) [P. S.]

LEUCI (Λευκοί), a Gallic people (Strab. p. 193; Ptol. ii. 9. § 13; Caes. *B. G.* i. 40), between the Mediomatrici on the north and the Lingones on the south. They occupied the valley of the *Upper Mosel.* One of their chief towns was Tullum (*Toul*). Their territory corresponded with the diocese of *Toul*, in which were comprised the dioceses of *Nancy* and *Saint-Dié* until 1774, when these two dioceses were detached from that of *Toul.* (Walckenaer, *Géog. &c.* vol. i. p. 531.) The Leuci are only mentioned once in Caesar, and with the Sequani and Lingones: they were to supply Caesar with corn. Pliny (iv. 17) gives the Leuci the title of Liberi. Lucan celebrates them in his poem (i. 424) as skilled in throwing the spear: —

> "Optimus excusso Leucus Rhemusque lacerto."

Tacitus (*Hist.* i. 64) mentions "Leucorum civitas," which is Tullum. [G. L.]

LEUCIANA. [LUSITANIA.]

LEUCI MONTES or ALBI MONTES (τὰ Λευκὰ ὄρη, Strab. x. p. 479; Ptol. iii. 17. § 9), the snow-clad summits which form the W. part of the mountain range of Crete. Strabo (*l. c.*) asserts that the highest points are not inferior in elevation to

Taygetus, and that the extent of the range is 300 stadia. (Comp. Theophrast. *H. P.* iii. 11, iv. 1; Plin. xvi. 33; Callim. *Hymn. Dian.* 40.) The bold and beautiful outline of the "White Mountains" is still called by its ancient title in modern Greek, τὰ ἄσπρα βουνά, or, from the inhabitants, τὰ Σφακιανὰ βουνά. Crete is the only part of Greece in which the word ὄρη is still in common use, denoting the loftier parts of any high mountains. Trees grow on all these rocky mountains, except on quite the extreme summits. The commonest tree is the *prinos* or ilex. (Pashley, *Trav.* vol. i. p. 31, vol. ii. p. 190; Höck, *Kreta*, vol. i. p. 19.) [E. B. J.]

LEUCIMNA. [CORCYRA, pp. 669, 670.]

LEUCOLLA (Λεύκολλα), a promontory on the south-east of Pamphylia, near the Cilician frontier. (Plin. v. 26; Liv. xxvii. 23; Pomp. Mela, i. 15.) In the Stadiasmus Maris Magni (§§ 190, 191) it is called Leucotheium (Λευκόθειον). Mela erroneously places it at the extremity of the gulf of Pamphylia, for it is situated in the middle of it; its modern name is *Karaburnu.* (Leake, *Asia Minor*, p. 196.) [L. S.]

LEUCOLLA (Λεύκολλα, Strab. xiv. p. 682), a harbour of Cyprus, N. of Cape Pedalium. It is referred to in Athenaeus (v. p. 209, where instead of Κῴας, Κύπρος should be read), and is identified with *Porta Armidio e Lucola*, S. of *Famagusta.* (Engel, *Kypros*, vol. i. p. 97.) [E. B. J.]

LEUCO'NIUM (Λευκώνιον). 1. A place mentioned in the Antonine Itinerary (p. 260) in the south of Pannonia, on the road from Aemona to Sirmium, 82 Roman miles to the north-west of the latter town. Its site is pointed out in the neighbourhood of the village of *Rasboistje.*

2. A town of Ionia, of uncertain site, where a battle was fought by the Athenians in B. C. 413. (Thucyd. viii. 24.) From this passage it seems clear that the place cannot be looked for on the mainland of Asia Minor, but that it must have been situated near Phanae, in the island of Chios, where a place of the name of *Leuconia* is said to exist to this day. Polyaenus (viii. 66) mentions a place, Leuconia, about the possession of which the Chians were involved in a war with Erythrae; and this Leuconia, which, according to Plutarch (*de Virt. Mul.* vii. p. 7, ed. Reiske), was a colony of Chios, was probably situated on the coast of Asia Minor, and may possibly be identical with Leucae on the Hermaean gulf. [Comp. LEUCAE.] [L. S.]

LEUCOPETRA (Λευκοπέτρα), a promontory of Bruttium, remarkable as the extreme SW. point of Italy, looking towards the Sicilian sea and the E. coast of Sicily. It was in consequence generally regarded as the termination of the chain of the Apennines. Pliny tells us it was 12 miles from Rhegium, and this circumstance clearly identifies it with the modern *Capo dell' Armi*, where the mountain mass of the southern Apennines in fact descends to the sea. The whiteness of the rocks composing this headland, which gave origin to the ancient name, is noticed also by modern travellers. (Strab. vi. p. 259; Plin. iii. 5. s. 10; Ptol. iii. 1. § 9; Swinburne, *Travels*, vol. i. p. 355.) It is evidently the same promontory which is called by Thucydides Πέτρα τῆς Ρηγίνης, and was the last point in Italy where Demosthenes and Eurymedon touched with the Athenian armament before they crossed over to Sicily. (Thuc. vii. 35.) It was here also that Cicero touched on his voyage from Sicily, when, after the death of Caesar B. C. 44, he was preparing to repair into Greece, and where he was visited by some friends from Rhegium, who brought news from Rome that induced him to alter his plans. (Cic. *Phil.* i. 3, *ad Att.* xvi. 7.) In the former passage he terms it "promontorium agri Rhegini:" the "Leucopetra Tarentinorum" mentioned by him (*ad Att.* xvi. 6), if it be not a false reading, must refer to quite a different place, probably the headland of Leuca, more commonly called the Iapygian promontory. [LEUCA.] [E. H. B.]

LEUCOPHRYS (Λευκόφρυς), a town in Caria, apparently in the plain of the Maeander, on the borders of a lake, whose water was hot and in constant commotion. (Xenoph. *Hell.* iv. 8. § 17, iii. 2. § 19.) From the latter of the passages here referred to, we learn that the town possessed a very revered sanctuary of Artemis; hence surnamed Artemis Leucophryene or Leucophryne. (Paus. i 26. § 4; Strab. xiv. p. 647; Tac. *Ann.* iii. 62.) The poet Nicander spoke of Leucophrys as a place distinguished for its fine roses. (Athen. xv. p. 683.)

Respecting Leucophrys, the ancient name of Tenedos, see TENEDOS. [L. S.]

LEUCO'SIA (Λευκωσία), a small island off the coast of Lucania, separated only by a narrow channel from the headland which forms the southern boundary of the gulf of Paestum. This headland is called by Lycophron ἀκτὴ Ἐνιπέως, "the promontory of Neptune," and his commentators tell us that it was commonly known as Posidium Promontorium (τὸ Ποσειδήϊον). (Lycophr. *Alex.* 722; and Tzetz. *ad loc.*) But no such name is found in the geographers, and it seems probable that the promontory itself, as well as the little island off it, was known by the name of Leucosia. The former is still called *Punta della Licosa;* the islet, which is a mere rock, is known as *Isola Piana.* It is generally said to have derived its ancient name from one of the Sirens, who was supposed to have been buried there (Lycophr. *l. c.*; Strab. *l. c.*; Plin. iii. 7. s. 13); but Dionysius (who writes the name Leucasia) asserts that it was named after a female cousin of Aeneas, and the same account is adopted by Solinus. (Dionys. i. 53; Solin. 2. § 13.) We learn from Symmachus (*Epp.* v. 13, vi. 25) that the opposite promontory was selected by wealthy Romans as a site for their villas; and the remains of ancient buildings, which have been discovered on the little island itself, prove that the latter was also resorted to for similar purposes. (Romanelli, vol. i. p. 345.) [E. H. B.]

LEUCO'SIA (Λευκωσία, Λευκουσία), a city of Cyprus, which is mentioned only by Hierocles and the ecclesiastical historian Sozomen (*H. E.* i. 3, 10). The name is preserved in the modern *Lefkosia* or *Nikosia*, the capital of the island. (Engel, *Kypros*, vol. i. p. 150; Mariti, *Viaggi*, vol. i. p. 89; Pococke, *Trav. in the East*, vol. ii. pt. 1. p. 221.) [E. B. J.]

LEUCOSYRI (Λευκόσυροι), the ancient name of the Syrians inhabiting Cappadocia, by which they were distinguished from the more southern Syrians, who were of a darker complexion. (Herod. i. 72, vii. 72; Strab. xvi. p. 737; Plin. *H. N.* vi. 3; Eustath. *ad Dionys.* 772, 970.) They also spread over the western parts of Pontus, between the rivers Iris and Halys. In the time of Xenophon (*Anab.* v. 6. § 8, &c.) they were united with Paphlagonia, and governed by a Paphlagonian prince, who is said to have had an army of 120,000 men, mostly horsemen. This name was often used by the Greeks, even at the time when it had become customary to desig-

nate all the inhabitants of the country by their native, or rather Persian name, Cappadoces; but it was applied more particularly to the inhabitants of the coast district on the Euxine, between the rivers Halys and Iris. (Hecat. *Fragm.* 194, 200, 350; Marcian. Heracl. p. 72.) Ptolemy (v. 6. § 2) also applies the name exclusively to the inhabitants about the Iris, and treats of their country as a part of the province of Cappadocia. The Leucosyri were regarded as colonists, who had been planted there during the early conquests of the Assyrians, and were successively subject to Lydia, Persia, and Macedonia; but after the time of Alexander their name is scarcely mentioned, the people having become entirely amalgamated with the nations among which they lived. [L. S.]

LEUCOTHEES FANUM (Λευκοθέας ἱερόν), a temple and oracle in the district of the Moschi in Colchis. Its legendary founder was Phryxus; the temple was plundered by Pharnaces and then by Mithridates. (Strab. xi. p. 498.) The site has been placed near *Suram*, on the frontiers of *Imiretia* and *Kartuhlia*, where two large "tumuli" are now found. (Dubois de Montpereux, *Voyage Autour du Caucase*, vol. ii. p. 349, comp. p. 17, vol. iii. p. 171.) [E. B. J.]

LEUCOTHEIUM. [LEUCOLLA.]

LEUCTRA (τὰ Λεῦκτρα). 1. A village of Boeotia, situated on the road from Thespiae to Plataea (Strab. ix. p. 414), and in the territory of the former city. (Xen. *Hell.* vi. 4. § 4). Its name only occurs in history on account of the celebrated battle fought in its neighbourhood between the Spartans and Thebans, B. C. 371, by which the supremacy of Sparta was for ever overthrown. In the plain of Leuctra, was the tomb of the two daughters of Scedasus, a Leuctrian, who had been violated by two Spartans, and had afterwards slain themselves; this tomb was crowned with wreaths by Epaminondas before the battle, since an oracle had predicted that the Spartans would be defeated at this spot (Xen. *Hell.* vi. 4. § 7; Diod. xv. 54; Paus. ix. 13. § 3; Plut. *Pelop.* cc. 20, 21). The city of Leuctra, is sometimes supposed to be represented by the extensive ruins at *Lefka* (Λεύκα), which are situated immediately below the modern village of *Rimókastro.* But these ruins are clearly those of Thespiae, as appears from the inscriptions found there, as well as from their importance; for Leuctra was never anything more than a village in the territory of Thespiae, and had apparently ceased to exist in the time of Strabo, who calls it simply a τόπος (x. p. 414). The real site of Leuctra, "is very clearly marked by a tumulus and some artificial ground on the summit of the ridge which borders the southern side of the valley of Thespiae. The battle of Leuctra was fought probably in the valley on the northern side of the tumulus, about midway between Thespiae, and the western extremity of the plain of Plataea. Cleombrotus, in order to avoid the Boeotians, who were expecting him by the direct route from Phocis, marched by Thisbe and the valleys on the southern side of Mount Helicon; and having thus made his appearance suddenly at Creusis, the port of Thespiae, captured that fortress. From thence, he moved upon Leuctra, where he intrenched himself on a rising ground; after which the Thebans encamped on an opposite hill, at no great distance. The position of the latter, therefore, seems to have been on the eastern prolongation of the height of *Rimókastro.*" (Leake.) The tumulus is probably the place of sepulture of the 1000 Lacedaemonians who fell in the battle. For a full account of this celebrated contest, see Grote, *Hist. of Greece*, vol. x. p. 239, seq. In ancient times, the neighbourhood of Leuctra appears to have been well wooded, as we may infer from the epithet of "shady" bestowed upon it by the oracle of Delphi (Λεῦκτρα σκιόεντα, Paus. ix. 14. § 3); but at present there is scarcely a shrub or a tree to be seen in the surrounding country. (Leake, *North. Greece*, vol. ii. p. 480, seq.

2. Or LEUCTRUM (τὰ Λεῦκτρα, Paus.; τὸ Λεῦκτρον, Strab., Plut., Ptol.), a town of Laconia, situated on the eastern side of the Messenian gulf, 20 stadia north of Pephnus, and 60 stadia south of Cardamyle. Strabo speaks of Leuctrum as near the minor Pamisus, but this river flows into the sea at Pephnus, about three miles south of Leuctrum [PEPHNUS]. The ruins of Leuctrum are still called *Leftro.* Leuctrum was said to have been founded by Pelops, and was claimed by the Messenians as originally one of their towns. It was awarded to the latter people by Philip in B.C. 338, but in the time of the Roman empire it was one of the Eleuthero-Laconian places. (Strab. viii. pp. 360, 361; Paus. iii. 21. § 7, iii. 26. § 4, seq.; Plut. *Pelop.* 20; Plin. iv. 5. s. 8; Ptol. iii. 16. § 9.) Pausanias saw in Leuctra a temple and statue of Athena on the Acropolis, a temple and statue of Cassandra (there called Alexandra), a marble statue of Asclepius, another of Ino, and wooden figures of Apollo Carneius. (Paus. iii. 26. § 4, seq). (Leake, *Morea*, vol. i. p. 331, *Peloponnesiaca*, p. 179; Boblaye, *Récherches*, &c. p. 93; Curtius *Peloponnesos*, vol. ii. p. 285.)

3. Or LEUCTRUM (τὰ Λεῦκτρα, Thuc. Xen.: τὸ Λεῦκτρον, Paus.), a fortress of the district Aegytis, on the confines of Arcadia and Laconia, described by Thucydides (v. 54) as on the confines of Laconia towards Mt. Lycaeus, and by Xenophon (*Hell.* vi. 5. § 24). It was originally an Arcadian town, but was included in the territory of Laconia. (Thuc. *l. c.*) It commanded one of the passes leading into Laconia, by which a portion of the Theban army penetrated into the country on their first invasion under Epaminondas. (Xen. *l. c.*) It was detached from Sparta by Epaminondas, and added to the territory of Megalopolis. (Paus. viii. 27. § 4.) It appears to have stood on the direct road from Sparta to Megalopolis, either at or near *Leondári*, in which position it was originally placed by Leake; and this seems more probable than the site subsequently assigned to it by the same writer, who supposes that both Leuctra and Malea were on the route from Megalopolis to Carnasium. [MALEA.] (Leake, *Morea*, vol. ii. p. 322, *Peloponnesiaca*, p. 248; Curtius, *Peloponnesos*, vol. i. p. 336.)

LEUCTRUM. [LEUCTRA.]

LEUCUS. [PYDNA.]

LEVI. [PALAESTINA.]

LEUNI (Λεῦνοι), a tribe of the Vindelici, which Ptolemy (ii. 13. § 1) places between the Runicatae and Consuantae. The form of the name has been the subject of discussion; Mannert maintaining that it ought to be written Λαῦνοι, and that it is the general name of several tribes in those parts, such as the Βενλαῦνοι and Ἀλαυνοί. But nothing certain can be said about the matter; and all we know is, that the Leuni must have dwelt at the foot of the Alps of *Salzburg*, in the south-eastern part of Bavaria. [L. S.]

LEVO'NI (Λευῶνοι), a tribe mentioned by Ptolemy (ii. 11. § 35) as dwelling in the central parts of the island of Scandia. No further particulars are known about them. (Comp. Zeuss, *die Deutschen*, p. 158.) [L. S.]

LEUPHANA (Λευφάνα), a town mentioned by Ptolemy (ii. 11. § 27) in the north of Germany, on the west of the *Elbe*; it probably occupied the site of the modern *Lüneburg*. (Wilhelm, *Germanien*, p. 161.) [L. S.]

LEUTERNIA or LEUTARNIA. [LEUCA.]

LEUTUOANUM, a place in Pannonia Superior, 12 Roman miles east of Mursa, on the road from Aquileia to Sirmium (*It. Hieros.* p. 561); hence it seems to be identical with the place called Ad Labores in the Peuting. Table. [L. S.]

LEXO'VII (Ληξόβιοι, Strab. p. 189; Ληξούβιοι, Ptol. ii. 8. § 2), a Celtic people, on the coast of Gallia, immediately west of the mouth of the *Seine*. When the Veneti and their neighbours were preparing for Caesar's attack (B. C. 56), they applied for aid to the Osismi, Lexovii, Nannetes, and others. (*B. G.* iii. 9, 11.) Caesar sent Sabinus against the Unelli, Curiosolites, and Lexovii, to prevent their joining the Veneti. A few days after Sabinus reached the country of the Unelli, the Aulerci Eburovices and the Lexovii murdered their council or senate, as Caesar calls it, because they were against the war; and they joined Viridovix, the chief of the Unelli. The Gallic confederates were defeated by Sabinus, and compelled to surrender. (*B. G.* iii. 17—19.) The Lexovii took part in the great rising of the Galli against Caesar (B. C. 52); but their force was only 3000 men. (*B. G.* vii. 75.) Walckenaer supposes that the territory of the Lexovii of Caesar and Ptolemy comprised both the territories of *Lisieux* and *Bayeux*, though there was a people in *Bayeux* named Baiocasses; and he further supposes that these Baiocasses and the Viducasses were dependent on the Lexovii, and within their territorial limits. [BAIOCASSES.] The capital of the Lexovii, or Civitas Lexoviorum, as it is called in the Notit. Provinc., is *Lisieux*, in the French department of *Calvados*. [NOVIOMAGUS.] The country of the Lexovii was one of the parts of Gallia from which the passage to Britain was made. [G. L.]

LIBA (Λίβα), a small place in Mesopotamia, mentioned by Polybius (v. 51) on the march of Antiochus. It was probably situated on the road between Nisibis and the Tigris. [V.]

LIBA'NUS MONS (Λίβανος ὄρος), in Hebrew LEBANON (לְבָנוֹן), a celebrated mountain range of Syria, or, as St. Jerome truly terms it, "mons Phoenices altissimus." (*Onomast. s. v.*) Its name is derived from the root לָבַן, "to be white;" as St. Jerome also remarks, "Libanus λευκασμὸς, id est, 'candor' interpretatur" (*Adv. Jovinianum*, tom. iv. col. 172): and white it is, "both in summer and winter; in the former season on account of the natural colour of the barren rock, and in the latter by reason of the snow," which indeed "remains in some places, near the summit, throughout the year." (Irby and Mangles, Oct. 30 and Nov. 1.) Allusion is made to its snows in *Jer.* xviii. 14; and it is described by Tacitus as "tantos inter ardores opacum fidumque nivibus." (*Hist.* v. 6.) Lebanon is much celebrated both in sacred and classical writers, and, in particular, much of the sublime imagery of the prophets of the Old Testament is borrowed from this mountain (e. g. *Psal.* xxix. 5, 6, civ. 16—18; *Cant.* iv. 8, 11, 15, v. 15; *Isa.* ii. 13; *Hos.* xiv. 5—7; *Zech.* xi. 1, 2). It is, however, chiefly celebrated in sacred history for its forests of cedar and fir, from which the temple of Solomon was constructed and adorned. (1 *Kings*, v.; 2 *Chron.* ii.) It is clear from the sacred history that Mount Lebanon was, in Solomon's time, subject to the kings of Tyre; but at a later period we find the king of Assyria felling its timber for his military engines (*Isa.* xiv. 8, xxxvii. 24; *Ezek.* xxxi. 16); and Diodorus Siculus relates that Antigonus, having collected from all quarters hewers of wood, and sawyers, and shipbuilders, brought down timber from Libanus to the sea, to build himself a navy. Some idea of the extent of its pine forests may be formed from the fact recorded by this historian, that 8000 men were employed in felling and sawing it, and 1000 beasts in transporting it to its destination. He correctly describes the mountain as extending along the coast of Tripoli and Byblius, as far as Sidon, abounding in cedars, and firs, and cypresses, of marvellous size and beauty (xix. 58); and it is singular that the other classical geographers were wholly mistaken as to the course of this remarkable mountain chain, both Ptolemy (v. 15) and Strabo (xvi. p. 755) representing the two almost parallel ranges of Libanus and Antilibanus as commencing near the sea and running from west to east, in the direction of Damascus,—Libanus on the north and Antilibanus on the south; and it is remarkable that the Septuagint translators, apparently under the same erroneous idea, frequently translate the Hebrew word Lebanon by Ἀντιλίβανος (e. g. *Deut.* i. 7, iii. 25, xi. 24; *Josh.* i. 4, ix. 1). Their relative position is correctly stated by Eusebius and St. Jerome (*s. v. Antilibanus*), who place Antilibanus to the east of Libanus and in the vicinity of Damascus. [ANTILIBANUS.]

Lebanon itself may be said to commence on the north of the river Leontes (*el-Kâsimîyeh*), between Tyre and Sidon; it follows the course of the coast of the Mediterranean towards the north, which in some places washes its base, and in others is separated from it by a plain varying in extent: the mountain attains its highest elevation (nearly 12,000 feet) about half way between *Beirût* and *Tripoli*. It is now called by various names, after the tribes by whom it is peopled,—the southern part being inhabited by the Metowili; to the north of whom, as far as the road from *Beirût* to Damascus, are the Druses; the Maronites occupying the northern parts, and in particular the district called *Kesrawan*. (Robinson, *Bibl. Res.* vol. iii. p. 459; Burckhardt, *Syria*, pp. 182—209.) It still answers, in part at least, to the description of St. Jerome, being "fertilissimus et virens," though it can be no longer said "densissimis arborum comis protegitur" (*Comment. in Osee*, c. xiv.): and again,—"Nihil Libano in terra repromissionis excelsius est, nec nemorosius atque condensius." (*Comment. in Zacharian*, c. xi.) It is now chiefly fruitful in vines and mulberry trees; the former celebrated from of old (*Hos.* xiv. 7), the latter introduced with the cultivation of the silkworm in comparatively modern times. Its extensive pine forests have entirely disappeared, or are now represented by small clusters of firs of no imposing growth, scattered over the mountain in those parts where the soft sandstone (here of a reddish hue) comes out from between the Jura limestone, which is the prevailing formation of the mountain. The cedars so renowned in ancient times, and known to be the patriarchs of all of their species now existing,

are found principally towards the north of the range (Robinson, *Bibl. Res.* vol. iii. pp. 440, 441), particularly in the vicinity of a Maronite village named *Ehden*, doubtless identical with the "Eden" of Ezekiel (xxxi. 16), in the neighbourhood of which the finest specimens of the cedars were even then found. They had almost become extinct, — only eight ancient trees can now be numbered, — when, a few years ago, the monks of a neighbouring convent went to the pains of planting some five hundred trees, which are now carefully preserved, and will perpetuate the tradition of the "cedars of Lebanon" to succeeding generations. The fact remarked by St. Jerome, of the proper name of the mountain being synonymous with frankincense, both in Greek and Hebrew, has given rise to the idea that the mountain produced this odoriferous shrub, of which, however, there is no proof. (Reland, *Palaestina*, p. 313.) [G. W.]

LIBARNA (Λίβαρνα), a city of Liguria, which is mentioned by Pliny among the "nobilia oppida" that adorned the interior of that province, as well as by Ptolemy and the Itineraries, in which its name appears as "Libarnum" or "Libarium." (Plin. iii. 5. s. 7; Ptol. iii. 1. § 45; *Itin. Ant.* p. 294; *Tab. Peut.*) These place it on the road from Genua to Dertona, but the distances given are certainly corrupt, and therefore afford no clue to the position of the town. This has, however, been of late years established beyond doubt by the discovery of its remains on the left bank of the *Scrivia*, between *Arquata* and *Serravalle*. The traces still visible of its ancient theatre, forum, and aqueducts, confirm Pliny's statement of its flourishing condition: which is further attested by several inscriptions, from one of which it would appear to have enjoyed colonial rank. (S. Quintino, *Antica Colonia di Libarna*, in the *Mem. dell' Accadem. di Torino*, vol. xxix. p. 143; Aldini, *Lapidi Ticinesi*, pp. 120, 139.) [E. H. B.]

LIBETHRA, LIBETHRUM (Λιβήθρα: *Eth.* Λιβήθριος), a town of Macedonia in the neighbourhood of Dium. It is mentioned by Livy (xliv. 5), who, after describing the perilous march of the Roman army under Q. Marcius through a pass in the chain of Olympus,—CALLIPEUCE (the lower part of the ravine of *Platamóna*),—says, that after four days of extreme labour, they reached the plain between Libethrum and Heracleia. Pausanias (ix. 30. § 9) reports a tradition that the town was once destroyed. "Libethra," he says, "was situated on Mount Olympus, on the side of Macedonia. At no great distance from it stood the tomb of Orpheus, respecting which an oracle had declared that when the sun beheld the bones of the poet the city should be destroyed by a boar (ὑπὸ συός). The inhabitants of Libethra ridiculed the thing as impossible; but the column of Orpheus's monument having been accidentally broken, a gap was made by which light broke in upon the tomb, when the same night the torrent named Sus, being prodigiously swollen, rushed down with violence from Mt. Olympus upon Libethra, overthrowing the walls and all the public and private buildings, and destroying every living creature in its furious course. After this calamity the remains of Orpheus were removed to Dium, 20 stadia distant from their city towards Olympus, where they erected a monument to him, consisting of an urn of stone upon a column." In the time of Alexander the Great there was a statue of Orpheus made of cypress, at Libethra. (Plut. *Alex.* 14.)

The only two torrents which could have effected such havoc as that described by Pausanias are the rivers of *Platamóna* and *Litókhoro*. As the former was near Heracleia, it may be concluded that the Sus, was the same river as the Enipeus, and that Libethra was situated not far from its junction with the sea, as the upper parts of the slope towards *Litókhoro*, are secured from the ravages of the torrent by their elevation above its bank.

It might be supposed, from the resemblance, that the modern *Malathria* [DIUM] is a corruption of the ancient Libethra: the similarity is to be attributed, perhaps, to the two names having a common origin in some word of the ancient language of Macedonia. (Leake, *Northern Greece*, vol. iii. pp. 413, 422.)

Strabo (ix. p. 409, x. p. 471) alludes to this place when speaking of Helicon, and remarks that several places around that mountain, attested the former existence of the Pierian Thracians in the Boeotian districts. Along with the worship of the Muses the names of mountains, caves, and springs, were transferred from Mt. Olympus to Helicon; hence they were surnamed Libethrides as well as Pierides ("Nymphae, noster amor, Libethrides," Virg. *Ecl.* vii. 21). [E. B. J.]

LIBE'THRIAS, LIBE'THRIUS. [HELICON.]

LI'BIA. [AUTRIGONES.]

LIBICII or LIBICI (Λεβέκιοι, Pol.; Λιβικοί, Ptol.), a tribe of Cisalpine Gauls, who inhabited the part of Gallia Transpadana about the river Sesia and the neighbourhood of Vercellae. They are first mentioned by Polybius (ii. 17), who places them, together with the LAEVI (Λάοι), towards the sources of the Padus, and W. of the Insubres. This statement is sufficiently vague: a more precise clue to their position is supplied by Pliny and Ptolemy, both of whom notice Vercellae as their chief city, to which the latter adds Laumellum also. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 36.) Pliny expressly tells us that they were descended from the Sallyes, a people of Ligurian race; whence it would appear probable that the Libicii as well as the Laevi were Ligurian, and not Gaulish tribes [LAEVI], though settled on the N. side of the Padus. Livy also speaks, but in a passage of which the reading is very uncertain (v. 35), of the Salluvii (the same people with the Sallyes) as crossing the Alps, and settling in Gaul near the Laevi. [E. H. B.]

LIBISO'SONA (cognomine Foroaugustana, Plin. iii. 3. s. 4; Inscr. *ap.* Gruter, p. 260. no. 3; Libisona, Coins, *ap.* Sestini, p. 168; Libisosia, *Itin. Ant.* p. 446; Λιβισῶκα, Ptol. ii. 6. § 59; Lebinosa, Geog. Rav. iv. 44: *Lezuza*), a city of the Oretani, in Hispania Tarraconensis, 14 M. P. NE. of the sources of the Anas, on the high-road from Laminium to Caesaraugusta. It was an important place of trade, and, under the Romans, a colony, belonging to the conventus of Caesaraugusta (Plin. *l. c.*; Ukert, vol. ii. pt. 1. pp. 411, 412). [P. S.]

LIBNATH (Λεβνά, Λοβνά), generally mentioned in connection with Lachish, from which it could not be far distant [LACHISH]. (*Josh.* x. 29—32; 2 *Kings*, xix. 8.) It belonged to Judah (*Josh.* xv. 42), and is recognised by Eusebius as a village in the district of Eleutheropolis. (*Onomast. s. v.* Λοβανά.) Dr. Robinson could not succeed in recovering any traces of its name or site (*Bib. Res.* vol. ii. p. 389). [G. W.]

LI'BNIUS, a river in Ireland, mentioned by Ptolemy (ii. 2. § 4) as on the west coast, = the river

that falls into *Sligo Bay? Killala Bay? Black Sod Bay? Clew Bay?* For the elements of uncertainty see VENNICNII, RHOBOGDII, and IBERNIA. [R. G. L.]

LIBORA. [AEBURA.]

LIBRIA or LIRIA, a river of Gallia Narbonensis, which Pliny (iii. 4) mentions after the Arauris (*Hérault*), and his description proceeds from west to east. It is said (Harduin's Pliny) that all the MSS. have the reading "Libria." Harduin takes the Libria to be the *Lez*, but this is the Ledus. [LEDUS.] It has been conjectured that the Libria is the *Lieron*, though this river is west of the Arauris. [G. L.]

LIBUI. [LIBICI.]

LIBUM (Λίβον), a town in Bithynia, distant according to the Itin. Anton. 23, and according to the Itin. Hier. 20 miles N. of Nicaena. (Liban. *Vit. suae*, p. 24.) [L. S.]

LIBUNCAE. [GALLAECIA, p. 934, b.]

LIBURNI (Λιβυρνοί, Scyl. p. 7; Strab. vi. p. 269, vii. p. 317; Appian, *Ill.* 12; Steph. B.; Schol. *ad Nicand.* 607: Pomp. Mela, ii. 3. § 12; Plin. iii. 25; Flor. ii. 5), a people who occupied the N. part of Illyricum, or the district called LIBURNIA (Λιβυρνὶς χώρα, Scyl. p. 7; Λιβουρνία, Ptol. ii. 16. § 8, viii. 7. § 7; Plin. iii. 6, 23, 26; *Peut. Tab.*; Orelli, *Inscr.* n. 664). The Liburnians were an ancient people, who, together with the Siculians, had occupied the opposite coast of Picenum; they had a city there, Truentum, which had continued in existence amid all the changes of the population (Plin. iii. 18). Niebuhr (*Hist. of Rome*, vol. i. p. 50, trans.) has conjectured that they were a Pelasgian race. However this may be, it is certain that at the time when the historical accounts of these coasts begin they were very extensively diffused. Corcyra, before the Greeks took possession of it, was peopled by them. (Strab. vi. p. 269.) So was Issa and the neighbouring islands. (Schol. *ad Apollon.* iv. 564.)

They were also considerably extended to the N., for Noricum, it is evident, had been previously inhabited by Liburnian tribes; for the Vindelicians were Liburnians (Serv. *ad Virg. Aen.* i. 243), and Strabo (iv. p. 206) makes a distinction between them and the Breuni and Genauni, whom he calls Illyrians. The words of Virgil (*l. c.*), too, seem distinctly to term the Veneti Liburnians, for the "innermost realm of the Liburnians" must have been the goal at which Antenor is said to have arrived.

Driven out from the countries between Pannonia and the Veneti by the Gallic invasion, they were compressed within the district from the Titius to the Arsia, which assumed the title of Liburnia. A wild and piratical race (Liv. x. 2), they used privateers ("lembi," "naves Liburnicae") with one very large lateen sail, which, adopted by the Romans in their struggle with Carthage (Eutrop. ii. 22) and in the Second Macedonian War (Liv. xlii. 48), supplanted gradually the high-bulwarked galleys which had formerly been in use. (Caes. *B. C.* iii. 5; Hor. *Epod.* i. 1.) Liburnia was afterwards incorporated with the province of Dalmatia, and IADERA, its capital, was made a Roman colony. In A. D. 634 Heraclius invited the Chorvates or Chrobati, who lived on the N. side of the Carpathians, in what is now *S. Poland* or *Gallicia*, to occupy the province as vassals of the Empire (Const. Porph. *de Adm. Imp.* c. 31). This connection with the Byzantine Court, and their occupation of countries which had embraced Christianity in the Apostolic age (Titus was in Dalmatia in the time of St. Paul, *II. Ep. Tim.* iv. 10), naturally led to the conversion of these Slavonian strangers as early as the 7th century. (Comp. Schafarik, *Slav. Alt.* vol. ii. pp. 277—309; Neigebaur, *Die Sud-Slaven*, pp. 224—244.) Strabo (vi. p. 315) extends the coast-line of Liburnia as far as 1500 stadia; their chief cities were IADERA and the "conventus" or congress of SCARDONA, at which the inhabitants of fourteen towns assembled (Plin. iii. 25). Besides these, Pliny (*l. c.*) enumerates the following:—Alvona, Flanona, Tarsatica, Senia, Lopsica, Ortopula, Vegium, Argyruntum, Corinium, Aenona, and Civitas Pasini. [E. B. J.]

LIBU'RNICAE I'NSULAE. [ILLYRICUM.]

LIBURNUM or LIBURNI PORTUS, a seaport on the coast of Etruria, a little to the S. of the Portus Pisanus, near the mouth of the Arnus, now called *Livorno*. The ancient authorities for the existence of a port on the site of this now celebrated seaport are discussed under PORTUS PISANUS. [E. H. B.]

LIBURNUS MONS, a mountain in Apulia, mentioned only by Polybius, in his description of Hannibal's march into that country, B. C. 217 (Pol. iii. 100), from which it appears to have been the name of a part of the Apennines on the frontiers of Samnium and Apulia, not far from Luceria; but it cannot be more precisely identified. [E. H. B.]

LI'BYA (ἡ Λιβύη), was the general appellation given by the more ancient cosmographers and historians to that portion of the old continent which lay between Aegypt, Aethiopia, and the shores of the Atlantic, and which was bounded to the N. by the Mediterranean sea, and to the S. by the river Oceanus. With the increase of geographical knowledge, the latter mythical boundary gave place to the equatorial line: but the actual form and dimensions of Africa were not ascertained until the close of the 15th century A. D.; when, in the year 1497, the Portuguese doubled the *Cape of Good Hope*, and verified the assertion of Herodotus (iv. 42), that Libya, except at the isthmus of *Suez*, was surrounded by water.

From the Libya of the ancients we must substract such portions as have already been described, or will hereafter be mentioned, in the articles entitled AEGYPTUS, AETHIOPIA, AFRICA, ATLAS, BARCA, CARTHAGE, CYRENE, MARMARICA, MAURETANIA, the OASES, SYRTES, &c. Including these districts, indeed, the boundaries of Libya are the same with those of modern Africa as far as the equator. The limits, however, of Libya Interior, as opposed to the Aegyptian, Aethiopian, Phoenician, Grecian, and Roman kingdoms and commonwealths, were much narrower and less distinct. The Nile and the Atlantic Ocean bounded it respectively on the east and west; but to the north and south its frontiers were less accurately traced. Some geographers, as Ptolemy, conceived that the south of Libya joined the east of Asia, and that the Indian Ocean was a vast salt lake: others, like Agatharchides, and the Alexandrian writers generally, maintained that it stretched to the equator, and they gave to the unknown regions southward of that line the general title of Agisymba. We shall be assisted in forming a just conception of Libya Interior by tracing the progress of ancient discovery in those regions.

Progress of Discovery.—The Libya of Homer (*Od.* iv. 87, xiv. 295) and Hesiod (*Theog.* 739; comp. Strab. i. p. 29) comprised all that portion of the African continent which lay west of Lower and Middle Aegypt. They knew it by report only, had no conception of its form or extent, and gave its in-

habitants the general name of Aethiopes, the dark or black coloured men. Between B. C. 630—620, Battus of Thera, being commanded by the oracle to lead a colony into Libya, inquired anxiously "where Libya was," although at that time the position of Aegypt, and probably that of the Phoenician Carthage also, was well known to the Greeks. Hence we may conclude that, in the 7th century B. C., the name Libya, as the generic appellation of a continent within sight of Sicily, and within a few days' sail from Peloponnesus, was either partially adopted by or wholly unknown to the Greeks. The Phoenicians were among the first explorers, as they were among the earliest colonisers of Libya; but they concealed their knowledge of it with true commercial jealousy, and even as late as the 6th century B.C. interdicted the Roman and Etruscan mariners from sailing beyond the Fair Promontory. (Polyb. iii. 22.) About sixty years before the journey of Herodotus to Aegypt, i. e. B. C. 523, Cambyses explored a portion of the western desert that lies beyond Elephantine: but his expedition was too brief and disastrous to afford any extension of geographical acquaintance with the interior. Herodotus is the first traveller whose accounts of Libya are in any way distinct or to be relied upon; and his information was probably derived, in great measure, from the caravan guides with whom he conversed at Memphis or Naucratis in the Delta. By the term Libya, Herodotus understood sometimes the whole of ancient Africa (iv. 42), sometimes Africa exclusive of Aegypt (ii. 17, 18, iv. 167). He defined its proper eastern boundary to be the isthmus of *Suez* and the Red sea, in opposition to those who placed it along the western bank of the Nile. In this opinion he is supported by Strabo (i. pp. 86, 174) and Ptolemy (ii. 1. § 6, iv. 5. § 47); and his description of the Great Desert and other features of the interior prove that his narrative generally rests upon the evidence of travellers in that region. The next step in discovery was made by the Macedonian kings of Aegypt. They not only required gold, precious stones, ivory, and aromatics, for luxury and art, and elephants for their wars, but were also actuated by a zeal for the promotion of science. Accordingly, Ptolemy Philadelphus (Diod. i. 37; Plin. vi. 29) and Ptolemy Euergetes (B. C. 283—222) sent forth expeditions to the coast and mouth of the Red sea, and into the modern *Nubia* Their investigations, however, tended more to extending acquaintance with the country between the cataracts of the Nile and the straits of *Bab-el-Mandeb* than to the examination of Western Libya.

About 200 years before our era, Eratosthenes described Libya, but rather as a mathematician than a geographer. He defines it to be an acute angled triangle, of which the base was the Mediterranean, and the sides the Red sea, on the east, and on the west an imaginary line drawn from the Pillars of Hercules to the Sinus Adulitanus.

The wars of Rome with Carthage, and the destruction of that city in B. C. 146, tended considerably to promote a clearer acquaintance with Libya Interior. Polybius, commissioned by his friend and commander, Scipio Aemilianus, visited Aegypt and many districts of the northern coast of Africa, and explored its western shores also, as far as the river Bambotus, perhaps *Cape Non*, lat. 28° N., where he found the crocodile and hippopotamus. Unfortunately, the record of his journey has perished, although it was extant in the 1st century A. D., and is cited by Pliny (vi. 1) and Stephanus of Byzantium (*s. vv* Ἱππών, Ταβρακά, Χαλκεῖα, Βύζαντες; comp. Gosselin, *Récherches sur les Géographie Ancienne*, tom. ii. pp. 1—30).

The events of the Jugurthine War (B. C. 111—106) led the Romans further into the interior. The historian Sallust, when praetor of Numidia, assiduously collected information respecting the indigenous races of Libya. He mentions the Gaetuli as the rude Aborigines, who fed on the flesh of wild beasts, and on the roots of the earth. They dwelt near the torrid zone ("haud procul ab ardoribus"), and their huts (mapalia) resembled inverted boats. In B. C. 24, Aelius Gallus conducted, by the command of Augustus, an expedition into Aethiopia and Nubia, and extended the knowledge of the eastern districts. The difficulties of the road and the treachery of his guides, indeed, rendered his attempt unprosperous; but in the year following, Petronius repulsed an inroad of the Aethiopians, and established a line of military posts south of Elephantine (Strab. xvii. p. 615; Dion Cass. liv. 6). In B. C. 19, L. Cornelius Balbus attacked the Garamantes with success, and ascertained the names at least of many of their towns. (Flor. iv. 12; Plin. v. 75.) The information then acquired was employed by Strabo in his account of Libya. Again, in Nero's reign, an exploring party was despatched to the Abyssinian highlands, with a view of discovering the sources of the Nile. (Plin. vi. 32; Senec. *Nat. Quaest.* vi. 8.)

But the Romans became acquainted with portions of the Libyan desert, less through regular attempts to penetrate it on either side, than from their desire to procure wild beasts for the amphitheatre. Under the emperors, especially, the passion for exhibiting rare animals prevailed: nor have we reason to suspect that these were found in the cultivated northern provinces, whence they must have been driven by the colonial herdsmen and farmers, even while Cyrene and Carthage were independent states. At the secular games exhibited by the emperor Philip the Arabian (A. D. 248), an incredible number of Libyan wild beasts were slaughtered in the arena, and the Roman hunters who collected them must have visited the *Sâhâra* at least, and the southern slope of Atlas: nor, since the hippopotamus and the alligator are mentioned, is it improbable that they even reached the banks of the *Senegal*.

Of all the ancient geographers, however, Claudius Ptolemy, who flourished in the second century A. D., displays the most accurate and various acquaintance with Libya Interior. Yet, with the works of his predecessors before him, the scientific labours of the Alexandrians, and the Roman surveys, Ptolemy possessed a very inadequate knowledge of the form and extent of this continent. His tables show that its western coast had been explored as far as 11° lat. N.; and he was aware of the approximate position of the Fortunate Islands (now the *Canaries*), since from them, or some point in them, he calculates all his eastern distances or longitudes. He was also better acquainted than any of his precursors with the eastern coast, and with the tracts which intervened between the left bank of the Nile and the Great Desert. He mentions an expedition conducted by a Roman officer named Maternus, who, setting forth from *Tripoli*, advanced as far southward as the neighbourhood of the lake *Tchad*, and, perhaps, even of *Timbuctoo*. He has also given, with probable correctness, the position of a number of places in the interior, along a river which he calls

the Nigir. Ptolemy moreover assigns to Africa a greater extent S. of the equator: but here his knowledge becomes inexact, since he makes the land stretch into the Atlantic instead of curving eastward; and he concluded that the southern parts of Libya joined the eastern parts of Asia, and consequently was either incredulous or ignorant of the Periplus of the Phoenicians in the reign of Pharaoh Necho.

Pliny adds little to our information respecting Libya beyond its northern and eastern provinces, although he contributes to its geography a number of strange and irrecognisable names of places. He had seen an abstract at least of the journal of Polybius, and he mentions an expedition in A. D. 41 by Suetonius Paullinus, which crossed the Atlas range, and explored a portion of the desert beyond. But both Pliny and Pomponius Mela are at once too vague and succinct in their accounts to have added much to our knowledge of the interior.

The persecutions which were mutually inflicted by the Christian sects upon each other in the 3rd and 4th centuries A. D., the expulsion of the Donatists, Montanists, Circumcellions, &c., from the ecclesiastical provinces of the Roman church, drove even beyond the Atlas region thousands of fugitives, and combined with the conquests of the Arabs in the 7th century in rendering the interior more permeable and better known. Yet neither the fugitives nor the conquerors have materially increased our acquaintance with these regions. The era of discovery, in any extensive sense of the term, commences with the voyages of the Portuguese at the close of the 15th and the commencement of the 16th century. But their observations belong to the geography of modern Africa.

We have reserved an account of the two most memorable expeditions of the ancients for the discovery of the form and dimensions of the Libyan continent, partly on account of their superior importance, if they are authentic, and partly because the results of them have been the subject of much discussion.

Herodotus (iv. 42) alleges as one reason for his belief that Libya, except at the isthmus of *Suez*, is surrounded by water, a story which he heard of its circumnavigation by the Phoenicians in the reign and by the command of Pharaoh Necho, king of Aegypt. This supposed voyage was therefore made between B. C. 610—594.

According to Herodotus, whose narrative is indeed meagre enough, Pharaoh Necho desired to connect the Mediterranean with the Red sea by a canal from Bubastis in the Delta to the Arsinoite bay near *Suez*. He abandoned this project at the bidding of the priests, and then ordered his pilots to attempt the passage from the one sea to the other by a different channel. For this purpose his fleet, manned entirely by Phoenicians, set sail from the Red sea, coasted Aegypt and Aethiopia, and passed into the Indian ocean. At the end of three years they entered the mouth of the Nile, having, as they affirmed, circumnavigated the continent. Twice they landed,—probably at the season of the monsoons,—laid up their ships, sowed the fields, and reaped the harvest, and then proceeded on their course. They alleged—and their assertion is remarkable, although Herodotus did not believe it—that as they were sailing westward the sun was on their right hand.

The probability or improbability of this voyage has been canvassed by Mannert (*Geograph. der Griech. und Römer*, vol. x. pt. 2, pp. 491—511), by Gosselin (*Géographie des Grecs Analysée*, tom. i. pp. 108, &c.), Rennell (*Geogr. of Herod.* vol. ii. pp. 348—363.), and Heeren (*Ideen*, vol. i. p. 364). We do not consider that its improbability is by any means fully established; the voyage, however, was too tedious and difficult to be repeated by the navigators of antiquity, and its results for commerce and geographical knowledge were accordingly unimportant. The most striking argument for the circumnavigation having been accomplished is the reported phaenomenon of the sun appearing on the right hand, or to the *north* of the voyagers: nor were the Phoenician galleys less competent to the voyage than the carrels which conveyed Columbus across the Atlantic, or Di Gama round the Cape. On the other hand, we must admit the improbability of some of the circumstances narrated. Herodotus heard the story 150 years after the supposed voyage had been made: in that time an extraordinary expedition beyond the Red sea may have been magnified into a complete Periplus. Again, for sowing and reaping on an unknown coast, for laying up the ships, &c. the time allowed—three years—is too short. Moreover, no account is made for opposition from the inhabitants of the coast, or for the violent winds which prevail at the Cape itself. The notion which Herodotus entertained, and which long afterwards prevailed, that Libya did not extend so far S. as the equator, is not an argument against the fact of the circumnavigation; for the brevity of Herodotus's statement, in a matter so important to geography, shows that he had taken little pains in sifting the tradition.

A second ancient voyage is better authenticated. This was rather an expedition for the promotion of trade than of geographical discovery. Its date is uncertain: but it was undertaken in the most flourishing period of the Punic Commonwealth,—i. e. in the interval between the reign of Darius Hystaspes and the First Punic War (B. C. 521—264). Hanno, a suffetes or king, as he is vaguely termed, of Carthage (*Geogr. Graec. Minor.* tom. i. Bernhardy), with a fleet of 60 galleys, having on board 30,000 men, set sail from that city through the *Straits of Gibraltar* with a commission to found trading-stations on the Atlantic coast, the present empire of *Morocco*. How far he sailed southward is the subject of much discussion. Gosselin (*Géograph. des Anciens*, vol. i. p. 109, seq.) so shortens Hanno's voyage as to make *Cape Non*, in lat. 28° N., its extreme southern terminus, while Rennell extends it to *Sierra Leone*, within 8° of the equator (*Geog. of Herod.* vol. ii. p. 348). The mention of a river, where he saw the crocodile and the river-horse, renders it probable that Hanno passed the *Senegal* at least. Of the fact of the voyage there is no doubt. The record of it was preserved in an inscription in the temple of Kronos at Carthage. There it was copied and translated into his own language by some Greek traveller or merchant. (Bochart, *Geog. Sacr.* i. 33; Campomanes, *Antiq. Maritim. de Carthago*, vol. ii.; Dodwell, *Dissertat. I. in Geogr. Graec. Min.*, ed. Hudson; Bougainville, *Descouvertes d'Hanno Mém. de l'Acad. des Inscript.* tom. xxvi. xxviii.; Heeren, *Ideen*, vol. i. p. 654.)

A third and much later Periplus is that which goes under the name of Arrian. It is probably a work of the first century A. D. It is the record or log-book of a trading-voyage on the eastern coast of Libya, and is chiefly valuable as a register of the articles of export and import in the markets of the Red sea, of the Arabian and Persian coast, of the

western shores of India, and the eastern shores of Africa. The extreme south point of the voyage is the headland of Rhapta, probably the modern *Quiloa*, in lat. 10° N. (See Vincent's *Voyage of Nearchus*, vol. ii. p. 74, seq.) With their imperfect acquaintance with Libya Interior, and their misconception of its extent, it is not surprising that the more ancient geographers should have long hesitated to which portion of the old continent Libya should be assigned. It was sometimes regarded as an independent division of the earth, and sometimes as part of Asia, and even of Europe. (Agathemer. ii.; Herod. iv. 42; Varr. *L. L.* iv. 5; Sall. *Bell. Jugurth.* 17; Lucan, *Pharsal.* ix. 411; Maltebrun, *Geog.* i. 27.) As the topography of the interior is very uncertain, we shall examine rather the general physical phenomena of this region, than attempt to assign a local habitation to tribes who roamed over the waste, or to towns of which the names are doubtful and disguised, even when genuine, by the Greek or Roman orthography of their Libyan titles.

1. *The Great Desert.*—Herodotus (ii. 32, iv. 181) divides Libya N. of the equator into three regions:—(1) *The inhabited*, which is described under the several heads of AFRICA, ATLAS, CARTHAGE, CYRENE, &c.; (2) *the wild beast territory* [ATLAS]; and (3) *the Desert.* These divisions correspond nearly to the modern districts of *Barbary*, *Biledulgerid*, and *Sāhāra*. The latter region (ὀφρύη ψάμμης, Herod. iv. 181) extends from the Atlantic to Aegypt, and is continued under the same degrees of latitude through Arabia, Asia, the southern provinces of Persia, to *Moultan* in Northern India. Contrasted with the vale of *Biledulgerid*, the rich arable districts of Africa Propria, and especially with the well-watered Aegypt, the *Sāhāra* is one of the most dreary and inhospitable portions of the world. To its real barrenness and solitude the ancients ascribed also many fabulous terrors, which the researches of modern travellers have dispersed. It was believed to swarm with serpents, which, by their number and their venom, were able to impede armies in their march (Lucan, *Pharsal.* ix. 765): its tribes shrieked like bats, instead of uttering articulate sounds (Herod. iv. 183); its pestilential winds struck with instant death men and animals, who traversed them (Arrian, *Exp. Alex.* iii. 3); and its eddies of sand buried the slain. These descriptions are, however, much exaggerated. The *Khamsin* or fifty-days' gale, as the Copts term it, the *Simoum* (*semen*, poison) of the Arabs, blows at the summer solstice from S. and SE. over a surface scorched by an almost vertical sun, and thus accumulates heat, which dries up all moisture, relaxes the muscular powers, and renders respiration difficult. But though it enfeebles, it does not necessarily kill. The real peril of the route, which from very remote ages has been trodden by the caravans, lies in the scanty supply of water, and in the obliteration of the track by the whirlwinds of sand. (Bruce, *Travels*, vol. vi. p. 458; Burckhardt, *Nubia*, vol. i. p. 207.) The difficulty of passing the Libyan Desert was, in fact, diminished by the islands or oases, which served as stepping-stones across it. Of these oases a more particular description is given elsewhere [OASIS], but they are too important a feature of this region to be quite omitted from an account of it. Herodotus (iv. 181) mentions a chain of these patches of verdure extending from E. to W. through Libya. Sometimes they are little more than halting-places for the caravans,—a spring of water, surrounded by date-trees and a few acres of herbage: others, like the oasis of *El-Khargeh*, are spacious and populous tracts, over which nomad hordes wander with their cattle, and a few form entire provinces and kingdoms, such as *Augila* and *Fezzan* (Regio Phazania of Ptolemy). One geological feature is common to them all. They are not elevations of the plain, but depressions of its limestone basis. Into these hollows, which are composed of limestone and clay, the subsoil water percolates, the periodical rains are received, and a rich and varied vegetation springs from the strong and moist earth of the oasis. But even the arid waste itself is not a uniform level. It has considerable inequalities, and even hills of gravel. Probably amid the changes which our globe has undergone, at some period anterior to the history, if not the existence of man, the *Sāhāra*, whose level even now is not much above that of the Mediterranean, was the bed of an ocean running athwart the continent. Its irregular breadth and outline favour this supposition. It is widest in the western half of N. Africa, between the present kingdom of *Morocco* and the negro country, and narrowest between the present states of *Tripoli* and *Khassina*, where it is broken up by watery districts. As it approaches Aegypt it becomes again broader. Libya is, indeed, a land of terraces, ascending gradually from the three seas which bound it to central plateaus, such as the Abyssinian highlands, the Lunae Montes, and the Atlas chain.

Before the importation of the camel from Arabia —and this animal never appears in monuments of the Pharaonic times—the impediments to large companies crossing the *Sāhāra* must have been almost insurmountable. The camel was introduced by the Persians: Darius succeeded in establishing his garrisons in the oases; and in the time of Herodotus they were the stages of a traffic which penetrated Libya nearly from east to west. The Desert, however, was not only a road for commerce, but itself also productive. It exported dates, alum, and mineral salts, which, especially in the district between *El-Siwah*, the ancient Ammonium, and the *Natron* lakes, cover the soil with an incrustation through which the foot of the camel breaks as through a thin coat of ice. The salt was a marketable article with the inhabitants of Nigritia, S. of the *Sāhāra*. The components of the salt are muriate, carbonate, and sulphate of soda; and these, both in ancient and modern times, have been extensively employed in the operations of bleaching and glass-making. Libya shows few, if any, traces of volcanic action; and earthquakes, except in Aegypt, appear to have been unknown. Yet, that the continent has undergone changes unrecorded in history, is manifest from the agatised wood found on the eastern extremity of the desert in the latitude of *Cairo*. The *Bahr-be-la-Ma*, or river without water, is another proof of a change in the elevation of N. Africa. The streams, which once filled its dry hollows, have been violently expelled by subterranean action, and the silex, agate, and jasper in its neighbourhood indicate the agency of fire. (Newbold, *Geolog. of Aegypt*, *Proceed. of Geolog. Society*, 1842.)

It is still an unsettled question whether the ancient geographers were acquainted with the countries S. of the Great Desert; i. e. with the upper part of the river *Quorra*, commonly called the *Niger*. Herodotus (ii. 32) relates, on the authority of some Cyrenians, that certain young men of the tribe of

Nasamones, who inhabited the Syrtis and the district east of it (the present gulf of *Sidra*), crossed the Desert in a westerly direction, and came to a great river which ran towards the rising sun, and had crocodiles in it, and black men inhabiting its banks. Notwithstanding some marvellous circumstances, the narrative is probably true in substance; and, combined with the known activity of the Carthaginian trade in slaves, gold-dust, ivory, elephants, &c., renders it likely that the interior was known to the ancients as well as the western coast, within 11° of the equator. But such knowledge as was acquired by travellers was rarely employed by the Greek geographers, who were more intent on accumulating names of places, than on recording the physical features, through which alone names become instructive.

The mountain and river system of Libya Interior has been partly described in the article ATLAS; and the principal features of its indigenous population under the heads GAETULI and GARAMANTES. It will suffice, then, to point out here the effect which the general conformation of the mountains has upon the climate and the rivers. The absence of snow on the Atlas range denies to this continent, in its northern portion at least, the privilege of partial refrigeration, although in the loftier regions of the Aethiopian highlands the heat is mitigated by the ice upon their summits. Hence arises the superior volume of the Aethiopian rivers, the tributaries of the Nile, and the milder temperature of the plains surrounding the lake of *Dembia*, which, although within the tropics, enjoy a perpetual spring. Again, the northern range of Atlas runs so close to the Mediterranean that the watershed is brief and abrupt, and the rivers are properly mountain streams, which, after a short course, discharge themselves into the sea. The western slope of the Libyci Montes also presents a succession of terraces, which do not propel the rivers with force enough upon the lowlands to produce a continuous course; so that either they lose themselves in swamps, or are absorbed by the sands. In some cases, indeed, they concentrate themselves in vast inland lakes, which in their turn drain off their superfluous waters in thread-like rivulets. On the southern inclination of Atlas, there is a similar impediment to the formation of large rivers, and not until within a few degrees of the equator, and in districts beyond the bounds of ancient Libya, do we meet with majestic streams, like the *Senegal*, the *Quorra*, &c., rivalling the Nile. On this side, indeed, the irrigated portions of the lowlands are rich pasture-lands, and the Great Desert is bordered and encroached upon by luxurious patches both of forest and arable land.

The more remarkable mountains not included in the Atlas range are the following:—On the northern frontier of the Desert, Mons Ater or Niger (Plin. v. 5. s. 5, vi. 30. s. 35), the modern *Harusch* or Black Mountain, which, running from east to west, separated the Oasis Phazania (*Fezzan*) from Africa Romana. Westward of this was the Usargala (Οὐσάργαλα ὄρος, Ptol. iv. 6. § 7, &c.), the present *Adameh-kozael-wegiod*, which ran far into the territory of the Garamantes, and contained the sources of the river Bagrada. This may be regarded as a continuation of the Atlas Major, S. of Numidia and Mauretania. Next, running in a N. direction to the verge of Numidia, and a branch of the Usargala, was Mons Girgiri (τὸ Γίργιρι ὄρος), *Tibesti*, in which the river Cinyphus arose. Along the Atlantic coast, and parallel with the Greater Atlas, were the following mountains and headlands:—Mount Sagapola (Σαγάπολα, Ptol. iv. 6. § 8, &c.), from which the river Subus sprang, to SW. of which was Mount Mandrus (τὸ Μάνδρον ὄρος), a long chain of hills, reaching to the parallel of the Fortunate Islands, and containing the fountains of all the rivers that discharge themselves into the Atlantic, from the Salathus to the Massa, or from *Cape Non* to *Cape Bojador*. Mt. Caphas (Κάφας), 8 degrees to S., from which the Daradas flowed, stretched in a SE. direction far into the Desert: Mount Ryssadius (τὸ Ῥυσσάδιον ὄρος) terminated in a headland of the same name, probably *Cape Blanco*, and in it rose the river Stachir. Of all these mountains, however, the most remarkable as regards the Libyan rock system, because it exhibited unquestionable tokens of volcanic action, was that denominated the Chariot of the Gods (Θεῶν Ὄχημα), probably the present *Kong*, or *Sierra Leone*. This was the extreme point of ancient navigation on the Atlantic; for the Phoenician Periplus, if it indeed was actually performed, formed the single exception to the otherwise universal ignorance of the coast beyond. As far as modern discoveries have made known the interior, Libya, from the ocean to the borders of Aegypt, is crossed by a succession of highlands, arising at certain points to a considerable elevation, and sending forth terraces and spurs towards the south. It is possible that these may form a continuous chain, but our acquaintance with its bearings is very imperfect. The ancient geographers distinguished some portions of these highlands by the names of Mount Bardetus (Βάρδητον ὄρος), west of the Lunae Montes; and in the same line, but at a considerable interval, M. Mesche (Μεσχή); Zipha (Ζιφά), north of Mesche; and, approaching the Atlantic, Mount Ion (Ἴον ὄρος), and Dauchis (Δαῦχις). In a line with the Chariot of the Gods, and northward of the line of Bardetus, were the elevations Arualtes (ὁ Ἀρουάλτης) and Arangas (ὁ Ἀράγγας), the latter of which ran down to the equatorial line. These, with Mount Thala (τὸ Θάλα ὄρος), and, further eastward, the serrated range entitled the Garamantic Pharanx or Combe (ἡ Γαραμαντικὴ φάραγξ), may be regarded as offsets of the Aethiopian highlands. That these mountains contain considerable mineral wealth is rendered probable by their feeding the sources of rivers in the gold region, and from the copper pyrites discovered on their flanks. That they were the cradles of innumerable streams is also certain from the rich pasture and woodland which mark the confines of the equatorial region of Libya Interior.

The voyage of Hanno was undertaken for the purpose of planting upon the coast of the Atlantic trading stations, and to secure with the regions that produced gold, aromatics, and elephants, a readier communication with Carthage than could be maintained across the *Sāhăra*. That this trade was materially impaired when the Romans became masters of Africa, is probable, because the conquering people had little genius for commerce, and because they derived the same articles of trade through the more circuitous route of Egypt and Aethiopia. Yet the knowledge acquired by the Carthaginians was not altogether lost, and the geographers of the empire have left us some important information respecting the western coast of Libya as far as 11° N. lat. According to Ptolemy, the principal promontories were, beginning from the

N.:—Gannaria (Γαννaρία ἄκρα), probably *Cape Non*; Soloëntia (Σολοεντία), *Cape Bojador;* Arsinarium (Ἀρσινάριον), *Cape Corveiro*, the westernmost point of the continent, lying between the mouths of the Daradus and the Stachir; the headland of Ryssadium, *Cape Blanco*, a continuation of the mountain ridge of that name, and a few miles southward of Arsinarium; the promontories of Catharon (τὸ Καθαρὸν ἄκρον), *Cape Darca*, near the mouth of the Nia, and of the Hesperides, celebrated in fable (Ἑσπέρου κέρας, Ptol.; Hesperion Ceras, Plin. v. 1. s. 1), the *Cape Verde* of the Portuguese: lastly, the term of Hanno's voyage, the basaltic rock entitled the headland of Notium (Νότου κέρας), *Cape Roxo*, or *Red Cape*, from the colour of its surface. Between the two last-mentioned projections lay the Hesperian bay (Ἑσπέριος κόλπος), which, owing to their misconception of the extent of this continent, the ancients regarded as the southern boundary of Libya, the point from which it crossed towards Asia, or where the great Southern Ocean commenced.

While enumerating the mountains which concealed their springs, we have nearly exhausted the catalogue of the Libyan rivers which flow into the Atlantic. It is a consequence of the terraced conformation of the interior, that the streams would, for the most part, take an easterly or a westerly direction. Those which ran east were the tributaries of the lakes, morasses, and rivers of Aethiopia, and, with the exception of such as fed the Astapus and the Astaboras, have been scarcely explored. On the western side the most important were (Ptol. iv. 6. § 8) the Subus (Σοῦβος), the modern *Sus*, and combining, if not the same, with the Chretes (Χρέτης) and the Xion (Ξιὼν) (Scylax, p. 53), had its source in Mt. Sagapola, and entered the Atlantic below the furthest western projection of the Greater Atlas. Mt. Mandrus gave birth to the Salathus, at the mouth of which stood a town of the same name; to the Chusarius (Χουσάριος), apparently the Cosenus of Polybius (*ap.* Plin. v. 1. s. 1); to the Ophiodes (Ὀφιώδης) and Novius (Νοῦϊος), between the headlands of Gannarium and Soloeis; and, lastly, the Massa or Masasat. (Polyb. *l. c.*) In Mount Caphas arises a more considerable stream than any of the above-mentioned, the modern *Rio de Ouro*, the ancient Daradus (Δάραδος, Δαράτ), which contained crocodiles, and discharged itself into the Sinus Magnus. The appearance of the crocodile in this river, and the dark population which inhabited its banks in common with those of the *Niger*, led many of the ancient geographers to imagine that the Nile, wherein similar phenomena were observed, took a westerly course S. of Meroe, and, crossing the continent, emptied itself a second time into the sea in the extreme west. The Aethiopes Hesperii were among the consequences of this fiction, and were believed to be of the same race with the Aethiopians of the Nile. Next in order southward was the Stachir (Στάχειρ), which rose in Mt. Ryssadius, and, after forming the Lake Clonia, proceeded in a SE. direction to the bay of the Hesperides. The Stachir is probably represented by the present *St. Antonio* river, or *Rio de Guaon*, and seems to answer to the Salsus of Polybius (*ap.* Plin. *l. c.*). The same bay receives the waters of the Nia, the Bambotus of Polybius, and the modern *Senegal*. The river-horse, as well as the crocodile, inhabit its streams, and the hides of the former were exported by the neighbouring tribe of Daratae to Carthage The Masitholus, the present *Gambia*, descends into the Atlantic from the Theôn Ochema, a little N. of the Hippodrome of the Aethiopians (Ἱππόδρομος Αἰθιοπίας), or *Cape Roxo*, with which terminates the geographer Ptolemy's Itinerary of the Libyan coast. He mentions, indeed, a few rivers in the interior which have no outlet to the sea, but form vast inland lakes. These are, probably, either tributaries of the *Niger*, or the upper portion of the arms of the *Niger* itself; but the course of the streams that flow southward to *Nigritia* and the *Bight of Benin* belongs rather to modern than to ancient geography. It is worthy of notice, however, that rumours at least of the dimensions of the *Niger* must have reached the ears of the old geographers (Agathem. ii. 10; Plin. v. 1. s. 1), since they ascribe to the Ger or Gir (*Tab. Peuting.* Girin) a course of more than 300 miles, with a further curvature to the N. of 100, where it ends in the lake Chelonides. The direct mainstream was represented as diving underground, reappearing on the surface, and finally discharging itself into a lake called Nuba.

Libya, indeed, "is a region of extensive lakes; of which there appear to be a great number on the lowlands of its east coast, in which many of the rivers from the edge of the table-land terminate." (Somerville, *Physical Geog.* vol. ii. p. 9.) In Libya N. of the equator the following were known to the ancients:—The Tritonis (Aeschyl. *Eumen.* 289; Pindar, *Pyth.* iv. 36; Scylax, p. 49; Herod. iv. 178); the lake of the Hesperides (Strab. xviii. p. 836); the Libya Palus, which was connected with the *Niger* by one of its tributaries; the Clonia, near the eastern flank of the Mount Ryssadium: the Nigritis, into which the upper portion of the Nigir flowed, probably the present *Dibbeh* of the Arabs, or the Black-Water, SW. of *Timbuctoo:* the Nuba, in which the river Ger terminates, and which answers to *Lake Tchad*, or *Nou* in *Bornou*, and whose dimensions almost entitle it to the denomination of a fresh-water sea; and lastly, the cluster of lakes named Chelonides, perhaps the modern *Fittre*, into which an arm of the Ger flows, and which are surrounded with jungle and pastures celebrated for their herds of elephants. Salt-water lakes abound on the northern extremity of the *Sāhāra*, and the salt obtained from them has been in every age an article of barter with the south, where that necessary of life is wholly wanting. It is obtained either from these lakes, which, dried up by the summer heat, leave behind a vast quantity of salt, covering extensive patches of the earth, or from large beds, or layers, which frequently extend for many miles, and rise into hills. The inhabitants of *Nigritia* purchase salt with gold-dust. A scarcity of salt in *Kashna* and *Timbuctoo* is equivalent to a famine in other lands. At such times the price of salt becomes so extravagant, that Leo Africanus (p. 250) saw an ass's load sold at *Timbuctoo* for eighty ducats. The neighbourhood of the lakes is also celebrated for the number and luxuriance of its date trees. To the borderers of the Desert the date tree is what the bread-fruit tree is to the South Sea islanders. Its fruit is food for both men and cattle: it was capable of being preserved for a long time, and conveyed to great distances; while, from the sap or fruit of the tree (Rennell, *Exped. of Cyrus*, p. 120) was extracted a liquor equally intoxicating with wine.

Population.— Herodotus (iv. 168—199) distinguishes four main elements in the population of Libya:—(1) the Libyans, (2) the Aethiopians

(3) the Phoenicians, and (4) the Greeks. He enumerates, moreover, a considerable number of indigenous tribes, and his catalogue of them is greatly increased by subsequent writers, e.g. Scylax, Hanno, Polybius, and Ptolemy. When, however, we would assign to these a generic connection, or a local habitation, the insurmountable difficulty meets us which ever attends the description of nomad races; ignorance of their language, of their relations with one another, and their customary or proper districts. The Greek geographers, in their efforts to render the names of barbarians euphonic, impenetrably disguise them for the most part. Again, their information of the interior was principally derived from the merchants, or guides of the caravans; and these persons had a direct interest, even if their knowledge were exact or various, in concealing it. Moreover, the traveller, even if unbiassed, was liable to error in his impression of these regions. The population, beyond the settled and cultivated districts, was extremely fluctuating. In the rainy season they inhabited the plains, in the hot months the highlands, accordingly as their cattle required change of climate and pasture. The same tribe might, therefore, be reckoned twice, and exhibited under the opposite characteristics of a highland or a lowland people. Savage races also are often designated, when described by travellers, by names accidentally caught up or arbitrarily imposed, and not by their genuine and native appellations. Thus Herodotus, in common with the other geographers of antiquity, gives an undue extension to the name Aethiopes, derived from the mere accident of a black or dark complexion, and had he been acquainted with the Caffirs and the Hottentots, he would, doubtless, from their colour, have placed them in the same category. The diet of the Ichthyophagi was not restricted to fish, since they were also breeders of cattle; but they acquired that appellation from their principal food at one season of the year. The Troglodytes, during the spring and summer months, dwelt among the low meadows and morasses of Meröe and Aethiopia; but their name was given them because, during the rainy period, they retired to habitations scooped in the rocks. With regard to the native races of Libya, the only secure presumption is, that they formed one of those sporadic offsets of the human family which remain in, or acquire a lower degree of civilisation, because they have wandered beyond the verge of the great empires and communities in which civilisation is matured. The Libyan continent has, indeed, been in all ages the principal resort of these sporadic tribes. The deserts, which intervene between the cultivated and uncultivated portions of it, removed much of its population from the neighbourhood of cities; they were liable to no admixtures from other countries; they were never thoroughly subdued or intermingled with superior races: and though, as in the instance of the Perioeci of the Greek states, the Liby-Phoenicians in the dominions of Carthage, and the subordinate castes of Aegypt, they were not incapable of a high material cultivation; yet, when left to themselves, they continued to exist under the simplest forms of social life. Combining the glimpses we obtain from the ancients with the more accurate knowledge of the moderns, we are warranted in ascribing to them, generally, a monarchical form of government, with some control from the priests and assembly of chief men, warlike and migratory habits, debased condition of the female sex, and the vice of Africa, in all ages, constant warfare, waged with the sole purpose of supplying the slave-markets of the North and East.

The Fauna of Libya must not be unnoticed. In the northern deserts tawny and grey tints are the prevailing colours, not merely in birds and beasts, but also in reptiles and insects. In consequence of the extension of this barren region from North Africa through Arabia to Persia and India, many similar species of animals are common to both continents,—as the ass, antelopes, leopards, panthers, and hyaenas. The cat tribe prevails in great beauty and variety: the lion of Mount Atlas is said to be the strongest and most formidable of his species. The African elephant is different from the Asiatic, and has always been preferred to it for military purposes. The hippopotamus, which was known to the ancients as the inhabitant of the Senegal and the Upper Nile, appears to be a different species from that which is found in the inter-tropical and southern parts of the continent. The magot or Barbary ape was known to the ancients, and is mentioned by the Byzantine writers as imported for the menageries of Constantinople. The giraffe or camelopard is found as far north as the Great Desert. It appears on the monuments of Aegypt, and was exhibited in the imperial triumphs at Rome. The Atlas region contains two kinds of fallow-deer, one of which is the common fallow-deer of Europe. The ox of *Nubia*, *Abyssinia*, and *Bornou* is remarkable for the extraordinary size of its horns, which are sometimes two feet in circumference at the root. Of the Libyan animals generally it may be remarked, that while the species which require rich vegetation and much water are found in the Atlas valleys and the plains below them, the Desert abounds in such kinds as are content with scantier herbage,—such as the deer, the wild ass, and the antelope. These being fleet of foot, easily remove from the scorched to the green pasture, and find a sufficient supply of water in the ooze of the river beds.

As regards its Flora, the northern coast of Libya, and the range of the Atlas generally, may be regarded as a zone of transition, where the plants of southern Europe are mingled with those peculiar to Africa. The Greek and Phoenician colonists built their naval armaments of the pine and oak of Mount Atlas, the Aleppo pine and the *sandarach* or *Thuia articulata*, being celebrated for their close grain and durability. The vegetation of the interior has been already in part mentioned. The large forests of date-palms, along the southern base of the Atlas, are its principal woodland. The date tree is indigenous, but improved by cultivation. Of the Desert itself stunted shrubs are the only produce besides the coarse prickly grass (*pennisetum dichotomum*), which covers large tracts, and supplies fodder to the camels.

For the authorities upon which this account of Libya rests, see, besides the ancient writers already cited, the travels of Shaw, Hornemann, Burckhardt; Ritter's *Erdkunde*, *Africa*; Heeren, *Ideen*, vol. i.; Mannert's *Géographie*, *Libya*; and Maltebrun, *Afrique*. [W. B. D.]

LIBYA PALUS. [LIBYA, p. 180, b.; TRITON.]

LIBYARCHAE. [MARMARICA.]

LIBYCI MONTES. [AEGYPTUS, p. 37; OASIS.]

LI'BYCUM MARE (τὸ Λιβυκὸν πέλαγος, πόντος Λιβύης), was the name applied to that part of the Mediterranean which washed the shores of N. Africa, from the E. coast of Africa Propria on

the W., to the S. shores of Crete, and the frontier of Egypt, on the E., where it joined the Mare Aegyptium: the two Syrtes belonged to it. (Strab. ii. pp. 122, 123, x. pp. 475, 488; Agathem. i. 3, ii. 14; Dion. Per. 104; Mela, i. 4, ii. 7; Plin. v. 1; Florus, iii. 6. § 10.) [P. S.]

LI'BYCUS NO'MOS. [MARMARICA.]

LIBYPHOENI'CES (Λιβυφοίνικες, sometimes spelt Λιβοφοίνικες), a portion of the population of N. Africa, who are defined by Livy, in accordance with the signification of their name, as "*mixtum Punicum Afris genus*" (Liv. xxi. 22). Diodorus gives a somewhat fuller account of them, as one of the four races who inhabited the Carthaginian territory in N. Africa, namely, the Punic inhabitants of Carthage, the Libyphoenicians, the Libyans, and the Numidians; and he says that the Libyphoenicians possessed many of the cities on the seashore, and had the tie of intermarriage with the Carthaginians (Diod. xx. 55). Pliny restricts them to the S. part of the ancient territory of Carthage. (Plin. v. 4. s. 3: *Libyphoenices vocantur qui Byzacium incolunt*); and there can be no doubt, from the nature of the case, that the original seat of the race was in the country around Carthage. It is not, however, equally clear whether the Libyphoenicians of the Carthaginian colonies along the coast of Africa are to be regarded as a race arising out of the intermarriage of the original Punic settlers with the natives of the surrounding country, or as the descendants of Libyphoenicians from the country round Carthage, who had been sent out as colonists. The latter is the more probable, both from indications which we find in the ancient writers, and from the well-known fact that, in all such cases, it is the half-breed which multiplies rapidly, so as to make it a matter of importance for the members of the pure and dominant caste to find a vent for the increasing numbers of the race below them. That such was the policy of Carthage with regard to the Libyphoenicians, and moreover that they were marked by the energy and success which usually distinguishes such half-bred races, we have some interesting proofs. The defence of Agrigentum against the Romans, during the Second Punic War, was signalised by the skill and energy of Mutines, a Libyphoenician of Hipponium, whom Livy describes as "*vir impiger, et sub Hannibale magistro omnes belli artes edoctus*" (Liv. xxv. 40). The mention of his native place, Hipponium, on the Bruttian coast, a city which had been for some time in the hands of the Carthaginians, is a proof of the tendency to make use of the race in their foreign settlements; while the advantage taken by Hannibal of his talents agrees with the fact that he employed Libyphoenician cavalry in his armies. (Polyb. iii. 33; Liv. xxi. 22.) Niebuhr has traced the presence of Libyphoenicians in the Punic settlements in Sardinia, and their further mixture with the Sardinians, as attested by Cicero in an interesting fragment of his speech for Scaurus. (*Lectures on Anc. Geog.* vol. ii. p. 275.) Avienus mentions the "wild Libyphoenicians" on the S. coast of Spain, E. of Calpe. (*Or. Mar.* 419.) Perhaps the half-bred races of the Spanish colonies in America furnish the closest analogy that can be found to the Libyphoenician subjects of Carthage. [P. S.]

LIBYSSA (Λίβυσσα or Λίβισσα, Ptol. v. 1. § 13: *Eth.* Λιβυσσαῖος), a town on the north coast of the Sinus Atacenus in Bithynia, on the road from Nicaea to Chalcedon. It was celebrated in antiquity as the place containing the tomb of the great Hannibal. (Plut. *Flam.* 20; Steph. B. *s. v.*; Plin. *H. N* v. 43; Amm. Marc. xxii. 9; Eutrop. iv. 11; *Itin. Ant.* p. 139; *Itin. Hier.* p. 572.) In Pliny's time the town no longer existed, but the spot was noticed only because of the tumulus of Hannibal. According to Appian (*Syr.* 11), who evidently did not know the town of Libyssa, a river of Phrygia was called Libyssus, and he states that from it the surrounding country received the name of Libyssa. The slight resemblance between the name Libyssa and the modern *Ghebse* has led some geographers to regard the latter as the site of the ancient town; but Leake (*Asia Minor*, p. 9), from an accurate computation of distances, has shown that the modern *Maldysem* is much more likely to be the site of Libyssa. [L. S.]

LICATII, or LICATTII (Λικάτιοι, or Λικάττιοι), a tribe of the Vindelici, dwelling on the banks of the river Licias or Licus, from which they derived their name. (Ptol. ii. 13. § 1.) Strabo (iv. p. 206) mentions them among the most audacious of the Vindelician tribes. Pliny (iii. 24), who calls them Licates, enumerates them among the Alpine tribes subdued by Augustus. [L. S.]

LI'CHADES (αἱ Λιχάδες), a group of three small islands between the promontory of Cenaeum in Euboea and that of Cnemides in Locris. They are said to have derived their name from Lichas, who was here thrown into the sea by Hercules, when he was suffering from the poisoned garment. (Strab. i. p. 60, ix. p. 426; Plin. iv. 12. s. 20; Leake, *Northern Greece*, vol. ii. p. 177.)

LICIAS, LICUS (Λικίας: *Lech*), a small river in Vindelicia. (Ptol. ii. 12. § 2, 13. § 1; Ven. Fort. *Vit. S. Mart.* iv. 641.) It assumed the modern form of its name as early as the time of the Lombards (Paul. Diac. *Longob.* ii. 13.) Its only tributary of any note was the Virdo or Vindo. It has its sources in the Alps, and, flowing in a northern direction, empties itself into the Danube, not far from Drusomagus. [L. S.]

LICINIA'NA. [LUSITANIA.]

LIDE (Λίδη), a mountain in Caria, in the neighbourhood of Pedasus. In the war of Cyrus against the Carians, the Pedasaeans alone of all the Carians maintained themselves against Harpalus, the Persian commander, by fortifying themselves on Mount Lide; but in the end they were also reduced. (Herod. i. 175, viii. 104.) [L. S.]

LIGAUNI, a people of Gallia Narbonensis, mentioned by Pliny (iii. 4): "Regio Oxubiorum Ligaunorumque: super quos Suetri, &c." The next Regio to the east that he mentions is "Regio Deciatium." If we can make a safe conclusion from Pliny's text, the Ligauni must have been close to the Oxybii, with the Deciates to the east, and somewhere between the Argenteus river and Antipolis. Walckenaer (*Géog. &c.* vol. ii. p. 42) places the Ligauni in the parts about *Saint-Vallier*, *Callian*, and *Fayen*. [G. L.]

LIGER, LIGERIS (Λείγηρ, Λιγείρ: *Loire*), a river of Gallia, which has the largest basin of all the French rivers. The orthography seems to be Liger or Λείγηρ (Caes. iii. 9, ed. Schneider), though the Romans made both syllables short. In Caesar (vii. 55), the nominative "Liger" occurs, and the genitive "Ligeris." In *B. G.* vii. 5, 11, the accusative "Ligerem," or according to some editions "Ligerim" occurs; and "Ligerim," if it is right, must have a nominative "Ligeris." The forms "Ligere," "Li-

geri," for the ablative also occur in Caesar's text. The form Λίγειρ occurs in Ptolemy (ii. 7. § 2), and in Stephanus Byz. (*s. v.* Βέχειρ), who has also Λίγυρος (*s. v.* Λίγυρες), with a remark that the Ligures, who border on the Tyrrheni, derive their name from the river Ligyrus. Dion Cassius (xxxix. 40, xliv. 42; and the notes of Reimarus), has the shorter form Λίγρος. Lucan (i. 438) is generally cited as authority for the Roman quantity of the word:

"In nebulis Meduana tuis marcere perosus
Andus jam placida Ligeris recreatur ab unda."

But these verses are spurious. (See the Notes in Oudendorp's edition.) According to Strabo, the *Loire* rises in the *Cévennes* (τὰ Κέμμενα), and flows into the ocean. But he is mistaken as to the course of the *Loire*, for he makes both the Garumna and the Liger flow parallel to the Pyrenees; and he was further mistaken in supposing the axis of the Pyrenees to be south and north. [GALLIA TRANSALPINA, vol. i. p. 949.] He estimates the navigable part of each river at 2000 stadia; but the *Loire* is a much longer river than the *Garonne*. He says that the *Loire* flows past Genabum (*Orléans*), and that Genabum is situated about half way between the commencement of the navigable part of the river and its outlet, which lies between the territory of the Pictones on the south, and the territory of the Namnetes on the north; all which is correct enough. (Strab. iv. pp. 189, 190, 191.) He adds that there was a trading place (ἐμπορεῖον), named Corbilo [CORBILO], on the river, which Polybius speaks of. It appears that Strabo did not distinguish the Elaver (*Allier*) from the *Loire*, for he says: "the Arverni are situated on the Liger, and their chief city is Nemossus, which lies on the river; and this river, flowing past Genabum, the trading town of the Carnutes, which is situated about the middle of the navigable part, discharges itself into the ocean" (p. 191). But Nemossus is near the *Allier*.

Caesar was acquainted both with the Elaver (vii. 34, 35) and the river properly called the *Loire*. He crossed the Elaver on his march to Gergovia. [GERGOVIA.] He remarks that the *Allier* was not generally fordable before the autumn; and in another place (*B. G.* vii. 55) he describes his passage over the *Loire* at a season when it was swollen by the melted snow. When Caesar was preparing for his naval warfare with the Veneti, he had ships built on the *Loire*. (*B. G.* iii. 9.) He does not tell us where he built them, but it may have been in the country of the Andes or Andecavi, which he held at that time.

Of the four passages which were made in Strabo's time from Gallia to Britannia, one was from the mouth of the *Loire;* and this river was one line of commercial communication between the Provincia and Britannia. Goods were taken by land from the Provincia to the *Loire*, and then carried down the *Loire*. (Strab. iv. p. 189.) Pliny (iv. 18) calls the *Loire* "flumen clarum," which Forbiger explains by the words "clear stream;" but this does not seem to be what Pliny means. Tibullus (i. 7, 11) says,

"Testis Arar Rhodanusque celer magnusque Garumna,
Carnuti et flavi caerula lympha Liger."

This seems to be all that the ancient geographers have said of the *Loire*. The Elaver (*Allier*) rises in Mons Lesura (*Mont Lozère*), not very far from the source of the *Loire*, and on the north-west side of the *Cévennes*. It flows north through the fertile *Limagne d'Auvergne*, and after a course of about 200 miles joins the *Loire* at Noviodunum or Nevirnum (*Nevers*). The *Loire* rises in *Mont Mezene*, and flows north to its junction with the *Allier* in a valley between the valley of the *Allier* and the basin of the *Rhone*. From *Nevers* the course of the *Loire* is north-west to Genabum (*Orléans*); and from *Orléans* it has a general west course to the ocean, which it enters below *Nantes*. The whole length of the river is above 500 miles. Several large rivers flow into it on the left side below *Orléans;* and the *Mayenne* on the right side below *Tours*. The area of this river-basin is 50,000 square miles, or as much as the area of England. The drainage from this large surface passes through one channel into the sea, and when the volume of water is increased by great rains it causes inundations, and does great damage [G. L.]

LI'GURES. [LIGURIA.]

LI'GURES BAEBIA'NI ET CORNELIA'NI. [HIRPINI.]

LIGU'RIA (Λιγουρία, Ptol.; but in earlier Greek writers always ἡ Λιγυστική: the people were called by the Greeks Λίγυες, but by later writers Λιγυστῖνοι: by the Romans Ligures; but the adjective form is Ligustinus), one of the provinces or regions of Northern Italy, extending along the N. coast of the Tyrrhenian sea, from the frontiers of Gaul to those of Etruria. In the more precise and definite sense in which the name was employed from the time of Augustus, and in which it is used by the geographers (Strabo, Pliny, Ptolemy, &c.), Liguria was bounded by the river Varus on the W., and by the Macra on the E., while towards the N. it extended across the chain of the Maritime Alps and Apennines as far as the river Padus. The Trebia, one of the confluents of the Padus on its right bank, appears to have formed the limit which separated Liguria from Gallia Cispadana. In this sense, Liguria constituted the ninth region of Italy, according to the division of Augustus, and its boundaries were fixed by that monarch. (Plin. iii. 5. s. 7; Strab. v. p. 218; Mel. ii. 4. § 9; Ptol. iii. 1. § 3.)

But Liguria, in its original sense, as "the land of the Ligurians," comprised a much more extensive tract. All the earliest authors are agreed in representing the tribes that occupied the western slopes of the Maritime Alps and the region which extends from thence to the sea at Massilia, and as far as the mouths of the Rhone, as of Ligurian, and not Gaulish origin. Thus Aeschylus represents Hercules as contending *with the Ligurians* on the stony plains near the mouths of the Rhone, Herodotus speaks of Ligurians inhabiting the country above Massilia, and Hecataeus distinctly calls Massilia itself a city of Liguria, while he terms Narbo a city of Gaul. Scylax also assigns to the Ligurians the coast of the Mediterranean sea as far as the mouths of the Rhone; while from that river to Emporium in Spain, he tells us that the Ligurians and Iberians were intermingled. The Helisyci, who, according to Avienus, were the earliest inhabitants of the country around Narbo, were, according to Hecataeus, a Ligurian tribe. (Aeschyl. *ap.* Strab. iv. p. 183; Hecat. *Fr.* 19, 20, 22, ed. Klausen; Herod. v. 9; Scyl. p. 2. §§ 3, 4; Avien. *Or. Marit.* 584; Strab. iv. p. 203.) Thucydides also speaks of the Ligurians having expelled the Sicanians, an Iberian tribe from the banks of the river Sicanus, *in*

Iberia, thus pointing to a still wider extension of their power. (Thuc. vi. 2.) But while the Ligurian settlements to the W. of the Rhone are more obscure and uncertain, the tribes that extended from that river to the Maritime Alps and the confines of Italy — the Salyes, Oxybii, and Deciates — are assigned on good authority to the Ligurian race. (Strab. iv. pp. 202, 203; Pol. xxxiii. 7, 8.) On their eastern frontier, also, the Ligurians were at one time more widely spread than the limits above described. Polybius tells us that in his time they occupied the sea-coast as far as Pisae, which was the first city of Etruria: and in the interior they held the mountain districts as far as the confines of the Arretines. (Pol. ii. 16.) In the narrative of their wars with Rome in the 2nd century B.C., as given in Livy, we find them extending to the same limits: and Lycophron represents them at a much earlier period as stretching far down the coast of Etruria, before the arrival of the Tyrrhenians, who wrested from them by force of arms the site of Pisae and other cities. (Lycophr. *Alex.* 1356.) The population of Corsica also is ascribed by Seneca, and probably with good reason, to a Ligurian stock. [CORSICA.] On the N. of the Apennines, in like manner, it is probable that the Ligurians were far more widely spread, before the settlement of the Gauls, who occupied the fertile plains and drove them back into the mountains. Thus the Laevi and Libici, who occupied the banks of the Ticinus, appear to have been of Ligurian race (Plin. iii. 17. s. 21; Liv. v. 35): the Taurini, who certainly dwelt on both banks of the Padus, were unquestionably a Ligurian tribe; and there seems much reason to assign the same origin to the Salassi also.

In regard to the national affinities or origin of the Ligurians themselves, we are almost wholly in the dark. We know only that they were *not* either Iberians or Gauls. Strabo tells us distinctly that they were of a different race from the Gauls or Celts who inhabited the rest of the Alps, though they resembled them in their mode of life. (Strab. ii. p. 128.) And the same thing is implied in the marked distinction uniformly observed by Livy and other Roman writers between the Gaulish and Ligurian tribes, notwithstanding their close geographical proximity, and their frequent alliance in war. Dionysius says that the origin and descent of the Ligurians was wholly unknown, and Cato appears to have acquiesced in a similar conclusion. (Dionys. i. 10; Cato, *ap. Serv. ad Aen.* xi. 715.) But all ancient authors appear to have agreed in regarding them as one of the most ancient nations of Italy; and on this account Philistus represented the Siculi as a Ligurian tribe, while other authors assigned the same origin to the Aborigines of Latium. (Dionys. i. 10, 22.) Several modern writers have maintained the Celtic origin or affinity of the Ligurians. (Cluver. *Ital.* pp. 49—51; Grotefend, *Alt.-Italien*, vol. ii. pp. 5—7.) But the authority of Strabo seems decisive against any *close* connection between the two races: and it is impossible, in the absence of all remains of their language, to form even a reasonable conjecture as to their more remote affinities. A fact mentioned by Plutarch (*Mar.* 19), according to whom the Ligurians in the army of Marius called themselves in their own language Ambrones, though curious, is much too isolated and uncertain to be received as reasonable proof of a common origin with the Gauls of that name.

The name of the Ligurians appears to have been obscurely known to the Greeks from a very early period, for even Hesiod noticed them, in conjunction with the Scythians and Aethiopians,—evidently as one of the most distant nations of the then known world. (Hesiod. *ap.* Strab. vii. p. 300.) But from the time of the foundation of the flourishing Greek colony of Massilia, which speedily extended not only its commerce but its colonies along the shores of Liguria, as well as those of Iberia, the name of the Ligurians must have become familiar to the Greeks, and was, as we have seen, well known to Hecataeus and Aeschylus. The Ligurians seem also from an early period to have been ready to engage as mercenary troops in the service of more civilised nations; and we find Ligurian auxiliaries already mentioned in the great army of the Carthaginian general Hamilcar, in B.C. 480. (Herod. vii. 165; Diod. xi. 1.) The Greek despots in Sicily continued to recruit their mercenary forces from the same quarter as late as the time of Agathocles. (Diod. xxi. 3.) The Greeks of Massilia founded colonies along the coast of Liguria as far as Nicaea and the Portus Herculis Monoeci, but evidently never established their power far inland, and the mountain tribes of the Ligurians were left in the enjoyment of undisturbed independence.

It was not till the year 237 B. C. that the Ligurians, for the first time, came into contact with the arms of Rome; and P. Lentulus Caudinus, one of the consuls of the following year, was the first who celebrated a triumph over them. (Eutrop. iii. 2; Liv. *Epit.* xx.: *Fast. Capit.*) But the successes of the Romans at this period were evidently very partial and incomplete, and though we find one of the consuls for several years in succession sent against the Ligurians, and the name of that people appears three times in the triumphal Fasti (B. C. 233—223), it is evident that nothing more was accomplished than to prevent them from keeping the field and compel them to take refuge in the mountains (Zonar. viii. 18, 19). The Ligurian tribes with whom the Romans were at this time engaged in hostilities were exclusively those on the N. of the Apennines, who made common cause with the neighbouring Gaulish tribes of the Boians and Insubrians. These petty hostilities were for a time interrupted by the more important contest of the Second Punic War. During that struggle the Ligurians openly sided with the Carthaginians: they sent support to Hannibal, and furnished an important contingent to the army with which Hasdrubal fought at the Metaurus. Again, before the close of the war, when Mago landed in their territory, and made it the base of his operations against Cisalpine Gaul, the Ligurians espoused his cause with zeal, and prepared to support him with their whole forces (Liv. xxii. 33, xxvii. 47, xxviii. 46, xxix. 5). After the untimely fate of Mago, and the close of the war, the Romans were in no haste to punish the Ligurians and Gauls for their defection, but those nations were the first to take up arms, and, at the instigation of the Carthaginian Hamilcar, broke out into open hostilities, (B. C. 200), and attacked the Roman colonies of Placentia and Cremona. (Liv. xxxi. 10.)

From this time commenced the long series of wars between the Romans and Ligurians, which continued with little intermission for above eighty years. It would be impossible to give here any detailed account of these long protracted, but desultory hostilities; indeed we possess, in reality, very little information concerning them. So long as the books of Livy are pre

d to us, we find perpetually recurring notices of aigns against the Ligurians; and while the Roarms were overthrowing the powerful empires of edonia and Syria in the East, one, and somes both, of the consuls were engaged in petty and rious hostilities with the hardy mountaineers of ria. But the annual records of these camns for the most part throw little light on the state of the case or the progress of the Roman . It is evident, indeed, that, notwithstanding ften repeated tales of victories, frequently celed at Rome by triumphs, and often said to have followed by the submission of the whole Ligunation, the struggle was really an arduous one, t was long before the Romans made any real ess in the reduction of their territory.

e of the most formidable and powerful of the ian tribes was that of the APUANI, who ind the lofty group of mountains bordering on a, and appear to have occupied the valleys of acra and Ausar (*Magra* and *Serchio*), while extended eastwards along the chain of the ines to the frontiers of the Arretines and rritory of Mutina and Bononia. To oppose inroads, the Romans generally made Pisae the quarters of one of their armies, and from thence d their arms into the heart of the mountains: heir successes seldom effected more than to el the enemy to disperse and take refuge in villages and castles, of which the latter were tain fastnesses in which they were generally o defy the Roman arms. It was not till B. C. that the first effectual step was taken for their tion, by the consuls Cornelius and Baebius, after having compelled them to a nominal subn, adopted the expedient of transporting the nation (to the number of 40,000, including n and children) to a distance from their own y, and settled them in the heart of Samnium, they continued to exist, under the name of ures Corneliani et Baebiani," for centuries after. (Liv. xl. 38, 41.) The establishment of n colonies at Pisae and Luca a few years afters tended to consolidate the conquest thus ob, and established the Roman dominion pently as far as the Macra and the port of Luna. xl. 43, xli. 13.) The FRINIATES, a tribe on . of the Apennines, near the sources of the enna (*Panaro*), had been reduced to subjection Flaminius in B. C. 187, and the obscure tribes e Briniates, Garuli, Hercates, and Lapicini apto have been finally subdued in B. C. 175. xxix. 2, xli. 19.) The INGAUNI, one of the powerful tribes on the coast to the W. of a, had been reduced to nominal submission as as B.C. 181. but appear to have been still imperfectly subdued; and they, as well as their bours the Intemelii, continued to harass the ory of the Romans, as well as of their allies the ilians, by piratical expeditions. (Liv. xl. 18, -28, 41.) In B. C. 173 the STATIELLI were ced to subjection (Id. xlii. 8, 9); and the name is people, which here appears for the first time, s that the Romans were gradually, though ly, making good their advance towards the W. m the year 167 B.C., when we lose the guidance Livy, we are unable to trace the Ligurian wars in detail, but we find triumphs over them still retedly recorded, and it is evident that they were l unsubdued. In B.C. 154 the Romans for the st time attacked the Ligurian tribes of the Oxybii and Deciates, who dwelt W. of the Varus, and were therefore not included in Italy, according to its later limits. (Liv. *Epit.* xlvii.; Polyb. xxxiii. 7.) It was not till more than thirty years afterwards (B. C. 123—122) that two successive triumphs celebrated the reduction of the more powerful tribes of the Vocontii and Salluvii, both of them in the same neighbourhood. But while the Ligurian tribes W. of the Maritime Alps were thus brought gradually under the Roman yoke, it appears, that the subjection of those in Italy was still incomplete; and in B. C. 117, Q. Marcius for the last time earned a triumph "de Liguribus." (*Fast. Capit.*) Even after this, M. Aemilius Scaurus is said to have distinguished himself by fresh successes over them; and the construction by him (B. C. 109) of the Via Aemilia, which extended along the coast from Luna to Vada Sabbata, and from thence inland across the Apennines to Dertona, may be considered as marking the period of the final subjugation of Liguria. (Strab. v. p. 217; Aur. Vict. *de Vir. Illustr.* 72.) But a remarkable expression of Strabo, who says that, after eighty years of warfare, the Romans only succeeded in securing a space of 12 stadia in breadth for the free passage of public officers, shows that even at this time the subjection of the mountain tribes was but imperfect. (Strab. iv. p. 203.) Those which inhabited the Maritime Alps, indeed, were not finally reduced to obedience till the reign of Augustus, B. C. 14. (Dion Cass. liv. 24.) This had, however, been completely effected at the time that Strabo wrote, and Liguria had been brought under the same system of administration with the rest of Italy. (Strab. *l. c.*) The period at which the Ligurians obtained the Roman franchise is unknown: it is perhaps probable that the towns obtained this privilege at the same time with those of Cisalpine Gaul (B. C. 89); but the mountain tribes, even in the days of Pliny, only enjoyed the Latin franchise. (Plin. iii. 20. s. 24.)

In the division of Italy under Augustus, Liguria (in the more limited sense, as already defined) constituted the ninth region (Plin. iii. 5. s. 7), and its boundaries on the E. and W. appear to have continued unchanged throughout the period of the Roman Empire: but the Cottian Alps, which in the time of Augustus still constituted a separate district under their own native chieftain, though dependent upon Rome, and, from the reign of Nero to that of Constantine, still formed a separate province, were incorporated by Constantine with Liguria; and from this period the whole of the region thus constituted came to be known as the ALPES COTTIAE, while the name of Liguria was transferred (on what account we know not) to the eleventh region, or Gallia Transpadana [ITALIA, p. 93]. Hence we find late writers uniformly speaking of Mediolanum and Ticinum as *cities of Liguria*, while the real land of the Ligurians had altogether lost that appellation, and was known only as "the province of the Cottian Alps." (*Lib. Provinc.*; P. Diac. *Hist. Lang.* ii. 15, 16; Jornand. *Get.* 30, 42; Procop. *B. G.* i. 14; Böcking, *ad Not. Dign.* ii. pp. 442, 443.) It is evident that long before this change took place the Ligurians must have lost all traces of their distinct nationality, and become blended into one common mass with the other Italian subjects of Rome.

Liguria is throughout the greater part of its extent a mountainous country. The Maritime Alps, which formed the western boundary, descend completely to the sea in the neighbourhood of *Nice* and

Monaco, while the main chain of the same mountains, turning off from the general direction of the central chain of the Alps near the sources of the *Var* (Varus), is prolonged in a lofty and rugged range till it reaches the sea between *Noli* and *Savona*. The lateral ranges and offshoots which descend from these mountains to the sea occupy the whole line of coast from *Monaco* to *Savona*. Hence this line has always been one where there has been much difficulty in making and maintaining a practicable road. It was not till the reign of Augustus that the Romans carried a highway from Vada Sabbata to Antipolis; and in the middle ages, when the Roman roads had fallen into decay, the whole of this line of coast became proverbial for the difficulty of its communications. (Dante, *Purg.* iii. 49.) From the neighbourhood of Vada Sabbata, or *Savona*, where the Alps may be considered to end and the Apennines to begin, the latter chain of mountains runs nearly parallel with the coast of Liguria throughout its whole extent as far as the river Macra; and though the range of the Apennines is far inferior in elevation to that of the Maritime Alps, they nevertheless constitute a mountain mass of a rugged and difficult character, which leaves scarcely any level space between the foot of the mountains and the sea. The northern declivity of the Apennines is less abrupt, and the mountains gradually subside into ranges of steep wooded hills as they approach the plains of the *Po*: but for this very reason the space occupied by the mountainous and hilly tract is more extensive, and constitutes a broad belt or band varying from 15 to 30 miles in width. The narrowest portion of the range, as well as one of the lowest, is immediately at the back of *Genoa*, and for that reason the pass from that city to Dertona was in ancient as well as modern times one of the principal lines of communication with the interior. Another natural pass is marked out by a depression in the ridge between the Maritime Alps and Apennines, which is crossed by the road from *Savona* to *Ceva*. This line of road communicates with the plain at the N. foot of the Maritime Alps, extending from the neighbourhood of *Coni* and *Mondovi* to that of *Turin*, which is one of the most extensive tracts of fertile and level country comprised within the limits of the ancient Liguria. E. of this, the hills of the *Astigiana* and *Monferrat* extend from the foot of the Apennines (of the northern slopes of which they are, in fact, a mere continuation) quite to the bank of the *Po*; but are of moderate elevation and constitute a fertile country. Beyond these, again, another tract of plain occurs, but of less extent; for though it runs far up into the mountains near *Novi*, it is soon hemmed in again by the hills which descend to *Tortona* (Dertona), *Voghera* (Iria), and *Casteggio* (Clastidium), so as to leave but a narrow strip of plain between them and the banks of the *Po*.

The physical features of Liguria naturally exercised a marked influence on the character and habits of its inhabitants. It was with the tribes who occupied the lofty and rugged ranges of the Apennines E. of the Macra (where these mountains rise to a much greater elevation, and assume a much more Alpine character, than in any part of Liguria proper) that the Romans waged their longest and most obstinate contests; but all the tribes who inhabited the upper valleys of the central chain, and the steep and rugged declivities of the Apennines towards the sea, partook of the same hardy and warlike character. On the other hand, the Statielli, Vagienni, and other tribes who occupied the more fertile hills and valleys on the N. declivity of the Apennines, were evidently reduced with comparatively little difficulty. It is to the former portion of the Ligurian people that the character and description of them which we find in ancient writers may be considered almost exclusively to apply. Strabo says that they dwelt in scattered villages, tilling the soil with difficulty, on account of its rugged and barren character, so that they had almost to *quarry* rather than *dig* it. But their chief subsistence was derived from their herds, which supplied them with flesh, cheese, and milk; and they made a kind of drink from barley. Their mountains also supplied timber in great abundance and of the largest size. Genua was their principal emporium, and thither they brought, for export, timber, cattle, hides, and honey, in return for which they received wine and oil. (Strab. iv. p. 202, v. p. 218; Diod. v. 39.) In the days of the geographer they produced but little wine, and that of bad quality; but Pliny speaks of the Ligurian wines with commendation. (Strab. p. 202; Plin. xiv. 6. s. 8.) The nature of their country and the life they led inured them to hardships ("assuetum malo Ligurem," Virg. *G.* ii. 168; "Ligures montani duri et agrestes," Cic. *de Leg. Agr.* ii. 35); and they were distinguished for their agility, which admirably fitted them for the chase, as well as for the kind of predatory warfare which they so long maintained against the Romans. Cato gave them the character of being treacherous and deceitful,—an opinion which seems to have been generally adopted by the Romans (Serv. *ad Aen.* xi. 700, 715), and must naturally have grown up from the nature of the wars between them; but they appear to have served faithfully, as well as bravely, in the service of the Greeks and Carthaginians, as mercenaries, and, at a later period, as auxiliaries in those of Rome. (Diod. v. 39; Plut. *Mar.* 19; Tac. *Hist.* ii. 14.) The troops they furnished were almost exclusively infantry, and, for the most part, light-armed: they excelled particularly as slingers (Pseudo Arist. *Mirab.* 90); but their regular infantry carried oblong shields of brass, resembling those of the Greeks. (Diod. *l. c.*; Strab. iv. p. 202.) During the period of their independence, they not only made plundering incursions by land into the neighbouring countries, but carried on piracy by sea to a considerable extent, and were distinguished for their hardiness and daring as navigators, as well as in all their other pursuits. (Diod. v. 39; Liv. xl. 18, 28.) The mountain tribes resembled the Gauls and Germans in the custom of wearing their hair long; on which account the wilder tribes, which were the last to maintain their independence, were known as the Ligures Capillati or Comati (Λίγυες Κομηταί, Dion Cass. liv. 24; Plin. iii. 20. s. 24; Lucan, i. 442); and the cropping their hair was regarded as a proof of their subjection to Rome.

Among the more peculiar natural productions of Liguria are noticed a breed of dwarf horses and mules, called by the Greeks γίννοι; and a kind of mineral resembling amber, called λιγγούριον, which appears to have been confounded by Theophrastus with genuine amber. (Strab. iv. p. 202; Theophr. *de Lapid.* §§ 28, 29.)

The Ligurians were divided, like most nations in a similar state of society, into a number of tribes, which appear to have had little, if any, political bond of union beyond the temporary alliances which they might form for warlike objects; and it is evident, from the account of the wars carried on by

them with the Romans, that these leagues were extremely variable and partial. The names of many of the different tribes have been transmitted to us; but it is often difficult, or impossible, to determine with any degree of certainty the situation or limits of their respective territories. It is probable, as pointed out by Pliny, that these limits themselves varied much at different times (Plin. iii. 5. s. 6), and many of the minor tribes, whose names are mentioned by Livy in the history of the Roman conquest of Liguria, seem to have at a later period disappeared altogether.* The only tribes concerning whom we have any tolerably definite information are: — 1. the APUANI, in the valley of the Macra, and about the Portus Lunae; but the greater part of the territory which had once belonged to this powerful tribe was not included in Roman Liguria. 2. The FRINIATES, who may be placed with much probability in the upper valley of the Scultenna, or *Panaro*, on the N. slope of the Apennines towards Mutina (a district still called *Frignano*); so that they also were excluded from Liguria in the later sense of the term. 3. The BRINIATES may *perhaps* be placed in the valley of the *Vara*, the most considerable confluent of the *Magra*, called by Ptolemy the Boactes. 4. The GENUATES, known to us only from an inscription [GENUA], were obviously the inhabitants of Genua and its immediate neighbourhood. 5. The VETURII, mentioned in the same inscription, adjoined the Genuates on the W., and were apparently separated from them by the river Porcifera, or *Polcevera*. 6. The more powerful and celebrated tribe of the INGAUNI may be placed with certainty on the coast near *Albenga* (Albium Ingaunum), though we cannot fix their limits with any precision. 7. The INTEMELII occupied the coast W. of the Ingauni: their chief town was Albium Intemelium, now *Vintimiglia*. 8. The VEDIANTII inhabited the country on both sides of the Varus, as their name is evidently retained by the town of *Vence*, some miles W. of that river; while Cemenelium, about 5 miles to the E. of it, also belonged to them. (Plin. iii. 5. s. 7.)

Of the tribes N. of the Apennines, or inhabiting the valleys of that range which slope towards the Padus, the most conspicuous were:—1. The VAGIENNI, whose capital was Augusta Vagiennorum, now *Bene*, between the *Stura* and the *Tanaro*, while their confines appear to have extended as far as the *Monte Viso* and the sources of the *Po*. 2. The STATIELLI, whose position is marked by the celebrated watering-place of Aquae Statiellae, now *Acqui*. 3. The TAURINI, whose capital was Augusta Taurinorum, now *Turin*, and who appear to have occupied the whole country on both sides of the Padus, from the foot of the Cottian Alps to the banks of the Tanarus. 4. The EUBURIATES (Flor. ii. 3; Plin. iii. 5. s. 7) may be placed, according to a local antiquary, in the hills of the *Astigiana*. (Durandi, *Piemonte Cispadano*, cited by Walckenaer, *Géogr. des Gaules*, vol. i. p. 161.) 5. E. of these must be placed several smaller tribes mentioned by Livy in the history of the Roman wars with Liguria, and of which we know only that they were situated on the N. side of the Apennines. These are the Celelates, Cerdiciates, and apparently the Ilvates also. (Liv. xxxii. 29, 31.) 6. The EPANTERII are mentioned also by Livy (xxviii. 46) as a tribe who occupied the mountains above the Ingauni; but no subsequent mention of them occurs.

In addition to these, Livy notices the Garuli, Hercates, and Lapicini, as situated on the S. side of the Apennines (xli. 19), but we have no further clue to their position. Pliny also enumerates (iii. 5. s. 7) among the Ligurian tribes on the Italian side of the Alps, the Veneni, Bimbelli, Magelli, Casmonates, and Veleiates, of which the last doubtless occupied the country around Veleia, the ruins of which still remain about eighteen miles S. of Placentia. The others are wholly unknown, and the names themselves vary so much in the MSS. as to be of very doubtful authority.

The coast of Liguria, as already described, is bordered closely throughout its whole extent by the ranges of the Maritime Alps and Apennines, which for the most part rise very abruptly from the seashore, in other places leave a narrow strip of fertile territory between their foot and the sea, but nowhere is there anything like a plain. This steep coast also affords very few natural ports, with the exception of the magnificent bay called the Portus Lunae (now the *Gulf of Spezia*) near its eastern extremity, which is one of the most spacious and secure harbours in the Mediterranean. The port of Genua also caused it to be frequented from the earliest times as a place of trade (Strab. iv. p. 202), while the Portus Herculis Monoeci (*Monaco*), though small, was considered secure. It is singular that the much more spacious and secure harbour of *Villafranca*, in the same neighbourhood, is not mentioned by any ancient writer, though noticed in the Maritime Itinerary under the name of Portus Olivulae. The same Itinerary (pp. 503, 504) notices two small ports, which it places between this last and that of *Monaco*, under the names of Anao and Avisio, which may probably be placed respectively at *S. Ospizio* and *Eza*. [NICAEA.] The PORTUS MAURICI of the same Itinerary is still called *Porto Maurizio*, a small town about two miles W. of *Oneglia*.

The rivers of Liguria are not of much importance. From the proximity of the mountains to the S. coast, the streams which descend from them to the sea are for the most part mere mountain torrents, altogether dry in summer, though violent and destructive in winter and after heavy rains. Almost the only exceptions are the two rivers which formed the extreme limits of Liguria on the E. and W., the MACRA and the VARUS, both of which are large and perennial streams. Next in importance to these is the RUTUBA or *Roja*, which flowed through the country of the Intemelii. It rises at the foot of the *Col di Tenda*, in the Maritime Alps, and has a course of above 36 miles from thence to the sea at *Vintimiglia*. The smaller streams on the S. coast were:— the PAULO (*Paglione*), which flowed by the walls of Nicaea (Plin. iii. 5. s. 7; Mel. ii. 4. § 9); the TAVIA (*Itin. Marit.* p. 503) still called the *Taggia*, between *S. Remo* and *Porto Maurizio;* the MERULA (Plin. *l. c.*), which still retains its name, and falls into the sea between *Oneglia* and *Albenga;* the PORCIFERA of Pliny (*l. c.*), now called the *Polcevera*, which flows a few miles to the W. of *Genoa*; the FERITOR (*Ib.*), on the E. of the same city, now the *Bisagno;* the ENTELLA (Ptol. iii. 1. § 3), which is probably

* The same thing is the case with the names of three Ligurian tribes, cited by Stephanus of Byzantium (*s. v.*) from Theophrastus,—the Arbaxani, Eubii, and Ipsicuri. Of these we do not know even whether they dwelt in Italy or on the southern coast of Gaul.

the *Lavagna*, that falls into the sea at *Chiavari;* and the BOACTES of the same author, which can be no other than the *Vara*, the most considerable tributary of the *Magra*. Much more considerable than these, both in the volume of water and length of their course, are the streams which flow from the N. slopes of the Apennines towards the Padus. But of these, the only ones whose names are found in any ancient author, are the TANARUS, or *Tanaro*, one of the most important of the southern tributaries of the Padus; the STURA, which joins the Tanarus near Pollentia; and the TREBIA, which rises in the Apennines, not far from *Genoa*, and falls into the *Po* near Placentia, forming during a part at least of its course the boundary between Liguria and Gallia Cispadana.

The rivers marked in this part of Italy in the Tabula are so confused, and the names so corrupt, that it is useless to attempt to identify them.

The native Ligurians lived for the most part in mere villages and mountain fastnesses ("castella vicique," Liv. xl. 17; Strab. v. p. 218), and had probably few towns. Even under the Roman government there seem to have been few places which deserved the name of *towns* along the sea-coast, or among the inner ranges of the Apennines; but on the northern slopes of the same mountains, where they approached or opened out into the plains, these grew up rapidly and rose to great prosperity,— so that Pliny says of this part of Liguria in his time, "omnia nobilibus oppidis nitent" (Plin. iii. 5. s. 7). Those which he proceeds to enumerate are: — LIBARNA (between *Arquata* and *Serravalle*), DERTONA (*Tortona*), IRIA (*Voghera*), BARDERATE (of uncertain site), INDUSTRIA (at *Monteu*, on the right bank of the *Po*), POLLENTIA (*Polenza*), CARREA POTENTIA (uncertain), FORUM FULVII, called VALENTINUM (*Valenza*), AUGUSTA VAGIENNORUM (*Bene*), ALBA POMPEIA (*Alba*), ASTA (*Asti*), AQUAE STATIELLAE (*Acqui*). To these must be added AUGUSTA TAURINORUM, which was certainly a Ligurian town, though, from its position on the left bank of the Padus, it is enumerated by Pliny with the cities of the xith region, or Gallia Transpadana. In the same district were FORUM VIBII, in the territory of the Vagienni, and OCELUM, now *Uxeau*, in the valley of *Fenestrelles*. Segusio (*Susa*) was probably a Gaulish rather than a Ligurian town. In addition to these may be mentioned CLASTIDIUM (*Casteggio*), which is expressly called by Livy a Ligurian town, though situated on the Gaulish frontier, and CEBA, now *Ceva*, in the upper valley of the *Tanaro*. Litubium, mentioned by Livy together with Clastidium (xxxii. 29), and Carystum, noticed by the same author as a town of the Statielli (xlii. 7), are otherwise wholly unknown.

Along the coast of Liguria, beginning from the Varus, the towns enumerated by Pliny or Ptolemy are:— NICAEA (*Nice*), CEMENELIUM (*Cimiez*, a short distance inland), PORTUS HERCULIS MONOECI (*Monaco*), ALBIUM INTEMELIUM (*Vintimiglia*), ALBIUM INGAUNUM (*Albenga*), VADA SABBATA (*Vado*, near *Savona*), GENUA, PORTUS DELPHINI (*Porto Fino*), Tigullia (probably *Tregoso*, near, *Sestri*), Segesta (probably *Sestri*), PORTUS VENERIS (*Porto Venere*), and PORTUS ERICIS (*Lerici*), both of them on the *Gulf of Spezia*, which was called as a whole the PORTUS LUNAE [LUNA]. The other names enumerated in the Itineraries are for the most part very obscure and uncertain, and many of them, from their very form, are obviously not the names of towns or even villages, but of mere stations or "mutationes." The few which can be determined with any certainty have their modern names annexed in the Itineraries here given.

1. The coast road from the Varus to the Macra is thus given in the Tabula Peutingeriana:—

Varum fl. (*Var*).
Cemenelium (*Cimiez*).
In Alpe Maritima (*Turbia*).
Albintemelium (*Vintimiglia*).
Costa Balaenae.
Lucus Bormani.
Albingaunum (*Albenga*).
Vada Sabata (*Vado*).
Vicus Virginis.
Alba Docilia (*Albissola*).
Ad Navalia.
Hasta.
Ad Figlinas.
Genua (*Genoa*).
Ricina.
Ad Solaria (*Solaro* near *Chiavari*).
Ad Monilia (*Moneglia*).
In Alpe Pennino.
Boron.
Luna (*Luni*).

2. The same line of route is thus given (in the contrary direction) in the Itinerary of Antoninus (p. 293):—

Luna.
Boaceas (probably Boactes fl.: the *Vara*).
Bodetia.
Tegulata (perhaps identical with the Tigullia of Pliny: *Tregoso*).
Delphinis (Portus Delphini, Plin.: *Porto Fino*).
Genua (*Genoa*).
Libarium (Libarnum).*
Dertona (*Tortona*).
Aquae (*Acqui*).
Crixia.
Canalicum.
Vada Sabata (*Vado*).
Pullopicem.
Albingaunum (*Albenga*).
Lucus Bormani.
Costa Balaenae.
Albintimelium (*Vintimiglia*).
Lumonem (*Mentone*).
Alpe summa (*Turbia*).
Cemenelium (*Cimiez*).
Varum flumen (*Var*).

(The distances given along this line of route are in both Itineraries so corrupt and confused that they are omitted above. For a fuller discussion of the routes in question see Walckenaer, *Géographie des Gaules*, vol. iii. pp. 18—21; and Serra, *Storia dell' antica Liguria*, vol. i. pp. 97—100.)

* It is evident that the Antonine Itinerary here quits the coast road, and makes a sudden turn inland to Dertona, and thence back again by Aquae Statiellae to the coast at Vada Sabata, from whence it resumes the line of coast road. A comparison with the Tabula (as given in fac-simile by Mannert), in which *both* lines of road are placed side by side, will at once explain how this error originated; and points out a source of corruption and confusion in our existing copies of the Itinerary, which has doubtless operated in many other cases where it cannot now be so distinctly traced.

3. The most important of the routes in the interior of Liguria, was that leading from Genua inland by Libarnum to Dertona, from whence a branch communicated, through Iria and Comillomagus, with Placentia; while another branch passed by Aquae Statiellae to the coast at Vada Sabata. (The stations on both these roads have been already given in the preceding route). From Aquae Statiellae another branch led by Pollentia to Augusta Taurinorum. (*Tab. Peut.*) [E. H. B.]

LIGU'STICUM MARE (τὸ Λιγυστικὸν πέλαγος, Strab. ii. p. 122), was the name given in ancient times to that part of the Mediterranean sea which adjoined the coast of Liguria, and lay to the N. of the Tyrrhenian sea. The name was applied (like all similar appellations) with considerable vagueness, sometimes as limited to what is now called the *Gulf of Genoa*,— in which sense it is termed the LIGUSTICUS SINUS by Florus (iii. 6. § 9), — at others in a much wider sense, so that Pliny speaks of Corsica as an island "in Ligustico mari." Some of the Greek geographers included under the name the whole extent from the frontiers of Spain to those of Etruria, comprising the MARE GALLICUM of the Romans, or the modern *Gulf of Lyons*. The more limited use of the name seems, however, to have been the more usual, at all events in later times, and is elsewhere adopted by Pliny himself. (Plin. iii. 5. s. 10, 6. s. 12; Strab. *l. c.*; Ptol. iii. 1. § 3; Agathem. i. 3; Dionys. Per. 76; Priscian, *Per.* 80.) [E. H. B.]

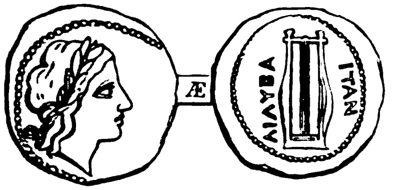
LILAEA (Λίλαια: *Eth.* Λιλαιεύς), a town of Phocis, situated at the foot of Mount Parnassus, and at the sources of the Cephissus. (Hom. *Il.* ii. 522, *Hymn. in Apoll.* 240: Strab. ix. pp. 407, 424; Paus. ix. 24. § 1, x. 33. § 3; Stat. *Theb.* vii. 348.) It was distant from Delphi by the road over Parnassus 180 stadia. (Paus. *l. c.*) It is not mentioned by Herodotus (viii. 31) among the towns destroyed by the Persians; whence we may conjecture that it belonged at that time to the Dorians, who made their submission to Xerxes. (Leake, *Northern Greece*, vol. ii. p. 90.) It was destroyed at the end of the Sacred War; but was soon afterwards restored. It was taken by Demetrius, but subsequently threw off the Macedonian yoke. Pausanias saw at Lilaea a theatre, an agora, and baths, with temples of Apollo and Artemis, containing statues of Athenian workmanship and of Pentelic marble. (Paus. x. 33. § 4; see also x. 3. § 1, x. 8. § 10; Lycophr. 1073; Steph. B. *s. v.*) The ruins of Lilaea, called *Paleókastro*, are situated about half a mile from the sources of the Cephissus. The entire circuit of the fortification exists, partly founded on the steep descent of a rocky hill, while the remainder encompasses a level space at its foot, where the ground is covered with ruins. Some of the towers on the walls are almost entire. The sources of the Cephissus, now called *Kefalovrýses* (Κεφαλοβρύσεις), are said by Pausanias very often to issue from the earth, especially at midday, with a noise resembling the roaring of a bull; and Leake found, upon inquiry, that though the present natives had never made any such observation at *Kefalovrýses*, yet the water often rises suddenly from the ground in larger quantities than usual, which cannot but be accompanied with some noise. (Dodwell, *Classical Tour*, vol. ii. p. 133; Leake, *Northern Greece*, vol. ii. pp. 71, 84.) Ptolemy (iii. 15. § 15) erroneously calls Lilaea a town of Doris.

LI'LLIUM or LI'LEUM (Λίλλιον, Λιλεόν), a commercial place (emporium) on the coast of Bithynia, 40 stadia to the east of Dia; but no particulars are known about it. (Arrian, *Peripl.* p. 13; Anonym. *Peripl.* 3.) It is possible that the place may have derived its name from the Lilaeus, which Pliny (*H. N.* v. 43) mentions among the rivers of Bithynia. [L. S.]

LILYBAEUM (Λιλύβαιον: *Eth.* Λιλυβαίτης, Lilybaetanus: *Marsala*), a city of Sicily, situated on the promontory of the same name, which forms the extreme W. point of the island, now called *Capo Boèo*. The promontory of Lilybaeum is mentioned by many ancient writers, as well as by all the geographers, as one of the three principal headlands of Sicily, from which that island derived its name of Trinacria. It was the most westerly point of the island and that nearest to Africa, from which it was distant only 1000 stadia according to Polybius, but Strabo gives the distance as 1500 stadia. Both statements, however, exceed the truth; the real distance from *Cape Bon*, the nearest point of the coast of Africa, being less than 90 geog. miles, or 900 stadia. (Pol. i. 42; Strab. ii. p. 122, vi. pp. 265, 267; Mel. ii. 7; Plin. iii. 8. s. 14; Ptol. iii. 4. § 5; Diod. v. 2, xiii. 54; Steph. B. *s. v.*; Dionys. Per. 470.) The headland itself is a low but rocky point, continued out to sea by a reef of hidden rocks and shoals, which rendered the navigation dangerous, though there was a safe port immediately adjoining the promontory. (Pol. *l. c.*; Virg. *Aen.* iii. 706.)

Diodorus tells us distinctly that there was no town upon the spot until after the destruction of Motya by Dionysius of Syracuse, in B. C. 397, when the Carthaginians, instead of attempting to restore that city, settled its few remaining inhabitants on the promontory of Lilybaeum, which they fortified and converted into a stronghold. (Diod. xiii. 54, xxii. 10.) It is, therefore, certainly a mistake (though one of which we cannot explain the origin) when that author, as early as B. C. 454, speaks of the *Lilybaeans* and Segestans as engaged in war on account of the territory on the banks of the river Mazarus (Id. xi. 86). The promontory and port were, however, frequented at a much earlier period: we are told that the Cnidians under Pentathlus, who afterwards founded Lipara, landed in the first instance at Lilybaeum (Id. v. 9); and it was also the point where, in B. C. 409, Hannibal landed with the great Carthaginian armament designed for the attack of Selinus. (Id. xiii. 54.) Diodorus tells us (*l. c.*) that on the promontory was a *well* (φρέαρ), from whence the city took its name: this was obviously the same with a source or spring of fresh water rising in a cave, now consecrated to St. John, and still regarded with superstitious reverence. (Fazell. *de Reb. Sic.* vii. 1; Smyth's *Sicily*, p. 228.)

It is clear that the new city quickly rose to prosperity, and became an important stronghold of the Carthaginian power, succeeding in this respect to the position that Motya had previously held. [MOTYA.] Its proximity to Africa rendered it of especial importance to the Carthaginians in securing their communications with Sicily, while the danger which would threaten them if a foreign power were in possession of such a fortress, immediately opposite to the gulf of Carthage, led them to spare no pains for its security. Hence Lilybaeum twice became the last bulwark of their power in Sicily. In B. C. 276 it was besieged by Pyrrhus, who had already reduced all the other cities of Sicily, and expelled the Car-



thaginians from all their other strongholds. But they continued to throw in supplies and reinforcements by sea to Lilybaeum, so that the king, after a siege of two months, was compelled to abandon the enterprise as hopeless. (Diod. xxii. 10. Exc. Hoesch. pp. 498, 499.) But it is the memorable siege of Lilybaeum by the Romans in the First Punic War which has given to that city its chief historical celebrity. When the Romans first commenced the siege in the fifteenth year of the war, B. C. 250, they were already masters of the whole of Sicily, with the exception of Lilybaeum and Drepanum; and hence they were able to concentrate all their efforts and employ the armies of both consuls in the attack of the former city, while the Carthaginians on their side exerted all their energies in its defence. They had just before removed thither all the inhabitants of Selinus (Diod. xxiv. 1. p. 506), and in addition to the citizens there was a garrison in the place of 10,000 men. (Pol. i. 42.) The city appears to have occupied the whole of the promontory, and was fortified on the land side by a wall flanked with towers and protected by a deep ditch. The Romans at first attacked this vigorously, but all their efforts were frustrated by the courage and activity of the Carthaginian commander Himilco; their battering engines were burnt by a sally of the besieged, and on the approach of winter the consuls were compelled to convert the siege into a blockade. This was easily maintained on the land side, but the Romans in vain endeavoured to exclude the besieged from succours by sea. A Carthaginian fleet under Hannibal succeeded in making good its entrance into the port; and the skilful Carthaginian captains were able to elude the vigilance of the Roman cruisers, and keep up free communications with the besieged. The Roman consuls next tried to block up the entrance of the port with a mound, but this was soon carried away by the violence of the waves; and soon after, Adherbal, the Carthaginian commander-in-chief, who lay with a large fleet at Drepanum, totally defeated the Roman fleet under the consul P. Claudius, B. C. 249. This disaster was followed by the almost total loss of two Roman fleets in succession by shipwreck, and these accumulated misfortunes compelled the Romans to abandon the very attempt to contest the dominion of the sea. But though they could not in consequence maintain any efficient blockade, they still continued to hem in Lilybaeum on the land side, and their armies continued encamped before the city for several years in succession. It was not till the tenth year of the siege that the victory of C. Lutatius Catulus at the Aegates, B. C. 241, compelled the Carthaginians to conclude peace, and to abandon the possession of Lilybaeum and Drepanum, which up to that time the continued efforts of the Romans had failed in wresting from their hands. (Pol. i. 41—54, 59—62; Diod. xxiv. 1, 3, 11, Exc. H. pp. 506—509, Exc. Vales. p. 565; Zonar. viii. 15—17; Oros. iv. 10.)

Lilybaeum now passed into the condition of a Roman provincial town: but it continued to be a flourishing and populous place. Its position rendered it now as important a point to the Romans for the invasion of Africa, as it had previously been to the Carthaginians for that of Sicily; and hence its name is one of frequent occurrence during almost all periods of Roman history. Thus, at the outbreak of the Second Punic War, B. C. 218, Lilybaeum was the station of the Roman fleet under the praetor M. Aemilius, who defeated a Carthaginian force that had attempted to surprise that important post. (Liv. xxi. 49, 50.) During the course of the same war it was the point from whence Roman commanders repeatedly made predatory descents with small squadrons upon the coast of Africa; and towards the close of the same memorable contest, B. C. 204, it was from thence that Scipio sailed with the fleet and army which were destined for the conquest of Africa. (Liv. xxv. 31, xxvii. 5, xxix. 24.) In like manner it was at Lilybaeum that the younger Scipio Africanus assembled his fleet and army in B. C. 149, preparatory to passing over into Africa (Diod. xxxii. 6); and in the Civil Wars Caesar made it his head-quarters when preparing for his African campaign against Scipio and Juba, B. C. 47. (Hirt. *B. Afr.* 1, 2, 37; Appian, *B. C.* ii. 95.) It was also one of the chief naval stations of Sextus Pompeius in his war with Augustus, B. C. 36. (Appian, *B. C.* v. 97, 122; Dion Cass. xlix. 8.) Nor was the importance of Lilybaeum confined to these warlike occasions: it is evident that it was the habitual port of communication between Sicily and Africa, and must have derived the greatest prosperity from the constant traffic which arose from this circumstance. Hence we find it selected as the habitual place of residence of one of the two quaestors of Sicily (Pseud. Ascon. *in Verr.* p. 100); and Cicero, who had himself held that office at Lilybaeum, calls it "splendidissima civitas" (*Verr.* v. 5.) It was one of the few cities of Sicily which still retained some importance in the time of Strabo. (Strab. vi. p. 272.) Its continued prosperity under the Roman Empire is sufficiently attested by inscriptions: from one of these we learn that its population was divided into twelve tribes; a rare mode of municipal organisation. (Torremuzza *Inscr. Sicil.* pp. 7, 15, 49; Orell. *Inscr.* 151, 1691, 3718.) In another inscription it bears the title of a colonia: the time when it became such is uncertain; but probably not till the reign of Hadrian, as Pliny does not mention it among the five colonies founded by Augustus in Sicily. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 5; *Itin. Ant.* pp, 86, 89, 96; Zumpt, *de Colon.* p. 409.)

After the fall of the Roman Empire Lilybaeum still continued to be one of the most important cities of Sicily. It is mentioned as such under the successive dominion of the Goths and Vandals (Procop. *B. V.* i. 8, ii. 5); and during the period of the Arabian dominion in Sicily, that people attached so much value to its port, that they gave it the name of *Marsa Alla*,—the port of God,—from whence has come its modern appellation of *Marsala*. It was not till the 16th century that this celebrated port was blocked up with a mole or mound of sunken stones by order of the Emperor Charles V., in order to protect it from the attacks of the Barbary corsairs. From that period *Trapani* has taken its place as the principal port in the W. of Sicily; but *Marsala* is still a considerable town, and a place of some trade, especially in wine. (Smyth's *Sicily*, p. 232.) Very few vestiges of the ancient city remain, but numerous fragments of sculpture, vases, and other relics, as well as coins, have been discovered on the site; and some portions of an ancient aqueduct are still visible. The site of the ancient port, though now filled with mud, may be distinctly traced, but it is of small extent, and could never have had a depth of more than 12 or 14 feet. The rocks and shoals, which even in ancient times rendered it difficult of

approach (Pol. i. 42), would now effectually prevent it from being used as a port for large vessels. (Smyth, *l. c.* pp. 233, 234.)

It is a strong proof of the extent to which Greek culture and civilisation were diffused throughout Sicily, that, though we have no account of Lilybaeum being at any time in possession of the Greeks, but, on the contrary, we know positively that it was founded by the Carthaginians, and continued in their hands till it passed under the dominion of Rome, yet the coins of Lilybaeum are exclusively Greek; and we learn from Cicero that it was possible for a man to acquire a knowledge of the Greek language and literature in that city (Cic. *in Caecil.* 12). [E. H. B.]

COIN OF LILYBAEUM.

LI'MENAE (Λιμέναι), also called LIMNOPOLIS (Λιμνῶν πόλις), a place in the north of Pisidia, which is mentioned only by ecclesiastical writers (Hierocl. p. 672; *Concil. Chalced.* p. 670; *Concil. Const.* iii. p. 676, where it is called Λυμναία). The ancient ruins of Galandos, on the east of the lake of Eyerdir, are believed to belong to Limenae. (Arundell, *Discov. in Asia Minor*, vol. i. p. 326; Franz, *Fünf Inschrift*, p. 35.) [L. S.]

LIME'NIA (Λιμενία), a town of Cyprus, which Strabo (x. p. 683) places S. of Soli. It appears from some ecclesiastical documents cited by Wesseling (*ap. Hierocl.*) to have been 4 M. P. from Soli. Now *Limna.* (Engel, *Kypros*, vol. i. p. 77.) [E. H. B.]

LI'MIA, river and town. [GALLAECIA.]

LI'MICI. [GALLAECIA.]

LIMIGANTES. The ordinary account of the Limigantes is as follows. In A. D. 334—337, the Sarmatians, in alliance with the Vandals under Visumar, provoke the indignation of Constantine by their inroads on the Empire. He leaves them to the sword of Geberic the Gothic king. Reduced and humbled by him, they resort to the expedient of arming their slaves. These rebel against their masters, whom they either reduce or expel. Of those that leave their country, some take arms under the Gothic king, others retreat to the parts beyond the Carpathians; a third portion seeks the service of Rome, and is established, to the number of 300,000, in different parts of Pannonia, Thrace, Macedonia, and Italy (Gibbon, c. xviii. with note).

Zeuss (*Die Deutschen*, *&c.*, *s. v. Sarmatae*) holds that others were transplanted to the Rhine, believing that a passage in Ausonius applies to them. (*Ad Mosell.* l. 5—8.) This may or may not be the case. The more important elements of the account are, that the *slaves* who were thus armed and thus rebelled, are called *Limigantes*—this being the name they take in Gibbon. Their scene of action was the parts about the present town of Peterwaradein, on the north bank of the Danube, nearly opposite the *Servian* frontier, and in the district between the Theiss and the great bend of the Danube. Here lay the tract of the Sarmatae, and Jazyges Metanastae, a tract which never was Roman, a tract which lay as a *March or Boundary*, with Pannonia on one side and Dacia on the other, but belonging to neither. Observe the words in Italics.

In his note, Gibbon draws special attention to "the broken and imperfect manner" in which the "Gothic and Sarmatian wars are related." Should this remark stimulate the inquiries of the historian, he may observe that the name *Limigantes* is not found in the authority nearest the time, and of the most importance in the way of evidence, viz. Ammianus Marcellinus. Ammianus speaks only of *servi* and *domini*:—"Sarmatae *liberi* ad discretionem *servorum* rebellium appellati (xxix. 6. 15)."

On the other hand, it is only in a work of such inferior authority (at least, for an event A. D. 337) as the Chronicle of Jerome (*Chronicon Hieronymi*) that the name *Limigans* is found; the same work stating that the masters were called *Arcaragantes.*

To say nothing about the extent to which the story has a suspicious similarity to more than one older account of the expulsion of the masters by the slaves of the same sort, the utter absence of either name in any other writer is remarkable. So is their semi-Latin form.

Can the whole account of the slave insurrection be problematical—based upon a confusion of names which will be shown to be highly probable? Let us bear in mind the locality of these *Limigantes*, and the language of those parts in contact with it which belonged to Rome. The locality itself was a *Limes* (eminently so), and the contiguous tongue was a *Lingua Rustica* in which such a form as *Limigantes* would be evolved. It is believed to be the Latin name of the Sarmatae and Jazyges of what may be called the Daco-Pannonian March.

The account of the Servile War is susceptible of a similar explanation. Ammianus is nearly the last of the authors who uses the name *Sarmatae*, which will, ere long, be replaced, to a great extent, by the name *Serv-* (Σερβ-). Early and late, this name has always suggested the idea of the Latin *Servus*,—just as its partial equivalent *Slav-* does of the English *Slave.* It is submitted that these *Servi* of Ammianus (*Limigantes* of the Chronicle) are the *Servians* (*Servi*) of the *March* (*Limes*), now beginning to be called by the name by which they designated themselves rather than by the name by which they were designated by their neighbours. [R. G. L.]

LI'MITES ROMA'NI, sometimes simply LIMES or LIMITES, is the name generally applied to the long line of fortifications constructed by the Romans as a protection of their empire, or more directly of the Decumates agri, against the invasions of the Germans. It extended along the Danube and the Rhine, and consisted of forts, ramparts, walls, and palisades. The course of these fortifications, which were first commenced by Drusus and Tiberius, can still be traced with tolerable accuracy, as very considerable portions still exist in a good state of preservation. Its whole length was about 350 English miles, between *Cologne* and *Ratisbon.* It begins on the Danube, about 15 miles to the south-west of *Ratisbon*, whence it proceeds in a north-western direction under the name given to it in the middle ages of "the Devil's Wall" (Teufelsmauer), or *Pfahlrain.* For a distance of about 60 miles it was a real stone wall, which is still in a tolerable state of preservation, and in some places still rises 4 or 5 feet above the ground; and at intervals of little more than a mile, remnants of round towers are visible. This wall terminates at *Pfahlheim* in *Würtemberg.* From

this point it proceeds in a northern direction, under the name of *Teufelshecke* (the Devil's Hedge), as far as *Lorch*, and is more or less interrupted. From *Lorch* onwards it does not present a continuous line, its course being effaced in many parts; but where it is visible it generally consists of a mound of between 6 and 7 feet in breadth, sometimes rising to the height of 10 feet; and on its eastern side there runs along it a ditch or trench, which is called by the people the *Schweinegraben*, perhaps a corruption of *Suevengraben* (Ditch of the Suevi). In this state the limes runs as far as the *Odenwald*, from which point it changes its character altogether, for it consists of a succession of forts, which were originally connected by palisades. (Spart. *Hadr.* 12.) Remains of these forts (castella) are seen in many parts. At *Obernburg* this line of fortifications ceases, as the river *Main* in its northern course afforded sufficient protection. A little to the east of *Aschaffenburg*, where the *Main* takes a western direction, the fortifications recommence, but at first the traces are not continuous, until some miles north of *Nidda* it reappears as a continuous mound raised on a foundation of stones. This last part is now known by the name of the *Pfahlgraben*, and its remains in some parts rise to a height of from 10 to 12 feet. It can be distinctly traced as far as *Rheinbreitbach*, in the neighbourhood of *Bonn*, where every trace of a northern continuation disappears behind the *Siebengebirge*. It is probable, however, that it was continued at least as far as *Cologne*, where Tiberius had commenced the construction of a limes. (Tac. *Ann.* i. 50.) Some have supposed that it extended even further north, as far as the river *Lippe* and the Caesia forest; but from Tacitus (*Germ.* 32) it seems clear that it terminated near the river *Sieg*.

This enormous line of fortification was the work of several generations, and the parts which were first built appear to have been those constructed by Drusus in Mount Taunus. (Tac. *Ann.* i. 56; Dion Cass. liv. 33.) But Tiberius and the other emperors of the first century constructed the greater part of it, and more especially Trajan and Hadrian. (Vell. Pat. ii. 120; Dion Cass. lvi. 15; Eutrop. viii. 2; Spart. *Hadr.* 12.) Until the reign of Alexander Severus these limites appear to have effectually protected the Decumates agri; but after that time the Alemanni frequently broke through the fortifications. (J. Capitol. *Maximin.* 13; Flav. Vopisc. *Prob.* 13.) His successors, Posthumus, Lollianus, and Probus, exerted themselves to repair the breaches; yet after the death of Probus, it became impossible to prevent the northern barbarians from breaking through the fortifications; and about the end of the third century the Romans for ever lost their possessions in Germany south of the limes. (Comp. Wilhelm, *Germanien*, p. 290, &c.; Buchner, *Reise auf der Teufelsmauer*, Regensburg, 1820.) [L. S.]

LIMNAE (Λίμναι), a place on the frontiers of Messenia and Laconia, containing a temple of Artemis Limnatis, used jointly by the Messenians and Lacedaemonians. An outrage offered by the Messenians to some Lacedaemonian virgins at the festival of this goddess is said to have been the cause of the First Messenian War. (Strab. vi. p. 257, viii. p. 362; Paus. iii. 2. § 6, iv. 31. § 3.) The possession of this temple, and of the Ager Dentheliatis, the district in which it was situated, was a frequent subject of the dispute between the Lacedaemonians and Messenians down to the time of the Roman emperors. (Tac. *Ann.* iv. 43.) The ruins of the temple of Artemis Limnatis have been discovered by Ross, near the church of *Panaghia Volimniátissa*, in the village of *Vólimnos*; but the topography of this district requires a more particular description, and will be found under MESSENIA.

LIMNAE. [SPARTA.]

LIMNAEA. 1. (Λιμναία: *Eth.* Λιμναῖος: *Kervasará*), a town in Acarnania at the SE. corner of the Ambraciot gulf, on the very frontier of Acarnania towards Argos. There has been a dispute about its site, but the ruins at *Kervasará* are probably the remains of Limnaea: some modern writers would place it more to the W., either at *Lutráki*, or at *Ruga*. The former supposition, however, appears to be the more correct, since we learn from Thucydides that Limnaea lay on the road from Ambracia and Argos Amphilochicum to Stratus, which could not have been the case if Limnaea lay to the W. of *Kervasará*. Philip III., king of Macedonia, disembarked at Limnaea, when about to invade Aetolia. There is a marsh near *Kervasará*, two miles in length, from which Limnaea appears to have derived its name. (Thuc. ii. 80, iii. 105; Pol. v. 5; Leake, *Northern Greece*, vol. iv. p. 243, seq.)

2. A town of Histiaeotis in Thessaly, taken by the Romans in B.C. 191, was probably on the site of *Kortikhi*. (Liv. xxxvi. 13; Leake, *Northern Greece*, vol. iv. p. 512.)

LIMNUS, an island off the coast of Ireland, mentioned by Ptolemy (ii. 2), as lying to the east of Ireland, and being uninhabited. Pliny also mentions it (iv. 30). It is probably *Lambay Island*. However, the *Monumenta Britannica* not only suggests for Limnos (Ptolemy's Limnus) the modern names of *Lambay*, *Lymen*, and *Ramsey*, but they also distinguish it from Limnus (Pliny's Limnos) which they make *Dalkey*. [R. G. L.]

LIMONE. [LEIMONE.]

LI'MONUM or LEMONUM (Λίμονον, Ptol. ii. 7. § 6: *Poitiers*), the capital of the Pictones or Pictavi, one of the Celtic nations south of the *Loire*. The name is first mentioned in the eighth book of the Gallic war (viii. 26, 27.). At a later time, after the fashion of many other capital towns in Gallia, it took the name of the people, Pictavi, whence comes the modern name *Poitiers*. (Ammianus Marcellinus, xv. 11.) Though De Valois and others did not admit Limonum to be *Poitiers*, and fixed Augustoritum the capital of the Lemovices at *Limoges*, the evidence of the roads shows that Limonum must be *Poitiers*. Magnon, a writer of the 9th century, calls *Poitiers* by the name of Pictavus Limonum; and inscriptions also found at *Poitiers* confirm the other evidence. There is a place called *Vieux-Poitiers*, more than 15 Roman miles north of *Poitiers*, but though it seems to have been an old town, it is quite a different place from the *Poitiers* which is the site of Limonum.

The conquest of the Pictavi cost the Romans little trouble, we may suppose, for little is said of them. In B.C. 51, C. Caninius, a legatus of Caesar, came to the relief of Duratius, a Gaul and a Roman ally, who was blockaded in Limonum by Dumnacus, the chief of the Andes. The siege was raised, and Dumnacus was subsequently defeated.

The remains of the huge amphitheatre of Limonum are described by M. Dufour, in his *Histoire de Poitou* (quoted in the *Guide du Voyageur*, par Richard et Hocquart). M. Dufour found the walls of the amphitheatre three feet and a half below the present level of the soil. The walls are seven French feet thick. It is estimated that this amphitheatre

l contain 20,000 spectators, from which estimate
ust conclude that the dimensions and outline of
uilding can be accurately determined. M. Du-
says: "On the level of the present soil, there
some vestiges of the corridors or covered por-
s, which led, by means of the vomitoria, into the
rent galleries: the part which is least damaged
resent is in the stables of the Hotel d'Evreux. A
ipal arch, which led into the arena, is still
y entire, though the interior facings have been
st completely removed." [G. L.]

'MYRA (Λίμυρα or Λιμύρα), a town in the
ern part of Lycia, on the river Limyrus, twenty
a above its mouth. (Strab. xiv. p. 666; comp.
p. 39; Ptol. v. 3. § 6; Steph. B. *s. v.*) Vel-
Paterculus (ii. 102) states that Caius Caesar,
dopted son of Augustus, died at Limyra. It is
mentioned by Roman writers, as Ovid (*Met.*
5), Mela (i. 15), and continued to exist down
late period. (Basil. M. *Epist.* 218; Hierocl.
.) Ruins of Limyra were first discovered by
n Beaufort above Cape *Fineka;* but it was
d for Sir Charles Fellows to explore and de-
them more minutely. In his first work
nal of an Excursion in Asia Minor, p. 214)
y says: "two miles across the little valley, at
ot of the mountains, and up their sides, lay
ins of the ancient Limyra, its theatre, temples,
walls." But in his later work (*Account of*
veries in Lycia, p. 205, foll.), he fully enters
description of the remains of the place, illus-
by fine engravings and copies of some of the
inscriptions, both Greek and Lycian, in which
ace abounds. In describing the approach to
wn, he says, that first he found a fine stately
hagus, with a bilingual inscription. "Hundreds
bs cut in the rocks, and quite excavating the
ibs of its protruding strata, as they curved
the sides of the mountain, soon came in view.
e inscriptions were almost all Lycian,—some few
, but these were always inferior in execution,
eing merely scratched upon the surface; while
cian were cut deeply in the stone, and many
coloured,—the letters being alternately red
ne, or in others green, yellow, or red." Some
se tombs contain beautiful bas-reliefs, repre-
g stories from Greek mythology. Beyond
tombs lies the city, "marked by many foun-
s, and by a long wall with towers. Further
a very pretty theatre, . . . the size of which
ks a small population." The whole neigh-
od, however, is filled with tombs cut in the
(Comp. Leake, *Asia Minor*, p. 186.) [L. S.]

MYRICA. [INDIA, p. 47, a.]

MYRUS (ὁ Λίμυρος), a river on the south
of Lycia, which, after receiving the waters of
ntary Arycandus (*Fineka*), becomes navigable
point where Limyra is situated. It falls into
a, at a distance of 90 stadia west of the holy
ntory, and 60 stadia from Melanippe. (Scyl.
; Strab. xiv. p. 666; Ptol. v. 3. § 3.) Pliny
28) and Mela (i. 15) call the river Li-
, and the Stadiasmus Maris Magni (§ 211)
rus, which is no doubt a mistake. Leake
a Minor, p. 187) states that both the Limyrus
the Arycandus reach the sea at no great distance
each other; while in the map of Lycia by Spratt,
Limyrus is the smaller river, and a tributary to
Arycandus. Both these statements are opposed
he testimony of Pliny, whose words are: "Limyra
amne in quem Arycandus influit." [L. S.]

LINDUM (Λίνδον). 1. A town in Britain; the modern *Lincoln*. Ptolemy (ii. 3. § 20) assigns Lindum and Rage, or Ratae, to the district of the Coritani. In the list of the anonymous Geographer of Ravenna it appears as Lindum Colonia; in the Itinerary of Antoninus, simply as Lindum. Among the prelates who attended the Synod of Arles, A. D. 314, was "Adelfius de civitate colonia Londinensium," which we must read Lindinensium, for at the same council London was represented by Restitutus; and that Lincoln was a colony may be accepted from the authority cited above, and also from the form in which the word occurs in Beda (*Hist. Eccles.* ii. 16, "Civitas Lindocolina.") Lindum occurs in Antoninus in the iter from Londinium to the great Wall; in that from Eburacum to Londinium; and in another from Londinium, in which it is the terminus.

The Roman remains extant at Lincoln are among the most important and interesting in this country. It is perhaps the only town in England which preserves one of the original Roman gateways in use at the present day. This is the Newport Gate, which is wholly of Roman masonry, as is also the narrow side entrance for foot passengers. Originally there were two of the latter, but one is walled up in a modern building. Another of the Roman gateways was discovered, a few years since, near the castle. There is also a long extent of the Roman sewer remaining at Lincoln, and a considerable number of inscriptions, chiefly sepulchral. The Mint Wall, as it is called, is a side wall of a Roman edifice, apparently of a public description. From the course of the remains of the external walls, the Romans seem to have found it necessary to extend the circumvallation of Lindum.

2. A town of the Damnii, in the northern part of Britain, placed by Ptolemy (ii. 3. § 9) a little to the north of the Clyde. Horsley suggests *Kirkintilloch*, on the Wall of Antoninus Pius, as the site of this Lindum. [C. R. S.]

LINDUS (Λίνδος: *Eth.* Λίνδιος: *Lindos*), one of the most important and most ancient towns in the island of Rhodes, was situated on the eastern coast, a little to the north of a promontory bearing the same name. The district was in ancient times very productive in wine and figs, though otherwise it was, and is still, very barren. (Philostr. *Icon.* ii. 24.) In the Homeric Catalogue (*Il.* ii. 656) Lindus, together with the two other Rhodian cities, Ialysus and Camirus, are said to have taken part in the war against Troy. Their inhabitants were Dorians, and formed the three Dorian tribes of the island, Lindus itself being of one the Dorian hexapolis in the south-west of Asia Minor. Previous to the year B. C. 408, when Rhodes was built, Lindus, like the other cities, formed a little state by itself, but when Rhodes was founded, a great part of the population and the common government was transferred to the new city. (Diod. xii. 75.) Lindus, however, though it lost its political importance, still remained an interesting place in a religious point of view, for it contained two ancient and much revered sanctuaries,—one of Athena, hence called the Lindian, and the other of Heracles. The former was believed to have been built by Danaus (Diod. v. 58; Callim. *Fragm.* p. 477, ed. Ernesti), or, according to others by his daughters on their flight from Egypt. (Herod. ii. 182; Strab. xiv. p. 655; comp. Plin. *H. N.* xxxiii. 23; *Act. Apost.* xvii. 17.) The temple of Heracles was remarkable, according to Lactantius

(i. 31), on account of the vituperative and injurious language with which the worship was conducted. This temple contained a painting of Heracles by Parrhasius; and Lindus appears to have possessed several other paintings by the same artist. (Athen. xii. p. 543, xv. p. 687.) Lindus also was the native place of Cleobulus, one of the Seven Sages of Greece; and Athenaeus (viii. p. 360) has preserved a pretty poem ascribed to Cleobulus, and which the Lindian boys used to sing as they went round collecting money for the return of the swallows in spring.

The site of Lindus, as described by Strabo, "on the side of a hill, looking towards the south and Alexandria," cannot be mistaken; and the modern neat little town of *Lindos* is exactly the spot occupied by the ancient Dorian city. The place and its many ancient remains have often been visited and described, and most recently by Ross in his *Reisen auf den Griech. Inseln*, vols. iii. and iv., from which it appears that ancient remains are more and more destroyed. There are many tombs cut in the rocks, some of which have had beautiful architectural ornaments; the remains of a theatre at the foot of the hill; and on the acropolis are seen the ruins of two Greek temples, which, to judge from inscriptions, belonged to the Lindian Athena and Zeus Polieus. The number of inscriptions found at Lindus is very considerable. (Comp. Ross, *l. c.* vol. iii. pp. 72, &c., vol. iv. pp. 68, &c.; Hamilton, *Researches*, vol. ii. pp. 55, &c.; *Rhein. Museum*, for 1845, pp. 161, &c.) [L. S.]

LI'NGONES (Λίγγονες). The form Λόγγωνες in Ptolemy (ii. 19. § 9) may probably be a copyist's error. In Polybius (ii. 17, ed. Bekker), Λίγγωνες is a correction of Αἴγωνες, which appears to be the MSS. reading, and was doubtless intended to be Λίγωνες. In the old text of Strabo (p. 186) it is said that the Arar (*Saône*) separates the Sequani from the Aedui and Lincasii (Λιγκασίοι); but it is agreed that we ought to read Lingones, for Strabo names the people Lingones in two other passages (pp. 193, 208).

The Lingones occupied the country about the sources of the *Marne* and *Seine*, and extended eastward to the Vosegus (*Vosges*) (*B. G.* iv. 10). Caesar does not state expressly whether they belonged to Celtica or to Belgica, but we may infer from what he says that he considered them as included in Celtica [GALLIA TRANSALPINA, Vol. I. p. 962]. Strabo (p. 193) says: "Above or beyond the Helvetii and Sequani, the Aedui and Lingones dwell to the west; and beyond the Mediomatrici dwell the Leuci and part of the Lingones." But the Leuci, whose capital was Tullum (*Toul*), are between the Mediomatrici and the Lingones, and there is some error in this passage of Strabo. The chief town of the Lingones was Andomatunum, afterwards named Lingones, and in the old French, *Langone* or *Langoinne*, and now *Langres*, near the source of the *Marne*. Dibio (*Dijon*) was also in the territory of the Lingones, which corresponded to the diocese of *Langres*, before the diocese of *Dijon* was taken from it.

Ptolemy (ii. 8) and Pliny (iv. 17) place the Lingones in Belgica, which was true of the time when they wrote.

The Lingones were one of the Celtic nations, which, according to Roman tradition, sent a detachment to settle in North Italy. [See the next article.] Lucan (i. 397) represents the Lingones as warlike, or fond of fighting, for which there is no evidence in Caesar at least:—

"Castraque quae Vosegi curvam super ardua rupem
Pugnaces pictis cohibebant Lingones armis."

After Caesar had defeated the Helvetii in the great battle near Bibracte, the survivors fled into the country of the Lingones; "to whom Caesar sent letters and a message to inform them that they must not supply the Helvetii with corn, or help them in any way; and that if they did, he would treat them like the Helvetii." (*B. G.* i. 26.) It is plain from Caesar's narrative that this insolent order was obeyed. When Caesar was at Vesontio (*Besançon*) on his march against Ariovistus, the Sequani, Leuci, and Lingones supplied him with corn (*B. G.* i. 40). During the winter which followed the campaign of B. C. 53, Caesar placed two legions in the country of the Lingones, not to keep them in obedience, for they never rose in arms against him, but because it was a good position (*B. G.* vi. 44).

It is stated in Tacitus (*Hist.* i. 78) that Otho gave the "civitas Romana" to all the Lingones: but this passage is not free from difficulty. Galba had lost the fidelity of the Treviri, Lingones, and some other Gallic states, by harsh measures or by depriving them of part of their lands; and the Lingones and others supported the party of Vitellius in Gallia by offering soldiers, horses, arms and money (Tacit. i. 53, 59). It seems that Otho made the Lingones a present of the "civitas" in order to effect a diversion in his favour; but it remains to be explained, if Tacitus's text is right, why he omitted the Treviri and others. Pliny calls the Lingones "Foederati." This nation, which during the whole Gallic war was tranquil, even in the year of Vercingetorix's great struggle (*B. G.* vii. 63), became very restless under the Empire, as we see from Tacitus (*Hist.* iv. 67). [GALLIA TRANSALPINA, Vol. I. p. 969.] [G. L.]

LINGONES (Λίγγωνες, Pol.), a tribe of Cisalpine Gauls, without doubt a colony or offset of the more powerful Transalpine tribe of the same name, who, according to Livy, migrated into Italy together with the Boii, and settled with them in the plains between the Apennines and the Padus. We learn from Polybius, that they dwelt between the Boii and the Senones, apparently occupying the country about Bononia and as far eastward as the river Utis (*Montone*), which was the northern limit of the Senones. (Liv. v. 35; Pol. ii. 17.) They seem to have been in later times so closely associated with the Boii as to be commonly considered as one nation; hence we do not meet with any separate mention of their name in history, nor are they noticed by the geographers. [E. H. B.]

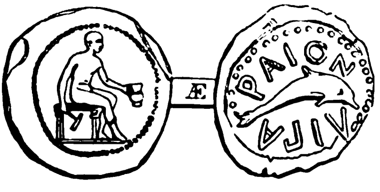
LINTOMAGUS. [LUTTOMAGUS.]

LINUS (Λῖνος), a place on the coast of Mysia, on the Propontis, between Priapus and Parium; it is noticed only by Strabo (xiii. p. 588), as the spot where the best snails (κοχλίαι) were found. [L. S.]

LI'PARA (ἡ Λιπάρα: *Eth.* Λιπαραῖος, Liparensis: *Lipari*), the largest and most important of the group of the Aeolian islands, between the coast of Sicily and Italy. It had a town of the same name, and was the only one of the whole group which was inhabited, or at least that had any considerable population. Hence the other islands were always dependent on it, and were sometimes called in ancient times, as they habitually are at the present day, the Liparaean islands (αἱ Λιπαραίων νῆσοι, Strab. vi. p. 275). Strabo correctly tells us that it was the largest of the seven, and the nearest to the coast of Sicily except Thermessa or Hiera (*Vul-*

cano). Both he and Pliny inform us that it was originally called Meligunis (Μελιγουνίς); a name that must probably be referred to the period before the Greek colony; although ancient writers affirm that it derived the name of Lipara from Liparus, a son of Auson, who reigned there *before* Aeolus, so that they must have referred the name of Meligunis to a purely fabulous age. (Plin. iii. 9. s. 14; Diod. v. 7.) The name of Aeolus himself is inseparably connected with the Aeolian islands, and there can be no doubt that his abode was placed by the earliest mythological traditions in Lipara itself, though in later times this was frequently transferred to Strongyle. [AEOLIAE INSULAE, p. 52.]

In the historical period the first mention that we find of Lipara is the settlement there of a Greek colony. This is assigned by Diodorus to the 50th Olympiad (B. C. 580—577); and there seems no reason to doubt this date, though Eusebius (on what authority we know not) carries it back nearly 50 years, and places it as early as B. C. 627. (Diod. v. 9; Euseb. Arm. p. 107; Clinton, *F. H.* vol. i. pp. 208, 232.) The colonists were Dorians from Cnidus and Rhodes; but the former people predominated, and the leader of the colony, Pentathlus, was himself a Cnidian, so that the city was always reckoned a Cnidian colony. (Diod. *l. c.*; Paus. x. 11. § 3; Thuc. iii. 88; Strab. vi. p. 275; Scymn. Ch. 263.) According to some accounts Pentathlus did not himself live to reach Lipara, but the colony was founded by his sons. (Diod. *l. c.*) Of its history we know scarcely anything for more than a century and a half, but are told generally that it attained to considerable power and prosperity, and that the necessity of defending themselves against the Tyrrhenian pirates led the Liparaeans to establish a naval force, with which they ultimately obtained some brilliant victories over the Tyrrhenians, and commemorated these successes by costly offerings at Delphi. (Strab. *l. c.*; Diod. v. 9; Paus. x. 11. § 3, 16. § 7.) It appears, however, that the Liparaeans themselves were sometimes addicted to piracy, and on one occasion their corsairs intercepted a valuable offering that the Romans were sending to Delphi; but their chief magistrate, Timasitheus, immediately caused it to be restored and forwarded to its destination. (Diod. xiv. 93; Liv. v. 28; Val. Max. i. 1. § 4.)



The territory of Lipara, though of small extent, was fertile, and produced abundance of fruit; but its more important resources were its mines of alum, arising from the volcanic nature of the soil, and the abundance of thermal sources proceeding from the same cause. The inhabitants of Lipara not only cultivated their own island, but the adjoining ones of Hiera, Strongyle, and Didyme as well; a proof that the population of Lipara itself must have been considerable. (Thuc. iii. 88; Diod. v. 10; Paus. x. 11. § 4; Strab. vi. p. 275.)

At the time of the first Athenian expedition to Sicily under Laches (B. C. 427) the Liparaeans were in alliance with the Syracusans, probably on account of their Dorian descent; for which reason they were attacked by the Athenian and Rhegian fleet, but with no serious result. (Thuc. iii. 88; Diod. xii. 54.) In B. C. 396 they again appear as in friendly relations with Syracuse, and were in consequence attacked by the Carthaginian general Himilco, who made himself master of the city and exacted a contribution of 30 talents from the inhabitants. (Diod. xiv. 56.) It does not appear that the Carthaginians at this time retained possession of Lipara; and we subsequently find it in the enjoyment of independence in B. C. 304, when the island was suddenly attacked by Agathocles, in the midst of profound peace, and without even a pretext for the aggression. The invader carried off a booty of 50 talents, which was, however, lost on his voyage to Sicily in a storm, which was naturally attributed to the wrath of Aeolus. (Id. xx. 101.) It could not have been long after this that Lipara fell under the yoke of Carthage, to which city it was subject at the outbreak of the First Punic War (B. C. 264), and from its excellent ports, and advantageous situation for commanding the N. coast of Sicily, became a favourite naval station with that people. (Id. xxii. 13, p. 500.) In the fifth year of the war (B. C. 260), the Roman consul, Cn. Cornelius, having been deceived with the hopes of making himself master of the island, was captured there, with his whole squadron (Pol. i. 21); and in B. C. 257, a battle was fought between the Carthaginian and Roman fleets in its immediate neighbourhood (*Id.* 25): but a few years later it was at length taken by the Romans, under C. Aurelius, and remained in their hands from this time, B. C. 251. (*Ib.* 39; Diod. xxiii. 20; Zonar. viii. 14; Oros. iv. 8; Frontin. *Strat.* iv. 1. § 31.)

At the commencement of the Second Punic War a considerable Carthaginian squadron was wrecked on the shores of Lipara and the adjoining island of *Vulcano* (Liv. xxi. 49); but from this time we find no historical mention of it till the war between Octavian and Sextus Pompeius in Sicily, in B. C. 36, when Lipara and the adjoining islands once more appear as a naval station of importance. It was occupied and fortified by Pompeius, but taken by Agrippa, who afterwards established his fleets at the island of *Vulcano*, and from thence threatened the forces of Pompeius at Mylae and Messana. (Appian, *B. C.* v. 97, 105, 112; Dion Cass. xlix. 1, 7.) There seems no doubt that Lipara continued to enjoy considerable prosperity under the Roman government. Diodorus praises its fertility, as well as the excellence of its ports; and says that the Liparaeans derived a large revenue from the monopoly of the trade in alum. (Diod. v. 10.) Cicero, indeed, speaks of it in disparaging terms, as "parva civitas, in insula inculta tenuique posita" (*Verr.* iii. 37); but this seems to be an oratorical exaggeration, and the immediate reference of the passage is to corn, for the growth of which Lipara could never have been well adapted. But though suffering severely from drought in summer (Thuc. iii. 88), owing to the volcanic nature of the soil, the island is, nevertheless, one of considerable fertility, and at the present day produces abundance of fruit, wine, and oil. (Smyth's *Sicily*, p. 265; D'Orville, *Sicula*, p. 18.)

Under the Roman Empire Lipara was sometimes used as a place of exile for political offenders (Dion Cass. lxxvi. 6); and before the fall of the Western Empire it became a favourite resort of monks. At an earlier period of the Empire it was frequented for its hot baths (Plin. xxxi. 6. s. 32; Diod. v. 10), which are still in use at the present day, being supplied from thermal springs: some remains of ancient buildings, still visible, appear to have been connected with these establishments. A few fragments of walls may also be traced on the hill crowned by the modern castle; and many coins, fragments of sculpture, &c., have been discovered on the island. (Smyth's *Sicily*, p. 262.)

Strabo and some other ancient writers speak of volcanic phenomena as occurring on the island of Lipara itself (Strab. vi. p. 275); but though it abounds in hot springs, and outbreaks of volcanic vapour, it does not appear probable that any volcanic eruptions on a larger scale have occurred there within the period of history. Those of the neighbouring island of Hiera (the VULCANI INSULA of the Romans, now *Vulcano*), from its proximity to Lipara, of which it was a mere dependency, are sometimes described as if they had occurred at Lipara itself. (Oros. v. 10; Jul. Obs. 89.) The volcanic phenomena of the Aeolian islands in general are more fully noticed under the article AEOLIAE INSULAE. [E. H. B.]

COIN OF LIPARA.

LI'PARIS (Λίπαρις), a small river in the east of Cilicia, which emptied itself into the sea at Soli, and was believed to derive its name from the oily nature of its waters. (Plin. v. 22; Antig. Caryst. 150; Vitruv. viii. 3.) [L. S.]

LIPAXUS (Λίπαξος), a town of Crusis, or Crossaea, in Macedonia, mentioned only by Hecataeus (Steph. B. *s. v.*) and Herodotus (vii. 123).

LIPPOS, AD. [VETTONES.]

LIPSYDRIUM [ATTICA, p. 326, b.]

LIQUE'NTIA (*Livenza*), a considerable river of Venetia, which rises in the Julian Alps to the N. of Opitergium (*Oderzo*), and flows into the Adriatic near *Caorle*, about midway between the *Piave* (Plavis) and the *Tagliamento* (Tilaventum). (Plin. iii. 18. s. 22.) It had a port of the same name at its mouth. Servius (*ad Aen.* ix. 679) correctly places it between Altinum and Concordia. The name is not found in the Itineraries, but Paulus Diaconus mentions the "pons Liquentiae fluminis" on the road from Forum Julii towards Patavium. (P. Diac. *Hist. Lang.* v. 39; Anon. Ravenn. iv. 36.) [E. H. B.]

LI'RIA. [EDETA.]

LIRIMIRIS (Λιριμιρίς), a town in the north of Germany, between Marionis and Leuphana, about 10 miles to the north of *Hamburgh*. Its exact site, however, is unknown. (Ptol. ii. 11. § 27.) [L. S.]

LIRIS (Λεῖρις: *Garigliano*), one of the principal rivers of central Italy, flowing into the Tyrrhenian Sea a little below Minturnae. It had its source in the central Apennines, only a few miles from the Lacus Fucinus, of which it has been sometimes, but erroneously, regarded as a subterranean outlet. It flows at first in a SE. direction through a long troughlike valley, parallel to the general direction of the Apennines, until it reaches the city of Sora, where it turns abruptly to the SW., and pursues that course until after its junction with the Trerus or *Sacco*, close to the site of Fregellae; from thence it again makes a great bend to the SE., but ultimately resumes its SW. direction before it enters the sea near Minturnae. Both Strabo and Pliny tell us that it was originally called Clanis, a name which appears to have been common to many Italian rivers [CLANIS]: the former writer erroneously assigns its sources to the country of the Vestini; an opinion which is adopted also by Lucan. (Strab. v. p. 233; Lucan. ii. 425.) The Liris is noticed by several of the Roman poets, as a very gentle and tranquil stream (Hor. *Carm.* i. 31. 8; Sil. Ital. iv. 348),—a character which it well deserves in the lower part of its course, where it is described by a modern traveller as "a wide and noble river, winding under the shadow of poplars through a lovely vale, and then gliding gently towards the sea." (Eustace's *Classical Tour*, vol. ii. p. 320.) But nearer its source it is a clear and rapid mountain river, and at the village of *Isola*, about four miles below Sora, and just after its junction with the Fibrenus, it forms a cascade of above 90 feet in height, one of the most remarkable waterfalls in Italy. (Craven's *Abruzzi*, vol. i. p. 93.)

The Liris, which is still called *Liri* in the upper part of its course, though better known by the name of *Garigliano*, which it assumes when it becomes a more considerable stream, has a course altogether of above 60 geographical miles: its most considerable tributary is the Trerus or *Sacco*, which joins it about three miles below *Ceprano*. A few miles higher up it receives the waters of the Fibrenus, so celebrated from Cicero's description (*de Leg.* ii. 3); which is, however, but a small stream, though remarkable for the clearness and beauty of its waters. [FIBRENUS.] The Melfis (*Melfa*), which joins it a few miles below the *Sacco*, but from the opposite bank, is equally inconsiderable.

At the mouth of the Liris near Minturnae, was an extensive sacred grove consecrated to Marica, a nymph or local divinity, who was represented by a tradition, adopted by Virgil, as mother of Latinus, while others identified her with Circe. (Virg. *Aen.* vii. 47; Lactant. *Inst. Div.* i. 21.) Her grove and temple (LUCUS MARICAE: Μαρίκας ἄλσος, Plut. *Mar.* 39) were not only objects of great veneration to the people of the neighbouring town of Minturnae, but appear to have enjoyed considerable celebrity with the Romans themselves. (Strab. v. p. 233; Liv. xxvii. 37; Serv. *ad Aen.* vii. 47.) Immediately adjoining its mouth was an extensive marsh, formed probably by the stagnation of the river itself, and celebrated in history in connection with the adventures of Marius. [E. H. B.]

LISAE (Λίσαι), a town of Crusis or Crossaea, in Macedonia, mentioned only by Herodotus (vii. 123). [CRUSIS.]

LISINAE, a town of Histiaeotis, in Thessaly, on the borders of Athamania. (Liv. xxxii. 14.)

LISSA. [JACCETANI.]

LISSA (Λίσσα, Procop. *B. G.* i. 7; *Itin. Anton.*), an island off the coast of Illyricum, placed by Pliny (iii. 30) over against Iadera. *Uglian*, noted for its marbles, and an island which obtained a momentary importance during the wars of the Venetians, represents Lissa. (Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 78.) [E. B. J.]

LISSUS. [LEONTINI.]

LISSUS (Λίσσος, Ptol. iii. 17. § 3), a town on the S. coast of Crete, which the anonymous Coast-describer places between Suia and Calamyde. (*Stadiasm.*) The Peutinger Table gives 16 M. P. as the distance between Cantanum and Liso. This Cretan city was an episcopal see in the time of Hierocles. (Comp. Cornel. *Creta Sacra*, vol. i. p. 235.) The order in which he mentions it with the other bishoprics

in the W. part of the island agrees very well with the supposition that its site was on the spot now called *Hágio Kýrko*. This place occupies a small hollow of the hills facing the sea, like a theatre. Near the church of the *Panaghia* are what appear to be vestiges of an ancient temple, consisting of granite columns, and white marble fragments, architraves, and pediments. Further on, appears to have been another temple, and a theatre. The tombs are on the SW. side of the plain. They are worked independent of the rock, with arched roofs. There are perhaps fifty of them. (Pashley, *Trav.* vol. ii. p. 88; *Mus. Class. Ant.* vol. ii. p. 298.)

Of all the towns which existed on this part of the coast, Lissus alone seems to have struck coins, a fact which agrees very well with the evidence supplied by its situation, of its having been a place of some trading importance. The harbour is mentioned by Scylax (p. 18), and the types of the coins are either maritime, or indicative of the worship of Dictynna, as might have been expected on this part of the island The obverse of one coin bears the impress of the caps and stars of the Dioscuri, and its reverse a quiver and arrow. On the second coin the caps and stars are replaced by a dolphin, and instead of the quiver a female head, probably that of Artemis or Dictynna. (Comp. Eckhel, vol. ii. p. 315.) [E. B. J.]

LISSUS (Λίσσος, Strab. vii. p. 316; Ptol. ii. 16. § 5; Steph. B.; Hierocles; *Peut. Tab.*), a town of Illyricum, at the mouth of the river Drilo. Dionysius the elder, in his schemes for establishing settlements among the Illyrian tribes, founded Lissus. (Diod. xv. 13.) It was afterwards in the hands of the Illyrians, who, after they had been defeated by the Romans, retained this port, beyond which their vessels were not allowed to sail. (Polyb. ii. 12.) B. C. 211, Philip of Macedon, having surprised the citadel Acrolissus, compelled the town to surrender. (Polyb. viii. 15.) Gentius, the Illyrian king, collected his forces here for the war against Rome. (Liv. xliv. 30.) A body of Roman citizens was stationed there by Caesar (*B. C.* iii. 26—29) to defend the town; and Pliny (iii. 26), who says that it was 100 M. P. from Epidaurus, describes it as "oppidum civium Romanorum." Constantine Porphyrogeneta (*de Adm. Imp.* c. 30) calls it Ἐλισσός, and it now bears the name of *Lesch*. (Leake, *Northern Greece*, vol. iii. p. 477; Schafarik, *Slav. Alt.* vol. ii. p. 275.) [E. B. J.]

LISTA (Λίστα), a very ancient city of Central Italy, which, according to Varro (*ap. Dion. Hal.* i. 14), was the metropolis of the Aborigines, when that people still dwelt in the mountain valleys around Reate. It was surprised by the Sabines by a night attack from Amiternum; and the inhabitants took refuge in Reate, from whence they made several fruitless attempts to recover possession of their city; but failing in this, they declared it, with the surrounding territory, sacred to the gods, and imprecated curses on all who should occupy it. This circumstance probably accounts for the absence of all other mention of it; though it would seem that its ruins still remained in the time of Varro, or at least that its site was clearly known. This has been in modern times a subject of much dispute. According to the present text of Dionysius, it was situated 24 stadia from Tiora, the ruins of which are probably those at *Castore* near *Sta. Anatolia*, in the upper valley of the *Salto*, 36 miles from *Rieti*. Bunsen accordingly places it at *Sta. Anatolia* itself, where there are some remains of an ancient city. But Holstenius long ago pointed out a site about 3 miles from Reate itself, on the road from thence to *Civita Ducale*, still called *Monte di Lesta*, where there still exist, according to a local antiquarian, Martelli, and Sir W. Gell, the remains of an ancient city, with walls of polygonal construction, and a site of considerable strength. The situation of these ruins would certainly be a more probable position for the capital of the Aborigines than one so far removed as *Sta. Anatolia* from their other settlements, and would accord better with the natural line of advance of the Sabines from Amiternum, which must have been by the pass of *Antrodoco* and the valley of the *Velino*. In this case we must understand the distance of 24 stadia (3 miles), as stated by Dionysius (or rather by Varro, whom he cites), as having reference to Reate itself, not to Tiora. (Bunsen, *Antichi Stabilimenti Italici*, in *Ann. d. Inst. Arch.* vol. vi. p. 137; Gell's *Topography of Rome*, p. 472; Holsten. *Not. in Cluver.* p. 114.) [E. H. B.]

LISTRON (Λιστρῶν), a place in Epirus Nova, mentioned by Hierocles with a fortress ALISTRUS (Ἄλιστρος, Procop. *de Aed.* iv. 4). It is probably represented by the village and castle of *Klisúra*, situated on the river Aous (*Viósa*), which is mentioned by Cantacuzenus (Κλεισοῦρα, ii. 32; comp. Anna Comnena, xiii. p. 390) in the fourteenth century, together with other places which are still to be recognised as having been the chief strongholds in this part of Greece. [AOUS.] (Leake, *Northern Greece*, vol. i. p. 383.) [E. B. J.]

LITA'BRUM. [VACCAEI].

LITANA SILVA, a forest in the territory of the Boians in Gallia Cispadana, memorable for the defeat of the Roman consul L. Postumius, in B. C. 216. On this disastrous occasion the consul himself perished, with his whole army, consisting of two Roman legions, augmented by auxiliaries to the amount of 25,000 men. (Liv. xxiii. 24; Frontin. *Strat.* i. 6. § 4.) At a later period it witnessed, on the other hand, a defeat of the Boians by the Roman consul L. Valerius Flaccus, B. C. 195. (Liv. xxxiv. 22.) The forest in question appears to have been situated somewhere between Bononia and Placentia, but its name is never mentioned after the reduction of Cisalpine Gaul, and its exact site cannot be determined. It is probable, indeed, that a great part of the tract between the Apennines and the marshy ground on the banks of the Padus was at this time covered with forest. [E. H. B.]

LITANOBRIGA, in Gallia, is placed by the Antonine Itin. between Caesaromagus (*Beauvais*) and Augustomagus, which D'Anville supposes to be *Senlis*. According to his reading, the Itin. makes it xviii. Gallic leagues from Caesaromagus to Litanobriga, and iiii. from Litanobriga to Augustomagus. Walckenaer (*Géog. &c.*, vol. iii. p. 55) makes the first distance xvi., and the second iiii.; and he places Caesaromagus at *Verberie*, near the river *Autone*. The Table mentions no place between Caesaromagus and Augustomagus, but it makes the whole distance xxii. We may assume that Litanobriga was situated at a ford or bridge over a river, and this river is the *Oise*. D'Anville first thought that Litanobriga might be *Pont Sainte-Maxence*, for a Roman road from *Beauvais*, called *Brunehaut*, passes by *Clermont*, and joins a road from *Pont-Sainte-Maxence*. But the numbers in the Itins. fall short of the distance between *Beauvais* and *Senlis*; and accordingly

D'Anville gave up *Pont-Sainte-Maxence*, and fixed Litanobriga at *Creil* on the *Oise*, and along this line the distances of the Table agree pretty well with the real distances. Walckenaer fixes Litanobriga at *Pont-Sainte-Maxence*. The solution of this difficulty depends on the position of Augustomagus; or if we are content with the evidence for fixing Litanobriga at *Pont Sainte-Maxence*, we cannot place Augustomagus at *Senlis*. [AUGUSTOMAGUS.] [G. L.]

LITERNUM (Λίτερνον, Strab.; Λειτερνον, Ptol.: *Eth.* Literninus: *Tor di Patria*), a town on the sea-coast of Campania, between the mouth of the Vulturnus and Cumae.* It was situated at the mouth of a river of the same name (Strab. v. p. 243: Liv. xxxii. 29), which assumed a stagnant character as it approached the sea, so as to form a considerable marshy pool or lagoon, called the LITERNA PALUS (Sil. Ital. vii. 278; Stat. *Silv.* iv. 3. 66), and bordered on either side by more extensive marshes. It is not quite clear whether there was a town there at all before the establishment of the Roman colony: Livy's expression (*l. c.*) that that colony was sent "ad ostia Literni fluminis," would seem to imply the contrary; and though the name of Liternum is mentioned in the Second Punic War, it is in a manner that does not clearly prove there was *then* a town there. (Liv. xxiii. 35.) But the notice in Festus (*v. Praefecturae*), who mentions Liternum, with Capua, Cumae, and other Campanian towns, among the Praefecturae, must probably refer to a period earlier than the Roman settlement.

It was not till the year B. C. 194 that a colony of Roman citizens was settled at Liternum at the same time with one at Vulturnum; they were both of the class called "coloniae maritimae civium," but were not numerous, only 300 colonists being sent to each. (Liv. xxxii. 29, xxxiv. 45.) The situation of Liternum also was badly chosen: the marshy character of the neighbourhood rendered it unhealthy, while the adjoining tract on the sea-coast was sandy and barren; hence, it never seems to have risen to be a place of any importance, and is chiefly noted from the circumstance that it was the place which Scipio Africanus chose for his retirement, when he withdrew in disgust from public life, and where he ended his days in a kind of voluntary exile. (Liv. xxxviii. 52, 53; Seneca, *Ep.* 86; Val. Max. v. 3. § 1; Oros. iv. 20.) At a later period, however, Augustus settled a fresh colony at Liternum (*Lib. Colon.* p. 235), and the construction by Domitian of the road leading along the sea-coast from Sinuessa to Cumae must have tended to render it more frequented. But it evidently never rose to be a considerable place: under the Roman Empire its name is mentioned only by the geographers, and in the Itineraries in connection with the Via Domitiana already noticed. (Strab. v. p. 243; Mel. ii. 4. § 9; Plin. iii. 5. s. 9; Ptol. iii. 1. § 6; *Itin. Ant.* p. 122; *Tab. Peut.*) We learn, however, that it still existed as a "civitas" as late as the reign of Valentinian II. (Symmach. *Ep.* vi. 5); and it was probably destroyed by the Vandals in the fifth century.

The villa of Scipio, where he spent the latter years of his life, was still extant in the days of Seneca, who has left us a detailed description of it, and strongly contrasts the simplicity of its arrangements with the luxury and splendour of those of his own time. (*Ep.* 86.) Pliny also tells us, that some of the olive trees and myrtles planted by the hands of Scipio himself were still visible there. (Plin. xvi. 44. s. 85.) It is certain that his tomb also was shown at Liternum in the days of Strabo and Livy, though it would appear that there was great doubt whether he was really buried there. The well-known epitaph which, according to Valerius Maximus, he caused to be engraved on his tomb,—"Ingrata patria, ne ossa quidem mea habes,"—could certainly not have been extant in the time of Seneca, who treats the question as one of mere conjecture, though he inclines to the belief that Africanus was really buried there, and not in the tomb of the Scipios at Rome. (Seneca, *l. c.*; Val. Max. v. 3. § 1; Strab. *l. c.*; Liv. xxxviii. 56.)

The site of Liternum is now marked by a watch-tower called *Tor di Patria*, and a miserable village of the same name; the adjoining *Lago di Patria* is unquestionably the Literna Palus, and hence the river Liternus can be no other than the small and sluggish stream which forms the outlet of this lake to the sea. At the present day the *Lago di Patria* communicates with the river Clanius or *Lagno*, and is formed by one of the arms of that stream. It is not improbable that this was the case in ancient times also, for we have no account of the mouth of the Clanius, while the Liternus is mentioned only in connection with the town at its mouth. [CLANIUS.] The modern name of *Patria* must certainly have been derived from some tradition of the epitaph of Scipio already noticed, though we cannot explain the mode in which it arose; but the name may be traced back as far as the eighth century. There are scarcely any ruins on the site of Liternum, but the remains of the ancient bridge by which the Via Domitiana here crossed the river are still extant, and the road itself may be traced from thence the whole way to Cumae. [E. H. B.]

LITHRUS (Λίθρος), the name of the northern branch of Mount Paryadres in Pontus, which, together with Mount Ophelimus in the north-west of Amasia, enclosed the extensive and fertile plain of Phanaroea. (Strab. xii. p. 556.) Hamilton (*Researches*, vol. i. p. 349) believes that these two ancient hills answer to the modern *Kemer Dagh* and *Oktap Dagh*. [L. S.]

LIVIANA, in Gallia Narbonensis, is placed by the Table and the Jerusalem Itin. between Carcaso (*Carcassonne*) and Narbo (*Narbonne*). It is the next station to Carcaso, and xii. from it: the station that follows Liviana is Usuerva, or Usuerna, or Hosuerba. The site is uncertain. [G. L.]

LIX, LIXUS. [MAURETANIA.]

LIZIZIS. [AZIZIS.]

LOBETA'NI (Λωβητανοί), one of the lesser peoples in the NE. part of Hispania Tarraconensis. Their position was SE. of the CELTIBERI, and N. of the BASTETANI, in the SW. of *Arragon*. The only city mentioned as belonging to them was LOBETUM (Λώβητον), which D'Anville identifies with *Requena*, but Ukert with *Albarracin*. (Ptol. ii. 6. § 60; Coins *ap.* Sestini, p. 169; Ukert, vol. ii. pt. 1, pp 322, 464.) [P. S.]

LOBE'TUM. [LOBETANI.]

LOCORITUM (Λοκόριτον), a town on the river Main in Germany, and probably the same as the

* The name is written in many MSS. LINTERNUM, and it is difficult, in the absence of inscriptions, to say which form is really the more correct; but LITERNUM seems to be supported, on the whole, by the best MSS., as well as by the Greek form of the name as found both in Strabo and Ptolemy. (Tzschucke, *ad Mel.* ii. 4. § 9.)

modern *Lohr*. (Ptol. ii. 11. § 29.) Its name seems to be of Celtic origin. (Comp. Steiner, *Das Main-gebiet*, p. 125.) [L. S.]

LOCRAS. [CORSICA, p. 691, a.]

LOCRI EPICNEMI'DII, OPU'NTII. [LOCRIS.]

LOCRI O'ZOLAE. [LOCRIS.]

LOCRI (Λοκροί), sometimes called, for distinction's sake, LOCRI EPIZEPHY'RII (Λοκροὶ Ἐπιζεφύριοι, Thuc. vii. 1; Pind. *Ol.* xi. 15; Strab.; Steph. B.: *Eth.* Λοκρός, Locrensis: Ruins near *Gerace*), a city on the SE. coast of the Bruttian peninsula, not far from its southern extremity, and one of the most celebrated of the Greek colonies in this part of Italy. It was a colony, as its name obviously implies, of the Locrians in Greece, but there is much discrepancy as to the tribe of that nation from which it derived its origin. Strabo affirms that it was founded by the Locri Ozolae, under a leader named Euanthes, and censures Ephorus for ascribing it to the Locri Opuntii; but this last opinion seems to have been the one generally prevalent. Scymnus Chius mentions both opinions, but seems to incline to the latter; and it is adopted without question by Pausanias, as well as by the poets and later Latin authors, whence we may probably infer that it was the tradition adopted by the Locrians themselves. (Strab. vi. p. 259; Scymn. Ch. 313—317; Paus. iii. 19. § 12; Virg. *Aen.* iii. 399.) Unfortunately Polybius, who had informed himself particularly as to the history and institutions of the Locrians, does not give any statement upon this point. But we learn from him that the origin of the colony was ascribed by the tradition current among the Locrians themselves, and sanctioned by the authority of Aristotle, to a body of fugitive slaves, who had carried off their mistresses, with whom they had previously carried on an illicit intercourse. (Pol. xii. 5, 6, 10—12.) The same story is alluded to by Dionysius Periegetes (365—367). Pausanias would seem to refer to a wholly different tale where he says that the Lacedaemonians sent a colony to the Epizephyrian Locri, at the same time with one to Crotona. (Paus. iii. 3. § 1.) These were, however, in both cases, probably only additional bands of colonists, as Lacedaemon was never regarded as the founder of either city. The date of the foundation of Locri is equally uncertain. Strabo (*l. c.*) places it a little after that of Crotona and Syracuse, which he regarded as nearly contemporary, but he is probably mistaken in this last opinion. [CROTONA.] Eusebius, on the contrary, brings it down to so late a date as B. C. 673 (or, according to Hieronymus, 683); but there seems good reason to believe that this is much too late, and we may venture to adopt Strabo's statement that it was founded soon after Crotona, if the latter be placed about 710 B. C. (Euseb. Arm. p. 105; Clinton *F. H.* vol. i. p. 186, vol. ii. p. 410.) The traditions adopted by Aristotle and Polybius represented the first settlers as gaining possession of the soil from the native Oenotrians (whom they called Siculi), by a fraud not unlike those related in many similar legends. (Pol. xii. 6.) The fact stated by Strabo that they first established themselves on Cape Zephyrium (*Capo di Bruzzano*), and subsequently removed from thence to the site which they ultimately occupied, about 15 miles further N., is supported by the evidence of their distinctive appellation, and may be depended on as accurate. (Strab. *l. c.*)

As in the case of most of the other Greek colonies in Italy, we have very scanty and imperfect information concerning the early history of Locri. The first event in its annals that has been transmitted to us, and one of those to which it owes its chief celebrity, is the legislation of Zaleucus. This was said to be the most ancient *written* code of laws that had been given to any Greek state; and though the history of Zaleucus himself was involved in great obscurity, and mixed up with much of fable [ZALEUCUS, *Biogr. Dict.*], there is certainly no doubt that the Locrians possessed a written code, which passed under his name, and which continued down to a late period to be in force in their city. Even in the days of Pindar and of Demosthenes, Locri was regarded as a model of good government and order; and its inhabitants were distinguished for their adherence to established laws and their aversion to all innovation. (Pind. *Ol.* x. 17; Schol. *ad loc.*; Strab. vi. p. 260; Demosth. *adv. Timocrat.* p. 743; Diod. xii. 20, 21.)

The period of the legislation of Zaleucus cannot be determined with certainty: but the date given by Eusebius of Ol. 30, or B. C. 660, may be received as approximately correct. (Euseb. Arm. p. 105; Clinton, vol. i. p. 193.) Of its principles we know but little; and the quotations from his laws, even if we could depend upon their authenticity, have no reference to the political institutions of the state. It appears, however, that the government of Locri was an aristocracy, in which certain select families, called the Hundred Houses, enjoyed superior privileges: these were considered to be derived from the original settlers, and in accordance with the legend concerning their origin, were regarded as deriving their nobility from the female side. (Pol. xii. 5.)

The next event in the history of Locri, of which we have any account, is the memorable battle of the Sagras, in which it was said that a force of 10,000 Locrians, with a small body of auxiliaries from Rhegium, totally defeated an army of 130,000 Crotoniats, with vast slaughter. (Strab. vi. p. 261; Cic. *de N. D.* ii. 2; Justin. xx. 2, 3.) The extraordinary character of this victory, and the exaggerated and fabulous accounts of it which appear to have been circulated, rendered it proverbial among the Greeks (ἀληθέστερα τῶν ἐπὶ Σάγρᾳ, Suid. *s. v.*) Yet we have no means of assigning its correct place in history, its date being extremely uncertain, some accounts placing it after the fall of Sybaris (B. C. 510), while others would carry it back nearly 50 years earlier. [CROTONA.]

The small number of troops which the Locrians are represented as bringing into the field upon this occasion, as compared with those of Crotona, would seem to prove that the city was not at this time a very powerful one; at least it is clear that it was not to compare with the great republics of Sybaris and Crotona. But it seems to have been in a flourishing condition; and it must in all probability be to this period that we must refer the establishment of its colonies of Hipponium and Medma, on the opposite side of the Bruttian peninsula. (Scymn. Ch.. 308; Strab. vi. p. 256.) Locri is mentioned by Herodotus in B. C. 493, when the Samian colonists, who were on their way to Sicily, touched there (Herod. vi. 23); and it appears to have been in a state of great prosperity when its praises were sung by Pindar, in B. C. 484. (Pind. *Ol.* x., xi.) The Locrians, from their position, were naturally led to maintain a close connection with the Greek cities of Sicily, especially with Syracuse, their friendship with which would seem to have dated, according to some accounts,

from the period of their very foundation. (Strab. vi. p. 259.) On the other hand, they were almost constantly on terms of hostility with their neighbours of Rhegium, and, during the rule of Anaxilas, in the latter city, were threatened with complete destruction by that despot, from which they were saved by the intervention of Hieron of Syracuse. (Pind. *Pyth.* ii. 35; and Schol. *ad loc.*) In like manner we find them, at the period of the Athenian expeditions to Sicily, in close alliance with Syracuse, and on terms of open enmity with Rhegium. Hence they at first engaged in actual hostilities with the Athenians under Laches; and though they subsequently concluded a treaty of peace with them, they still refused to admit the great Athenian armament, in B.C. 415, even to anchor on their coasts. (Thuc. iii. 99, 115, iv. 1, 24, v. 5, vi. 44, vii. 1; Diod. xii. 54, xiii. 3.) At a later period of the Peloponnesian War they were among the few Italian cities that sent auxiliary ships to the Lacedaemonians. (Thuc. viii. 91.)

During the reign of the elder Dionysius at Syracuse, the bonds of amity between the two cities were strengthened by the personal alliance of that monarch, who married Doris, the daughter of Xenetus, one of the most eminent of the citizens of Locri. (Diod. xiv. 44.) He subsequently adhered steadfastly to this alliance, which secured him a footing in Italy, from which he derived great advantage in his wars against the Rhegians and other states of Magna Graecia. In return for this, as well as to secure the continuance of their support, he conferred great benefits upon the Locrians, to whom he gave the whole territory of Caulonia, after the destruction of that city in B.C. 389; to which he added that of Hipponium in the following year, and a part of that of Scylletium. (Diod. xiv. 100, 106, 107; Strab. p. 261.) Hipponium was, however, again wrested from them by the Carthaginians in B.C. 379. (Id. xv. 24.) The same intimate relations with Syracuse continued under the younger Dionysius, when they became the source of great misfortunes to the city: for that despot, after his expulsion from Syracuse (B.C. 356), withdrew to Locri, where he seized on the citadel, and established himself in the possession of despotic power. His rule here is described as extremely arbitrary and oppressive, and stained at once by the most excessive avarice and unbridled licentiousness. At length, after a period of six years, the Locrians took advantage of the absence of Dionysius, and drove out his garrison; while they exercised a cruel vengeance upon his unfortunate wife and daughters, who had fallen into their hands. (Justin, xxi. 2, 3; Strab. vi. p. 259; Arist. *Pol.* v. 7; Clearch. *ap. Athen.* xii. 541.)

The Locrians are said to have suffered severely from the oppressions of this tyrant; but it is probable that they sustained still greater injury from the increasing power of the Bruttians, who were now become most formidable neighbours to all the Greek cities in this part of Italy. The Locrians never appear to have fallen under the yoke of the barbarians, but it is certain that their city declined greatly from its former prosperity. It is not again mentioned till the wars of Pyrrhus. At that period it appears that Locri, as well as Rhegium and other Greek cities, had placed itself under the protection of Rome, and even admitted a Roman garrison into its walls. On the approach of Pyrrhus they expelled this garrison, and declared themselves in favour of that monarch (Justin, xviii. 1); but they had soon cause to regret the change: for the garrison left there by the king, during his absence in Sicily, conducted itself so ill, that the Locrians rose against them and expelled them from their city. On this account they were severely punished by Pyrrhus on his return from Sicily; and, not content with exactions from the inhabitants, he carried off a great part of the sacred treasures from the temple of Proserpine, the most celebrated sanctuary at Locri. A violent storm is said to have punished his impiety, and compelled him to restore the treasures. (Appian, *Samn.* iii. 12; Liv. xxix. 18; Val. Max. i. 1, Ext. § 1.)

After the departure of Pyrrhus, the Locrians seem to have submitted again to Rome, and continued so till the Second Punic War, when they were among the states that threw off the Roman alliance and declared in favour of the Carthaginians, after the battle of Cannae, B.C. 216. (Liv. xxii. 61, xxiii. 30.) They soon after received a Carthaginian force within their walls, though at the same time their liberties were guaranteed by a treaty of alliance on equal terms. (Liv. xxiv. 1.) When the fortune of the war began to turn against Carthage, Locri was besieged by the Roman consul Crispinus, but without success; and the approach of Hannibal compelled him to raise the siege, B.C. 208. (Id. xxvii. 25, 28.) It was not till B.C. 205, that Scipio, when on the point of sailing for Africa, was enabled, by the treachery of some of the citizens, to surprise one of the forts which commanded the town; an advantage that soon led to the surrender of the other citadel and the city itself. (Id. xxix. 6—8.) Scipio confided the charge of the city and the command of the garrison to his legate, Q. Pleminius; but that officer conducted himself with such cruelty and rapacity towards the unfortunate Locrians, that they rose in tumult against him, and a violent sedition took place, which was only appeased by the intervention of Scipio himself. That general, however, took the part of Pleminius, whom he continued in his command; and the Locrians were exposed anew to his exactions and cruelties, till they at length took courage to appeal to the Roman senate. Notwithstanding vehement opposition on the part of the friends of Scipio, the senate pronounced in favour of the Locrians, condemned Pleminius, and restored to the Locrians their liberty and the enjoyment of their own laws. (Liv. xxix. 8, 16—22; Diod. xxvii. 4; Appian, *Annib*, 55.) Pleminius had, on this occasion, followed the example of Pyrrhus in plundering the temple of Proserpine; but the senate caused restitution to be made, and the impiety to be expiated at the public cost. (Diod. *l. c.*)

From this time we hear little of Locri. Notwithstanding the privileged condition conceded to it by the senate, it seems to have sunk into a very subordinate position. Polybius, however, speaks of it as in his day still a considerable town, which was bound by treaty to furnish a certain amount of naval auxiliaries to the Romans. (Pol. xii. 5.) The Locrians were under particular obligations to that historian (*Ib.*); and at a later period we find them enjoying the special patronage of Cicero (Cic. *de Leg.* ii. 6), but we do not know the origin of their connection with the great orator. From Strabo's account it is obvious that Locri still subsisted as a town in his day, and it is noticed in like manner by Pliny and Ptolemy (Strab. vi. p. 259; Plin. iii. 5. s. 10; Ptol. iii. 1. § 10). Its name is not found in the Itineraries, though they describe this coast in con-

siderable detail; but Procopius seems to attest its continued existence in the 6th century (*B. G.* i. 15), and it is probable that it owed its complete destruction to the Saracens. Its very name was forgotten in the middle ages, and its site became a matter of dispute. This has however been completely established by the researches of modern travellers, who have found the remains of the ancient city on the sea-coast, near the modern town of *Gerace*. (Cluver, *Ital.* p. 1301; Romanelli, vol. i. p. 152; Cramer, vol. ii. p. 411; Riedesel, *Voyage dans la Grande Grèce*, p. 148.)

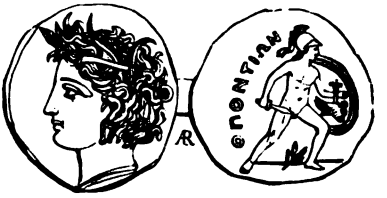
The few ruins that still remain have been carefully examined and described by the Duc de Luynes. (*Ann. d. Inst. Arch.* vol. ii. pp. 3—12.) The site of the ancient city, which may be distinctly traced by the vestiges of the walls, occupied a space of near two miles in length, by less than a mile in breadth, extending from the sea-coast at *Torre di Gerace* (on the left bank of a small stream called the *Fiume di S. Ilario*), to the first heights or ridges of the Apennines. It is evidently to these heights that Strabo gives the name of Mount Esopis (Ἐσῶπις), on which he places the first foundation of the city. (Strab. vi. p. 259.) The same heights are separated by deep ravines, so as to constitute two separate summits, both of them retaining the traces of ancient fortifications, and evidently the "two citadels not far distant from each other" noticed by Livy in his account of the capture of the city by Scipio. (Liv. xxix. 6.) The city extended from hence down the slopes of the hills towards the sea, and had unquestionably its port at the mouth of the little river *S. Ilario*, though there could never have been a harbour there in the modern sense of the term. Numerous fragments of ancient masonry are scattered over the site, but the only distinct vestiges of any ancient edifice are those of a Doric temple, of which the basement alone now remains, but several columns were standing down to a recent period. It is occupied by a farm-house, called the *Casino dell' Imperatore*, about a mile from the sea, and appears to have stood without the ancient walls, so that it is not improbable the ruins may be the remains of the celebrated temple of Proserpine, which we know to have occupied a similar position. (Liv. xxix. 18.) The ruins of Locri are about five miles distant from the modern town of *Gerace*, which was previously supposed to occupy the site of the ancient city (Cluver, *l. c.*; Barr. *de Sit. Calabr.* iii. 7), and 15 miles from the *Capo di Bruzzano*, the Zephyrian promontory.

The Locrians are celebrated by Pindar (*Ol.* x. 18, xi. 19) for their devotion to the Muses as well as for their skill and courage in war. In accordance with this character we find mention of Xenocritus and Erasippus, both of them natives of Locri, as poets of some note; the lyric poetess Theano was probably also a native of the Epizephyrian Locri. (Schol. *ad Pind. Ol.* xi. 17; Boeckh, *ad Ol.* x. p. 197.) The Pythagorean philosophy also was warmly taken up and cultivated there, though the authorities had refused to admit any of the political innovations of that philosopher. (Porphyr. *Vit. Pyth.* 56.) But among his followers and disciples several were natives of Locri (Iambl. *Vit. Pyth.* 267), the most eminent of whom were Timaeus, Echecrates, and Acrion, from whom Plato is said to have imbibed his knowledge of the Pythagorean tenets. (Cic. *de Fin.* v. 29.) Nor was the cultivation of other arts neglected. Eunomus, a Locrian citizen, was celebrated for his skill on the cithara; and the athlete Euthymus of Locri, who gained several prizes at Olympia, was scarcely less renowned than Milo of Crotona. (Strab. vi. pp. 255, 260; Paus. vi. 6. §§ 4—11.)

The territory of Locri, during the flourishing period of the city, was certainly of considerable extent. Its great augmentation by Dionysius of Syracuse has been already mentioned. But previous to that time, it was separated from that of Rhegium on the SW. by the river Halex or *Alice*, while its northern limit towards Caulonia was probably the Sagras, generally identified with the *Alaro*. The river Buthrotus of Livy (xxix. 7), which appears to have been but a short distance from the town, was probably the *Novito*, about six miles to the N. Thucydides mentions two other colonies of Locri (besides Hipponium and Medma already noticed), to which he gives the names of Itone and Melae, but no other trace is found of either the one or the other. (Thuc. v. 5.) [E. H. B.]

COIN OF THE LOCRI EPIZEPHYRII.

LOCRIS (Λοκρίς: *Eth.* Λοκροί; in Latin also Locri, but sometimes Locrenses). The Locri were an ancient people in Greece, and were said to have been descended from the Leleges. This was the opinion of Aristotle; and other writers supposed the name of the Locrians to be derived from Locrus, an ancient king of the Leleges. (Aristot.; Hes. *ap. Strab.* vii. p. 322; Scymnus Ch. 590; Dicaearch. 71; Plin. iv. 7. s. 12.) The Locrians, however, must at a very early period have become intermingled with the Hellenes. In the Homeric poems they always appear as Hellenes; and, according to some traditions, even Deucalion, the founder of the Hellenic race, is said to have lived in the Locrian town of Opus or Cynus. (Pind. *Ol.* ix. 63, seq.; Strab. ix. p. 425.) In historical times the Locrians were divided into two distinct tribes, differing from one another in customs, habits, and civilisation. Of these the eastern Locrians, called the Opuntii and Epicnemidii, dwelt upon the eastern coast of Greece, opposite the island of Euboea; while the western Locrians dwelt upon the Corinthian gulf, and were separated from the former by Mount Parnassus and the whole of Doris and Phocis. (Strab. ix. p. 425.) The eastern Locrians are alone mentioned by Homer; they were the more ancient and the more civilised: the western Locrians, who are said to have been a colony of the former, are not mentioned in history till the time of the Peloponnesian War, and are even then represented as a semi-barbarous people. (Thuc. i. 5.) We may conjecture that the Locrians at one time extended from sea to sea, and were torn asunder by the immigration of the Phocians and Dorians. (Niebuhr, *Lectures on Ancient Ethnography*, vol. i. p. 123.)



1. LOCRI EPICNEMIDII and OPUNTII (Ἐπικνημίδιοι, Ὀπούντιοι), inhabited a narrow slip upon the eastern coast of Greece, from the pass of Thermopylae to the mouth of the river Cephissus.

Their northern frontier town was Alpeni, which bordered upon the Malians, and their southern frontier town was Larymna, which at a later time belonged to Boeotia. The Locrians, however, did not inhabit this coast continuously, but were separated by a narrow slip of Phocis, which extended to the Euboean sea, and contained the Phocian seaport town of Daphnus. The Locrians north of Daphnus were called Epicnemidii, from Mount Cnemis; and those south of this town were named Opuntii, from Opus, their principal city. On the west the Locrians were separated from Phocis and Boeotia by a range of mountains, extending from Mount Oeta and running parallel to the coast. The northern part of this range, called Mount Cnemis (Strab. ix. pp. 416, 425), now *Tálanda*, rises to a considerable height, and separated the Epicnemidii Locri from the Phocians of the upper valley of the Cephissus; the southern portion, which bore no specific name, is not so lofty as Mount Cnemis, and separated the Opuntian Locrians from the north-eastern parts of Boeotia. Lateral branches extended from these mountains to the coast, of which one terminated in the promontory Cnemides [Cnemides], opposite the islands called Lichades; but there were several fruitful valleys, and the fertility of the whole of the Locrian coast is praised both by ancient and modern observers. (Strab. ix. p. 425; Forchhammer, *Hellenika*, pp. 11—12; Grote, *Hist. of Greece*, vol. ii. p. 381.) In consequence of the proximity of the mountains to the coast there was no room for any considerable rivers. The largest, which, however, is only a mountain torrent, is the Boagrius (Βοάγριος), called also Manes (Μάνης) by Strabo, rising in Mount Cnemis, and flowing into the sea between Scarpheia and Thronium. (Hom. *Il.* ii. 533; Strab. ix. p. 426; Ptol. iii. 15. § 11; Plin. iv. 7. s. 12; Leake, *Northern Greece*, vol. ii. p. 67.) The only other river mentioned by name is the Platanius (Πλατάνιος, Paus. ix. 24. § 5), a small stream, which flows into the Opuntian gulf near the Boeotian frontier: it is the river which flows from the modern village of *Proskyná*. (Leake, vol. ii. p. 174.) The Opuntian gulf (ὁ Ὀπούντιος κόλπος, Strab. ix. pp. 416, 425, 426), at the head of which stood the town of Opus, is a considerable bay, shallow at its inner extremity. In this bay, close to the coast, is the small island of Atalanta. [Atalanta, No. 1.]

There are three important passes across the Locrian mountains into Phocis. One leads from the territory of the Epicnemidii, between the summits of Mount Callidromus and Mount Cnemis, to Tithronum, in the upper valley of the Cephissus; a second across Mount Cnemis to the Phocian town of Elateia; and a third from Opus to Hyampolis, also a Phocian town, whence the road ran to Abae and Orchomenos.

The eastern Locrians, as we have already said, are mentioned by Homer, who describes them as following Ajax, the son of Oïleus, to the Trojan War in forty ships, and as inhabiting the towns of Cynus, Opus, Calliarus, Besa, Scarphe, Augeiae, Tarphe, and Thronium. (*Il.* ii. 527—535.) Neither Homer, Herodotus, Thucydides, nor Polybius, make any distinction between the Opuntii and Epicnemidii; and, during the flourishing period of Grecian history, Opus was regarded as the chief town of the eastern Locrians. Even Strabo, from whom the distinction is chiefly derived, in one place describes Opus as the metropolis of the Epicnemidii (ix. p. 416); and the same is confirmed by Pliny (iv. 7. s. 12) and Stephanus (*s. v.* Ὀπόεις; from Leake vol. ii. p. 181). In the Persian War the Opuntian Locrians fought with Leonidas at Thermopylae, and also sent seven ships to the Grecian fleet. (Herod. vii. 203, viii. 1.) The Locrians fought on the side of Sparta in the Peloponnesian War. (Thuc. ii. 9.)

The following is a list of the Locrian towns:— 1. Of the Epicnemidii: along the coast from N. to S., Alpenus; Nicaea; Scarphe or Scarpheia; Thronium; Cnemis or Cnemides; more inland, Tarphe, afterwards Pharygae; Augeiae.—2. Of the Opuntii: along the coast from N. to S., Alope; Cynus; Opus; Halae; Larymna, which at a later time belonged to Boeotia; more inland, Calliarus; Naryx; Corseia.

COIN OF THE LOCRI OPUNTII.

II. Locri Ozolae (Ὀζόλαι), inhabited a district upon the Corinthian gulf, bounded on the north by Doris and Aetolia, on the east by Phocis, and on the west by Aetolia. This district is mountainous, and for the most part unproductive. The declivities of Mount Parnassus from Phocis, and of Mount Corax from Aetolia, occupy the greater part of it. The only river, of which the name is mentioned, is the Hylaethus, now the *Morno*, which runs in a south-westerly direction, and falls into the Corinthian gulf near Naupactus. The frontier of the Locri Ozolae on the west was close to the promontory Antirrhium, opposite the promontory Rhium on the coast of Achaia. Antirrhium, which was in the territory of the Locri, is spoken of elsewhere. [Vol. I. p. 13.] The eastern frontier of Locris, on the coast, was close to the Phocian town of Crissa; and the Crissaean gulf washed on its western side the Locrian, and on its eastern the Phocian coast. The origin of the name of Ozolae is uncertain. Various etymologies were proposed by the ancients. (Paus. x. 38. § 1, seq.) Some derived it from the verb ὄζειν, "to smell," either from the stench arising from a spring at the foot of Mount Taphiassus, beneath which the centaur Nessus is said to have been buried, and which still retains this property (cf. Strab. ix. p. 427), or from the abundance of asphodel which scented the air. (Cf. Archytas, *ap. Plut. Quaest. Graec.* 15.) Others derived it from the undressed skins which were worn by the ancient inhabitants; and the Locrians themselves from the branches (ὄζοι) of a vine which was produced in their country in a marvellous manner. The Locri Ozolae are said to have been a colony from the Opuntian Locrians. They first appear in history in the time of the Peloponnesian War, as has been mentioned above, when they are mentioned by Thucydides as a semi-barbarous nation, along with the Aetolians and Acarnanians, whom they resembled in their armour and mode of fighting. (Thuc. i. 5, iii. 94.) In B. C. 426 the Locrians promised to assist Demosthenes, the Athenian commander, in his invasion of Aetolia; but, after the defeat of Demosthenes, most of the Locrian tribes submitted

-hout opposition to the Spartan Eurylochus, who -rched through their territory from Delphi to -upactus. (Thuc. iii. 95, seq.) They belonged at -ater period to the Aetolian League. (Polyb. xviii. -.)

The chief and only important town of the Ozolae -s AMPHISSA, situated on the borders of Phocis. -e other towns, in the direction of W. to E., were: -OLYCREIA; NAUPACTUS; OENEON; ANTICIRRHA -ANTICYRA; EUPALIUM; ERYTHRAE; TOLO-ON; HESSUS; OEANTHEIA or OEANTHE; IPNUS; -HALAEUM: more inland, AEGITIUM; POTIDANIA; -OCTYLEIUM; TEICHIUM; OLPAE; MESSAPIA; -LE; TRITAEA; MYONIA.

On the geography of the Locrian tribes, see Leake, -rthern Greece, vol. ii. pp. 66, seq., 170, seq., -, seq.

LOGI or LUGI (Λόγοι or Λοῦγοι), a people in -th Britain, mentioned by Ptolemy (ii. 3. § 12) -population to the south of the Mertae, and west -he Cornabii. This gives the part about the -noch, *Cromarty*, and *Murray Firths.* [R. G. L.]

LOGIA, a river in Ireland, mentioned by Ptolemy -between the Vinderius and the Rhobogdian pro-tory. Probably [see VINDERIUS] the *Lagan*, -ng into *Belfast Lough*, name for name, and place -place. [R. G. L.]

LONCIUM (*Lienz*), a place in the south of -ricum, on the right bank of the river Dravus, at -point where it receives the *Isel.* (*Itin. Ant.* -279.) The whole district about *Lienz* abounds -Roman antiquities. (Gruter, *Inscript.* p. 267. -Muchar, *Noricum*, p. 254.) [L. S.]

LONDINIUM (Λονδίνιον, Ptol. ii. 3. § 27; Λιν--ιον, Steph. B. *s. v.*; Londinium, Tac. *Ann.* xiv. -Oppidum Londiniense, Eumen. *Paneg. Const.* 17; -dinium, Amm. Marc. xx. 1), the capital of Roman -tain. Ptolemy (*l. c.*) places Londinium in the -rict of the Cantii; but the correctness of this -tion has very naturally been questioned. Modern -overies have, however, decided that the southern -its of the city, in the time of Hadrian and Anto--us Pius, extended a considerable distance into the -ritory of the Cantii; and Ptolemy, therefore, was -altogether unwarranted in placing Londinium in -s division of Britain. In earlier times the city -s confined to the northern bank of the Thames.

The earliest mention of it is by Tacitus, in his -ll-known account of the insurrection of the Britons -the reign of Nero. As Britain was only fully -bjugated by Claudius, Londinium must have ra--ly advanced to the importance it assumes in the -rrative of this historian. Although it is not men--ned by Julius Caesar or by other early writers, the -culiar natural advantages of the locality point it -t as one of the chief places of resort of the mer--ants and traders who visited Britain from the -ullish ports and from other parts of the continent. -t the comparatively early period in the Roman -mination referred to, Londinium is spoken of as -place of established mercantile reputation. The -ree chief cities of Britain at this period were -erulamium, Camulodunum, and Londinium. At -amulodunum a colony of veterans had been esta--lished; Verulamium had received the rights and -rivileges of a municipium; Londinium, without such -istinctions, had attained by home and foreign trade -hat pre-eminence which ever marked her as the me--tropolis of Britain: — "Londinium .... cognomento -quidem coloniae non insigne, sed copia negotiatorum et -commeatuum maxime celebre." (Tac. *Ann.* xiv. 33.) At this period we must infer that Londinium was without external walls; and this absence of mural defences appears to have been common also to Verulamium and to Camulodunum. The Britons passed by the fortified places and attacked at once the rich and populous cities inadequately defended. Camulodunum was the first to fall; Londinium and Verulamium speedily followed in a similar catastrophe.

The Itinerary of Antoninus, which is probably not later than the time of Severus, affords direct evidence of the chief position which Londinium held among the towns and cities of Britain. It occurs in no less than seven of the itinera, and in six of these it stands either as the place of departure or as the terminus of the routes; no other town is introduced so conspicuously.

The next historical mention of Londinium occurs in the panegyric of Eumenius addressed to Constantius Caesar (c. 17), in which it is termed "oppidum Londiniense." After the defeat of Allectus, the victorious Romans marched directly on Londinium, which was being plundered by the Franks and other foreign mercenaries, who made up the greater part of the usurper's forces.

Ammianus Marcellinus, who wrote at a later period, states that, in his time, Londinium was called Augusta, an honourable appellation not unfrequently conferred on cities of distinction. In this writer we find the word written as it is pronounced at the present day: — "Egressus, tendensque ad Lundinium vetus oppidum, quod Augustam posteritas appellavit" (xxvii. 8, comp. xxviii. 3). In the Notitia Dignitatum we find mention of a "Praepositus Thesaurorum Augustensium in Britanniis;" and in the Chorography of Ravenna the complete form, Londinium Augusta, is given.

Monumental remains show that Londinium contained buildings commensurate in grandeur and extent with its historical claims. The foundations of the wall which bordered the river, when laid open a few years since, was almost wholly composed of materials used in buildings which were anterior to the period when the wall was built; but it was impossible to decide the dates of either. The stones of which this wall was constructed were portions of columns, friezes, cornices, and also foundation stones. From their magnitude, character, and number, they gave an important and interesting insight into the obscure history of Roman London, in showing the architectual changes that had taken place in it. Similar discoveries have been made in various parts of the modern city which more fully developed the *debris* of an ancient city of importance: other architectural fragments have been found; walls of vast strength and thickness have been noticed; and within the last twenty years, at least thirty tessellated pavements have been laid open, of which some were of a very fine kind. (*Archaeologia*, vols. xxvii. xxviii. et seq.) Londinium, unenclosed at first, was subsequently in early times walled; but it occupied only part of the site it eventually covered (*Archaeologia*, vol. xxix.). The line of the wall of Roman London is well known, and can still, in parts, be traced. Where it has been excavated to the foundation, it appears based upon a bed of clay and flints; the wall itself, composed of rubble and hard mortar, is faced with small squared stones and bonding tiles; its thickness is about 12 feet; its original height was probably between 20 and 30 feet; it was flanked with towers, and had a

least seven gates. By the sides of the chief roads stood the cemeteries, from which enormous quantities of sepulchral remains have been, and still are, procured. Among the inscriptions, are records of soldiers of the second, the sixth, and the twentieth legions. (*Col. Ant.* vol. i.) We have no evidence, however, to show that the legions themselves were ever quartered at Londinium. The only troops which may be considered to have been stationed in this city were a cohort of the native Britons (*Col. Ant.* vol. i.); but it is not known at what particular period they were here. It is, however, a rather remarkable fact, as it was somewhat contrary to the policy of the Romans to station the auxiliaries in their native countries.

Traces of temples and portions of statues have also been found in London. The most remarkable of the latter is, perhaps, the bronze head of Hadrian found in the Thames, and the large bronze hand found in Thames Street. In reference to the statues in bronze which adorned Londinium and other cities of Roman Britain, the reader may be directed to a curious passage in Geoffrey of Monmouth. That writer relates (xii. 13), that, after the death of Cadwalla, the Britons embalmed his body and placed it in a bronze statue, which was set upon a bronze horse of wonderful beauty, and placed over the western gate of London, as a trophy of victory and as a terror to the Saxons. All that we are called upon to consider in this statement is, whether it is at all likely that the writer would have invented the details about the works in bronze; and whether it is not very probable that the story was made up to account for some Roman works of art, which, for centuries after the Romans had left Britain, remained a wonder and a puzzle to their successors. Equestrian statues in bronze were erected in Britain by the Romans, as is proved by a fragment found at *Lincoln*; but in the subsequent and middle ages such works of art were not fabricated.

We have above referred to the "Praepositus Thesaurorum Augustensium." Numerous coins are extant of the mint of Londinium. Those which may be certainly thus attributed are of Carausius, Allectus, Constantinus, and the Constantine family. (Akerman's *Coins of the Romans relating to Britain*.) With respect to the precise position of the public buildings, and, indeed, of the general distribution of the Roman city, but little is known; it is, however, very certain, that, with some few exceptions, the course of the modern streets is no guide to that of the ancient. This has also been remarked to be the case at *Trèves* and other ancient cities. [C.R.S.]

LO'NDOBRIS (Λουδοβρίς, Ptol. ii. 5. § 10; Λάνουκρις, Marc. Heracl. p. 43: *Berlinguas*), a small island, and the only one, belonging to the province of Lusitania, lay off the promontory LUNARIUM (*C. Carvoeiro*.) [P. S.]

LONGANUS (Λογγανός), a river in the N. of Sicily, not far from Mylae (*Milazzo*), celebrated for the victory of Hieron, king of Syracuse, over the Mamertines in B. C. 270 (Pol. i. 9; Diod. xxii. 13; Exc. H. p. 499, where the name is written Λοίτανος, but the same river is undoubtedly meant). Polybius describes it as "in the plain of Mylae" (ἐν τῷ Μυλαίῳ πεδίῳ), but it is impossible to say, with certainty, which of the small rivers that flow into the sea near that town is the one meant. The *Fiume di Santa Lucia*, about three miles southwest of *Milazzo*, has perhaps the best claim; though Cluverius fixes on the *Fiume di Castro Reale*, a little more distant from that city. (Cluv. *Sicil.* p. 303.) [E. H. B.]

LONGATICUM, a town in the S. of Pannonia Superior, on the road from Aquileia to Emona. Now *Logatecz*, according to Muchar. (*It. Anton.*; *It. Hieros.*; *Tab. Peut.*; Muchar, *Noricum*, p. 232.)

LONGOBARDI. [LANGOBARDI.]

LONGONES. [SARDINIA.]

LONGOVICUS, a town in Britain, mentioned in the *Notitia*, and nowhere else. It was, probably, in the neighbourhood of the *Cumberland* and *Westmoreland* lakes; but beyond this it is not safe to go further in the way of identification; though the *Monumenta Britannica* makes it *Lancaster*. [R. G. L.]

LO'NGULA (Λόγγολα: *Eth.* Longulanus: *Buon Riposo*), an ancient city of Latium, which seems to have been included in the territory of the Volscians. It first appears as a Volscian city, which was taken by assault by the Roman consul, Postumus Cominius in B. C. 493. (Liv. ii. 33; Dionys. vi. 91.) But it was recovered by the Volscians under the command of Coriolanus, in B.C. 488 (Liv. ii. 39; Dionys. viii. 36): in both cases it is described as falling an easy prey to the invading army, and was probably not a place of any great importance; indeed Livy's expressions would lead us to infer that it was a dependency of Antium. After this it is only incidentally mentioned; once, as the place where the Roman army under L. Aemilius encamped in the war against the Volscians, B.C. 482 (Dionys. viii. 85); and again, at a much later period in the Samnite Wars, B. C. 309. (Liv. ix. 39.) Its name is after this found only in Pliny's list of the cities of Latium which were in his time utterly decayed and deserted. (Plin. iii. 5. s. 9.) As he enumerates it among the cities that shared in the sacrifices on the Alban Mount, it would seem to have been originally a Latin city, though it had fallen into the hands of the Volscians before its name appears in history.

All the above passages would lead us to place Longula in the neighbourhood of Antium, while the two former connect it closely with Pollusca and Corioli. These are all the data which we have for determining its position, which must therefore be in some degree matter of conjecture, especially as that of Pollusca and Corioli is equally uncertain. But Nibby has pointed out a locality which has at all events a plausible claim to be that of Longula, in the *casale*, or farm-house, now called *Buon Riposo*, on the right of the road from Rome to Antium, about 27 miles from Rome, and 10 in a straight line from *Porto d'Anzo*.* The farm, or *tenuta*, of *Buon Riposo* lies between that of *Carroceto* on the one side, and *Ardea* on the other; while the site occupied by the *casale* itself, and which was that of a castle in the middle ages, is described as one of those which is so clearly marked by natural advantages of position that it could scarcely fail to have been chosen as the site of an ancient city. No ruins remain; but perhaps these could hardly be expected in the case of a town that ceased to exist at so early a period. (Nibby, vol. i. p. 326; Abeken, *Mittel-Italien*, p. 72.) [E. H. B.]

* The position assigned to *Buon Riposo* on Gell's map does not accord with this description of the site given by Nibby; but this part of the map is very imperfect, and evidently not derived from personal observation. Gell's own account of the situation of *Buon Riposo* (p. 185), though less precise, agrees with that of Nibby.

LONGUM PROMONTORIUM. [SICILIA.]

LONGUS, in North Britain, mentioned by Ptolemy (ii. 3) as a river to the north of the Epidian Promontory (*Mull of Cantyre*). Identified in the *Monumenta Britannica* with *Lynneloch*, *Innerlochy*, and *Loch Melfort*. [R. G. L.]

LOPADUSSA (Λοπαδοῦσσα, Strab. xvii. p. 834; Λοπαδοῦσα, Ptol. iv. 3. § 34: *Lampedusa*), a small island off the E. coast of Africa Propria, opposite to the town of Thapsus, at the distance of 80 stadia, according to an ancient *Periplus* (Iriarte, *Bibl. Matrit. Cod. Graec.* p. 488). Pliny places it about 50 M. P. N. of Cercina, and makes its length about 6 M. P. (Plin. iii. 8. s. 14, v. 7. s. 7.) It really lies about 80 English miles E. of Thapsus, and about 90 NE. of Cercina. [P. S.]

LOPHIS. [BOEOTIA, p. 413, a.]

LOPOSAGIUM, in Gallia, is placed by the Table between Vesontio (*Besançon*) and Epamanduodurum (*Mandeure*). It is xiii. leagues from Vesontio. D'Anville supposes that it may be a place called *Baumes-les-Nones*: others guess *Baumes-les-Dames*, or a place near it named *Luciol* or *Luxiol*. [G. L.]

LOPSICA (Λόψικα), a town of Liburnia, which Ptolemy (ii. 16. § 2; comp. Plin. iii. 25) places near the mouth of the river Tedanius (*Zermagna*): perhaps the same place as the OSPELA of the Geographer of Ravenna. [E. B. J.]

LO'RIUM, or LAU'RIUM, a village in Southern Etruria and station on the Via Aurelia, 12 miles from Rome. (*Itin. Ant.* p. 290; *Tab. Peut.*) It is chiefly known from the circumstance that the family of Antoninus Pius had a villa there, in which that emperor was brought up, and where he afterwards constructed a palace or villa on a more magnificent scale, which was his place of residence at the time of his death. (Jul. Capit. *Ant. P.* 12; Vict. *de Caes.* 15, *Epit.* 15; Eutrop. viii. 8.) It was afterwards a favourite place of resort with his successor M. Aurelius, as we learn from his letters to Fronto (Fronto, *Ep.* ii. 18, iii. 20, vi. 3, &c.); but had already fallen into decay in the time of Capitolinus, who speaks only of its ruins. No other mention of Laurium occurs except in the Itineraries, by which we are enabled to fix its position with certainty. The 12th mile from Rome coincides with a bridge over a small stream between a farm called *Bottaccia* and the *Castel di Guido*: here the remains of ancient buildings and sepulchres have been found; and on the high ground above are the ruins of an edifice of a more extensive and sumptuous character, which, from the style of construction, may probably have belonged to the villa of the Antonines. (Nibby, vol. ii. p. 271.) The name is variously written Lorium, Lorii, and Laurium, but the first form, which is that adopted in the epistles of Fronto and M. Aurelius, is the best warranted. The place appears to have continued to be inhabited during the early ages of Christianity, and we even meet with a bishop of Lorium in the 5th century. [E. H. B.]

LO'RYMA (τὰ Λόρυμα), a small fortified place with a port, close to Cape Cynossema, on the westernmost point of the Rhodian Chersonesus, in Caria. Its harbour was about 20 Roman miles distant from Rhodes. (Liv. xxxvii. 17, xlv. 10; Steph. B. *s. v.*; Plin. v. 29; Ptol. v. 2. § 11; Thucyd. viii. 43; Senec. *Quaest. Nat.* iii. 19; Appian, *Bell. Civ* iv. 72.) Strabo (xiv. p. 652) applies the name Loryma to the whole of the rocky district, without mentioning the town. The Larumna of Mela (i. 16) and the Lorimna of the Tab. Peut. perhaps refer to Loryma, although it is also possible that they may be identical with a place called Larymna mentioned by Pliny in the same district. Leake (*Asia Minor*, p. 223) regards the ruins in the west of *Port Aplotheca* as belonging to the ancient town of Loryma. These ruins are seen on the spur of a hill at the south-western entrance of the port; the town was long and narrow, running from west to east; on each of its long sides there are still visible six or seven square towers, and one large round one at each end: the round tower at the east end is completely demolished. The walls are preserved almost to their entire height, and built in the best style, of large square blocks of limestone. Towards the harbour, in the north, the town had no gate, and on the south side alone there appear three rather narrow entrances. In the interior no remains of buildings are discernible, the ground consisting of the bare rock, whence it is evident that the place was not a town, but only a fort. Sculptures and inscriptions have not been found either within or outside the fort, but several tombs with bare stelae, and some ruins, exist in the valley at the head of the harbour. (Ross, *Reisen auf den Griech. Inseln*, vol. iv. pp. 46, &c.) [L. S.]

LORNE, a fortress in Mesopotamia, situated on the northern frontier, upon Mount Izala. (Amm. Marc. xix. 9.)

LOSA, a station in Gallia Aquitania, placed by the Antonine Itin. on the road from Pompelo (*Pampelona*) in Spain to Burdigala (*Bordeaux*). From Segosa (*Escoussé* or *Escoursé*) to Losa is xii. (leagues), from Losa to Boii [BOII] xii., and from Boii to Burdigala xvi. D'Anville conjectures Losa to be at a little canton, as he calls it, named *Leche*. Walckenaer fixes it at the *Bois de Licogas*. [G. L.]

LOSO'RIUM (Λοσόριον), a fortress in Lazica, built by Justinian (Procop. *de Aed.* iii. 7), which Dubois de Montpereux (*Voyage Autour du Caucase*, vol. ii. p. 360) identifies with the modern village of *Loussiatkhevi*. [E. B. J.]

LOSSONUS. [OLOOSSON.]

LOTO'PHAGI (Λωτοφάγοι, i. e. *lotus-eaters*), a people on the N. coast of Africa, between the Syrtes, who first appear in mythical, but afterwards in historical geography. Homer (*Od.* ix. 84, et seqq.) represents Ulysses as coming, in his wanderings, to the coast of the Lotophagi, who compassed the destruction of his companions by giving them the lotus to eat. For whoever of them ate the sweet fruit of the lotus, lost all wish to return to his native country, but desired to remain there with the Lotophagi, feeding on the lotus, and forgetful of return. (The poetical idea is exquisitely wrought out by Tennyson in his *Lotos-Eaters*, works, vol. i. pp. 175—184.) The Greeks of the historical period identified the country of these Lotus-eaters with the coast between the Syrtes, where they found an indigenous tribe, who used to a great extent (Herodotus says, as their sole article of food) the fruit of a plant, which they therefore supposed to be the lotus of Homer. To this day, the aboriginal inhabitants who live in caves along the same coasts eat the fruit of the plant, which is doubtless the lotus of the ancients, and drink a wine made from its juice, as the ancient Lotophagi also did (Herod. iv. 177). This plant, the *Zizyphus Lotus* or *Rhamnus Lotus* (jujube tree) of the botanists (called by the Arabs *Sèedra*), is a prickly branching shrub, bearing fruit of the size of a wild plum, of a

saffron colour and sweetish taste (Herodotus likens its taste to that of the date). It must not be confounded with the celebrated Egyptian lotus, or water-lily of the Nile, which was also used for food. (There were, in fact, several plants of the name, which are carefully distinguished by Liddell and and Scott, *Gr. Lex. s. v.*)

The ancient geographers differ as to the extent of coast which they assign to the Lotophagi. Their chief seat was around the Lesser Syrtis, and eastward indefinitely towards the Great Syrtis; but Mela carries them into Cyrenaica. They are also placed in the large island of MENINX or Lotophagitis, E. of the Lesser Syrtis. (Hom. Herod. *ll. cc.*; Xen. *Anab.* iii. 2. § 25; Scylax. p. 47; Mela, i. 7. § 5; Plin. v. 4. s. 4; Sil. iii. 310; Hygin. *Fab.* 125; Shaw; Della Cella; Barth; Heeren, *Ideen*, vol. ii. pt. 1. p. 54; Ritter, *Erdkunde*, vol i. p. 989.) [P.S.]

LOTUM, in Gallia, is placed by the Antonine Itin. on a road from Juliobona (*Lillebonne*) to Rotomagus (*Rouen*). It is vi. leagues from Juliobona to Lotum, and xiii. from Lotum to Rotomagus. The actual distances seem to fix Lotum at or near *Caudebec*, which is on the north bank of the *Seine* between *Lillebonne* and *Rouen*. [G. L.]

LOXA, in Britain, mentioned by Ptolemy (ii. 3) as a river on the western coast of Scotland, north of the *Vara* (Οὐάρα) *aestuary*, i. e. the *Murray Firth*. Identified in the *Monumenta Britannica* with the *Loth* in Sutherland; the *Lossie*, and *Cromarty Firth*. [R. G. L.]

LUANCI. [GALLAECIA.]

LUBAENI. [GALLAECIA.]

LUCA (Λοῦκα, Strab., Ptol.: *Eth.* Lucensis: *Lucca*), a city of Etruria, situated in a plain at the foot of the Apennines, near the left bank of the Ausar (*Serchio*) about 12 miles from the sea, and 10 NE. of Pisae. Though Luca was included within the limits of Etruria, as these were established in the time of Augustus (Plin. iii. 5. s. 8; Ptol. iii. 1. § 47), it is very doubtful whether it was ever an Etruscan town. No mention of it is found as such, and no Etruscan remains have been discovered in its neighbourhood. But it is probable that the Etruscans at one time extended their power over the level country at the foot of the Apennines, from the Arnus to the Macra, leaving the Ligurians in possession only of the mountains, — and at this period, therefore, Luca was probably subject to them. At a later period, however, it had certainly fallen into the hands of the Ligurians, and being retaken from them by the Romans, seems to have been commonly considered (until the reign of Augustus) a Ligurian town. For this reason we find it comprised within the province assigned to Caesar, which included Liguria as well as Cisalpine Gaul. (Suet. *Caes.* 24.) The first mention of Luca in history is in B. C. 218, when Livy tells us that the consul Sempronius retired there after his unsuccessful contest with Hannibal. (Liv. xxi. 59.) It was, therefore, at this period certainly in the hands of the Romans, though it would seem to have subsequently fallen again into those of the Ligurians; but it is strange that during the long protracted wars of the Romans with that people, we meet with no mention of Luca, though it must have been of importance as a frontier town, especially in their wars with the Apuani. The next notice of it is that of the establishment there of a Roman colony in B. C. 177. (Vell. Pat. i. 15; Liv. xli. 13.) There is, indeed, some difficulty with regard to this; the MSS. and editions of Livy vary between Luca and Luna; but there is no such discrepancy in those of Velleius, and there seems at least no reason to doubt the settlement of a *Latin* colony at Luca; while that mentioned in Livy being a "colonia civium," may, perhaps, with more probability, be referred to Luna. (Madvig, *de Colon.* p. 287; Zumpt, *de Colon.* p. 349) That at Luca became, in common with the other Latin colonies, a municipal town by virtue of the Lex Julia (B.C. 49), and hence is termed by Cicero "municipium Lucense." (Cic. *ad Fam.* xiii. 13.) It appears to have been at this time a considerable town, as we find it repeatedly selected by Caesar during his administration of Gaul as the frontier town of his province, to which he repaired in order to consult with his friends, or with the leaders of political parties at Rome. (Suet. *Caes.* 24; Plut. *Caes.* 21, *Crass.* 14, *Pomp.* 51; Cic. *ad Fam.* i. 9. § 9). On one of these occasions (in B. C. 56) there are said to have been more than 200 senators assembled at Luca, including Pompey and Crassus, as well as Caesar himself. (Plut. *l. c.*; Appian, *B. C.* ii. 17.) Luca would seem to have received a fresh colony before the time of Pliny, probably under Augustus. (Plin. iii. 5. s. 8; Zumpt, *de Colon.* p. 349.) We hear little of it under the Roman Empire; but it seems to have continued to be a provincial town of some consideration: it was the point where the Via Clodia, proceeding from Rome by Arretium, Florentia, and Pistoria, was met by other roads from Parma and Pisae. (Plin. *l. c.*; Ptol. iii. 1. § 47; *Itin. Ant.* pp. 283, 284, 289; *Tab. Peut.*) During the Gothic wars of Narses, Luca figures as an important city and a strong fortress (Agath. *B. G* i. 15), but it was not till after the fall of the Lombard monarchy that it attained to the degree of prosperity and importance that we find it enjoying during the middle ages. *Lucca* is still a flourishing city, with 25,000 inhabitants: the only relics of antiquity visible there are those of an amphitheatre, considerable part of which may still be traced, now converted into a market-place called the *Piazza del Mercato*, and some small remains of a theatre near the church of *Sta. Maria di Corte Landini*. [E. H. B.]

LUCA'NUS, a river of Bruttium. [BRUTTII, p. 450, b.]

LUCA'NIA (Λευκανία, Strab. The name of the people is written Λευκανοί by Strabo and Polybius, but Ptolemy has Λουκανοί, and this is found also on coins), a province or district of Southern Italy, extending across from the Tyrrhenian sea to the gulf of Tarentum, and bounded by the Bruttians on the S., by Samnium and Apulia on the N., and by Campania, or the district of the Picentini, on the NW. Its more precise limits, which are fixed with unusual unanimity by the geographers, were, the river Silarus on the NW.; the Bradanus, which flows into the gulf of Tarentum, just beyond Metapontum, on the NE.; while the mouths of the Laüs and the Crathis marked its frontiers towards the Bruttians on the two sides of the peninsula. (Strab. vi pp. 252, 253, 255; Plin. iii. 5. s. 10, 11. s. 15; Ptol. iii. 1. §§ 8, 9.) Its northern frontier, from the sources of the Silarus to those of the Bradanus, must have been an arbitrary line; but nearly following the main ridge of the Apennines in this part of its course. It thus comprised the modern province of the *Basilicata*, together with the greater part of the *Principato Citeriore* and the extreme northern portion of *Calabria*.

Lucania is evidently "the land of the Lucanians:" but though no territorial designation in Italy became more clearly marked or generally adopted than this appellation, it was not till a comparatively late period that it came into use. The name of the Lucanians was wholly unknown to the Greeks in the days of Thucydides; and the tract subsequently known as Lucania was up to that time generally comprised under the vague appellation of Oenotria, while its coasts were included in the name of Magna Graecia. Scylax is the earliest author in whom the name of Lucania and the Lucanians is found; and he describes them as extending from the frontiers of the Samnites and Iapygians to the southern extremity of the Bruttian peninsula. (Scyl. pp. 3, 4, 5. §§ 12, 13.) We are fortunately able to trace with certainty the historical causes of this change of designation.

The earliest inhabitants of the part of Italy afterwards known as Lucania, were the Oenotrians and Chones, tribes whom there is good reason to refer to a Pelasgic stock. [ITALIA, p. 84. The few particulars transmitted to us concerning them are given under OENOTRIA.] These races appear to have been unwarlike, or at least incapable of offering any material opposition to the arms of the Greeks; so that when the latter established a line of colonies along the shores of the Tyrrhenian sea and the gulf of Tarentum, they seem to have reduced the barbarians of the interior to a state of at least nominal subjection with but little difficulty. Thus Sybaris extended her power from sea to sea, and founded the colonies of Posidonia, Laüs, and Scidrus on the western coast of Oenotria; while further to the S. Crotona and Locri followed her example. It is probable, however, that other means were employed by the Greeks as well as arms. The Pelasgic races of Oenotria were probably assimilated without much difficulty with their Hellenic rulers; and there seems reason to believe that the native races were to a considerable extent admitted to the privileges of citizens, and formed no unimportant element in the population of the cities of Magna Graecia. (Niebuhr, vol. i. p. 60.) The history of the foundation and rise of the numerous Greek colonies, which gradually formed as it were a belt, encircling the whole southern peninsula of Italy, are more appropriately reserved for the article MAGNA GRAECIA. It may here suffice to mention that the period immediately preceding the fall of Sybaris (B.C. 510) may be taken as that during which the Greek cities were at the height of their power, and when their dominion was most widely extended. But though many of those cities suffered severely from domestic dissensions, we find no trace of any material change in their relations with the neighbouring barbarians, till the appearance of the Lucanians at once produced an entire change in the aspect of affairs.

The Lucanians were, according to the general testimony of ancient writers, a Sabellian race,—an offshoot or branch of the Samnite nation, which, separating from the main body of that people, in the same manner as the Campanians, the Hirpini, and the Frentani had severally done, pressed on still further to the south, and established themselves in the country subsequently known as Lucania. (Strab. vi. p. 254; Plin. iii. 5. s. 10.) The origin of their name is unknown: for the derivation of it from a leader of the name of Lucius (Plin. xxx. *l. c.*; Etym. Magn. *s. v.* Λευκανοί) is too obviously a mere etymological fiction of late days to deserve attention. Nor have we any distinct information as to the period of their first appearance and establishment. Strabo describes them, without doubt, correctly, as first expelling (or more properly *subduing*) the Oenotrians and Chones, and then turning their arms against the Greek cities on the coast. But it is not till they come into contact with these last that we have any account of their proceedings; and we have, therefore, no information as to the commencement of their career. Even their wars with the Greeks are known to us only in a very imperfect and fragmentary manner, so that we can scarcely trace the steps of their progress. But it is probable that it was not till after the conquest of Campania (about B.C. 420) that the Samnites began to extend their conquests to the southward. Niebuhr has justly observed that the tranquil foundation of the Athenian colony at Thurii, in B.C. 442, and the period of prosperity which allowed it at first to rise rapidly to power, sufficiently prove that the Lucanians had not as yet become formidable neighbours to the Gauls, at least on that side of the peninsula (Nieb. vol. i. p. 96). But they seemed to have first turned their arms against the Greek cities on the W. coast, and established a permanent footing in that quarter, before they came into collision with the more powerful cities on the Tarentine gulf. (Strab. i. p. 254.) Posidonia was apparently the first of the Greek cities which yielded to their arms, though the date of its conquest is uncertain. [PAESTUM.] It was probably soon after this that the Thurians, under the command of Cleandridas, were engaged in war with the Lucanians, in which they appeared to have obtained some considerable successes. (Polyaen, ii. 10.) But the progress of the latter was still unchecked; and the increasing danger from their power led to the formation, in B.C. 393, of a defensive league among all the principal cities of Magna Graecia, with a view of resisting the Lucanians on the N., and the power of Dionysius on the S. (Diod. xiv. 91.) They might reasonably suppose that their combined arms would easily effect this; but only three years later, B.C. 390, the forces of the confederates, among whom the Thurians took the lead, sustained a great defeat near Laüs, in which it is said that 10,000 of the Greeks perished. (Diod. xiv. 101, 102; Strab. vi p. 253.) After this success, the Lucanians seem to have spread themselves with but little opposition through the southern peninsula of Italy. The wars of the elder Dionysius in that region must have indirectly favoured their progress by weakening the Greek cities; and though he did not openly support the Lucanians, it is evident that he looked upon their successes with no unfavourable eyes. (Diod. xiv. 102.) Their continued advance towards the south, however, would soon render them in their turn a source of umbrage to the Syracusan despots, who had established a permanent footing in the Italian peninsula; hence we find the younger Dionysius engaged in hostilities with the Lucanians, but apparently with little success; and after a vain attempt to exclude them from the southernmost peninsula of Bruttium, by fortifying the isthmus between the Hipponian and Scyllacian gulfs, he was obliged to conclude a treaty of peace with them in B.C. 358. (Diod. xvi. 5; Strab. vi. p. 261.)

This was about the period during which the Lucanians had attained their greatest power, and extended their dominion to the limits which we find assigned to them by Scylax (pp. 3, 4). They

had not, however, subdued the Greek cities on the coasts, some of which fell at a later period under the yoke of the Bruttians; while others maintained their independence, though for the most part in a decayed and enfeebled condition, till the period of the Roman dominion. [MAGNA GRAECIA.] Shortly afterwards, the Lucanians lost the Bruttian peninsula, their most recent acquisition, by the revolt of the Bruttians, who, from a mere troop of outlaws and banditti, gradually coalesced into a formidable nation. [BRUTTII.] The establishment of this power in the extreme south, confined the Lucanians within the limits which are commonly assigned from this time forth to their territory; they seem to have acquiesced, after a brief struggle, in the independence of of the Bruttians, and soon made common cause with them against the Greeks. Their arms were now principally directed against the Tarentines, on their eastern frontier. The latter people, who had apparently taken little part in the earlier contests of the Greeks with the Lucanians, were now compelled to provide for their own defence; and successively called in the assistance of Archidamus, king of Sparta, and Alexander, king of Epirus. The former monarch was slain in a battle against the Lucanians in B.C. 338, and his whole army cut to pieces (Diod. xvi. 63, 88; Strab. vi. p. 280); but Alexander proved a more formidable antagonist: he defeated the Lucanians (though supported by the Samnites) in a great battle near Paestum, as well as in several minor encounters, took several of their cities, and carried his arms into the heart of Bruttium, where he ultimately fell in battle near Pandosia, B.C. 326. (Liv. viii. 24; Justin. xii. 2, xxiii. 1; Strab. vi. p. 256.) It would appear as if the power of the Lucanians was considerably broken at this period; and in B.C. 303, when we next hear of them as engaged in war with the Tarentines, the very arrival of Cleonymus from Sparta is said to have terrified them into the conclusion of a treaty. (Diod. xx. 104.)

Meantime the Lucanians had become involved in relations with a more formidable power. Already, in B.C. 326, immediately after the death of Alexander king of Epirus, the Lucanians are mentioned as voluntarily concluding a treaty of peace and alliance with Rome, which was then just entering on the Second Samnite War. (Liv. viii. 25.) We have no explanation of the causes which led to this change of policy; just before, we find them in alliance with the Samnites, and very shortly after they returned once more to their old allies. (Ib. 27.) But though they were thus brought into a state of direct hostility with Rome, it was not till B.C. 317, that the course of events allowed the Romans to punish their defection. In that year the consuls for the first time entered Lucania, and took the town of Nerulum by assault. (Liv. ix. 20.) The Lucanians were evidently included in the peace which put an end to the Second Samnite War (B.C. 304), and from this time continued steadfast in the Roman alliance; so that it was the attack made on them by the Samnites which led to the Third Samnite War, B.C. 298. (Liv. x. 11.) Throughout that struggle the Lucanians seem to have been faithful to Rome; and were probably admitted to an alliance on favourable conditions at its close. But in B.C. 286, they having turned their arms against Thurii, the Romans took up the cause of the besieged city, and declared war against the Lucanians, over whom M'. Curius is said to have celebrated an ovation. (Aur. Vict. *de Vir Illust.* 33); and four years afterwards (B.C. 282) the allied forces of the Lucanians and Samnites, which had again beleaguered Thurii, were defeated in a great battle by C. Fabricius. (Val. Max. i. 8. § 6.) On the arrival of Pyrrhus in Italy (B.C. 281) the Lucanians were among the first to declare in favour of that monarch, though it was not till after his victory at Heraclea that they actually sent their contingent to his support. (Plut. *Pyrr.* 13, 17; Zonar. viii. 3.) The Lucanian auxiliaries are especially mentioned in the service of that prince at the battle of Asculum (Dionys. xx., *Fr.* Didot): but when Pyrrhus withdrew from Italy, he left his allies at the mercy of the Roman arms, and the Lucanians in particular, were exposed to the full brunt of their resentment. After they had seen their armies defeated, and their territory ravaged in several successive compaigns, by C. Fabricius, Cornelius Rufinus, and M'. Curius, they were at length reduced to submission by Sp. Carvilius and L. Papirius Cursor in B.C. 272. (Zonar. viii. 6; Eutrop. ii. 14; Liv. *Epit.* xiii., xiv.; *Fast. Capit.*)

From this time the Lucanians continued in undisturbed subjection to Rome till the Second Punic War. In the celebrated register of the Roman forces in B.C. 225, the Lucanians (including, probably, the Bruttians, who are not separately noticed) are reckoned as capable of bringing into the field 30,000 foot and 3000 horse, so that they must have been still a numerous and powerful people. (Pol. ii. 24.) But they suffered severely in the Second Punic War. Having declared in favour of Hannibal after the battle of Cannae (B.C. 216), their territory became during many successive campaigns the theatre of war, and was ravaged, in turn, by both contending armies. Thus, in B.C. 214, it was the scene of the contest between Sempronius Gracchus and Hanno; in the following year Gracchus employed the whole campaign within its limits, and it was in Lucania that that general met with his untimely death in the summer of B.C. 212. (Liv. xxii. 61, xxiv. 20, xxv. 1, 16.) At length, in B.C. 209, the Lucanians, in conjunction with the Hirpini, abandoned the alliance of Hannibal, and betrayed the garrisons which he had left in their towns into the hands of the Romans; in consideration of which service they were admitted to favourable terms. (Id. xxvii. 15.) They did not, however, yet escape the evils of war; for in the next year their territory was the scene of the campaign of Marcellus and Crispinus against Hannibal, in which both consuls perished; and it was not till after the battle of the Metaurus, in B.C. 207, that Hannibal withdrew his forces into Bruttium, and abandoned the attempt to maintain his footing in Lucania. (Liv. xxvii. 51, xxviii. 11.)

Strabo tells us that the Lucanians were punished by the Romans for their defection to Hannibal, by being reduced to the same degraded condition as the Bruttians. (Strab. v. p. 251.) But this can only be true of those among them who had refused to join in the general submission of the people in B.C. 209, and clung to Hannibal to the last: the others were restored to a somewhat favourable condition, and continued to form a considerable nation; though, if we may trust to the statement of Strabo, they never recovered from the ravages of this war.

But it was the Social War (B.C. 90—88) that gave the final blow to the prosperity of Lucania. The Lucanians on that occasion were among the first to take up arms; and, after bearing an important part throughout the contest, they still, in conjunction with

the Samnites, preserved a hostile attitude when all the other nations of Italy had already submitted and received the Roman franchise. (Appian, *B. C.* i. 39, 51, 53.) In the civil war between Marius and Sulla, which immediately followed, the Lucanians, as well as the Samnites, actively espoused the cause of the Marian party, and a Lucanian legion fought in the great battle at the Colline Gate. They in consequence were exposed to the full vengeance of the conqueror; and Lucania, as well as Samnium, was laid waste by Sulla in a manner that it never recovered. The remaining inhabitants were admitted to the Roman citizenship, and from this time the Lucanians ceased to be a people, and soon lost all traces of distinct nationality. (Appian, *B. C.* i. 90—93, 96; Strab. vi. pp. 253, 254.)

Of Lucania under the Roman government we hear but little; but it is certain that it had fallen into a state of complete decay. The Greek cities on its coasts, once so powerful and flourishing, had sunk into utter insignificance, and the smaller towns of the interior were poor and obscure places. (Strab. *l. c.*) Nor is there any appearance that it ever recovered from this state of depression under the Roman Empire. The Liber Coloniarum mentions only eight towns in the whole province, and all of these were in the subordinate condition of "praefecturae." (*Lib. Colon.* p. 209.) The malaria which now desolates its coasts, must have begun to act as soon as the population had disappeared; and the mountain region of the interior was apparently then, as at the present day, one of the wildest regions of Italy. Large tracts were given up to pasture, while extensive forests afforded subsistence to vast herds of swine, the flesh of which formed an important part of the supplies of the Imperial City. The mountain forests were also favourite resorts of wild boars, and contained abundance of bears, which were sent from thence to the amphitheatres at Rome. (Hor. *Sat.* ii. 3. 234, 8. 6; Martial, *de Spect.* 8; Varr. *L. L.* v. § 100.) Lucania was comprised together with Bruttium in the third region of Augustus, and the two provinces continued to be united for administrative purposes throughout the period of the Roman Empire. Even after the fall of the Western Empire, we meet with mention of the "Corrector Lucaniae et Bruttiorum." Lucania long continued to acknowledge the supremacy of the Eastern Emperors; and the modern province of the *Basilicata* is supposed to have derived its name from the emperor Basilius II. in the 10th century. (Plin. iii. 5. s. 10; *Not. Dign.* ii. p. 64; Orell. *Inscr.* 1074; Treb. Poll. *Tetr.* 24; P. Diac. ii. 17; Cassiod. *Var.* iii. 8, 46.)

The physical characters of Lucania are almost wholly determined by the chain of the Apennines, which enters at its northern frontier, and from thence traverses the province in its whole extent. These mountains form a lofty group or knot immediately on the frontiers of Samnium, and from thence the main chain is continued nearly due S. to the confines of Bruttium; a little before reaching which, it rises again into the very lofty group of *Monte Pollino*, the highest summit of which attains an elevation of above 7000 feet. Throughout its course this chain approaches considerably nearer to the western than the eastern coast; but it is not till after passing the frontier of Bruttium that it becomes a complete littoral chain, as it continues for a considerable distance. In the more northern part of Lucania the space between the central chain and the Tyrrhenian sea is almost filled up with ranges of lofty and rugged mountains, leaving only here and there a small strip of plain on the sea-coast: but towards the eastward, the mountains sink much more gradually as they approach the gulf of Tarentum, constituting long ranges of hills, which gradually subside into the broad strip of plain that borders the gulf the whole way from the mouth of the Siris (*Sinno*) to that of the Bradanus. It is this tract of plain, in many places marshy, and now desolate and unhealthy, that was celebrated in ancient times for its almost matchless fertility. (Archiloch. *ap. Athen.* xii. 25.) South of the river Siris, the offshoots of the Apennines, descending from the lofty group of *Monte Pollino* as a centre, again approach close to the shore, filling up the greater part of the space between the mouth of the Siris and that of the Crathis; but once more receding as they approach the latter river, so as to leave a considerable tract of fertile plain bordering its banks on both sides.

The lofty group of mountains just noticed as situated on the frontiers of Lucania and Samnium, sends down its waters towards both seas, and is the source of the most considerable rivers of Lucania. Of these the SILARUS (*Sele*) flows to the gulf of Paestum, receiving in its course the waters of the TANAGER (*Tanagro*) and CALOR (*Calore*), both considerable streams, which join it from the S. On the other side, the BRADANUS (*Bradano*), which rises to the N. of Potentia, and the CASUENTUS (*Basiento*), which has its source in the *Monti della Maddalena*, a little to the S. of the same town, flow to the SE., and pursue a nearly parallel course the whole way to the gulf of Tarentum. The ACIRIS (*Agri*) and the SIRIS (*Sinno*), which rise in the central chain further to the S., have also a general SE. direction, and flow to the gulf of Tarentum. The CRATHIS, further down the same coast, which forms near its mouth the limit between Lucania and Bruttium, belongs in the greater part of its course exclusively to the latter country. But the SYBARIS, now the *Coscile*, a much less considerable stream, immediately to the N. of the Crathis, belongs wholly to Lucania. The ACALANDRUS (*Calandro*), which falls into the sea between the Sybaris and the Siris, is a very trifling stream. On the W. coast of Lucania, the only river, besides the Silarus and its tributaries, worthy of notice, is the Laüs, or *Lao*, which forms the southern boundary of Lucania on this side. The Pyxus (*Busento*), flowing by the town of the same name (Buxentum), is but a trifling stream; and the Melphes (*Molpa*), which enters the sea by the promontory of Palinurus, though noticed by Pliny (iii. 5. s. 10), is not more considerable. The HELES or ELEES, which gave name to Elea or Velia, is somewhat more important, but by no means a large stream. [VELIA.]

The western coast of Lucania is marked by several bold and prominent headlands, formed by the ridges of the Apennines, which, as already stated, here descend quite to the sea, and end abruptly on the coast. The most northern of these, forming the southern limit of the extensive gulf of Paestum, is called by Lycophron Enipeus, but was more commonly known as the Posidium or Posidonium Promontorium. S. of this was the more celebrated promontory of PALINURUS, still called *Capo di Palinuro*, with a port of the same name; and beyond this, again, the promontory of Pyxus (now *Capo degli Infreschi*), which bounds the *Gulf of Policastro* on the W. Viewed on a larger scale, these three headlands may

be regarded as only the salient points of one large projecting mass which separates the gulf of Paestum from that of *Policastro*. The latter seems to have been known in ancient times as the gulf of Laüs. Opposite to the headland called Posidium was the small islet named by the Greeks Leucosia, from which the promontory now derives the name of *Punta di Licosa;* and a little further S., off the coast of Velia, were the two islands (also mere rocks) called by the Greeks the Oenotrides. (Strab. vi. p. 252; Plin. iii. 7. s. 13.)

The towns of Lucania may be conveniently enumerated in two classes:—the first comprising those along the coasts, which were almost without exception of Greek origin; the other containing the towns of the interior, which were for the most part either native Lucanian settlements, or Roman colonies of a later date. On the W. coast, proceeding along the shore of the Tyrrhenian sea, from N. to S., were:—Posidonia, afterwards called Paestum, a very little way from the mouth of the Silarus; Elea or Velia, at the mouth of the Heles (*Alento*); Pyxus, called by the Romans Buxentum, now *Policastro;* Scidrus, supposed to have occupied the site of *Sapri;* Blanda, now *Maratea;* and Laus, which was at the mouth of the river of that name, on its right bank. On the E. coast, bordering on the gulf of Tarentum, and beginning from the Crathis, stood Thurii, replacing the ancient city of Sybaris, but not occupying precisely the same site; Heraclea, which had in like manner succeeded to the more ancient settlement of Siris, a few miles further N.; and, lastly, Metapontum, on the southern bank of the river Bradanus.

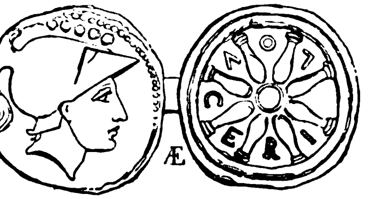
The principal towns in the interior were:—Potentia, still called *Potenza*, and the capital of the province known as the *Basilicata;* Atina, still called *Atina*, in the upper valley of the Tanager; Volceium or Volcentum, now *Buccino;* Numistro, of uncertain site, but apparently in the same neighbourhood; Eburi (*Eboli*), which is expressly called by Pliny a Lucanian town, though situated to the N. of the Silarus; Bantia, *Banzi*, a few miles from Venusia, on the very frontiers of Apulia, so that it was sometimes referred to that country; Grumentum (near *Saponara*), one of the most considerable towns in Lucania; Nerulum, probably at *La Rotonda*, and Muranum, still called *Morano*, almost adjoining the frontier of Bruttium. Consilinum or Cosilinum may probably be placed at *Padula*, in the upper valley of the Tanager, and Tegianum at *Diano*, in the same neighbourhood; while *La Polla*, in the same valley, occupies the site of Forum Popillii; Sontia, noticed only by Pliny, is probably the place now called *Sanza;* while the Tergilani and Ursentini of the same author are wholly unknown, unless the former name be corrupted from that of Tegianum, already noticed. (Plin. iii. 11. s. 15; *Lib. Colon.* p. 209.) Of the few names mentioned by Strabo (vi. p. 254), those of Vertinae and Calasarna are wholly unknown. The existence of a *Lucanian* Petelia and Pandosia, in addition to the *Bruttian* cities of those names, is a subject of great doubt.

The principal line of highroad through Lucania was the Via Popillia (regarded by the Itineraries as a branch of the Via Appia), which, in its course from Capua to Rhegium, traversed the whole province from N. to S. The stations on it given in the *Antonine Itinerary*, p. 109, are (proceeding from Nuceria):—

Ad Tanagrum - - -	xxv.
Ad Calorem - - -	xxiv.
Marciliana - - -	xxv.
Caesariana - - -	xxi.
Nerulum - - - -	xxiii.
Sub Murano - - -	xiv.

The Tabula gives a place which it calls Vicus Mendicolus (?) as the intermediate station between Marciliana and Nerulum. All these stations are very doubtful, the exact line of the ancient road through this mountain country having never been traced with accuracy. Another road, given in the Tabula, led from Potentia by Anxia (*Anzi*) and Grumentum to Nerulum, where it joined the Via Popillia. The other roads in the interior, given in the Itinerary and the Tabula, are very corrupt; we may, however, ascertain that there was a line of road proceeding from Venusia through Potentia to Heraclea and Thurii, and another from Potentia to join the Via Popillia at Marciliana, being probably the direct line of communication between Potentia and Rome. Lastly, there was always a line of road along the coast, following its level shores from Tarentum by Metapontum and Heraclea to Thurii. [E. H. B.]

COIN OF LUCANIA.



LUCE'RIA (Λουκερία, Pol., Strab.: *Eth.* Λουκερῖνος, Steph. B.; Lucerinus: *Lucera*), an ancient and important city of Apulia situated in the interior of that country, about 12 miles W. of Arpi, and 9 N. of Aecae (*Troja*). It is called by ancient writers a city of the Daunians, and the tradition current among the Greeks ascribed its foundation, in common with that of Arpi and Canusium, to Diomed; in proof of which an ancient statue of Minerva, in the temple of that goddess, was alleged to be the true Palladium brought by Diomed himself from Troy. (Strab. vi. pp. 264, 284; Plin. iii. 11. s. 16.) Yet all the accounts of the city from the time that its name appears in history would seem to point to its being an Oscan town, and connected rather with the Oscan branch of the Apulians than with the Daunians. Nothing is known of the history of Luceria till the Second Samnite War, when the Lucerians, who had apparently joined with the other Apulians, in their alliance with Rome in B. C. 326, but had refused to partake in their subsequent defection to the Samnites, were besieged by the latter people; and the Roman legions were on their way to relieve and succour them, when they sustained the great disaster at the Caudine Forks. (Liv. ix. 2; Drakenborch, *ad loc.*; Aur. Vict. *de Vir. Illust.* 30.) It is clear that in consequence of that blow to the Roman power, Luceria fell into the hands of the Samnites, as we are told shortly after that the hostages given up by the Romans by the treaty at Caudium were deposited for safety in that city. (Id. ix. 12.) For this reason its recovery was a great object with the Romans; and in B. C. 320, Papirius Cursor laid siege to Luceria with a large army, and

after an obstinate resistance, made himself master of the city, which was defended by a garrison of above 7000 Samnites. (Id. ix. 12—15.) Besides recovering the hostages, he obtained an immense booty, so that Luceria was evidently at this period a flourishing city, and Diodorus (xix. 72) calls it the most important place in Apulia. A few years after (B. C. 314), the city was again betrayed into the hands of the Samnites; but was quickly recovered by the Romans, who put the greater part of the inhabitants to the sword, and sent thither a body of 2500 colonists to supply their place. (Id. ix. 26; Vell. Pat. i. 14; Diod xix. 72.) The possession of so important a stronghold in this part of the country became of material service to the Romans in the subsequent operations of the war (Diod. *l. c.*); and in B. C. 294, the Samnites having laid siege to it, the Roman consul Atilius advanced to its relief, and defeated the Samnites in a great battle. According to another account, Luceria afforded shelter to the shattered remnants of the consul's army after he had sustained a severe defeat. (Liv. x. 35, 37.)

Not less important was the part which Luceria bore in the Second Punic War. The establishment of this powerful colony in a military position of the utmost importance, was of signal advantage to the Romans during all their operations in Apulia; and it was repeatedly chosen as the place where their armies took up their winter-quarters, or their generals established their head-quarters during successive campaigns in Apulia. (Liv. xxii. 9, xxiii. 37, xxiv. 3, 14, 20; Pol. iii. 88, 100.) But though it was thus exposed to a more than ordinary share of the sufferings of the war, Luceria was nevertheless one of the eighteen Latin colonies which in B. C. 209 expressed their readiness to continue their contributions, both of men and money, and which in consequence received the thanks of the senate for their fidelity. (Liv. xxvii. 10.)

From this time we meet with no notice of Luceria till near the close of the Roman Republic; but it appears from the manner in which Cicero speaks of it (*pro Cluent.* 69) that it was in his time still one of the most considerable towns in this part of Italy; and in the Civil War between Caesar and Pompey, it is evident that much importance was attached to its possession by the latter, who for some time made it his head-quarters before he retired to Brundusium. (Caes. *B. C.* i. 24; Cic. *ad Att.* vii. 12, viii. 1; Appian, *B. C.* ii. 38.) Strabo speaks of Luceria as having fallen into decay, like Canusium and Arpi (vi. p. 284): but this can only be understood in comparison with its former presumed greatness; for it seems certain that it was still a considerable town, and one of the few in this part of Italy that retained their prosperity under the Roman Empire. Pliny terms it a Colonia, and it had therefore probably received a fresh colony under Augustus (Plin. iii. 11. s. 16; *Lib. Colon.* p. 210; Zumpt, *de Colon.* p. 349). Its colonial rank is also attested by inscriptions (Mommsen, *Inscr. R. N.* pp. 50, 51); and from the Tabula it would appear to have been in the 4th century one of the most considerable cities of Apulia (*Tab. Peut.*, where the indication of a great building with the name "Praetorium Laverianum" evidently points to the residence of some provincial magistrate). Even after the fall of the Roman Empire Luceria long retained its prosperity, and is enumerated in the 7th century by P. Diaconus among the "urbes satis opulentas" which still remained in Apulia. (P. Diac. ii. 21.) But in A.D. 663 it was taken by the emperor Constans II. from the Lombards, and utterly destroyed (Id. v. 7). Nor does it appear to have recovered this blow till it was restored by the emperor Frederic II. in 1227. The modern city of *Lucera* still retains its episcopal see and about 12,000 inhabitants. It occupies the ancient site, on a hill of considerable elevation (one of the last underfalls of the Apennines) overlooking the extensive and fertile plains of Apulia. Livy speaks of it as situated *in the plain* ("urbs sita in plano," ix. 26); but if this was the case with the Apulian city, the Roman colony must have been removed to the heights above, as existing remains leave no doubt that the ancient city occupied the same site with the modern one. The remains of buildings are not of much importance, but numerous inscriptions, fragments of sculpture, &c. have been found there. The inscriptions are collected by Mommsen (*Inscr. Regn. Neap.* pp. 50—54). The neighbourhood of Luceria was celebrated in ancient, as it still is in modern, times for the abundance and excellence of its wool (Hor. *Carm.* iii. 15. 14), an advantage which was indeed common to all the neighbouring district of Apulia. (Strab. vi. p. 284; Plin. viii. 48; K. Craven, *Southern Tour*, p. 45.)

Ptolemy writes the name Nuceria; and that this is not merely an error of the MSS. in our existing copies is shown by the circumstance that the epithet Apula is added to it (Νουκερία Ἀπουλῶν, Ptol. iii. 1. § 72), as if to distinguish it from other towns of the name. Appian also writes the name Νουκερία (*B. C.* ii. 38): and the same confusion between *Nocera* and *Lucera* occurs perpetually in the middle ages. But the correctness of the orthography of Luceria is well established by inscriptions and coins. The latter, which have the name LOVCERI in *Roman* characters, are certainly not earlier than the establishment of the Roman colony. [E. H. B.]

COIN OF LUCERIA.

LUCEIUM. [BLUCIUM.]

LUCENSES, CALLAICI. [GALLAECIA.]

LUCENTUM (Plin. iii. 3. s. 4; Lucentia, Mela, ii. 6. § 6; Λουκέντοι ἢ Λούκεντον, Ptol. ii. 6. § 14: *Alicante*), a city on the sea-coast of the Contestani, in Hispania Tarraconensis, with the Latin franchise. (Marca, *Hisp.* ii. 6; Ukert, ii. 1. p. 403.) [P. S.]

LUCI'NAE OPPIDUM. [ILITHYIA.]

LUCOPIBIA (Λουκοπιβία), in North Britain, mentioned by Ptolemy (ii. 3) as one of the towns of the Novantae (*Galloway*), Rhetigonium being the other. Probably, this lay on *Luce Bay*, in *Wigtonshire*. The *Monumenta Britannica* suggests *Broughtern*, and *Whiterne*. [R. G. L.]

LUCRE'TILIS MONS (*Monte Gennaro*), a mountain in the land of the Sabines, whose name is known to us only from the mention of it by Horace, who calls it "the pleasant Lucretilis," whose shades could allure Faunus himself from Mount Lycaeum. (Hor. *Carm.* i. 17.) It is evident from the expressions of the poet that it was in the immediate neigh-

bourhood of his Sabine farm; and this is admitted by all the old commentators, who with one accord call it "Mons in Sabinis," but without giving any further clue to its position. The identification of this must therefore depend upon that of Horace's Sabine villa; but this being clearly established near *Licenza* [DIGENTIA], we cannot refuse to recognise Lucretilis in *Monte Gennaro*, a lofty mountain mass which rises nearly due W. of *Licenza*, standing out prominently towards the plain of the *Campagna*, so that it is one of the most conspicuous of the Apennines as seen from Rome. On the side towards the plain it rises very steeply and abruptly, but on the reverse or Sabine side it has a much more gentle slope, and fully deserves Horace's epithet of "amoenus,"— being furrowed by deep valleys, the sides of which are clothed with woods, while nearer the summit are extensive pastures, much resorted to by cattle in summer. (Gell, *Top. of Rome*, pp. 270—273; Nibby, *Dintorni*, vol. ii. pp. 105—107.) The highest point is 4285 English feet above the sea. Whether the name of Mons Lucretilis was applied to the highest part of the mountain, now called *Monte Gennaro*, which is so conspicuous from Rome, or was a more local appellation for the peaks nearer the valley of the Digentia, cannot now be determined; but there is little doubt that the two names belong at least to the same mass or group of mountains. [E. H. B.]

LUCRI'NUS LACUS (ὁ Λοκρῖνος κόλπος, Strab: *Lago Lucrino*), a salt-water lake or lagoon, adjoining the gulf of Baiae on the coast of Campania. It was situated just at the bight or inmost point of the deep bay between Puteoli and Baiae, and was separated from the outer sea only by a narrow strip or bank of sand, in all probability of natural origin, but the construction of which was ascribed by a tradition or legend, frequently alluded to by the Roman poets, to Hercules, and the road along it is said to have been commonly called in consequence, the Via Herculea or Heraclea. According to Strabo it was 8 stadia in length, and wide enough to admit of a road for waggons. (Diod. iv. 22; Strab. v. p. 245; Lycophr. *Alex.* 697; Propert. iv. 18. 4; Sil. Ital. xii. 116—120.) On the other side, the Lucrine lake was separated only by a narrow space from the lake Avernus, which was, however, of a wholly different character, being a deep basin of fresh water, formed in the crater of an extinct volcano; while the Lacus Lucrinus, in common with all similar lagoons, was very shallow, and was for that reason well adapted for producing oysters and other shell-fish, for the excellence of which it was celebrated. (Hor. *Epod.* ii. 49, *Sat.* ii. 4. 32; Juven. iv. 141; Petron. *Sat.* p. 424; Martial, vi. 11. 5, xiii. 90; Varr. *ap. Non.* p. 216.) These oyster-beds were so valuable as to be farmed out at a high price, and Caesar was induced by the contractors to repair the dyke of Hercules for their protection. (Serv. *ad Georg.* ii. 161.)

The Lucrine lake is otherwise known chiefly in connection with the great works of Agrippa for the construction of the so-called JULIUS PORTUS, alluded to in two well-known passages of Virgil and Horace. (Virg. *Georg.* ii. 161—163; Hor. *Ars Poet.* 63.) It is not easy to understand exactly the nature of these works; but the object of Agrippa was obviously to obtain a perfectly secure and land-locked basin, for anchoring his fleet and for exercising his newly-raised crews and rowers. For this purpose he seems to have opened an entrance to the lake Avernus by a cut or canal from the Lucrine lake, and must, at the same time, have opened a channel from the latter into the bay, sufficiently deep for the passage of large vessels. But, together with this work, he strengthened the natural barrier of the Lucrine lake against the sea by an artificial dyke or dam, so as to prevent the waves from breaking over it as they previously did during heavy gales. (Strab. v. p. 245; Dion Cass. xlviii. 50; Suet. *Aug.* 16; Vell. Pat. ii. 79; Serv. et Philargyr. *ad Virg. l. c.*; Plin. xxxvi. 15. s. 24.) It is clear from the accounts of these works that they were perfectly successful for a time, and they appear to have excited the greatest admiration; but they were soon abandoned, probably from the natural difficulties proving insuperable; and, from the time that the station of the Roman fleet was established at Misenum, we hear no more of the Julian Port. Even in the time of Strabo it seems to have fallen into complete disuse, for he says distinctly, that the lake Avernus was deep and well adapted for a port, but *could not be used as such* on account of the Lucrine lake, which was shallow and broad, lying between it and the sea (v. p. 244). And again, a little further on (p. 245), he speaks of the latter as useless as a harbour, and accessible only to small vessels, but producing abundance of oysters. At a later period Cassiodorus (*Var.* ix. 6) describes it in a manner which implies that a communication was still open with the lake Avernus as well as with the sea. The two lakes are now separated by a considerable breadth of low sandy ground, but it is probable that this was formed in great part by the memorable volcanic eruption of 1538, when the hill now called *Monte Nuovo*, 413 feet in height and above 8000 feet in circumference, was thrown up in the course of two days, and a large part of the Lucrine lake filled up at the same time. Hence the present aspect of the lake, which is reduced to a mere marshy pool full of reeds, affords little assistance in comprehending the ancient localities. (Daubeny, *On Volcanoes*, pp. 208—210.) It is said that some portions of the piers of the port of Agrippa, as well as part of the dyke or bank ascribed to Hercules, are still visible under the level of the water. [E. H. B.]

LUCUS ANGI'TIAE (*Eth.* Lucensis: *Luco*), a place on the W. shore of the lake Fucinus, in the territory of the Marsi, originally, as its name imports, nothing more than a sanctuary of the goddess Angitia, but which seems to have gradually grown up into a town. This was sometimes called, as we learn from an inscription, ANGITIA; but the name of Lucus or Lucus Angitiae must have been the more prevalent, as we find the inhabitants styled by Pliny simply Lucenses, and the modern name of *Luco* or *Lugo* points to the same conclusion. It is evident, both from Pliny and from the inscription referred to, that it was a municipal town, having its own local magistrates. (Plin. iii. 12. s. 17; Orell. *Inscr.* 115.) About half a mile N. of the modern village of *Luco*, and close to the shores of the lake, are the remains of ancient walls constructed in the polygonal style, but which, from their position, could never have been designed as fortifications; and these probably formed part of the sacred enclosure or Peribolus of the grove and temple. The site is now marked, as is so often the case in Italy, by an ancient church. (Nibby, *Viaggio Antiq.* vol. i. p. 210; *Class. Mus.* vol. ii. p. 175, note.) Virgil alludes in a well-known passage to the "nemus Angitiae" (*Aen.* vii. 759), where the name of the

goddess is written in some MSS. "Angitia," in others "Anguitia;" but the authority of numerous inscriptions is decisive in favour of the first form. (Orell. *Inscr.* 115, 116, 1845.) [E. H. B.]

LUCUS A'STURUM. [ASTURES.]

LUCUS AUGUSTI, a town in Gallia Narbonensis, and east of the Rhone, which Tacitus (*Hist.* i. 66) calls "municipium Vocontiorum;" and Pliny (iii. 4) names Vasio (*Vaison*) and Lucus Augusti the two chief towns of the Vocontii. Lucus is placed in the Itins. on a road from Vapincum (*Gap*) to Lugdunum (*Lyon*): it is the first stage after Mons Seleucus, and lies between Mons Seleucus and Dea Vocontiorum (*Die*). The name is preserved in *Luc.* "This town has been destroyed by the fall of a rock, which, having stopped the course of the Drôme, has caused the river to spread out and form lakes which have covered part of its territory: there remains, however, in the neighbourhood and at the outlet of these lakes a place which preserves the name of Luc." (D'Anville, *Notice, &c.*) It is stated in the *Guide du Voyageur* (Richard et Hocquart), that "on the mountain called the *Pied de Luc*, in the commune of Luc-en-Diois, there are considerable remains of old buildings. The column of the public fountain of this little place is a fragment of an old capital, and the basin is a sarcophagus of a single stone." There is an inscription on it in Roman characters. [G. L.]

LUCUS AUGUSTI (Λοῦκος Αὐγούστου, Ptol. ii. 6. § 24: *Lugo*), a city in the centre of Gallaecia, in Hispania Tarraconensis, was originally the chief town of the insignificant tribe of the CAPORI, but under the Romans it was made the seat of a *conventus juridicus*, and became one of the two capitals of Gallaecia, and gave its name to the Callaïci Lucenses. [GALLAECIA.] The Conventus Lucensis, according to Pliny, began at the river Navilubio, and contained 16 peoples, besides the Celtici and Lebuni; and though these tribes were insignificant, and their names barbarous, there were among them 166,000 freemen (Plin. iii. 3. s. 4, iv. 20. s. 34). The city stood on one of the upper branches of the Minius (*Miño*), on the road from BRACARA to ASTURICA (*Itin. Ant.* pp. 424, 430), and had some famous baths, of which there are now no remains. (Florez, *Esp. S.* vol. xl., xli.; Ukert, vol. ii. pt. 1, p. 437). [P. S]

LUCUS FERO'NIAE. [FERONIA.]

LUCUS HE'CATES (ἄλσος Ἑκάτης ἄκρον (Ptol. iii. 5. § 7), the westernmost point of the peninsula of Hylaea, now the alluvial tongue of land *Kinburn*. [E. B. J.]

LUCUS MARI'CAE. [LIRIS.]

LU'DIAS, LY'DIAS (Λυδίης, Herod. vii. 127; Λυδίας, Eur. *Bacch.* 565; Scyl. p. 26; Ptol. iii. 13. § 15; Λουδίας, Strab. vii. p. 330), a river of Bottiaeis in Macedonia, or discharge of the marshes of Pella. In the time of Herodotus (*l. c.*) it joined the Haliacmon, but a change has taken place in its course, as it is now an affluent of the Axius (*Vardhári*). The river which now emerges from the lower end of the lake of Pella is called *Karasmák* or *Mavronéri*. The river of *Moglená*, now called *Karadjá*, by the Turks, *Meglesnitj*, by the Bulgarians, and by the Greeks *Moglenitiko*, which falls into the lake of Pella, and which in its course before entering the lake follows the same direction as the *Mavronéri*, was probably called by the ancients the Lydias. (Leake, *Northern Greece*, vol. iii. pp. 270, 437.) [E. B. J.]

LUENTI'NUM (Λουέντινον), in Britain, mentioned by Ptolemy (ii. 3) as a town of the Dimetae, Maridunum (*Caer-marthen*) being the other. The *Monumenta Britannica* suggests *Llan-dewy-brevy*. [R. G. L.]

LUGDU'NUM (Λούγδουνον: *Eth.* Λουγδουνήσιος, Lugdunensis: *Lyon*), a Roman settlement in Gallia, at the junction of the Arar (*Saône*) and Rhodanus. It was in the territory of the Segusiani, who were the neighbours of the Aedui (Caes. *B. G.* i. 10, vii. 64): in Pliny's time the Segusiani had the title of Liberi. (Plin. *H. N.* iv. 18.) Ptolemy incorrectly places Lugdunum among the cities of the Aedui; he calls it Lugdunum Metropolis.

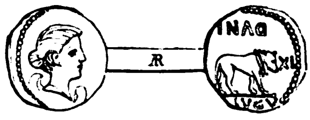
The writing of the name does not seem to have been quite fixed. Dion Cassius (xlvi. 50, ed. Reim.) observes that the place was originally named Lugudunum (Λουγούδουνον), and then Lugdunum. In Stephanus (*s. v.*) the name is Lugdunus, and he refers to Ptolemy; but in Ptolemy (ii. 8. § 17) it is Lugdunum. It is also written "Lugdunus" in Ammianus Marcellinus. In the Treatise on Rivers printed among Plutarch's works (Ἄραρ, c. 4), the hill of *Lyon* is named Lugdunus; and it is added, on the authority of Clitophon, that *Lugus* means "a crow" and *dunum* "an eminence." Though the explanation of *dun* is right, we cannot accept the explanation of the other part of the word.

The colonia of Lugdunum is said to have been settled B. C. 43, by L. Munatius Plancus, and the settlers were the people of Vienna (*Vienne*) who were driven from their homes by the Allobroges. (Dion Cass. xlvi. 50; Strab. pp. 192, 193.) The position, according to Dion, was the place between the *Saône* and the *Rhone*. Strabo says that it was "under" a hill, the position of which he determines by referring it to the junction of the two rivers; but this does not show exactly where the town was, and probably Strabo did not know. In the passage in Strabo, the word "under" (ὑπό) has been corrected to "upon" (ἐπί), which may be a true correction. The old town of Lugdunum was on the right side of the Rhone, on the slope of a hill named *Fourvière*, which is supposed to be a corruption of Forum Vetus. The largest part of modern *Lyon* is between the *Saône* and the *Rhone*, but this is a modern addition, not earlier than the time of Louis XII. and Francis I.

In Strabo's time Lugdunum was the most populous of the Gallic towns after *Narbonne*: it was a place of trade, and the Roman governors had a mint there for coining gold and silver. Its great commercial prosperity was due to its excellent position, and to the roads which the Romans constructed in several directions from Lugdunum as a centre. [GALLIA TRANSALPINA, Vol. I. p. 966.] In the time of the younger Pliny there were booksellers at Lugdunum, and Pliny's works might be got there (Plin. *Ep.* ix. 11). The city was destroyed by fire in Seneca's time (*Ep.* 91), but shortly after it was restored through the liberality of the emperor Nero, to whom the inhabitants of Lugdunum continued faithful when Galba revolted (Tacit. *Ann.* xvi. 13, *Hist.* i. 51). Lugdunum was plundered and again burnt by the soldiers of Septimius Severus (A. D. 197), after the defeat of Albinus near the city (Herodian, iii. 23). It was an important position under the later Empire, but the name only occurs occasionally in the scanty historical notices of that time. When Julian was governor of Gallia, Lugdunum was near being surprised by a

body of Alamanni (Ammian. Marcell. xvi. 11). The place is entitled Copia Claudia Augusta on some inscriptions, a name probably given to it in the time of the emperor Claudius.

In the angle between the Arar and the Rhodanus was the Ara Augusti, dedicated to Augustus by all the Gallic states. On this large altar there was an inscription which contained the names of the sixty states; and there were as many figures, intended to represent each state. If the figures were not reliefs on the altar, they may have been statues placed round the altar, or near it. The passage of Strabo (p. 192) appears to be corrupt; but, as it is explained by Groskurd (*Transl.* vol. i. p. 331), there was also a large statue of Augustus, which may have been in the middle of the sixty. There was an annual solemn celebration at this altar, which was observed even when Dion Cassius was writing. (Dion, liv. 32.) The time when this altar was built is fixed by the Epitome of Livy (*Ep.* 137) in the year in which there was a disturbance in Gallia on account of the census. This year was B. C. 12. Suetonius (*Claud.* 2) fixes the dedication of the Altar of Augustus in the consulship of Julius Antonius and Fabius Africanus (B. C. 10), on the first of August, which was the birthday of the emperor Claudius, who was a native of Lugdunum. The first priest of the altar was C. Julius Vercundaridubius, an Aeduan. The celebration at the altar of Lugdunum is alluded to by Juvenal in the line (i. 44, and Heinrich's note), —



"Aut Lugdunensem rhetor dicturus ad aram."

Lugdunum was the seat of a Christian church at an early period. In the time of Marcus Aurelius (about A. D. 172, or perhaps A. D. 177, according to some computations) there was a furious persecution of the Christians at Lugdunum. The sufferings of the martyrs are told by Eusebius with some manifest absurdities and exaggerations; but, the fact of a cruel persecution cannot be disputed. The letter of the churches of Lugdunum and Vienna to the churches of Asia and Phrygia is preserved by Eusebius (*Hist. Eccles.* v. 1); and it states that Aurelius, who was then at Rome, was consulted by the Gallic governor about the treatment of the Christians. The answer was that those who confessed to being Christians should be put to death, and that those who denied it should be set free. We have however only one version of the story, though no excuse can be made for the Roman philosophical emperor, if men were put to death only because they were Christians. Irenaeus, one of the Christian fathers, was bishop of Lugdunum. He is said to have succeeded Pothinus, who perished A. D. 177, in the religious persecutions at Lugdunum.

The part of Gallia which Caesar called Celtica became under Augustus Gallia Lugdunensis, of which Lugdunum was the capital; but Lugdunensis was contracted within narrower limits than Celtica by the extension of the province of Aquitania [AQUITANIA; GALLIA TRANS. Vol. I. p. 966].

The Romans covered the soil of *Lyon* with houses, temples, theatres, palaces and aqueducts. Nature made it to be the site of a large city. There are few remains of Roman Lugdunum. Time, the invasion of the barbarian, and the employment of old materials for other purposes, have left only scanty fragments of the works of the most magnificent of all city-builders. There are some remains on the *Place des Minimes* which are supposed to have been a theatre. On the west side of the *Saône* there are traces of a camp capable of holding several legions. It was bounded and defended on the west by the hills of the *Forez*, and on the north by the heights of *Saint-Didier* and of the *Mont d'Or*. The *Saône* defended it on the east side. The camp had no water, but the Romans found a supply in the chain of mountains which bounds it on the west. Water was brought along the valleys and the sides of the hills in a regular slope all the way, and under ground through a distance measured along its line of more than 24 miles. In its course the aqueduct collected water from seventeen streams or large sources. The height of the channel or passage for the water, measured inside, was near five feet; the vault or roof was semicircular. There were openings at intervals by which workmen could go in to clean and repair the channel. It was constructed with great care, and the two sides were covered with a double layer of cement. All this construction was buried in a cutting six feet and a half wide and near ten feet deep; and a great part of this cutting was made in the solid rock. Another aqueduct was constructed from *Mont Pilat* to the site of the hill of *Fourvières*, a distance of more than 50 miles along the course of the aqueduct. There were in all fourteen aqueduct bridges along this line: one of them at the village of *Champonost* still has ninety arches well preserved. There was a third aqueduct from *Mont d'Or*.

Two bronze tablets were dug up at *Lyon* in 1529, on which is inscribed the Oratio of the emperor Claudius on the subject of giving the Roman civitas to the Galli. (Tacit. *Ann.* xi. 24; and Oberlin's edition of Tacitus, vol. ii. p. 306: GALLIA TRANS. Vol. I. p. 968.) There are many modern works on Lyon and its antiquities. The principal are mentioned by Forbiger (*Handbuch, &c.* vol. iii. p. 210.) [G. L.]

COIN OF LUGDUNUM.

LUGDU'NUM or CO'NVENAE. [CONVENAE.]

LUGDUNUM BATAVO'RUM (Λουγόδεινον, Ptol. ii. 9. § 4: *Leiden*). The two elements *Lug* and *dun* appear in the name of this remote city and in two other Gallic names, which is one evidence of the Celtic race having once occupied the flat country about the outlets of the Rhine. The Roman Itins. have marked a road running from *Leiden* through *Cologne* to Vemania (*Immenstadt*) on the Upper Danube Circle of Bavaria. The routes are not the same all through, but the commencement of the road and the termination are the same. This route in fact followed the basin of the Rhine from the *Lake of Constanz* to the low and sandy shores of the *North Sea*.

The words "Caput Germaniarum" placed before the name Lugdunum in the Antonine Itin. probably do not mean that it was the capital of the Germaniae, for this was certainly not so, but that it was the point where the two provinces called Germaniae commenced on this northern limit. It has been supposed that *Leiden* in the province of Holland is not the Roman Lugdunum, because no Roman remains have been found there, though the absence of

hem would certainly not be conclusive against *Leiden*. But remains have been dug up in the neighbourhood of *Leiden*, and an inscription of the time of Septimius Severus. (Ukert, *Gallien*, p. 534.) [G. L.]

LU'GEUS LACUS (Λούγεον ἕλος), a lake in the land of the Iapodes in Illyricum, now *Lake Zirknitz*. (Strab. vii. p. 314.)

LUGIDU'NUM (Λουγίδουνον), a town in the east of Germany, the site of which must be looked for in Silesia, either at *Breslau* or *Liegnitz*. (Ptol. ii. 11. § 28.) [L. S.]

LU'GII. [LYGII.]

LUGIO'NUM (Λουγίωνον), a town in the south of Pannonia Inferior, was the capital of a district. (Ptol. ii. 16. § 5.) In the Peuting. Table it is called Lugio, and it is, perhaps, to be looked for on the site of the modern *Batta*, at the entrance of the Sarviz into the Danube. [L. S.]

LUGUVALLUM, or LUGUVALLIUM (*Anton. Itin.*), LUGUBALUM (Ravennas), now *Carlisle*. This town is not mentioned by Ptolemy; neither does it occur in the Notitia. The reason of its omission in the latter work may be, that, although it stands on the line of the Wall, the proximity of the great castra, as well as its own strength and population, rendered a fixed garrison unnecessary. Beda (*in Vita S. Cuthberti*, c. 8) describes Saint Cuthbert on his visit to Lugubalia, as being shown the walls and fountain built by the Romans: "venit ad Lugubaliam civitatem, quae a populis Anglorum corrupto uel vocatur, ut alloqueretur reginam. Postera autem die deducentibus eum civibus ut videret moenia civitatis, fontemque in ea miro quondam Romanorum opere exstructum." Leland (*Itin.* vol. vii. p. 54), after speaking of the Roman architectural and other remains often brought to light in Carlisle, adds, "the hole site of the towne is sore changid. For wher as the stretes were and great edifices now be vacant and garden plottes." But few remains, if any, of the Roman town are, at the present day, to be noticed; but whenever excavations are made to any considerable depth, the foundations of the buildings of Luguvallum are almost always met with. Very recently a deep drain having been sunk on the north side of the castle, the course of the Great Wall has been ascertained; previously, the direction it took from *Stanwix*, where there was a fortified camp, was uncertain, as above ground in the immediate vicinity of *Carlisle*, it has been entirely pulled down. [C.R.S.]

LUMBERITA'NI. [VASCONES.]

LUNA (Λοῦνα, Strab. Λοῦνα, Ptol.: Σελήνης λιμήν, Steph. B.: *Eth.* Lunensis: *Luni*), a city of Etruria, situated on the left bank of the Macra, a short distance from its mouth, and consequently on the very borders of Liguria. There is indeed considerable discrepancy among ancient authors as to whether it was an Etruscan or a Ligurian city; and it is probable that this arose not only from the circumstance of its position on the immediate frontier of the two countries, but from its having been successively occupied and held by both nations. Pliny calls it "the first city of Etruria;" and Strabo begins to reckon the Etrurian coast from thence: Ptolemy also mentions it first in order among the cities of Etruria; while Mela, on the contrary, assigns it to the Ligurians. ("Luna Ligurum," Mel. ii. 4. § 9; Strab. v. p. 222; Plin. iii. 5. s. 8; Ptol. iii. 1. § 4.) From the time indeed when the Macra became the established limit between Liguria and Etruria, there could be no doubt as to Luna being geographically included within the latter country; but it is certain that when the Romans first came into collision with the Ligurians, that people was in possession of Luna and the surrounding territory, and indeed held the whole country from the Macra to the mouth of the Arnus. (Pol. ii. 16; Liv. xxxiv. 56; xxxix. 32, &c.) Livy, however, tells us that the territory of Luna, in which the Roman colony was founded, and which had been taken by them from the Ligurians, had previously belonged to the Etruscans (Liv. xli. 13), and this seems to be the true explanation of the case. Both Luna and Luca, with the whole of the fertile and level country adjoining them at the foot of the Apennines, seem to have really belonged to the Etruscans during the height of their power, but had fallen into the hands of the Ligurians, before that people came into contact with Rome. We have, however, scarcely any account of Luna as an Etruscan city, no Etruscan remains have been found there, and there is certainly no foundation for the views of some modern writers who have supposed it to be one of the chief cities of Etruria, and one of the twelve that composed the League. (Dennis's *Etruria*, vol. ii. p. 79.)

The first historical mention of Luna itself (as distinguished from its more celebrated port) is that of its capture by the Romans under Domitius Calvinus (Frontin. *Strat.* iii. 2. § 1); but the date of this event, which is not noticed by Livy, cannot be fixed with any approach to certainty. Hence, the first fact in its history of which we have any positive information, is the establishment there of a Roman colony in B. C. 177 (Liv. xli. 13), if at least we are to adopt in that passage the reading of "Lunam" for "Lucam," which has been received by the latest editors of Livy. (Madvig, *de Colon.* p. 287.) Its territory is mentioned repeatedly in conjunction with that of Pisae, as having been laid waste by the neighbouring Ligurians. (Liv. xxxiv. 56, xli. 19, xliii. 9.) It appears that the two districts adjoined one another, so that the Pisans, in B. C. 169, complained of the encroachments of the Roman colonists on their territory. (*Id.* xlv. 13.) But, notwithstanding this colony, Luna seems not to have risen into any importance: Lucan indeed represents it as in a state of complete decay at the period of the Civil War (*desertae moenia Lunae*, Lucan, i. 586); and though it received a fresh colony under the Second Triumvirate, it was still in Strabo's time but a small and inconsiderable city. (*Lib. Colon.* p. 223; Strab. v. p. 222.) No historical notice of it is found under the Roman Empire, but its continued existence down to the fifth century is attested by Pliny, Ptolemy, the Itineraries, and Rutilius, as well as by inscriptions found on the spot. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 4; *Itin. Ant.* p. 293; *Itin. Marit.* p. 501; Rutil. *Itin.* ii. 63—68.) We learn also that it was celebrated for its wine, which was reckoned the best in Etruria (Plin. xiv. s. 8. § 67), as well as for its cheeses, which were of vast size, some of them weighing as much as a thousand pounds. (Plin. xi. 42. s. 97; Martial. xiii. 30.) But the chief celebrity of Luna in imperial times was derived from its quarries of white marble, the same now known as *Carrara* marble, and which was considered equal, if not superior in quality, to the finest Greek marbles. It is first mentioned as employed at Rome for building purposes in the time of Caesar, and from the age of Augustus onwards was very extensively employed, as may still be seen in the Pantheon, the Pyramid of Caius Cestius

&c. But it was speedily adopted for statuary purposes also, for which it was esteemed a finer material even than the Parian. (Plin. xxxvi. 5. s. 4, 6. s. 7; Strab. v. p. 222; Sil. Ital. viii. 480; Rutil. *l. c.*; Stat. *Silv.* iv. 2. 29, 4. 23.) The buildings of Luna itself, and even its walls, are said to have been constructed wholly of it, whence Rutilius calls them "candentia moenia:" and Cyriacus, an antiquarian of the 15th century, who visited the ruins of Luna, attests the same fact.

The period of the final decay of Luna is uncertain. It was taken and plundered by the Normans in 857, but was probably not destroyed; and Dante, writing after 1300, speaks of *Luni* as a city that had sunk gradually into complete decay (*Par.* xvi. 73); which was doubtless accelerated by the malaria, from which the neighbourhood now suffers severely. When it was visited by Cyriacus of Ancona, the ruins were still extensive and in good preservation; but little now remains. Vestiges of an amphitheatre, of a semi-circular building which may have been a theatre, of a circus, and *piscina*, as well as fragments of columns, pedestals, &c., are still however visible. All these remains are certainly of Roman date, and no vestiges of Etruscan antiquity have been found on the spot. The ruins, which are obviously those of a small town, as it is called by Strabo, are situated about 4 m. S. of *Sarzana*, and little more than a mile from the sea. (Dennis's *Etruria*, vol. ii. pp. 78—84; Targioni-Tozzetti, *Viaggia in Toscana*, vol. x. pp. 403—466; Promis, *Memorie della Città di Luna*, 4to. Turin, 1838.)

Far more celebrated in ancient times than Luna itself was its port, or rather the magnificent gulf that was known by that name (Portus Lunae, Liv., Plin., &c.; Σελήνης λιμήν, Strab.), now called the *Gulf of Spezia*. This is well described by Strabo as one of the largest and finest harbours in the world, containing within itself many minor ports, and surrounded by high mountains, with deep water close in to shore. (Strab. v. p. 222; Sil. Ital. viii. 482.) He adds, that it was well adapted for a people that had so long possessed the dominion of the sea,—a remark that must refer to the Etruscans or Tyrrhenians in general, as we have no allusion to any naval supremacy of Luna in particular. The great advantages of this port, which is so spacious as to be capable of containing all the navies of Europe, seem to have early attracted the attention of the Romans; and long before the subjection of the mountain tribes of Liguria was completed, they were accustomed to make the Lunae Portus the station or *rendezvous* of their fleets which were destined either for Spain or Sardinia. (Liv. xxxiv. 8, xxxix. 21, 32.) It must have been on one of these occasions (probably in company with M. Cato) that it was visited by Ennius, who was much struck with it, and celebrated it in the opening of his Annals (Ennius, *ap. Pers. Sat.* vi. 9.) At a later period it seems to have been resorted to also for its mild and delightful climate. (Pers. *l. c.*) No doubt can exist that the port of Luna is identical with the modern *Gulf of Spezia*; but it is certainly curious that it should have derived that name from the town or city of Luna, which was situated on the left bank of the *Magra*, at least five miles from the gulf, and separated from it, not only by the river *Magra*, but by a considerable range of rocky hills, which divide the *Gulf of Spezia* from the valley of the *Magra*, so that the gulf is not even within sight of Luna itself. It is this range of hills which at their extremity form a promontory, called by Ptolemy, Lunae Promontorium (Σελήνη, ἄκρον, Ptol. iii. 1. § 4.), now the *Punta Bianca*. It is true that Strabo places Luna on the *right* bank of the Macra; but this is a mere mistake, as he is certainly speaking of the Roman town of Luna: it is possible that the Etruscan city of that name may not have occupied the same site with the Roman colony, but may have been situated on the right bank of the Macra, but even then it would have been at some distance from the port. Holstenius and some other writers have endeavoured to prove that the port of Luna was situated at the mouth of the Macra; and it is probable that the town may have had a small port or landing-place at that point; but the celebrated Port of Luna, described by Strabo and extolled by Ennius, can certainly be no other than the *Gulf of Spezia*.

The *Gulf of Spezia* is about 7 miles in depth by 3 in breadth: it contains within itself (as justly observed by Strabo) several minor ports, two of which are noticed by Ptolemy under the names of Portus Veneris (Ἀφροδίτης λιμήν), still called *Porto Venere*, and situated near the western extremity of the gulf; and Portus Ericis (Ἐρίκης κόλπος), now *Lerici*, on the E. shore of the gulf. The former name is found also in the Maritime Itinerary. (Ptol. iii. 1. § 3; *Itin. Marit.* p. 502.) [E. H. B.]

LUNAE MONTES (Σελήνης ὄρος Αἰθιοπίας, Ptol. iv. 8. §§ 3, 6), from which mountains, and from the lakes formed by their melting snows, Ptolemy derives the sources of the Nile. Their position is unknown, and if they have any real existence, they must be placed S. of the Equator. [W. B. D.]

LUNAE PORTUS. [Luna.]

LUNAE PROMONTO'RIUM (Σελήνης ὄρος ἄκρον, Ptol. ii. 5. § 4), a headland on the W. coast of Lusitania, placed by Ptolemy 10 minutes N. of the mouth of the Tagus, and therefore corresponds to the *C. da Roca*, near *Cintra*, where Resendius found ruins of what he took for a temple of the Sun and Moon, with inscriptions (*Antiq. Lusit.* p. 52). Others, however, identify it with the more northern *C. Carvoeiro*; and, in fact, the accounts of the headlands on this coast are given in a confused manner by the ancient writers. [P. S.]

LUNA'RIUM PROMONTO'RIUM (Λουνάριον ἄκρον, Ptol. ii. 6. § 19: *C. Tordera*, NE. of *Barcelona*), a headland on the coast of the Baetuli, in Hispania Tarraconensis, formed by one of the SE. spurs of the Pyrenees. [P. S.]

LU'NGONES. [Astures.]

LUNNA, in Gallia, was on a road from Lugdunum (*Lyon*) to Augustodunum (*Autun*). The first station after Lugdunum is Asa Paulini, 15 M. P. from Lugdunum, and then Lunna 15 M. P. from Asa Paulini, according to the Antonine Itin. [Asa Paulini.] In the Table it is 24 M. P. from Lugdunum to Ludnam, as the name is written in the Table, and Asa Paulini is omitted. Lunna and Ludnam are probably the same place; and the site is uncertain. [G. L.]

LU'PIA. [Luppia.]

LU'PIAE (Λουπίαι, Strab.; Λουπία, Paus.; Λουπίαι, Ptol.: *Eth.* Lupiensis: *Lecce*), an ancient city of the Salentines, in the Roman province of Calabria, situated on the high road from Brundusium to Hydruntum, and just about 25 M.P. distant from each of these cities (*Itin. Ant.* p. 118). It was about 8 miles from the sea, whence Strabo correctly describes it as situated, together with Rhudiae, in the interior of Calabria (Strab. v. p. 282), though both Pliny and

Ptolemy would lead us to suppose that it was a maritime town. (Plin. iii. 11. s. 16; Ptol. iii. 1. § 14.) Appian also speaks of Octavian as *landing* there on his return to Italy, immediately after Caesar's death, when he halted some days at Lupiae without venturing to advance to Brundusium, until he received fresh information from Rome. (Appian, *B. C.* iii. 10.) There seems, however, no doubt that the ancient Lupiae occupied the same site as the modern *Lecce*, though it may have had a port or landing-place of its own. The above passage of Appian is the only mention of it that occurs in history: but a tradition preserved to us by Julius Capitolinus (*M. Ant.* 1.) ascribed its foundation to a king of the Salentines, named Malennius, the son of Dasumus. There is little doubt that it was really a native Salentine city; nor is there any foundation for supposing it to have received a Greek colony. Pausanias, in a passage which has given rise to much confusion, in treating of the treasury of the Sybarites at Olympia, tells us that Sybaris was the same city which was called in his time Lupia, and was situated between Brundusium and Hydruntum. (Paus. vi. 19. § 9.) The only reasonable explanation of this strange mistake is, that he confounded Lupia in Calabria (the name of which was sometimes written Lopia) with the Roman colony of Copia in Lucania, which had in fact arisen on the site of Thurii, and, therefore, in a manner succeeded to Sybaris. But several modern writers (Romanelli, Cramer, &c.) have adopted the mistake of Pausanias, and affirmed that Lupiae was previously called Sybaris, though it is evidently of the well-known city of Sybaris that that author is speaking. We hear but little of Lupiae as a Roman town, though it appears to have been a municipal town of some importance, and is mentioned by all the geographers. The "ager Lyppiensis" (sic) is also noticed in the Liber Coloniarum; but it does not appear that it received a colony, and the inscriptions in which it bears the title of one are, in all probability, spurious. Nor is there any ancient authority for the name of Lycium or Lycia, which is assigned to the city by several local writers: this form, of which the modern name of *Lecce* is obviously a corruption, being first found in documents of the middle ages. (*Lib. Colon.* p. 262; Mel. ii. 4. § 7; *Itin. Ant.* p. 118.)

The modern city of *Lecce* is a large and populous place, and the chief town of the province called the *Terra di Otranto*. No ancient remains are now visible; but Galateo, writing in the 15th century, tells us that there were then extensive subterranean remains of the ancient city — vast arches, covered galleries and foundations of ancient buildings — upon which the modern city was in great measure built. Numerous vases and other relics of antiquity have also been brought to light by excavations, and an inscription in the Messapian dialect. (Galateo, *de Sit. Iapyg.* pp. 81—86; Romanelli, vol. ii. pp. 83—93; Mommsen, *Unter Ital. Dialecte*, p. 59.) [E. H. B.]

LUPODU'NUM, a place on the river Nicer (*Neckar*) in Southern Germany. (Auson. *Mosel.* 423; Symmachus, p. 16, ed. Niebuhr.) It is probably the same place as the modern *Ladenburg* on the *Neckar*, though some identify it with the fort which the emperor Valentinian built on the banks of the *Neckar*. (Amm. Marc. xxviii. 2.) [L. S.]

LUPPHURDUM (Λούπφουρδον), a town in the north of Germany. (Ptol. ii. 11. § 28.) Its site is generally identified with *Wittenberg* or *Meissen*; but it seems more probable that it was situated near *Leipzig*, on the river Luppa, from which it may have derived its name. [L. S.]

LU'PPIA or LU'PIA (ὁ Λουπίας: *Lippe*), a navigable river in the north-west of Germany, which was well known to the Romans, from its sources to the point where it empties itself into the Rhine. Its sources are in the interior of Germany, not far from those of the Amisia. (*Ems.*) (Vell. Pat. ii. 105; Tac. *Ann.* i. 60, ii. 7, *Hist.* v. 22; Pomp. Mela, iii. 3. § 3; Strab. vii. p. 291; Dion Cass. liv. 33.) Strabo (*l. c.*) had a very incorrect notion of the course of the Lupia, for he describes it as flowing through the country of the Bructeri Minores, and as discharging its waters, like the Amasia, into the ocean: he, moreover, places it about 600 stadia from the Rhine. Tacitus (*Ann.* ii. 7) mentions a Roman fort built on its banks. [L. S.]

LU'PPIA (Λουππία), a place of considerable importance in the north of Germany, between the rivers Albis and Visurgis, above Mons Melibocus. (Ptol. ii. 11. § 28, viii. 6. § 3.) It is generally identified with the modern town of *Lupta.* [L. S.]

LUSI (Λουσοί, Paus., Steph. B. *s. v.*; Λοῦσοι, Λουσσοί, τὰ Λοῦσσα, Schol. *ad Callim. Dian.* 235; comp. Meineke, *ad Steph. B. s. v.*: *Eth.* Λούσιος, Λουσεύς, Λουσιάτης, Steph. B.; Λουσιεύς, Xen. *Anab.* iv. 2. § 21), a town in the north of Arcadia, originally independent of, but afterwards subject to, Cleitor. [CLEITOR.] Lusi was situated in the upper valley of the Aroanius, and probably on the site of *Sudhená*, which stands in the NE. corner of the valley at the foot of Mt. *Khelmós* (the ancient Aroanian mountains), and on the road from *Tripolitzá* to *Kalávryta*. The upper valley of the Aroanius, now called the plain of *Sudhená*, consists of two plains, of which the more easterly is the one through which the Aroanius flows, the waters of which force their way through a gorge in the mountains into the plain of Cleitor, now *Kátzana*, to the south. The more westerly plain of *Sudhená* is entirely shut in by a range of hills; and the waters of three streams which flow into this plain are carried off by a katavóthra, after forming an inundation, apparently the Lacus Clitorius mentioned by Pliny (xxxi. 2. s. 13). The air is damp and cold; and in this locality the best hemlock was grown (Theophr. ix. 15. § 8).

Lusi was still independent in the 58th Olympiad; since one of its citizens is recorded to have gained the victory in the 11th Pythiad. (Paus. viii. 18. § 8.) Its territory was ravaged by the Aetolians in the Social War (Polyb. iv. 18); but in the time of Pausanias there were no longer even any ruins of the town. (Paus. *l. c.*) Its name, however, was preserved in consequence of its temple of Artemis Lusia or Hemerasia (the "Soother"). The goddess was so called, because it was here that the daughters of Proetus were purified from their madness. They had concealed themselves in a large cavern, from which they were taken by Melampus, who cured them by sacred expiations. Thereupon their father Proetus founded this temple of Artemis Hemerasia, which was regarded with great reverence throughout the whole Peloponnesus as an inviolable asylum. It was plundered by the Aetolians in the Social War. It was situated near Lusi, at the distance of 40 stadia from Cynaetha. (Paus.; Polyb. *ll. cc.*; Callim. *Dian.* 233.) The interior of the temple, with the purification of the daughters of Proetus, is re-

presented on an ancient vase. (Millinger, *Peintures de Vases*, pl. 52; Müller, *Denkmäler der alt. Kunst*, t. 11.) The ruins, which Dodwell discovered above Lusi towards the end of the plain, and on the road to Cynaetha, are probably those of the temple of Artemis Leake discovered some ancient foundations at the middle fountain of the three in the more westerly of the two plains of *Sudhenά*, which he supposes to be the remains of the temple. One of the officers of the French Commission observed a large cave on the western side of the Aroanian mountains, in which the inhabitants of *Sudhenά* were accustomed to take refuge during war, and which is probably the one intended in the legend of the daughters of Proetus. (Dodwell, *Classical Tour*, vol. ii. p. 447; Leake, *Morea*, vol. ii. p. 109, vol. iii. pp. 168, 181; Boblaye, *Récherches, &c.* p. 155; Curtius, *Peloponnesos*, vol. i. p. 375, seq.)

LUSITA'NIA (ἡ Λυσιτανία, ἡ Λυσιτανική, Strab.; Λουσιτανία, Diod. Sic., Ptol., Steph. B.: *Eth.* Λυσιτανοί, Lusitani), originally denoted the country of the Lusitani, but is commonly used in a wider sense, as the name of one of the three provinces, into which Hispania was divided by Augustus. (HISPANIA, p. 1081, Nos. 3, 4).

1. *Extent and Boundaries.*— Like the modern *Portugal*, it lay on the W. side of the peninsula, extending from its SW. point (SACRUM PR., *C. S. Vincent*), eastwards to the mouth of the ANAS (*Guadiana*), and northwards along the W. coast; but here, as well as in the interior, the boundaries of the two countries were very different; Lusitania occupying only two-thirds of the W. coast, and Portugal more than three-fourths. The former had its N. boundary at the DURIUS (*Douro*), the latter at the MINIUS (*Miño*); and the Portuguese province, called *Entre Douro e Minho*, as lying between these rivers, as well as that of *Traz os Montes* E. of it, were anciently the part of GALLAECIA which belonged to the Callaïci Bracarii. But on the E. side, inland, Lusitania had a much wider extent than Portugal. Both rest on the same base, as their S. side, namely the coast between C. S. Vincent and the mouth of the Guadiana, and at first the boundary runs N. nearly along the same line, namely the course of the Guadiana, the slight difference being in favour of Portugal, which has a slip on the E. side of the river. But, from a point on the river, a little below *Badajoz*, and a little above its intersection with the Meridian of 7° W. long., the boundaries diverge; that of Portugal taking a general direction N. with a slight bearing to the E., till it strikes the *Douro* at its great bend from SW. to NW. (where the *Agueda* joins it), and running up the river to its great bend in the opposite direction, below the *Esla*; while that of Lusitania continued up the Anas eastward, towards the middle of the Peninsula, to a point considerably above METELLINUM (but not very certainly defined), whence it followed a N. direction to the Durius, which it met at a point below the river Pistoraca (also not very well defined). Thus, Lusitania contained, on this side, the N. part of Spanish *Estremadura*, and the S. part of *Leon*; and the part of the province thus lying E. of Modern Portugal, corresponds very nearly to the territory of the VETTONES. These are the boundaries of the Roman province, as constituted under Augustus; but there are considerable variations in the extent assigned to the country by various writers, especially according as the word is used, in the wider sense, for the province, or in the narrower meaning, for the country of the Lusitani. In this first and narrowest sense, it included only the district between the Tagus and the Durius, from the Atlantic on the W., to about the present frontier of Portugal on the E. Next, the supposed or actual connection of these people with their Northern neighbours, the Callaïci, Artabri, and Astures, led to their being, at least in part, included under the same name, and accordingly Strabo defines Lusitania as the country N. of the Tagus, bounded on the W. & N. by the Ocean. (Strab. iii. p. 153.) But just above he says, that the greater part of the Lusitani, meaning those N. of the Durius, had obtained the name of Callaïci; and elsewhere he expressly states that the whole region N. of the Durius, which was formerly called Lusitania, was now called Callaïca. (iii. p. 166.) On the E., says Strabo (*l. c.*), it bordered on the Carpetani, Vettones, Vaccaei, and Callaïci, and other tribes of less note; and he adds that these also were sometimes called Lusitani, thus pointing to the extension of the name towards the east. Then, again, on the S. of the Tagus, where the country seems originally to have belonged to the TURDETANI, with an intermixture of Celtic tribes [CELTICI], the long and obstinate wars carried on by the Romans drove many of the Lusitanians and their allies into the district, which thus came naturally to be included under the name of Lusitania. (Strab. iii. p. 139.) Finally, under Augustus, the boundaries were fixed as above stated.

2. *Dimensions.*— Agrippa, as quoted by Pliny, assigned to the province, together with Asturia and Gallaecia, a width of 536 M. P.; and a length of 540 M. P. (Plin. iv. 21. s. 35.) Strabo makes its length 3000 stadia, and its width considerably less (iii. p. 153, as amended by Xylander: it should be remembered that the *width* is reckoned, as Strabo expressly says, *along* the E. side, *i. e.* from N. to S., in conformity with his general views respecting the form of the peninsula, which are explained under HISPANIA).

3. *Physical Geography.*—Strabo's description of Lusitania (*l. c.*) as lofty and rugged on the E. side, and level towards the sea, with the exception of minor ridges of mountains, is tolerably correct. A more exact account of its relation to the whole formation of the surface of the peninsula is given under HISPANIA (§ v. No. 5. pp. 1085, 1086), together with a description of the coast and the chief promontories. Its surface is roughly divided by the MONS HERMINIUS (*Sierra de Estrella*), which ends in the peninsula of *Lisbon*, into the two great basins of the Tagus and the Durius; but it is also intersected by numerous offsets from the great central chains of the peninsula. Besides the great river TAGUS, which bisects it, there are several others, of more or less importance, which flow in the same general direction, and fall into the sea on the W. coast; but of these none require special notice, except the Callipus (Καλλίπους, *Sadao*), which flows N. from the M. Cuneus in the extreme S., and falls into the sea, SE. of the Tagus, and the MUNDA (*Mondego*) and VACUA (*Vouga*), between the Tagus and the Durius.*

* The discrepancies among the ancient writers respecting the names of the rivers between the Tagus and the Minius have been noticed under GALLAECIA: the following conspectus, by Groskurd, of their various statements, may be useful:—

The country, being irrigated by these rivers, and penetrated by their navigable streams, as well as enriched by the gold and silver found in their beds and in mines, was rich and fertile, Strabo tells us; but its prosperity was greatly checked by the predatory habits of its people, who neglected the culture of the soil, to give themselves up to war and robbery. This evil tendency, however, he ascribes chiefly to the mountaineers, by whose attacks the inhabitants of the lowlands were involved in the same disorder. (Strab. iii. p. 154.)

4. *Population.* — The province, as finally constituted, contained the countries of five chief peoples, and of innumerable petty tribes, most of whom, however, may be included among these five. Thus, for example, the 30 (some read 50) tribes (ἔθνη), mentioned by Strabo, between the Tagus and the Artabri, are doubtless but subdivisions of the Callaici and Lusitani. The five chief peoples of Lusitania (the Roman province) were:—(1.) The LUSITANI, on the W. coast between the Durius and the Tagus, and extending also (as explained above) S. of the latter river. (2.) E. of them the VETTONES, between the Durius and the Anas. (3.) S. of these two were the TURDULI VETERES, a branch of the ancient population of Baetica, who (according to the common opinion of the ancients) had crossed the Anas; but whose presence should perhaps rather be referred to an ancient occupation of the country up to the Tagus. (4.) S. of them again, in the district between the lower course of the Anas and the S. and W. coasts, were a branch of the TURDETANI, to whom similar remarks apply. (5.) Lastly, in various positions, we find remnants of the old Celtic population, preserving the name of CELTICI. The chief traces of them are on the SE. of the lower Tagus, between it and the great bend of the Anas, where they were mingled with the Turduli; and among the Turdetani, in the extreme S., where they seem to have taken up their position in the mountainous district between the termination of the W. coast and the Anas (*Algarbe*), which the ancients called CUNEUS, and where they bore the distinctive name of CONII. (Comp. HISPANIA, p. 1087. § vii.) The particulars respecting these peoples, their chief cities, and so forth, are given under the several articles: in this place we have to deal only with the Lusitanians, properly so called.

5. The LUSITANI (Λυσιτανοί, Strab.; Λουσιτανοί, Diod., Ptol.), are designated by Strabo as "the greatest of the nations of Iberia, and the one most frequently and longest engaged in war with the Romans," a distinction which, certainly, not even the Celtiberians could dispute with them. The history of the wars referred to has been given in outline under HISPANIA, and that of their last great contest may be read in the histories of Rome and under VIRIATHUS (*Dict. of Biog.*). The incidents of that war seem to prove that though the Lusitani formed a compact state, under one national government, its force was impaired by a certain defect of real union among the numerous minor peoples of whom Strabo speaks. (Niebuhr, *Lectures on Anc. Ethnog. and Geog.* vol. ii. p. 297.) The full account of their manners and customs, given by Strabo (iii. pp. 154—156), may be more conveniently studied in the original than repeated here in its many details.

6. *Lusitania as a Roman Province.*—(LUSITANIA PROVINCIA, *Inscr. ap.* Gruter, p. 31, No. 383.) The position of Lusitania, after its conquest by the Romans, first as a part of Hispania Ulterior, and already under Julius Caesar tending to a separate constitution; its formation into a distinct province, under Augustus; its civil and military governments; its three conventus of EMERITA AUGUSTA, PAX JULIA, and SCALABIS, with the number and rank of the towns included in them; and its position under the later empire, are all given under HISPANIA (pp. 1081, 1082).

7. *Cities and Towns* —(Those of the VETTONES are given under the article.)—The city of *Lisbon* (Port. *Lisboa*) was, under the same name [OLISIPO], the ancient capital of the Lusitanians, and though the Romans degraded it from that rank, in favour of their own military colonies, it remained a place of great commercial importance. Its political rank was transferred, under the Romans, to SCALABIS (*Santarem*), a colony, and seat of a *conventus juridicus*, higher up the river, on its right bank. But the true Roman capital was EMERITA AUGUSTA (*Merida*) in the SE. of the province, on the right bank of the Anas, a colony founded by Augustus. The chief roads leading through the province from Emerita, with the places on them, were as follows: 1. From EMERITA, E. and then NE. to CAESAR-AUGUSTA "per Lusitaniam," as the Itinerary expressly says, although it lies entirely S. of the Anas (*Itin. Ant.* pp. 444, 445); thus suggesting a doubt whether the boundary of Lusitania was not carried as far S. as the M. MARIANUS (*Sierra Morena*): the places on the road, which are commonly assigned to Baetica, are: CONTOSOLIA, 12 M. P. (*Alange?*) MIROBRIGA, 36 M. P. (*Capilla*); Sisalone, or SISAPO, 13 M. P. (*Almaden*); CARCUVIUM, 20 M. P. (*Caracuel?*); AD TURRES, 26 M. P. (*Calatrava?*), where, if not sooner, the roads enter the ORETANI. 2. From EMERITA, due N. to SALMANTICE (*Salamanca*) and ASTURICA, through the territory of the VETTONES. (*Itin. Ant.* p. 433: for the places see VETTONES). 2. From EMERITA, NW. to the TAGUS, and down the right side of the river to OLISIPO (*Itin. Ant.* pp. 419, 420*): PLAGIARIA, 30 M. P. (*Raposéra*, Cortés; *El-Commandante*, Lapie); AD VII ARAS, 20 M. P. (*Codesera*, Cortés, *Arronches*, Mentelle and Lapie); MONTOBRIGA, 14 M. P. (vulg. Mundobriga, *Marvao*, Resend. *Antiq. Lus.* p. 58, Florez, *Esp. S.* vol. xiii. p. 66, Cortés, Ukert; *Partalegre*, Lapie; it seems to be the Medobriga of the *Bell. Alex.* 48, and the town of the Medubricenses Plumbarii of Plin. iv. 21. s. 35); FRAXINUS, 30 M. P., on or near the left bank of the Tagus (*Amieira*, Cortés; *Villa Velha*, Lapie); TUBUCCI, 32 M. P. (*Abrantes* or *Punhete?*); SCALABIS, 32 M. P., a colony and conventus, with the surname PRAESIDIUM JU-

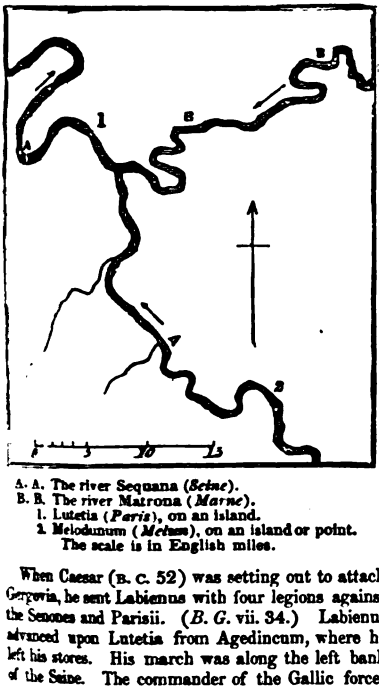
* The *numbers* on all the roads from Emerita to Olisipo are very corrupt: they do not agree with the totals given at the head of each route; and many of them are evidently too short.

LIUM (Plin. *l. c. Santarem*, Florez, *Esp. S.* vol. xiii p. 69, xiv. p. 171); JERABRIGA, 32 M. P. (Arabriga, Plin. *l. c.*; Ἀράβριγα, Ptol. ii. 5. § 7; *Alanquer*, Florez, *Esp. S.* vol. xiv. p. 174); OLISIPO, 30 M. P. 4. From EMERITA, W. to OLISIPO, curving round to the N.: PLAGIARIA, 30 M. P. (*vide sup.*); BUDUA, 8 M. P. (*S. Maria de Bedoya* Cortés, *Campo Mayor*, Lapie; the river *Bodoa* preserves the name); AD VII. ARAS, 12 M. P. (*vid. sup.*) MATUSARO, 8 M. P., ABELTERIUM, 24 M. P. (it seems that these names are inverted, and that the latter is *Alter da Chao*, and the former *Puente do Sora*); ARITIUM PRAETORIUM, 28 M. P. (*Salvatierra*, or *Benavente*, both close together on the left bank of the Tagus); OLISIPO, 38 M. P. 5. From EMERITA to OLISIPO, W. with a curve to the S. (*Itin. Ant.* pp. 416—418): EVANDRIANA, 8 M. P. (Εὐανδρία, Ptol. ii. 5. § 8); DIPO, 17 M. P.; AD ADRUM FLUMEN, 12 M. P.; EBORA, 9 M. P. (*Evora*). Here is a difficulty: the last is a well-known place, but the distance is evidently much too small; and the various attempts made to identify the intermediate positions rest on no sufficient data. The alteration of *Ad Adrum* to *Ad Anam* has no sign in the MSS. to bear it out. It seems, on the whole, most likely that the route intended is that of the great road through *Talavera la Real*, *Badajoz*, and *Elvas*. From Ebora, it proceeds thus:— SALACIA, 44 M. P., surnamed URBS IMPERATORIA, a municipium, with the Old Latin Franchise (*Alcaçer do Sal.*; Plin. iv. 35, viii. 73; Mela, iii. 1; Marc. Herac. p. 42; Inscr. *ap.* Gruter, pp. 13, 16; Florez, *Esp. S.*, vol. xiii. p. 115, xiv. p. 241); MALECECA, 26 M. P. (*Marateca ?*); CAECILIANA, 26 M. P. (*Agnalva*, or *Pinheiro*, or *Seixola ?*); CATOBRIGA, 8 M. P. (Cetobriga, Geog. Rav. iv. 43; Καιτόβριξ, Ptol. ii. 5. § 3; Καστόβριξ, Marc. Herac. p. 42; Ru. on the headland at the mouth of the estuary of the Callipus, *Sado*, near *Setubal*; Resend. *Antiq. Lus.* iv. p. 210; Mentelle, p. 87); EQUABONA, 12 M. P. (*Coyna*): OLISIPO, 12 M. P. The country S. of this road was traversed by others, connecting EBORA with PAX JULIA, and both with the Anas and the S coast; namely:—6. (*Itin. Ant.* pp. 426, 427.) From ESURIS (opp. *Ayamonte*) at the mouth of the Anas, in Baetica, W. along the coast to BALSA, 24 M. P. (*Tavira*); OSSONOBA, 16 M. P. (*Estoy*, N. of Faro, by C. de S. Maria); thence the road struck inland across the mountains of the Cuneus (*Algarbe*), and down the valley of the Callipus (*Salo*), to ARANNI, or ARANDIS, 60 M. P. (*Ourique*), SALACIA, 35 M. P. (vid. sup.), and EBORA, 44 M. P. (*vid. sup.*). The course pursued from EBORA by SERPA, 14 M. P., FINES, 20 M. P., and ARUCCI, 25 M. P., to PAX JULIA, 30 M. P. (*Beja*), is so intricate as to prove an error in the Itinerary, which commentators have sought in vain to amend. 7. The direct road from ESURIS to PAX JULIA is given thus (*Itin. Ant.* p. 431):—MYRTILIS, 40 M. P. (*Mertola*); PAX JULIA, 36 M. P. 8. A direct road from SALACIA to OSSONOBA is also mentioned, but the distance, 16 M. P., is absurdly wrong (*Itin. Ant.* p. 418). 9. From OLISIPO a great road ran parallel to the coast, up to the mouth of the Durius and BRACARA AUGUSTA, thus (*Itin. Ant.* pp. 420—422): JERABRIGA, 30 M. P. (*vid. sup.*); Scalabis, 32 M. P. (*vid. sup.*); SELLIUM, 32 M. P. (*Pombal ?*); CONEMBRICA, 34 M. P. (*Coimbra*, or further S.); EMINIUM, 10 M. P. (*Agueda*, *Mintro*, or *Carvalhos ?* site very uncertain), TALABRIGA, 40 M. P. (*Aveiro*); LANGOBRIGA, 18 M. P. (near *Feira*); CALEM, 13 M. P. (*Oporto*); BRACARA, 35 M. P. (*Braga*); the last two, though originally Lusitanian, belong, according to the common division, to the Callaïci Bracarii. Other places, not important enough to require further notice, will be found in the lists of Ptolemy (ii. 5) and Ukert (vol. ii. pt. 1. pp. 387—399). [P. S.]

LU'SIUS. [GORTYS.]

LUSO'NES (Λούσωνες), the smallest of the four tribes into which the Celtiberians were divided. Their position was about the sources of the Tagus, SW. of the territory of Numantia. (Strab. iii. p. 162; Appian, *Hisp.* cc. 42, 49.) [P. S.]

LUSSO'NIUM (Λουσσόνιον), also called Lossunium, a town in Lower Pannonia, on the western bank of the Danube, a little to the north of the modern *Paks*. It was the station of a body of Dalmatian cavalry. (Ptol. ii. 16. § 4; *Not. Imp.*; *Itin. Ant.* p. 254; *Tab. Peut.*, where it is called Lusione.) [L. S.]



LUTE'TIA PARISIO'RUM (Λουκοτεκία, Ptol. ii. 8. § 13; Λουκοτοκία, Strabo, p. 194), the city of the Parisii, a Gallic people on the *Seine*. Lutetia is mentioned by Caesar (*B. G.* vi. 3), who held a meeting of the Gallic states there in the spring of B. C. 53. He calls it Lutetia Parisiorum; and in his narrative of the operations of Labienus in B. C. 52, he says (*B. G.* vii. 57) that Lutetia is on an island in the Sequana (*Seine*). Strabo copies this description from Caesar. Vibius Sequester (p. 17 ed. Oberlin) also describes Lutecia, as he writes it, as being on an island.

The Parisii were the neighbours of the Senones. There had been some kind of political union between the Parisii and the Senones before Caesar's Gallic campaigns (*B. G.* vi. 3), but at the time when Caesar mentions them, they seem to have been separate states. When Vercingetorix (B. C. 52) rose against the Romans, the Senones, Parisii, and others joined him immediately; and the Parisii sent 8000 men to oppose Caesar at Alesia (*B. G.* vii. 4, 75). Though a part of the little territory of the Parisii was north of the *Seine*, we must conclude from Caesar's narrative that they were a Celtic people. The diocese of Paris represents the territory of the Parisii.

Lutetia, like many other Gallic towns, finally took the name of the people, and was called Civitas Parisiorum, whence the modern name of Paris. Zosimus (iii. 9) calls it Parisium. It appears from the Notit. Dign. that the Romans had a fleet at Paris; and from the words in the Notitia, "Praefectus classis Anderitianorum Parisiis," D'Anville conjectures that the name "Anderitiani" implies a place Anderitium, which he further supposes to be *Andrési*, immediately below the junction of the *Seine* and *Oise*. An inscription dug up in 1711 among other ancient monuments in the church of *Notre Dame* at *Paris*, contained the words "Nantae Parisiaci;" and De Valois observes that as the people of Paris had always a fleet before their eyes, they may from this circumstance have taken the ship which appears in the arms of the city.

The position of Lutetia at Paris is determined by the description of the place, the name, and the measurements of the roads from Agedincum (*Sens*), Rotomagus (*Rouen*), and Genabum (*Orléans*), which meet at Lutetia. When Caesar held the meeting of the states of Gallia at Lutetia, the town was con-

ned to the island which afterwards was called *La ?ité* (civitas), a name given to the old Roman part f several French towns. But the island on which tands the church of *Notre Dame* was then and or a long time after of less extent than it is now; or the site of the *Place Dauphine* was once two mall islands which were not joined together and mited to the *Cité* before the sixteenth century; and he spot called *Le Terrein* was another addition roduced by the ruins of the buildings which were rected in this part of the city. Paris was never a arge place under the Roman dominion. Ammianus xv. 11) calls it a Castellum, and Julian (*Misoogon*, p. 340) and Zosimus name it a small city πολίχνη). Zosimus, who was no great geographer, laces it in Germania. Lutetia may probably have ccupied some ground on the north or on the south side f the river, or even on both sides, for the island as joined to the mainland by bridges in Caesar's me (*B. G.* vii. 58), made of wood, as we may asume. Julian spent a winter in Paris, A. D. 358, nd was proclaimed Augustus there. (Ammian. larcell. xvii. 2, 8, xx. 4.) The Franks under lovis took Paris about the close of the fifth century, . D.; and about A. D. 508 Clovis made Paris is residence.

A. A. The river Sequana (*Seine*).
B. B. The river Matrona (*Marne*).
1. Lutetia (*Paris*), on an island.
2. Melodunum (*Melun*), on an island or point.
The scale is in English miles.

When Caesar (B. C. 52) was setting out to attack Gergovia, he sent Labienus with four legions against the Senones and Parisii. (*B. G.* vii. 34.) Labienus advanced upon Lutetia from Agedincum, where he left his stores. His march was along the left bank of the Seine. The commander of the Gallic forces occupied a marshy tract, the water of which ran into the Seine, and here he waited, with the intention of preventing the Romans from crossing the river (*B. G.* vii. 57) to Lutetia. Labienus attempted to make a road across the marsh, but, finding it impossible, he left his camp silently in the night, and, returning by the route by which he had advanced, he reached Melodunum (*Melun*), a town of the Senones on an island in the Seine. He there seized about fifty vessels, and easily got possession of *Melun*. After repairing the bridge from the island to the right bank of the river, he carried over his men to the right side, and marched again upon Lutetia. He took the vessels with him, and used them, as we must suppose, for crossing the Matrona (*Marne*), though the *Marne* is not mentioned in the narrative. Before Labienus could reach Paris, the Galli set Lutetia on fire, and broke down the bridges which united the island to the main. They also quitted the marsh, and placed themselves on the banks of the Seine opposite to Lutetia and to the camp of Labienus, which was on the right side of the river. In the meantime Caesar's defeat before Gergovia was known, and Labienus was threatened from the north by the Bellovaci in his rear. In front of him, on the opposite side of the river, were the Parisii and their allies. His safety depended on getting to the left bank of the Seine, and he accomplished it by a clever movement. Soon after nightfall he left half a legion in his camp; he ordered another half legion, with their baggage, to march up the river, making a loud noise; and he sent up the river, in the same direction as the half legion as many boats as he could collect, which made a great splashing with their oars. He sent the ships that he brought from Melodunum four miles down the river, and, soon after despatching the half legion up the river, he marched with his three legions down the stream in great silence, and found his ships. The scouts of the enemy, who were placed all along the stream, were surprised and slaughtered; for there was a great storm raging, and they were off their guard. The three legions were carried across the river in the vessels. The enemy were confounded by the unusual noise purposely made in the Roman camp, by the boats moving up the river, and by the news of the enemy crossing lower down. Accordingly, the Galli left part of their forces to watch the opposite camp, and sent another part up the river towards Metiosedum, as it is in Caesar's text, which is either a mistake for Melodunum, or it is some place higher up the Seine than Paris. Either supposition will explain Caesar. The Galli led the rest of their forces to oppose the three legion which had crossed the Seine with Labienus, and, after a hard fight, they were defeated and dispersed. Labienus led his troops back to Agedincum, where his stores and baggage were. This is the substance of Caesar's narrative, which is correctly explained by D'Anville (*Notice, &c.*, art. Melodunum), and Ukert (*Gallien*, p. 476) has done well in following him. Some of the old critics completely misunderstood Labienus' movements; and even. of late years, the passage has been wrongly explained.

The Romans built both on the island *La Cité* and on both sides of the Seine, but the Roman memorials of Paris are very few. Some sculptured stones were dug up under the choir of Notre Dame. The inscriptions were of the time of Tiberius Caesar, and show that the Roman and Gallic deities were worshipped jointly. The remains of a subterranean aqueduct have been discovered both on the north and south sides of the river. The materials of the Roman city were doubtless employed for more recent constructions, and thus Roman Lutetia has disappeared. [G. L.]

LUTE'VA (*Eth.* Lutevani: *Lodève*), in Gallia Narbonensis, is placed by the Table, where the name is written Loteva, on a road from Agatha (*Agde*) to Segodunum (*Rhodez*). Pliny (iii. 5) says, "Lutevani qui et Foroneronienses," whence it has been

concluded that he means the Forum Neronis mentioned by Ptolemy as being in the country of the Memini. [CARPENTORACTE.] But the name Luteva, the modern name *Lodève*, and the Itin. seem to determine the position of Luteva; and, if Pliny is right, we must suppose that Luteva was also named Forum Neronis. [G. L.]

LU'TIA (Λουτία), a considerable town of the Arevacae, in Hispania Citerior, 300 stadia from Numantia, mentioned only by Appian (*Hisp.* 93, 94). [P. S.]

LUTTOMAGUS, a place in North Gallia, according to the Table on a road from Samarobriva (*Amiens*) to Castellum Menapiorum. The site is uncertain. D'Anville has followed Cluver in writing the name Luttomagus; but it is Lintomagus in the Table. [G. L.]

LU'XIA (*Odiel*), a small river on the coast of Hispania Baetica, between the Baetis (*Guadalquivir*) and the Anas (*Guadiana;* Plin. iii. 1. s. 3). [P. S.]

LUXOVIUM. This name appears on some inscriptions dug up at *Luxeuil*, in the French department of the *Upper Saône*. *Luxeuil* is on the *Brenchin*, and it has warm baths. The name on the inscriptions is said to be Luxovium or Lixovium. These inscriptions were published by Caylus, but they may not be genuine. In the life of St. Columban, written in the seventh century, Luxovium is mentioned:—"Castrum quod olim munitissimum, priscis temporibus Luxovium nuncupatum, ubi etiam Thermae eximio opere instructae habebantur. Multae illic statuae lapideae erant." (D'Anville, *Notice, &c.*; Walckenaer, *Géog.* vol. i. p. 320.) [G. L.]

LYCABETTUS MONS. [ATHENAE, p. 303, b.]

LYCAEA. [LYCOA.]

LYCAEUS or LYCE'US (τὸ Λύκαιον ὄρος, ὁ Λυκαῖος: *Diofórti*), a lofty mountain of Arcadia, in the district of Parrhasia, from which there is a view of the greater part of Peloponnesus. Its height has been determined by the French Commission to be 4659 feet. It was one of the chief seats of the worship of Zeus in Arcadia, and on the summit called Olympus, or ἱερὰ κορυφή, were the sacred grove and altar of Zeus Lycaeus, together with a hippodrome and a stadium, where games called Lycaea were celebrated in honour of Zeus (Λύκαια). These games are said to have resembled the Roman Lupercalia, and were sometimes celebrated by Arcadians when in foreign countries. (Plut. *Caes.* 61; Xen. *Anab.* i. 2. § 10.) Near the hippodrome was a temple of Pan, who is hence also called Lycaeus. There are still remains of the hippodrome extending from S. to N.; and near its northern extremity there are considerable remains of a cistern, about 50 feet in length from E. to W. A little further W. is a ruin called *Hellenikon*, apparently part of a temple; and near the church of St. Elias is the summit called *Diofórti*, where the altar of Zeus formerly stood. In the eastern part of the mountain stood the sanctuary and grove of Apollo Parrhasius or Pythius, and left of it the place called Cretea. (Paus. viii. 38; Pind. *Ol.* ix. 145, xiii. 154; Theocr. i. 123; Virg. *Georg.* i. 16, iii. 314; *Aen.* viii. 344.) The river Neda rose in Mt. Cerausium (Κεραύσιον), which was a portion of Mt. Lycaeus. (Paus. vii. 41. § 3; comp. Strab. p. 348.) Cerausium is shown by Ross to be *Stephâni*, and not *Tetrázi*, as is usually stated. Mt. Nomia (Νόμια ὄρη), near Lycosura (Paus. viii. 38. § 11), was probably a portion of the modern *Tetrázi*. (Leake, *Morea*, vol. ii. p. 313, seq.; *Peloponnesiaca*, p. 244; Ross, *Reisen im Peloponnes*, vol. i. pp. 88, 91; Curtius, *Peloponnesos*, vol. i. pp. 294, 338.)

LYCAO'NIA (ἡ Λυκαονία: *Eth.* Λυκάων, Λυκαόνιος), a province of Asia Minor, bordering in the east on Cappadocia, in the south on Cilicia, in the west on Pisidia and Phrygia, and in the north on Galatia. These frontiers, however, were not always the same, but the fluctuation becomes most perplexing at the time when Asia was under the influence of the Romans, who gave portions of Lycaonia sometimes to this and sometimes to that Asiatic prince, while they incorporated the greater part with the province of Cappadocia, whence Ptolemy (v. 6. § 16) treats of it as a part of Cappadocia. The name Lycaonia, however, continued to be applied to the country down to a late period, as we see from Hierocles (p. 675) and other Christian writers.

Lycaonia is, on the whole, a plain country, but the southern and northern parts are surrounded by high mountains; and the north, especially, was a cold and bleak country, but very well adapted as pasture-land for sheep, of which king Amyntas is said to have possessed no less than 300 flocks. Their wool was rather coarse, but still yielded considerable profit to the proprietors. The country was also rich in wild asses. Its chief mineral product was salt, the soil down to a considerable depth being impregnated with salt. In consequence of this the country had little drinking-water, which had to be obtained from very deep wells, and in some parts was sold at a high price. This account of the country, furnished by Strabo (xii. p. 568), is fully confirmed by modern travellers. The streams which come down from the surrounding mountains do not form rivers of any importance, but unite into several lakes, among which the salt lake Tatta, in the north-east, is the most important.

The Lycaonians of Lycaonia, although Eustathius (*ad Dionys. Per.* 857) connects their name with the Arcadian Lycaon, according to which they would be Pelasgians, are never mentioned in history until the time of the expedition of Cyrus the Younger against his brother Artaxerxes, when Cyrus, passing through their country in five days, gave it up to plunder because they were hostile. (Xenoph. *Anab.* i. 2. § 19, comp. iii. 2. § 23, *Cyrop.* vi. 2. § 20.) Who the Lycaonians were, and to what branch of the human family they belonged, is uncertain; but from the Acts of the Apostles (xiv. 11) it appears that they spoke a peculiar language. It is also well attested that, like the Pisidians, they were a hardy and warlike race, which owned no subjection to the Persian monarchs, and lived by plunder and foray. (Dionys. Per. 857; Prisc. 806; Avien. 1020.) Their principal towns, which are few in number, and all of which appear to have been very small, were: ICONIUM, LAODICEIA COMBUSTA, DERBE, ANTIOCHIANA, and LARANDA; the less important ones were TYRIAEUM, VASATA, SOATRA, ILISTRA, and COROPASSUS.

As to their early history, we know nothing about the Lycaonians; but they seem to have gradually advanced westward, for in the time of Croesus the Phrygians occupied the country as far as the river Halys, and Xenophon calls Iconium the easternmost town of Phrygia, so that the Lycaonians must have continued their extension towards the west even after that time, for subsequently Iconium was nearly in the centre of Lycaonia. It has already been remarked that they maintained their independence against Persia, but afterwards they shared the fate

of all the other nations of Asia Minor, being successively under the rule of Alexander the Great, the Seleucidae, Antiochus, Eumenes of Pergamus, and finally under the Romans. (Liv. xxvii. 54, xxxviii. 39, 56.) Under this change of rulers, the character of the people remained the same: daring and intractable, they still continued their wild and lawless habits, though in the course of time many Greek settlers must have taken up their abode in the Lycaonian towns. Under their chief Amyntas, however, whom Strabo even calls king, and who was his own contemporary, the country acquired a greater political consistency. [*Dict. of Biogr.* under AMYNTAS, Vol. I. p. 156.] After the death of Amyntas, his whole kingdom, which he had greatly extended, fell into the hands of the Romans, who constituted the greater part of Lycaonia as a part of their province of Cappadocia.

We may add, that Strabo regards Isauria as a part of Lycaonia. [ISAURIA.] [L.S.]

LYCASTUS (Λύκαστος: *Eth.* Λυκάστιος), a town of Crete, mentioned in the Homeric catalogue (*Il.* ii. 647; comp. Pomp. Mela, ii. 7. § 13; Plin. iv. 12). Strabo (x. p. 479) says that it had entirely disappeared, having been conquered and destroyed by the Cnossians. According to Polybius (xxiii. 15) the Lycastian district was afterwards wrested from Cnossus by the Gortynians, who gave it to the neighbouring town of Rhaucus. In Mr. Pashley's map the site is fixed at *Kaenúria*. (Höck, *Kreta*, vol. i. pp. 15, 414.) [E. B. J.]

LYCASTUS or LYCASTUM (Λύκαστος), a very ancient town in Pontus, on a river bearing the same name. It was situated 20 stadia south-east of Amisus. (Scyl. *Peripl.* p. 33; Marcian, p. 74; *Peripl. Pont. Eux.* p. 10; Steph. B. *s. v.* Χαδισία; Plin. vi. 3; Mela, i. 19, who calls it Lycasto.) Pherecydes (ap. *Schol. ad Apoll. Rhod.* ii. 373, comp. ad ii. 1001) spoke of a town of Lycastia, inhabited by Amazons, and situated between Themiscyra and Chalybia. The river Lycastus was but a small stream, which after a short course emptied itself into the Euxine close by the town of Lycastus. (Scyl., Marcian., Plin., *ll. cc.*) [L. S.]

LYCEIUM. [ATHENAE, p. 303, b.]

LYCHNIDUS (Λυχνιδός: *Eth.* Λυχνίδιος, Λυχνίτης, Steph. B.; Ptol. iii. 13. § 32), the chief town of the Dassaretae in Illyricum. From its position on the frontier it was always a place of considerable importance, and the name frequently occurs in the wars of the Romans with Philippus V. and Perseus, kings of Macedon. (Liv. xxvii. 32, xxxiii. 34, xliii. 9, 10, 21; Λυχνίς, Polyb. xviii. 30.) Afterwards it continued to be, as on the Candavian way described by Polybius (Λυχνίδιον, xxxiv. 12), one of the principal points on the Egnatian road. (Strab. vii. p. 323; *Itin. Anton.*; *Peut. Tab.*; *Itin. Hierosol.*: in the Jerusalem Itinerary the original reads Cledo.) Under the Byzantine empire it appears to have been a large and populous town, but was nearly destroyed by an earthquake during the reign of Justinian. (Procop. *Hist. Arc.* 18; Malch. *Excerpt.* p. 250, ed. Bonn; Niceph. Callist. xvii. 3.) Lychnidus, which from the data of the Itineraries must be placed near the S. extremity of the Lake Lychnitis, on its E. shores (Leake, *North. Greece*, vol. iii. p. 281), was afterwards replaced by the more northerly ACHRIDA (στὴν Ἄχριδα, Ὄχριδα, Ἄχρις, of the Byzantine writers; Anna Comn. xiii. p. 371; Cedren. vol. ii. p. 468, ed. Bonn Cantacuzen. ii. 21), the capital of the Bulgarian empire. Some geographers have supposed that Achrida is the same as Justiniana; this identification, which is a mistake, has arisen from the circumstance that the metropolitans of Achrida called themselves after the emperor Justinian. Justiniana Prima is the modern town of *Köstendil*. (Schafarik, *Slav. Alt.* vol. ii. p. 227.) The Slavonic name survives in the modern *Akridha*, on the NE. shores of the lake. [E. B. J.]

LYCHNI'TIS. 1. (Λυχνῖτις, ἡ Λυχνιδία λίμνη, Polyb. v. 108), a lake of Illyricum, first mentioned by Scymnus of Chios (429). Philip pushed his conquests over the Illyrian tribes as far as this lake (Diod. xvi. 8). The lake of *Akridha* or *Okridha*, which abounds in fish (comp. Strab. vii. p. 327), represents Lychnitis. (Leake, *Northern Greece*, vol. i. p. 328, vol. iii. pp. 280, 328.)

2. (Λυχνῖτις; comp. Steph. B. *s. v.* Λυχνιδός), a lake of the Greater Armenia, which Ptolemy (v. 13. § 8) places in long. 78° and lat. 43° 15′. It has been identified with the lake *Gökdje Deniz*, or *Sevanga* to the NW. of *Erivan*, the true position of which is lat. 40° 37′. The river *Zengue*, which flows out of the lake and communicates with the Araxes, is not mentioned by Ptolemy. (Dubois de Montpereux, *Voyage Autour du Caucase*, Atlas, pt. i. pl. vii. vol. iii. pp. 299—311; St. Martin, *Mém. sur l'Armenie*, vol. i. p. 61; *Journ. Geog. Soc.* vol. iii. pp. 40—43; Ritter, *Erdkunde*, vol. ix. p. 786.) [E. B. J.]

LY'CIA (Λυκία: *Eth.* Λύκιος), a country on the south coast of Asia Minor, forming part of the region now called *Tekeh*. It is bounded on the west by Caria, on the north by Phrygia and Pisidia, and on the north-east by Pamphylia, while the whole of the south is washed by the part of the Mediterranean called the Lycian sea. The western frontier is formed by the river Glaucus and Mount Daedala (Strab. xiv. p. 664), the northern by the range of Mount Taurus, and the eastern one by Mount Climax. The whole extent of the country, from east to west, amounts, according to Strabo, to 1720 stadia; this measurement, however, must have been made along the line of coast, for a straight line from east to west does not amount to more than one-half that distance. Its extent from the sea to the northern boundary is different in the different parts, but is everywhere smaller than that from east to west. Until very recently, Lycia, with its rich remains of antiquity, was almost a *terra incognita*, — having never been visited by European travellers, until Sir Charles Fellows, in 1838, and a second time in 1840, travelled the country; since which time it has been explored and described by several other men of learning and science, whose works will be noticed below.

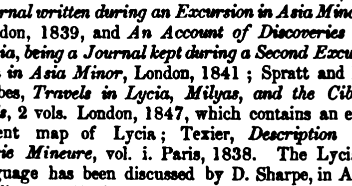
1. *Name of the Country.* — The name Lycia and Lycians is perfectly familiar to Homer, and the poet appears to have been better acquainted with Lycia than with some other parts of Asia Minor, for he knew the river Xanthus and Cape Chimaera. (*Il.* vi. 171, &c., x. 430, xii. 312, &c., *Od.* v. 282, and elsewhere.) But, according to Herodotus (i. 173), the ancient name of the country had been Milyas (ἡ Μιλυάς), and that of the inhabitants Solymi (Σόλυμοι), and Tremilae or Termilae (Τρεμίλαι or Τερμίλαι). These latter are said to have been conquered, and expelled from the coast districts by Sarpedon, the brother of Minos, who, with a band of Cretans, invaded the country and conquered it, but without changing either its name or that of the people. But in his reign, Lycus, the

son of Pandion, being driven by his brother Aegeus from Attica, found a place of refuge in Milyas, the kingdom of Sarpedon, who now changed the name of his dominion into Lycia, to honour his friend Lycus. (Comp. Strab. xiv. p. 667; and Steph. B. *s. v.* Τρεμίλη, who states, on the authority of the historian Alexander, that Bellerophontes changed the name of Tremilae into that of Lycians.) In later times the name Milyas still existed, but was confined to the northern and more mountainous parts of the country, into which the original inhabitants of the country had been driven by the conquerors, and where they were known under the name of the Milyae. [MILYAS.] Strabo, in his desire to look upon Homer as an infallible authority in historical and geographical matters, is inclined to disbelieve the tradition related by Herodotus, as irreconcilable with the poet, who, he conceives, meant by the Solymi no other people than that which in later times bore the name of Milyae. Whatever we may think of the cause of the change of name from Milyas to Lycia, it is probable that it must have originated in the conquest of the country by foreigners, and that this conquest belongs to an earlier date than the composition of the Homeric poems. But although the inhabitants of the country had changed their own name, they continued as late as the time of Herodotus to be called Termilae by their neighbours.

2. *Physical Character of the Country.*—All Lycia is a mountainous country,—the range of Mount Taurus in the north sending forth numerous branches to the south, which generally slope down as they approach the sea, and terminate in promontories. The principal of these branches are, mounts DAEDALA, CRAGUS, MASSICYTES (rising in some parts to a height of 10,000 feet), and CLIMAX. But, notwithstanding its mountainous character, Lycia was by no means an unfertile country, for it produced wine, corn, and all the other fruits of Asia Minor; its cedars, firs, and plane trees, were particularly celebrated. (Plin. *H. N.* xii. 5.) Among the products peculiar to it, we may mention a particularly soft kind of sponge found near Antiphellus, and a species of chalk, which possessed medicinal properties. Lycia also contained springs of naphtha, which attest its volcanic character; of which other proofs also are mentioned, for, not far from the rock called *Deliktash*, there is a perpetual fire issuing from the ground, which is supposed to have given rise to the story of the Chimaera, but is in reality nothing but a stream of inflammable gas issuing from the crevices of the rocks, as is the case in several parts of the Apennines. Most of the rivers of Lycia flow in a southern direction, and the most important of them are the XANTHUS, in the west, and the LIMYRUS or ARICANDUS, in the east. It also has two considerable lakes; one, now called *Avlan Gule*, is formed by the confluence of several rivers, another, in the more northern part, situated in a hollow among high mountains, is called *Yazeer Gule*.

3. *The Inhabitants of Lycia.*— The most ancient inhabitants of Lycia, as we have seen above, were the Solymi, who are generally believed to have been a Phoenician or Semitic race. We are not informed why these Solymi were called Termilae; but the probability is that the Solymi and the Termilae were two different tribes occupying different parts of the country at the same time, and that while the Solymi were driven into the northern mountains by the invaders, the Termilae were subdued, and received from their conquerors the name of Lycians. This seems clearly to follow from the account of Herodotus and the fragments quoted by Stephanus Byzantinus. The Tremilae were no doubt as foreign to the Hellenic stock of nations as the Solymi. The conquerors of the Tremilae, that is the Lycians proper, are said to have come from Crete, which, before its occupation by the Dorians, was inhabited by barbarous or non-Hellenic tribes, whence it follows that the conquering Lycians must likewise have been barbarians. Their struggles with the Solymi appear to have lasted long, and to have been very severe, for Bellerophon and other mythical heroes are described as having fought against the warlike Solymi. (Hom. *Il.* vi. 184, 204, *Od.* v. 283.) From the recently discovered Lycian inscriptions, composed in an alphabet partly Greek and partly foreign, it has been inferred that, after the conquest of Lycia by the Persians, the great body of the nation changed its character, at least in some parts, which are supposed to have then been occupied by Persians; and this theory is believed to derive support from the Lycian inscriptions, which Mr. Sharpe and others believe to contain a language akin to the Zend. But this hypothesis is devoid of all foundation, for we never find that the Persians colonised the countries conquered by them, and the Lycian language is as yet utterly unknown. All we can say is, that the Lycian alphabet seems to be a variety of the Graeco-Phoenician or Graeco-Semitic character, and that there is no evidence to show that in the historical ages the Lycians changed their character as a nation. They were and remained barbarians in the Greek sense, though they adopted and practised to a great extent the arts and modes of civilised life, such as they existed among their Greek neighbours.

4. *Institutions, &c. of the Lycians.* — In the Homeric poems the Lycians appear as governed by kings (Hom. *Il.* vi. 173; *Dict. of Biogr. s. v.* SARPEDON); but in the historical times we find Lycia as a confederation of free cities, with a constitution more wisely framed perhaps than any other in all antiquity. An authentic account of this constitution has been preserved by Strabo. It was the political unity among the towns of Lycia that made the country strong, and enabled it to maintain its freedom against the encroachments of Croesus, while all the surrounding nations were compelled to own his sway. When and by whom this federal constitution was devised, we are not informed, but it reflects great credit upon the political wisdom of the Lycians. They were a peaceable and well-conducted people, and took no part in the piracy of their maritime neighbours, but remained faithful to their ancient institutions, and on this account were allowed the enjoyment of their free constitution by the Romans. It was under the dominion of Rome that Strabo saw its working. The confederacy then consisted of 23 towns, from which the deputies met in a place fixed upon each time by common consent. The six largest towns, XANTHUS, PATARA, PINARA, OLYMPUS, MYRA, and TLOS, had each three votes at the common diet; the towns of more moderate size had two, and the remaining small places one vote each. The executive of the confederacy was in the hand of a magistrate called Lyciarch (Λυκιάρχης), whose election was the first business of the congress, and after whom the other officers of the confederacy were chosen. The judges, also, as well as the magistrates, were elected from each city according to the number of



its votes; taxation and other public duties were regulated on the same principle. In former times, the deputies constituting the congress had also decided upon peace, war, and alliances; but this of course ceased when Lycia acknowledged the supremacy of Rome. This happy constitution lasted until the time of the emperor Claudius, when Lycia became a Roman province, as is mentioned below. (Strab. xiv. p. 664, &c.) The laws and customs of the Lycians are said by Herodotus to have been partly Carian and partly Cretan; but in one point they differed from all other men, for they derived their names from their mothers and not from their fathers, and when any one was asked to give an account of his parentage, he enumerated his mother, grandmother, great grandmother, &c. (Herod. i. 173.) Herodotus (vii. 92), in describing their armour, mentions in particular, hats with plumes, greaves, short swords, and sickles. Respecting the religion of the Lycians nothing is known, except that they worshipped Apollo, especially at Patara; but whether this was the Greek Apollo, or a Lycian god identified with him, cannot be said with certainty; though the former is more probable, if we attach any value to the story of Patarus. [*Dict. of Biogr. s. v.*] This would show that the Greeks of Asia Minor exercised considerable influence upon the Lycians at a very early period.

5. *Literature and the Arts.* — Although we have no mention of any works in the Lycian language, it cannot be doubted that the Lycians either had, or at least might have had, a literature, as they had a peculiar alphabet of their own, and made frequent use of it in inscriptions. The mere fact, however, that many of these inscriptions are engraven in two languages, the Lycian and Greek, shows that the latter language had become so familiar to the people that it was thought desirable, or even necessary, to employ it along with the vernacular in public decrees and laws about and after the time of the Persian wars; and it must have been this circumstance that stopped or prevented the development of a national literature in Lycia. The influence of Greek literature is also attested by the theatres which existed in almost every town, and in which Greek plays must have been performed, and have been understood and enjoyed by the people. In the arts of sculpture and architecture, the Lycians attained a degree of perfection but little inferior to that of the Greeks. Their temples and tombs abound in the finest sculptures, representing mythological subjects, or events of their own military history. Their architecture, especially that of their tombs and sarcophagi, has quite a peculiar character, so much so that travellers are thereby enabled to distinguish whether any given place is really Lycian or not. These sarcophagi are surmounted by a structure with pointed arches, and richly decorated with sculptures. One of these has been brought to this country by Sir C. Fellows, and may now be seen in the British Museum. The entrances of the numerous tombs cut in the faces of lofty rocks are formed in the same way, presenting at the top a pointed arch, which has led Sir C. Fellows to compare them to Gothic or Elizabethan architecture. If we examine the remains of their towns, as figured in the works of Sir C. Fellows, Texier, and Forbes and Spratt, we cannot avoid coming to the conclusion that, in all the arts of civilised life, the Lycians, though barbarians, were little inferior to the Greeks.

6. *History.* — Lycia and the Lycians act rather a prominent part in the Homeric account of the Trojan War, where they are described as the allies of the Trojans. Sarpedon and Glaucus, are the two Lycian heroes in the war; but the poet was familiar also with the earlier legends of Lycia,—as that about Bellerophon, which he introduces into the parley between Glaucus and Diomede. Pandarus, another hero on the side of the Trojans, came from a district about the river Aesepus, which was likewise called Lycia, and which was supposed by the ancient commentators to have been peopled by colonists from Lycia, the subject of this article (*Il.* ii. 824, &c., iv. 91, v. 105; comp. Strab. xii. p. 572, xiii. p. 585); but both history and tradition are silent as to the time when, and the circumstances under which, Lycians settled in Troas. During the period from the Trojan times down to the Lydian conquests under Croesus, the Lycians are not mentioned in history; but that conqueror, who was successful in all other parts of Asia Minor, failed in his attempts upon the Lycians and Cilicians. (Herod. i. 28.) When Cyrus overthrew the Lydian monarchy, and his general Harpagus invaded the plain of the Xanthus, the Lycians offered a determined resistance; but when, in the end, they found their situation hopeless, the men of Xanthus assembled in the citadel their women, children, slaves, and treasures, and then set fire to it. They themselves then renewed the fight against the enemy, but all perished, except a few Xanthians who happened to be absent during the battle. [Xanthus.] Lycia thus became a part of the Persian monarchy, but, like all Persian provinces, retained its own constitution, being obliged only to pay tribute and furnish its contingents to the Persian army. The Lycians joined in the revolt of the Asiatic Greeks, but afterwards were reduced, and Darius made the country a part of his first satrapy (Herod. iii. 90); the fact that the Lycians furnished fifty ships to the fleet of Xerxes (Herod. vii. 92) shows, that they still continued to be a prosperous and powerful people. Their armour on that occasion is described by Herodotus, and was the same as that noticed above. During the Peloponnesian War the Lycians are not mentioned; but as Rhodes was tributary to Athens, and as contributions were often levied as far as Aspendus, it is not improbable that Lycia may have been compelled to pay similar contributions. Alexander traversed a part of the country on his march from Caria into Pisidia and Phrygia, and reduced it under his sway. The Lycians on that occasion offered little or no resistance to the young conqueror; the cities of Xanthus, Pinara, Patara, and about thirty other smaller towns, surrendered to him without a blow. (Arrian, *Anab.* i. 24.) In the division of the Macedonian empire, Lycia successively came under the dominion of the Ptolemies and the Seleucidae; and then, after a brief interval, during which the Lycians enjoyed their full freedom, they fell under the dominion of Rome: for after the defeat of Antiochus the Great, Lycia was ceded by the Roman senate to the Rhodians; but the Lycians, indignant at being considered the subjects of the islanders, and being secretly supported by Eumenes, resisted the Rhodian authorities by force of arms. In this contest they were overpowered; but the Romans, displeased with the Rhodians for their conduct in the Macedonian War, interfered, and restored the Lycians to independence. (Polyb. xxii. 7, xxiii. 3, xxvi. 7, xxx. 5; Liv. xlv. 25; Appian, *Mithr.* 61, &c., *Syr.* 44.) It was apparently during the period which now followed,

that Lycia enjoyed its highest degree of prosperity, for under the protection of Rome the people had sufficient leisure to attend to their own internal affairs. By a strict and wise neutrality, they escaped the dangers of the Mithridatic Wars as well as those of the wars against the pirates. (Appian, *Mithrid.* 24, 61; Strab. xvi. p. 665.) The prosperity of Lycia, however, received a severe blow during the war of Brutus and Cassius, who attacked the country because it was suspected to favour the party of Octavianus and Antony. When Brutus advanced against Xanthus, the inhabitants razed the suburbs to the ground, and offered the most determinate resistance. After a long and desperate siege, the soldiers of Brutus gained admission by treachery, whereupon the Xanthians made away with themselves by setting fire to their city. The fall of Xanthus was followed by the surrender of Patara and the whole Lycian nation. Brutus levied enormous contributions, and in some instances ordered the inhabitants to give up all their gold and silver. (Appian, *B. C.* iv. 60, 65, 75, &c.) Antony afterwards granted the Lycians exemption from taxes, in consideration of their sufferings, and exhorted them to rebuild the city of Xanthus. (Ibid. v. 7; comp. Dion Cass. xlvii. 34.) But after this time the prosperity of Lycia was gone, and internal dissensions in the end also deprived the inhabitants of their ancient and free constitution; for the emperor Claudius made the country a Roman province, forming part of the prefecture of Pamphylia. (Dion Cass. lx. 17; Suet. *Claud.* 25.) Pliny (v. 28) states that Lycia once contained seventy towns, but that in his time their number was reduced to twenty-six. Ptolemy (v. 3), indeed, describes Lycia as a separate province; but it is probable that until the time of Theodosius II. it remained united with Pamphylia, for an inscription (Gruter, *Thesaur.* p. 458. 6) mentions Porcius as "procos. Lyciae et Pamphyliae," and both countries had only one governor as late as the reign of Constantine. But Theodosius constituted Lycia a separate province; and so it also appears in the seventh century in Hierocles (p. 682, &c.), with Myra for its capital.

For further topographical and historical details see the separate articles of the Lycian towns, mountains, and rivers, and especially the following works of modern travellers. Sir C. Fellows, *A Journal written during an Excursion in Asia Minor*, London, 1839, and *An Account of Discoveries in Lycia, being a Journal kept during a Second Excursion in Asia Minor*, London, 1841; Spratt and E. Forbes, *Travels in Lycia, Milyas, and the Cibyratis*, 2 vols. London, 1847, which contains an excellent map of Lycia; Texier, *Description de l'Asie Mineure*, vol. i. Paris, 1838. The Lycian language has been discussed by D. Sharpe, in Appendices to Sir C. Fellows' works; by Grotefend, in vol. iv. of the *Zeitschrift für die Kunde des Morgenlands*; and by Cockerell in the *Journal des Savans*, April, 1841. [L. S.]

COIN OF LYCIA.

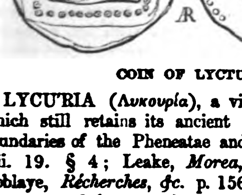
LYCO or LYCON, a small town of Hispania Baetica, mentioned only by Livy (xxxvii. 47). [P. S.]

LY'COA (Λυκόα: *Eth.* Λυκοάτης), a town of Arcadia in the district Maenalia, at the foot of Mt. Maenalus, with a temple of Artemis Lycoatis. It was in ruins in the time of Pausanias, and is represented by the *Paleokastron* between *Arachova* and *Karteroli.* (Paus. viii. 3. § 4, 36. § 7; Steph. B. *s. v.*; Leake, *Morea*, vol. ii. p. 52; Boblaye, *Récherches, &c.* p. 171; Ross, *Reisen im Peloponnes*, p. 120; Curtius, *Peloponnesos*, vol. i. p. 358.) There was another Lycoa not far from the Alpheius, near its junction with the Lusius or Gortynius, at the foot of Mt. Lycaeus. (Pol. xvi. 17.) It has been conjectured that the proper name of the latter of these towns was Lycaea, since Pausanias (viii. 27. § 4) speaks of the Lycaeatae (Λυκαιᾶται) as a people in the district of Cynuria, and Stephanus mentions a town Lycaea (Λύκαια). (Leake, *Morea*, vol. ii. p. 304.)

LYCO'NE (Λυκώνη), a mountain of Argolis, on the road from Argos to Tegea. (Paus. ii. 24. § 6.) [See Vol. I. p. 201, b.]

LYCO'POLIS (ἡ Λύκων πόλις, Ptol. iv. 5. § 63; Steph. B. *s. v.*; Strab. xvii. p. 813 · Lycon. Plin. v. 9. s. 11; Lyco, *Itin. Anton.* p. 157: *Eth.* Λυκοπολίτης), the name of two cities in Aegypt.

1. In the Thebaid, the capital of the nome Lycopolites, SE. of Hermopolis, in lat. 27° 10′ 14″ N.: the modern *E' Syout.* It was seated on the western bank of the Nile. The shield of a king named Recamai, who reigned in Upper Egypt, probably during the shepherd dynasty in the Lower Country, has been discovered here. (Rosellini, *Mon. Civ.* i. 81.) Lycopolis has no remarkable ruins, but in the excavated chambers of the adjacent rocks are found mummies of wolves, confirming the origin of its name, as well as a tradition preserved by Diodorus (ii. 88; comp. Aelian. *Hist. An.* x. 28), to the effect that an Aethiopian army, invading Aegypt, was repelled beyond the city of Elephantine by herds of wolves. Osiris was worshipped under the symbol of a wolf at Lycopolis: he having, according to a myth, come from the shades under that form, to aid Isis and Horus in their combat with Typhon. (Champollion, *Descript. de l'Egypte*, vol. i. p. 276; Jollois, *Egypte*, vol. ii. ch. 13.)



2. The Deltaic Lycopolis (Λυκούπολις, Strab. xvii. p. 802; Steph. B. *s. v.*), was an inconsiderable town in the Sebennytic nome, in the neighbourhood of Mendes, and, from its appellation, apparently founded by a colony of Osirian priests from Upper Egypt. The Deltaic Lycopolis was the birthplace of the Neo-Platonic philosopher Plotinus, A. D. 205. (Suidas, p. 3015.) [W. B. D.]

LYCOREIA. [DELPHI, p. 768.]

LYCOSU'RA (Λυκόσουρα: *Eth.* Λυκοσουρεύς), a town of Arcadia, in the district Parrhasia, at the foot of Mt. Lycaeus, and near the river Plataniston (*Gastritzi*), on the road from Megalopolis to Phigaleia. It is called by Pausanias the most ancient town in Greece, and is said to have been founded by Lycaon, the son of Pelasgus. It was in ruins in the time of Pausanias, since its inhabitants had been transplanted to Megalopolis upon the foundation of the latter. The remains of this town were first discovered by Dodwell, near the village of *Stala*, and have since been more accurately described by Ross. The ruins are called *Palaeokrambavos* or *Siderokastron*. (Paus. viii. 2. § 1, viii. 4. § 5, viii. 38. § 1; Dodwell, *Travels in Greece*, vol. ii. p. 395; Leake, *Morea* vol. ii. p. 312; Ross, *Reisen im Pelo-*

ponnes, p. 87; Curtius, *Peloponnesos*, vol. i. p. 295.)

LYCTUS, LYTTUS (Λύκτος, Λύττος: *Eth.* Λύκτιος, Λύττιος, Ptol. iii. 17. § 10), one of the most considerable cities in Crete, which appears in the Homeric catalogue. (*Il.* ii. 647, xvii. 611.) According to the Hesiodic Theogony (*Theog.* 477), Rhea gave birth to Zeus in a cave of Mt. Aegaeon, near Lyctus. The inhabitants of this ancient Doric city called themselves colonists of Sparta (Arist. *Pol.* ii. 7), and the worship of Apollo appears to have prevailed there. (Callim. *Hymn. Apoll.* 33; comp. Müller, *Dorians*, vol. i. pp. 141, 227, trans.) In B. C. 344, Phalaecus the Phocian assisted the Cnossians against their neighbours the Lyctians, and took the city of Lyctus, from which he was driven out by Archidamus, king of Sparta. (Diod. xvi. 62.) The Lyctians, at a still later period, were engaged in frequent hostilities with Cnossus, and succeeded in creating a formidable party in the island against that city. The Cnossians, taking advantage of their absence on a distant expedition, surprised Lyctus, and utterly destroyed it. The citizens, on their return, abandoned it, and found refuge at Lampa. Polybius (iv. 53, 54), on this occasion, bears testimony to the high character of the Lyctians, as compared with their countrymen. They afterwards recovered their city by the aid of the Gortynians, who gave them a place called Diatonium, which they had taken from the Cnossians. (Polyb. xxiii. 15, xxiv. 53.) Lyctus was sacked by Metellus at the Roman conquest (Liv. *Epit.* xcix.; Flor. iii. 7), but was existing in the time of Strabo (x. p. 479) at a distance of 80 stadia from the Libyan sea. (Strab. p. 476; comp. Steph. B. *s. v.*; Scyl. p. 18; Plin. iv. 12; Hesych. *s. v.* Καρνησσόπολις; Hierocl.) The site still bears the name of *Lýtto*, where ancient remains are now found. (Pashley, *Trav.* vol. i. p. 269.) In the 16th century, the Venetian MS. (*Mus. Class. Ant.* vol. ii. p. 274) describes the walls of the ancient city, with circular bastions, and other fortifications, as existing upon a lofty mountain, nearly in the centre of the island. Numerous vestiges of ancient structures, tombs, and broken marbles, are seen, as well as an immense arch of an aqueduct, by which the water was carried across a deep valley by means of a large marble channel. The town of ARSINOE and the harbour of CHERSONESUS are assigned to Lyctus. The type on its coins is usually an eagle flying, with the epigraph ΛΥΤΤΙΩΝ. (Eckhel, vol. ii. p. 316; Höck, *Kreta*, vol. i. pp. 13, 408, vol. ii. pp. 431, 446, vol. iii. pp. 430, 465, 508.) [E. B. J.]

COIN OF LYCTUS.

LYCU'RIA (Λυκουρία), a village in Arcadia, which still retains its ancient name, marked the boundaries of the Pheneatae and Cleitorii. (Paus. viii. 19. § 4; Leake, *Morea*, vol. iii. p. 143; Boblaye, *Récherches*, &c. p. 156; Curtius, *Peloponnesos*, vol. i. p. 198.)

LYCUS (Λύκος), is the name of a great many rivers, especially in Asia, and seems to have originated in the impression made upon the mind of the beholder by a torrent rushing down the side of a hill, which suggested the idea of a wolf rushing at his prey. The following rivers of this name occur in Asia Minor:—

1. The Lycus of Bithynia: it flows in the east of Bithynia in a western direction, and empties itself into the Euxine a little to the south of Heracleia Pontica, which was twenty stadia distant from it. The breadth of the river is stated to have been two plethra, and the plain near its mouth bore the name of Campus Lycaeus. (Scylax, p. 34; Orph. *Argon.* 720; Arrian, *Peripl.* p. 14; Anonym. *Peripl.* p. 3; Xenoph. *Anab.* vi. 2. § 3; Ov. *Epist. ex Pont.* x. 47; Memnon, *ap. Phot.* 51; Plin. vi. 1, who erroneously states that Heracleia was situated on (appositum) the river.)

2. The Lycus of Cilicia is mentioned only by Pliny (v. 22) as flowing between the Pyramus and Pinarus.

3. The Lycus of Lydia was a tributary of the Hermus, flowing in a south-western direction by the town of Thyatira: whether it emptied itself directly into the Hermus, or only after its juncture with the Hyllus, is uncertain. (Plin. v. 31; comp. Wheler, vol. i. p. 253; P. Lucas, *Troisieme Voyage*, vol. i. p. 139, who, however, confounds the Lycus with the Hermus.)

4. The Lycus of Phrygia, now called *Tchoruk-Su*, is a tributary of the Maeander, which it joins a few miles south of Tripolis. It had its sources in the eastern parts of Mount Cadmus (Strab. xii. p. 578), not far from those of the Maeander itself, and flowed in a western direction towards Colossae, near which place it disappeared in a chasm of the earth; after a distance of five stadia, however, its waters reappeared, and, after flowing close by Laodiceia, it discharged itself into the Maeander. (Herod. vii. 30; Plin. v. 29; Ptol. v. 2. § 8; Hamilton, *Researches*, vol. i. p. 508, &c., and *Journal of the Royal Geogr. Soc.* vii. p. 60, who re-discovered the chasm in which the Lycus disappears, amid the ruins near CHONAS.)

5. Pontus contained two rivers of this name:— (*a.*) A tributary of the Iris in the west, is now called *Kulei Hissar*. It has its sources in the hills of Lesser Armenia, and, after flowing for some time in a western direction, it turns towards the north, passing through Nicopolis, and emptying itself into the Iris at Magnopolis. The Lycus is almost as important a river as the Iris itself (Strab. xi. p. 529, xii. pp. 547, 556; Plut. *Lucul.* 15; Plin. vi. 3, 4; Ov. *Epist. ex Pont.* iv. 10, 47; Hierocl. p. 703; *Act. Martyr.* vol. iii. Jul. p. 46). (*b.*) A tributary of the Acampsis or Apsorrhos, in the eastern part of Pontus, and is believed to answer to the modern *Gorgoro*. (Ptol. v. 6. § 7.)

6. According to Curtius (iii. 1), the river Marsyas, which flowed through the town of Celaneae, changed its name into Lycus at the point where it rushed out of the fortifications of the place. [L. S.]

LYCUS (Λύκος), a river of Assyria, also called Zabatus. [ZABATUS.]

LYCUS (Λύκος), a river of Syria, between ancient Byblus and Berytus. (Strab. xvi. p. 755; Plin. v. 20.) Although both these geographers mention the river Adonis as distinct from this, more to the north, between Palae-Byblus and Byblus, the two rivers have been sometimes confounded. Their

Wolf-river is plainly identical with the Dog-river of the present day (*Nahr-el-Kelb*), about 2 hours north of *Beyrût;* which derives its name, says Maundrell, from an idol in the form of a dog or wolf, which was worshipped, and is said to have pronounced oracles, at this place. It is remarkable for an ancient viaduct cut in the face of a rocky promontory immediately on the south of the stream, the work of Antoninus Pius, as a Latin inscription, copied by Maundrell, and still legible, records (*Journey*, March 17, pp. 35—37). Cuneiform inscriptions and figures resembling those found at *Behistun* [BAGISTANUS MONS] would seem to indicate that the Roman emperor did but repair the work of some Persian king. There are casts of the inscriptions and figures in the British Museum. [G. W.]

LYCUS (Λύκος), a river of Sarmatia, which flows through the country of the Thyssagetae, and discharges itself into the Palus Maeotis. (Herod. iv. 124.) Herodotus was so much in error about the position of the Maeotis, that it is difficult to make out his geography here. The Lycus has been identified with the LAGOUS of Pliny (vi. 7), or the upper course of the *Volga*. (Comp. Schafarik, *Slav. Alt.* vol. i. p. 499.) Rennell (*Geog. of Herod.* vol. i. p. 119) supposes it may be the *Medweditza*. It must be distinguished from the Lycus of Ptolemy (iii. 5. § 13), which is the modern *Kalmius*. (Schafarik, *l. c.*) [E. B. J.]

LYCUS (Λύκος, Ptol. v. 14. § 2), a river of Cyprus, W. of Amathus. At a little distance inland from *Capo delle Gatte* [CURIAS] are some salt marshes, which receive an arm of a river corresponding with the Lycus of Ptolemy. (Engel, *Kypros*, vol. i. 37.) [E. B. J.]

LYDDA. [DIOSPOLIS.]

LY'DIA (Λυδία: *Eth.* Λυδός, Lydus), a country in the western part of Asia Minor. Its boundaries varied at different times. Originally it was a small kingdom in the east of the Ionian colonies; but during the period of the Persian dominion it extended to the south as far as the river Maeander, and, perhaps, even to Mount Messogis, whence some writers speak of the Carian towns of Aromata, Tralles, Nysa, and Magnesia on the Maeander, as Lydian towns, and Strabo (xii. p. 577) mentions the Maeander as the frontier between Lydia and Caria. To the east it extended as far as the river Lycus, so as to embrace a portion of Phrygia. In the time of Croesus, the kingdom of Lydia embraced the whole of Asia Minor between the Aegean and the river Halys, with the exception of Cilicia and Lycia. The limits of Lydia during the Roman period are more definitely fixed; for it bordered in the north on Mysia, from which it was separated near the coast by the river Hermus, and in the inland parts by the range of Mount Temnus; to the east it bordered on Phrygia, and to the south on Caria, from which it was separated by Mount Messogis. To the west it was washed by the Aegean (Plin. v. 30; Strab. i. p. 58, ii. p. 130, xii. pp. 572, 577, &c.), whence it is evident that it embraced the modern province of *Sarukhan* and the northern part of *Sighla*. This extent of country, however, includes also Ionia, or the coast country between the mouth of the Hermus and that of the Maeander, which was, properly speaking, no part of Lydia. [IONIA.]

1. *Physical Features of Lydia.*—In the southern and western parts Lydia was a mountainous country, being bounded on the south by the MESSOGIS, and traversed by the range of TMOLUS, which runs parallel to it, and includes the valley of the Caÿstrus. In the western parts we have, as continuations of Tmolus, Mounts DRACON and OLYMPUS, in the north of which rises Mount SIPYLUS. The extensive plains and valleys between these heights are traversed in a western direction by the rivers CAYSTRUS and HERMUS, and their numerous tributaries. The whole country was one of the most fertile in the world, even the sides of the mountains admitting of cultivation; its climate was mild and healthy, though the country has at all times been visited by severe earthquakes. (Xenoph. *Cyrop* vi. 2. § 21; Strab. i. p. 58.) Its most important productions were an excellent kind of wine, saffron, and gold. The accounts of the ancients about the quantity of gold found in Lydia, from which Croesus was believed to have derived his wealth, are no doubt exaggerated, for in later times the sand of the river Pactolus contained no gold at all, and the proceeds of the gold mines of Mount Tmolus were so small as scarcely to pay for the labour of working them. (Strab. xiii. p. 591.) The plains about the Hermus and Caystrus were the most fertile parts of the country, if we except the coast districts of Ionia. The most celebrated of these plains and valleys bore distinct names, as the CILBIANIAN, the CAYSTRIAN, the HYRCANIAN; and the CATACECAUMENE in the north east. Some of these plains also contained lakes of considerable extent, the most important of which are the GYGAEA LACUS, on the north of the Hermus, and some smaller ones in the neighbourhood of Ephesus, which were particularly rich in fish. The capital of the country at all times was SARDES.

2. *Names and Inhabitants of the Country.*—In the Homeric poems the names Lycia and Lycians do not occur; but the people dwelling about Mount Tmolus and Lake Gygaea, that is the country afterwards called Lydia, bear the name Meones or Maeones (Μῄονες, *Il.* ii. 865, v. 43, x. 431), and are allied with the Trojans. The earliest author who mentions the name Lydians is the lyric poet Mimnermus (*Fragm.* 14, ed. Bergk), whose native city of Colophon was conquered by the Lydians. Herodotus (i. 7) states that the people originally called Meones afterwards adopted the name of Lydians, from Lydus the son of Atys: and he accordingly regards Lydians and Meonians as the same people. But some of the ancients, as we learn from Strabo (xii. p. 572, xiv. p. 679), considered them as two distinct races, — a view which is unquestionably the correct one, and has been adopted in modern times by Niebuhr and other inquirers. A change of name like that of Maeonians into Lydians alone suggests the idea of the former people being either subdued or expelled by the latter. When once the name Lydians had been established, it was applied indiscriminately to the nation that had been conquered by them as well as to the conquerors, and hence it happens that later writers use the name Lydians even when speaking of a time when there were no Lydians in the country, but only Maeonians. We shall first endeavour to show who the Maeonians were, and then proceed to the more difficult question about the Lydians and the time when they conquered the Maeonians. The Maeonians unquestionably belonged to the Indo-European stock of nations, or that branch of them which is generally called Tyrrhenian or Pelasgian, for these latter "inhabited Lesbos before the Greeks took possession of those islands (Strab. v. p. 221

xiii. p. 621), and, according to Menecrates the Elaean, the whole coast of Ionia, beginning from Mycale, and of Aeolis." (Niebuhr, *Hist. of Rome*, vol. i. p. 32.) They no doubt extended beyond the coast into the interior of the country. The existence of a Pelasgian population is probably also implied in the statement, that the most ancient royal dynasty of Lydia were Heracleidae, and that Lydus was a brother of Tyrrhenus. The Lydians, on the other hand, are expressly stated to have had nothing in common with the Pelasgians (Dionys. i. 30), and all we know of them points to more eastern countries as their original home. It is true that Herodotus connects the Heracleid dynasty with that of Assyria, but if any value can be attached to this statement at all, it refers only to the rulers; but it may be as unfounded as his belief that most of the Greek institutions had been derived from Egypt. The Lydians are described as a kindred people of the Carians and Mysians, and all three are said to have had one common ancestor as well as one common language and religion. (Herod. i. 171.) The Carians are the only one of these three nations that are mentioned by Homer. It is impossible to ascertain what country was originally inhabited by the Lydians, though it is reasonable to assume that they occupied some district near the Maeonians; and it is possible that the Phrygians, who are said to have migrated into Asia from Thrace, may have pressed upon the Lydians, and thus forced them to make conquests in the country of the Maeonians. The time when these conquests took place, and when the Maeonians were overpowered or expelled, is conjectured by Niebuhr (*Lect. on Anc. Hist.* vol. i. p. 87) to have been the time when the Heracleid dynasty was supplanted by that of the Mermnadae, who were real Lydians. This would place the conquest of Maeonia by the Lydians about the year B. C. 720. The Maeonians, however, after this, still maintained themselves in the country of the Upper Hermus, which continued to be called Maeonia; whence Ptolemy (v. 2. § 21) speaks of Maeonia as a part of Lydia. Pliny (v. 30) also speaks of the Maeonii as the inhabitants of a district between Philadelphia and Tralles, and Hierocles (p. 670) and other ecclesiastical writers mention there a small town called Maeonia, which Mr. Hamilton (*Researches*, vol. ii. p. 139, &c.) is inclined to identify with the ruins of *Megne*, about five miles west of *Sandal*. To what branch of the human family the Lydians belonged is a question which cannot be answered, any more than that about their original seats; all the Lydian words which have been transmitted to us are quite foreign to the Greek, and their kinsmen, the Carians, are described as a people speaking a barbarous language.

3. *Institutions and Customs.*—Although the Lydians must be regarded as barbarians, and although they were different from the Greeks both in their language and in their religion, yet they were capable, like some other Asiatic nations, of adopting or developing institutions resembling those of the Greeks, though in a lesser degree than the Carians and Lycians, for the Lydians always lived under a monarchy, and never rose to free political institutions. They and the Carians were both gifted nations; they cultivated the arts, and were in many respects little inferior to the Greeks. Previous to their conquest by the Persians, they were an industrious, brave, and warlike people, and their cavalry was regarded as the best at that time. (Herod. i. 79; Mimnerm. *l. c.*) Cyrus purposely crushed their warlike spirit, forbade them the use of arms, and caused them to practice dancing and singing, instead of cultivating the arts of war. (Herod. i. 154; Justin, i. 8.) Their subsequent partiality to music was probably the reason why the Greeks ascribed to them the invention of gymnastic games. (Herod. i. 94.) The mode of life thus forced upon them by their conquerors gradually led them to that degree of effeminacy for which they were afterwards so notorious. Their commercial industry, however, continued under the Persian rule, and was a source of great prosperity. (Herod. i. 14, 25, 51, &c.) In their manners the Lydians differed but little from the Greeks, though their civilisation was inferior, as is manifest from the fact of their daughters generally gaining their dowries by public prostitution, without thereby injuring their reputation. (Herod. i. 93.) The moral character of the Lydian women necessarily suffered from such a custom, and it cannot be matter of surprise that ancient Greek authors speak of them with contempt. (Strab. xi. p. 533, xiii. p. 627.) As to the religion of the Lydians we know very little: their chief divinity appears to have been Cybele, but they also worshipped Artemis and Bacchus (Athen. xiv. p. 636; Dionys. Perieg. 842), and the phallus worship seems to have been universal, whence we still find enormous phalli on nearly all the Lydian tombs. (Hamilton's *Researches*, vol. 1. p. 145.) The Lydians are said to have been the first to establish inns for travellers, and to coin money. (Herod. i. 94.) The Lydian coins display Greek art in its highest perfection; they have no inscriptions, but are only adorned with the figure of a lion, which was the talisman of Sardes. We do not know that the Lydians had any alphabet or literature of their own: the want of these things can scarcely have been felt, for the people must at an early period have become familiar with the language and literature of their Greek neighbours.

4. *History.*—The Greeks possessed several works on the history of Lydia, and one of them was the production of Xanthus, a native of Sardes, the capital of Lydia; but all have perished with the exception of a few insignificant fragments. If we had the work of Xanthus, we should no doubt be well informed on various points on which we can now only form conjectures. As it is, we owe nearly all our knowledge of Lydian history to Herodotus. According to him (i. 7) Lydia was successively governed by three dynasties. The first began with Lydus, the son of Atys, but the number of its kings is not mentioned. The second dynasty was that of the Heracleidae, beginning with Agron, and ending with Candaules, whom the Greeks called Myrsilus. The commencement of the Heracleid dynasty may be dated about B. C. 1200; they are connected in the legend in Herodotus with the founder of Nineveh, which, according to Niebuhr, means either that they were actually descended from an Assyrian family, or that the Heracleid dynasty submitted to the supremacy of the king of Nineveh, and thus connected itself with the race of Ninus and Belus. The Heracleids maintained themselves on the throne of Lydia, in unbroken succession, for a period of 505 years. The third dynasty, or that of the Mermnadae, probably the first really Lydian rulers, commenced their reign, according to some, in B. C. 713 or 716, and according to Eusebius, twenty-two years later. Gyges,

the first king of the Mermnad dynasty, who is said to have murdered Candaules, is an entirely mythical personage, at least the story which Herodotus relates about him is nothing but a popular tradition. He reigned until B.C. 678, and conquered several of the adjacent countries, such as a great part of Mysia and the shores of the Hellespont, and annexed to his dominions the cities of Colophon and Magnesia, which had until then been quite independent of both the Maeonians and the Lydians. Gyges was succeeded by Ardys, who reigned from B.C. 678 to 629, and, continuing the conquests of his predecessor, made himself master of Priene. His reign, however, was disturbed by the invasion of his kingdom by the Cimmerians and Treres. He was succeeded by Sadyattes, of whom nothing is recorded except that he occupied the throne for a period of twelve years, from B.C. 629 to 617. His successor Alyattes, from B.C. 617 to 560, expelled the Cimmerians from Asia Minor, and conquered most of the Ionian cities. In the east he extended his dominion as far as the river Halys, where he came in contact with Cyaxares the Mede. His successor Croesus, from B.C. 560 to 546, extended his conquests so far as to embrace the whole peninsula of Asia Minor, in which the Lycians and Cilicians alone successfully resisted him. He governed his vast dominions with justice and moderation, and his yoke was scarcely felt by the conquered nations. But as both Lydia and the Persian monarchy were conquering states, and separated from each other only by the river Halys, a conflict was unavoidable, and the kingdom of Lydia was conquered by Cyrus. The detail of these occurrences is so well known that it does not require to be repeated here. Lydia became annexed to the Persian empire. We have already noticed the measures adopted by Cyrus to deprive the Lydians of their warlike character; but as their country was always considered the most valuable portion of Asia Minor, Darius, in the division of his empire, made Lydia and some small tribes, apparently of Maeonian origin, together with the Mysians, the second satrapy, and demanded from it an annual tribute for the royal treasury of 500 talents. (Herod. iii. 90.) Sardes now became the residence of a Persian satrap, who seems to have ranked higher than the other governors of provinces. Afterwards Lydia shared the fate of all the other Asiatic countries, and more and more lost its nationality, so that in the time of Strabo (xiii. p. 631) even the language of the Lydians had entirely disappeared, the Greek having taken its place. After the death of Alexander, Lydia was subject for a time to Antigonus; then to Achaeus, who set himself up as king at Sardes, but was afterwards conquered and put to death by Antiochus. (Polyb. v. 57.) After the defeat of Antiochus by the Romans, Lydia was annexed by them to the kingdom of Eumenes. (Liv. xxxviii. 39.) At a still later period it formed part of the proconsular province of Asia (Plin. v. 30), and continued to retain its name through all the vicissitudes of the Byzantine empire, until finally it fell under the dominion of the Turks. (Comp. Th. Menke, *Lydiaca, Dissertatio Ethnographica*, Berlin, 1844, 8vo.; Cramer, *Asia Minor*, vol. i. p. 413, &c.; Forbiger, *Handbuch der Alten Geogr.* vol. ii. p. 167, &c.; Clinton, *Fasti Hell.* Append. p. 361, &c., 3rd edit.; Niebuhr, *Lectures on Ancient History*, vol. i. p. 82, &c.) [L. S.]

LY'DIAS. [LUDIAS.]

LY'GII, LU'GII, or LI'GII (Λούγιοι, Λούιοι, Λύγιοι), is the general name for a number of small tribes in the north-east of Germany, all of which belonged to the Suevi. (Strab. vii. p. 290; Ptol. ii. 11. § 18; Dion Cass. lxvii. 5; Tac. *Germ.* 43, *Ann.* xii. 29, 30.) The ancients speak of them as a German nation, but there can be little doubt that, properly speaking, they were Slavonians, who had been subdued by the Suevi, and had gradually become united and amalgamated with them. Their name contains the root *lug*, which in the old German signifies a wood or marsh, and still has the same meaning in the Slavonic; it seems, therefore, to be descriptive of the nation dwelling in the plains of the Vistula and the Oder. The Lygii are first mentioned in history as belonging to the empire of Maroboduus, when they were united with the Marcomanni and Hermunduri. When the Quadi rose against king Vannius, in A. D. 50, the Lygii and Hermunduri were still united, and opposed the influence of the Romans in Germany. (Tac. *Ann. l. c.*) In the reign of Domitian, about A. D. 84, they made war on the Quadi, their neighbours, who in vain sought the protection of the Romans. (Dion Cass. *l. c.*) After this time the Lygii disappear from history, and it is possible that they may have become lost among the Goths. The different Lygian tribes, which are mentioned by Tacitus (Arii, Helvecones, Manimi, Elysii or Helisii, and Naharvali), seem to have been united among one another by a common worship, the principal seat of which was among the Naharvali. The name of their two common gods was Alci, who were worshipped without images; and Tacitus observes that their mode of worship was free from all foreign admixture. Ptolemy mentions, as tribes of the Lygii, the Omanni, Duni, and Buri, who are either not noticed by Tacitus at all, or are classed with other tribes. (Comp. Wilhelm, *Germanien*, p. 242, &c.; Zeuss, *die Deutschen*, p. 124; Latham, on *Tacit. Germania*, p. 158.) [L. S.]

LYGOS. [CONSTANTINOPOLIS, p. 257.]

LYNCESTIS (Λυγκηστίς, Strab. vii. p. 326; Ptol. iii. 13. § 33), the country of the LYNCESTAE (Λυγκηστία, Thuc. ii. 99, iv. 83, 124; Strab. vii. pp. 323, 326), once a small independent kingdom, and afterwards a province of the Macedonian monarchy. This district was situated to the S. of the Pelagones, and between that people, and the Eordaei. It was watered by the Erigon, and lay in the centre of the Egnatian Way, which connected Rome, Constantinople, and Jerusalem. The pass which separated Lyncestis from Eordaea, where Philip made his unsuccessful stand against the Romans, is described by Polybius (xviii. 6) as αἱ εἰς τὴν Ἐορδαίαν ὑπερβολαί,—and Thucydides (iv. 83) calls a defile in the same mountains ἡ ἐσβολὴ τῆς Λύγκου, in relating the attempt of Perdiccas against Lyncestis, which ended in a separate negotiation between his ally Brasidas and Arrhibaeus king of the Lyncestae. (Thuc. iv. 83.) It was by the same pass in the following year that Brasidas effected his skilful and daring retreat from the united forces of the Lyncestae and Illyrians. (Thuc. iv. 124.)

According to Strabo (vii. p. 326), Irrha, the daughter of Arrhabaeus (as he writes the name), was mother of Eurydice, who married Amyntas, father of Philip. Through this connection Lyncestis may have become annexed to Macedonia. The geography of this district is well illustrated by the operations of the consul Sulpicius against Philip, in the campaign of B.C. 200. (Liv. xxxi. 33.) From the narrative of Livy, which was undoubtedly

extracted from Polybius, as well as from the Itineraries, it would appear that Lyncestis comprehended that part of Upper Macedonia now called *Filúrina*, and all the S. part of the basin of the ERIGON, with its branches, the BEVUS and OSPHAGUS. As it is stated that the first encampment of the Romans was at LYNCUS on the river Bevus, and as Lyncus is described as a town by Stephanus B. (though his description is evidently incorrect), it might be supposed that HERACLEIA, the chief town of this district, was sometimes called Lyncus, and that the camp of Sulpicius, was at Heracleia itself. But though the words "ad Lyncum stativa posuit prope flumen Bevum" (Liv. *l. c.*) seem to point to this identification, yet it is more likely that Lyncus is here used as synonymous with Lyncestis, as in two other passages of Livy (xxvi. 25, xxxii. 9), and in Thucydides (iv. 83, 124) and Plutarch. (*Flamin.* 4.)

At or near *Bánitza* are the mineral acidulous waters of Lyncestis, which were supposed by the ancients to possess intoxicating qualities. (Ov. *Met.* xv. 329; comp. Arist. *Meteor.* ii. 3; Theopomp. *ap. Plin.* ii. 103, xxxi. 2, *ap. Antig. Caryst.* 180, *ap. Sotion. de Flum.* p. 125; Vitruv. viii. 3; Sen. *Quaest. Nat.* iii. 20.) They were found by Dr. Brown (*Travels in Hungaria, Macedonia, Thessaly, &c. &c.*, Lond. 1673, p. 45) on the road from *Filúrina* to *Egri Budjá*. He calls the place *Eccisso Verbéni;* this, which sounds Wallachian, may possibly be a corruption of the name of the *Dervéni* or pass. (Leake, *Northern Greece*, vol. iii. pp. 305—318.) [E. B. J.]

LYRBE (Λύρβη: *Eth.* Λυρβείτης), a town of Pisidia, mentioned by the poet Dionysius. There are coins of this place belonging to the reign of Alexander Severus, and it occurs among the episcopal towns of Pamphylia in the Not. Eccles. It is clearly the same as the LYROPE (Λυρόπη) of Ptolemy, though he places the latter in Cilicia Tracheia. (Dionys. Per. 858; Hierocl. p. 682; Ptol. v. 5. § 9; Cramer, *Asia Minor*, vol. ii. p. 313.)

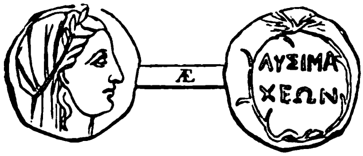
LYRCEIA or LYRCEIUM (ἡ Λύρκεια, Paus.; Λυρκεῖον, Soph. *ap. Strab.* vi. p. 271; in Strab. viii. p. 376, Λυκούργιον is a false reading for Λυρκεῖον, see Kramer's Strab. vol. ii. p. 186), a town in the Argeia, distant 60 stadia from Argos, and 60 stadia from Orneae, and situated on the road Climax, which ran from Argos in a north-westerly direction along the bed of the Inachus. [ARGOS, p. 201.] The town is said to have been originally called Lynceia, and to have obtained this name from Lynceus, who fled hither when all his other brothers, the sons of Aegyptus, were murdered by the daughters of Danaus on their wedding night. He gave intelligence of his safe arrival in this place to his faithful wife Hypermnestra, by holding up a torch; and she in like manner informed him of her safety by raising a torch from Larissa, the citadel of Argos. The name of the town was afterwards changed into Lyrceia from Lyrcus, a son of Abas. It was in ruins in the time of Pausanias. Its remains may still be seen on a small elevation on the left of the Inachus, at a little distance beyond *Sterna*, on the road to Argos. (Paus. ii. 25. §§ 4, 5; Apollod. ii. 1. § 5; Strab. *l. c.*; Ross, *Reisen im Peloponnes*, p. 138; Boblaye, *Récherches, &c.* p. 45; Leake, *Morea*, vol. ii. p. 414; Curtius, *Peloponnesos*, vol. ii. p. 415.)

LYRNAS. [LYRNESSUS, 2.]

LYRNESSUS (Λυρνησσός: *Eth.* Λυρνήσσιος or Λυρναῖος, Aeschyl. *Pers.* 324). 1. A town often mentioned by Homer (*Il.* ii. 690, xix. 60, xx. 92, 191), and described by Stephanus B. (*s. v.*) as one of the eleven towns in Troas; and Strabo (xiii. p. 612) mentions that it was situated in the territory of Thebe, but that afterwards it belonged to Adramyttium. Pliny (v. 32) places it on the river Evenus, near its sources. It was, like Thebe, a deserted place as early as the time of Strabo. (Comp. Strab. xiii. p. 584; Diod. v. 49.) About 4 miles from *Karavåren*, Sir C. Fellows (*Journ. of an Exc. in Asia Minor*, p. 39) found several columns and old walls of good masonry; which he is inclined to regard as remnants of the ancient Lyrnessus.

2. A place on the coast of Pamphylia, which was reported to have been founded there by the Trojan Cilicians, who transferred the name of the Trojan Lyrnessus to this new settlement. (Strab. xiv. 676.) The town is also mentioned by Pliny (v. 26), who places it on the Catarrhactes, and by Dionysius Periegetes (875). The Stadiasmus Maris Magni (§ 204) calls it Lyrnas, and, according to the French translators of Strabo (vol. iii. pt. 2. p. 363), its site is identical with the modern *Ernatia*.

3. An ancient name of the island of Tenedos. (Plin. v. 39.) [L. S.]



LY'ROPE. [LYRBE.]

LY'SIAS (Λυσιάς: *Eth.* Λυσιάδης), a small town in Phrygia, between Synnada and Prymnessus. (Strab. xii. p. 576; Plin. v. 29; Ptol. v. 2. § 23; Hierocl. p. 677.) No particulars are known about the place, nor is its site ascertained, but we still possess coins of Lysias. (Eckhel, *Doctr. Num.* iii. p. 167.) [L. S.]

LYSIMACHIA (Λυσιμαχία or Λυσιμάχεια) 1. A small town in Mysia, mentioned only by Pliny (v. 22), in whose time it no longer existed.

2. An important town on the north-western extremity of the Thracian Chersonesus, not far from the Sinus Melas. It was built by Lysimachus in B. C. 309, when he was preparing for the last struggle with his rivals; for the new city, being situated on the isthmus, commanded the road from Sestos to the north and the mainland of Thrace. In order to obtain inhabitants for his new city, Lysimachus destroyed the neighbouring town of Cardia, the birthplace of the historian Hieronymus. (Strab. ii. p. 134, vii. p. 331; Paus. i. 9. § 10; Diod xx. 29; Polyb. v. 34; Plin. *H. N.* iv. 18.) Lysimachus no doubt made Lysimachia the capital of his kingdom, and it must have rapidly risen to great splendour and prosperity. After his death the city fell under the dominion of Syria, and during the wars between Seleucus Callinicus and Ptolemy Euergetes it passed from the hands of the Syrians into those of the Egyptians. Whether these latter set the town free, or whether it emancipated itself, is uncertain, at any rate it entered into the relation of sympolity with the Aetolians. But as the Aetolians were not able to afford it the necessary protection, it was destroyed by the Thracians during the war of the Romans against Philip of Macedonia. Antiochus the Great restored the place, collected the scattered and enslaved inhabitants, and attracted colonists from all parts by liberal promises. (Liv. xxxiii. 38, 40; Diod. *Exc. de Virt. et Vit.* p. 574.) This restoration, however, appears to have been unsuccessful, and under the dominion of Rome it decayed more and more. The last time the place is mentioned under its ancient name, is in a passage of Ammianus Marcellinus (xxii. 8). The emperor Justinian restored it and surrounded it with strong fortifications

Procop. *de Aed.* iv. 10), and after that time it is spoken of only under the name of Hexamilium (Ἑξαμίλιον; Symeon, *Logoth.* p. 408). The place now occupying the place of Lysimachia, *Ecsemil*, derives its name from the Justinianean fortress, though the ruins of the ancient place are more numerous in the neighbouring village of *Baular*. [L. S.]

COIN OF LYSIMACHIA IN THRACE.

LYSIMA'CHIA (Λυσιμαχία: *Eth.* Λυσιμαχεύς: *Papadhates*), a town of Aetolia, situated upon the southern shore of the lake formerly called Hyria or Hydra, and subsequently Lysimachia, after this town. [Respecting the lake, see AETOLIA, p. 64, a.] The town was probably founded by Arsinoë, and named after her first husband Lysimachus, since we know that she enlarged the neighbouring town of Conope, and called it Arsinoë after herself. [CONOPE.] The position of the town is determined by the statement of Strabo that it lay between Pleuron and Conope, and by that of Livy, who places it on the line of march from Naupactus and Calydon to Stratus. Its site, therefore, corresponds to *Papadhates*, where Leake discovered some Hellenic remains. It was deserted in Strabo's time. (Strab. p. 460; Pol. v. 7; Liv. xxxvi. 11; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. i. pp. 122, 153.)

LYSIMELEIA. [SYRACUSAE.]

LYSINOE (Λυσινόη) or LYSINIA (Λυσινία, Ptol. v. 5. § 5), a small town in the north of Pisidia, on the south of the Ascania Lacus, and west of Sagalassus. (Polyb. *Exc. de Leg.* 32; Liv. xxxviii. 15; Hierocl. p. 680, who calls it Lysenara, Λυσήναρα.) [L. S.]

LYSIS, a small river mentioned only by Livy (xxxviii. 15), which had its sources near the town of Lagos, in the west of Pisidia. [L. S.]

LYSTRA (Λύστρα ἡ, or τά), a town of Lycaonia or Isauria, which is mentioned by Pliny (v. 42: *Eth.* Lystreni) and Ptolemy (v. 4. § 12), and repeatedly in the New Testament History. (*Acts*, xiv. 8, 21; *Timoth.* iii. 11; comp. Hierocl. p. 675.) A bishop of Lystra was present at the Council of Chalcedon. Leake (*Asia Minor*, p. 102) is inclined to place the town at *Khatoun Seraï*, about 30 miles south of Iconium; but Hamilton (*Researches*, vol. ii. p. 313), with more appearance of probability, identifies its site with the ruins of *Kaadagh*, which are generally believed to be the remains of Derbe. [L. S.]

LYTARNIS, a promontory in Northern Europe, mentioned by Pliny (vi. 12. s. 14). His text makes the promontory of Lytarnis, at one and the same time, a portion of the Celtic country and the extremity of the Rhipaean range — the Rhipaean mountains being the *Uralian* — "extra eos" (*i. e.* the Scythians), "ultraque Aquilonis initia Hyperboreos aliqui posuere, pluribus in Europa dictos. Primum inde noscitur promontorium Celticae *Lytarnis*, fluvius Carambucis, ubi lassata cum siderum vi Riphaeorum montium deficiunt juga." In the eyes of the physical geographer, the extremity of the *Uralian* chain is either the island of *Nova Zembla* or the most northern portion of the district on the west of the sea of *Obi*,—the *Obi* being the Caramoucis. In the usual maps, however, the *Dwina* is the Carambucis, and *Nanin Noss*, on the east of the White Sea, the Lytarmis Prom. [R. G. L.]

LYTTUS. [LYCTUS.]

M.

MAACAH, BETH-MAACAH v. ABEL BETH-MAACAH (Μααχά, Βεθμααχά, Ἀβὲλ οἴκου Μααχά), a city of Palestine, placed by Eusebius and St. Jerome on the road between Eleutheropolis and Jerusalem, 8 miles from the former, the site of which was then marked by a village named Mechanum. It is clear, however, that the Abel Beth-Maacah of the sacred writers could not have been situated so far south. It is first mentioned in 2 *Samuel*, xx. 14, &c., as the city in which the rebel Sheba was besieged by Joab. From this passage, however, it may be gathered (1.) that Abel was not identical with Beth-Maacah, for the copula is inserted between the names ("unto Abel and unto Beth-Maacah"); (2.) that it was situated at the extremity of the land of Israel, for Joab "went through all the tribes of Israel" to come there. Abel then, which was, as "the wise woman" called it, "a city and a mother in Israel" (ver. 19), was so called from its contiguity to Beth-Maacah, (so Reland, *Palaestina*, p. 519); and this must have been situated near the northern frontier, for it is mentioned with Ijon and Dan, and Cinneroth and Naphthali (1 *Kings*, xv. 20), as one of the cities taken by Benhadad, king of Syria, from Baasha, king of Israel; and two centuries later it was one of the cities of Israel first occupied by Tiglath-Pileser, king of Assyria. (2 *Kings*, xv. 29.) Eusebius mentions three places named Abel:—(1) a village three miles from Philadelphia; (2) a city 12 miles east of Gadara; 3. another between Paneas and Damascus. (*Onomast. s. v.*) Reland justly remarks (*l. c.*) that if any one of these is to be taken as Abel of Beth-Maacah it must be the last-named; but that he is more disposed to look for it in Galilee, to the west or south of Paneas, rather than to the east or north, on the Damascus road. This view is perhaps confirmed by a comparison of 2 *Chron.* xvi. 4. with 1 *Kings*, xv. 20; the Abel Beth-Maacah of the latter being called Abel Maim, or "Abel of the Waters" in the latter, probably so named either from the sea of Cinneroth or from the sea of Galilee. Dr. Robinson suggests its identity with the modern village of *Âbil*, or *Îbel-el-Kamkh*, or *Âbil* or *Îbel-el-Hawa*, both situated in the *Merj 'Ayun*, which last name is certainly identical with the ancient Ijon, with which Abel Beth-Maacah is associated in 1 *Kings*, xv. 20. (Robinson, *Bib. Res.* vol. iii. pp. 346, n. 2. 347, n. 1., and Appendix, pp. 136, 137, n. 1.)

Maacah is used as an adjunct to Syria or Aram in 1 *Chron.* xix. 6, 7, but its situation is not defined. (Reland, *Palaestina*, p. 118.)

The existence of the Maacathites (Μαχαθί) on the east of Jordan, apparently between Bashan and Mount Hermon, contiguous to the Geshurites (*Deut.* iii. 14; *Josh.* xii. 5, xiii. 11, 13) intimates that another city or district of the name Maacah was situated in that quarter. [G. W.]

MAAGR-AMMUM (Μαάγραμμον, Ptol. vii. 4. § 10, viii. 28. § 5), a considerable town in the island of Taprobane or *Ceylon*. Ptolemy calls it a

metropolis. It is not now certain where it stood, but some have identified it with *Tamankadawe*. Some MSS. read Naagrammum, but Maagrammum must be correct, as its form shows its Sanscrit origin. Lassen has supposed it stood at the SE. end of the island, and that its ancient name was *Mahagráma*. [V.]

MAARATH, a city of Judah situated in the mountains, mentioned only in the list in the book of Joshua (xv. 59). Reland (*Palaest. s. v.* p. 879) suggests that a lofty mountain, Mardes, near the Dead Sea, may have derived its name from this city. [G. W.]

MAARSARES. [BABYLONIA, p. 362, a.]

MABOG. [HIERAPOLIS.]

MACAE (Μάκαι), a people of Arabia mentioned by Ptolemy (vi. 7. § 14), immediately within the *Persian Gulf*, as inhabiting the shores of the extensive bay of the Fish-eaters (Ἰχθυοφάγων κόλποι). They occupied apparently the western shore of *Cape Musseldom*, as Pliny (vi. 26) states that the width of the strait from the promontory of Carmania to the opposite shore and the Macae, is 50 miles. They were bounded on the east by the Naritae (Ναρεῖται) [EPIMARANITAE]. Mr. Forster considers the Macae of Ptolemy is a palpable contraction of the Naumachaei of Pliny, and that this tribe is recovered in the Jowaser Arabs, the most famous pirates of the *Persian Gulf*. (*Geog. of Arabia*, vol. ii. p. 225.) It is clear that the "Naumachaeorum promontorium" of Pliny (vi. 32) is identical with the modern *Cape Musseldom*, at which he places the Macae. (Comp. Strabo, p. 765.) He mentions a remarkable story in connection with this place: that Numenius, who had been appointed prefect of Mesena by King Antiochus, gained a naval victory over the Persians, and on the same day, on the tide receding, conquered them in a cavalry engagement, and erected on the same spot two trophies,—one to Neptune, the other to Jupiter. [G. W.]

MACAE (Μάκαι), one of the aboriginal tribes of the Regio Syrtica, on the N. Coast of Libya, on the river Cinyps, according to Herodotus, who describes their customs (iv. 175; comp. Scyl. p. 46; Diod. iii. 48; Plin. vi. 23, 26; Sil. iii 275; Ptol. iv. 3. § 27, calls them Μακαῖοι or Μάκαι, Συρτῖται). Polybius mentions Maccaei in the Carthaginian army. (Pol. iii. 33.) [P. S.]

MACALLA (Μάκαλλα), an ancient city of Bruttium, where, according to Lycophron, was the sepulchre of Philoctetes, to whom the inhabitants paid divine honours. (Lycophr. *Alex.* 927.) The author of the treatise *De Mirabilibus*, ascribed to Aristotle, mentions the same tradition, and adds that the hero had deposited there in the temple of Apollo Halius the bow and arrows of Hercules, which had, however, been removed by the Crotoniats to the temple of Apollo in their own city. We learn from this author that Macalla was in the territory of Crotona, about 120 stadia from that city; but its position cannot be determined. It was doubtless an Oenotrian town: at a later period all trace of it disappears. (Pseud.-Arist. *de Mirab.* 107; Steph. B. *s. v.*; Schol. *ad Lycophr. l. c.*) [E. H. B.]

MACANI'TAE. [MAURETANIA.]

MACARAS. [BRAGADAS.]

MACA'REAE (Μακαρέαι: *Eth.* Μακαρεύς), a town of Arcadia, in the district Parrhasia, 22 stadia from Megalopolis, on the road to Phigaleia, and 2 stadia from the Alpheius. It was in ruins in the time of Pausanias, as its inhabitants had been removed to Megalopolis upon the foundation of the latter. (Paus. viii. 3. § 3, viii. 27. § 4, viii. 36, § 9; Steph. B. *s. v.*)

MACA'RIA (Μακαρία, Ptol. v. 14. § 4), a town on the N. coast of Cyprus, E. of Ceryneia. (Engel, *Kypros*, vol. i. p. 83.) [E. B. J.]

MACA'RIA (Μακαρία), that is, "the blessed (island)," a name given by the poets to several islands, such as CYPRUS, LESBOS, and RHODES; but also occurs as a proper name of an island in the south of the Arabian gulf, a little to the north of the gulf of Adule. [L. S.]

MACATU'TAE (Μακατοῦται), a people in the extreme W. of Cyrenaica, on the border of the province of Africa, above the Velpi Montes. (Ptol. iv. 4. § 10.) [P. S.]

MACCHURE'BI. [MAURETANIA.]

MACCOCALINGAE. [CALINGAE.]

MACCU'RAE. [MAURETANIA.]

MACEDO'NIA (ἡ Μακεδονία), the name applied to the country occupied by the tribes dwelling northward of Thessaly, and Mt. Olympus, eastward of the chain by which Pindus is continued, and westward of the river Axius. The extent of country, indeed, to which the name is generally given, embraces later enlargements, but, in its narrowest sense, it was a very small country, with a peculiar population.

I. *Name, race, and original seats.*

The Macedonians (Μακεδόνες or Μακηδόνες), as they are called by all the ancient poets, and in the fragments of epic poetry, owed their name, as it was said, to an eponymous ancestor; according to some, this was Macednus, son of Lycaon, from whom the Arcadians were descended (Apollod. iii. 8. § 1), or Macedon, the brother of Magnes, or a son of Aeolus, according to Hesiod and Hellanicus (*ap. Const. Porph. de Them.* ii. 2; comp. Aelian. *H. A.* x. 48; Eustath. *ad Dion. P.* 247; Steph. B.). These, as well as the otherwise unsupported statement of Herodotus (i. 56), of the original identity of the Doric and Macednian (Macedonian) peoples, are merely various attempts to form a genealogical connection between this semi-barbarous people and the rest of the Hellenic race. In the later poets, they appear, sometimes, under the name of MACETAE (Sil. Ital. xiii. 878, xiv. 5, xvii, 414, 632: Stat. *Sil.* iv. 6. 106; Auson. *de Clar. Urb.* ii. 9; Gell, x. 3). And their country is called MACETIA (Μακετία, Hesych. *s. v.*; Eustath. *ad Dion. P. l. c.*).

In the fashion of wearing the mantle and arranging their hair, the Macedonians bore a great resemblance to the Illyrians (Strab. vii. p. 327), but the fact that their language was different (Polyb. xxviii. 8) contradicts the supposition of their Illyrian descent. It was also different from Greek, but in the Macedonian dialect there occur many grammatical forms which are commonly called Aeolic, together with many Arcadian and Thessalian words; and what perhaps is still more decisive, several words which, though not found in the Greek, have been preserved in the Latin language. (Comp. Müller, *Dorians*, vol. i. p. 3, trans.) The ancients were unanimous in rejecting them from the true Hellenic family, but they must not be confounded with the armed plunderers—Illyrians, Thracians, and Epirots, by whom they were surrounded, as they resemble more nearly the Thessalians, and other ruder members of the Grecian name.

These tribes, which differed as much in ancient

times as they do now, accordingly as they dwelt in mountain or plain, or in soil or climate more or less kindly, though distinguished from each other, by having substantive names of their own, acknowledged one common nationality. Finally, the various sections, such as the Elymiotae, Orestae, Lyncestae, and others, were swallowed up by those who were pre-eminently known as the Macedonians, who had their original centre at Aegae or Edessa. (Comp. Grote, *Hist. of Greece*, c. xxv.)

Macedonia in its proper sense, it will be seen, did not touch upon the sea, and must be distinguished into two parts,— UPPER MACEDONIA, inhabited by people about the W. range of mountains extending from the N. as far as Pindus, and LOWER MACEDONIA about the rivers which flow into the Axius, in the earlier times, not, however, extending as far as the Axius, but only to Pella. From this district, the Macedonians extended themselves, and partly repressed the original inhabitants. The whole of the sea-coast was occupied by other tribes who are mentioned by Thucydides (ii. 99) in his episode on the expedition of the Thracians against Macedonia. There is some little difficulty in harmonising his statements with those of Herodotus (viii. 138), as to the original series of occupants on the Thermaic gulf, anterior to the Macedonian conquests. So far as it can be made out, it would seem that in the seventh century B. C., the narrow strip between the Peneius and Haliacmon, was the original abode of the Pierian Thracians; N. of the Pierians, from the mouth of the Haliacmon to that of the Axius, dwelt the Bottiaeai, who, when they were expelled by the Macedonians, went to Chalcidice. Next followed the Paeonians, who occupied both banks of the Strymon, from its source down to the lake near its mouth, but were pushed away from the coast towards the interior. Mygdonia, the lower country E. of the Axius, about the Thermaic gulf, was, previously to the extension of the Macedonians, inhabited by Thracian Edonians. While Upper Macedonia never attained to any importance, Lower Macedonia has been famous in the history of the world. This was owing to the energy of the royal dynasty of Edessa, who called themselves Heracleids, and traced their descent to the Temenidae of Argos. Respecting this family, there were two legends; according to the one, the kings were descended from Caranus, and according to the other from Perdiccas: the latter tale which is given by Herodotus (viii. 137—139), bears much more the marks of a genuine local tradition, than the other which cannot be traced higher than Theopompus. (Dexippus *ap. Syncell.* p. 262.) After the legend of the foundation of the Macedonian kingdom, there is nothing but a long blank, until the reign of king Amyntas (about 520—500 B. C.), and his son Alexander (about 480 B. C.). Herodotus (*l. c.*; comp. Thuc. ii. 100) gives a list of five successive kings between the founder Perdiccas and Alexander — Perdiccas, Argaeus, Philippus, Aëropas, Alcetas, Amyntas, and Alexander, the contemporary, and to a certain extent ally, of Xerxes. During the reign of these two last princes, who were on friendly terms with the Peisistratidae, and afterwards with the emancipated Athenians, Macedonia becomes implicated in the affairs of Greece. (Herod. i. 59, v. 94, vii. 136.)

Many barbarous customs, such as that of tattooing, which prevailed among the Thracians and Illyrians, must have fallen into disuse at a very early period. Even the usage of the ancient Macedonians, that every person who had not killed an enemy, should wear some disgraceful badge, had been discontinued in the time of Aristotle. (*Pol.* vii. 2. § 6.) Yet at a very late date no one was permitted to lie down at table who had not slain a wild boar without the nets. (Hegesander, *ap. Athen.* i. p. 18.) On the other hand, a military disposition, personal valour, and a certain freedom of spirit, were the national characteristics of this people. Long before Philip organised his phalanx, the cavalry of Macedon was greatly celebrated, especially that of the highlands, as is shown by the tetradrachms of Alexander I. In smaller numbers they attacked the close array of the Thracians of Sitalces, relying on their skill in horsemanship, and on their defensive armour. (Thuc. ii. 100.) Teleutias the Spartan also admired the cavalry of Elimea (Xen. *Hell.* v. 2. § 41, v. 3. § 1); and in the days of the conquests of Asia, the custom remained that the king could not condemn any person without having first taken the voice of the people or of the army. (Polyb. v. 27; Q. Curt. vi. 8. § 25, vi. 9. § 34.)

II. *Macedonia in the historic period till the death of Alexander.*

This kingdom had acquired considerable power even before the outbreak of the Persian War, and Grecian refinement and civilisation must have gained considerable ground, when Alexander the Philhellene offered himself as a combatant at the Olympic games (Herod. v. 22; Justin. vii. 12), and honoured the poetry of Pindar (Solin. ix. 16). After that war Alexander and his son Perdiccas appear gradually to have extended their dominions, in consequence of the fall of the Persian power in Thrace, as far as the Strymon. Perdiccas from being the ally of Athens became her active enemy, and it was from his intrigues that all the difficulties of Athens on the Thracian coast arose. The faithless Perdiccas, was succeeded by his son Archelaus, who first established fortresses and roads in his dominions, and formed a Macedonian army (Thuc. ii. 100), and even intended to procure a navy (Solin. ix. 17), and had tragedies of Euripides acted at his court under the direction of that poet (Ael. *V. H.* ii. 21, xiii. 4), while his palace was adorned with paintings by Zeuxis (Ael. *V. H.* xiv. 17). In B. C. 399, Archelaus perished by a violent death (Diod. xiv. 37; Arist. *Pol.* v. 8, 10—13; Plat. *Alcibiad.* ii. p. 141, D.). A list of kings follows of whom we know little but the names. Orestes, son of Archelaus, a child, was placed upon the throne, under the guardianship of Aëropus. The latter, however, after about four years, made away with his ward, and reigned in his stead for two years; he then died of sickness, and was succeeded by his son Pausanias, who, after a reign of only one year, was assassinated and succeeded by Amyntas. (Diod. xiv. 84—89.) The power of Macedonia so declined with these frequent dethronements and assassinations of its kings, that Amyntas had to cede to Olynthus all the country about the Thermaic gulf. (Diod. xiv. 92, xv. 19.) Amyntas, who was dependant on, if not tributary to, Jason, the "tagus" of Thessaly, died nearly about the same time as that prince (Diod. xv. 60), and was succeeded by his youthful son Alexander. After a short reign of two years, B. C. 368, Alexander perished by assassination, the fate that so frequently befell the Macedonian kings. Eurydice, the widow of Amyntas, was left with her two younger children, Perdiccas, now a young man, and Philip, yet a youth; Ptolemaeus of

Alorus, one of the murderers of Alexander, was regent, and administered the affairs of the widowed queen, and those of her children, against Pausanias, a man of the royal lineage and a pretender to the throne. (Diod. xvi. 2; Aeschin. *Fals. Legat.* pp. 249, 250; Justin. vii. 6.) Iphicrates declared in favour of Eurydice, who would have been forced to yield the country to Pausanias, and acted so vigorously against him as to expel him from Macedonia and secure the sceptre to the family of Amyntas. (Corn. Nep. *Iphicrat.* 3.) When Philip succeeded his brother Perdiccas, slain in battle with the Illyrians, B. C. 360—359, no one could have foreseen the future conqueror of Chaeroneia, and the destroyer of Grecian liberties. In the very first year of his reign, though only 24 years old, he laid the foundations of the future greatness of a state which was then almost annihilated. His history, together with that of the other Macedonian kings, is given in the *Dictionary of Biography*. At his death Macedonia had already become a compact empire; its boundaries had been extended into Thrace as far as Perinthus; and the Greek coast and towns belonged to it, while Macedonian ascendancy was established from the coasts of the Propontis to those of the Ionian sea, and the Ambracian, Messenian, and Saronic gulfs. The empire of Alexander became a world-dominion. Macedonian settlements were planted almost everywhere, and Grecian manners diffused over the immense region extending from the Temple of Ammon in the Libyan Oasis, and from Alexandria on the western Delta of the Nile to the northern Alexandria on the Jaxartes.

III. *Later History till the Fall of the Empire.*

At the death of Alexander a new Macedonian kingdom arose with the dynasty of Antipater; after the murder of the king Philippus III. (Arrhidaeus) and Eurydice by the queen Olympias, Cassander the son of Antipater, after having murdered the king Alexander Aegus, and his mother, ascended the throne of Macedon; at his death his three sons, Philip, Antipater, and Alexander, successively occupied the throne, but their reigns were of short duration. Philip was carried off by sickness, Alexander was put to death by Demetrius Poliorcetes, and Antipater, who had fled for refuge to Lysimachus, was murdered by that prince. When the line of Cassander became extinct, the crown of Macedon was the prize for which the neighbouring sovereigns struggled, Lysimachus and Pyrrhus, kings of Thrace and Epeirus, with Demetrius, who still retained Athens and Thessaly, in turns, dispossessed each other of this disputed throne. Demetrius, however, at last overcame the other competitors; and at his death transmitted the kingdom to his son Antigonus, and the dynasty of the Antigonidae, after many vicissitudes, finally established their power. The three great irruptions of the Gauls, who made themselves masters of the N. parts, and were established in Thrace and Upper Macedonia, fell within this period. Antigonus Gonatas recovered the throne of desolated Macedonia; and now secured from the irruptions of the Gauls, and from foreign rivals, directed his policy against Greece, when the formation of the Aetolian, and yet more important Achaean league, gave rise to entirely new relations. Antigonus, in the latter part of his reign, had recourse to various means, and more especially to an alliance with the Aetolians, for the purpose of counterpoising the Achaeans. He died in his eightieth year, and was succeeded by his son Demetrius II., who waged war upon the Aetolians, now, however, supported by the Achaeans; and tried to suppress the growth of the latter, by favouring the tyrants of particular cities. The remainder of the reign of this prince is little more than a gap in history. Demetrius' son, Philip, was passed over, and his brother's son, Antigonus II. surnamed Doson, was raised to the throne. This king was occupied most of his time by the events in Greece, when a very remarkable revolution in Sparta, raised up a formidable enemy against the Achaeans; and so completely altered the relative position of affairs, that the Macedonians from having been opponents became allies of the Achaeans. Philippus V., a young, warlike, and popular prince, was the first to come into collision with Rome,—the war with the imperial city (B. C. 200—197), suddenly hurled the Macedonian power from its lofty pitch, and by laying the foundation of Roman dominion in the East, worked a change in almost all the political relations there. T. Quinctius Flamininus, by offering the magic spell of freedom, stripped Philip of his allies, and the battle of Cynoscephalae decided everything. Soon after, the freedom of Greece was solemnly proclaimed at the Isthmian games; but loud as the Greeks were in their triumph, this measure served only to transfer the supremacy of their country from Macedonia to Rome. On the 22nd of June, B. C. 168, the fate of Macedon was decided on the field of Pydna by her last king Perseus.

According to the system then pursued at Rome, the conquered kingdom of Macedonia, was not immediately converted into a province, but, by the famous edicts of Amphipolis issued by the authority of the Roman senate, the year after the conquest, was divided into four districts. By this decree (Liv. xlv. 29), the Macedonians were called free,—each city was to govern itself by magistrates annually chosen, and the Romans were to receive half the amount of tribute formerly paid to the kings, the distribution and collection of which was probably the principal business of the councils of the four regions. None but the people of the extreme frontiers towards the barbarians were allowed to defend themselves by arms, so that the military power was entirely Roman. In order to break up more effectually the national union, no person was allowed to contract marriage, or to purchase land or buildings but within his own region. They were permitted to smelt copper and iron, on paying half the tax which the kings had received; but the Romans reserved to themselves the right of working the mines of gold and silver, and of felling naval timber, as well as the importation of salt, which, as the Third Region only was to have the right of selling it to the Dardani, was probably made for the profits of the conquerors on the Thermaic gulf. No wonder, that after such a division, which tore the race in pieces, the Macedonians should compare their severance to the laceration and disjointing of an animal. (Liv. xlv. 30.)

This division into four districts did not last longer than eighteen years, but many tetradrachms of the first division of the tetrarchy coined at its capital, Amphipolis, are still extant. B. C. 149 Andriscus, calling himself Philip son of Perseus, reconquered all Macedonia (Liv. *Epit.* xlix), but was defeated and taken in the following year, by Q. Caecilius Metellus; after which the Macedonians were made tributary (Porphyr. *ap. Euseb. Chron.* p. 178), and the country was probably governed by a "praetor,"

like Achaia, after the destruction of Corinth, which occurred two years afterwards, B.C. 146. From that time to the reign of Augustus the Romans had the troublesome duty of defending Macedonia, against the people of Illyricum and Thrace; during that period, they established colonies at Philippi, Pella, Stobi, and Dium.

At the division of the provinces, Macedonia fell to the senate (Dion Cass. liii. 12; Strab. xvii. p. 840). Tiberius, united the provinces of Achaia and Macedonia to the imperial government of Moesia, in order to deliver them from the weight of the proconsular administration (Tac. *Ann.* 176—80, v. 10), and this continued till the time of Claudius (Suet. *Claud.* 25; Dion Cass. lx. 24). Afterwards it was again under a "propraetor," with the title "proconsul" (Orelli, *Inscr.* n. 1170 (Vespasian); n. 3851 (Caracalla), while mention often occurs of "legate" (Orelli, n. 3658) and "quaestores" (Orelli, nn. 822, 3144). Thessalonica, the most populous city in Macedonia, was the seat of government, and virtually the capital of Greece and Illyricum, as well as of Macedonia. Under Constantine, Macedonia, was one of the two governments of the praefecture of Illyricum, and consisted of six provinces, Achaea, Macedonia, Crete, Thessaly, Old Epirus, and New Epirus (Marquardt, *in Becker*, *Röm. Alterthüm*, vol. iii. pt. i. pp. 115—119). The ravages inflicted by the northern nations on the frontier provinces were so continual that the inhabitants of Thrace and Macedonia were greatly diminished, the uncultivated plains were traversed by armed bands of Sclavonians, who gradually settled in great numbers in Macedonia, while many mountainous districts, and most of the fortified places still remained in the possession of the Greeks, who were driven into the Chalcidic peninsula, or into the low grounds near the sea, where the marshes and rivers which intersect them, offered means of resistance; but the existence of the ancient race may be said to terminate with the reign of Heraclius. (Comp. Schafarik, *Slav. Alt.* vol. ii. pp. 153—164.) The emperors of Constantinople attempted to remedy the depopulation of their empire by transporting Asiatic colonies. Thus a colony of Persians was established on the banks of the Axius (*Vardar*) as early as the reign of Theophilus, A. D. 829—842, and it long continued to furnish recruits for a cohort of the imperial guard, which bore the name of Vardariots. In A. D. 1065 a colony of Uzes was settled in Macedonia, whose chiefs rose to the rank of senators, and filled high official situations at Constantinople (Scylitz. *ad calc. Cedreni*, p. 868; Zonar. vol. ii. p. 273; Ann. Comn. p. 195). Anna Comnena (pp. 109, 315) mentions colonies of Turks established near Achrida before the reign of her father (A. D. 1081). These and other nations were often included under the general name of Turks, and indeed most of them were descended from Turkish tribes. (Finlay, *Mediaeval Greece*, p. 31.)

IV. *Physical and Comparative Geography.*

The large space of country, which lies to the N. of the Cambunian chain, is in great part mountainous, occupied by lateral ridges or elevations, which connect themselves with the main line of Scardus. It also comprises three wide alluvial basins, or plains which are of great extent, and well adapted to cultivation; the northernmost of the three, contains the sources and early course of the Axius, now the plain of *Tettovo* or *Kalkandele*: the second is that of *Bitolia*, coinciding to a great extent, with that of ancient Pelagonia, wherein the Erigon flows towards the Axius; and the larger and more undulating basin of *Grevenà* and *Anaseltiza*, containing the Upper Haliacmon with its confluent streams. These plains, though of high level above the sea, are yet very fertile, each generally bounded by mountains, which rise precipitously to an alpine height, and each leaving only one cleft for drainage by a single river, the Axius, the Erigon, and the Haliacmon respectively. The fat rich land to the E. of Pindus and Scardus is described as forming a marked contrast with the light calcareous soil of the Albanian plains and valleys on the W. side (comp. Grote, *Hist. of Greece*, cxxv.).

Upper Macedonia was divided into Elimeia, Eordaea, Orestis and Lyncestis; of these subdivisions, Elimeia comprehended the modern districts of *Grevenà*, *Verija*, and *Tjersembá*; Eordaea those of *Budjá*, *Sarighiul*, and *'Ostrovo*; Orestis those of *Grámista*, *Anaselitza*, and *Kastoria*; and Lyncestis *Filúrina*, and all the S. part of the basin of the Erigon. These seem to have been all the districts which properly belonged to Upper Macedonia, the country to the N. as far as Illyricum to the W. and Thrace to the E. constituting Paeonia, a part of which (probably on the Upper Axius) was a separate kingdom as late as the reign of Cassander (Diod. xx. 19), but which in its widest sense was the great belt of interior country which covered on the N. and NE. both Upper and Lower Macedonia; the latter containing the maritime and central provinces, which were the earliest acquisition of the kings, namely, Pieria, Bottiaeis, Emathia and Mygdonia.

Pieria, or the district of *Katerina*, forms the slope of the range of mountains of which Olympus is the highest peak, and is separated from Magnesia on the S. by the Peneius (*Salamavría*). The real Emathia is in the interior of Macedonia, and did not in its proper sense extend towards the sea, from which it is separated by Pieria and part of the ancient Bottiaeis. Mygdonia comprehended the plains around *Saloníki*, together with the valleys of *Klisalí* and *Besikía*, extending westward to the Axius, and including the lake Balbe to the E. The name Chalcidice is applied to the whole of the great peninsula lying to the S. of the ridge of Mt. *Khortiátzi*.

An account of these subdivisions will be found under their different heads, with a list of the towns belonging to each.

Macedonia was traversed by the great military road — the Via Egnatia; this route has been already described [Vol. II. p. 36] as far as Heracleia Lyncestis, the first town on the confines of Illyricum: pursuing it from that point, the following are the stations up to Amphipolis, where it entered Thrace, properly so called: —

Heracleia.	
Cellae -	- *'Ostrovo.*
Edessa -	- *Vodhená.*
Pella -	- *Aláklisi.*
Mutatio Gephyra	- *Bridge of the Vardhári.*
Thessalonica -	- *Saloníki.*
Melissurgis -	- *Melissurgús.*
Apollonia -	- *Pollina.*
Amphipolis -	- *Neokhóirio.*

From the Via Egnatia several roads branched off to the N. and S., the latter leading to the S. provinces of Macedonia and to Thessaly; the former into Paeonia, Dardania, Moesia, and as far as the Danube.

The Peutinger Table furnishes the following route from Pella to Larissa in Thessaly: —

Pella.		
Beroea	- -	*Verria.*
Ascordus	- -	"
Arulos	- -	"
Bada	- -	"
Anamo	- -	"
Hatera	- -	*Katerina.*
Bium (Dium)	- -	*Malathria.*
Sabatium	- -	"
Stenas (Tempe)	-	*Lykóstomo.*
Olympum	- -	"

Two roads led to Stobi in Paeonia, the one from Heracleia Lyncestis, the other from Thessalonica. According to the Table, the stations of the former are —

Heracleia.
Ceramie.
Euristo (Andaristus).
Stobi.

Of the latter —

Thessalonica.		
Gallicum	- -	*Gallikó.*
Tauriana	- -	*Doïrán.*
Idomenia	- -	"
Stonas (Stena)	-	*Demírkapi.*
Antigonia	- -	"
Stobi	- -	"

From Stobi again two roads struck off to the NW. and NE. to Scopi (*Skópia*), at the "débouché" from the Illyrian mountains into the plains of Paeonia and the Upper Axius, and to Serdica: —

Stobi.		
Tranupara.		
Astibon	- -	*Istib.*
Pautalia	- -	*Ghiustendil.*
Aelea	- -	"

(Cousinéry, *Voyage dans la Macedoine*, 2 vols. Paris, 1831; Leake, *Travels in North Greece*, 4 vols. London, 1835; Ami Boué, *La Turquie d'Europe*, 4 vols. Paris, 1840; Griesbach, *Reise durch Rumelien und Nach Brusa*, 2 vols. Göttingen, 1841; Jos. Müller, *Albanien Rumelien, und die Osterreichisch-Montenegrische Grenze*, Prag. 1844; Kiepert, *General-Karte der Europaischen Turkei*, 4 parts, Berlin, 1853; Niebuhr, *Lect. on Anc. Ethnog. and Geog.* vol. i. pp. 275, 297; *Hahn Albanesische Studien*, Jena 1854.)

Though the Macedonians were regarded by the Greeks as a semi-barbarous people, the execution of their coins would not lead to that inference, as they are fine and striking pieces, boldly executed in high, sharp, relief. The coin of Alexander I. of Macedon, B.C. 500, is the first known monarchic coin in the world that can be identified with a written name, and to which, consequently, a positive date can be assigned. It has for "type" a Macedonian warrior leading a horse; he bears two lances, and wears the Macedonian hat. The coins of the princes who followed him exhibit the steps towards perfection very graphically.

With Philip II. a new era in the Macedonian coinage commences. At this period the coins had become perfect on both sides, that is, had a "reverse" equal in execution to the "obverse." During his reign the gold mines at Mt. Pangaeus were worked. He issued a large gold coinage, the pieces of which went by his name, and were put forth in such abundance as to circulate throughout all Greece. The series of coins, from Philip II. to the extinction of the monarchy, exhibit the finest period of Greek monetary art. (Comp. H. N. Humphrey's *Ancient Coins and Medals*, London, 1850, pp. 58—65.) During the tetrarchy there are numerous existing coins, evidently struck at Amphipolis, bearing the head of the local deity Artemis Tauropolos, with an "obverse" representing the common Macedonian "type," the club of Hercules within a garland of oak, and the legend Μακεδόνων πρώτης. (Comp. Eckhel, vol. ii. p. 61, foll.) [E. B. J.]

COIN OF MACEDONIA.

MACELLA or MAGELLA (Μάκελλα: *Macellaro*), a town in the NW. of Sicily, which is noticed by Polybius (i. 24) as being taken by the Roman consuls, C. Duillius and Cn. Cornelius, as they returned after raising the siege of Segesta, in B.C. 260. It is interesting to find the same circumstance noticed, and the name of this otherwise obscure town mentioned, in the celebrated inscription on the rostral column which records the exploits of C. Duillius. (Orell. *Inscr.* 549.) It would seem from Diodorus, that at an earlier period of the same war, the Romans had besieged Macella without success, which may account for the importance thus attached to it. (Diod. xxiii. 4. p. 502.) The passage of Polybius in reality affords no proof of the position of Macella, though it has been generally received as an evidence that it was situated in the neighbourhood of Segesta and Panormus. But as we find a town still called *Macellaro*, in a strong position on a hill about 15 miles E. of Segesta, it is probable that this may occupy the site of Macella. The only other mention of it in history occurs in the Second Punic War (B.C. 211), among the towns which revolted to the Carthaginians after the departure of Marcellus from Sicily. (Liv. xxvi. 21.) As its name is here associated with those of Hybla and Murgantia, towns situated in quite another part of the island, Cluverius supposes that this must be a distinct town from the Macella of Polybius; but there is clearly no sufficient reason for this assumption. The name is written in the old editions of Livy, Magella; and we find the Magellini enumerated by Pliny among the stipendiary towns of the interior of Sicily (Plin. iii. 8. s. 14), while Ptolemy, like Polybius, writes the name Μάκελλα. (Ptol. iii. 4. § 14.) The orthography is therefore dubious, as the authority of so ancient an inscription as that of Duillius is of no avail in this case. The coins which have been ascribed to Macella are of very dubious authenticity. [E. H. B.]

MACEPHRACTA (Ammian. xxiv. 2), a small town of Babylonia mentioned by Ammianus Marcellinus. It was situated apparently on the Euphrates, to the W. of Sittace, not far from the place where the Royal Canal, or *Nahr-malka*, joined the Euphrates. [V.]

MACESTUS or MECESTUS (Μάκεστος or Μέκεστος), a tributary of the river Rhyndacus; it took

its origin in a lake near Ancyra, and, after flowing for some distance in a western direction, it turned northward, and joined the Rhyndacus a little to the north of Miletopolis. (Strab. xii. p. 576; Plin. v. 40.) It seems to be the same river as the one called by Polybius Megistus (v. 77), though the Scholiast on Apollonius Rhodius (i. 1162) remarks, that in his time the Rhyndacus itself bore that name. The lower part of the river now bears the name *Susu* or *Susugherli*, while the upper part is called *Simaul-Su*. (Hamilton's *Researches*, vol. ii. pp. 105, 111.) [L. S.]

MA'CETA (Μάκετα, Nearch. *Peripl.* p. 22: *C. Musseldom*), a promontory of Arabia, at the entrance of the Persian gulf, opposite the promontory Harmozon in Carmania. (Strab. xv. p. 726, xvi. p. 765.) It was on the coast of the Macae, and is, therefore, called by Strabo (xvi. p. 765) a promontory of the Macae, without giving it any special name. It formed the NW. extremity of the mountains of the Asabi, and is, therefore, called by Ptolemy (vi. 7. § 12), τὸ Ἀσαβῶν ἄκρον.

MA'CETAE, MACE'TIA. [MACEDONIA.]

MACHAERUS (Μαχαιροῦς: *Eth.* Μαχαιρίτης, Joseph.), a strong fortress of Peraea, first mentioned by Josephus in connection with Alexander the son of Hyrcanus I., by whom it was originally built. (*Ant.* xiii. 16. § 3; *Bell. Jud.* vii. 6. § 2.) It was delivered by his widow to her son Aristobulus, who first fortified it against Gabinius (*Ant.* xiv. 5. § 2.) to whom he afterwards surrendered it, and by whom it was dismantled (§ 4; Strab. xvi. p. 762). On his escape from Rome Aristobulus again attempted to fortify it; but it was taken after two days' siege (vi. 1). It is however celebrated in the history of Herod the Tetrarch, and St. John the Baptist. It was situated in the mountains of Arabia (πρὸς τοῖς Ἀραβίοις ὄρεσιν) (5. § 2), and on the confines of Herod's jurisdiction and that of Aretas king of Arabia, his father-in-law, but at this time the historian expressly states that it belonged to the latter (xviii. 6. § 1.), being the southern extremity of Peraea, as Pella was the northern. (*B. J.* iii. 3. § 3, iv. 7. § 5.) When Herod's first wife, the daughter of Aretas, first suspected her husband's guilty passion for Herodias, his brother Philip's wife, she dissembled her indignation, and requested to be sent to Machaerus, whence she immediately proceeded to Petra, her father's capital. The fact of Machaerus being then subject to the jurisdiction of Aretas presents an insuperable difficulty to the reception of Josephus's statement that it was the place of St. John the Baptist's martyrdom: for suffering, as he did in one view, as a martyr for the conjugal rights of the daughter of Aretas, it is impossible to believe that Herod could have had power to order his execution in that fortress. (xviii. 6. §§ 1, 2.) It held out against the Romans after the fall of Jerusalem, and the account of its siege and reduction by the lieutenant Lucilius Bassus furnishes us with the most detailed account of this remarkable fortress, which Pliny (v. 15) reckons second to Jerusalem for the strength of its works. Josephus's account is as follows. It was situated on a very high hill, and surrounded with a wall, trenched about on all sides with valleys of enormous depth, so as to defy embankments. Its western side was the highest, and on this quarter the valley extended 60 stadia, as far as the Dead Sea. On the north and south the valleys were not so steep, but still such as to render the fortress unassailable, and the eastern valley had a depth of 100 cubits. It had been selected by Herod, on account of its proximity to the Arabs and the natural advantages of its position, and he had enclosed a large space within its walls, which was strengthened with towers. This formed the city: but the summit of the hill was the acropolis, surrounded with a wall of its own: flanked with corner towers of 160 cubits in height. In the middle of this was a stately palace, laid out in large and beautiful chambers, and furnished with numerous reservoirs for preserving the rain water. A shrub of rue, of portentous size, grew in the palace yard, equal in height and bulk to any fig-tree. A large store of missiles and military engines was kept there so as to enable its garrison to endure a protracted siege. Bassus proposed to assail it on the east side, and commenced raising banks in the valley, and the garrison, having left the city and its inhabitants to their fate, betook themselves to the acropolis, from which they made a succession of spirited sallies against the besiegers. In one of these a youth named Eleazar, of influential connections, fell into the hands of the Romans, and the garrison capitulated on condition that his life was spared, and he and they allowed to evacuate the place in safety. A few of the inhabitants of the lower city, thus abandoned, succeeded in effecting their escape: but 1700 males were massacred, and the women and children sold into captivity. (*B. J.* vii. 6.) Its site has not been recovered in modern times; but it is certainly wrongly placed by Pliny at the South of the Dead Sea (vii. 16; Reland, *s. v.* p. 880). The account given by Josephus of the copious hot springs of bitter and sweet water, of the sulphur and alum mines in the valley of Baaras, which he places on the north of the city of Machaerus, seems rather to point to one of the ruined sites, noticed by Irby and Mangles, to the northern part of the Dead Sea, in the vicinity of Callirrhoe, where these phaenomena are still found; but not the peculiarly noxious tree, of the same name as the valley, which was deadly to the gatherer, but was a specific against daemoniacal possession. [CALLIRRHOE.] (Irby and Mangles, *Travels*, pp. 464, 465.) [G. W.]

MACHAETE'GI (Μαχαιτηγοί; some MSS. read Μαχαγενοί, Ptol. iv. 14. § 11), a people of "Scythia intra Imaum," near the IASTAE. [E. B. J.]

MACHELO'NES (Μαχελῶνες, Arrian, *Peripl.* p. 11; *Anon.* p. 15), a subdivision of the Colchian tribes situated to the S. of the Phasis. Anchialus, prince of this people, as well as of the Heniochi, submitted to Trajan. (Dion Cass. lxviii. 19; Ritter, *Erdkunde*, vol. x. p. 116.) [E. B. J.]

MA'CHLYES (Μάχλυες, Herod. iv. 179; Ptol. iv. 3. § 26. *vulg.* Μάχρυες), a Libyan people, in the S. of Africa Propria (Byzacena), on the river Triton, and separated by the lake Tritonis from the Lotophagi, like whom they fed upon the lotus. (Comp. Plin. vii. 2.) [P. S.]

MACHU'RES. [MAURETANIA.]

MACHU'SII. [MAURETANIA.]

MA'CHYNI (Μάχυνοι), a people of Africa Propria, whom Ptolemy places S. of the Libyphoenicians, as far as the Lesser Syrtis and the MACHLYES. (Ptol. iv. 3. §§ 22, 26.) [P. S.]

MACINA (Μακινή), a district of Arabia, mentioned only by Strabo (xvi. p. 766) as nearest to Babylonia, bounded on the one side by the desert of Arabia, on another by the marshes of the Chaldaeans, formed by the overflowing of the Euphrates, and on a third by the Persian Gulf. Its climate

was heavy and foggy, showery and hot, but producing excellent fruit. The cultivation of the vine was peculiar. They were planted in the marshes, the soil necessary for their sustenance being placed in wicker baskets. They would sometimes drift from their moorings, and were thrust back to their places with poles. [G. W.]

MACISTUS or MACISTUM (Μάκιστος, τὸ Μάκιστον: *Eth.* Μακίστιος), a town of Triphylia, in Elis, said to have been also called PLATANISTUS. (Πλατανιστοῦς, Strab. viii. p. 345.) It was originally inhabited by the Paroreatae and Caucones, who were driven out by the Minyae. (Strab. *l. c.*; Herod. iv. 148.) It was afterwards subdued by the Eleians, and became one of their dependent townships whose history is given under LEPREUM. In the time of Strabo, it was no longer inhabited (viii. p. 349). Macistus was situated upon a lofty hill in the north of Triphylia, and appears to have been the chief town in the north of the district, as Lepreum was in the south. That Macistus was in the north of Triphylia appears from several circumstances. Strabo describes its territory, the Macistia, as bordering upon Pisatis. (Strab. viii. p. 343.) Agis, in his invasion of the territory of Elis, in B.C. 400, when he entered Triphylia through the Aulon of Messenia, was first joined by the Lepreatae, next by the Macistii, and then by the Epitalii on the Alpheius. (Xen. *Hell.* iii. 2. § 25.) Stephanus places Macistus to the westward of the Lepreatis (Steph. B. *s. v.*); but this is obviously an error, as Arcadia bordered upon the Lepreatis in that direction. Macistus would appear to have been in the neighbourhood of Samicum upon the coast, as it had the superintendence of the celebrated temple of the Samian Poseidon at this place. (Strab. viii. p. 343.) From these circumstances there can be little doubt that Macistus was situated upon the heights of *Khaiáffa.*

It is worthy of notice that Pausanias and Polybius mention only Samicum, and Xenophon only Macistus. This fact, taken in connection with the Macistians having the superintendence of the temple of the Samian Poseidon, has led to the conjecture that upon the decay of Samos upon the coast, the Minyans built Macistus upon the heights above; but that the ancient name of the place was afterwards revived in the form of Samicum. The Macistians had a temple of Hercules situated upon the coast near the Acidon. (Strab. viii. p. 348.)

(Leake, *Morea*, vol. ii. p. 206; *Peloponnesiaca*, p. 217; Boblaye, *Récherches, &c.*, p. 135; Curtius, *Peloponnesos*, vol. ii. p. 83.)

MACNA (Μάκνα), an inland town of Arabia Felix, according to Ptolemy (vi. 7.), who places it in lat. 67°, long. 28° 45′, near the Aelanitic gulf of the Red Sea, now the *Gulf of Akaba.* [G. W.]

MACORABA (Μακοράβα), an inland city of Arabia Felix, placed by Ptolemy in lat. 73° 20′, long. 22°, universally admitted to be the ancient classical representative of the modern *Mekka* or *Mecca*, which Mr. Forster holds to be an idiomatic abbreviation of Machoraba, identical with the Arabic "Mecharab," "the warlike city," or "the city of the Harb." (*Geog. of Arabia*, vol. i. pp. 265, 266.) A very high antiquity is claimed for this city in the native traditions, but the absence of all authentic notices of it in the ancient geographers must be allowed to disprove its claim to notoriety on account of its sanctity at any very remote period. The territory of *Mekka* was, according to universal Arabian history or tradition, the central seat of the kingdom of Jorham and the Jorhamites, descendants of the Joktanite patriarch Sherah, the Jerah of the book of Genesis (x. 26), who in the earliest times were the sovereigns of Mekka, the guardians of the Kaaba, and the superintendents of the idolatrous sacrifices in the valley of *Mina*, from whence they derived their classical synonym MINAEI. It is quite uncertain when they were superseded by the Ishmaelite Arabs of the family of Kedar, whose descendants, according to immemorial Arabic tradition, settled in the Hedjaz; and one tribe of whom was named *Koreish* (*collegit undique*), "quod circa Meccam, *congregati degerent.*" (Canus. ap. Golium, *in voc.*, cited by Forster, *Geog. of Arabia*, vol. i. p. 248, n.) This tribe, however, from which Mohammed sprung, had been for centuries the guardians of the Kaaba, and lords of Mekka, prior to his appearance: for if the very plausible etymology and import of the classical name, as above given, be correct, and *Beni-Harb* was, as Mr. Forster has elaborately proved, a synonym for the sons of Kedar, it will follow that they had succeeded in fixing their name to the capital some time before it appeared in Ptolemy's list, nor can any traces of a more ancient name be discovered, nor any notices of the ancient city, further than the bare mention of its name by the Alexandrian geographer.

"*Mekka*, sometimes also called Bekka, which words are synonymous, and signify a place of great concourse, is certainly one of the most ancient cities in the world. It is by some thought to be the Mesa of Scripture (*Gen.* x. 30), a name not unknown to the Arabians, and supposed to be taken from one of Ishmael's sons" (*Gen.* xxv. 15). (Sale's *Koran, Preliminary Discourse*, sect. i. p. 4.) Its situation is thus described by Burckhardt:—"The town is situated in a valley, narrow and sandy, the main direction of which is from north to south; but it inclines towards the north-west near the southern extremity of the town. In breadth this valley varies from one hundred to seven hundred paces, the chief part of the city being placed where the valley is most broad. The town itself covers a space of about 1500 paces in length; . . . . but the whole extent of ground comprehended under the denomination of Mekka" (i. e. including the suburbs) "amounts to 3500 paces. The mountains enclosing this valley (which, before the town was built, the Arabs had named Wady Mekka or Bekka) are from 200 to 500 feet in height, completely barren and destitute of trees. . . . . Most of the town is situated in the valley itself; but there are also parts built on the sides of the mountains, principally of the eastern chain, where the primitive habitations of the Koreysh and the ancient town appear to have been placed." It is described as a handsome town; with streets broader, and stone houses more lofty, than in other Eastern cities: but since the decline of the pilgrimage "numerous buildings in the outskirts have fallen completely into ruin, and the town itself exhibits in every street houses rapidly decaying." Its population has declined in proportion. The results of Burckhardt's inquiries gave "between 25,000 and 30,000 stationary inhabitants for the population of the city and suburbs, besides from 3000 to 4000 Abyssinians and black slaves: its habitations are capable of containing three times this number." This estimate, however, shows a considerable increase within the last three centuries; for "in the time of Sultan Selym I. (in A. H. 923, i. e. A. D. 1517) a

census was taken, and the number found to be 12,000 men, women, and children." In earlier times the population was much more considerable; for "when Abou Dhaker sacked Mekka in A. H. 314 (A. D. 926) 30,000 of the inhabitants were killed by his ferocious soldiers." Ali Bey's estimate in A.D. 1807 is much lower than Burckhardt's in A. D. 1814. Yet the former says "that the population of Mekka diminishes sensibly. This city, which is known to have contained more than 100,000 souls, does not at present shelter more than from 16,000 to 18,000;" and conjectures that "it will be reduced, in the course of a century, to the tenth part of the size it now is." The celebrated Kaaba demands a cursory notice. It is situated in the midst of a great court, which forms a parallelogram of about 536 feet by 356, surrounded by a double piazza. This sanctuary, called, like that of Jerusalem, El-Haram, is situated near the middle of the city, which is built in a narrow valley, having a considerable slope from north to south. In order to form a level area for the great court of the temple, the ground has evidently been hollowed out, subsequently to the erection of the Kaaba, which is the only ancient edifice in the temple. The building itself (called by the natives *Beit-Ullah*, the House of God), probably the most ancient sacred building now existing, is a quadrilateral tower, the sides and angles of which are unequal. Its dimensions are 38 feet by 29, and its height 34 feet 4 inches; built of square-hewn but unpolished blocks of quartz, schorl, and mica, brought from the neighbouring mountains. The black stone, the most sacred object of veneration, is built into the angle formed by the NE. and SE. sides, 42 inches above the pavement. It is believed by the Moslems to have been presented to Abraham by the angel Gabriel, and is called "the heavenly stone." Ali Bey says that "it is a fragment of volcanic basalt, sprinkled throughout its circumference with small, pointed, coloured crystals, and varied with red feldspath upon a dark black ground like coal." The famous well of Zemzem, in the great mosk, is 56 feet deep to the surface of the water, fed by a copious spring; but its water, says Burckhardt, "however holy, is heavy to the taste, and impedes digestion." Ali Bey, on the contrary, says that it is wholesome, though warmer than the air even in that hot climate. The town is further supplied with rain-water preserved in cisterns: but the best water in Mekka is brought by a conduit from the vicinity of Arafat, six or seven hours distant." (Ali Bey, *Travels*, vol. ii. pp. 74—114; Burckhardt, *Travels in Arabia*, pp. 94, &c.) [G.W.]

MACRA (ὁ Μάκρης, Strab.; Ptolemy has the corrupt form Μακράλλα: *Magra*), a considerable river of Northern Italy, rising in the Apennines and flowing into the Tyrrhenian Sea near Luna. It was under the Roman dominion the established limit between Liguria and Etruria (Plin. iii. 5. s. 7; Flor. ii. 3. § 4; Strab. v. p. 222; Vib. Seq. p. 14); but at an earlier period the Ligurian tribe of the Apuani occupied the country on both sides of it, and it was not till after a long struggle with that people that the Romans were able to carry their arms as far as the banks of the Macra. (Liv. xxxix. 32, xl. 41.) The Macra is one of the most considerable of the rivers on the Ligurian coast, but it still retains the character of a mountain torrent, at times very violent and impetuous, at others so shallow as to be wholly unfit for navigation (Lucan, ii. 426). The ruins of Luna are situated on the *left* bank of the *Magra*, about a mile from the sea, while the celebrated Port of Luna (the Gulf of *Spezia*) is some miles distant to the W., and separated from it by an intervening range of hills [LUNA]. About 10 miles from its mouth the *Magra* receives from its W. bank the waters of the *Vara*, also a formidable torrent, which is in all probability the BOACTES of Ptolemy (iii. 1. § 3). [E. H. B.]

MACRA COME, a place mentioned by Livy (xxxii. 13) along with Sperchiae. Its position is uncertain, but it was perhaps a town of the Aenianes.

MACRIS, an island off the coast of Attica, also called Helena. [HELENA.]

MACRO'BII (Herod. iii. 17—25; Plin. vi. 30. s. 35, vii. 1. s. 2; Solin. 30. § 9; Mela, iii. 9. § 1), or the long-lived, might have been briefly enumerated among the numerous and obscure tribes which dwelt above Philae and the second cataract of the Nile, were it not for the conspicuous position assigned to them by Herodotus. He describes the Macrobii as a strong and opulent nation, remarkable for its stature, beauty and longevity, and, in some respects, as highly civilised. According to this historian, a rumour of the abundance of gold in the Macrobian territory stimulated the avarice of the Persian king, Cambyses, who led a great army against them: but in his haste he omitted to provide his host with food and water, and the city was distant many days' journey, and between the Macrobian land and Egypt lay sandy wastes, and the Persians perished through drought and hunger, Cambyses alone and a small residue of his army returning to Egypt. In the description of Herodotus, the most important point is the geographical position assigned to them. It is in the farthest south (ἐπὶ τῇ νοτίῃ θαλάσσῃ, *c.* 17, τὰ ἔσχατα τῆς γῆς, *c.* 25) the limits of the habitable world, according to the knowledge of Herodotus. The Macrobian land was accordingly beyond the Arabian Gulf, on the shores of the Indian ocean, and in that undefined and illimitable region called Barbaria by the ancient cosmographers.

Travellers and writers on geography have advanced several theories respecting their position in Africa. Bruce (*Travels*, vol. iv. p. 43) supposes the Macrobii to have been a tribe of Shangalla or lowland blacks. Rennell (*Geogr. System of Herod.* ii. p.29, 2nd edit.) identifies them with the Abyssinians; Heeren (*African Nations*, vol. ii. pp. 321—338) believes them to have been a branch of the Semâleh who occupied the maritime district around *Cape Guardafui*: while Niebuhr (*Dissertation on the Geog. of Herod.* p. 20) objects to all these surmises, as taking for granted too much knowledge in Herodotus himself. In the story, as it stands, there is one insurmountable objection to the position in the far south assigned to them by the historian, and too readily accepted by his modern commentators. No army, much less an oriental army with its many incumbrances, could have marched from Egypt into *Abyssinia* without previously sending forward magazines and securing wells. There were neither roads, nor tanks of water, nor corn land nor herbage to be found in a considerable portion of the route (Ψάμμος, *c.* 25). Even at the present day no direct communication exists between Aegypt and the land of the Nubians of *Somâleh*. No single traveller, no caravan, could adventure to proceed by land from the cataracts to *Cape Guardafui*. An army far inferior in numbers to the alleged host of Cambyses would in a few days exhaust the grass and the millet of Nu-

bia wherein the only productive soil for some hundreds of miles south of Philae consists of narrow slips of ground adjacent to and irrigated by the Nile. From the southern frontier of Egypt to the nearest frontier of *Abyssinia* the only practical road for an army lies along the river bank, and the distance to be traversed is at least 900 miles.

We must therefore abandon the belief that the Macrobians dwelt in the farthest south. But there are other suspicious features in the narrative. Similar length of days is ascribed by Herodotus to the Tartessians (i. 163; comp. Anacreon, *ap. Strab.* iii. 2), nor should it be overlooked that the Hyperboreans in the extreme north are also denominated Macrobii. We may also bear in mind the mythical aspect of Homer's Aethiopians (*Iliad*, i. 423) in which passage the epithet "faultless" (ἀμύμονες) implies not moral but physical superiority (comp. Herod, iii. 20: μέγιστοι καὶ κάλλιστοι ἀνθρώπων πάντων). "Men," as Dr. Kenrick justly remarks, "groaning under the burden of the social state, have in every age been prone to indulge in such pictures of ease and abundance as Herodotus, in the passages cited, and Pindar (*Pyth.* x. 57) draw of countries beyond the limits of geographical knowledge and of times beyond the origin of history."

If, then, we do not yield up the Macrobii to myth or fable altogether, we must seek for them in some district nearer Aegypt. Whatever tribe or region Cambyses intended to subdue, gold was abundant, and brass, or rather copper, scarce among them. Now the modern inhabitants of *Kordofan* (15° 20′—10° N. lat., 28°—32° E. long.) are commonly called Nobah, and *Nob* is an old Aegyptian word for gold. Again, the Macrobii were singularly tall, well proportioned and healthy; and *Kordofan* has, from time immemorial, supplied the valley of the Nile with able-bodied and comely slaves of both sexes (Hume, *ap. Walpole, Turkey*, p. 392). Moreover, the caravans bear with them, as marketable wares, wrought and unwrought copper to this district. In 1821 Mohammed Ali achieved what Cambyses failed in attempting. With less than 7000 men, half of whom indeed perished through fatigue and the climate, he subdued all the countries contiguous to the Nile as far as *Sennaar* and *Kordofan* inclusive: and the objects which stimulated his expedition were *gold* and *slaves*. We shall therefore perhaps not greatly err in assigning to the Macrobii of Herodotus a local habitation much nearer than *Abyssinia* to the southern frontier of Aegypt, nor in suggesting that their name, in the language of the Greeks, is a corruption of the Semitic word *Magrabi*, i. e. the dwellers in the west. A position west of the Nile would account also for the knowledge possessed by the Ichthyophagi of Elephantis (*Bojah* or *Bisharye* Arabs) of the languages of the Macrobii.

The modern Bisharyes occupy the country east of the Nile from Aegypt to *Abyssinia*; and their trade and journeys extend from the Red Sea to *Kordofan*. If then we regard the Macrobii (the *Magrabi*) and the Ichthyophagi (the Bisharye) as respectively seated on the east and west banks of the Nile, the latter people will have been the most available guides whom Cambyses could employ for exploring the land of the Macrobians.

It should be remembered, however, that Herodotus derived his knowledge of the Persian expedition either from the Persian conquerors of Aegypt, or from the Aegyptian priests themselves: neither of whom would be willing to disclose to an inquisitive foreigner the actual situation of a land in which gold was so abundant. By placing it in the far south, and exaggerating the hardships endured by the army of Cambyses, they might justly hope to deter strangers from prying into the recesses of a region from which themselves were deriving a profitable monopoly.

Upon the wonders of the Macrobian land it would be hardly worth while to dwell, were they not in singular accordance with some known features in the physical or commercial character of that region. In the southern portion of *Kordofan* the hills rise to a considerable height, and iron ore in some districts is plentiful. The fountain of health may thus have been one of several mineral springs. The ascription of extreme longevity to a people who dwelt in a hot and by no means healthy climate may be explained by the supposition that, whereas many of the pastoral tribes in these regions put to death their old people, when no longer capable of moving from place to place, the Macrobians abstained from so cruel a practice. The procerity of the king seems to imply that the chieftains of the Macrobii belonged to a different race from their subjects (compare Scylax, *ap. Aristot.* vii. p. 1332). "The Table of the Sun" is the market-place in which trade, or rather barter, was carried on with strangers, according to a practice mentioned by Cosmas, the Indian mariner, who describes the annual fairs of southern Aethiopia in terms not unlike those employed by Herodotus in his account of the Macrobians (pp. 138, 139). [W. B. D.]

MACROCE'PHALI (Μακροκέφαλοι), that is, "people with long heads." (Strab. i. p. 43.) The Siginni, a barbarous tribe about Mount Caucasus, artificially contrived to lengthen their heads as much as possible. (Strab. xi. p. 520; comp. Hippocr. *de Aer.* 35.) It appears that owing to this custom they were called Macrocephali; at least Pliny vi. 4), Pomp. Mela (i. 19), and Scylax (p. 33), speak of a nation of this name in the north-east of Pontus. The anonymous author of the *Peripl. Pont. Eux.* (p. 14) regards them as the same people as the Macrones, but Pliny (*l. c.*) clearly distinguishes the two. [L. S.]

MACRO'NES (Μάκρωνες), a powerful tribe in the east of Pontus, about the Moschici mountains. They are described as wearing garments made of hair, and as using in war wooden helmets, small shields of wicker-work, and short lances with long points. (Herod. ii. 104, vii. 78; Xenoph. *Anab.* iv. 8. § 3, v. 5. § 18, vii. 8. § 25; comp. Hecat. *Fragm.* 191; Scylax, p. 33; Dionys. Perieg. 766; Apollon. Rhod. ii. 22; Plin. vi. 4; Joseph. *c. Apion.* i. § 22, who asserts that they observed the custom of circumcision.) Strabo (xii. p. 548) remarks, in passing, that the people formerly called Macrones bore in his day the name of Sanni, though Pliny (*l. c.*) speaks of the Sanni and Macrones as two distinct peoples. They appear to have always been a rude and wild tribe, until civilisation and Christianity were introduced among them in the reign of Justinian. (Procop. *Bell. Pers.* i. 15, *Bell. Goth.* iv. 2, *de Aed.* iii. 6.) [L. S.]

MACRON TEICHOS (Μακρὸν τεῖχος), also called "the wall of Anastasius," was a fortification constructed in A. D. 507, by the emperor Anastasius I. of Constantinople, as a means of defence against the Bulgarians: it consisted of a strong wall running across the isthmus of Constantinople, from the coast of the Propontis to that of the Euxine.

Some parts of this wall, which at a later period proved useful against the Turks, are still existing. (Procop. *de Aed.* iv. 9; comp. *Dict. of Biogr.* Vol. I. p. 159.) [L. S.]

MACROPOGO'NES (Μακροπώγωνες), or the "Longbeards," one of the tribes of the W. Caucasus (Strab. xi. p. 492), whose position must be fixed somewhere near *Tarábuzún.* (Chesney, *Euphrat.* vol. i. p. 276.) [E. B. J.]

MACTO'RIUM (Μακτώριον), a town of Sicily, in the neighbourhood of Gela, mentioned by Herodotus (vii. 153), who tells us that it was occupied by a body of Geloan citizens, who were driven out from their country, and were restored to it by Telines, the ancestor of Gelon. The name is also found in Stephanus of Byzantium (*s. v.*), who cites it from Philistus, but no mention of it occurs in later times. The only clue to its position is that afforded by Herodotus, who calls it "a city *above* Gela," by which he must mean further inland. Cluverius conjectures that it may have occupied the site of *Butera*, a town on a hill about 8 miles inland from *Terranova*, the site of Gela. (Cluver. *Sicil.* p. 363.) [E. H. B.]

MACUM, a town in the north of Aethiopia. (Plin. vi. 29. s. 35.)

MACUREBI. [MAURETANIA.]

MACY'NIA (Μακυνία, Strab. x. p. 451; Μακύνα, Plut. *Quaest. Graec.* 15; Μακύνεια, Steph. B. *s. v.*: *Eth.* Μακυνεύς), a town of Aetolia on the coast, at the foot of the eastern slope of Mount Taphiassus. According to Strabo it was built after the return of the Heraclidae into Peloponnesus. It is called a town of the Ozolian Locrians by the poet Archytas of Amphissa, who describes it in an hexameter line: "the grape-clad, perfume-breathing, lovely Macyna." It is also mentioned in an epigram of Alcaeus, the Messenian, who was a contemporary of Philip V., king of Macedonia. Pliny mentions a mountain Macynium, which must have been part of Mount Taphiassus, near Macynia, unless it is indeed a mistake for the town. (Strab. x. pp. 451, 460; Plut. *l. c.*; *Anth. Graec.* ix. 518; Plin. iv. 3; Leake, *Northern Greece*, vol. i. p. 111.)

MACY'NIUM. [MACYNIA; AETOLIA, p. 63, b.]

MADAI. [MEDIA.]

MADAURA (Augustin. *Ep.* 49, *Conf.* ii. 3) or MADURUS (Μάδουρος, Ptol. iv. 3. § 30), a town in the north of Numidia, near Tagaste, which must not be confounded with Medaura, the birthplace of Appuleius. [MEDAURA.]

MADEBA (Μαιδαβάν, LXX.; Μεδάβη, Joseph.), a city originally of Moab, and afterwards obtained by conquest by Sihon, king of the Amorites. (*Numb.* xxi. 30; comp. Joseph. *Ant.* xiii. 1. §§ 2, 4.) The name does not occur in the LXX. in two of the passages in which it is found in the Hebrew, ἐπὶ Μωάβ being substituted in Numbers (*l. c.*) and τῆς Μωαβίτιδος in Isaiah (xv. 2). It fell to the lot of the Reubenites in the division of the trans-Jordanic conquests, and was in their southern border. (*Josh.* xiii. 9, 16.) It was one of several Moabite cities occupied by the Jews under Hyrcanus and Alexander Jannaeus (Joseph. *Ant.* xiii. 9. § 1, 15. § 4), but was afterwards restored by Hyrcanus II. to Aretas (xiv. 1. § 4). Μήδαυα is placed by Ptolemy (v. 17. § 6) in Arabia Petraea, and joined with Heshbon, consistently with which Eusebius and S. Jerome (*Onomast. s. v.*) notice it as still existing, under its old name, in the vicinity of Heshbon; where its ruins may still be identified. "In order to see Medaba, I left the great road at *Hesban*,—and proceeded in a more eastern direction. . . . At the end of eight hours we reached *Madeba* built upon a round hill. This is the ancient Medaba, but there is no river near it. It is at least half an hour in circumference: I observed many remains of the walls of private houses, constructed with blocks of silex; but not a single edifice is standing. There is a large Birket" ("the immense tank" mentioned by Irby and Mangles, p. 471, as "the only object of interest"). "On the west side of the town are the foundations of a temple, built with large stones, and apparently of great antiquity. . . . A part of its eastern wall remains. At the entrance of one of the courts stand two columns of the Doric order: . . . in the centre of one of the courts is a large well." (Burckhardt, *Travels in Syria*, pp. 365, 366.) It is mentioned as πόλις Μηδάβων in the Council of Chalcedon, and was an episcopal see of the Third Palaestine, or of Arabia. (Reland, *Palaestina*, *s. v.* pp. 893, 216—219; Le Quien, *Oriens Christianus*, col. 769—772.) [G. W.]

MADE'NA, a district in Armenia Minor, between the Cyrus and Araxes. (Sext. Ruf. *in Lucull.* 15; Eutrop. viii 4.)

MADETHU'BADUS M. (τὸ Μαδεθούβαδον ἢ Μαλεθούβαλον ὄρος), is the name applied by Ptolemy (iv. 2. § 15) to that part of the prolongation of the Atlas chain S. of Mauretania Caesariensis which contained the sources of the Chinalaph and its tributaries. [Comp. ATLAS.] [P. S.]

MA'DIA (Μαδία, Ptol. v. 10. § 6), a place in the interior of Colchis, probably the Matium of Pliny (vi. 4).

MADIS. [MADYTUS.]

MADMANNA (Μαχαρίμ, LXX.; Μηνεβηνά, Euseb.), a city of the tribe of Judah mentioned only in Joshua (xv. 31). It was situated in the south of the tribe, apparently near Ziklag. Eusebius, who confounds it with the Madmenah of Isaiah (x. 31), mentions the ruins of a town near Gaza, named Menois (Μηνοεὶς), which he identifies with Madmanna. (*Onomast. s. v.*) [G. W.]

MADMENAH (Μαδεβηνά, LXX.), a town or village on the confines of the tribes of Judah and Benjamin, mentioned only in Isaiah (x. 31). It was obviously on or near the line of march of an invading army approaching Jerusalem from the north, by way of Michmash, and apparently between Anathoth and Jerusalem. It is confounded with Madmanna by Eusebius. (*Onomast, s. v.* Μηνεβηνά.) [G. W.]

MADOCE (Μαδόκη πόλις), a city on the south coast of Arabia, in the country of the Homeritae, apparently in the extreme west of their district, and consequently not far to the west of Aden. (Ptol. vi. 7. § 9.) It is not otherwise known. [G. W.]

MADUATE'NI, a people of Thrace, mentioned by Livy (xxxviii. 40) along with the Astii, Caeni, and Coreli, but otherwise unknown.

MADU'RUS. [MADAURA.]

MA'DYTUS (Μαδυτός: *Eth.* Μαδύτιος), an important port town in the Thracian Chersonesus, on the Hellespont, nearly opposite to Abydos. (Liv. xxxi. 16, xxxiii. 38; Mela, ii. 2; Anna Comn. xiv. p. 429; Steph. Byz. *s. v.*; Strab. vii. p. 331.) Ptolemy (iii. 12. § 4) mentions in the same district a town of the name of Madis, which some identify with Madytus, but which seems to have been situated more inland. It is generally believed that *Maito* marks the site of the ancient Madytus. [L. S.]

MAEA (Μαῖα, *Stadiasm. Mar. Magn.* §§ 74, 75;

called Γαῖα or Γαία by Ptol. iv. 3. § 46), an island off the coast of Africa Propria, 7 stadia S. of the island Pontia.

MAEANDER (Μαίανδρος: *Meinder* or *Boyuk Meinder*), a celebrated river in Asia Minor, has its sources not far from Celaenae in Phrygia (Xenoph. *Anab.* i. 2. § 7), where it gushed forth in a park of Cyrus. According to some (Strab. xii. p. 578; Maxim. Tyr. viii. 38) its sources were the same as those of the river Marsyas; but this is irreconcilable with Xenophon, according to whom the sources of the two rivers were only near each other, the Marsyas rising in a royal palace. Others, again, as Pliny (v. 31), Solinus (40. § 7), and Martianus Capella (6. p. 221), state that the Maeander flowed out of a lake on Mount Aulocrene. Col. Leake (*Asia Minor*, p. 158, &c.) reconciles all these apparently different statements by the remark that both the Maeander and the Marsyas have their origin in the lake on Mount Aulocrene, above Celaenae, but that they issue at different parts of the mountain below the lake. The Maeander was so celebrated in antiquity for its numerous windings, that its name became, and still is, proverbial. (Hom. *Il.* ii. 869; Hesiod, *Theog.* 339; Herod. vii. 26, 30 Strab. xii. p. 577; Paus. viii. 41. § 3; Ov. *Met.* viii. 162, &c.; Liv. xxxviii. 13; Senec. *Herc. Fur.* 683, &c., *Phoen.* 605.) Its whole course has a south-western direction on the south of the range of Mount Messogis. In the south of Tripolis it receives the waters of the Lycus, whereby it becomes a river of some importance. Near Carura it passes from Phrygia into Caria, where it flows in its tortuous course through the Maeandrian plain (comp. Strab. xiv. p. 648, xv. p. 691), and finally discharges itself in the Icarian sea, between Priene and Myus, opposite to Miletus, from which its mouth is only 10 stadia distant. (Plin. *l. c.*; Paus. ii. 5. § 2.) The tributaries of the Maeander are the OROYAS, MARSYAS, CLUDRUS, LETHAEUS, and GAESON, in the north; and the OBRIMAS, LYCUS, HARPASUS, and a second MARSYAS, in the south. The Maeander is everywhere a very deep river (Nic. Chonat. p. 125; Liv. *l. c.*), but not very broad, so that in many parts its depth equals its breadth. As moreover it carried in its waters a great quantity of mud, it was navigable only for small craft. (Strab. xii. p. 579, xiv. p. 636.) It frequently overflowed its banks; and, in consequence of the quantity of its deposits at its mouth, the coast has been pushed about 20 or 30 stadia further into the sea, so that several small islands off the coast have become united with the mainland. (Paus. viii. 24. § 5; Thucyd. viii. 17.) There was a story about a subterraneous connection between the Maeander and the Alpheius in Elis. (Paus. ii. 5. § 2; comp. Hamilton, *Researches*, vol. i. p. 525, foll., ii. p. 161, foll.) [L. S.]

MAEANDER (ὁ Μαίανδρος, Ptol. vii. 2. §§ 8, 10, 11), a chain of mountains in Eastern India, comprehended, according to Ptolemy's subdivision, in the part called by him India extra Gangem. They may be best considered as an outlying spur from the Bepyrrhus M. (now *Jarrow*), extending in a southerly direction between the Ganges and the Doanas towards the sea coast. Their present name seems to be *Muin-Mura*. [V.]

MAEANDRO'POLIS (Μαιανδρούπολις), a town of uncertain site, though, as its name seems to indicate, it must have been situated somewhere on the Maeander, and more especially in the territory of Magnesia, as we learn from Stephanus B. (*s. v.*; comp. Plin. v. 29), from whom we may also infer that the place was sometimes called Maeander. [L.S.]

MAEATAE (Μαιάται), a general name given by Dion Cassius (lxxv. 5, lxxvi. 12) to the British tribes nearest to the Roman vallum, the Caledonii dwelling beyond them. (Comp. Jornandes, *de Reb. Get.* c. 2.)

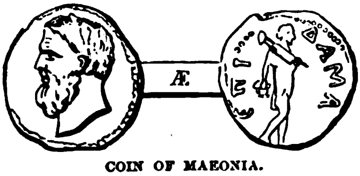
MAEDI (Μαιδοί, Μαῖδοι, Thuc. ii. 98; Polyb. x. 41), a powerful people in the west of Thrace, dwelling near the sources of the Axius and Margus, and upon the southern slopes of Mt. Scomius. (Leake, *Northern Greece*, vol. iii. p. 472.) Strabo says that the Maedi bordered eastward on the Thunatae of Dardania (vii. p. 316), and that the Axius flowed through their territory (vii. p. 331). The latter was called Maedica (Μαιδική, Ptol. iii. 11. § 9; Liv. xxvi. 25, xl. 22). They frequently made incursions into Macedonia; but in B.C. 211, Philip V. invaded their territory, and took their chief town Iamphorina, which is probably represented by *Vraniá* or *Ivorina*, in the upper valley of the Margus or *Morava*. (Liv. xxvi. 25.) We also learn from Livy (xl. 22) that the same king traversed their territory in order to reach the summit of Mt. Haemus; and that on his return into Macedonia he received the submission of Petra, a fortress of the Maedi. Among the other places in Maedica, we read of Phragandae (Liv. xxvi. 25) and Desudaba, probably the modern *Kumánovo*, on one of the confluents of the upper Axius. (Liv. xliv. 26.) The Maedi are said to have been of the same race as the Bithynians in Asia, and were hence called Maedobithyni (Steph. B. *s. v.* Μαιδοί; Strab. vii. p. 295). (Comp. Strab. vii. p. 316; Plin. iv. 11. s. 18.)

MAENACA (Μαινάκη), a Greek city on the S. coast of Hispania Baetica, the most westerly colony of the Phocaeans. (Strab. iii. p. 156; Scymn. 145, et seq.) In Strabo's time it had been destroyed; but the ruins were still visible. He refutes the error of those who confounded it with MALACA, which was not a Greek, but a Phoenician city, and lay further to the W.; but this error is repeated by Avienus (*Or. Marit.* 426, et seq.). The place seems to be the Μάκη of Stephanus. [P. S.]

MAE'NALUS. 1. (Μαίναλος, Strab. viii. p. 388; Schol. *ad Apoll. Rhod.* i. 769; Μαίναλον, Theocr. i. 123; τὸ Μαινάλιον ὄρος, Paus. viii. 36. § 7; *Maenalus*, Virg. *Ecl.* viii. 22; Mel. ii. 3; Plin. iv. 6. s. 10; *Maenala*, pl., Virg. *Ecl.* x. 55; Ov. *Met.* i. 216), a lofty mountain of Arcadia, forming the western boundary of the territories of Mantineia and Tegea. It was especially sacred to the god Pan, who is hence called *Maenalius Deus* (Ov. *Fast.* iv. 650.) The inhabitants of the mountain fancied that they had frequently heard the god playing on his pipe. The two highest summits of the mountain are called at present *Aidín* and *Apano-Khrépa*: the latter is 5115 feet high. The mountain is at present covered with pines and firs; the chief pass through it is near the modern town of *Tripolitza*.—The Roman poets frequently use the adjectives *Maenalius* and *Maenalis* as equivalent to Arcadian. Hence *Maenalii versus*, shepherds' songs, such as were usual in Arcadia (Virg. *Ecl.* viii. 21); *Maenalis ora*, i.e. Arcadia (Ov. *Fast.* iii. 84); *Maenalis nympha*, i. e. Carmenta (Ov. *Fast.* i. 634); *Maenalis Ursa*, and *Maenalia Arctos*, the constellation of the Bear, into which Callisto, daughter of Lycaon, king of Arcadia, was said to have been metamorphosed. (Ov. *Trist.* iii. 11. 8, *Fast.* ii. 192.)

2. (Μαίναλος: *Eth.* Μαινάλιος, Μαιναλίτης, Μαι-

ναλεύς), a town of Arcadia, and the capital of the district *Maenalia* (Μαιναλία, Thuc. v. 64; Paus. iii. 11. § 7, vi. 7. § 9, viii. 9. § 4), which formed part of the territory of Megalopolis upon the foundation of the latter city. A list of the towns in Maenalia is given in Vol. I. p. 192. The town Maenalus was in ruins in the time of Pausanias, who mentions a temple of Athena, a stadium, and a hippodrome, as belonging to the place. (Paus. viii. 3. § 4, 36. § 8; Steph. B. *s. v.*) Its site is uncertain. Ross supposes that the remains of polygonal walls on the isolated hill, on the right bank of the river Helisson and opposite the village *Davià*, represent Maenalus; and this appears more probable than the opinion of Leake, who identifies this site with Dipaea, and thinks that Maenalus stood on Mt. *Apano-khrépa.* (Ross, *Reisen im Peloponnes*, vol. i. p. 117; Leake, *Morea*, vol. ii. p. 52, *Peloponnesiaca*, p. 243.) [DIPAEA.]



MAENA'RIAE INSULAE, a cluster of little islands in the gulf of Palma, off the coast of the Greater Balearis. (Plin. iii. 5. s. 11.) [P. S.]

MAE'NOBA (Mela, ii. 6. § 7; Plin. iii. 1. s. 3; Μάνοβα, Ptol. ii. 4. § 7; MENOVA, *Itin. Ant.* p. 405: *Velez Malaga*), a town of the Bastuli Poeni, on the S. coast of Baetica, 12 M. P. E. of Malaca, on a river of the same name (*Velez*). Strabo (iii. p. 143) also mentions Maenoba (Μαίνοβα), with Astra, Nabrissa, Onoba, and Ossonoba, as towns remarkable for their situation on tidal estuaries; whence Ukert argues that, since not only all the other places thus mentioned were outside of the Straits, but also Strabo's description necessarily applies to an estuary exposed to the tides of the Atlantic, we must seek for his Maenoba elsewhere than on the tideless Mediterranean. Accordingly, he places it on the river Maenoba or Menuba (*Guadiamar*), the lowest of the great tributaries of the Baetis, on its right side, mentioned both by Pliny (iii. 1. s. 3), and in an inscription found at *San Lucar la Mayor* (Caro, *ap. Florez, Esp. S.* vol. ix. p. 47), up which river the tide extends to a considerable distance. (Ukert, vol. ii. pt. 1, pp. 288, 349, 350.) This argument, though doubtful, has certainly some force, and it is adopted by Spruner in his Atlas. [P. S.]

MAE'NOBA (Μαίνοβα), rivers. [MAENOBA.]

MAENOBO'RA (Μαινοβώρα), a town of the Mastiani, in the S. of Spain, mentioned by Hecataeus (*ap. Steph. B. s. v.*), seems to be identical with MAENOBA on the S. coast of Baetica. [P. S.]

MAEO'NIA (Μαιονία), an ancient name of Lydia. [LYDIA.] There was, also, in later times a town of this name in Lydia, mentioned by Pliny (v. 29. s. 30), Hierocles (p. 670), and in the Episcopal Notitia; and of which several coins are extant. Its ruins have been found at a place called *Megné*, 5 English miles W. of *Sandal.* (Hamilton, *Researches*, vol. ii. p. 139.)

COIN OF MAEONIA.

MAEO'TAE (Μαιῶται, Scyl. p. 31; Strab. xi. pp. 492, 494; Plin. iv. 26; Maeotici, Pomp. Mela, i. 2. § 6, i. 19. § 17; Plin. vi. 7), a collective name which was given to the peoples about the Palus Maeotis as early as the logographer Hellanicus (p. 78), if we read with his editor Sturz (for Μαλιῶται), Μαιῶται. According to Strabo (*l. c.*) they lived partly on fish, and partly tilled the land, but were no less warlike than their nomad neighbours. He enumerates the following subdivisions of the Maeotae: Sindi, Dandarii, Toreatae, Agri, Arrechi, Tarpetes, Obidiaceni, Sittaceni, Dosci, and many others. These wild hordes were sometimes tributary to the factory at the Tanais, and at other times to the Bosporani, revolting from one to the other. The kingdom of the Cimmerian Bosporus in later times, especially under Pharnaces, Asander, and Polemon, extended as far as the Tanais. [E. B. J.]

MAEO'TIS PALUS, the large body of water to the NE. of the Euxine now called the *Sea of Azov*, or the *Azák-deniz-i* of the Turks. This sea was usually called "Palus Maeotis" (ἡ Μαιῶτις λίμνη, Aesch. *Prom.* 427), but sometimes "Maeotica" or "Maeotia Palus" (Plin. ii. 67; Lucan, ii. 641), "Maeotius" or "Maeotis Lacus" (Plin. iv. 24, vi. 6), "Maeotium" or "Maeoticum aequor" (Avien. v. 32; Val. Flac. iv. 720), "Cimmeriae Paludes" (Claud. *in Eutrop.* i. 249), "Cimmericum" or "Bosporicum Mare" (Gell. xvii. 8), "Scythicae Undae, Paludes" (Ovid. *Her.* vi. 107, *Trist.* iii. 4. 49). The genitive in Latin followed the Greek form "Maeotidis," but was sometimes "Maeotis" (Ennius, *ap. Cic. Tusc.* v. 17). The accusative has the two forms Μαιῶτιν "Maeotim" (Plin. x. 10), and Μαιώτιδα "Maeotida" (Pomp. Mela, i. 3. § 1, ii. 1. § 1). Pliny (vi. 7) has preserved the Scythian name Temerinda, which he translates by "Mater Maris."

The Maeotic gulf, with a surface of rather more than 13,000 square miles, was supposed by the ancients to be of far larger dimensions than it really is. Thus Herodotus (iv. 86) believed it to be not much less in extent than the Euxine, while Scylax (p. 30, ed. Hudson) calculated it at half the size of that sea. Strabo (ii. p. 125, comp. vii. pp. 307—312, xi. p. 493; Arrian. *Perip.* p. 20, ed. Hudson; Agathem. i. 3, ii. 14) estimated the circumference at somewhat more than 9000 stadia, but Polybius (iv. 39) reduces it to 8000 stadia. According to Pliny (iv. 24) its circuit was reckoned at 1406 M. P., or, according to some, 1125 M. P. Strabo (vii. p. 310) reckons it in length 2200 stadia between the Cimmerian Bosporus and the mouth of the Tanais, and therefore came nearest amongst the ancients in the length; but he seems to have supposed it to carry its width on towards the Tanais (comp. Rennell, *Compar. Geog.* vol. ii. p. 331). The length according to Pliny (*l. c.*) is 385 M. P., which agrees with the estimate of Ptolemy (v. 9. §§ 1—7). Polybius (*l. c.*) confidently anticipated an entire and speedy choking of the waters of the Maeotis; and ever since his time the theory that the *Sea of Azov* has contracted its boundaries has met with considerable support, though on this point there is a material discordance among the various authorities; the latest statement, and approximation to the amount of its cubic contents will be found in Admiral Smyth's work (*The Mediterranean*, p. 148). The ancients appear to have been correct in their assertion about the absence of salt in its waters, as, although in SW. winds, when the water is highest, it becomes brackish, yet at other times it is drinkable, though of a disagreeable flavour (Jones, *Trav.* vol. ii. p. 143; *Journ. Geog. Soc.* vol. i. p. 106). [E. B. J.]

MAEPHA (Μαίφα μητρόπολις), an inland city of Arabia Felix, placed by Ptolemy in long. 83° 15',

lat. 15°, the capital, no doubt, of the Maphoritae, whom he places above the Homeritae and Adramitae of the southern coast. [MAPHORITAE.] The situation of this tribe is still marked by the wide and very fruitful *Wady Mayfah*, in the midst of which "the very extensive village named *Mayfah*, situated at the eastern base of the Hummarees," perhaps marks the site of the Maepha metropolis. Mr. Forster, however, identifies it with the ruined site of *Nakab-el-Hajar*, discovered and described by Lieut. Wellstead in 1834, the situation of which is thus stated by that officer:—"*Nakab-el-Hajar* is situated north-west, and is distant forty-eight miles from the village of *'Ain* [on the coast], which is marked on the chart in latitude 14° 2′ north, and longitude 46° 30′ east, nearly." It stands in the centre of the *Wady Meifah*, nearly 20 miles north of the village of that name, and was evidently a place of considerable importance in ancient times. The inscription over the gateway, in the ancient Arabic character, commonly known as the Hadraumatic, would doubtless throw light on the history of this castle; and it is curious that while the attempted decipherments of Professor Roediger and Mr. Charles Forster have so little in common, both would agree in identifying it with Maepha; for while the former discovers the name Mêfa twice in the first line of the inscription, the latter, who pronounces that this name "has no existence in the inscription," compensates for this disappointment by discovering a list of proper names, which serve to connect it with several historical personages, among whom are an Arabian patriarch, Mohâreb, son of Koreish, "belonging to a period certainly prior to the Christian era;" and Charibaël, "that king of the Homerites and Sabaeans celebrated by Arrian (*Periplus Maris Eryth.* pp. 13, 14, *apud* Hudson *Geographici Minores*), whose alliance in the reign of Claudius was assiduously courted by the Romans. The inscription further mentions many of the buildings described by Lieut. Wellstead. (Forster, vol. ii. pp. 193—204, 383—393.) [G. W.]

MAERA. [MANTINEIA.]

MAESIA SILVA, a forest of Etruria, in the territory of the Veientines, which was conquered from them by Ancus Marcius. (Liv. i. 33.) Its site cannot be determined with certainty, but it was probably situated on the right bank of the Tiber, between Rome and the sea-coast. Pliny also notices it as abounding in dormice. (Plin. viii. 58. s. 83.) [E. H. B.]

MAESO'LIA (ἡ Μαισωλία, Ptol. vii. 1. § 15; in *Peripl.* p. 35, Μασαλία), a district on the eastern coast of *Hindostán*, along the *Bay of Bengal*, corresponding to that now occupied by the Circars and the upper part of the *Coromandel* coast. Ptolemy mentions two towns in its territory which he calls *Emporia*, namely, Contacossyla (probably the present *Masulipattana*) and Allosygna. The district was traversed by a river of considerable size, the Maesolus (now *Godávari*), which flows into the *Bay of Bengal*, after giving its name to the surrounding country. It was from one of the ports of Maesolia that merchants were in the habit of taking ship and crossing the *Bay of Bengal* to the Aurea Chersonesus. The people were called Maesoli (Μαισώλοι). (Vincent, *Peripl.* vol. ii. p. 521.) [V.]

MAESO'LUS (ὁ Μαισώλος, Ptol. vii. 1. §§ 15, 37), a river of considerable size, which rises in the *Deccan* or midland part of *Hindostán*, and flows in a course at first SE., and then nearly E till it falls into the *Bay of Bengal* in lat. 18°. N. There has been some dispute among geographers as to its modern representative, some making it the same as the *Kistna*, and some as the *Godávari*. The latter is probably the most correct supposition. Ptolemy places its source in the Orudii or Aruedi mountains, which would seem to be part of the chain of the western *Ghâts*. [V.]

MA'GABA (*Kurgh Dagh*), a considerable mountain in the central part of Galatia, W. of the river Halys, and E. of the city of Ancyra, which was only 10 Roman miles distant from it. In B. C. 189, when Manlius was carrying on war against the Galatians, the Tectosagi and Trocmi took refuge on Mt. Magaba, and there defended themselves against the Romans, but were defeated. (Liv. xxxviii. 19, 26; Flor. i. 11.) According to Rufus Festus (11), this mountain was afterwards called Modiacus. [L. S.]

MAGABULA, a place mentioned in the Peuting. Table in Pontus Polemoniacus, on the road from Comana to Nicopolis, at a distance of 21 miles from the former city. There can be no doubt but that it is the same place as Megalula (Μεγάλουλα) mentioned by Ptolemy (v. 6. § 10); but its exact site cannot be ascertained. [L. S.]

MAGA'RSA, MAGARSUS, or MEGARSUS (Μάγαρσα, Μάγαρσυς, Μέγαρσος), a town in the eastern part of Cilicia, situated on a height close to the mouth of the river Pyramus. (Strab. xiv. p. 676.) Alexander, previous to the battle of Issus, marched from Soli to Megarsus, and there offered sacrifices to Athena Megarsis, and to Amphilochus, the son of Amphiaraus, the reputed founder of the place. (Arrian, *Anab.* ii. 5.) It seems to have formed the port of Mallus (Steph. Byz. *s. v.* Μάγαρσος; Lycoph. 439; Plin. *H. N.* v. 22). The hill on which the town stood now bears the name of *Karadash*, and vestiges of ancient buildings are still seen upon it. (Leake, *Asia Minor*, p. 215, foll.) [L. S.]

MAGDALA (Μαγδαλά: *Eth.* Μαγδαληνός), a town of Galilee, chiefly noted as the birthplace of that Mary to whom the distinguished name of Magdalene is ever applied in the Gospel. The place itself is mentioned only by S. Matthew (xv. 39), where we find the words τὰ ὅρια Μαγδαλά, which are represented in the parallel passage in S. Mark (viii. 10) as τὰ μέρη Δαλμανουθά. As neither does this name occur elsewhere, we have no clue to the situation of the town; although, a modern writer says, "it seems to follow from the New Testament itself that it lay on the west side of the lake." The argument is, that, on leaving the coast of Magdala, our Lord embarked again, and "departed to the *other side*,"—"an expression which in the N. T. is applied almost exclusively to the country east of the lake and of the Jordan." (Robinson, *Bib. Res.* vol. iii. p. 278.) There can, however, be no difficulty in identifying it with the site of the modern village of *Mejdel* in the SE. corner of the plain of Gennesaret; where there certainly existed an ancient town of the name, noticed in the Jerusalem Talmud, compiled in Tiberias, from which it is not more than 4 or 5 miles distant, on the north: probably identical also with Migdal-el, in the tribe of Naphtali. (*Josh.* xix. 38.) It is a small and insignificant village, "looking much like a ruin, though exhibiting no marks of antiquity." (Robinson, *l. c.*) Pococke's argument against this identification is unintelligible:—"This does not seem to be Magdalum mentioned in Scripture, because that is spoken of with Dalmanutha, which was to the east of the sea." (*Observations*

on Palestine, Travels, vol. ii. p. 71.) How this last assertion is to be proved does not appear. The authority of Josephus has been quoted for a Magdala near Gamala, and consequently on the east of the sea (*Vita*, § 24); but the reading is corrupt. (Robinson, *l. c.* p. 279, note.) [G. W.]

MAG'DOLUM (Μάγδολον, Herod. ii. 159; but Μάγδωλον in LXX.; the *Migdol* of the Old Testament (*Exod.* xiv. 2; *Numb.* xxxiii. 7; 2 *Kings*, xxiii. 29; *Jerem.* xliv. 1, xlvi. 14; *Ezek.* xxix. 10, xxx. 6; *It. Anton.* p. 171), a town of Lower Aegypt which stood about 12 miles S. of Pelusium, on the coast-road between Aegypt and Syro-Phoenicia. Here, according to Herodotus, (*l. c.*) Pharaoh-Necho defeated the Syrians, about 608 B. C. Eusebius (*Praepar. Evang.* ix. 18), apparently referring to the same event, calls the defeated army "Syrians of Judah." That the Syrians should have advanced so near the frontiers of Egypt as the Deltaic Magdolum, with an arid desert on their flanks and rear (comp. Herod. iii. 5) seems extraordinary; neither is the suspicious aspect of the Battle of Magdolus diminished by the conquest of Cadytis, a considerable city of Palestine, being represented as its result. The Syrians might indeed have pushed rapidly along the coast-road to Aegypt, if they had previously secured the aid of the desert tribes of Arabs, as Cambyses did before his invasion of Aegypt (comp. Herod. iii. 7). Calmet's *Dict. of the Bible, s. v. Megiddo*; Winer, *Bibl. Realwörterbuch*, vol. ii. p. 93, note 2; Champollion, *L'Egypte*, vol. ii. p. 79. [W. B. D.]

MAGELLI, a Ligurian tribe, mentioned only by Pliny (iii. 5. s. 7). They have been supposed to have occupied the *Val di Mugello*, in the Apennines, N. of *Florence*; but though it is certain that the Ligurians at one time extended as far to the E. as this, it is very improbable that Pliny should have included such a tribe in his description of Roman Liguria. The name of the *Mugello* is found in Procopius (*B. G.* iii. 5) where he speaks of a *place* (χωρίον) called Mucella (Μουκέλλα), situated a day's journey to the N. of Florence. [E. H. B.]

MAGETO'BRIA or ADMAGETO'BRIA, in Gallia. Probably the true name ended in *-briva* or *-briga*. Ariovistus, the German, defeated the forces of the Galli in a fight at this place. (Caes. *B. G.* i. 31.) The site of Magetobria is unknown. The resemblance of name induced D'Anville (*Notice, &c.*) to fix it at *Moigte de Broie*, near the confluence of the *Ognon* and the *Saône*, a little above *Pontarlier*. There is a story of a broken urn, with the inscription MAGETOB., having been found in the *Saône* in 1802. But this story is of doubtful credit, and the urn cannot be found now. Walckenaer supposes *Amage* on the *Brenchin*, which is west of *Faucogney* and east of *Luxeuil*, to correspond best to the indications in Caesar's text. But Caesar does not give us the least indication of the position of Magetobria. [G. L.]

MAGI. [MEDIA.]

MAGIOVINTUM or MAGIOVINIUM, in Britain, a station placed in three of the itinera of Antoninus at the distance of 24 miles to the N. of Verulamium. Its site is generally supposed to be at *Fenny Stratford*. [C. R. S.]

MAGNA (*It. Ant.* p. 484; Geogr. Ravenn.). 1. A town or station in Britain, the site of which is now occupied by *Kenchester*, in Herefordshire. In both of the above works the word is in the plural form, Magnis, most probably for Magnis Castris. Indeed, the extraordinary extent of the place, as ascertained by its remains, renders this suggestion more than probable. The walls, now almost entirely destroyed, enclosed an area of from 20 to 30 acres. Leland, speaking of *Kenchester*, says:—"Ther hath ben fownd 'nostra memoria lateres Britannici; et ex eisdem canales, aquae ductus, tesselata pavimente, fragmentum catenulae aureae, calcar ex argento,' byside other strawng things." The tesselated pavements, mentioned by Leland, have, of late years, been partially laid open. The only lapidary inscription which appears on record, as discovered at *Kenchester*, is a fragment with the name of the emperor Numerian; but coins and miscellaneous antiquities are still, from time to time, ploughed up.

2. A station in Britain, on the line of the Roman Wall, mentioned in the Notitia; it also occurs in Geog. Ravenn.; and probably on the Rudge Cup, as Maisa. Its site is that of *Carvoran*, a little to the S. of the Wall, on a high and commanding position near the village of *Greenhead*.

There seems but little doubt of *Carvoran* being the site of this Magna; although, unlike many of the Notitia stations on the Wall, its position has not been identified by inscriptions. The Notitia places at Magna the second cohort of the Dalmatians. At least two inscriptions found here mention the Hamii, but none name the Dalmatians. The Hamii do not appear to be recorded in any other inscriptions, and they are not mentioned by that name in the Notitia. Hodgson (*Roman Wall and South Tindale*, p. 205) considers that these auxiliary troops were from Apamenia in Syria, at the confluence of the Orontes and Marsyas, 62 miles from Aleppo, which is still a large place, and called Hamah, and, in ancient times, Hama. This conjecture seems feasible, as the Notitia mentions the Cohors Prima Apamenorum as quartered in Egypt; and also as some altars dedicated to the Syrian goddess have been discovered at Carvoran. [C. R. S.]

MAGNA GRAE'CIA (ἡ μεγάλη Ἑλλάς), was the name given in ancient times by the Greeks themselves to the assemblage of Greek colonies which encircled the shores of Southern Italy. The name is not found in any extant author earlier than Polybius: but the latter, in speaking of the cities of Magna Graecia in the time of Pythagoras, uses the expression, "the country that was *then* called Magna Graecia" (Pol. ii. 39); and it appears certain that the name must have arisen at an early period, while the Greek colonies in Italy were at the height of their power and prosperity, and before the states of Greece proper had attained to their fullest greatness. But the omission of the name in Herodotus and Thucydides, even in passages where it would have been convenient as a geographical designation, seems to show that it was not in their time generally recognised as a distinctive appellation, and was probably first adopted *as such* by the historians and geographers of later times, though its origin must have been derived from a much earlier age. It is perhaps still more significant, that the name is not found in Scylax, though that author attaches particular importance to the enumeration of the Greek cities in Italy as distinguished from those of the barbarians.

Nor is the use of the term, even at a later period, very fixed or definite. Strabo seems to imply that the Greek cities *of Sicily* were included under the appellation; but this is certainly opposed to the more general usage, which confined the term to the colo-

nies in Italy. Even of these, it is not clear whether Cumae and its colonies in Campania were regarded as belonging to it: it is certain at least that the name is more generally used with reference only to the Greek cities in the south of Italy, including those on the shores of the Tarentine gulf and the Bruttian peninsula, together with Velia, Posidonia, and Laüs, on the W. coast of Lucania. Sometimes, indeed, the name is confined within still narrower limits, as applying only to the cities on the Tarentine gulf, from Locri to Tarentum (Plin. iii. 10. s. 15; Ptol. iii. 1. § 10); but it is probable that this distinction was introduced only by the later geographers, and did not correspond to the original meaning of the term. Indeed, the name itself sufficiently implies (what is expressly stated by many ancient writers) that it was derived from the number and importance of the Greek colonies in Southern Italy, and must, therefore, naturally have been extended to them all. (Strab. vi. p. 253; Scymn. Ch. 303; Pol. ii. 39, iii. 118; Athen. xii. p. 523; Justin, xx. 2; Cic. *Tusc.* iv. 1, v. 4, *de Or.* iii. 34.) It must be added that the name was never understood (except perhaps by late geographers) as a *territorial* one, including the whole of Southern Italy, but applied merely to the Greek cities on the coasts, so as to correspond with the expression "Graecorum omnis ora," employed by Livy (xxii. 61). The same author in one passage (xxxi. 7) uses the phrase "Graecia Major," which is found also in Festus (p. 134, ed. Müll.), and employed by Justin and Ovid (Justin, *l. c.*; Ov. *Fast.* iv. 64); but the common form of expression was certainly Graecia Magna (Cic. *ll. cc.*)

There could obviously be no ethnic appellation which corresponded to such a term; but it is important to observe that the name of Ἰταλιῶται is universally used by the best writers to designate the *Greeks in Italy*, or as equivalent to the phrase *οἱ κατὰ τὴν Ἰταλίαν Ἕλληνες*, and is never confounded with that of Ἰταλοί, or the Italians in general. (Thuc. vi. 44; Herod. iv. 15, &c.) Polybius, however, as well as later writers, sometimes loses sight of this distinction. (Pol. vi. 52.)

The geographical description of the country known as Magna Graecia is given under the article ITALIA, and in more detail in those of BRUTTII, LUCANIA, and CALABRIA; but as the history of these Greek colonies is to a great extent separate from that of the mother country, while it is equally distinct from that of the Italian nations which came early in contact with Rome, it will be convenient here to give a brief summary of the history of Magna Graecia, bringing together under one head the leading facts which are given in the articles of the several cities.

The general testimony of antiquity points to Cumae as the most ancient of all the Greek settlements in Italy; and though we may reasonably refuse to admit the precise date assigned for its foundation (B. C. 1050), there seems no sufficient reason to doubt the fact that it really preceded all other Greek colonies in Italy or Sicily. [CUMAE.] But, from its remote position, it appears to have been in great measure isolated from the later Greek settlements, and, together with its own colonies and dependencies, Dicaearchia and Neapolis, formed a little group of Greek cities, that had but little connection with those further south, which here form the immediate subject of consideration.

With the single exception of Cumae, it seems certain that none of the Greek colonies in Italy were more ancient than those in Sicily; while there seems good reason to suppose that the greater part of them were founded within the half century which followed the first commencement of Greek colonisation in that quarter. (B. C. 735—685.) The causes which just at that period gave so sudden an impulse to emigration in this direction, are unknown to us; but, though the precise dates of the foundation of these colonies are often uncertain, and we have no record of their establishment equal either in completeness or authority to that preserved by Thucydides concerning the Greek cities in Sicily, we may still trace with tolerable certainty the course and progress of the Greek colonisation of Italy.

The Achaeans led the way; and it is remarkable that a people who never played more than a subordinate part in the affairs of Greece itself should have been the founders of the two most powerful cities of Magna Graecia. Of these, SYBARIS was the earliest of the Achaean colonies, and the most ancient of the Greek settlements in Italy of which the date is known with any approach to certainty. Its foundation is ascribed to the year 720 B. C. (Scymn. Ch. 360; Clinton, *F. H.* vol. i. p. 174); and that of CROTONA, according to the best authorities, may be placed about ten years later, B. C. 710. [CROTONA.] Within a very few years of the same period, took place the settlement of TARENTUM, a Spartan colony founded after the close of the First Messenian War, about 708 B. C. A spirit of rivalry between this city and the Achaean colonies seems to have early sprung up; and it was with a view of checking the encroachments of the Tarentines that the Achaeans, at the invitation of the Sybarites, founded the colony of METAPONTUM, on the immediate frontier of the Tarentine territory. The date of this is very uncertain (though it may probably be placed between 700 and 680 B. C.); but it is clear that Metapontum rose rapidly to prosperity, and became the third in importance among the Achaean colonies. While the latter were thus extending themselves along the shores of the Tarentine gulf, we find subsisting in the midst of them the Ionian colony of SIRIS, the history of which is extremely obscure, but which for a brief period rivalled even the neighbouring Sybaris in opulence and luxury. [SIRIS].

Further towards the S., the Locrians from Greece founded near the Cape Zephyrium the city which was thence known by the name of LOCRI EPIZEPHYRII. This settlement is described by Strabo as nearly contemporary with that of Crotona (B. C. 710), though some authorities would bring it down to a period thirty or forty years later. [LOCRI.] The next important colony was that of RHEGIUM, on the Sicilian straits, which was, according to the general statement, a Chalcidic colony, founded subsequently to Zancle in Sicily, but which, from the traditions connected with its foundation, would seem to have been more ancient even than Sybaris. [RHEGIUM.] The Greek cities on the Tyrrhenian sea along the shores of Bruttium and Lucania were, with the single exception of VELIA, which was not founded till about 540 B. C., all of them colonies from the earlier settlements already noticed and not sent out directly from the mother country. Thus POSIDONIA, LAÜS and SCIDRUS, on the Tyrrhenian sea, were all colonies of Sybaris, which in the days of its greatness undoubtedly extended its dominion from sea to sea. In like manner, Crotona had founded TERINA on the W. coast of the Bruttian peninsula, as well

as CAULONIA on the E. coast, but considerably more to the S. Locri, also, had established two colonies on the W. coast, HIPPONIUM and MEDMA; neither of which, however, attained to any great importance. Several other places which at a later period assumed more or less of a Greek character, were probably only Oenotrian towns, which had become gradually Hellenised, but without ever receiving Greek colonies. Such were PANDOSIA, PETELIA, TEMESA, and probably SCYLLETIUM also, though this is frequently called an Athenian colony.

We have very little information as to the early history of these Greek cities in Italy. All accounts agree in representing them as rising rapidly to a high state of prosperity, and attaining to an amount of wealth and power which far exceeded that enjoyed at so early a period by any of the cities of the mother country. The Achaean colonies, Sybaris, Crotona, and Metapontum, seem to have been the first to attain to this flourishing condition; and Sybaris especially became proverbial for its wealth and the luxurious habits of its citizens. [SYBARIS.] There can be no doubt that the extraordinary fertility of the district in which these colonies were founded was the primary cause of their prosperity; but they appear, also, to have carried on an extensive foreign commerce; and as they increased in power they sought to extend their territorial possessions, so that we are told that Sybaris, in the days of its greatness, ruled over twenty-five dependent cities, and four nations or tribes of the neighbouring Oenotrians. (Strab. vi. p. 263.) It is remarkable how little we hear of any wars with the barbarians of the interior, or of any check to the progress of the Greek cities arising from this cause; and it seems probable, not only that the Pelasgic origin of these tribes [OENOTRIA] caused them to assimilate with comparative facility with the Hellenic settlers, but that many of them were admitted to the full rights of citizens, and amalgamated into one body with the foreign colonists. This we know to have been the case with Locri in particular (Pol. xii. 5); and there can be little doubt that the same thing took place more or less extensively in all the other cities. (Diod. xii. 9.) It is, indeed, impossible, on any other supposition, to explain the rapidity with which these rose to an amount of wealth and population at that time unexampled in the Hellenic world.

It seems certain that the period of about two centuries, which elapsed from the first settlement of the Greek colonies till after the fall of Sybaris (B.C. 710—510), was that during which these cities rose to the height of their power; and probably the half century preceding the latter event (B.C. 560—510) may be taken as the culminating point in the prosperity of the Achaean cities (Grote, vol. iii. p. 522.) Unfortunately, it is precisely for this period that we are the most absolutely deficient in historical information. The loss of the early books of Diodorus is especially to be regretted, as they would undoubtedly have preserved to us many interesting notices concerning the early fortunes of the Greek cities, and at the same time have afforded us a clue to the chronological arrangement of the few scattered facts that have been preserved to us. The want of this renders it impossible to connect the extant notices into anything like a historical narrative.

Among the earliest of these may probably be placed the league of the three great Achaean cities, Crotona, Sybaris, and Metapontum, for the expulsion of the Ionians from their colony of Siris,—an union which appears to have led to the capture, and perhaps the destruction, of that city. (Justin, xx. 2.) But the date of this event is almost wholly uncertain [SIRIS], and scarcely less so is that of the much more celebrated battle of the Sagras, which Justin connects with the fall of Siris; while other authors would bring it down to a much later period. [SAGRAS.] According to all accounts, that famous battle, in which it is said that 120,000 Crotoniats were defeated by 10,000, or at most 15,000, of the Locrians and Rhegians, inflicted for a time a severe blow upon the prosperity of Crotona: but Strabo is certainly in error in representing that city as never recovering from its effects. [CROTONA.] Justin, on the contrary, describes the period of depression consequent on this disaster as continuing only till the time of Pythagoras (xx. 4); and it is certain that in the days of that philosopher, Crotona, as well as the neighbouring Achaean cities, appears in a state of great prosperity.

It was about the year B.C. 530 that the arrival of Pythagoras at Crotona gave rise to a marked change in the cities of Magna Graecia. The extraordinary influence which he speedily acquired, was not confined to that city, but extended to Sybaris and Metapontum also, as well as to Rhegium and Tarentum. And it was so far from being limited to the proper sphere of philosophy, that it led to the introduction of great political changes, and for a time threw the chief ascendency in the state into the hands of the Pythagoreans. [CROTONA.] Their power was ultimately overthrown by a violent revolution, which led to the expulsion of Pythagoras himself and his followers from Crotona; and this seems to have been followed by similar disturbances in the other cities. We are very imperfectly informed as to the circumstances of these revolutions, but it seems certain that they gave rise to a period of disorder and confusion throughout the cities of Magna Graecia from which the latter did not fully recover for a considerable period. (Pol. ii. 39; Justin, xx. 4; Iambl. *Vit. Pyth.* 258—264; Porphyr. *V. P.* 54—58.)

It was apparently before the expulsion of the Pythagoreans, and while their influence was still paramount at Crotona, that the final contest arose between that city and Sybaris, which ended in the total destruction of the latter, B.C. 510. On that occasion we are told that the Crotoniats brought into the field 100,000 men, and the Sybarites not less than 300,000; and though these numbers cannot be received as historically accurate, they sufficiently prove the opinion entertained of the opulence and power of the rival cities. The decisive victory of the Crotoniats on the banks of the river Traeis was followed by the capture and total destruction of Sybaris,—an event which seems to have produced a profound sensation in the Hellenic world (Herod. vi. 21), and must have caused a great change in the political relations of Magna Graecia. Unfortunately, we have no means of tracing these; we know only that a part of the surviving Sybarites took refuge in the colonial cities of Laüs and Scidrus, while another portion settled themselves on the banks of the Traeis, where they maintained themselves for a considerable period. (Herod. *l. c.*; Strab. vi. pp. 263, 264.)

The civil dissensions arising from the expulsion of the Pythagoreans may perhaps have been the cause of the remarkable circumstance (which we are otherwise at a loss to account for), that none of the states of Magna Graecia sent assistance to the Greeks at the

time of the Persian invasion. It is still more remarkable, that even when the Athenians and Lacedaemonians sent an embassy to Sicily to invoke the assistance of Gelon, we do not hear of any similar application to the Greek cities in Southern Italy.

While the Achaean cities were thus declining from their former prosperity, Rhegium, the name of which is scarcely mentioned in history at an earlier period, was raised to a position of considerable power and importance under the rule of the despot Anaxilas (B.C. 496—476), who united under his authority the city of Messana also, on the opposite side of the straits, and thus became involved in connection with the politics of Sicily, which had been hitherto very distinct from those of Magna Graecia. Micythus, the successor of Anaxilas in the government of Rhegium, was remarkable as the founder of the colony of Pyxus (afterwards called Buxentum), on the Tyrrhenian sea, in B.C. 471. (Diod. xi. 59.) This was the latest of the Greek settlements in that quarter.

About the same time (B.C. 473) we find mention of a disastrous defeat, which must, for a time, have given a severe check to the rising power of the Tarentines. That people appear to have taken little part in the disputes or contests of their Achaean neighbours; but after their ineffectual attempt to oppose the founding of Metapontum [METAPONTUM], would seem to have been principally engaged in extending their commerce, and in wars with the neighbouring barbarians. Here they found, among the Iapygians or Messapians, a more formidable opposition than was encountered by the other Greek cities. After repeated contests, in many of which they had come off victorious and reduced many of the Iapygian towns, the Tarentines were defeated in a great battle by the Iapygians, with such heavy loss that Herodotus tells us it was the greatest slaughter of Greek citizens that had happened within his knowledge. Three thousand Rhegian auxiliaries, who had been sent to the support of the Tarentines, perished on the same occasion. (Herod. vii. 170; Diod. xi. 52.)

The period between the Persian and Peloponnesian Wars witnessed the establishment of the two latest of the Greek colonies in Southern Italy—THURII and HERACLEA. Both of these were, however, but a kind of renewal of previously existing settlements. Thurii was founded in B.C. 443, by a body of colonists, of whom the Athenians seem to have taken the lead, but which was composed, in great part, of settlers from other states of Greece [THURII]; with whom were united the remaining citizens of Sybaris, and the new colony was established within two miles of the site of that city. The new settlement rose rapidly to prosperity, but was soon engaged in war with the Tarentines for the possession of the vacant district of Siris; until these hostilities were at length terminated by a compromise, according to which the two rival cities joined in establishing a new colony, three miles from the site of the ancient Siris, to which they gave the name of Heraclea, B.C. 432. (Strab. vi. p. 264; Diod. xii. 23, 36.) But though thus founded by common consent, the Tarentines seem to have had much the largest share in its establishment, and Heraclea was always considered as a colony of Tarentum.

During the Peloponnesian War the cities of Magna Graecia seem to have studiously kept aloof from the contest. Even when the Athenian expedition to Sicily (B.C. 415) involved the whole of the Greek cities in that island in the war, those on the coasts of Italy still endeavoured to preserve their neutrality, and refused to admit the Athenian forces within their walls, though they did not offer any obstruction to their progress. (Thuc. vi. 44; Diod. xiii. 3.) At a later period, however, the Thurians (among whom there was naturally an Athenian party) and the Metapontines were induced to enter into a regular alliance with Athens, and supplied a small force to their assistance. (Thuc. vii. 33, 35; Diod. xiii. 11.)

At this period the cities of Magna Graecia seem to have been still in a prosperous and flourishing condition; but it was not long after that they began to feel the combined operation of two causes which mainly contributed to their decline. The first danger which threatened them was from the south, where Dionysius, tyrant of Syracuse, after having established his power over the greater part of Sicily, began to seek to extend it in Italy also. Hitherto the cities of Italy had kept aloof in great measure from the revolutions and wars of the neighbouring island: Rhegium and Locri alone seem to have maintained closer relations with the Sicilian Greeks. The former, from its Chalcidic origin, was naturally friendly to the colonies of the same race in Sicily; and when Dionysius turned his arms against the Chalcidic cities, Naxos, Catana, and Leontini, he at once brought on himself the enmity of the Rhegians. Hence, when he soon after applied to conclude a matrimonial alliance with them, the proposal was indignantly rejected. The Locrians, on the other hand, readily accepted his offer, and thus secured the powerful assistance of the despot in his subsequent wars. (Diod. xiv. 44, 107.) From this time his efforts were mainly directed to the humiliation of Rhegium and the aggrandisement of the Locrians. His designs in this quarter soon excited so much alarm, that, in B.C. 393, the Italian Greeks were induced to conclude a general league for their mutual protection against the arms of Dionysius on the one side, as well as those of the Lucanians on the other. (Id. 91.) But the result was far from successful. The combined forces of the confederates were defeated by Dionysius in a great battle at the river Helleporus or Helorus, near Caulonia, B.C. 389; and this blow was followed by the capture of Caulonia itself, as well as Hipponium, both of which places were reduced to a state of dependence on Locri. Not long after, the powerful city of Rhegium was compelled to surrender, after a siege of nearly eleven months, B.C. 387. (Diod. xiv. 103—108, 111.)

While the more southerly cities of Magna Graecia were suffering thus severely from the attacks of Dionysius, those on the northern frontier were menaced by a still more formidable danger. The Lucanians, a Sabellian race or branch of the Samnite stock, who had pressed forward into the territory of the Oenotrians, and had gradually expelled or reduced to subjection the tribes of that people who inhabited the mountain districts of the interior, next turned their arms against the Greek cities on the coast. Posidonia, the most northerly of these settlements, was the first which fell under their yoke (Strab. vi. p. 254); and though we cannot fix with accuracy the date of its conquest, it is probable that this took place some time before we find them engaged in wars with the cities on the Tarentine gulf. If, indeed, we can trust to the uncertain chronology of some of these events, they would seem to have been already engaged in hostilities with the

rising colony of Thurii at an early period of its existence (Polyaen. ii. 10); but it was not till after 400 B.C. that their power assumed a formidable aspect towards the Greeks in general. The territory of Thurii was the first object of their hostilities, but the other cities were not insensible to their danger; and hence the general league of the Italian Greeks in B.C. 393, as already mentioned, was directed as much against the Lucanians as against Dionysius. Unfortunately, their arms met with equal ill success in both quarters; and in B.C. 390 the confederate forces were defeated by the Lucanians with great slaughter near Laüs. (Diod. xiv. 101, 102; Strab. vi. p. 253.) That city had already fallen into the hands of the invaders, who now pressed on towards the south, and seem to have spread themselves with great rapidity throughout the whole of the Bruttian peninsula. Here they became so formidable that the younger Dionysius was compelled to abandon the policy of his father (who had courted the alliance of the Lucanians, and even rendered them active assistance), and turn his arms against them, though with little effect. A period of great confusion and disorder appears to have ensued, and the rise of the Bruttian people, which took place at this period (B.C. 356), though it in some measure broke the power of the Lucanians, was so far from giving any relief to the Greek cities that they soon found the Bruttians still more formidable neighbours. The flourishing cities of Terina and Hipponium were conquered by the barbarians (Diod. xvi. 15; Strab. vi. p. 256): Rhegium and Locri, though they maintained their nationality, suffered almost as severely from the oppressions and exactions of the younger Dionysius; while Crotona, long the most powerful city in this part of Italy, seems never to have recovered from the blow inflicted on it by the elder despot of that name [CROTONA], and was with difficulty able to defend itself from the repeated attacks of the Bruttians. (Diod. xix. 3, 10.)

Meanwhile, the Lucanians had turned their arms against the more northerly cities on the Tarentine gulf. Here the Thurians seem, as before, to have borne the brunt of the attack; but at length Tarentum itself, which had hitherto stood aloof, and had apparently not even joined in the league of B.C. 393, was compelled to take up arms in its own defence. The Tarentines could have suffered comparatively but little from the causes which had so severely impaired the prosperity of the other cities of Magna Graecia; and Tarentum was undoubtedly at this time the most opulent and powerful of the Greek cities in Italy. But its citizens were already enervated by indolence and luxury; and when they found themselves threatened by the forces of the Lucanians, combined with their old enemies the Messapians, they mistrusted their own resources, and applied to their parent city of Sparta for assistance. Archidamus, king of Sparta, accepted the invitation, and proceeded to Italy with a considerable force, where he appears to have carried on the war for some years, but was finally defeated and slain in a battle near Manduria, B.C. 338. (Diod. xvi. 63, 88.) Only a few years afterwards, B.C. 332, Alexander king of Epirus was invited over to Italy for the same purpose. The history of his expedition is, unfortunately, very imperfectly known to us; though it is clear that his military operations were attended with much success, and must have exercised considerable influence upon the fortunes of the Greek cities. Though invited, in the first instance, by the Tarentines, he subsequently quarrelled with that people, and even turned his arms against them, and took Heraclea, their colony and dependency. At the same time he defeated the combined forces of the Lucanians and Bruttians in several successive battles, retook Terina, Consentia, and several other towns, and penetrated into the heart of Bruttium, where he was slain by a Lucanian exile, who was serving in his own army, B.C. 326. (Liv. viii. 17, 24; Justin, xii. 2.)

After his death, the wars between the Tarentines and Lucanians appear to have continued with little intermission; though we have no further account of them till the year 303 B.C., when the former people again sued to Sparta for assistance, and Cleonymus, the uncle of the Spartan king, repaired to Tarentum with a large mercenary force. So formidable did this armament appear that both the Messapians and Lucanians were speedily induced to sue for peace; while Metapontum, which, for some reason or other, had opposed the views of Cleonymus, was reduced by force of arms. (Diod. xx. 104.) The Spartan prince, however, soon alienated all his allies by his luxury and rapacity, and quitted Italy the object of universal contempt.

We have very little information as to the wars of Agathocles in Bruttium; though we learn that he made himself master of Hipponium and Crotona, and occupied the latter city with a garrison. It is evident, therefore, that his designs were directed as much against the Greek cities as their barbarian neighbours; and the alliance which he concluded at the same time with the Iapygians and Peucetians could only have been with a view to the humiliation of Tarentum. (Diod. xxi. 2, 8.) His ambitious designs in this quarter were interrupted by his death, B.C. 289.

Only a few years later than this took place the celebrated expedition of Pyrrhus to Italy (B.C. 281—274), which marks a conspicuous era in the history of Magna Graecia. Shortly before that event, the Thurians, finding themselves hard pressed and their city itself besieged by the Lucanians, had concluded an alliance with the Romans, who raised the siege and defeated the assailants, B.C. 282. (Appian, *Samn.* 7; Val. Max. i. 8. § 6.) This was the first occasion that brought the Roman power down to the shores of the Tarentine gulf; and here they almost immediately after came into collision with the Tarentines themselves. [TARENTUM.] That people, conscious of their inability to resist the power of these new enemies, now invoked the assistance of Pyrrhus, king of Epirus, at the same time that they concluded a league with the Lucanians and Samnites, so long the inveterate enemies of Rome. Hence, when Pyrrhus landed in Italy, he found himself supported at the same time by all the remaining Greek cities in that country, as well as by the barbarian nations with whom they had been so long at war. It is unnecessary to enter into a detailed account of his campaigns: notwithstanding his first successes, his alliance proved of no real advantage to the Greeks, while his visit to Sicily in B.C. 278, and his final departure in B.C. 274, left them at the mercy of the victorious Romans. Tarentum itself was taken by the consuls in B.C. 272. Crotona and Locri had previously fallen into the hands of the Romans; while Rhegium, which was held by a revolted body of Campanian troops, originally placed there as a garrison, was finally reduced to subjection in B.C. 271

There can be no doubt that the cities of Magna Graecia had suffered severely during these wars: the foreign troops placed within their walls, whether Roman or Greek, appear to have given way to similar excesses; and the garrisons of Pyrrhus at Locri and Tarentum were guilty of exactions and cruelties which almost rivalled those of the Campanians at Rhegium. In addition to the loss of their independence, therefore, it is certain that the war of Pyrrhus inflicted a mortal blow on the prosperity of the few Greek cities in Southern Italy which had survived their long-continued struggles with the Lucanians and Bruttians. The decayed and enfeebled condition of the once powerful Crotona (Liv. xxiii. 30) was undoubtedly common to many of her neighbours and former rivals. There were, however, some exceptions; Heraclea especially, which had earned the favour of Rome by a timely submission, obtained a treaty of alliance on unusually favourable terms (Cic. *pro Balb.* 22), and seems to have continued in a flourishing condition.

But the final blow to the prosperity of Magna Graecia was inflicted by the Second Punic War. It is probable that the Greek cities were viewed with unfavourable eyes by the Roman government, and were naturally desirous to recover their lost independence. Hence they eagerly seized the opportunity afforded by the victories of Hannibal, and after the battle of Cannae we are told that almost all the Greek cities on the S. coast of Italy (*Graecorum omnis ferme ora*, Liv. xxii. 61) declared in favour of the Carthaginian cause. Some of these were, however, overawed by Roman garrisons, which restrained them from open defection. Tarentum itself (still apparently the most powerful city in this part of Italy) was among the number; and though the city itself was betrayed into the hands of the Carthaginian commander, the citadel was still retained by a Roman garrison, which maintained its footing until the city was recovered by Fabius, B. C. 209. (Liv. xxv. 8—11, xxvii. 15, 16.) Tarentum was on this occasion treated like a captured city, and plundered without mercy, while the citizens were either put to the sword or sold as slaves. Metapontum was only saved from a similar fate by the removal of its inhabitants and their property, when Hannibal was compelled to abandon the town; and at a later period of the war Terina was utterly destroyed by the Carthaginian general. (Liv. xxvii. 51; Strab. vi. 256.) Locri and Crotona were taken and retaken: Rhegium alone, which maintained its fidelity to Rome inviolate, though several times attempted by a Carthaginian force, seems to have in great measure escaped the ravages of the war.

It is certain that the cities of Magna Graecia never recovered from this long series of calamities. We have very little information as to their condition under the government of the Roman Republic, or the particular regulations to which they were subjected. But it is probable that, until after the complete subjugation of Greece and Macedonia, they were looked upon with a jealous eye as the natural allies of their kinsmen beyond the seas (Liv. xxxi. 7); and even the colonies, whether of Roman or Latin citizens, which were settled on the coasts of Southern Italy, were probably designed rather to keep down the previous inhabitants than to recruit the exhausted population. One of these colonies, that to Posidonia, now known as Paestum, had been established at a period as early as B. C. 273 (Liv. *Epit.* xiv.; Vell. Pat. i. 14); and Brundusium, which subsequently rose to be so important a city, was also settled before the Second Punic War, B. C. 244. (Vell. Pat. *l. c.*; Liv. *Epit.* xix.) But, with these exceptions, all the Roman colonies to the coasts of Lucania, Bruttium, and Calabria, date from the period subsequent to that war. Of these, Buxentum in Lucania and Tempsa in Bruttium were settled as early as B. C. 194; and in the same year a body of Roman colonists was established in the once mighty Crotona. (Liv. xxxiv. 47.) Shortly afterwards two other colonies were settled, one at Thurii in Lucania, in B. C. 193, and the other at Hipponium or Vibo, in Bruttium, B. C. 192. (Liv. xxxiv. 53, xxxv. 9, 40.) The last of these, which under the name of Vibo Valentia became a flourishing and important town, was the only one of these colonies which appears to have risen to any considerable prosperity. At a much later period (B. C. 123), the two colonies sent to Scylacium and Tarentum, under the names of Colonia Minervia and Neptunia (Vell. Pat. i. 15), were probably designed as an attempt to recruit the sinking population of those places.

But all attempts to check the rapid decline of this part of Italy were obviously unsuccessful. It is probable, or indeed almost certain, that malaria began to make itself severely felt as soon as the population diminished. This is noticed by Strabo in the case of Posidonia (v. p. 251); and the same thing must have occurred along the shores of the Tarentine gulf. Indeed, Strabo himself tells us, that, of the cities of Magna Graecia which had been so famous in ancient times, the only ones that retained any traces of their Greek civilisation in his day were Rhegium, Tarentum, and Neapolis (vi. p. 253); while the great Achaean cities on the Tarentine gulf had almost entirely disappeared. (*Ib.* p. 262.) The expressions of Cicero are not less forcible, that Magna Graecia, which had been so flourishing in the days of Pythagoras, and abounded in great and opulent cities, was in his time sunk into utter ruin (*nunc quidem deleta est*, Cic. *de Amic.* 4, *Tusc.* iv. 1). Several of the towns which still existed in the days of Cicero, as Metapontum, Heraclea, and Locri, gradually fell into utter insignificance, and totally disappeared, while Tarentum, Crotona, and a few others maintained a sickly and feeble existence through the middle ages down to the present time.

It has been already observed, that the name of Magna Graecia was never a territorial designation; nor did the cities which composed it ever constitute a political unity. In the earliest times, indeed, the difference of their origin and race must have effectually prevented the formation of any such union among them as a whole. But even the Achaean cities appear to have formed no political league or union among themselves, until after the troubles growing out of the expulsion of the Pythagoreans, on which occasion they are said to have applied to the Achaeans in Greece for their arbitration, and to have founded by their advice a temple of Zeus Homorius, where they were to hold councils to deliberate upon their common affairs and interests. (Pol. ii. 39.)

A more comprehensive league was formed in B. C. 393, for mutual protection against the attacks of Dionysius on one side, and the Lucanians on the other (Diod. xiv. 91); and the cities which composed it must have had some kind of general council or place of meeting. It is probable that it was on this occasion that the general meetings of the Italian Greeks, alluded to by Strabo (vi. p. 280), were first instituted: though it is highly improbable

that the Tarentine colony of Heraclea was selected in the first instance for the place of assembly, as the Tarentines seem at first to have kept aloof from the contest, and it is very doubtful whether they were included in the league at all. But it was natural that, when the Tarentines assumed the leading position among the allied cities, the councils should be transferred to their colony of Heraclea, just as Alexander of Epirus afterwards sought to transfer them from thence to the river Acalandrus in the Thurian territory, as a mark of enmity towards the Tarentines. (Strab. *l. c.*) [E. H. B.]

MAGNATA. [NAGNATAE.]

MAGNE'SIA, MAGNE'TES. [THESSALIA.]

MAGNE'SIA (Μαγνησία: *Eth.* Μάγνης.) 1. A city in Ionia, generally with the addition πρὸς or ἐπὶ Μαιάνδρῳ (ad Maeandrum), to distinguish it from the Lydian Magnesia, was a considerable city, situated on the slope of mount Thorax, on the banks of the small river Lethaeus, a tributary of the Maeander. Its distance from Miletus was 120 stadia or 15 miles. (Strab. xiv. pp. 636, 647; Plin. v. 31.) It was an Aeolian city, said to have been founded by Magnesians from Europe, in the east of Thessaly, who were joined by some Cretans. It soon attained great power and prosperity, so as to be able to cope even with Ephesus (Callinus, *ap. Strab.* xiv. p. 647.) At a later time, however, the city was taken and destroyed by the Cimmerians; perhaps about B. C. 726. In the year following the deserted site was occupied, and the place rebuilt by the Milesians, or, according to Athenaeus (xii. p. 525), by the Ephesians. Themistocles during his exile took up his residence at Magnesia, the town having been assigned to him by Artaxerxes to supply him with bread. (Nepos, *Themist.* 10; Diod. xi. 57.) The Persian satraps of Lydia also occasionally resided in the place. (Herod. i. 161, iii. 122.) The territory of Magnesia was extremely fertile, and produced excellent wine, figs, and cucumbers (Athen. i. p. 29, ii. p. 59, iii. p. 78.) The town contained a temple of Dindymene, the mother of the gods; and the wife of Themistocles, or, according to others, his daughter, was priestess of that divinity; but, says Strabo (p. 647), the temple no longer exists, the town having been transferred to another place. The new town which the geographer saw, was most remarkable for its temple of Artemis Leucophryene, which in size and in the number of its treasures was indeed surpassed by the temple of Ephesus, but in beauty and the harmony of its parts was superior to all the temples in Asia Minor. The change in the site of the town alluded to by Strabo, is not noticed by any other author. The temple, as we learn from Vitruvius (vii. Praefat.), was built by the architect Hermogenes, in the Ionic style. In the time of the Romans, Magnesia was added to the kingdom of Pergamus, after Antiochus had been driven eastward beyond Mount Taurus. (Liv. xxxvii. 45, xxxviii. 13.) After this time the town seems to have decayed, and is rarely mentioned, though it is still noticed by Pliny (v. 31) and Tacitus (*Ann.* iv. 55). Hierocles (p. 659) ranks it among the bishoprics of Asia, and later documents seem to imply that at one time it bore the name of Maeandropolis. (Concil. Constantin. iii. p. 666.) The existence of the town in the time of the emperors Aurelius and Gallienus is attested by coins.

Formerly the site of Magnesia was identified with the modern *Guzel-hissar;* but it is now generally admitted, that *Inek-bazar*, where ruins of the temple of Artemis Leucophryene still exist, is the site of the ancient Magnesia. (Leake, *Asia Minor*, pp. 242, foll.; Arundell, *Seven Churches*, pp. 58, foll.; Cramer, *Asia Minor*, vol. i. pp. 459, foll.)

COIN OF MAGNESIA AD MAEANDRUM.

2. A town of Lydia, usually with the addition πρὸς or ὑπὸ Σιπύλῳ (ad Sipylum), to distinguish it from Magnesia on the Maeander in Ionia, situated on the north-western slope of Mount Sipylus, on the southern bank of the river Hermus. We are not informed when or by whom the town was founded, but it may have been a settlement of the Magnesians in the east of Thessaly. Magnesia is most celebrated in history for the victory gained under its walls by the two Scipios in B. C. 190, over Antiochus the Great, whereby the king was for ever driven from Western Asia. (Strab. xiii. p. 622; Plin. ii. 93; Ptol. v. 2. § 16, viii. 17. § 16; Scylax, p. 37; Liv. xxxvii. 37, foll.; Tac. *Ann.* ii. 47.) The town, after the victory of the Scipios, surrendered to the Romans. (Appian, *Syr.* 35.) During the war against Mithridates the Magnesians defended themselves bravely against the king. (Paus. i. 20. § 3.) In the reign of Tiberius, the town was nearly destroyed by an earthquake, in which several other Asiatic cities perished; and the emperor on that occasion granted liberal sums from the treasury to repair the loss sustained by the inhabitants (Strab. xii. p. 579; xiii. p. 622; Tac. *l. c.*) From coins and other sources, we learn that Magnesia continued to flourish down to the fifth century (Hierocl. p. 660); and it is often mentioned by the Byzantine writers. During the Turkish rule, it once was the residence of the Sultan; but at present it is much reduced, though it preserves its ancient name in the corrupt form of *Manissa.* The ruins of ancient buildings are not very considerable. (Chandler, *Travels in Asia*, ii. p. 332; Keppel, *Travels*, ii. p. 295.) The accompanying coin is remarkable by having on its obverse the head of Cicero, though the reason why it appears here, is unknown. The legend, which is incorrectly figured, should be, ΜΑΡΚΟΣ ΤΥΛΛΙΟΣ ΚΙΚΕΡΩΝ. [L.S.]

COIN OF MAGNESIA AD SIPYLUM.

MAGNO'POLIS (Μαγνόπολις), a town in Pontus, at the confluence of the rivers Lycus and Iris, was founded by Mithridates Eupator, who called it Eupatoria; but it was completed by Pompey the Great, who changed its name into Magnopolis (Strab xii. p. 556). The town seems to have fallen into

decay at an early period, as it is not mentioned by any late writer. Appian (*Mithrid.* 78, 115) speaks of it under both names, Eupatoria and Magnopolis, and Strabo in one passage (xii. p. 560) speaks of it under the name of Megalopolis. Ruins of the place are said to exist some miles to the west of *Sonnisa*, at a place called *Boghas Hissan Kaleh.* (Hamilton, *Researches*, i. p. 340.) [L. S.]

MAGNUM PROMONTORIUM (τὸ μέγα ἀκρωτήριον, Ptol. vii. 2. § 7; Marcian, *Peripl.* p. 28), a promontory which forms the southern termination of the Chersonesus Aurea, in India extra Gangem, on the western side of the Sinus Magnus. Its modern name is *C. Romania.* Some have supposed that the Prom. Magn. represents another cape, either considerably to the NW., now called *C. Patani.* Ptolemy's account of these far Eastern places is so doubtful, that it is impossible to feel sure of the evidence for or against the position of any place in the Aurea Chersonesus. [V.]

MAGNUM PROMONTORIUM, a promontory on the west coast of Lusitania (Mela, iii. 1. § 6), probably the same which Strabo (iii. p. 151) and Ptolemy ii. 5. § 1) call τὸ Βαρβάριον ἄκρον, near the mouth of the Tagus. The passage in Strabo is corrupt; but according to the correction of Coray, approved of by Groskurd, the promontory was 210 stadia from the mouth of the Tagus, which makes it correspond with *C. Espichel.* Pliny also calls it Magnum or Olisiponense, from the town in its vicinity; but he strangely confounds it with the Prom. Artabrum, on the NW. of the peninsula (iv. 21. s. 35).

MAGNUM PROM. MAURETANIAE. [MAURETANIA.]

MAGNUS PORTUS. 1. (Πόρτος μάγνος, Ptol. ii. 4. § 7; comp. Marcian. p. 41), a port-town of Hispania Baetica, between the town Abdara and the Prom. Charidemi.

2. (Μέγας λιμήν, Ptol. ii. 6. § 4), a bay on the coast of the Gallaeci Lucenses, which is evidently the same as the Artabrorum Sinus. [Vol. I. p. 226, b.]

3. (Μέγας λιμήν, Ptol. ii. 3. §§ 4, 33), a harbour in Britain, opposite the island of Vectis, corresponds to *Portsmouth.*

4. (Πόρτος Μάγνος, Ptol. iv. 2. § 2; Mela, i. 5; Plin. v. 2; *It. Anton.* p. 13), a port-town of Mauretania Caesariensis, on the road between Gilva and Quiza, described by Pliny as "civium Romanorum oppidum." It is identified by Forbiger with *Oran*, of which the harbour is still called *Mars-el-Kibir*, i. e., the great Harbour.

5. (Μεγὸς λιμήν, Ptol. iv. 6. § 6), a port on the west coast of Libya Interior, between the mouth of the river Daradus and the promontory Ryssadium.

MAGNUS SINUS (ὁ μέγας κόλπος, Ptol. vii. 2. §§ 3, 5; Agathem. i. p. 53), the great gulf which runs up to the middle of the present kingdom of Ava, and is known by the name of the *Gulf of Siam.* The ancient geographers correctly placed *China* on the east of this gulf, though they had no very accurate notions relative to its latitude or longitude. On the west side was the Aurea Chersonesus. [V.]

MAGO. [BALEARES, p. 374, a.]

MAGON (ὁ Μαγῶν, Arrian, *Ind.* c. 4), a river mentioned by Arrian as flowing into the Ganges on its left bank. It has been conjectured that it is the same as the present *Ramguna.* [V.]

MAGONTIACUM. [MOGANTIACUM.]

MAGORAS, a river of Syria, under mount Libanus, mentioned by Pliny (v. 20) apparently between Sidon and Berytus, and probably identical with the Tamyras of Strabo (xvi. p. 756), now *Nahr-ed-Damur;* though Dr. Robinson suggests the *Nahr-Beirût.* (*Bib. Res.* vol. iii. pp. 433, 439.) [TAMYRAS.] [G. W.]

MAGORUM SINUS (Μαγῶν κόλπος), a bay on the Arabian coast of the *Persian Gulf*, in the country of the Themi, who joined the Gerraei on the north. (Ptol. vi. 7. § 54.) It is still marked by the modern town of *Magas*, and the ancient name is accounted for by Mr. Forster by the fact that "the ancient Themi are the Magian tribe of Beni-Temin, in all ages of Arabian history inhabitants of the gulf and city of *Magas*,—a deep bay, with its chief town of the same name, immediately above the bay of *Katiff.*" (*Geogr. of Arabia*, vol. ii. p. 215.) He maintains that the Magi of S. Matthew (ii. 1) were of this tribe, and from this country (vol. i. pp. 304—307). [THEMI.] [G. W.]

MAGRADA, a small river on the N. coast of Hispania Tarraconensis, now *Uresmea.* (Mela, iii. 1. § 10.)

MAGYDUS (Μάγυδος: *Eth.* Μαγυδεύς; called Μάσηδος by Scylax, p. 39), a town of Pamphylia, on the coast between Attaleia and Perge, and subsequently of episcopal rank, is probably the MYGDALE (Μυγδάλη), of the Stadiasmus. There are numerous imperial coins of Magydus, bearing the epigraph ΜΑΓΥΔΕΩΝ. Leake identifies it with *Laara.* (Ptol. v. 5. § 2; Hierocl. p. 679; *Stadiasm.* §§ 201, 202; Leake, *Asia Minor*, p. 194; Cramer, *Asia Minor*, vol. ii. p. 278.)

MAHANAIM (Μαναΐμ, LXX.), a place, and afterwards a town, on the east side of the Jordan, so named from the incident related in Genesis (xxxii. 2), where the word is translated, both by the LXX. and Josephus, Παρεμβολαί, and also by the latter Θεοῦ στρατόπεδον (*Ant.* i. 20. § 1). The following notices of its position occur in the Old Testament:—It was north of the brook Jabbok (*Gen. l. c.*, comp. v. 22), in the borders of Bashan (*Josh.* xiii. 30), afterwards in the tribe of Gad (xxi. 38), but on the confines of the half-tribe of Manasseh (xiii. 29) assigned to the Levites. (1 *Chron.* vi. 80.) It was the seat of Ishbosheth's kingdom, during the time that David reigned in Hebron (2 *Sam.* ii.), and there he was assassinated (iv.). When David fled from Absalom, he was maintained at Mahanaim by Barzillai, the aged *sheikh* of that district (2 *Sam.* xvii. 27, xix. 32); and it was apparently in the vicinity of this city that the decisive battle was fought in the wood of Ephraim between the royal troops and the rebels (xviii). A ruined site is mentioned in the *Jebel 'Ajlûn*, under the name of Mahneh, which probably marks the position of Mahanaim. (Robinson, *Bib. Res.* vol. iii. Appendix, p. 166.) [G.W.]

MAIS, a station in Britain, so called upon an engraved bronze cup found at *Rudge*, in *Wiltshire.* From this name occurring with those of four other stations, all on the line of the Great Wall, it is supposed to be identical with Magna, or Magnis. [C. R. S.]

MAIS (Μαΐς), a river of India intra Gangem, flowing into the Sinus Barygazenus, now the *Mahi.* (Nearch. p. 24; Arrian, *Periplus Maris Erythraei.*)

MAKKEDAH (Μακηδά, LXX., Euseb.; Μακχιδά, Joseph.), a city of the Canaanites in the south part of the tribe of Judah (*Josh.* xv. 41), governed by a sheikh. It was the first city taken by Joshua after the battle in Gibeon; and there it was that the five confederate kings were found hid in a cave, which

was made their sepulchre after their executions (*Josh.* x. 16—28.) It is placed by Eusebius (*Onomast. s. v.*) 8 miles east of Eleutheropolis. [BETHOGABRIS.] [G. W.]

MALA (Μάλα, Μάλη), a town in Colchis, which Scylax (p. 32), in contradiction to other writers, makes the birthplace of Medeia. [E. B. J.]

MALACA (Μάλακα, Strab.; Ptol. ii. 4. § 7; Μαλάκη, Steph. B. *s. v.*: *Eth.* Μαλακιτανός: *Malaga*), an important town upon the coast of Hispania Baetica, east of Calpe, which was equidistant from Gadeira and Malaca. (Strab. iii. p. 156.) According to the Antonine Itinerary (p. 405), the distance from Gadeira to Malaca was 145 miles; according to Strabo (iii. p. 140) the distance from Gadeira to Calpe was 750 stadia. Malaca stood upon a river of the same name, now *Guadalmedina.* (Avien. *Or. Mar.* 426; Malaca cum fluvio, Plin. iii. 1. s. 3.) Strabo says (*l. c.*) that Malaca was built in the Phoenician fashion, whence we may conclude that it was a Phoenician colony. Accordingly some modern writers have supposed that the name was derived from the Phoenician word *malcha*, "royal;" but Humboldt says that Malaca is a Basque word, signifying the "side of a mountain." Under the Romans it was a foederata civitas (Plin. *l. c.*), and had extensive establishments for salting fish. (Strab. *l. c.*) Avienus says (*l. c.*) that Malaca was formerly called Maenaca; but Strabo had already noticed this error, and observed not only that Maenaca was further from Calpe, but that the ruins of the latter city were clearly Hellenic. Malaca is also mentioned in Strab. iii. pp. 158, 161, 163; Hirt. *B. Alex.* 46; Geogr. Rav. iv. 42. There are still a few remains of Roman architecture in *Malaga.*

MALACHATH (Μαλαχάθ), a city of Libya Interior, which Ptolemy (iv. 6. § 25) places in the country above the Nigeir, in E. long. 20° 20′, and N. lat. 20° 15′. [E. B. J.]

MALAEA. [MALEA.]

MALAEI COLON (Μαλαίου, or Μαλέου κῶλον, Ptol. vii. 2. § 5), a promontory on the southern coast of the Golden Chersonesus. Its exact position cannot be determined, but it was probably along the *Straits of Malacca.* [V.]

MALAMANTUS (ὁ Μαλάμαντος, Arrian, *Ind.* c. 4), a small tributary of the Cophen, or river of *Kábul*, perhaps now the *Pandjcora.* [V.]

MALANA (Μάλανα, Arrian, *Ind.* c. 25), a cape which enters the Indian Ocean, and forms the western boundary of the Oreitae (one of the sea-coast tribes of Gedrosia) and the Ichthyophagi. There is no doubt that it is the same as the present *C. Malan* in *Mekran*, the measurements of Nearchus and of modern navigators corresponding remarkably. (Vincent, *Voy. of Nearchus*, vol. i. p. 216.) [V.]

MALANGA (Μάλαγγα, Ptol. vii. 1. § 92), the chief town of the Arvarni, a tribe who inhabited the eastern side of *Hindostán*, below where the Tyndis (now *Kistna*) flows into the sea. It has been supposed that it is the same place as the present *Madras*, but it may have been a little higher up near *Nellore.* [V.]

MALAO (Μαλάω, Ptol. iv. 7. § 10. com. Μάλεως), probably answers to the modern *Berbera*, the chief town of the *Somâleh*, who inhabit the western coast of Africa from the straits of *Bab-el-Mandeb* to cape *Guardafui.* This district has in all times been the seat of an active commerce between Africa and Arabia, and Malao was one of the principal marts for gums, myrrh, frankincense, cattle, slaves, gold-dust and ivory. (See Heeren, *African Nations*, vol. i. p. 330, Engl. transl.) [W. B. D.]

MALATA, according to an inscription, or MILATA according to the Peuting. Table, a place in Pannonia Inferior, on the Danube. As the inscription was found at *Peterwardein*, Malata was perhaps situated at or near the latter place. (Geor. Rav. iv. 19; Marsilius, *Danub.* ii. p. 118, tab. 47.) [L. S.]

MALCHUBII. [MAURETANIA.]

MALCOAE. [MANDRUS.]

MA'LEA (Μαλέα), a town in the district of Aegytis in Arcadia, the inhabitants of which were transferred to Megalopolis upon the foundation of the latter city. (Paus. viii. 27. § 4.) Its territory was called the Maleatis (ἡ Μαλεᾶτις). Xenophon describes Leuctra as a fortress situated above the Maleatis; and as Leuctra was probably at or near *Leondári*, Malea must have been in the same neighbourhood. [LEUCTRA.] Leake, however, connecting Malea with the river MALUS (Μαλοῦς, Paus. viii. 35. § 1), a tributary of the Alpheius, places the town on this river, and on the road from Megalopolis to Carnasium (Leake, *Peloponnesiaca*, p. 248); but this is not probable. The place MIDEA (Μιδέα) mentioned by Xenophon (*Hell.* vii. 1. § 28) is probably a corrupt form of Malea. (Curtius, *Peloponnesos*, vol. i. p. 336.)

MA'LEA (Μαλέα, Steph. B. *s. v.* et alii; Μαλέαι, Herod. i. 82; Strab. viii. p. 368), still called *Malià*, a promontory of Laconia, and the most southerly point in Greece with the exception of Taenarum. For details see Vol. II. p. 114.

MA'LEA (Μαλέα, Thucyd. iii. 4, 6; Xen. *Hell.* i. 6. §§ 26, 27; Μαλία, Strab. xiii. p. 617; Μανία, Ptol. v. 2; see Schol. *ad Aristoph. Ran.* p. 33), the southernmost point of the island of LESBOS, reckoned by Strabo to be 70 stadia distant from Mytilene, 560 stadia from Cape Sigrium, and 340 from Methymna. Immediately opposite, on the mainland, were the point of CANE and the islands of ARGINUSAE [see those articles]. The modern name of Malea is *Zeitoun Bouroun*, or *Cape St. Mary*, and it is a high and conspicuous point at sea. Xenophon says (*l. c.*) that the fleet of Callicratidas occupied this station before the sea-fight off Arginusae. There is some obscurity in Xenophon's topography in reference to this place; and the Malea of Thucydides (*l. c.*) can hardly have been *C. St. Mary*, unless there is some error in his relation. He says distinctly (c. 4.), that Malea lay to the north of Mytilene, and (c. 6.) that the Athenians had their market there, while besieging the city. The first statement is inconsistent with the position of *Cape St. Mary*, and the second with its distance from Mytilene. Possibly the Malea of Thucydides had some connection with the sanctuary of Apollo Maloeis. (See the notes of Arnold and Poppo, and Thirlwall's *Greece*, vol. iii. p. 173.) [J. S. H.]

MA'LEA (Μαλέα, or Μαλαία ὄρος, Ptol. vii. 4. § 8), a large group of mountains in the southern part of the ancient Taprobane or *Ceylon.* There can be little doubt that it comprehends the mountain tract now known by the name of *Newera Ellia*, one of the chief mountains of which is called, from the Arabs, *Adam's Peak*, by the natives *Sripada.* Ptolemy states, that it is the water-shed of three rivers, which he calls the Soanas, the Azanus, and the Baraces, and describes with remarkable truth the present condition of the island, when he adds that in the low ground below it, towards the sea, are the pastures of the elephants. Pliny speaks of a moun-

tain in the interior of India, which he calls Mons Maleus (vi. 19. s. 22). It has been supposed that he may refer to the western *Ghâts*; but as Maleus is evidently derived from the Sanscrit *mala*, a mountain, this identification cannot, we think, be maintained. [V.]

MALECECA. [LUSITANIA, p. 220, a.]

MALE'NE (Μαλήνη), a place near Atarneus, where Histiaeus was defeated by the Persians, is not mentioned by any ancient author except Herodotus (vi. 29). [L. S.]

MALETHUBALON (Μαλεθούβαλον, Ptol. iv. 2. § 15; Nobbe, *ad loc.* reads Μαλεθούβαδον), a mountain of Mauretania Caesariensis, which is identified with *Jebel Nad'ür* in the *Sâhâra*. (Shaw's *Travels*, p. 56.) [E. B. J.]

MALEVENTUM. [BENEVENTUM.]

MA'LEUM P. (Μαλεὼ ἄκρον, Ptol. vii. 1. § 4), a promontory which forms the southern termination of Syrastrene (now *Cutch*). It separated the gulfs of Canthi (the *Runn of Cutch*) and Barygaza (*Cambay*). [V.]

MA'LIA (Μαλία: *Eth.* Μαλιεύς), a town in Hispania Tarraconensis, near Numantia, but of which nothing more is known. (Appian, *Hisp.* 77.)

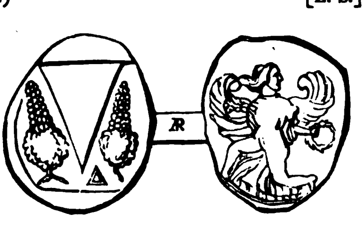
MALIACUS SINUS (ὁ Μαλιακὸς κόλπος; Μηλιακός, Thuc. iii. 96; Strab. ix. p. 403; ὁ Μηλιεὺς κόλπος, Herod. iv. 33; Polyb. ix. 41: *Gulf of Zitúni*), a long gulf of the sea, lying between the southern coast of Thessaly and the northern coast of the Locri Epicnemidii, and which derived its name from the country of the Malians, situated at its head. At the entrance of the gulf is the north-western promontory of Euboea, and the islands Lichades, and into its furthest extremity the river Spercheius flows. The gulf is called LAMIACUS SINUS (ὁ Λαμιακὸς κόλπος) by Pausanias (i. 4. § 3, vii. 15. § 2, x. 1. § 2), from the important town of Lamia; and in the same way the gulf is now called *Zitúni*, which is the modern name of Lamia. Livy, who usually terms it Maliacus Sinus, gives it in one place the name of Aenianum Sinus (xxviii. 5), which is borrowed from Polybius (x. 42). (Comp. Leake, *Northern Greece*, vol. ii. p. 4.)

MALIARPHA (Μαλιάρφα, Ptol. vii. 14), a place of considerable commerce in the territory of the Arvarni, on the western coast of the *Bay of Bengal*, between the mouths of the *Godavari* and the *Kistna*. It is represented now by either *Maliaper* or by the ruins of *Mavalipuram*. [V.]

MALICHI INSULAE (Μαλίχου νῆσοι, Ptol. vi. 7. § 44), two islands in the Sinus Arabicus, off the south coast of Arabia Felix. One of them is the modern *Sokar*.

MALIS (ἡ Μαλὶς γῆ; Μηλίς, Herod. vii. 198: *Eth.* Μαλιεύς, Μηλιεύς), a small district of Greece, at the head of the Maliac gulf, surrounded on all sides by mountains, and open only in the direction of the sea. The river Spercheius flowed through it. The limits of Malis are fixed by the description of Herodotus. It extended a little north of the valley of the Spercheius to the narrowest part of the straits of Thermopylae. Anticyra was the northernmost town of the Malians (Herod. vii. 198); the boundary passed between Lamia and Anticyra. Anthela was their southernmost town (vii. 176, 200). Inland, the Anopaea, the path over Mount Oeta, by which the Persians turned the army of Leonidas, in part divided the territory of the Trachinian Malians from that of the Oetaeans (vii. 217). A more particular description of the locality is given under THERMOPYLAE. According to Stephanus B. (*s. v.* Μαλιεύς), the Malians derived their name from a town Malieus, not mentioned by any other ancient author, said to have been founded by Malus, the son of Amphictyon. The Malians were reckoned among the Thessalians; but although tributary to the latter, they were genuine Hellenes, and were from the earliest times members of the Amphicytonic council. They were probably Dorians, and were always in close connection with the acknowledged Doric states. Hercules, the great Doric hero, is represented as the friend of Ceyx of Trachis, and Mount Oeta was the scene of the hero's death. Diodorus (xii. 59) even speaks of Trachis as the mother-town of Lacedaemon. When the Trachinians were hard pressed by their Oetaean neighbours, about the commencement of the Peloponnesian War, they applied for assistance to the Spartans, who founded in consequence the colony of Heracleia near Trachis. (Thuc. iii. 92.)

Scylax (p. 24), who is followed by Diodorus (xviii. 11), distinguishes between the Μηλιεῖς and Μαλιεῖς, the former extending along the northern coast of the Maliac gulf from Lamia to Echinus; but, as no other writer mentions these towns as belonging to the Lamians, we ought probably to read Λαμιεῖς, as K. O. Müller observes. Thucydides mentions three divisions (μέρη) of the Malians, called Paralii (Παράλιοι), Priests (Ἱερῆς), and Trachinii (Τραχίνιοι). Who the Priests were is a matter only of conjecture: Grote supposes that they may have been possessors of the sacred spot on which the Amphictyonic meetings were held; while Leake imagines that they were the inhabitants of the Sacred City (ἱερὸν ἄστυ), to which, according to Callimachus (*Hymn. in Del.* 287), the Hyperborean offerings were sent from Dodona on their way to Delus, and that this Sacred City was the city Oeta mentioned by Stephanus B. The names of the Paralii and Trachinii sufficiently indicate their position. The Malians admitted every man to a share in the government, who either had served or was serving as a Hoplite (Aristot. *Polit.* iv. 10. § 10). In war they were chiefly famous as slingers and darters. (Thuc. iv. 100.)



TRACHIS was the principal town of the Malians. There were also ANTICYRA and ANTHELA on the coast; and others, of which the names only are preserved, such as COLACEIA (Theopom. *ap. Athen.* vi. p. 254, f.), AEGONEIA (Lycophr. 903; Steph. B. *s. v.*), and IRUS (Schol. *in Lycophr. l. c.*; Steph. B. *s. v.*). (Müller, *Dorians*, vol. i. p. 50; Grote, *Greece*, vol. ii. p. 378; Leake, *Northern Greece*, vol. ii. p. 20.)

MALLAEA, MALLOEA, or MALOEA, a town of southern Perrhaebia in Thessaly, perhaps represented in name by *Mológhusta*, which Leake conjectures to be a corruption of Malloea, with the addition of Augusta. But as there are no remains of antiquity at *Mológhusta*, Leake supposes Malloea to have occupied a height on the opposite side of the river, where are some vestiges of ancient walls. (Liv. xxxi. 41, xxxvi. 10, 13, xxxix. 25; Leake, *Northern Greece*, vol. iv. p. 311.)

MALLI (Μάλλοι, Arrian, *Anab.* vi. 7, 8, 14), the inhabitants of the south part of the district now known by the name of the *Panjáb*. There was probably in ancient times a city from which they derived their name, though the name of the town is not given by ancient authors. (Arrian, *l. c.*; Strab.

xv. p. 701; Curt. ix. 4.) The people occupied the space between the Acesines (*Asikni*) and Hyarotis (*Irávati*), which both enter the Indus at no great distance. There can be little doubt that the name represents at once the country and the town of the Malli, being itself derived from the Sanscrit *Málasthání*. Pliny speaks of *Malli quorum Mons Mallus* (vi. 17. s. 21). If his locality corresponds with that of the other geographers, the name might be taken from the mountain which was conspicuous there. It is not, however, possible from Pliny's brief notice, to determine anything of the position of his Malli. It was in this country, and not improbably in the actual town of the Malli (as Arrian appears to think) that Alexander was nearly slain in combat with the Indian tribes of the *Panjáb*. [V.]

MALLUS (Μαλλός: *Eth.* Μαλλώτης), an ancient city of Cilicia, which, according to tradition, was founded in the Trojan times by the soothsayers Mopsus and Amphilochus. (Strab. xiv. p. 675, &c.; Arrian, *Anab.* ii. 5.) It was situated near the mouth of the river Pyramus, on an eminence opposite to Megarsus, as we must infer from Curtius (iii. 7), who states that Alexander entered the town after throwing a bridge across the Pyramus. Mallus therefore stood on the eastern bank of the river. According to Scylax (p. 40) it was necessary to sail up the river a short distance in order to reach Mallus; and Mela (i. 13) also states that the town is situated close upon the river; whence Ptolemy (v. 8. § 4) must be mistaken in placing it more than two miles away from the river. Mallus was a town of considerable importance, though it does not appear to have possessed any particular attractions. Its port-town was Magarsa [MAGARSA], though in later times it seems to have had a port of its own, called Portus Palorum (Geogr. Nub. p.195; Sanut. *Secret. Fid.* ii. 4, 26, whence we learn that in the middle ages it continued to be called *Malo;* comp. Callim. *Fragm.* 15; Appian, *Mithrid.* 96; Dionys. Per. 875; Ptol. viii. 17. § 44; Plin. *H. N.* v. 22; *Stadiasm. Mar. M.* §§ 151, 152; Leake, *Asia Minor*, pp. 216, &c.) [L. S.]

COIN OF MALLUS IN CILICIA.

MALOETAS. [METHYDRIUM.]

MALVA. [MULUCHA.]

MALUS. [MALEA; MEGALOPOLIS.]

MAMALA (Μάμαλα κώμη), a village of the Cassanitae, south of BADEI REGIA, on the Arabian coast of the Red Sea. (Ptol. vi. 7. § 5) [GASANDES; BADEI REGIA.] It has been supposed to be represented by the modern town of *Konfoda*, and to have been the capital of the piratical tribe of Conraitae, mentioned by Arrian (*Periplus*, p. 15). [G. W.]

MAMERTI'NI. [MESSANA.]

MAME'RTIUM (Μαμέρτιον: *Eth.* Μαμερτῖνος), a city in the interior of the Bruttian peninsula. It is noticed only by Strabo, who places it in the mountains above Locri, in the neighbourhood of the great forest of Sila, and by Stephanus of Byzantium, who calls it merely a city of Italy. (Strab. vi. p. 261; Steph. B. *s. v.*) There is no reason to reject these testimonies, though we have no other account of the existence of such a place; and its position cannot be determined with any greater precision. But the Mamertini who figure in history as the occupants of Messana are wholly distinct from the citizens of this obscure town. [MESSANA.] [E. H. B.]

MAMMA (Μαμμή), a district in Byzacena, at the foot of a chain of lofty mountains, where in A. D. 536 the eunuch Solomon, with 10,000 Romans, inflicted a signal defeat upon 50,000 Moors. (Procop. *B. V.* ii. 11; Corippus, *Johannis*, vi. 283; Theophan. p. 170; Anast. p. 61; Le Beau, *Bas Empire*, vol. viii. pp. 307–311; comp. Gibbon, c. xli.) Justinian afterwards fortified Mamma (Procop. *de Aed.* vi. 6), which is represented by the plains lying under the slopes of *Jebel Truzza* near *Kiruán*, in the *Regency of Tunis*. (Barth, *Wanderungen*, pp. 247, 285.) [E. B. J.]

MAMPSARUS MONS. [BAGRADAS.]

MANA'PII (Μανάπιοι), a people of Ireland on the east coast, possessing a town called MANAPIA (Μαναπία), near the mouth of the Modonus, the present *Dublin*. (Ptol. ii. 2. §§ 8, 9.) The name is the same as one of the Celtic tribes of Gaul. [MENAPII.]

MANARMANIS PORTUS (Μαναρμανὶς λιμήν), a harbour on the west coast of Germany, and probably formed by the mouth of the river Unsingis. It is perhaps identical with the modern *Marna* in *West Friesland*, which may even owe its name to the ancient port. (Ptol. ii. 11. § 1; Marcian. Heracl. p. 51, where it is called Μαραρμαρός.) [L. S.]

MANASSEH. [PALAESTINA.]

MANCHANE (Μαγχάνη), a town in Mesopotamia, of which the site is uncertain. (Ptol. v. 18. § 9.)

MANCU'NIUM, a town of the Brigantes in Britain (*It. Ant.* p. 482), now *Manchester*. But few, if any, of the remains of the ancient town are to be traced at the present day. From inscriptions we learn that at some period of the Roman domination a cohort of the Frisians was stationed at Mancunium; and that the sixth legion, or one of its divisions was there, probably on the occasion of some journey into the north. [C. R. S.]

MANDACADA (Μανδακάδα), a place in Mysia, which is not mentioned till the time of Hierocles (p. 663), though it must have existed before, as Pliny (v. 32) mentions Cilices Mandacadeni in the northern part of Mysia on the Hellespont. [L. S.]

MANDAGARA (Μανδαγάρα, Ptol. vii. 1. § 7), a small port on the western coast of *Hindostán*, in the district now called *Concan*. It was situated a little to the S. of *Bombay*, nearly in the same latitude as *Poonah*. The author of the Periplus calls it Mandagora (p. 30). [V.]

MANDAGARSIS (Μανδαγαρσίς, Ptol. vi. 2. § 2), a small port on the shores of the Caspian sea, between the rivers Strato and Charindas. Forbiger has conjectured that it may be represented by the present *Mesheddizar*. [V.]

MANDALAE (Μανδάλαι, Ptol. vii. 1. § 72), an Indian tribe who occupied both banks of the Ganges in the neighbourhood of Palimbothra (*Patna*), which was perhaps (as has been conjectured by some geographers), their chief city. They seem

however, to have lived rather lower down the river near *Monghir*, in the district now called *Behar*. (See Lassen's map.) [V.]

MANDANE (Μανδάνη), a town on the coast of Cilicia, between Celenderis, and Cape Pisidium, from which it was only 7 stadia distant (*Stadiasm.* §§ 174, 175.) It is probably the same place as the Myanda or Mysanda in Pliny (v. 27); and if so, it must also be identical with the town of Myus (Μυοῦς) mentioned by Scylax (p. 40) between Nagidus and Celenderis. [L. S.]

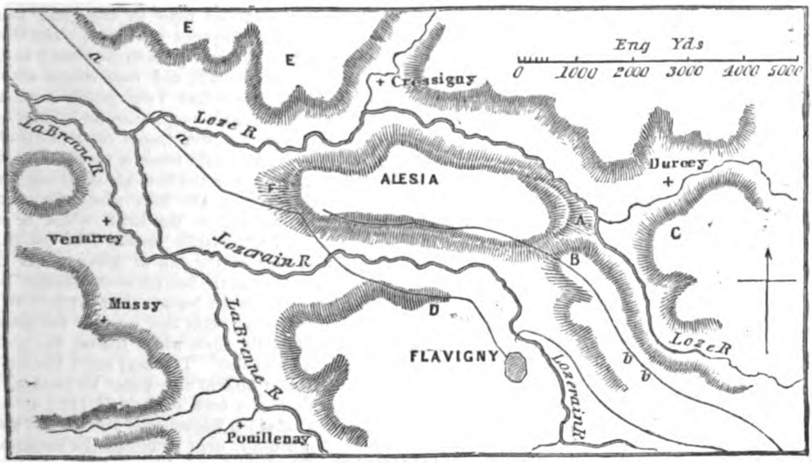
MANDARAE (Μανδαραί), the district about Cyrrhus in Macedonia. (Steph. B. *s. v.*) [E. B. J.]

MANDELA. [DIGENTIA.]

MANDORI. [MANDRUS.]

MANDROCIUM. [CARTHAGO, Vol. I. p. 551, a.]

MANDRUANI (Plin. vi. 16. s. 18), a people mentioned by Pliny as occupying a part of Western Bactriana, under the spurs of the Paropamisus. They are now, like several other tribes whose names are given by that geographer to the same locality, no longer to be identified. [V.]



MANDRUPOLIS (Μανδρούπολις or Μανδρόπολις), a town in Mysia (Hierocl. p. 664), now called *Menduria* or *Mendreghora*, at the foot of Mount Temnus. Stephanus of Byzantium (*s. v.*) erroneously places the town in Phrygia. There seems to be little doubt but that Mandrupolis is the same town as Mandropus or Mandrupium, mentioned by Livy (xxxviii. 15). [L. S.]

MANDRUS MONS (τὸ Μάνδρον, ἡ Μάνδρου ὄρος), one of the chief mountains of Libya, from whence flow all the streams from Salathus to Massa; the middle of the mountain has a position of 14° E. long. and 19° N. lat., assigned to it by Ptolemy (iv. 6. § 8). Afterwards (§ 14) he describes the river Nigeir as uniting, or yoking together (ἐπιζευγνύων), Mount Mandrus with Mount Thala. [NIGEIR.] (Comp. *London Geogr. Journ.* vol. ii. p. 19; Donkin, *Dissertation on the Niger*, p. 81.) Ptolemy (§ 17) places the following tribes in the neighbourhood of this mountain: the RABII (Ῥάβιοι), the MALCOAE (Μαλκόαι), and the MANDORI (Μάνδοροι). [E. B. J.]

MANDU'BII (Μανδούβιοι), a Gallic people whom Strabo (iv. p. 191) erroneously calls the neighbours of the Arverni. When Caesar (B. C. 52) was marching through the territory of the Lingones, with the intention of retreating through the Sequani into the Provincia, he was attacked by the confederate Galli under Vercingetorix (*B. G.* vii. 68). The Galli were defeated, and Vercingetorix, with his men, took refuge in Alesia, a town of the Mandubii. The site of the battle is not indicated by Caesar, but the position of Alesia is at *Alise*, or *Alise Sainte Reine*, as it is also called, in the department of the *Côte d'Or*. The railroad from *Paris* to *Dijon* crosses the hills of the *Côte d'Or*, of which Alesia and the heights around it are a part. The Mandubii were a small people who fed their flocks and cattle on the grassy hills of the *Côte d'Or*, and cultivated the fertile land at the foot of Alesia. Before the blockade was formed, they had driven a great quantity of their animals (pecus) within the walls. (*B. G.* vii. 71.)

The Mandubii who had received their countrymen into the city, were turned out of it by them, with their wives and children, during Caear's blockade, in order that the scanty supply of provisions for the troops might last longer. The Romans refused to receive the Mandubii and give them food. The certain conclusion from Caesar's narrative is, that these unfortunate people died of hunger between their own walls and the Roman circumvallation (*B. G.* vii. 78; Dion Cass. xl. 41). Caesar's description of Alesia is true; and the operations of his army about the place (*B. G.* vii. 69—90) are easily understood.

This plan of Alesia and the surrounding country is taken from Cassini's large map of France. The city of the Mandubii, or Alesia, was "on the summit of a hill, in a very elevated position," as Caesar correctly describes it. This hill stands alone, and, except on the west side, where there is a plain, it is surrounded by hills of the same height, which are separated from Alesia by valleys. In the flat valley

PLAN OF THE ENVIRONS OF ALESIA.

A. The east end of the hill of Alesia, where Vercingetorix built his stone wall.
B. Hill partly occupied by Caesar.
C. Ditto.
D. Ditto.
E. Ditto.
F. Hospital of *Alise*.
a a. Road from *Montbard* and *Auxerre*.
b b. Road to *Dijon*.

on the north side of Alesia, and in the narrower valley at the east end, is the railroad from *Paris* to *Dijon*. The nearest railway station to Alesia is *Les Laumes*.

The summit of Alesia is not quite flat; but the irregularities are inconsiderable. The sides of the hill beneath the plateau are steep and rocky; and the upper part of the ascent to the summit is not easy. Below the plateau, and below this steep ascent, there is a narrow level piece of ground, which appears to have been widened a little by the labour of man; and below this level part there is another descent, which in some parts is steep. The fine plain (planities) at the western foot of Alesia, which Caesar describes, is seen well from the western end of the level summit. This is the part which Caesar (c. 84) calls the "Arx Alesiae." The surface of the plateau rises a little towards the western extremity, and then falls away abruptly, terminating in a rocky promontory, something like the head of a boat. A cross, with a small tree on each side of it, stands at the edge of the brow, and exactly marks the place from which Vercingetorix looked down on the plain of Alesia (c. 84). Beneath the Arx Alesiae is the small town of *Alise*, on the western and south-western slope of the hill. It occupies a different place from the old town of the Mandubii, which was on the summit level. The hill is a mass of rock. The plateau has a thin soil, and the few parts which are not cultivated are covered with a short grass like that on the Brighton downs. It appears that the town of the Mandubii occupied all the large plateau, the length of which is shown by the scale, though we must assume that it was not all built on. The Arx, as already explained, was at the west end, commanding a view of the plain. The city wall seems to have been carried all round the margin of the plateau. Caesar says (*B. G.* vii. 69): "under the wall, that part of the hill which looked towards the east, all this space the forces of the Galli had filled, and they had formed in their front a ditch and a wall of stones (maceria) six feet high." This is the place marked A. in the plan, the only part of the hill of Alesia which is connected with the neighbouring heights. It is a small neck of land which separates the valleys of the *Loze* and the *Lozerain*. This is the part where the plateau of Alesia is most accessible, which Vercingetorix first occupied when he retired to Alesia, and where he constructed the wall of loose stones (maceria). There are plenty of stones on the spot to construct another such wall, if it were wanted.

At the eastern end of the plateau, just under the summit there is a source of water, which is now covered over with a small building. The water is now carried in pipes round the hill, to supply the hospital of *Alise*, which is (F.) on the west side of the hill on the slope. Water is got at *Alise* by digging wells in the small level below the plateau; and as the Galli held this part of the mountain during the blockade, they may have got water from wells, as they no doubt did from the spring on the plateau.

Caesar's lines were formed all round the hill of Alesia, and they crossed the neck (A.) which connects this hill with another hill (B.) on the south-east side. The "castra" of Caesar (cc. 69, 80) were on B. C. D. E., on all the heights around Alesia. These hills have a steep side turned to Alesia, and flat tops. They are so near to Alesia that Caesar could not be safe against an attack from the outside, unless he occupied them. The valleys between Alesia and B. C. D. are narrow. On the north and north-west side the valley is wider. There is a good source of water on the hill B.

The hill of Alesia is well defined on the north and the south by the valleys of the two streams which Caesar mentions (*B. G.* vii. 69), and on the west side by the plain in which these rivers meet. Caesar estimates the width of this plain from north to south at three Roman miles; and it is that width at least even in the part which is only a little distance from the foot of the hill. It extends much further in a NW. direction on the road to *Montbard*. This plain is a perfect level, covered in summer with fine wheat. As we go from the foot of the hill of Alesia to *Les Laumes*, the Arx Alesiae is a conspicuous object.

Caesar made two lines of circumvallation round Alesia. The circuit of the inner lines was eleven Roman miles; and we may infer from his words that this circumvallation was entirely in the plain and the valleys, except that it must have passed over the small elevation or neck of land between A. and B. In making the outer lines, which were fourteen Roman miles in circuit, he followed the level as far as the ground allowed (c. 74); from which we conclude that some parts of the outer line were on the high grounds opposite to the hill of Alesia; and the form of the surface shows that this must have been so. The upper part of the hill west of *Cressigny*, part of which hill appears in the north-west angle of the plan, was crossed by the lines; and the camp of Reginus and Rebilus (c. 83) was on the slope of this hill which faces Alesia. One of the ditches (fossae) of the interior lines was filled with water from the river (c. 72). The lines of eleven and fourteen miles in circuit are no exaggeration. No less circuit would enclose the hill and give the Romans the necessary space. The boldness of the undertaking may be easily conceived by the aid of numbers; but the sight of the work that was to be done before Vercingetorix and his troops, to the number of 80,000 men, could be shut in, can alone make us fully comprehend and admire the daring genius of the Roman proconsul.

There was a cavalry fight in the great plain before Caesar had completed his works. The Galli were driven back from the plain to their camp under the east end of the hill, and took refuge within Alesia. After this defeat Vercingetorix sent his cavalry away, and made preparation for holding out till the Gallic confederates should come to his aid. (*B.G.* 70, 71.) When the forces of the confederates (vii. 75) came to raise the blockade of Alesia, they posted themselves on the hills where the name *Mussy* appears; and in the battle which is described in vii. 79, the Gallic cavalry filled the plain on the west side of the hill of Alesia, while the infantry remained on the heights about *Mussy*. The Gallic horse were beaten back to their camp (c. 80); but on the following night they renewed the attack on that part of the lines which crossed the plain. This attack also failed. The next night the Gallic confederates sent 60,000 men under Vergasillaunus to the north, to the back of the hill (E.), on the south slope of which Reginus and Rebilus had their camp. Their orders were to fall on the Romans at midday. The Galli got to the back of the hill at daybreak, and waited till near noon, when they began their attack on the camp. At the same time the cavalry of the confederates came against the lines in the plain; and Vercingetorix descended from the heights of Alesia to attack the lines from

the inside. The Galli failed to force the lines both on the inside and the outside. But the attack on the camp of Reginus and Rebilus was desperate, and Labienus was sent to support them. Neither ramparts nor ditches could stop the fierce assault of the enemy. Labienus summoned to his aid the soldiers from the nearest posts, and sent to tell Caesar what he thought ought to be done. His design was to sally out upon the enemy, as Caesar had ordered him to do, if he could not drive them off from the lines.

The place where the decisive struggle took place is easily seen from the Arx Alesiae; and it is accurately described by Caesar (*B.G.* 83, 85). This is the hill (E.) which slopes down to the plain of the *Loze*. The upper part of the slope opposite to the Arx Alesiae is gentle, or "leniter declivis" (c. 83); but the descent from the gentle slope to the plain of the *Loze*, in which the railway runs, is in some parts very steep. Caesar could draw his lines in such a way as to bring them along the gentle slope, and comprise the steep and lower slope within them. But there would still be a small slope downwards from the upper part of the hill to the Roman lines; and this is this gentle slope downward which he describes in c. 85, as giving a great advantage to the Gallic assailants under Vergasillaunus ("Exiguum loci ad declivitatem fastigium magnum habet momentum").

The mountain behind which Vergasillaunus hid himself after the night's march is the part of the mountain west of *Cressigny*. The camp of Reginus and Rebilus being on the south face turned to Alesia, they could see nothing of Vergasillaunus and his men till they came over the hill top to attack the lines. Vercingetorix, from the Arx Alesiae (c. 84), could see the attack on Reginus' camp, and all that was going on in the plain. He could see everything. Caesar's position during the attack of Vergasillaunus was one (idoneus locus) which gave him a view of the fight. He saw the plain, the "superiores munitiones," or the lines on the mountain north-west of Alesia, the Arx Alesiae, and the ground beneath. He stood therefore on the hill south of Alesia, and at the western end of it.

Caesar, hearing from Labienus how desperate was the attack on the upper lines, sent part of his cavalry round the exterior lines to attack Vergasillaunus in the rear. The cavalry went round by the east end of Alesia. They could not go round the west end, for they would have crossed the plain outside of the lines, and the plain was occupied by the Galli. Nor could they have got up the hill on that side without some trouble; and they would not have come on the rear of the enemy. It is certain that they went by the east end, and upon the heights round Alesia, which would take a much longer time than Caesar's rapid narrative would lead us to suppose, if we did not know the ground.

When Caesar sent the cavalry round Alesia, he went to the aid of Labienus with four cohorts and some cavalry. The men from the higher ground could see him as he came along the lower ground (cc. 87, 88). He came from the hill on the south of Alesia, between his lines along the plain, with the Arx Alesia on his right, from which the men in the town were looking down on the furious battle. The scarlet cloak of the proconsul told his men and the enemies who was coming. He was received with a shout from both sides, and the shout was answered from the circumvallation and all the lines. The Roman soldier throws his pila aside; and the sword begins its work. All at once Caesar's cavalry appears in the rear of Vergasillaunus: "other cohorts approach; the enemy turn their backs; the cavalry meet the fugitives; there is a great slaughter;" and the victory is won. The Galli who were on the outside of the fortifications desert their camp, and the next day Vercingetorix surrenders Alesia. The fight of Alesia was the last great effort of the united Galli against Caesar. They never recovered from this defeat; and from this time the subjugation of Gallia, though not yet quite completed, was near and certain.

Alesia was a town during the Roman occupation of Gallia; but the plateau has long since been deserted, and there is not a trace of building upon it. Many medals and other antiquities have been found by grubbing on the plateau. A vigneron of *Alise* possesses many of these rare things, which he has found; a fine gold medal of Nero, some excellent bronze medals of Trajan and Faustina, and the well-known medal of Nemausus (*Nîmes*), called the "pied de biche." He has also a steelyard, keys, and a variety of other things.

The plan of Cassini is tolerably correct; correct enough to make the text of Caesar intelligible. [G.L.]

MANDUESSEDUM, a Roman station in Britain (*It. Ant.* p. 470), the site of which is supposed to be occupied by *Mancester* in *Warwickshire*. [C. R. S.]

MANDU'RIA (Μανδύριον, Steph. B.: *Eth.* Μανδυρῖνος: *Manduria*), an ancient city of Calabria, in the territory of the Salentines, situated at the distance of 24 miles E. of Tarentum. Its name has obtained some celebrity from its being the scene of the death of Archidamus, king of Sparta, the son of Agesilaus, who had been invited to Italy by the Tarentines, to assist them against their neighbours the Messapians and Lucanians; but was defeated and slain in a battle under the walls of Manduria, which was fought on the same day with the more celebrated battle of Chaeronea, 3rd Aug., B. C. 338. (Plut. *Ages.* 3, who writes the name Μανδόνιον; Theopomp. *ap. Athen.* xii. p. 536; Diod. xvi. 63, 88; Paus. iii. 10. § 5.) This is the first notice we find of the name of Manduria: it would appear to have been a Messapian (or rather perhaps a Salentine) city, and apparently a place of considerable importance; but the only other mention of it that occurs in history is in the Second Punic War, when it revolted to the Carthaginians, but was taken by assault by Fabius Maximus, just before he recovered Tarentum, B. C. 209. (Liv. xxvii. 15.) We have no account of its fate on this occasion, but it would seem certain that it was severely punished, and either destroyed or at least reduced to a degraded condition; for we find no mention of it as a municipal town under the Romans; and Pliny omits its name in his list of towns in this part of Italy, though he elsewhere (ii. 103. s. 106) incidentally notices it as "oppidum in Salentino." The name is again found in the Tabula, which places it at the distance of 20 M. P. from Tarentum, an interval less than the truth, the actual distance being 20 geog. miles, or at least 24 Roman miles. (*Tab. Peut.*)

The existing ruins are considerable, especially those of the ancient walls, great part of the circuit of which is still preserved: they are built of large rectangular blocks, but composed of the soft and porous stone of which the whole neighbouring country consists; and in their original state appear to have formed a double circuit of walls, with a

broad street or way between the two, and a ditch on the outside. At present they are nowhere more than six feet in height. The modern town of *Manduria* (a flourishing place, with about 6000 inhabitants) does not occupy the site of the ancient city; the latter having been destroyed by the Saracens, the few remaining inhabitants settled at a place called *Casal Nuovo*, which appellation it retained till towards the close of the eighteenth century, when, having grown into a considerable town, it resumed, by royal license, its ancient name of *Manduria*. (Swinburne, *Travels*, vol. i. p. 222; Romanelli, vol. i. p. 53; Giustiniani, *Diz. Geogr.* vol. v. p. 338.)

Pliny mentions the existence at Manduria of a well or spring of water, which was always full to the brim, and could not be either increased or diminished in quantity. This natural curiosity is still shown by the inhabitants of *Manduria*, and has been described by several recent travellers; it is said that it preserves a constant equality in the level of its waters, notwithstanding any addition that may be made to them or any quantity that may be withdrawn,—a statement exactly coinciding with that of Pliny. (Plin. ii. 103. s. 106; Swinburne, *Travels*, vol. i. p. 223; K. Craven, *Travels*, pp. 165—167.) The expression used by that author, who calls the basin or reservoir of the water "lacus," has given rise to the erroneous notion that there existed *a lake* in the neighbourhood of Manduria, for which there is no foundation in fact. [E. H. B.]

MANIMI, a tribe of the Lygii, in the north-east of Germany (Tac. *Germ.* 43). They occupied the country south of the Burgundiones, and appear to be the same as the Omanni (Ὀμαννοί) of Ptolemy (ii. 11. § 18; Zeuss, *Die Deutschen*, p. 124). [L. S.]

MANI'TAE (Μανῖται), an inland tribe of Arabia Felix, situated west of the Thanuetae, and south of the Salapeni, north of the "inner Frankincense" country (ἡ ἐντὸς Σμυρνοφόρος, Ptol. vi. 7. § 23). The position of Ptolemy's "Manitae," west of his Katanitae, and of *Zames* Mons, together with the near resemblance of name, implies their being the same with the *Mazeyne* of Burckhardt, the most eastern of the Harb tribes, situated on the borders of *Karym* in the line of country between *Medina* and *Derayeh*. (Forster, *Geog. of Arabia*, vol. ii. p. 249.) [G. W.]

MA'NIUS SINUS (Μάνιος κόλπος, Scyl. p. 8), that part of the sea off the coast of Dalmatia into which the river Naro discharged itself, and in which the Liburnian group of islands is situated. In modern times it bears no distinctive name. [E. B. J.]

MANLIA'NA) Μανλίανα ἡ Μαρλίανα, Ptol. iv. 2. § 25), an inland town of Mauretania, upon the position of which there is a great disagreement between Ptolemy and the author of the Itinerary. The first places it 10′ to the W. of OPPIDUM NOVUM, and the latter 18 M. P. to the E. of that place. The modern *Miliana*, on the slopes of the *Lesser Atlas*, preserving the ancient name, may be presumed to represent the old town, both of Ptolemy and the Itinerary, in which a Christian community was established. (Augustin. *Ep.* ccxxxvi.; Morcelli, *Africa Christiana*, vol. i. p. 211.) Shaw (*Travels*, pp. 62—64) found remains of Roman architecture, and a "cippus" with an inscription which he refers to some of the descendants of Cn. Pompeius (Barth, *Wanderungen*, pp. 58, 207.) [E. B. J.]

MANLIA'NUS SALTUS. [IDUBEDA.]

MANNARITIUM, in north Gallia, is placed by the Antonine Itin. on a road which leads from Lugdunum through Trajectum (*Utrecht*) to Carvo [CARVO]. It is 15 M. P. from Trajectum to Mannaritium, and 16 M. P. from Mannaritium to Carvo. Mannaritium may be *Maaren*. But other places have been suggested. [G. L.]

MANRALI (Μάνραλοι, Ptol. v. 10. § 6), a people on the coast of Colchis, whose name has been traced in the modern *Mingrelia*. [E. B. J.]

MANTALA, a place in Gallia Narbonensis, on the road from Vienna (*Vienne*) to Darantasia (*Moutiers en Tarentaise*). It is the next station after Leminoum [LEMINCUM], and 16 M. P. from it. The Antonine Itin. and the Table agree as to the position of Mantala. The site of the station Mantala may be, as D'Anville suggests, at a place on the *Isère*, named *Gressi*, which is commanded by an old building named *Montailleu*. [G. L.]

MANTIANA LACUS. [ARSISSA.]

MANTINEIA (Μαντίνεια: *Eth.* Μαντινεύς, Mantinensis: *Paleópoli*), one of the most ancient and powerful towns in Arcadia, situated on the borders of Argolis, S. of Orchomenus, and N. of Tegea. Its territory was called MANTINICE (Μαντινική). The city is mentioned in the Homeric catalogue as Μαντινέη ἐρατεινή, and, according to tradition, it derived its name from Mantineus, a son of Lycaon. (Hom. *Il.* ii. 607; Pol. ii. 56; Paus. viii. 8. § 4.) Mantineia originally consisted of four or five distinct villages, the inhabitants of which were collected into one city. (Xen. *Hell.* v. 2. § 6, seq.; Strab. viii. p. 337; Diod. xv. 5.) If Strabo is correct in stating that this incorporation was brought about by the Argives, we may conjecture, with Mr. Grote, that the latter adopted this proceeding as a means of providing some check upon their powerful neighbours of Tegea. The political constitution of Mantineia is mentioned by Polybius as one of the best in antiquity; and the city had acquired so great a reputation at an early period, that the Cyrenaeans, in the reign of Battus III. (B. C. 550—530), when weakened by internal seditions, were recommended to apply to the Mantineians, who sent to them Demonax to settle their constitution. (Pol. vi. 43; Herod. iv. 161.) Some time before the Persian wars, Mantineia, like the other Arcadian towns, had acknowledged the Spartan supremacy; and accordingly the Mantineians fought against the Persians as the allies of Sparta. Five hundred of their citizens fought at Thermopylae, but their contingent arrived on the field of Plataea immediately after the battle. (Herod. vii. 202, ix. 77.) In the Peloponnesian War, Mantineia was at first a member of the Peloponnesian confederacy; but several causes tended to estrange her from the Spartan alliance. Mantineia and Tegea were, at this time, the two most important Arcadian states, and were frequently engaged in hostilities. In B. C. 423, they fought a bloody and indecisive battle, which is mentioned by Thucydides (iv. 134). Tegea, being oligarchically governed, was firmly attached to Sparta; whereas Mantineia, from her possessing a democratical constitution, as well as from her hatred to Tegea, was disposed to desert Sparta on the first favourable opportunity. In addition to this, the Mantineians had recently extended their dominion over the Parrhasians and had garrisoned a fortress at Cypsela, near the site where Megalopolis was afterwards built. Well aware that the Lacedaemonians would not allow them to retain their recent acquisitions, as it was the policy of Sparta to prevent the increase of any political power in the Peloponnesus, the Manti-

neians formed an alliance with Argos, Elis, and Athens, in B. C. 421, and thus became involved in war with Sparta. (Thuc. v. 29, 33, 47.) This war was brought to a close by the decisive battle fought near Mantineia, in June, 418, in which the Argives, Mantineians, and Athenians were defeated by the Lacedaemonians under Agis. This battle was fought to the S. of Mantineia, between the city and the frontiers of Tegea, and is the first of the five great battles bearing the name of Mantineia. The Mantineians now concluded a peace with Sparta, renouncing their dominion over the districts in Arcadia, which they had conquered. (Thuc. v. 65, seq., 81.)

Mantineia continued an unwilling ally of Sparta for the next 33 years; but in the second year after the peace of Antalcidas, which had restored to the Spartans a great part of their former power, they resolved to crush for ever this obnoxious city. Accordingly, they required the Mantineians to raze their walls; and upon the refusal of the latter, they marched against the city with an army under the command of their king Agesipolis (B. C. 385), alleging that the truce for 30 years had expired, which had been concluded between the two states after the battle of 418. The Mantineians were defeated in battle, and took refuge in their city, prepared to withstand a siege; but Agesipolis having raised an embankment across the river Ophis, which flowed through Mantineia, forced back the waters of the river, and thus caused an inundation around the walls of the city. These walls, being built of unbaked bricks, soon began to give way; and the Mantineians, fearing that the city would be taken by assault, were obliged to yield to the terms of the Spartans, who required that the inhabitants should quit the city, and be dispersed among the villages, from the coalescence of which the city had been originally formed. (Xen. *Hell.* v. 2. §§ 6, 7; Diod. xv. 5; Ephorus, *ap. Harpocrat. s. v.* Μαντινέων διοικισμός; Pol. iv. 27; Paus. viii. 8. § 7, seq.) Of the forces of Mantineia shortly before this time we have an account from the orator Lysias, who says that the military population or citizens of Mantineia were not less than 3000, which will give 13,000 for the free population of the Mantineian territory. (Lysias, *ap. Dionys.* p. 531; Clinton, *F. H.* vol. ii. p. 416.)

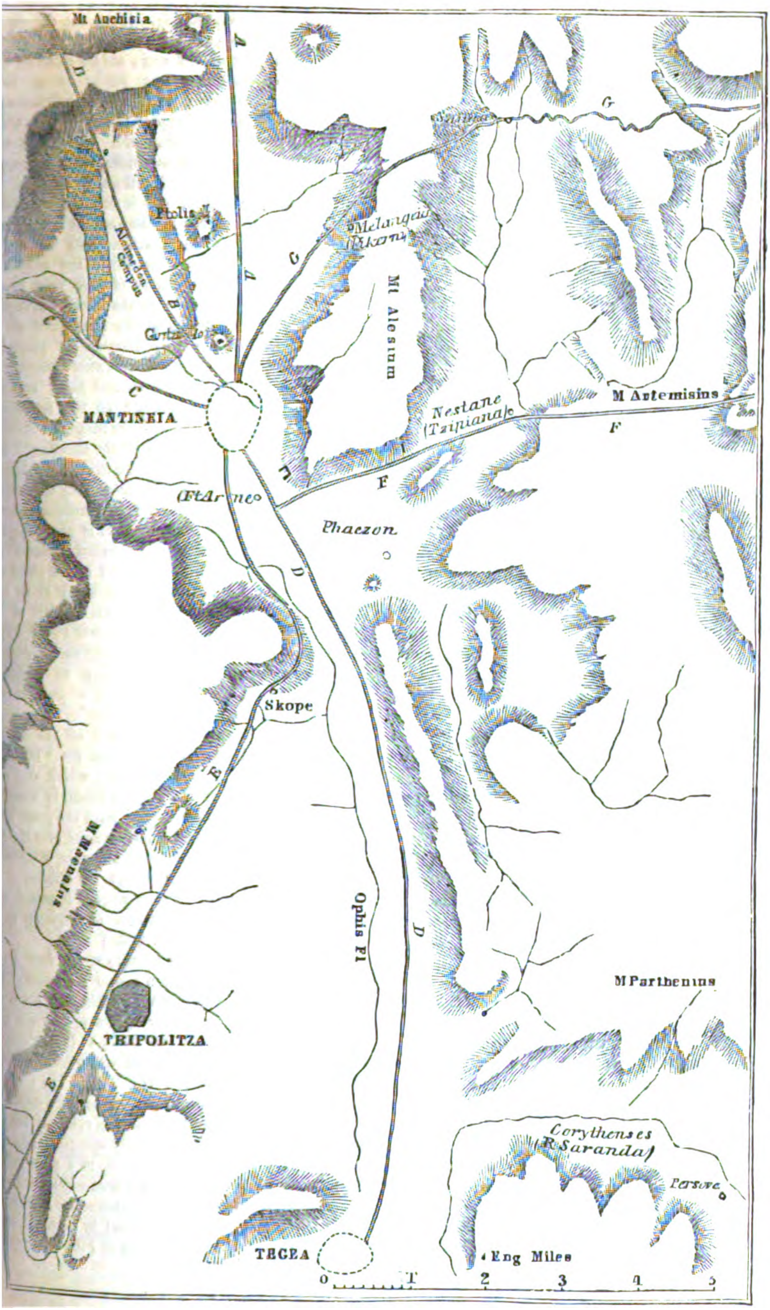
The Mantineians did not long remain in this dispersed condition. When the Spartan supremacy was overthrown by the battle of Leuctra in 371, they again assembled together, and rebuilt their city. They took care to exclude the river from the new city, and to make the stone substructions of the walls higher than they had been previously. (Xen. *Hell.* vi. 5. § 3; Paus. viii. 8. § 10; Leake, *Morea*, vol. iii. p. 73.) The Mantineians took an active part in the formation of the Arcadian confederacy, and in the foundation of Megalopolis, which followed immediately after the restoration of their own city; and one of their own citizens, Lycomedes, was the chief promoter of the scheme. But a few years afterwards the Mantineians, for reasons which are not distinctly mentioned, quarrelled with the supreme Arcadian government, and formed an alliance with their inveterate enemies the Spartans. In order to put down this new coalition, Epaminondas marched into the Peloponnesus; and Mantineia was again the scene of another great battle (the second of the five alluded to above), in which the Spartans were defeated, but which was rendered still more memorable by the death of Epaminondas. (Xen. *Hell.* vii. 5; Diod. xv. 84.) The site of this battle is described below. The third and fourth battles of Mantineia are only incidentally mentioned by the ancient writers: the third was fought in 295, when Demetrius Poliorcetes defeated Archidamus and the Spartans (Plut. *Demetr.* 35); the fourth in 242, when Aratus and the Achaeans defeated the Spartans under Agis, the latter falling in the battle. (Paus. viii. 10. § 5, seq.)

Mantineia continued to be one of the most powerful towns of Arcadia down to the time of the Achaean League. It at first joined this league; but it subsequently deserted it, and, together with Orchomenus and Tegea, became a member of the Aetolian confederacy. These three cities at a later time renounced their alliance with the Aetolians, and entered into a close union with Sparta, about B. C. 228. This step was the immediate cause of the war between the Achaeans and the Spartans, usually called the Cleomenic War. In 226, Aratus surprised Mantineia, and compelled the city to receive an Achaean garrison. The Mantineians soon afterwards expelled the Achaeans, and again joined the Spartans; but the city was taken a second time, in 222, by Antigonus Doson, whom the Achaeans had invited to their assistance. It was now treated with great severity. It was abandoned to plunder, its citizens were sold as slaves, and its name changed to Antigoneia (Ἀντιγόνεια), in compliment to the Macedonian monarch (Pol. ii. 57, seq.; Plut. *Arat.* 45; Paus. viii. 8. § 11). In 207, the plain of Mantineia was the scene of a fifth great battle, between the Achaean forces, commanded by Philopoemen, and the Lacedaemonians, under the tyrant Machanidas, in which the latter was defeated and slain. An account of this battle is given by Polybius, from whom we learn that the Achaean army occupied the entire breadth of the plain S. of the city, and that their light-armed troops occupied the hill to the E. of the city called Alesium by Pausanias. The Lacedaemonians were drawn up opposite to the Achaeans; and the two armies thus occupied the same position as in the first battle of Mantineia, fought in the Peloponnesian War. (Pol. xi. 11.) The Mantineians were the only Arcadian people who fought on the side of Augustus at the battle of Actium. (Paus. viii. 8. § 12.) The city continued to bear the name of Antigoneia till the time of Hadrian, who restored to it its ancient appellation, and conferred upon it other marks of his favour, in honour of his favourite, Antinous, because the Bithynians, to whom Antinous belonged, claimed descent from the Mantineians. (Paus. viii. 8. § 12, viii. 9. § 7.)

The territory of Mantineia was bounded on the W. by Mt. Maenalus, and on the E. by Mt. Artemisium, which separated it from Argolis. Its northern frontier was a low narrow ridge, separating it from Orchomenia; its southern frontier, which divided it from Tegeatis, was formed by a narrow part of the valley, hemmed in by a projecting ridge from Mt. Maenalus on the one side, and by a similar ridge from Mt. Artemisius on the other. (See below.) The territory of Mantineia forms part of the plain now called the plain of *Tripolitzá*, from the modern town of this name, lying between the ancient Mantineia and Tegea, and which is the principal place in the district. This plain is about 25 English miles in length, with a breadth varying from 1 to 8, and includes, besides the territory of Mantineia, that of

Orchomenus and Caphyae on the N., and that of Tegea and Pallantium on the S. The distance between Mantineia and Tegea is about 10 English miles in a direct line. The height of the plain where Mantineia stood is 2067 feet above the level of the sea. Owing to its situation, Mantineia was a place of great military importance, and its territory was the scene of many important battles, as has been already related. It stood upon the river Ophis, nearly in the centre of the plain of *Tripolitzá* as to length, and in one of the narrowest parts as to breadth. It was enclosed between two ranges of hills, on the E. and the W., running parallel to Mts. Artemisium and Maenalus respectively. The eastern hill was called ALESIUM (Ἀλήσιον, Paus. viii. 10. § 1), and between it and Artemisium lay the plain called by Pausanias (viii. 7. § 1) τὸ ἀργὸν πεδίον, or the "Uncultivated Plain." (viii. 8. § 1.) The range of hills on the W. had no distinct name: between them and Mt. Maenalus there was also a plain called Alcimedon (Ἀλκιμέδων, Paus. viii. 12. § 2.)

Mantineia was not only situated entirely in the plain, but nearly in its lowest part, as appears by the course of the waters. In the regularity of its fortifications it differs from almost all other Greek cities of which there are remains, since very few other Greek cities stood so completely in a plain. It is now called *Paleópoli*. The circuit of the walls is entire, with the exception of a small space on the N. and W. sides. In no place are there more than three courses of masonry existing above ground, and the height is so uniform that we may conclude that the remainder of the walls was constructed of unbaked bricks. The city had 9 or 10 gates, the approach to which was carefully defended. Along the walls there were towers at regular distances. Leake reckoned 118 towers, and says that the city was about 2½ miles in circumference; but Ross makes the city considerably larger, giving 129 or 130 as the number of the towers, and from 28 to 30 stadia, or about 3½ English miles, as the circuit of the city. The walls of the city are surrounded by a ditch, through which the river Ophis flows. This stream is composed of several rivulets, of which the most important rises on Mt. Alesium, on the E. side of the city: the different rivulets unite on the NW. side of the town, and flow westward into a katavóthra. Before the capture of Mantineia by Agesipolis, the Ophis was made to flow through the city; and it is probable that all the water-courses of the surrounding plain were then collected into one channel above the city. Of the buildings in the interior of the city, described by Pausanias, few remains are left. Nearly in the centre of the city are the ruins of the theatre, of which the diameter was about 240 feet; and west of the theatre, Ross observed the foundations of the temple of Aphrodite Symmachia, which the Mantineians erected to commemorate the share they had taken in the battle of Actium. (Paus. viii. 9. § 6.)



The territory of Mantineia is frequently described by the ancient writers, from its having been so often the seat of war; but it is difficult, and almost impossible, to identify any of the localities of which we find mention, from the disappearance of the sanctuaries and monuments by which spots are indicated, and also from the nature of the plain, the topography of which must have been frequently altered by the change of the water-courses. On the latter subject a few words are necessary. The plain of *Tripolitzá*, of which Mantinice formed part, is one of those valleys in Arcadia, which is so completely shut in by mountains, that the streams which flow into it have no outlet except through the chasms in the mountains, called katavóthra. [ARCADIA.] The part of the plain, which formed the territory of Mantineia, is so complete a level, that there is not, in some parts, a sufficient slope to carry off the waters; and the land would be overflowed, unless trenches were made to assist the course of the waters towards some one or other of the katavóthra which nature has provided for their discharge. (Pol. xi. 11.) Not only must the direction of these trenches have been sometimes changed, but even the course of the streams was sometimes altered, of which we have an interesting example in the history of the campaign of 418. It appears that the regulation of the mountain torrent on the frontiers of Mantinice and Tegeatis was a frequent subject of dispute and even of war between the two states; and the one frequently inundated the territory of the other, as a means of annoyance. This was done in 418 by Agis, who let the waters over the plain of Mantineia (Thuc. v. 65). This river can only be the one called Ophis by the Geographers of the French Commission. It rises a little N. of Tegea, and after flowing through Tegeatis falls now into a katavóthra north of the hill Scope. In general the whole plain of Mantineia bears a very different aspect from what it presented in antiquity; instead of the wood of oaks and cork-trees, described by Pausanias, there is now not a single tree to be found; and no poet would now think of giving the epithet of "lovely" (ἐρατεινή) to the naked plain, covered to a great extent with stagnant water, and shut in by gray treeless rocks. (Ross, *Reisen im Peloponnes*, p. 128.)

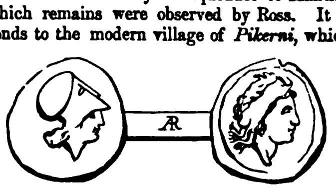
About a mile N. of the ruins of Mantineia is an isolated hill called *Gurtzúli;* north of which again, also at the distance of about a mile, is another hill. The latter was probably the site of the ancient Mantineia, and was therefore called PTOLIS (Πτόλις) in the time of Pausanias (viii. 12. § 7). This appears to have been one of the five villages from the inhabitants of which the city on the plain was peopled.

There were several roads leading from Mantineia. Two of these roads led north of the city to Orchomenus: the more easterly of the two passed by Ptolis, just mentioned, the fountain of Alalcomeneia, and a deserted village named MAERA (Μαῖρα), 30 stadia from Ptolis; the road on the west passed over Mt. Anchisia, on the northern slope of which was the temple of Artemis Hymnia, which formed the boundary between Mantinice and Orchomenia. (Paus. viii. 12. §§ 5—9, comp. viii. 5. § 11.)

A road led from Mantineia on the W. to Methydrium. It passed through the plain Alcimedon, which was 30 stadia from the city, above which was Mount Ostracina; then by the fountain Cissa, and, at the distance of 40 stadia from the fountain, by the small place PETROSACA (ἡ Πετροσάκα), which was on the confines of the Mantineian and Megalopolitan territories. (Paus. viii. 12. §§ 2—4.)

Two roads led from Mantineia southwards,—the one SE. to Tegea, and the other SW. to Pallantium. On the left of the road to Tegea, [illegible] XENIS (Ξενίς) by Polybius (xi. 11. § 5), just o[illegible] the gates of Mantineia, was the hippodrome, [illegible] little further on the stadium, above which [illegible] Mount Alesium: at the spot where the mou[illegible] ceased was the temple of Poseidon Hippius, wh[illegible] was 7 stadia from the city, as we learn from Poly-

PLAIN OF MANTINEIA.



A A. Road to Orchomenos.
B B. Road to Orchomenos.
C C. Road to Methydrium.
D D. Road to Tegea.
E E. Road to Pallantium.
F F. Road to Argos, called Prinus.
G G. Road to Argos, called Climax.

bius (xi. 11. § 4, compared with xi. 14. § 1). Here commenced the ditch, which is said by Polybius to have led across the Mantineian plain to the mountains bordering upon the district of the Elisphasii (ἡ τῶν Ἐλισφασίων χώρα, Pol. xi. 11. § 6, comp. 15. § 7, xvii. 6).* Beyond the temple of Poseidon was a forest of oaks, called PELAGUS (Πέλαγος), through which ran the road to Tegea. On turning out of the road to the left, at the temple of Poseidon, one found at the distance of 5 stadia the tombs of the daughters of Pelias. Twenty stadia further on was a place called PHOEZON (Φοίζων). This was the narrowest part of the plain between Tegea and Mantineia, the road being shortened by the hill Scope on the W. and a similar projecting rock on the E. Here was the tomb of Areithous, who was said to have been slain in a narrow pass by Lycurgus (στεινωπῷ ἐν ὁδῷ, Hom. *Il.* vii. 143).† This narrow valley, shut in by the two projecting ridges already mentioned, formed the natural frontier between the territories of Mantineia and Tegea. The boundary between the two states was marked by a round altar on the road, which was about four miles distant from Mantineia, and about six miles from Tegea. It was here that the Lacedaemonian army was posted, over which Epaminondas gained his memorable victory. He had marched from Tegea in a north-westerly direction, probably passing near the site of the modern *Tripolitzá*, and then keeping along the side of Mt. Maenalus. He attacked the enemy on their right flank, near the projecting ridge of Mt. Maenalus, already described. It was called Scopé (Σκόπη, now *Myrtikas*), because Epaminondas, after receiving his mortal wound, was carried to this height to view the battle. Here he expired, and his tomb, which Pausanias saw, was erected on the spot. (Paus. viii. 11. §§ 6, 7; for an account of the battle see Grote, vol. xi. p. 464, seq.)

The road from Mantineia to Pallantium ran almost parallel to the road to Tegea till it reached the frontiers of Tegeatis. At the distance of one stadium was the temple of Zeus Charmon. (Paus. viii. 10, 11, 12. § 1.)

Two roads led from Mantineia eastwards to Argos, called PRINUS (Πρῖνος) and CLIMAX (Κλίμαξ), or the "Ladder," respectively. (Paus. viii. 6. § 4.) The latter was so called from the steps cut out of the rock in a part of the road; and the Prinus probably derived its name from passing by a large holm-oak (πρῖνος), or a small wood of holm-oaks; but the roads do not appear to have borne these names till they entered Mantinice. There are only two passes through the mountains, which separate the Argive plain from Mantinice, of which the southern and the shorter one is along the course of the river Charadrus, the northern and the longer one along the valley of the Inachus. Both Ross and Leake agree in making the Prinus the southern and the Climax the northern of these two roads, contrary to the conclusions of the French surveyors. Both roads quitted Argos at the same gate, at the hill called Deiras, but then immediately parted in different directions. The PRINUS, after crossing the Charadrus, passed by Oenoë, and then ascended Mount Artemisium (*Malevós*), on the summit of which, by the road-side, stood the temple of Artemis, and near it were the sources of the Inachus. Here were the boundaries of Mantinice and Argolis. (Paus. ii. 25. §§ 1—3.) On descending this mountain the road entered Mantinice, first crossing through the lowest and most marshy part of the "Argon," or "Uncultivated Plain," so called because the waters from the mountains collect in the plain and render it unfit for cultivation, although there is a katavóthra to carry them off. On the left of the plain were the remains of the camp of Philip, son of Amyntas, and a village called NESTANE (Νεστάνη), probably now the modern village of *Tzipianá*. Near this spot the waters of the plain entered the katavóthra, and are said not to have made their exit till they reached the sea off the coast of the Argeia. Below Nestane was the "Dancing-place of Maera" (Χορὸς Μαίρας), which was only the southern arm of the Argon Plain, by means of which the latter was connected with the great Mantineian plain. The road then crossed over the foot of Mount Alesium, and entered the great Mantineian plain near the fountain Arne at the distance of 12 stadia from the city. From thence it passed into the city by the south-eastern or Tegeatan gate. (Paus. viii. 6. § 6—viii. 8. § 4.)

The other road, called CLIMAX, ran from Argos in a north-westerly direction along the course of the Inachus, first 60 stadia to Lyrceia, and again 60 stadia to Orneae, on the frontiers of Sicyonia and Phliasia. (Paus. ii. 25. §§ 4—6.) It then crossed the mountain, on the descent of which into Mantinice were the steps cut out of the rock. The road entered Mantinice at the upper or northern corner of the Argon Plain, near the modern village of *Sanga*. It then ran in a south-westerly direction, along the western side of Mount Alesium, to a place called MELANGEIA (τὰ Μελαγγεῖα), from which drinking-water was conducted by an aqueduct to Mantineia, of which remains were observed by Ross. It corresponds to the modern village of *Pikerni*, which is

COIN OF MANTINEIA.

* This ditch must have terminated in a katavóthra, probably in one of the katavóthra on the W. side of the plain at the foot of the Maenalian mountains. On the other side of these mountains is the village and river named Helisson; and as the Elisphasii are not mentioned in any other passage, it has been proposed to read Ἐλισσοντίων instead of Ἐλισφασίων. (Ross, p. 127.) Leake has conjectured, with some probability, that Elisphasii may be the corrupt ethnic of ELYMIA (Ἐλυμία), a place only mentioned by Xenophon (*Hell.* vi. 5. § 13), who places it on the confines of Orchomenus and Mantineia. Although Leake places Elymia at *Levidhi*, on the NW. frontier of Mantinice, he conjectures that the whole plain of Alcimedon may have belonged to it. (Leake, *Peloponnesiaca*, p. 380.)

† Leake imagines that Phoezon was situated on a side road, leading from the tombs of the daughters of Pelias. But Ross maintains that Phoezon was on the high-road to Tegea, and that Pausanias has only mentioned by anticipation, in viii. 11. § 1, the altar forming the boundary between Mantinice and Tegeatis, the more proper place for it being at the close of § 4.

said to signify in the Albanian language "abounding in springs." The road next passed by the fountain of the Meliastae (Μελιασταί), where were temples of Dionysus and of Aphrodite Melaenis: this fountain was 7 stadia from the city, opposite Ptolis or Old Mantineia. (Paus. viii. 6. §§ 4, 5.) The preceding account is rendered clearer by the map on p. 263.

(For the geography of Mantinice, see Leake, *Morea*, vol. i. p. 100, seq., vol. iii. p. 44, seq.; *Peloponnesiaca*, p. 369, seq.; Ross, *Reisen im Peloponnes*, vol. i. p. 121, seq.; Curtius, *Peloponnesos*, vol. i. p. 232, seq.)

MANTUA (Μάντουα: *Eth.* Mantuanus: *Mantova*), a city of Cisalpine Gaul, situated on the river Mincius, on an island formed by its waters, about 12 miles above its confluence with the Padus. There seems no doubt that it was a very ancient city, and existed long before the establishment of the Gauls in this part of Italy. Virgil, who was naturally well acquainted with the traditions of his native place, tells us that its population was a mixed race, but the bulk of the people were of Etruscan origin; and Pliny even says that it was the only city beyond the Padus which was still inhabited by an Etruscan people. (Virg. *Aen.* x. 201—203; Plin. iii. 19. s. 23.) Virgil does not tell us what were the other national elements of its population, and it is not easy to understand the exact meaning of his expression that it consisted of three "gentes," and that each gens comprised four "populi;" but it seems certainly probable that this relates to the internal division of its own territory and population, and has no reference (as Müller has supposed) to the twelve cities founded by the Etruscans in the valley of the Padus. (Müller, *Etrusker*, vol. i. p. 137; Niebuhr, vol. i. p. 296, note 757.) The Etruscan origin of Mantua is confirmed by its name, which was in all probability derived from that of the Etruscan divinity Mantus, though another tradition, adopted by Virgil himself, seems to have deduced it from a prophetic nymph of the name of Manto. (Serv. *ad Aen. l. c.*; Schol. Veron. *ad loc.* p. 103, ed. Keil.) According to one of the oldest scholiasts on Virgil, both Verrius Flaccus and Caecina, in their Etruscan histories, ascribed the foundation of Mantua to Tarchon himself, while Virgil represents Ocnus, the son of Manto, as its founder. (Virg. *Aen.* x. 200; Schol. Veron. *l. c.*) The only historical fact that can be considered as resulting from all these statements is that Mantua really was an Etruscan settlement, and that for some reason (probably from its peculiar and inaccessible situation) it retained much of its Etruscan character long after this had disappeared in the other cities of Cisalpine Gaul.

After the settlement of the Gauls in Northern Italy, Mantua was probably included in the territory of the Cenomani (Ptol. iii. 1. § 31); but we find no mention of its name in history, nor do we know at what period it passed under the Roman dominion. From an incidental notice in Livy (xxiv. 10) during the Second Punic War, we may probably infer that it was then on friendly terms with Rome, as were the Cenomani and Veneti; and as its name is not mentioned during the subsequent wars of the Romans in Cisalpine Gaul, it is probable that it passed gradually, with the other towns of the Cenomani, from a state of alliance to one of dependence, and ultimately of subjection. But even under the Roman dominion the name of Mantua scarcely appears in history, and it is clear that it was far from possessing the same relative importance in ancient times that it did in the middle ages, and still retains. It was undoubtedly a municipal town, and is mentioned as such by all the geographers, as well as in inscriptions, but both Strabo and Martial speak of it as very inferior to the neighbouring city of Verona, in comparison with which the latter terms it "parva Mantua." (Strab. v. p. 213; Plin. iii. 19. s. 23; Ptol. iii. 1. § 31; Martial, xiv. 195.) During the civil wars after the death of Caesar, Mantua suffered the loss of a part of its territory, for Octavian having assigned to his discharged soldiers the lands of the neighbouring Cremona, and these having proved insufficient, a portion of the territory of Mantua was taken to make up the necessary amount. (Virg. *Ecl.* ix. 28, *Georg.* ii. 198; Serv. *ad loc.*) It was on this occasion that Virgil was expelled from his patrimonial estate, which he however recovered by the favour of Augustus.

The chief celebrity of Mantua under the Roman Empire was undoubtedly owing to its having been the birthplace of Virgil, who has, in consequence, celebrated it in several passages of his works; and its name is noticed on the same account by many of the later Roman poets. (Virg. *Georg.* iii. 12; Ovid, *Amor.* iii. 15. 7; Stat. *Silv.* iv. 2. 9; Sil. Ital. viii. 595; Martial, i. 62. 2, xiv. 195.) According to Donatus, however, the actual birthplace of the poet was the village of Andes in the territory of Mantua, and not the city itself. (Donat. *Vit. Virg.* 1; Hieron. *Chron.* ad ann. 1947.)

After the fall of the Roman Empire, Mantua appears to have become a place of importance from its great strength as a fortress, arising from its peculiar situation, surrounded on all sides by broad lakes or expanses of water, formed by the stagnation of the river Mincius. It, however, fell into the hands of the Lombards under Agilulf (P. Diac. iv. 29), and after the expulsion of that people was governed by independent counts. In the middle ages it became one of the most important cities of the N. of Italy; and is still a populous place, and one of the strongest fortresses in Italy. It is still so completely surrounded by the stagnant waters of the *Mincio*, that it is accessible only by causeways, the shortest of which is 1000 feet in length.

Mantua was distant from Verona 25 miles; so that Procopius calls it a day's journey from thence. (Procop. *B. G.* iii. 3.) It was situated on a line of road given in the Tabula, which proceeded from Mediolanum, by Cremona and Bedriacum, to Mantua, and thence to Hostilia, where it crossed the Padus, and thence proceeded direct to Ravenna. (*Tab. Peut.*) Mantua was distant from Cremona by this road about 40 miles. It would appear from one of the minor poems ascribed to Virgil (*Catalect.* 8. 4), that this distance was frequently traversed by muleteers with light vehicles in a single day. [E. H. B.]

MANTZICIERT (Μαντζικιέρτ, Const. Porph. *de Adm. Imp.* c. 44), a fortress of great importance upon the Armenian frontier. In A. D. 1050, it offered so determined a resistance to Togrul Beĭ, the founder of the Seljukian dynasty, that he had to give up all hope of breaking through the barrier of fortresses that defended the limits of the empire, and retired into Persia. (Cedren. vol. ii. p. 780; Le Beau, *Bas Empire*, vol. xiv. p. 367; Finlay, *Byzantine Empire*, p. 523.) It is identified with *Melasgerd* or *Manaskhert*, situated to the NW. of lake *Vân*, and the

remarkable volcanic cone of *Stpân Tâgh.* (St. Martin, *Mém. sur l'Arménie*, vol. i. p. 105; Ritter, *Erdkunde*, vol. ix. p. 994.) [E. B. J.]

MAOGAMALCHA (Ammian. xxiv. 4), a place in Mesopotamia, attacked and taken by Julian. It was distant about 90 stadia from Ctesiphon. (Zosim. iii. 21.) It appears to have been strongly fortified and well defended. Zosimus evidently alludes to the same place (*l. c.*), though he does not mention it by name. [V.]

MAON (Μαών), a city of Judah, in the mountains, south of Hebron. It is joined with Carmel, and Ziph, and Juttah (*Josh.* xv. 55), known only as the residence of Nabal and Abigail (1 *Sam.* xxv. 2). "The wilderness of Maon, in the plain on the south of Jeshimon," is identical with or contiguous to the wilderness of Ziph, where David and his men hid themselves in the strongholds from the malice of Saul (xxiii. 14—25). It is placed by Eusebius in the east of Daroma (*Onomast. s. v.*) Its site is marked by ruins, still called *Mâin*, situated between *Carmel* and *Zuph*, half an hour south of the former. [CARMEL, Vol. I. p. 521.] [G. W.]

MAPHARITIS (Μαφαρῖτις), a district of Arabia Felix, lying about the city of Sava (Σαυή), which is placed by Arrian three days' journey from Muza, on the Red Sea. [MUZA.] He mentions the king's name, Cholaebus (Χόλαιβος). (*Periplus Maris Eryth.* p. 13.) The Sava of Arrian is probably identical with the Sapphara or Sapphar of Ptolemy (Σάπφαρα al. Σαπφὰρ μητρόπολις, vi. 7. § 41), the capital no doubt of a tribe named by him Sappharitae (Σαπφαριταί), the Mapharitis of Arrian. They are distinct from the MAPHORITAE of Ptolemy. [G. W.]

MAPHORI'TAE (Μαφορῖται), a people of Arabia Felix, placed by Ptolemy above, i. e. north of, the Rathini, and west of the outer Frankincense country (ἡ ἐκτὸς Σμυρνοφόρος), contiguous to the Chatramamititae (vi. 7. § 25). The similarity of name indicates a connection between this tribe and the Maepha metropolis of the same geographer; the same as the "Aphae metropolis" of Arrian, which he places 9 days' journey east of his Maphoritis regio, and therefore 12 days from the Red Sea. It was the capital of Charibaël, the lawful king of the Homeritae and their neighbours the Sabaitae, styled the friend of the Roman emperors, to whom he is said to have sent frequent embassies. [MAEPHA.] The district is probably that now known as *Wady Mayfa*, in the midst of which is situated the remarkable ruins now called *Nakab-el-Hajar*, which are supposed to mark the site of the metropolis. This fruitful valley commences above the ruins in question and is well cultivated throughout. It is thus described by Lieut. Wellsted, who traversed its southern part in 1838:—"*Nakab-el-Hajar* (ancient MAEPHA, *q. v.*) is situated north-west, and is distant 48 miles from the village of 'Aïn, which is marked on the chart in latitude 14° 2′ north, and longitude 46° 30′ east, nearly. It stands in the centre of a most extensive valley, called by the natives *Wady Meïfah*, which, whether we regard its fertility, population, or extent, is the most interesting geographical feature we have yet discovered on the southern coast of Arabia. Taking its length from where it opens out on the sea-coast to the town of *'Abbân*, it is 4 days' journey, or 75 miles. Beyond this point I could not exactly ascertain the extent of its prolongation; various native authorities give it from 5 to 7 additional days. Throughout the whole of this space it is thickly studded with villages, hamlets, and cultivated grounds. In a journey of 15 miles, we counted more than thirty of the former, besides a great number of single houses." (Wellsted, *Travels in Arabia*, vol. i. p. 436.) [G. W.]

MAPONIS, in Britain, occurring in Geogr. Ravenn. among the *diversa loca*, without any clue to guide us to its locality. An inscription to a topical deity Mapon (Deo Mapono), discovered at *Plumpton* in *Cumberland;* and another (Apollini Mapono) at *Ribchester*, in *Lancashire*, merely strengthen the probability of the existence of a place so called in Britain, without disclosing its situation. Maporiton also appears in Geogr. Ravenn. among the towns in the north of Britain. [C. R. S.]

MARA'BIUS (Μαράβιος, Μαρούβιος, Ptol. v. 9 § 2), a river of Sarmatia, which Reichard has identified with the *Manyez*, an affluent of the *Don*, on the left bank of that river. Some have considered the *Manyez* to represent the ACHARDEUS (Ἀχαρδέος), but Strabo (xi. p. 506) expressly says that the latter discharges itself into the Maeotis. (Schafarik, *Slav. Alt.* vol. i. pp. 60, 500.) [E. B. J.]

MARACANDA (Μαράκανδα, Strab. xi. p. 517; Arrian, iii. 30, iv. 5; Ptol. vi. 11. § 9), the capital of Sogdiana, now *Samarcand*. It is said by Strabo to have been one of the eight cities which were built in those parts by Alexander the Great. Ptolemy places it in Bactriana. Arrian (iii. 30) states that it contained the palace of the ruler of the Sogdiani, but does not apparently credit the story that Alexander had anything to do with the building of it. Curtius states that the city was 70 stadia in circumference, and surrounded by a wall, and that he had destined the province for his favourite, Clitus, when the unfortunate quarrel took place in which he was slain (viii. 1. § 20). Professor Wilson (*Ariana*, p. 165) considers that the name has been derived from the Sanscrit *Samara-khanda*, "the warlike province." In many of the old editions the word was written Paracanda, but there can be no doubt that Maracanda is the correct form. *Samarcand* has been in all ages a great *entrepôt* for the commerce of Central Asia. [V.]

MARANI'TAE (Μαρανῖται, Strab. xvi. p. 776; Μαρανεῖς), an ancient people on the W. coast of Arabia Felix, near the corner of the Aelaniticus Sinus, destroyed by the Garindaei.

MARAPHII (Μαράφιοι, Herod. i. 125), one of the three tribes into which the highest class of the ancient Persians was divided, according to Herodotus. The other two were the Pasargadae and the Maspii. [V.]

MA'RATHA (Μάραθα), a village of Arcadia, in the district Cynuria, between Buphagium and Gortys, perhaps represented by the ruin called the Castle of *Leódhoro*. (Paus. viii. 28. § 1; Leake, *Morea*, vol. ii. p. 66, *Peloponnesiaca*, p. 232.)

MARATHE, a small island near Corcyra, mentioned only by Pliny (iv. 12. s. 19).

MARATHE'SIUM (Μαραθήσιον: *Eth.* Μαραθήσιος), an Ionian town on the coast of Lydia, south of Ephesus, and not far from the frontiers of Caria, whence Stephanus (*s. v.*) calls it a town of Caria. (Scylax, p. 37; Plin. *H. N.* v. 31.) The town at one time belonged to the Samians; but they made an exchange, and, giving it up to the Ephesians, received Neapolis in return. (Strab. xiv. p. 639.) Col. Leake (*Asia Minor*, p. 261) believes that a few ancient ruins found at a place called *Skalanova* mark the site of Marathesium, though others regard them as remains of Pygela. [L. S.]

MARATHON (Μαραθών: *Eth.* Μαραθώνιος), a small plain in the NE. of Attica, containing four places, named MARATHON, PROBALINTHUS (Προβάλινθος: *Eth.* Προβαλίσιος), TRICORYTHUS (Τρικόρυθος, or Τρικόρυνθος, Τρικόρινθος: *Eth.* Τρικορύσιος), and OENOE (Οἰνόη: *Eth.* Οἰναῖος), which originally formed the Tetrapolis, one of the 12 districts into which Attica was divided before the time of Theseus. Here Xuthus, who married the daughter of Erechtheus, is said to have reigned; and here the Heracleidae took refuge when driven out of Peloponnesus, and defeated Eurystheus. (Strab. viii. p. 383; Steph. B. s. v. Τετράπολις.) The Marathonii claimed to be the first people in Greece who paid divine honours to Hercules, who possessed a sanctuary in the plain, of which we shall speak presently. (Paus. i. 15. § 3, i. 35. § 4.) Marathon is also celebrated in the legends of Theseus, who conquered the ferocious bull, which used to devastate the plain. (Plut. *Thes.* 14; Strab. ix. p. 399; Paus. i. 27. § 10.) Marathon is mentioned in the Homeric poems in a way that implies that it was then a place of importance. (*Od.* vii. 80.) Its name was derived from an eponymous hero Marathon, who is described by Pausanias as a son of Epopeus, king of Sicyon, who fled into Attica in consequence of the cruelty of his father (Paus. ii. 1. § 1, ii. 6. § 5, i. 15. § 3, i. 32. § 4). Plutarch calls him an Arcadian, who accompanied the Dioscuri in their expedition into Attica, and voluntarily devoted himself to death before the battle. (*Thes.* 32.)

After Theseus united the 12 independent districts of Attica into one state, the name of Tetrapolis gradually fell into disuse; and the four places of which it consisted became Attic demi, — Marathon, Tricorythus, and Oenoë belonging to the tribe Aeantis, and Probalinthus to the tribe Pandionis; but Marathon was so superior to the other three, that its name was applied to the whole district down to the latest times. Hence Lucian speaks of "the parts of Marathon about Oenoë" (Μαραθῶνος τὰ περὶ τὴν Οἰνόην, *Icaro-Menip.* 18).

Few places have obtained such celebrity in the history of the world as Marathon, on account of the victory which the Athenians here gained over the Persians in B. C. 490. Hence it is necessary to give a detailed account of the topography of the plain, in which we shall follow the admirable description of Colonel Leake, drawing a little additional information from Mr. Finlay and other writers.

The plain of Marathon is open to a bay of the sea on the east, and is shut in on the opposite side by the heights of Brilessus (subsequently called Pentelicus) and Diacria, which send forth roots extending to the sea, and bounding the plain to the north and south. The principal shelter of the bay is afforded by a long rocky promontory to the north, anciently called CYNOSURA (Κυνόσουρα, Hesych., Phot., *s. v.*) and now *Stómi*. The plain is about 6 miles in length and half that breadth in its broadest part. It is somewhat in the form of a half-moon, the inner curve of which is bounded by the bay, and the outer by the range of mountains already described. The plain, described by Aristophanes as the "pleasant mead of Marathon" (λειμῶνα τὸν ἐρόεντα Μαραθῶνος, *Aves*, 246), is a level green expanse. The hills, which shut in the plain, were covered in ancient times with olives and vines (Nonn. *Dionys.* xiii. 84, xlviii. 18). The plain is bounded at at its southern and northern extremities by two marshes, of which the southern is not large and is almost dry at the conclusion of the great heats; while the northern, which is much larger, offers several parts which are at all seasons impassable. Both, however, have a broad, firm, sandy beach between them and the sea. A river, now called the river of *Marathóna*, flows through the centre of the plain into the sea.

There are four roads leading out of the plain. 1. One runs along the coast by the south-western extremity of the plain. (Plan, *aa.*) Here the plain of Marathon opens into a narrow maritime plain three miles in length, where the mountains fall so gradually towards the sea as to present no very defensible impediment to the communication between the Marathonia and the Mesogaea. The road afterwards passes through the valley between Pentelicus and Hymettus, through the ancient demus of Pallene. This is the most level road to Athens, and the only one practicable for carriages. It was the one by which Peisistratus marched to Athens after landing at Marathon. (Herod. i. 62.) 2. The second road runs through the pass of *Vraná*, so called from a small village of this name, situated in the southern of the two valleys, which branch off from the interior of the plain. (Plan, *bb.*) This road leads through Cephisia into the northern part of the plain of Athens. 3. The third road follows the vale of *Marathóna*, the northern of the two valleys already named, in which lies the village of the same name, the largest in the district. (Plan, *cc.*) The two valleys are separated from one another by a hill called *Kotróni* (Plan, 3), very rugged, but of no great height. This third road leads to Aphidna, from which the plain of Athens may also be reached. 4. The fourth road leaves the plain on the north-east by a narrow pass (Plan, *dd*) between the northern marsh and a round naked rocky height called *Mt. Koráki* or *Stavrokoráki*. (Plan, 4.) It leads to Rhamnus; and at the entrance of the pass stands the village of *Lower Súli*. (Plan, 12.)

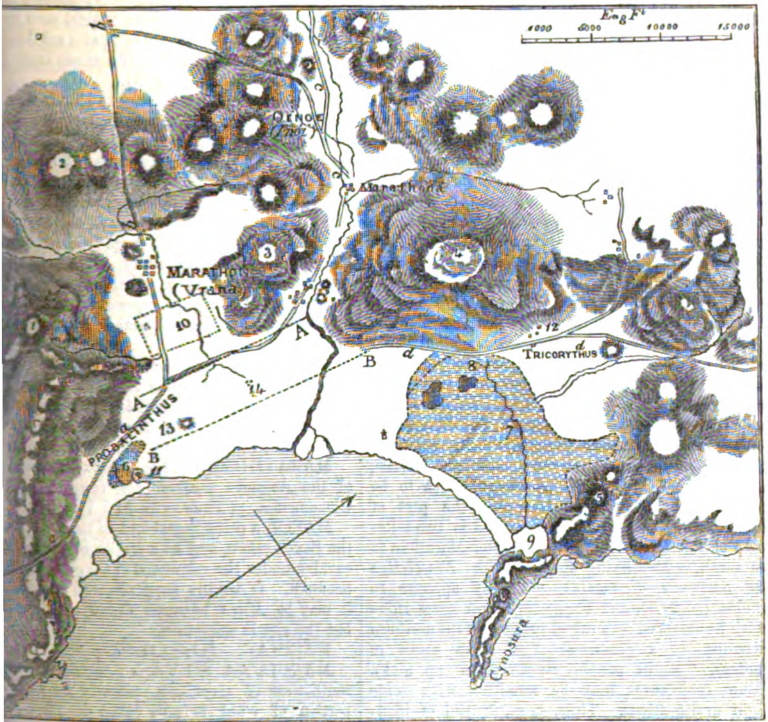
Three places in the Marathonian district particularly retain vestiges of ancient demi. 1. *Vraná*, which Leake supposes to be the site of the demus of Marathon. It lies upon a height fortified by the ravine of a torrent, which descends into the plain after flowing between *Mts. Argalíki* and *Aforismó*, which are parts of Mt. Brilessus or Pentelicus. (Plan, 1, 2.) A little below *Vraná* are seen four artificial tumuli of earth, one considerably larger than the others; and in a pass at the back of the hill of *Kotróni*, which leads from the vale of *Vraná* into that of *Marathóna*, there are some remains of an ancient gate. Near the gate are the foundations of a wide wall, 5 feet in thickness, which are traced for nearly 3 miles in circumference, enclosing all the upper part of the valley of *Vraná*. These ruins are now known by the name of ἡ μάνδρα τῆς γραίας (the old woman's sheepfold). Near the ruined gate Leake observed the remains of three statues, probably those which were erected by Herodes Atticus to three favourite servants. (Philostr. *Soph.* ii. 1. § 10.) Marathon was the demus of Herodes, who also died there. The wall mentioned above was probably built by Herodes, to enclose his property; for it would seem from Pliny that Marathon no longer existed as a town or village a century before the time of Herodes. ("Rhamnus pagus, locus Marathon," Plin. iv. 7. s. 11.) The early disappearance of the ancient town of Marathon would easily cause its name to be

transferred to another site; and it was natural that the celebrated name should be given to the principal place in the district. Three-quarters of a mile to the south-east of the tumuli of *Vraná* there is a rising ground, upon which are the traces of a Hellenic wall, apparently the peribolus of a temple. This was probably the temple of Hercules (Plan, 10), in whose sacred enclosure the Athenians were encamped before the battle of Marathon. (Herod. vi. 108.)

2. There are several fragments of antiquity situated at the head of the valley of *Marathóna* at a spot called *Inói*, which is no doubt the site of the ancient OENOE, one of the four demi of the district. The retired situation of Oenoe accounts for its omission by Strabo in his enumeration of the demi situated near the coast (ix. p. 399).

3. There are also evident remains of an ancient demus situated upon an insulated height in the plain of *Súli*, near the entrance of the pass leading out of the Marathonian plain to *Súli*. These ruins are probably those of TRICORYTHUS, the situation of which agrees with the order of the maritime demi in Strabo, where Tricorythus immediately precedes Rhamnus. We learn from Aristophanes and Suidas that Tricorythus was tormented by gnats from a neighbouring marsh (ἐμπὶς ἐστιν ἤδη Τρικορυσία, Aristoph. *Lysistr.* 1032; Suidas, *s. v.* ἐμπίς); and at the present day the inhabitants of *Lower Súli* in the summer are driven by this plague and the bad air into the upper village of the same name. The town was probably called Tricorythus from the triple peak on which its citadel was built.

The site of PROBALINTHUS is uncertain, but it should probably be placed at the south-west extremity of the Marathonian plain. This might be inferred from Strabo's enumeration, who mentions first Probalinthus, then Marathon, and lastly Tricorythus. Between the southern marsh and *Mt. Argalíki* there are foundations of buildings at a place called *Valarí*, which is, perhaps, a corruption of Probalinthus. Close to the sea, upon a rising ground in the marsh, there are some ancient remains, which may, perhaps, be those of the temple of Athena Hellotia (Plan, 11), which epithet the goddess is said to have derived from the marsh of Marathon, where the temple was built. (Schol. *ad Pind. Ol.* xiii. 56; Etym. M. *s. v.* Ἑλλωτίς.)



The principal monument in the Marathonian plain was the tumulus erected to the 192 Athenians who were slain in the battle, and whose names were inscribed upon ten pillars, one for each tribe, placed upon the tomb. There was also a second tumulus for the Plataeans and slaves, and a separate monument to Miltiades. All these monuments were seen by Pausanias 600 years after the battle (i. 32. § 3). The tumulus of the Athenians still exists. It stands in the centre of the plain, about half a mile from the sea-shore, and is known by the name of *Soró* (ὁ Σορός), the tomb. (Plan, 13.) It is about 30 feet high, and 200 yards in circumference, composed of a light mould mixed with sand, amidst which have been found many brazen heads of arrows, about an inch in length, of a trilateral form, and pierced at the top with a round hole for the reception of the shaft. There are also found, in still greater numbers, fragments of black flint, rudely shaped by art, which have been usually considered fragments of the arrow-heads used by the Persian archers; but this opinion cannot be received, as flints of the same kind abound in other parts of Greece, where no Persian is reputed to have set his foot; and, on the other hand, none have been found either at Thermopylae or Plataea. At a very small distance from this tumulus Leake noticed a small heap of earth and stones, which is, perhaps, the tomb of Plataeans and Athenian slaves. At 500 yards north of the great tumulus is a ruin called *Pyrgo* (Πύργος), consisting of the foundation of a square monument, constructed of large blocks of white marble; it is apparently the monument erected in honour of Miltiades. (Plan, 14.)

We learn from Philochorus that there was a temple of the Pythian Apollo at Marathon (*ap.* Schol. *ad Soph. Oed. Col.* 1047); and Demosthenes relates that the sacred vessel was kept on this coast, and that once it was carried off by Philip. (*Phil.* i. p. 49.)

Pausanias (i. 32. § 3, seq.) mentions in the plain several natural objects, some of which have been noticed already. The lake at the northern extremity of the plain he describes "as for the most part marshy, into which the flying barbarians fell through their ignorance of the ways; and here it is said that the principal slaughter of them occurred. Beyond the lake (ὑπὲρ τὴν λίμνην) are seen the stables of stone for the horses of Artaphernes, together with vestiges of a tent upon the rock. A river flows out of the lake which, within the lake, affords water fit for cattle to drink; but, towards the place where it enters the sea, becomes salt and full of sea-fishes. At a little distance from the plain is a mountain of Pan, and a cavern worthy of inspection: the entrance is narrow; but within are apartments and baths, and that which is called the goat-stand (αἰπόλιον) of Pan, together with rocks very much resembling goats." Leake observes that the marshy lake, and the river, which, becoming salt towards the mouth, produces sea-fishes, are precisely as Pausanias describes them. The marsh is deepest towards the foot of *Mt. Koráki*, where several springs issue from the foot of the rocks on the right side of the road leading from the great plain to *Lower Súli*. These springs are apparently the fountain MACARIA (Plan, 8), which Pausanias mentions just before his description of the marsh. It derived its name from Macaria, a daughter of Hercules, who devoted herself to death in behalf of the Heraclidae before the victory which they gained over the Argives in the plain. (Comp. Strab. viii. p. 377.) A small stream, which has its origin in these springs, is traced through the marsh into a small salt lake (Plan, 9), supplied by subterraneous sources, and situated on the south-eastern extremity of the marsh, under a rocky ridge, the continuation of *C. Stómi*. Both the ridge and salt lake are known by the name of *Dhrakonéria* (τὰ Δρακονέρια, i. e. the monster-waters, so called from its size, since δράκο is a common expression among the modern Greeks for any marvellous object). On the eastern side of the great marsh Leake noticed a small cavern in the side of *Mt. Dhrakonéria*, which is perhaps the place called by Pausanias "the stables of Artaphernes." Leake supposes that the Persian commanders were encamped in the adjoining plain of Tricorythus. The mountain and cavern of Pan have not yet been discovered. They would appear, from the description of Pausanias, to have been a little further removed from the plain than the marsh and salt lake. Hence they may be placed in *Mt. Koráki*.

e exact ground occupied by the Greek and ian armies at the battle of Marathon can only matter of conjecture. Col. Leake, whose unt is both probable and consistent, though Mr. y differs from him, supposes that the Athe- camp was in the valley of *Vraná* near its open- into the plain; that on the day of battle the nian line extended from a little in front of Heracleium, at the foot of *Mt. Argalíki*, he bend of the river of *Marathóna*, below the ge of *Seféri;* and that the Persians, who were dia in front of them, had their right resting on *Koráki*, and their left extending to the southern h, which prevented them from having a front greater than that of the Athenians. (See AA, BB.) When the Persians defeated the nian centre, they pursued the latter up one or of the two valleys on either side of *Mt. Kotróni*, since Herodotus says that the pursuit continued quite into the interior (ἐς τὴν μεσόγαιαν). Nearly at the same time the Persian left and right were defeated; but instead of pursuing them, the Athenians returned towards the field to the aid of their own centre. The Persian right fled towards the narrow pass leading into the plain of Tricorythus; and here numbers were forced into the marsh, as Pausanias relates.

(Leake, *The Demi of Attica*, vol. ii. pp. 77, 203, originally published in *Transactions of the Royal Society of Literature*, 1829, vol. ii.; Finlay, *Ibid.* vol. iii. p. 363; Wordsworth, *Athens and Attica*, p. 44; Mure, *Journal of a Tour in Greece*, vol. ii. p. 101; Thirlwall, *Hist. of Greece*, vol. ii. p. 239; Grote, *Hist. of Greece*, vol. ii. p. 466; Mure, *Hist. of Greek Literature*, vol. iv. pp. 510, 549, 550; Blakesley's Herodotus, vol. ii. p. 172.)

PLAN OF THE PLAIN OF MARATHON.

A. Position of the Greeks on the day of the battle.
B. Do. Persians do.
1. Mt. *Argalíki.*
2. Mt. *Aforismó.*
3. Mt. *Kotróni.*
4. Mt. *Koráki.*
5. Mt. *Dhrakonéra.*
6. Small Marsh.
7. Great Marsh.
8. Fountain Macaria.
9. Salt lake of *Dhrakonéra*
10. Heracleium.
11. Temple of Athena Hellotia?
12. Village of *Lower Súli.*
13. *Soró:* tumulus of Athenians.
14. *Pýrgo:* tomb of Miltiades.

Roads:—

a a. To Athens, between Mts. Pentelicus and Hymettus through Pallene.
b b. To Athens, through Cephisia.
c c. To Athens, through Aphidna.
d d. To Rhamnus.

MARATHUS (Μάραθος: *Eth.* Μαραθηναῖος al. ...), a city on the coast of Syria, north of ..., placed by Ptolemy in the district of Cassiotis, which extended as far north as Antioch. It joined with Enydra, and was a ruin in Strabo's time. It was on the confines of Phoenice, and the district was then under the dominion of the Aradians (Strab. xvi. p. 753; comp. Plin. v. 20), who had been foiled in a former attempt to reduce it to their power. The story, as given in a fragment of Diodorus (lib. xxxiii. vol. x. p. 76—78, ed. Bipont; vol. ii. p. 593, ed. Wess.), is as follows. The people of Aradus having

seized what they considered a favourable opportunity for the destruction of the people of Marathus, sent privately to Ammonius, prime minister of Alexander Balas, the king of Syria, and bribed him with the offer of 300 talents to deliver up Marathus to them. The unfortunate inhabitants of the devoted city attempted in vain to appease their enemies. The Aradians violated the common laws of suppliants, broke the very ancient images of the local deities, —which the Maratheni had brought to add solemnity to their embassy,—stoned the ambassadors, and cast them into prison: according to another account, they murdered some, and forged letters in their names, which they sealed with their seals, promising succour to Marathus, with a view of introducing their troops into the city under this pretence. But discovering that the citizens of Marathus were informed of their design, they desisted from the attempt. The facts of its final subjugation to Aradus are not preserved. Pliny (v. 20) places Marathus opposite to the island of Aradus, which he says was 200 passus (= 1000 Roman feet) from the coast. Diodorus (*l. c.*) states the distance between Aradus and Marathus to be 8 stadia; which need not be inconsistent with the statement of Pliny, as the latter may be supposed to measure to the point on the mainland nearest to Aradus, the former the distance between that island and the town of Marathus. The fact, however, is, that even the statement of Diodorus is too short for the nearest point on the coast; for this island is, according to Maundrell (March 7, p. 19), "about a league distant from the shore." And Pococke, who crossed the strait, says "it is reckoned to be about two miles from the continent. (*Observations on Syria*, p. 201.) The 20 stadia of Strabo is therefore much more correct than either of the other authorities. He says that the island lay off an exposed coast (ῥαχιώδους καὶ ἀλιμένου), between its port (Caranus *lege* Carnos) and Marathus: and what was the respective situation of these towns he intimates in another passage, where, reckoning from the north, he enumerates Balanaea, Carnos, Enydra, Marathus. Pococke takes Tortosa to be "without doubt Caranus (Carnos) the port of Aradus on the continent;" and as this is two miles north of Aradus, he properly looks for Marathus to the south,—identifying Enydra with *Ein-el-Hye* (*the Serpent's Fountain*), "directly opposite to Aradus (p. 203), and suggesting that some ruins which he observed on a raised ground, at the northern extremity of a plain, about 7 miles south of *Tortosa*, "might possibly be Marathus" (p. 204). These conjectures may be admitted with some slight modifications. Thus, e. g., instead of identifying Tortosa with Carnos, this naval arsenal of the Arvadites must be placed about 2½ miles north of Tortosa, where a late traveller has discovered "extensive ruins, called by the Arab peasants *Carnoon*, —the site, doubtless, of the Carnos or Caranus of the ancients. The people from Arvad still quarry stones from these ruins; and below it, on the north, is a small harbour, which appears to have been fortified like that of Tortosa." (Thompson, in *Bibliotheca Sacra*, vol. v. p. 254.) A fresh-water spring in the sea, is mentioned by Strabo; and a mile to the south, between *Carnoos* and *Tortosa*, "a few rods from the shore, an immense fountain, called *'Ain Ibrahim* (*Abraham's fountain*), boils up from the bottom." *Tortosa*, then, will be, as many mediaeval writers maintained, Antaradus, which "Arabic geographers write Antartûs and Antarsûs; whence the common Arabic name *Tartûs*, in Italian *Tortosa*" (*l. c.* p. 247, n. 1). *'Ain-el-Hiyeh*, written by Pococke *Ein-el-Hye*, is certainly the Enydra of Strabo; the geographer, or his informant, having in this, as in so many other instances, retained the first half of the native name, and translated the latter half,—*En* being the usual Greek and Latin equivalent for the Semetic *'Ayn* = *fountain*, and the *hydra* a sufficiently close representative of the Semetic *Hiyeh* = *serpent*. South of this fountain are very extensive quarries, five or six miles to the south of *Tortosa*. "This neighbourhood is called by the Arabs *Amreed* or *Maabed Amreet* 'the fane of Amreet.' This name the Greeks probably changed into Marathus, and the old vaults, foundations, sarcophagi, &c., near *'Ain-el-Hiyeh* (*Serpent's Fountain*), may mark the precise locality of ancient Marathus." (Thompson, *l. c.* p. 250.) Pococke describes here a rock-hewn temple, and monolithic house and chambers; besides a kind of semicircle, which he thinks "might serve for some sports to divert the people of Aradus and Antaradus, or of the ancient Marathus, if that was near. It was probably a circus" (p. 203).

It was the more necessary to identify these sites, as D'Anville placed the ancient Marathus at the modern *Marakiah*, which is, doubtless, the representative of "Mutatio Maraccas" of the Jerusalem Itinerary, on the confines of Syria and Phoenice, 13 M. P. south of Balaneas (now *Baneas*), and 10 M. P. north of Antaradus: and this error is perpetuated in Arrowsmith's map. [G. W.]

MARATHUS (Μάραθος). 1. A small town in Phocis, near Anticyra, mentioned only by Strabo (ix. p. 423). Perhaps represented by the remains at *Sidhiro-kafkhió*. (Leake, *Northern Greece*, vol. ii. p. 549.)

2. A town of Acarnania, of unknown site, mentioned only by Stephanus B. (*s. v.*)

MARATHUSA, an inland city of Crete, mentioned by Pliny (iv. 12; comp. Tzschucke, *ad Pomp. Mel.* ii. 7. § 13; Höck, *Kreta*, vol. i. p. 434.) [E. B. J.]

MARATHUSSA (Μαράθουσσα), a small island of the Aegaean sea, off the coast of Ionia, near Clazomenae. (Thuc. viii. 31; Plin. v. 31. s. 38.)

MARCI, a place mentioned in the Not. Imp. as on the Saxon shore, and as a station of some Dalmatian cavalry under the command of the general of Belgica Secunda. D'Anville supposes, with De Valois, that it may be *Mark* between *Calais* and *Gravelines*: but the site is uncertain. [G. L.]

MARCIAE. [GALLAECIA, p. 934, b.]

MARCIA'NA SILVA, a mountain forest in the south-west of Germany, probably the whole or a portion of what is now called the *Black Forest* (Amm. Marc. xxi. 8; *Tab. Peuting.*) The origin of the name is not known, Cluver regarding Marciana as a corruption of *schwarz*, and others connecting it with *marsh* and *march*, which is still used in the *Black Forest* as a name for a moor. [L. S.]

MARCIANO'POLIS (Μαρκιανούπολις, Procop. *de Aed.* iv. 7), a city of Moesia, 18 M. P. from Odessus (*Varna*) (*Itin. Anton.*; *Peut. Tab.*; Hierocl.), which derived its name from Marciana, sister of Trajan. (Amm. Marc. xxvii. 6. § 12; Jornand. *de Reb. Get.* 16.) Claudius II. signally defeated the Goths in several battles near this town. (Trebell. Poll. *Claud.* 9; Zozim. i. 42.) Gibbon (c. xxvi.; comp. Le Beau, *Bas Empire*, vol. iv. p. 106; Greenwood, *History of the Germans*, London, 1836, p. 329 *Art de Vér. les Dates*, vol. i. p. 358) has told the story of the accidental quarrel between the Visigoth

Fritigern and the Roman governor of Marcianopolis, Lupicinus, — which became the signal of a long and destructive war. (Amm. Marc. xxxi. 5. § 4, Zozim. iv. 10, 11.) Marcianopolis afterwards became Peristhlava or Presthlava (Περισθλάβα), the capital of the Bulgarian kingdom, which was taken A. D. 971 by Swiatoslaff the Russian, and again reduced by John Zimisces, when 8500 Russians were put to the sword, and the sons of the Bulgarian king rescued from an ignominious prison, and invested with a nominal diadem. (Gibbon, c. lv.; Schafarik, *Slav. Alt.* vol. ii. pp. 187, foll. 216; Finlay, *Byzantine Empire*, pp. 408—413.) The site of the ancient town must be sought for in the neighbourhood of *Pravadi.* For coins of Marcianopolis, both autonomous and imperial, see Eckhel, vol. ii. p. 15. [E. B. J.]

MARCILIA'NA, a station on the Via Popillia, in Lucania, where, according to the Tabula, that road (which led directly S. from Campania into Bruttium) was joined by a branch from Potentia. The name is corrupted both in the Tabula and in the Antonine Itinerary; but there can be no doubt that the place meant is the same called by Cassiodorus "Marcilianum," which was a kind of suburb of the town of Consilinum, where a great fair was annually held. (*Itin. Ant.* p. 110; *Tab. Peut.*; Cassiod. *Varr.* viii. 33.) The site is still called *Marciliana*, in the valley of the *Tanagro*, between *La Sala* and *Padula.* (Romanelli, vol. i. p. 405.) [E. H. B.]

MARCI'NA (Μαρκῖνα), a town of Campania, in the district of the Picentini, situated on the N. shore of the gulf of Posidonia, between the Sirenusae Insulae and the mouth of the Silarus. (Strab. v. p. 251.) It is mentioned by no writer except Strabo, who tells us that it was a colony founded by the Tyrrhenians, but subsequently occupied, and in his day still inhabited, by the Samnites. As he adds that the distance from thence through Nuceria to Pompeii was not more than 120 stadia (15 Roman miles), he appears to have regarded this as the point from whence the passage of the isthmus (as he calls it) between the two bays began; and it may therefore be placed with some plausibility at *Vietri.* (Cluver, *Ital.* p. 1190; Romanelli, vol. iii. p. 614.) Some ancient remains have been discovered there, though these may seem to indicate the site of Roman villas rather than of a town. [E. H. B.]

MA'RCIUS MONS (τὸ Μάρκιον ὄρος) was, according to Plutarch, the name of the place which was the scene of a great defeat of the Volscians and Latins by Camillus in the year after the taking of Rome by the Gauls B. C. 389. (Plut. *Camill.* 33, 34.) Diodorus, who calls it simply Marcius or Marcium (τὸ καλούμενον Μάρκιον, xiv. 107), tells us it was 200 stadia from Rome; and Livy, who writes the name "ad Mecium," says it was near Lanuvium. (Liv. vi. 2.) The exact site cannot be determined. Some of the older topographers speak of a hill called *Colle Marzo*, but no such place is found on modern maps; and Gell suggests the *Colle di Due Torri* as the most probable locality. (Gell, *Top. of Rome*, p 311.) [E. H. B.]

MARCODAVA (Μαρκόδαυα, Ptol. iii. 8. § 7), a town of Dacia, the remains of which have been found near *Thorda.* (Sestini, *Viaggio*, p. 105.) [E.B.J.]

MARCODU'RUM, in North Gallia. Some of the cohorts of the Ubii were cut to pieces by the troops of Civilis at Marcodurum, which as Tacitus observes (*Hist.* iv. 28) is a long way from the bank of the Rhine. The termination *durum* indicates a place on a river; and Marcodurum seems to be *Düren* on the *Roer.* The Frank kings are said to have had a palace there, named Duria Villa or Dura. [G. L.]

MARCOMAGUS, a place in North Gallia on a road from Augusta Trevirorum (*Trèves*) to Agrippina Civitas (*Cologne*). It appears both in the Antonine Itin. and in the Table. Marcomagus is *Marmagen.* It is 28 or 31 M. P. from Cologne, for the numbers are not certain. [G. L.]

MARCOMANNI (Μαρκομάννοι, Μαρκομμάνοι, or Μαρκομανοί), a name frequently occurring in the ancient history of Germany, sometimes as a mere appellative, and sometimes as a proper name of a distinct nation. Its meaning is border-men or march-men, and as such it might be applied to any tribe or tribes inhabiting and defending a border country. Hence we must be prepared to find Marcomanni both on the western and southern frontiers of Germany; and they might also have existed in the east, or on any other frontier. Marcomanni are first mentioned in history among the tribes with which Ariovistus had invaded Gaul, and which were defeated and driven back across the Rhine by J. Caesar, B. C. 58 (Caes. *Bell. Gall.* i. 51). These Marcomanni, therefore, appear to have been the marchmen on the Rhenish frontier, perhaps about the lower part of the *Main.* They are again mentioned during the campaigns of Drusus in Germany, from B. C. 12 to 9, by Florus (iv. 12), who seems to place them somewhat further in the interior. Only a few years later, we hear of a powerful Marcomannian kingdom in Boiohemum or Bohemia, governed by Maroboduus; and we might be inclined to regard these Marcomanni as quite a different people from those on the *Rhine* and *Main*,— that is, as the marchmen on the southern frontier,— were it not that we are expressly told by Tacitus (*Germ.* 42), Paterculus (ii. 108), and Strabo (vii. p. 290), that their king Maroboduus had emigrated with them from the west, and that, after expelling the Celtic Boii from Bohemia, he established himself and his Marcomanni in that country. (Comp. Ptol. ii. 11. § 25.) If we remember that the kingdom of the Marcomanni in Bohemia was fully organised as early as A. D. 6, when Tiberius was preparing for an expedition against it, it must be owned that Maroboduus, whose work it was, must have been a man of unusual ability and energy. Henceforth the name of the Marcomanni appears in history as a national name, though ethnologically it was not peculiar to any particular tribe, but was given to all the different tribes which the Marcomannian conqueror had united under his rule. The neighbouring nations whom it was impossible to subdue were secured by treaties, and thus was formed what may be termed the great Marcomannic confederacy, the object of which was to defend Germany against the Romans in Pannonia. But the Marcomanni soon also came into collision with another German confederation, that of the Cherusci, who regarded the powerful empire of Maroboduus as not less dangerous to the liberty of the German tribes than the aggressive policy of the Romans. In the ensuing contest, A. D. 17, the Marcomanni were humbled by the Cherusci and their allies, and Maroboduus implored the assistance of the emperor Tiberius. The aid was refused, but Drusus was sent to mediate peace between the hostile powers. (Tac. *Ann.* ii. 45, 46.) During this mediation, however, the Romans seem to have stirred up other enemies against the Marcomanni; for two years later, A. D. 19, Catualda, a young chief of the Gothones,

invaded and conquered their country. Marobodnus fled, and demanded the protection of Tiberius, who offered to him a safe retreat in Italy. He there spent the remaining eighteen years of his life, while the throne of the Marcomanni was left to Catualda. [*Dict. of Biogr.* art. MAROBODUUS.] But the latter, too, was soon expelled by the Hermunduri, and ended his life in exile. (Tac. *Ann.* ii. 62, 63.) The Marcomanni, however, like the Quadi, continued to be governed by kings of their own, though they were not quite independent of the Romans, who often supported them with money and more rarely with troops. (Tac. *Germ.* 42.) They appear to have gradually extended their dominion to the banks of the Danube, where they came into hostile collision with the Romans. The emperor Domitian demanded their assistance against the Dacians, and this being refused, he made war against them. But he was defeated A. D. 90, and obliged to make peace with the Dacians. (Dion Cass. lxvii. 7.) Trajan and Hadrian kept them in check; but in the reign of M. Aurelius hostilities were recommenced with fresh energy. The Marcomanni, allied with the Quadi and others, partly from hatred of the Romans, and partly urged on by other tribes pressing upon them in the north and east, invaded the Roman provinces A. D. 166; and thus commenced the protracted war commonly called the Marcomannic or German War, which lasted until the accession of Commodus, A. D. 180, who purchased peace of them. During this war, the Marcomanni and their confederates advanced into Rhaetia, and even penetrated as far as Aquileia. The war was not carried on uninterruptedly, but was divided into two distinct contests, having been interrupted by a peace or truce, in which the places conquered on both sides were restored. The second war broke out towards the end of the reign of M. Aurelius, about A. D. 178. (Dion Cass. *Fragm.* lib. lxxi., lxxii., lxxvii. pp. 1178, foll., 1305, ed. Reimar.; Eutrop. viii. 6; J. Capitol. *M. Anton. Philos.* 12, &c., 17, 21, 22, 25, 27; Amm. Marc. xix. 6; Herodian, i. init.) In consequence of the pusillanimity of Commodus the Marcomannians were so much emboldened, that, soon after and throughout the third century, they continued their inroads into the Roman provinces, especially Rhaetia and Noricum. In the reign of Aurelian, they penetrated into Italy, even as far as Ancona, and excited great alarm at Rome. (Vopisc. *Aurel.* 18, 21.) But afterwards they cease to act a prominent part in history. Their name, however, is still mentioned occasionally, as in Jornandes (22), who speaks of them as dwelling on the west of Transylvania. (Comp. Amm. Marc. xxii. 5, xxix. 6, xxxi. 4.) In the Notitia Imperii, we have mention of "Honoriani Marcomanni seniores" and "juniores" among the Roman auxiliaries. The last occasion on which their name occurs is in the history of Attila, among whose hordes Marcomanni are mentioned. (Comp. Wilhelm, *Germanien*, p. 212, foll.; Zeuss, *Die Deutschen*, p. 114, foll.; Latham, *Tacit. Germ.* Proleg. p. 53, foll.) [L. S.]

MARDENE. [MARDYENE.]

MARDI. [AMARDI.]

MARDI, a branch of this powerful and warlike people were found in Armenia to the E. of *Mardastan* (lake *Ván*). (Ptol. v. 13. § 20; Tac. *Ann.* xiv. 23; comp. Anquetil Duperron, *Mém. de l'Acad. des Inscr.* vol. xlv. p. 87.) [E. B. J.]

MARDYE'NE (Μαρδυηνή, Ptol. vi. 4. § 3), a district of ancient Persis, which, according to Ptolemy, extended to the sea-coast. The name is probably derived from some of the far extended nomade tribes of the Mardi or Amardi. (Herod. i. 125; Strab. xi. p. 524.) [V.]

MARDYE'NI (Μαρδυηνοί, Ptol. vi. 12 § 4), a tribe who occupied the lower part of the Sogdian mountains in Sogdiana. There can be no doubt that these people are the remains of a once very numerous race, whose traces we find spread over a wide extent of country from the Caspian to the *Persian Gulf*, and from the Oxus to the Caspian. We find the names of these tribes preserved in different authors, and attributed to very different places. Hence the presumption that they were to a great extent a nomade tribe, who pressed onward from the N. and E. to the S. Thus we find them under the form of Mardi in Hyrcania (Diod. xvii. 76; Arrian, *Anab.* iii. 24, iv. 18; Dionys. Perieg. v. 732; Curt. vi. 5), in Margiana according to Pliny (vi. 16. s. 13), in Persia (Herod. i. 125; Strab. xi. p. 524; Ptol. vi. 4. § 3; Curt. v. 6), in Armenia (Ptol. v. 13; Tacit. *Ann.* xiv. 23), on the eastern side of the Pontus Euxinus (Plin. vi. 5), under the form Amardi in Scythia intra Imaum (Mela, iii. 5, iv. 6; Plin. vi. 17. s. 19), and lastly in Bactriana. (Plin. vi. 16. s. 18.) [V.]

MAREIA or MA'REA (Μαρέα, Herod. ii. 18, 30; Μαρεία, Thucyd. i. 104; Μάρεια, Steph. Byz. *s. v.*; Μαρία, Diod. ii. 68; Παλαι Μάρεια κώμη, Ptol. iv. 5. § 34), the modern *Mariouth*, and the chief town of the Mareotic Nome, stood on a peninsula in the south of the lake Mareotis, nearly due south of Alexandreia, and adjacent to the mouth of the canal which connected the lake with the Canopic arm of the Nile. Under the Pharaohs Mareia was one of the principal frontier garrisons of Aegypt on the side of Libya; but from the silence of Herodotus (ii. 30) we may infer that the Persians did not station troops there. In all ages, however, until it was eclipsed by the neighbouring greatness of Alexandreia, Mareia, as the nearest place of strength to the Libyan desert, must have been a town of great importance to the Delta. At Mareia, according to Diodorus (ii. 681), Amasis defeated the Pharaoh-Apries, Hofra, or Psammetichus; although Herodotus (ii. 161) places this defeat at Momemphis. (Herod. ii. 169.) At Mareia, also, according to Thucydides (i. 104; comp. Herod. iii. 12), Inarus, the son of Psammetichus, reigned, and organised the revolt of Lower Aegypt against the Persians. Under the Ptolemies, Mareia continued to flourish as a harbour; but it declined under the Romans, and in the age of the Antonines—the second century A.D.—it had dwindled into a village. (Comp. Athen. i. 25, p. 33, with Eustath. *ad Homer. Odyss.* ix. 197.)

Mareia was the principal depôt of the trade of the Mareotic Lake and Nome. The vineyards in its vicinity produced a celebrated wine, which Athenaeus (*l. c.*) describes as "remarkable for its sweetness, white in colour, in quality excellent, light, with a fragrant *bouquet*: it was by no means astringent, and did not affect the head." (Comp. Plin. xiv. 3; Strab. xvii. p. 796.) Some, however, deemed the Mareotic wine inferior to that of Anthylla and Tenia; and Columella (*R. R.* iii. 2) says that it was too thin for Italian palates, accustomed to the fuller-bodied Falernian. Virgil (*Georg.* ii. 91) describes the Mareotic grape as white, and growing in a rich soil; yet the soil of the vineyards around the Mareotic Lake was principally composed of gravel, and lay beyond the reach of the alluvial deposit of the Nile, which is ill suited to viticulture. Strabo (xvii. p. 799) ascribes to the wine of Mareia the additional

merit of keeping well to a great age; and Horace (*Od.* i. 37) mentions it as a favourite beverage of Cleopatra.

Mareia, from its neighbourhood to Alexandreia, was so generally known to Roman travellers, that among the Latin poets, the words Mareia and Mareotic became synonymous with Aegypt and Aegyptian. Thus Martial (*Ep.* xiv. 209) calls the papyrus, "cortex Mareotica" (comp. *id. Ep.* iv. 42); and Gratius (*Cynegetic.* v. 313) designates Aegyptian luxury as Mareotic: and Ovid (*Met.* ix. v. 73) employs "arva Mareotica" for Lower Aegypt. [W. B. D.]

MAREO'TIS or MAREI'A (ἡ Μαρεῶτις or Μαρεία λίμνη, Strab. xvii. pp. 789—799; Μάρεια, Steph. B. *s. v.*; Mareotis Libya, Plin. v. 10. s. 11; Justin. xi. 1), the modern *Birket-el-Mariout*, was a considerable lake in the north of the Delta, extending south-westward of the Canopic arm of the Nile, and running parallel to the Mediterranean, from which it was separated by a long and narrow ridge of sand, as far as the tower of Perseus on the Plinthinetic bay. The extreme western point of the lake was about 26 miles distant from Alexandreia; and on that side it closely bordered upon the Libyan desert. At its northern extremity its waters at one time washed the walls of Alexandreia on their southern side, and before the foundation of that city Mareotis was termed the Lake above Pharus. In breadth it was rather more than 150 stadia, or about 22 English miles, and in length nearly 300 stadia, or about 42 English miles. One canal connected the lake with the Canopic arm of the Nile, and another with the old harbour of Alexandreia, the Portus Eunostus. [ALEXANDREIA.] The shores of the Mareotis were planted with olives and vineyards; the papyrus which lined its banks and those of the eight islets which studded its waters was celebrated for its fine quality; and around its margin stood the country-houses and gardens of the opulent Alexandrian merchants. Its creeks and quays were filled with Nile boats, and its export and import trade in the age of Strabo surpassed that of the most flourishing havens of Italy.

Under the later Caesars, and after Alexandreia was occupied by the Arabs, the canals which fed the lake were neglected, and its depth and compass were materially reduced. In the 16th century A. D. its waters had retired about 2 miles from the city walls; yet it still presented an ample sheet of water, and its banks were adorned with thriving date-plantations. The lake, however, continued to recede and to grow shallower; and, according to the French traveller Savary, who visited this district in 1777, its bed was then, for the most part, a sandy waste. In 1801 the English army in Aegypt, in order to annoy the French garrison in Alexandria, bored the narrow isthmus which separates the *Birket-el-Mariout* from the *Lake of Madieh* or *Aboukir*, and re-admitted the sea-water. About 450 square miles were thus converted into a salt-marsh. But subsequently Mehemet Ali repaired the isthmus, and again diverted the sea from the lake. It is now of very unequal depth. At its northern end, near Alexandreia, it is about 14 feet deep, at its opposite extremity not more than 3 or 4. Westward it forms a long and shallow lagoon, separated from the sea by a bar of sand, and running towards Libya nearly as far as the *Tower of the Arabs*. The lands surrounding the ancient Mareotis were designated as the Mareotic Nome (Μαρεώτης Νόμος, Ptol. iv. 5. §§ 8, 34); but this was probably not one of the established Nomes of Pharaonic Aegypt. [W. B. D.]

MARES (Μᾶρες), a tribe on the coast of Pontus, in the neighbourhood of the Mosynoeci. (Hecat. *Fragm.* 192; Herod. iii. 94.) Their armour, when serving in the army of Xerxes, is described by Herodotus (vii. 79) as having consisted of helmets of wicker-work, leather shields, and javelins. Later writers do not mention this tribe. [L. S.]

MARESHAH (Μαρησά, LXX., Euseb.; Μαρίσσα, Joseph.), a city of Judah, "in the valley," enumerated with Keilah and Achzib in Joshua (xv. 44). In Micah (i. 15), where it is again joined with Achzib, the LXX. have substituted Λαχείς. Lachish, however, is found in the list of Joshua, independent of Maresha (xv. 39), so it could not be a synonym for Mareshah. It was one of the cities fortified by Rehoboam against the Philistines and Egyptians (2 *Chron.* xi. 8); and there it was that Asa encountered Zerah the Ethiopian, "in the valley of Zephathah at Mareshah" (xiv. 9), and gained a signal victory over him. In the time of Judas Maccabaeus it was occupied by the Idumaeans (2 *Maccab.* xii. 35), but Judas took and destroyed it. (Joseph. *Ant.* xii. 8. § 6.) Only a few years later it is again reckoned to Idumaea; and Hyrcanus I. took it, and compelled its inhabitants, in common with the other Idumaeans, to practice circumcision, and conform to the law, as a condition of remaining in that country (xiii. 9. § 1, 15. § 4). It was one of the cities restored to Aretas king of Arabia by Hyrcanus II., as the price of his services (xiv. 1. § 4): soon after which it was rebuilt by Gabinius (5. § 3); shortly after sacked and destroyed by the Parthians in their invasion of the country, in the time of Herod the Great (xiv. 13. § 9); and probably never recovered its former importance, as this is the latest historical notice. It is placed by Eusebius and St. Jerome 2 miles from Eleutheropolis; it was then a ruin. Dr. Robinson conjectures that "Eleutheropolis (at first Betogabra) had sprung up after the destruction of Maresha, and had been built with its materials," and that "the foundations which he discovered on the south-eastern part of the remarkable tell, south of the place, were remains of Maresha. The spot is admirably adapted for a fortress; it lies about a Roman mile and a half from the ruins of *Beit Jebrin.*" There are no other ruins in the vicinity. (*Bib. Res.* vol. ii. pp. 422, 423.) [G. W.]

MAREU'RA or MALTHU'RA (Μαρέουρα μητρόπολις ἡ καὶ Μάλθουρα καλουμένη, Ptol. vii. 2. § 24), a place of some importance in the upper part of the Aurea Chersonesus in India extra Gangem. It is not possible now to identify it with any existing place. [V.]

MA'RGANA or MA'RGALAE (Μάργανα, Diod.; Μαργανεῖς, Xen.; Μαργάλαι, Strab.; Μάργαια, Steph. B. *s. v.*), a town in the Pisatis, in the district Amphidolia, was supposed by some to be the Homeric Aepy. (Strab. viii. p. 349.) The Eleians were obliged to renounce their supremacy over it by the treaty which they made with Sparta in B. C. 400 (Xen. *Hell.* iii. 2. § 30), on which occasion it is called one of the Triphylian towns: as to this statement, see LETRINI. It is mentioned as one of the towns taken by the Arcadians in their war with the Eleians in B. C. 366. (Xen. *Hell.* vii. 4. § 14; Diod. xv. 77.) Its site is uncertain, but it was probably east of Letrini. Leake places it too far north, at the junction of the Ladon and the Peneius, which is in all probability the site of the Eleian Pylos. (Leake, *Peloponnesiaca*, p. 219; Boblaye, *Récherches, &c.* p. 130; Curtius, *Peloponnesos*, vol. i. p. 73.)

MARGIA'NA (ἡ Μαργιανή, Strab. xi. p. 516, Ptol. vi. 10; Plin. vi. 16. s. 18), a district of considerable extent in the western part of Central Asia, which was bounded on the W. by Hyrcania, on the N. by Scythia and the Oxus as far as Bactriana, on the E. by Bactriana, and on the S. by Ariana. At present the country is called *Khorásan*, and comprehends also some part of the territory occupied by the Turkoman tribes. Like most of the districts at a great distance from Greece or Rome, it was but partially known to the ancients; hence its limits are variously stated by ancient authors. Thus Strabo makes it the province next to Parthia, to the N. of the Sariphi mountains, and gives the same boundaries to the W., N., and E. as the other geographers (xi. p. 516). Pliny places it in the same direction, but adds that a desert of 120 M.P. must be crossed before it could be reached (vi. 16. s. 18). Both Strabo and Pliny speak of the great fertility of its land, and the fineness of its climate; the former stating that the vines were often so large that a man could not embrace their stems in his arms; the latter, that it was the only district in that part of the world which produced grapes. The accounts of the ancients are in this particular confirmed by modern and by Muhammedan writers. According to the latter, it would seem to have comprehended the territory from *Bunjurd* on the west, to *Merv* and the *Murgh-áb* in the east, a tract remarkable for its beauty and fertility. (Wilson, *Ariana*, p. 149.) The principal river of Margiana, from which, too, it probably derived its name, was the Margus (now *Murgh-áb*). Various races and tribes are noticed in different authors as occupying parts of Margiana. All of them may be considered as of Scythian or Tátar origin;— indeed, in this part of Asia, the population has remained nearly the same to the present day which it was in the classical times. The principal of these were the DERBICCAE or DERBICES (Steph. p. 23; Strab. xi. p. 508; Dionys. v. 734), who lived to the N. near the mouth of the Oxus; the MASSAGETAE, the PARNI, and the DAAE, who lived to the S. of the former along the Caspian and the termination of the Margus, which loses itself in the sands before it reaches the Caspian; and the TAPURI and MARDI. The chief towns were, ANTIOCHEIA MARGIANA (certainly the present *Merv*), NISAEA or NESAEA, ARIACA, and JASONIUM. [See these places under their respective names.] [V.]

MARGIDUNUM, in Britain (*Itin. Anton.* pp. 477, 479). It is supposed by Camden, Stukeley, Horseley, and others, to have been situated at or near *East Bridgeford*, about eight miles from *Willoughby*. [C. R. S.]

MARGUM or MARGUS (Μάργον, Μάργος), also called MURGUM, a city of Moesia, at the confluence of the Margus and Danube. It was termed "Margum planum" on account of the level character of the surrounding country. (Jornand. *de Reb. Get.* c. 58.) It was here that the emperor Carinus was totally defeated by Diocletian. (Eutrop. ix. 13, x. 20; *It. Ant.* p. 132; *It. Hieros.* p. 564.) [A. L.]

MARGUS (Μάργος, Strab. vii. p. 318; Margis, Plin. iii. 26. s. 29), an important river of Moesia, which flows into the Danube, near the town of Margum, now the *Morava*. Strabo says (*l. c.*) that it was also called Bargus, and the same appears in Herodotus (iv. 44) under the form of Brongus (Βρόγγος). It is the same river as the Moschius (Μόσχιος) of Ptolemy (iii. 9. § 3). [A. L.]

MARGUS (Μάργος, Strab. xi. p. 516; Ptol. vi. 10. §§ 1, 4), the chief river of the province of Margiana, which in all probability derives its name from it,—now the *Murgh-áb* or *Merv Rúd*. It is said by Ptolemy to have taken its rise in the Sariphi mountains (now *Hazarás*), a western spur of the great range of the Paropamisus, and, after a northern course and a junction with another small stream, to have flowed into the Oxus. The travels of Sir Alexander Burnes have demonstrated that the *Murgh-áb* no longer reaches the Oxus, but is lost in the sands about 50 miles NW. of *Merv* (Burnes, vol. ii. p. 35); but it is probable that as late as the time of Ibn Haukal (about A. D. 950) it still flowed into the Jihon (De Sacy, *Mém. sur deux Prov. de la Perse*, p. 22). The Margus passed by and watered Antiocheia Margiana, the capital of the province. [V.]

MARIABA (Μαρίαβα). There seem to have been several cities of this name in Arabia, as there are still several towns or sites of the name, scarcely modified. How many distinct cities are mentioned by the classical geographers, antiquarians are not agreed, and the various readings have involved the question in great perplexity. It will be well to eliminate first those of which the notices are most distinct.

1. The celebrated capital of the Sabaei in *Yemen*, is known both in the native and classical writers. It is called the metropolis of the Sabaei by Strabo (xvi. 4. § 2), which tribe was contiguous to that of the Minaei, who bordered on the Red Sea on one side, and to the Catabaneis, who reached to the straits of *Bab-el-Mandeb*. [SABAEI; MINAEI; CATABANI.] It was situated on a well-wooded mountain, and was the royal residence. It seems difficult to imagine that this was distinct from the Mariaba of Pliny, who, however, assigns it to the Atramitae, a branch of the Sabaei, and places it on a bay 94 M. P. in circuit, filled with spice-bearing islands; while it is certain that the Mariaba of the Sabaeans was an inland city. It is beyond all doubt the Maarib of the Arabian historians, built according to their traditions by 'Abd-schems, surnamed *Saba*, third only in succession from the patriarch Koktan or Joktan, son of Eber. Abulfeda says that this city was also called Saba; and that, in the opinion of some, Maarib was the name of the royal residence, while the city itself was called Saba. Its founder also constructed the stupendous embankment so renowned in history, forming a dam for confining the water of seventy rivers and torrents, which he conducted into it from a distance. (Abulfeda, *Historia Ante-Islamica*, lib. iv. ap. init.) The object of this was not only to supply the city with water, but also to irrigate the lands, and to keep the subjugated country in awe, by being masters of the water. The water rose to the height of almost 20 fathoms, and was kept in on every side by a work so solid, that many of the inhabitants had their houses built upon it. It stood like a mountain above the city, and no danger was apprehended of its ever failing. The inundation of El-Arem (*the mound*) is an aera in Arabic history, and is mentioned in the Koran as a signal instance of divine judgment on the inhabitants of this city for their pride and insolence. A mighty flood broke down the mound by night, while the inhabitants were asleep, and carried away the whole city, with the neighbouring towns and people. (Sale, *Koran*, cap. 34, vol. ii. p. 289, notes, and *Preliminary Discourse*, sect. 1. vol. i p. 13;

Questions Proposées, par M. Michaelis, pp. 183—188.) This catastrophe seems to have happened about the time of Alexander the Great, though some chronologies place it subsequently to the Christian aera. Sale places the city three days' journey from Sanaa (note, *in loc. cit.*). The notion of the identity of *Mareb* with Sheba, mentioned by Abulfeda, is still maintained by some natives; and Niebuhr quotes for this opinion a native of the town itself (*Description de l'Arabie*, p. 252), and justly remarks that the existence of the remains of the famous reservoir of the Sabaeans in the vicinity of *Mareb* serves to identify it with the capital of the Sabaeans. To account for the capital not bearing the name of the tribe, as was usual, he suggests that the Sabaeans may have derived their name from another town, and then have built this stupendous reservoir near Mariaba, and there have fixed the residence of their kings. But a fact elsewhere mentioned by him, will perhaps lead to a more satisfactory solution. It seems that the great reservoir is not situated before *Mareb*, nor close to it, but at the distance of an hour, and on the side of it. This may account for its preservation on the bursting of the embankment. May not the inundation have occasioned the utter destruction of the neighbouring city of Sheba, as the traditions relate, while the royal residence at *Mareb* escaped, and formed the nucleus of the modern town? We have seen from Abulfeda that some native authorities maintain that Maarib was the royal residence, while the capital itself was called Saba. The name Mariaba (al. Mariva) signifying, according to the etymology of Pliny, "dominos omnium," would well suit the residence of the dominant family (vi. 28. § 32).

Mareb is now the principal town of the district of *Dsorf*, 16 German leagues ENE. of *Sana*, containing only 300 houses, with a wall and three gates; and the ruins of a palace of Queen Balkis are there shown. The reservoir is still much celebrated. It is described by a native as a valley between two chains of mountains, nearly a day's journey in length (=5 German leagues). Six or seven small streams, flowing from the west and south, are united in this valley, which contracts so much at its east end, by the convergence of the mountains, that it is not more than 5 or 6 minutes wide. This space was closed by a thick wall, to retain the superfluous water during and after the rains, and to distribute it over the fields and gardens on the east and north by three sluice-gates, one over the other. The wall was 40 or 50 feet high, built of enormous blocks of hewn stone, and the ruins of its two sides still remain. It precisely resembles in its construction the *Bends*, as they are called, in the woods of *Belgrave*, near *Bukderie*, on the Bosphorus, which supply Constantinople with water, only that the work at *Mareb* is on a much larger scale. (Niebuhr, *l. c.* pp. 240, 241.)

2. Mariaba Baramalacum. A city of this name in the interior of Arabia is mentioned with this distinguishing appellation by Pliny (vi. 32) as a considerable town of the Charmaei, which was one division of the Minaei: he calls it "oppidum xvi. mill. pass. . . . . et ipsum non spernendum." It is supposed by some to be identical with the Baraba metropolis (Βάραβα al. Μαμάρα μητρόπολις) of Ptolemy (vi. 15, p. 155), which he places in long. 76°, lat. 18° 20′. Forster has found its representative in the modern *Taraba*, whose situation corresponds sufficiently well with the Baraba metropolis of Ptolemy (*Geog. of Arabia*, vol. i. p. 135, ii. p. 256); but his account of the designation Baramalacum (*quasi* Bar-Amalacum, equivalent to "Merab of the sons of Amelek") is inadmissible according to all rules of etymology (vol. ii. pp. 43, 47). *Taraba*, pronounced by the Bedouins *Toroba*, is 30 hours (about 80 miles) distant from *Tayf* in the *Hedjaz*, still a considerable town, "as large as *Tayf*, remarkable for its plantations, which furnish all the surrounding country with dates; and famous for its resistance against the Turkish forces of Mohammed Ali, until January, 1815, when its inhabitants were compelled to submit. *Taraba* is environed with palm-groves and gardens, watered by numerous rivulets." (Burckhardt, *Travels in Arabia*, Appendix, No. iv. p. 451.) A more probable derivation of Baramalacum from Bahr-u-malkim = the Royal Lake, would identify it with the preceding, No. 1. (Vincent, *Periplus*, p. 307.)

3. Mariaba, another inland city of Arabia, is mentioned also by Pliny (*l. c.*) as the capital of the Calingii, 6 M.P. in circumference, which was, according to him, one of the eight towns taken and destroyed by Aelius Gallus. He has perhaps confounded it with the Marsyabae which Strabo fixes as the limit of his expedition, and the siege of which he was forced to abandon; but it was remarked before that this name was according to Pliny equivalent to metropolis, — though the etymology of the name is hopelessly obscure: — so that it is very possible that, besides the Marsyabae mentioned by Strabo, a Mariaba may have fallen in with the line of that general's march, either identical with one of those above named, or distinct from both; possibly still marked by a modern site of one of several towns still preserving a modification of the name, as *El-Marabba*, marked in Kiepert's map in the very heart of the country of the Wahibites; and a *Merab* marked by Arrowsmith, in the NE. of the *Nedjd* country. [Marsyabae.] [G. W.]

MARIAMA (Μαριάμα), an inland city of Arabia, mentioned only by Ptolemy (vi. 15), who places it in long. 78° 10′ and lat. 17° 10′, and therefore not far south-east from his Baraba or Maraba metropolis [Mariaba, 2]. Mannert (*Geographie*, pt. vi. vol. i. p. 66) suggests its identity with *Maribba*, marked in Niebuhr's map towards the north-east of *Yemen*, which is, however, the name of a district, not of a town, its capital being named *Arâm* (*Description de l'Arabie*, p. 228); but this would not agree with the position above assigned to Mariaba Baramalacum. (Ritter, *Erdkunde von Arabien*, vol. i. p. 283.) [Marsyabae.] [G. W.]

MARIAMME (Μαριάμμη), a city of Syria, subject to Aradus, and surrendered with Aradus and its other dependencies, Marathus and Sigon, to Alexander the Great by Straton, son of Gerostratus, king of Aradus. (Arrian, ii. 14. § 8.) It is placed by Ptolemy in the district of Cassiotis (v. 15), and by Hierocles in the second eparchy of Syria (*apud* Wesseling, *Itineraria*, p. 712). [G. W.]

MARIANA (Μαριανή, Ptol.), a city on the E. coast of Corsica, which, as its name imports, was a Roman colony, founded by the celebrated C. Marius. (Plin. iii. 6. s. 12; Ptol. iii. 2. § 5; Mel. ii. 7. § 19; Senec. *Cons. ad Helv.* 8.) Nothing more is known of its history, but it is recognised as holding colonial rank by Pliny and Mela, and appears to have been one of the two principal cities in the island. It is a plausible conjecture of Cluverius that it was founded

on the site previously occupied by the Greek city of Nicaea mentioned by Diodorus (Diod. v. 13; Cluver. *Sicil.* p. 508). Its name is mentioned in the Antonine Itinerary (p. 85), which erroneously reckons it 40 miles from Aleria; the ruins of Mariana, which are still extant under their ancient name at the mouth of the river *Golo*, being only about 30 miles N. of those of Aleria. They are 15 miles S. of the modern city of *Bastia*. The ancient remains are inconsiderable, but a ruined cathedral still marks the site, and gives title to the bishop who now resides at *Bastia*. (Rampoldi, *Diz. Geogr.* vol. ii. p. 589.) [E. H. B.]

MARIA'NA FOSSA. [FOSSA MARIANA.]

MARIANDY'NI (Μαριανδυνοί, Μαριανδηνοί, or Μαρυανδυνοί), an ancient and celebrated tribe in the north-east of Bithynia, between the rivers Sangarius and Billaeus, on the east of the tribe called Thyni or Bithyni. (Scylax, p. 34; Plin. vi. 1.) According to Scylax, they did not extend as far west as the Sangarius, for according to him the river Hypius formed the boundary between the Bithyni and Mariandyni. Strabo (vii. p. 295) expresses a belief that the Mariandyni were a branch of the Bithynians, a belief to which he was probably led by the resemblance between their names, and which cannot be well reconciled with the statement of Herodotus (iii. 90), who clearly distinguishes the Mariandyni from the Thracians or Thyni in Asia. In the Persian army, also, they appear quite separated from the Bithyni, and their armour resembles that of the Paphlagonians, which was quite different from that of the Bithyni. (Herod. vii. 72, 75; comp. Strab. vii. p. 345, xii. p. 542.) The chief city in their territory was Heraclea Pontica, the inhabitants of which reduced the Mariandyni, for a time, to a state of servitude resembling that of the Cretan Mnoae, or the Thessalian Penestae. To what race they belonged is uncertain, though if their Thracian origin be given up, it must probably be admitted that they were akin to the Paphlagonians. In the division of the Persian empire they formed part of the third Persian satrapy. Their country was called Mariandynia (Μαριανδυνία, Steph. B. *s. v.*), and Pliny speaks of a Sinus Mariandynus on their coast. (Comp. Hecat. *Fragm.* 201; Aeschyl. *Pers.* 932; Xen. *Anab.* vi. 4. § 4, *Cyrop.* i. 1. § 4; Ptol. v. 1. § 11; Scymn. *Fragm.* 199; Dionys. Perieg. 788; Mela, i. 19; Athen. xiv. p. 620; Apollon. *Argon.* ii. 724; Constant. Porph. *Them.* i. 7.) [L. S.]

MARIA'NUS MONS (τὸ Μαριανὸν ὄρος, Ptol. ii. 4. § 15; Mons Mariorum, *It. Anton.* p. 432: *Sierra Morena*), a mountain in Hispania Baetica, properly only a western offshoot of the Orospeda, and probably the mountain which Strabo describes, (iii. p. 142), without mentioning its name, as running parallel to the river Baetis, and full of mines. Hence Pliny (xxxiv. 2) speaks of "aes Marianum, quod et Cordubense dicitur." The eastern part of this mountain was called Saltus Castulonensis. [CASTULO.]

MARI'CAE LUCUS. [LIRIS.]

MARIDE (Ammian. xviii. 6), a castle or fortified town in Mesopotamia, mentioned by Ammianus Marcellinus in his account of Constantius. There can be no doubt that it is the same as the present *Mardin*, which is seated on a considerable eminence looking southward over the plains of Mesopotamia. [V.]

MARIDUNUM (Μαρίδουνον, Ptol. ii. 3. § 23), in Britain, a town in the country of the Demetae, now *Carmarthen*. In the time of Giraldus Cambrensis the Roman walls were in part standing ("est igitur haec urbs antiqua coctilibus muris partem adhuc extantibus egregie clausa," *Itin. Camb.* lib. i. c 10). [C. R. S.]

MARINIA'NA, also called MAURIANA (*It. Hieros.* p. 562), a town in Pannonia, on the frontier between Upper and Lower Pannonia, on the road from Jovia to Mursa. (*It. Ant.* p. 130.) It is possible that the place may have been the same as the one called by Ptolemy (ii. 14. § 6) Μαγνίανα. (Comp. Geogr. Rav. iv. 19, and *Tab. Peut.*) [L. S.]

MARIO'NIS (Μαριωνίς). Two towns of this name are mentioned by Ptolemy (ii. 11. § 27) in the north-west of Germany. As the name seems to indicate a maritime town, it has been inferred that one of them was the modern *Hamburg*, or *Marne* at the mouth of the *Elbe*, and the other *Lübeck* or *Wismar*. But nothing certain can be said about the matter. [L. S.]

MARIS. [MARISUS.]

MARISUS (Μάρισος, Strab. vii. 304; Μάρις, Herod. iv. 49; Marisia, Jornand. *de Reb. Get.* 5; Geogr. Rav.), a river of Dacia, which both Herodotus (*l. c.*) and Strabo (*l. c.*) describe as falling into the Danube; it is the same as the *Marosch*, which falls into the *Theiss*. (Heeren, *Asiat. Nations*, vol. ii. p. 10, trans.; Schafarik, *Slav. Alt.* vol. i. p. 507.) [E. B. J.]

MARITHI MONTES (τὰ Μάριθα or Μάρειθα ὄρη), a mountain chain in the interior of Arabia, the middle of which is placed by Ptolemy, who alone mentions them, in long. 80° 30′, lat. 21° 30′, and round which he groups the various tribes of this part of the peninsula, viz., the Melangitae (Μελαγγῖται) and Dachareni (al. Dacharemoizae, Δαχαρηνοί), on the north; the Zeritae (Ζειρῖται), Blinlaei (Βλιουλαῖοι), and Omanitae (Ὀμαγκῖται), on the south; to the east of the last were the Cattabeni, extending to the Montes Asaborum. [MELANES MONTES.] (Ptol. vi. 7. § 20.) They appear to correspond in situation with the *Jebel 'Athal*, on the south of *Wady-el-Aftân*, in Ritter's map. (Forster, *Geog. of Arabia*, vol. ii. p. 266.) [G. W.]

MARI'TIMA, a town of Gallia Narbonensis on the coast. Mela (ii. 5) says, that "between Massilia and the Rhodanus Maritima was close to the Avaticorum stagnum;" and he adds that a "fossa" discharges a part of the lake's water by a navigable mouth. Pliny in a passage before quoted [FOSSA MARIANA, Vol. I. p. 912], also calls "Maritima a town of the Avatici, above which are the Campi Lapidei." Ptolemy (ii. 18. § 8) places Maritima of the Avatici east of the eastern branch of the Rhone, and he calls it Colonia. The name is Avatici in the Greek texts of Ptolemy that are now printed, but it is Anatili in the Latin text of Pirckeym, and perhaps in other Latin texts. It does not seem certain which is the true reading. Walckenaer (*Géog. &c.* vol. i. p. 188) assumes that Anatili is the true reading in Ptolemy.

D'Anville concludes that Maritima was between *Marseille* and the canal of Marius, and that *Martigues* is the site; but there is no reason for fixing on *Martigues*, except that it is between the Rhone and *Marseille*, and that there is some little resemblance between the two names. It is said that no traces of remains have been found at *Martigues*, which, however, is not decisive against it, if it is true; and it is not true. *Martigues* is near the outlet of the *E'tang de Berre*. Walckenaer observes, that

there has been found at *Citis* or *Saint-Blaise*, on the borders of the same lake, an inscription which mentions "Curator Maritimae, Sextumvir Augustalis Avaticorum," and he would fix the Maritima Avaticorum of Pliny at this place. But he thinks that the Maritima Colonia of Ptolemy is a different place from the Maritima Avaticorum of Pliny; and he says that the measures of Ptolemy for Maritima Colonia fix the Anatili, whose capital this town was, between the mouths of the Rhone. Pliny also speaks of the Anatili (iii. 4), and Walckenaer says that he places them where Ptolemy does, or rather where he says that Ptolemy places them. But this is not so. Pliny places them east of the eastern branch of the Rhone, if his text can be understood. Nor is it true that Ptolemy places the Anatili or Avatici, whatever may be the true name in his text, between the mouths of the Rhone; for Ptolemy places them east of the eastern branch of the Rhone, where Pliny places the Avatici. Walckenaer can find no place for Ptolemy's Maritima Colonia, except by hazarding a guess that it may have been Heraclea [HERACLEA] at the mouth of the Rhone; but Ptolemy places the Maritima Colonia half a degree east of the eastern mouth of the Rhone. Walckenaer's examination of this question is very badly done. The site of Maritima at *Saint-Blaise* seems probable, for it is certain that a Roman town was there. Many remains, Roman bricks, and coins have been found at *Saint-Blaise;* and "there are wharves on which there are still iron rings to fasten ships by" (Ukert, *Gallien*, p. 421). Ukert's authority seems to be the *Statistique du Départ. des Bouches-du-Rhône;* but one can hardly suppose that any man can believe that iron rings exposed to the weather could last so long. [G. L.]

MARITIMA INSULA. [AEGATES.]

MARI'TIMAE STATIO'NES (Ὕφαλοι ὅρμοι, Ptol. iv. 4. § 3), a place on the coast-line of the Great Syrtis, a little to the N. of AUTOMALA (*Braiga*). The position of *Tabilba*, where there are ruins, and inscriptions in the running hand of the Greeks of the Roman Empire, corresponds exactly with these naval stations. (Beechey, *Expedition to the N. Coast of Africa*, pp. 230—237.) [E.B.J.]

MA'RIUM. [ARSINOE, p. 225, b.]

MA'RIUS (Μάριος), a town of Laconia, belonging in the time of Pausanias to the Eleuthero-Lacones, was situated 100 stadia east of Geronthrae. It contained a sanctuary of all the gods and one of Artemis, and in each there were copious springs of water. It is represented by *Mari*, which stands on the road from *Gheráki* (Geronthrae) over the mountains to *Kremasti;* but, according to the French Commission, its real distance from Geronthrae is from 75 to 80 stadia, and not 100, as is stated by Pausanias. There are ruins of the ancient town about a mile and a half to the south of the modern village, and the place is still characterised by its abundant fountains. (Paus. iii. 21. § 7, 22. § 8; Boblaye, *Récherches, &c.* p. 96; Leake, *Peloponnesiaca*, p. 362; Curtius, *Peloponnesos*, vol. ii. p. 303.)

MARMA'RICA (ἡ Μαρμαρική), the sandy and barren district, which extends along the S. coast of the Mediterranean, from the valley of the Nile to the Cyrenaica, and is now called the *Desert of Barkah*, and divided by no certain line of demarcation between the Pasha of Aegypt and the ruler of Tripoli. The MARMARIDAE (οἱ Μαρμαρίδαι), a Libyan tribe, gave their name, which Niebuhr (*Lect. on Anc. Ethnog. and Geog.* vol. ii. p. 336) derives from the word "Mar" = salt, with a reduplication common to these languages, to the region they occupied. They appear as the principal indigenous tribe to the W. of Aegypt, between the age of Philip of Macedon, and the third century of the Christian aera (Scylax, c. 107, ed. Klausen; Strab. ii. p. 131, xvii. pp. 798, 825, 838; Plin. v. 5; Joseph. *B. J.* ii. 16. § 4; Vopisc. *Vit. Prob.* c. 9), but are not mentioned by Herodotus; it is probable that they were pushed into the interior of the country, by the Greek colonists of Cyrene, and afterwards recovered their ancient seats. In the reign of Magas of Cyrene, the Marmaridae revolted, and compelled that prince to give up his intention of attacking Ptolemy Philadelphus, and the Aegyptian frontier. (Paus. i. 7. §§ 1, 2.) The ancients differed considerably in the limits they assigned to the Marmaridae: Scylax (*l. c.*) places them between Apis, and the Gardens of the Hesperides; Pliny (*l. c.*) between Paraetonium, and the Greater Syrtis; while Strabo (xvii. p. 838) extends their frontier to the S. as far as the Oasis of Ammonium (*Sirah*). Ptolemy (iv. 5. §§ 1—10) bounds the district Marmarica, on the E. by the Plinthinetic gulf, and on the W. by a line which is drawn through the town of Darnis (*Derna*); he divides this region—according to the arrangement made by the Ptolemies when Cyrenaica became a dependency of Aegypt—into two parts, the E. of which was called LIBYCUS NOMOS (Λιβύης νόμος, § 4) and the W. MARMARICUS NOMOS (Μαρμαρικῆς νόμος; § 2); the line of separation was made by the CATABATHMUS MAGNUS (Καταβαθμὸς μέγας, Polyb. xxxi. 26; Strab. pp. 791, 798, 825, 838; *Stadiasm.* p. 440; Sall. *Jug.* 19; Mela, i. 8. § 2; Plin. v. 5; Oros. i. 2; Steph. B.) This elevation, which rises to the height of 900 feet, according to some authors separated Aegypt from Cyrenaica, and extends from the coast in a SSE. direction towards the Oasis of of Ammonium. Edrisi (vol. i. p. 125, ed. Jaubert.) calls it *'Akábah el Sollom*, or staircase descent, whence the port Solom and Soloume of most of the earlier "Portulani;" the modern name is *'Akábah el Kibír*. Further to the E., near Paraetonium, was the smaller inclination CATABATHMUS MINOR (Strab. p. 838; Solin. 30), now called *'Akábah el Sgír*, the height of which is 500 feet. Shooting out into the sea, in the headland *Ras el Kanaïs*, it takes a direction from N. to S. to the Oasis of *Ghara*. In the sea-board of this arid space, following the coast from E. to W., were the promontories of DERIS (*el Heyf*); HERMAEUM (*Ras el Kaanïs*); the harbour of GYZIS or ZYGIS (*Mahadah*); PARAETONIUM (*Ras el Harzeit*); APIS (*Boun Ajoubah*); the little rocks called SCOPULI TYNDAREI (*el Chairy*); PLYNI Ps. (*Ras Halem*); PANORMUS (*Marsah Saloum*); ARDANIS PROM. (*Ras el Mellah*), with the adjoining harbour MENELAI Ps.; ANTIPYRGOS (*Tobrûk*); PETRAS PARVUS (*Magharat el Heabés*), with its harbour BATRACHUS; AEDONIA Ps. (*Aïn el Ghazáh*), with the islands AEDONIA and PLATEA (*Bomba*), and CHERSONESUS (*Ras et Tîn.*) Along the whole of this coast a road ran, the stations on which are given in the Peutinger Table. (Segm. viii.) One river, the PALIURUS (Παλίουρος, Ptol. iv. 5. § 2: *el Zemminéh*), watering the district of AZIRIS, discharges itself into the sea at the *Gulf of Bomba*. The interior, which was occupied by the tribes of the ADYRMACHIDAE and GILIGAMMAE, is described under OASIS. TAPOSIRIS, APIS, and PARAETONIUM were the chief towns, of

which the ruins still remain. Throughout the whole of Marmarica no vestiges of Aegyptian architecture before the Greek period have been found. The sea-onion, "scilla maritima," and madder, "rubia," which cover the plains, remind the traveller of what Herodotus (iv. 189, 190) says about the practice of the Libyan women dying their goat-skins with red, and of the portable houses constructed of stalks of asphodel, intertwined with rushes. Now, as then, the "jerboa" (δίπους, Herod. iv. 192) is common. The few coins of Marmaric towns, such as those of Apis and Batrachus, are of the same workmanship as the Aegyptian mints. (Eckhel, vol. iv. p. 116.)

Ptolemy (iv. 5. § 22) enumerates the following tribes in Marmarica:—In the Lybian nome, along the coast, the ZYGRITAE (Ζυγρῖται), CHATTANI (Χαττανοί), and Zygenses (Ζυγεῖς); further to the S., in the interior, the BUZENSES (Βουζεῖς) and OGDAEMI. In the district of Ammonium (§ 23), the ANAGOMBRI (Ἀνάγομβροι), IOBACCHI (Ἰοβακχοί), and RUADITAE (Ῥουαδῖται). In the Marmaric nome, to the N., on the coast, the LIBYARCHAE (Λιβυάρχαι), the ANERITAE (Ἀνηρῖται), and BASSACHITAE (Βασαχῖται); to the S. of these, the AUGILAE (Αὐγίλαι), NASAMONES (Νασαμῶνες), and BACATAE (Βακάται); then the AUSCHISAE (Αὐσχίσαι), who belong more properly to Cyrenaica; TAPANITAE (Ταπανῖται); and further to the S. the SENTITES (Σέντιτες), OBILAE (Ὀβίλαι), and AEZARI (Αἴζαροι).

(Pacho, *Voyage dans la Marmarique*, pp. 1—81; Barth, *Wanderungen*, pp. 499—546.) [E. B. J.]

MARMA'RIUM. [CARYSTUS.]

MARMOLITIS. [PAPHLAGONIA.]

MAROBU'DUM (Μαρόβουδον), a town of the Marcomanni in Bohemia (Ptol. ii. 11. § 29), and undoubtedly identical with the royal residence of Maroboduus, with a fortress attached to it, mentioned by Tacitus. (*Ann.* ii. 62.) The same place, or rather the fortress, is called by Strabo (vii. p. 290) Buiaemon, and is identified with the modern *Budweis*, in Bohemia. [L. S.]

MARONEIA (Μαρώνεια: *Eth.* Μαρωνείτης), a rich and powerful city of the Cicones, in Thrace, situated on the Aegean sea, not far from the lake Ismaris. (Herod. vii. 109.) It was said to have been founded by Maron, a son of Dionysus (Eurip. *Cycl.* v. 100, 141), or, according to some, a companion of Osiris (Diod. Sic. i. 20); but Scymnus (675) relates that it was built by a colony from Chios in the fourth year of the fifty-ninth Olympiad (B.C. 540). Pliny (iv. 11. s. 18) tells us that the ancient name was Ortagurea. The people of Maronea venerated Dionysus in an especial manner, as we learn from their coins, probably on account of the superior character of their wine, which was celebrated as early as the days of Homer (*Od.* ix. 196, seqq.). This wine was universally esteemed all over the ancient world; it was said to possess the odour of Nectar (Nonnus, i. 12, xvii. 6, xix. 11), and to be capable of mixture with twenty times its quantity of water (Hom. *Od.* ix. 209); and, according to Pliny, on an experiment being made by Mucianus, who doubted the truth of Homer's statement, it was found to bear even a larger proportion of water. (Plin. xiv. 4. s. 6; comp. "Victa Maroneo foedatus lumina Baccho," Tibull. iv. 1. 57).

Maroneia was taken by Philip V. of Macedon in B.C. 200; and when he was ordered by the Romans to evacuate the towns of Thrace, he vented his rage by slaughtering a great number of the inhabitants of the city. (Liv. xxxi. 16, xxxix. 24; Polyb. xxii. 6, 13, xxiii. 11, 13.) The Romans subsequently granted Maroneia to Attalus; but they almost immediately afterwards revoked their gift, and declared it a free city. (Polyb. xxx. 3.) By Constantine Porphyrogenitus (Them. ii. 2), Maroneia is reckoned among the towns of Macedon. The modern name is *Marogna*, and it has been the seat of an archbishopric. (Comp. Ptol. iii. 11. § 2; Scylax, p. 27; Strab. vii. 331; Amm. Marc. xxii. 8, xxvii. 4; Hierocl. p. 643; Tzetz. *ad Lycophr.* p. 818; Theophil. *ad Autol.* xi. p. 86.) [A. L.]

COIN OF MARONEIA.

MARONSA (Μάρωνσα, Zosim. iii. 28), a small village in Mesopotamia, at which the army of Julian arrived, just before the combat in which he fell. It is probably the same which Ammianus calls Maranga (xxv. 1), but its exact locality cannot now be determined. [V.]

MARPESSA (Μάρπησσα), a mountain in the island of Paros, from which the celebrated Parian marble was obtained. (Steph. B. *s. v.* Μάρπησσα.) [PAROS.] Hence Virgil (vi. 471) speaks of "Marpesia cautes."

MARPESSUS. [MERMESSUS.]

MARRU'BIUM. [MARRUVIUM.]

MARRUCI'NI (Μαῤῥουκῖνοι, Pol., Strab.; Μαῤῥουκινοί, Ptol.), a nation of Central Italy, inhabiting a narrow strip of territory on the S. bank of the river Aternus, extending from the Adriatic to the ridge of the Apennines. (Strab. v. p. 241.) They were bounded on the N. by the Vestini, from whom they were separated by the Aternus, and on the S. by the Frentani, while to the W. and SW. they apparently extended inland as far as the lofty mountain barriers of the *Majella* and the *Morrone*, which separated them from the Peligni, and effectually cut them off from all intercourse with their neighbours on that side, except by the valley of the Aternus. The southern limit of their territory is not stated by any ancient author, but was probably formed by the river *Foro*, which falls into the Adriatic about 7 miles from the mouth of the Aternus (*Pescara*). Pliny, indeed, extends the district of the Frentani as far as the Aternus (Plin. iii. 12. s. 17), thus cutting off the Marrucini altogether from the sea; but there seems little doubt that this is erroneous. [FRENTANI.] The Marrucini were, undoubtedly, like the other tribes in their immediate neighbourhood, of Sabine origin, and appear to have been closely connected with the Marsi; indeed, the two names are little more than different forms of the same, a fact which appears to have been already recognised by Cato (*ap. Priscian.* ix. p. 871). But, whether the Marrucini were an offset of the Marsi, or both tribes were separately derived from the common Sabine stock, we have no information. The Marrucini appear in history as an independent people, but in almost constant alliance with the Marsi, Peligni, and Vestini. There is, indeed, little doubt that the four nations formed a kind of league for mutual defence

(Liv. viii. 29; Niebuhr, vol. i. p. 101); and hence we find the Marrucini generally following the lead and sharing the fortunes of the Marsi and Peligni. But in B. C. 311 they appear to have taken part with the Samnites, though the other confederates remained neuter; as in that year, according to Diodorus, they were engaged in open hostilities with Rome. (Diod. xix. 105.) No mention of this is found in Livy, nor is their name noticed in B. C. 308, when the Marsi and Peligni appear in hostility to Rome; but a few years after, B. C. 304, all three nations, together with the Frentani, united in sending ambassadors to sue for peace, and obtained a treaty of alliance on favourable terms. (Liv. ix. 41, 45; Diod. xx. 101.) From this time the Marrucini became the firm and faithful allies of Rome; and are repeatedly mentioned among the auxiliaries serving in the Roman armies. (Dionys. xx. Fr. Didot.; Pol. ii. 24; Lix. xliv. 40; Sil. Ital. viii. 519.) During the Second Punic War their fidelity was unshaken, though their territory was repeatedly traversed and ravaged by Hannibal (Liv. xxii. 9, xxvi. 11; Pol. iii. 88); and we find them, besides furnishing their usual contingent to the Roman armies, providing supplies for Claudius Nero on his march to the Metaurus, and raising a force of volunteers to assist Scipio in his expedition to Africa. (Liv. xxvii. 43, xxviii. 45.) In the Social War, however, they followed the example of the Marsi and Peligni, and, though their name is less often mentioned than that of their more powerful neighbours, they appear to have borne an important part in that momentous contest. (Appian, *B. C.* i. 39, 46; Liv. *Epit.* lxxii.; Oros. v. 18.) Thus Herius Asinius, who is called by Livy "praetor Marrucinorum," and was slain in one of the battles between Marius and the Marsi, is particularly noticed as one of the chief leaders of the Italian allies. (Liv. *Epit.* lxxiii.; Vell. Pat. ii. 16; Appian, *B. C.* i. 40.) But before the close of the year 89 B. C. they were defeated, and their territory ravaged by Sulpicius, the lieutenant of Pompeius, and soon after reduced to submission by Pompeius himself. (Liv. *Epit.* lxxvi.; Oros. v. 18; Appian, *B. C.* i. 52.)

The Marrucini were at this time admitted to the Roman franchise, and became quickly merged in the ordinary condition of the Italian subjects of Rome. Hence their name is from henceforth rarely found in history; though it is incidentally noticed by Cicero, as well as by Caesar, who traversed their territory on his march from Corfinium into Apulia. (Cic. *pro Cluent.* 19; Caes. *B. C.* i. 23, ii. 34.) In B. C. 43, also, they were among the most prominent to declare themselves against Antonius. (Cic. *Phil.* vii. 8.) From these notices it is evident that they still retained their municipal existence as a separate people; and we learn from the geographers that this continued to be the case under the Roman Empire also; but the name gradually sank into disuse. Their territory was comprised, as well as that of the Vestini, in the Fourth Region of Augustus; in the subsequent distribution of the provinces, it is not quite clear to which it was assigned, the Liber Coloniarum including Teate among the "Civitates Piceni," while P. Diaconus refers it, together with the Frentani, to the province of Samnium. (Strab. v. p. 241; Plin. iii. 12. s. 17; Ptol. iii. 1. § 60; *Lib. Col.* p. 258; P. Diac. ii. 20.)

The territory of the Marrucini (ager Marrucinus, Plin.; ἡ Μαῤῥουκίνη, Strab.), though of small extent, was fertile, and, from its situation on the E. of the Apennines, sloping towards the sea, enjoyed a much milder climate than that of the neighbouring Peligni. Hence it produced oil, wine, and corn in abundance, and appears to have been noted for the excellence of its fruit and vegetables. (Plin. xv. 19. s. 21; Columell. x. 131.) It would appear to have been subject to earthquakes (Plin. ii. 83. s. 85, xvii. 25. s. 38); and hence, probably, arose the apprehension expressed by Statius, lest the mountains of the Marrucini should be visited by a catastrophe similar to that which had recently occurred in Campania. (Stat. *Silv.* iv. 4. 86.)

The only city of importance belonging to the Marrucini was TEATE, now *Chieti*, which is called by several writers their metropolis, or capital city. At a later period its municipal district appears to have comprised the whole territory of the Marrucini. INTERPROMIUM, known only from the Itineraries, and situated on the Via Valeria, 12 miles from Corfinium, at the *Osteria di S. Valentino*, was never more than a village or vicus in the territory of Teate. Pollitium, mentioned by Diodorus (xix. 105) as a city of the Marrucini, which was besieged by the Romans in B. C. 311, is wholly unknown. ATERNUM, at the mouth of the river of the same name, served as the port of the Marrucini, but belonged to the Vestini. (Strab. v. p. 241.) [E. H. B.]

MARRU'VIUM or MARRU'BIUM (Μαρούϊον, Strab.: *Eth.* Marruvius: *S. Benedetto*), the chief city of the Marsi, situated on the eastern shore of the lake Fucinus, and distant 13 miles from Alba Fucensis. Ancient writers agree in representing it as the capital of the Marsi: indeed, this is sufficiently attested by its name alone; Marruvii or Marrubii being evidently only another form of the name of the Marsi, and being thus used by Virgil as an ethnic appellation (*Marruvia de gente*, *Aen.* vii. 750). In accordance with this, also, Silius Italicus represents Marruvium as deriving its name from a certain Marrus, who is evidently only an eponymous hero of the Marsi. (Sil. Ital. viii. 505.) We have no account of Marruvium, however, previous to the Roman conquest of the Marsic territory; but under the Roman Empire it was a flourishing municipal town; it is noticed as such both by Strabo and Pliny, and in inscriptions we find it called "splendidissima civitas Marsorum Marruvium." (Strab. v. p. 241; Plin. iii. 12. s. 17; Mommsen, *Inscr. R. N.* 5491, 5499; Orell. *Inscr.* 3149.) It seems, indeed, to have been not unfrequently called "Civitas Marsorum," and in the middle ages "Civitas Marsicana:" hence, even in the Liber Coloniarum, we find it called "Marsus municipium." (*Lib. Colon.* pp. 229, 256.) It is noticed in the Tabula, which places it 13 M. P. from Alba; but it was not situated on the Via Valeria, and must have communicated with that high-road by a branch from Cerfennia. (*Tab. Peut.*) Marruvium continued through the middle ages to be the see of the bishop of the Marsi; and it was not till 1580 that the see was removed to the neighbouring town of *Pescina*. The site is now known by the name of *S. Benedetto*, from a convent erected on the spot. Considerable ruins of the ancient city still remain, including portions of its walls; the remains of an amphitheatre, &c., and numerous inscriptions, as well as statues, have been discovered on the site. These ruins are situated close to the margin of the lake, about two miles below *Pescina*. (Holsten. *ad Cluver.* p. 151; Romanelli, vol. iii. p. 180—186; Kramer, *Fuciner See*, p. 55; Hoare's *Class. Tour*,

vol. i. pp. 357—361. The inscriptions are collected by Mommsen, *I. R. N.* pp. 290—294.) The little river *Giovenco*, which flows into the lake close to the site of the ancient city, is probably the stream called by the ancients PITONIUS, concerning which they related many marvels. [FUCINUS LACUS.]

Dionysius mentions (i. 14) a town called Maruvium (Μαρούϊον) among the ancient settlements of the Aborigines in the neighbourhood of Reate, which is certainly distinct from the above, but is otherwise wholly unknown. [ABORIGINES.] [E. H. B.]

MARSES. [BABYLONIA, p. 362.]

MARSI (Μάρσοι: *Adj.* Μαρσικός, Marsicus), an ancient nation of Central Italy, who inhabited an inland and mountainous district around the basin of the lake Fucinus, where they bordered on the Peligni towards the E., on the Sabines and Vestini to the N. and on the Aequians, Hernicans, and Volscians, to the W. and S. There can be no doubt that they were, in common with the other inhabitants of the upland valleys of the central Apennines, a race of Sabine origin; though we have no direct testimony to this effect. Indeed the only express statement which we find concerning their descent is that which represents them as sprung from a son of Circe, obviously a mere mythological fable arising from their peculiar customs. (Plin. vii. 2; Solin. 2. § 27.) Another tradition, equally fabulous, but obscurely known to us, seems to have ascribed to them a Lydian origin, and derived their name from Marsyas. (Gellianus, *ap. Plin.* iii. 12. s. 17; Sil. Ital. viii. 503.) But the close connection of the four nations of the Marsi, Marrucini, Peligni and Vestini, can leave no reasonable doubt of their common origin; and the Sabine descent of the Peligni at least is clearly attested. [PELIGNI.] It may be added that the Marsi are repeatedly mentioned by the Roman poets in a manner which, without distinctly affirming it, certainly seems to imply their connection with the Sabine race (Hor. *Epod.* 17. 29; Juv. iii. 169; Virg. *Georg.* ii. 167.) That the Marsi and the Marrucini were closely related is sufficiently evident from the resemblance of their names, which are in fact only two forms of the same; the old form Marrubii or Marruvii, retained by Virgil (*Aen.* vii. 750) as the name of the people, as well as preserved in that of their capital city, Marrubium, being the connecting link between the two. (Niebuhr, vol. i. p. 100.) This connection seems to have been already perceived by Cato (*ap. Priscian.* ix. p. 871), though he mixed it up with a strange etymological fable. But we have no historical account, or even tradition, of the origin or separation of these closely connected tribes, which appear in history together with the Peligni and Vestini, as nearly related, but still distinct, nations.

The Marsi are first noticed in Roman history in B. C. 340, at which time they, as well as the Peligni, were on friendly terms with the Romans, and granted a free passage to the consuls who were proceeding with their armies through Samnium into Campania. (Liv. viii. 6.) At the commencement of the Second Samnite War they appear to have remained neutral; and even when their kinsmen and allies the Vestini were assailed by the Roman arms, they did not, as had been expected, take up arms in their defence. (Id. viii. 29.) It was not till B. C. 308 that we first find them engaged in hostilities with Rome, and we have no explanation of the circumstances which then induced them to take part with the Samnites. (Id. ix. 41.) It is indeed singular that while Livy notices this campaign as memorable from its being the first occasion on which the Romans were opposed to the Marsians, Diodorus gives a wholly different account, and represents the two nations as in alliance against the Samnites. (Diod. xx. 44.) There is, however, every probability that the account given by Livy is the more correct one, as we find shortly after (B. C. 304) a special treaty concluded with the Marsi, Marrucini, and Peligni, immediately after the defeat of the Aequians. (Liv. ix. 45; Diod. xx. 101.) But a few years later (B. C. 301) the Marsi again took up arms (this time apparently single-handed) to oppose the foundation of the Roman colony at Carseoli, on the immediate frontiers of their territory. They were, however, easily defeated; three of their towns, Plestina, Milionia, and Fresilia, were taken; and they were compelled to purchase peace by the cession of a part of their territory. (Liv. x. 3.) With this exception, they obtained favourable terms, and the former treaty was renewed.

From this time the Marsi, as well as their confederate tribes, the Marrucini, Peligni, and Vestini, became the faithful and constant allies of Rome, and occupied a prominent position among the "socii" whose contingents bore so important a share in the Roman victories. The names of the four nations are sometimes all mentioned, sometimes one or other of them omitted; while the Frentani, who appear, though of Samnite origin, to have maintained closer political relations with their northern neighbours, are, in consequence, often associated with them. Thus Polybius, in enumerating the forces of the several Italian nations in B. C. 225, classes the Marsi, Marrucini, Vestini and *Frentani*, under one head, while he omits the name of the Peligni altogether. (Pol. ii. 24.) Dionysius, on the other hand, notices *by name* only the Marrucini, Peligni, and Frentani, among the Roman allies at the battle of Asculum, omitting both the Marsi and Vestini; while Silius Italicus enumerates them all among the Roman allies at the battle of Cannae. (Dionys. xx. Fr. Didot; Sil. Ital. viii. 495—520.) Ennius also associated together the "Marsa manus, Peligna cohors, Vestina virum vis." (Enn. *Fr.* p. 150.) During the Second Punic War they suffered severely for their fidelity to Rome, their territory being repeatedly ravaged by Hannibal. (Liv. xxii. 9, xxvi. 11.) Nevertheless, towards the close of the same war, they were among the foremost to offer volunteers to the fleet and army of Scipio in B. C. 205. (Id. xxviii. 45.)

During this period the Marsi appear to have earned a high reputation among the Roman allies for their courage and skill in war; a character which they shared in common with the neighbouring tribes. But their chief celebrity was derived from the prominent part which they took in the great struggle of the Italian allies against Rome, commonly called the Social War, but which appears to have been more frequently termed by the Romans themselves the Marsic War. (Bellum Marsicum, Fast. Capit.; Vell. Pat. ii. 21; Cic. *de Div.* i. 44, &c.; ὁ Μαρσικὸς καλούμενος πόλεμος, Strab. v. p. 241.) Pompaedius Silo, who is termed by Livy one of the chief authors of this memorable contest, was himself a Marsian; and it was probably at his instigation that the Marsi were the first to take up arms after the outbreak of the Picentes at Asculum; thus at once imparting to the impending contest the character of a national war. (Vell. Pat. ii. 15; Strab. v. p. 241; Diod. xxxvii. 2.) Their example was immediately followed

by their neighbours and kinsfolk the Peligni, Marrucini, and Vestini, as well as by the Samnites, Frentani, and Lucanians. (Appian, *B. C.* i. 39; Liv. *Epit.* lxxii.; Oros. v. 18.) During the military operations that followed, imperfect as is our information concerning them, we may clearly discern that the allies formed two principal groups; the one composed of the Marsi, with their immediate neighbours already mentioned, as well as the Picentes, and probably the Frentani; the other of the Samnites, with the Lucanians, Apulians, and some of the Campanians. The Marsi appear to have stood, by common consent, at the head of the former section; and hence we frequently find their name alone mentioned, where it is clear that their confederates also fought by their side. At the first outbreak of the war (B. C. 91), they laid siege to Alba Fucensis, a Roman colony and a strong fortress (Liv. *Epit.* lxxii.), which appears to have at first defied all their efforts. But the Roman consul P. Rutilius, who was sent against them, proved unequal to the task. One division of his army, under Perpenna, was cut to pieces at the outset of the campaign; and somewhat later the consul himself was defeated and slain by the allied forces under Vettius Cato. (Appian, *B. C.* i. 43; Liv. *Epit.* lxxiii.; Oros. v. 18.) C. Marius, who was acting as legate to Rutilius, is said to have retrieved this disaster; and afterwards, in conjunction with Sulla, achieved a decisive victory over the Marsi, in which it is said that the allies lost 6000 men, and the leader or praetor of the Marrucini, Herius Asinius, was slain. But notwithstanding this advantage, it appears that Marius himself was unable to keep the field, and was almost blockaded in his camp by Pompaedius Silo; and when at length he ventured on a third battle, it had no decisive result. Meanwhile, his colleague in the command, Q. Caepio, was totally defeated and cut to pieces with his whole army by the Marsi; while an advantage gained by Ser. Sulpicius over the Peligni appears to have led to no important result. (Liv. *Epit.* lxxiii. lxxiv.; Appian *B. C.* i. 46; Plut. *Mar.* 33; Oros. v. 18.) The next campaign (B. C. 89) proved at first scarcely more favourable to the Roman arms; for though the consul L. Porcius Cato obtained some successes over the Marsi and their allies, he was himself slain in a battle near the lake Fucinus. (Appian, *B. C.* i. 50; Oros. v. 18.) But it is probable that the policy adopted by the Romans in admitting to the franchise all those of the allies who were willing to submit had a great tendency to disarm the confederates, as well as to introduce dissensions among them; and this cause, combined with the successful operations of the consul Cn. Pompeius Strabo and his lieutenant Sulpicius, effected the submission of the Marrucini, Vestini, and Peligni before the close of the year. The Marsi for a time still held out, though single-handed; but repeated defeats at length compelled them also to sue for peace. (Liv. *Epit.* lxxvi.; Oros. v. 18.) Notwithstanding their obstinate resistance, they were admitted to favourable terms, and received, in common with the rest of the Italians, the full rights of Roman citizens.

From this time the Marsi as a nation disappear from history, and became merged in the common condition of the Italians. They however, still retained much of their national character, and their existence as a separate tribe is acknowledged by many Roman writers, both of the Republic and Empire. In the civil war between Caesar and Pompey they appear to have been at first favourably disposed to the latter; and the twenty cohorts with which Domitius occupied Corfinium were principally raised among the Marsi and Peligni, or their immediate neighbours. (Caes. *B. C.* i. 15, 20.) In like manner, the Marsi are mentioned as declaring themselves, as a people, in favour of Vespasian during the civil war between him and Vitellius. (Tac. *Hist.* iii. 59.) In the days of Cicero, the Marsi and Peligni, as well as the Sabines, were comprised in the Sergian tribe (Cic. *in Vatin.* 15; Schol. Bob. *ad loc.*); and at a later period all three were included in the Fourth Region of Augustus, which, according to Pliny, was composed of the bravest nations of all Italy. (Plin. iii. 12. s. 17.) In the later division of the Empire, the territory of the Marsi (Marsorum regio) was included in the province named Valeria. (P. Diac. ii. 20; *Lib. Col.* p. 229.) It appears to have early formed a separate ecclesiastical diocese; and in the middle ages the bishop of Marruvium bore the title of "Episcopus Marsorum," which is still retained by the bishops of *Pescina*, to which place the see has been transferred. (Bingham's *Ecclesiastical Antiquities*, book ix. ch. 5. § 3.) The district comprised within it is still familiarly called "the land of the Marsi," and the noble Roman family of Colonna bears the title of Counts of the Marsi. (K. Craven's *Abruzzi*, vol. i. p. 144.)

The Marsi appear to have been always celebrated in ancient times, even beyond their hardy and warlike neighbours, for their valour and spirit in war. Virgil adduces them as the first and most prominent example of the "genus acre virûm" which Italy was able to produce: and Horace alludes to the "Marsic cohorts" as an almost proverbial expression for the bravest troops in the Roman army. (Virg. *Georg.* ii. 167; Hor. *Carm.* ii. 20. 18, iii. 5. 9.) Appian also tells us that a proverbial saying was current at the time of the outbreak of the Social War, that no triumph had ever been gained *over* the Marsi or *without* the Marsi (Appian, *B. C.* i. 46). The historical accuracy of this saying will not bear examination, but it sufficiently proves the high character they had earned as Roman auxiliaries. In common with the Sabines and other mountain tribes, they retained down to a late period their rustic and frugal habits; and are cited by the Roman poets as examples of primitive simplicity. (Juv. iii. 169, xiv. 180.)

But the most remarkable characteristic of the Marsians was their peculiar skill in magical charms and incantations,—especially in charming venomous reptiles, so as to render them innoxious. This power, which they were said to have derived from their ancestress Circe, or from the local divinity Angitia, who was described as her sister, was not confined to a few individuals, though the priests appear to have principally exercised it, but, according to Silius Italicus, was possessed by the whole body of the nation. (Virg. *Aen.* vii. 750—758; Sil. Ital. viii. 495—501; Plin. vii. 2, xxi. 13. s. 25, xxviii. 3. s. 6; Solin. 2. § 27; Gell. xvi. 11; Lamprid. *Heliogab.* 23.) It is worthy of notice that the inhabitants of these regions still pretend to possess the same occult powers as their ancestors: and are often seen as wanderers in the streets of Naples carrying boxes full of serpents of various sizes and colours, against the bites of which they profess to charm both themselves and the spectators. (Craven's *Abruzzi*, vol. i. p. 145.)

The physical characters of the land of the Marsi have been already described under the article of the lake FUCINUS; the basin of which, surrounded on

all sides by lofty, or strongly marked mountain ridges, may be considered as constituting the natural limits of their territory. But towards the NE. we find that Alba Fucensis, though certainly belonging to this natural district, and hence sometimes described as belonging to the Marsi (Ptol. iii. 1. § 57; Sil. Ital. viii. 507), was more properly an Aequian city [ALBA FUCENSIS]; while, on the other hand, the upper valley of the Liris (though separated from the lake by an intervening mountain ridge) was included in the Marsic territory, as Antinum (*Civitù d'Antino*) was unquestionably a Marsian city. [ANTINUM.] On the N. the Marsi were separated from the Sabines and Vestini by the lofty group of the *Monte Velino* and its neighbours; while on the S. another mountain group, of almost equal elevation, separated them from the northern valleys of Samnium and the sources of the Sagrus (*Sangro*). On the E., a ridge of very inferior height, but forming a strongly marked barrier, divided them from the Peligni, who occupied the valley of the *Gizio*, a tributary of the Aternus. From its great elevation above the sea (2176 feet at the level of the lake), even more than from the mountains which surrounded it, the land of the Marsi had a cold and ungenial climate, and was ill adapted for the growth of corn, but produced abundance of fruit, as well as wine, though the latter was considered harsh and of inferior quality. (Sil. Ital. viii. 507; Athen. i. p. 26; Martial, xiii. 121, xiv. 116.)

The principal town of the Marsi was MARRUVIUM, the ruins of which are still visible at *S. Benedetto*, on the E. shore of the lake Fucinus. This was indeed (if Alba Fucensis be excluded) probably the only place within their territory which deserved the name of a city. The others, as we are told by Silius Italicus, though numerous, were for the most part obscure places, rather fortified villages (castella) than towns. (Sil. Ital. viii. 510.) To this class belonged, in all probability, the three places mentioned by Livy (x. 3) as having been taken in B. C. 301 by the dictator M. Valerius Maximus,—Milionia, Plestina, and Fresilia; all three names are otherwise wholly unknown, and there is no clue to their site. Pliny, however, assigns to the Marsi the following towns:—ANXANTIA (Anxantini), the name of which is found also (written ANXATINI) in an inscription, and must have been situated near *Androssano* or *Scurgola*, in the immediate neighbourhood of *Alba* (Hoare's *Classical Tour*, vol. i. p. 367; Mommsen, *Inscr. R. N.* 5628); ANTINUM (Antinates), now *Cirita d'Antino;* LUCUS (Lucenses), more properly LUCUS ANGITIAE, still called *Lugo*, on the W. bank of the lake; and a "populus" or community, which he terms Fucenses, who evidently derived their name from the lake; but what part of its shores they inhabited is uncertain. Besides these he notices a tradition, mentioned also by Solinus, that a town named Archippe, founded by the mythical Marsyas, had been swallowed up in the waters of the lake. (Plin. iii. 12. s. 17; Solin. 2. § 6.) From the number of inscriptions found at *Trasacco*, a village near the S. end of the lake, it would appear to have been certainly an ancient site; but its name is unknown. (Mommsen, *l. c.* p. 295.) The only town of the Marsi mentioned by Ptolemy (iii. 1. § 57) besides Alba Fucensis, is a place which he calls AEX (Αἴξ), a name in all probability corrupt, for which we should perhaps read Ἄνξα, the Anxatia or Anxantia of Pliny. CERFENNIA, a place known only from the Itineraries, was situated on the Via Valeria, at the foot of the pass leading over the Mons Imeus into the valley of the Peligni. This remarkable pass, now called the *Forca di Caruso*, must in all ages have formed the principal line of communication between the Marsi and their eastern neighbours, the Peligni and Marrucini. Another natural line of communication led from the basin of the Fucinus near *Celano* to the valley of the Aternus near *Aquila*. It must be this line which was followed by a route obscurely given in the Tabula as leading from Aveia through a place called Frusteniae (?) to Alba and Marruvium (*Tab. Peut.*). [E. H. B.]

MARSIGNI, a German tribe, mentioned only by Tacitus (*Germ.* 43), probably occupying the north of Bohemia, about the *Upper Elbe*. In language and manners they belonged to the Suevi. (Comp. Zeuss, *Die Deutschen*, p. 124.) [L. S.]

MARSO'NIA (Μαρσονία), or MARSO'NIUM (*Tab. Peut.*), a place in Upper Pannonia, south of the river Savus, on the road between Siscia and Servitium; is identified by some with the town of *Issenoviz*, at the mouth of the *Unna* into the *Save*. (Ptol. ii. 16. § 7; Geogr. Rav. iv. 19.) [L. S.]

MARSYABAE (Μαρσυαβαί), a town of the Rhamanitae, an Arabian tribe, mentioned by Strabo as the utmost limit of the Roman expedition under Aelius Gallus, the siege of which he was obliged to abandon after six days for want of water, and to commence his retreat. The only direct clue afforded by Strabo to the position of the town is that it was two days distant from the Frankincense country; but the interest attaching to this expedition—which promises so much for the elucidation of the classical geography of Arabia, but has hitherto served only still further to perplex it—demands an investigation of its site in connection with the other places named in the only two remaining versions of the narrative. It will be convenient to consider,—(I.) the texts of the classical authors. (II.) The commentaries and glosses of modern writers on the subject. (III). To offer such remarks as may serve either to reconcile and harmonise conflicting views, or to indicate a more satisfactory result than has hitherto been arrived at. In order to study brevity, the conclusions only will be stated; the arguments on which they are supported must be sought in the writings referred to. I. To commence with Strabo, a personal friend of the Roman general who commanded the expedition, and whose account, scanty and unsatisfactory as it is, has all the authority of a personal narrative, in which, however, it will be advisable to omit all incidents but such as directly bear on the geography. [*Dictionary of Biography*, GALLUS, AELIUS.] After a voyage of 15 days from Cleopatris [ARSINOE, No. 1], the expedition arrived at Leuce Come (Λευκὴ κώμη), a considerable seaport in the country of the Nabathaeans, under whose treacherous escort Gallus had placed his armament. An epidemic among the troops obliged him to pass the summer and winter at this place. Setting out again in the spring, they traversed for many days a barren tract, through which they had to carry their water on camels. This brought them to the territory of Aretas, a kinsman of Obodas, the chief sheikh of the Nabathaei at the time. They took thirty days to pass through this territory, owing to the obstructions placed in their way by their guide Syllaeus. It produced spelt and a few palms. They next came to the nomad country named Ararena (Ἀραρηνή), under a sheikh named Sabus. This it

took them fifty days to traverse, through the fault of their guide; when they came to the city of the Agrani (Ἀγρανοί), lying in a peaceful and fruitful country. This they took; and after a march of six days, came to the river. Here, after a pitched battle, in which the Romans killed 10,000 Arabs, with the loss of only two men, they took the city called Asca (Ἄσκα), then Athrulla (Ἀθρουλλα), and proceeded to Marsyabae of the Rhamanitae, then governed by Ilasarus, from which, as already mentioned, they commenced their retreat by a much shorter route. Nine days brought them to Anagrana (Ἀνάγρανα), where the battle had been fought; eleven more to the Seven Wells (Ἑπτὰ φρέατα), so called from the fact; then to a village named Chaalla (Χάαλλα), and another named Malotha (Μαλόθα), — the latter situated on a river,—and through a desert with few watering-places to Nera or Negra Come (Νερὰ κώμη), on the sea-shore, subject to Obodas. This retreat was accomplished in sixty days; the advance had occupied six months. From Nera they sailed to Myos Hormus (Μυὸς ὅρμος) in eleven days. Thus far Strabo (xvi. p. 782). Pliny is much more brief. He merely states that Gallus destroyed towns not mentioned by previous writers, Negra, Amnestrum, Nesca, Magusa, Tammacum, Labecia, the above-named Mariaba (i. e. the Mariaba of the Calingii, 3), and Caripeta, the remotest point which he reached. (*Hist. Nat.* vi. 28.) The only geographical point mentioned by Dion Cassius, who dwells chiefly on the sufferings of the army, is that the important city of Athlula (Ἀθλούλα) was the limit of this disastrous expedition. (Dion Cass. liii. 29.)

II. The variations of commentators on this narrative may be estimated by these facts: Dean Vincent maintains that, "as Pliny says, that places which occur in the expedition of Gallus are not found in authors previous to his time, the same may be said of subsequent writers; for there is not one of them, ancient or modern, who will do more than afford matter for conjecture." (*Peripl.* pp. 300, 301.) Mr. Forster asserts, "Of the eight cities named by Pliny, the names of two most clearly prove them to be the same with two of those mentioned by Strabo; and that seven out of the eight stand, with moral certainty, and the eighth with good probability, identified with as many Arab towns, still actually in being." (*Geography of Arabia*, vol. ii. p. 310.) D'Anville and M. Fresnel (*inf. cit.*) conduct the expedition to *Hadramaut*, in the southern extremity of the peninsula; Gosselin does not extend it beyond the *Hedjaz*. (*Récherches sur la Géographie des Anciens*, tom. ii. p. 114.) But these various theories require more distinct notice. 1. D'Anville, following Bochart (*Chanaan*, i. 44), identifies Leuce Come with the modern *Hawr* or *El-Haura*, on the Red Sea, a little north of the latitude of *Medina*, justifying the identification by the coincidence of meaning between the native and the Greek names. Anagrana he fixes at Nageran or Negran (*Nedjran*), a town in the NE. of *Yemen;* consistently with which theory he makes the Marsyabae of Strabo identical with the Mariaba of the same geographer; though Strabo makes the latter the capital of the Sabaei, and assigns the former to the Rhamanitae. Finally, D'Anville places Chaalla at Khaûlan (*El-Chaulan*), in the NW. extremity of *Yemen*, and, therefore, as he presumes, on the Roman line of retreat between Anagrana and the sea. (D'Anville *Géographie ancienne abrégée*, tom. ii. pp. 216, 217, 223, 224). 2. Gosselin, as before noticed, maintains that the expedition did not pass beyond Arabia Deserta and the *Hedjaz;* that the Negra of Pliny = the Negran of Ptolemy = the modern *Nokra* or *Maaden en-Nokra* (in the NW. of *Nedjd*); that Pliny's Magusa = *Mégarish-uzzir* (which he marks in his map NW. of Negra, and due East of *Moilah*, his Leuce (pp. 254, 255), perhaps identical with *Dahr el-Maghair* in Ritter's map; that Tammacum in Pliny = Thaema in Ptolemy = the modern Tima (which he places nearly due north of Negra, between it and Magusa) = *Teimâ* in Ritter, between *Maaden en-Nokra* and *Dahr el-Maghair;* that Labecia = Laba of Ptolemy, which he does not place; that Athrulla = Iathrippa [LATHRIPPA] in Ptolemy = *Medineh*; that Mariaba in Pliny = Marsyabae in Strabo, = Macoraba in Ptolemy = *Mecca;* and lastly, that Caripeta, the extreme point according to Pliny, = Ararene in Strabo = modern *Cariatain*, in the heart of *El-Nedjd*. (Gosselin, *l. c.* pp. 113—116.) 3. Dean Vincent's opinion on the difficulty of recovering any clue to the line of march has already been stated; but he ventures the following conjectures, partly in agreement, and partly in correction, of the preceding. He adopts the Leuce Come of Gosselin, i. e. *Moilah;* the Anagrana or Negra of D'Anville, i. e. *Nedjran* of *Yemen;* and thinks that the country of the nomades, called Ararênè, has a resemblance to the territory of *Medina* and *Mecca;* and that the space of fifty days employed in passing it, is some confirmation of the conjecture. Marsyabae, he thinks, could not be Mariaba of the Tank; but takes it as the general name for a capital,—in this case of the Minêans,—which he suggests may correspond with the Caripeta of Pliny, the Carna or Carana of Strabo, the capital of the Minêans, and the Carni-peta, or Carni-petra of modern geographers. The fact that Strabo speaks of Carna as the capital of the Minaei, and places Marsyabae in the territory of the Rhamanitae, is disposed of by the double hypothesis, that if Ilasar is the king of this tribe, whether Calingii, Rhamanitae, or Elaesari, all three were comprehended under the title of Minêans. Of Nera, the termination of the expedition, he remarks, that it being in the country of Obodas, it must be within the limits of Petraea; but, as no modern representative offers, it should be placed as far below (south of) Leuce Come as the province will admit. (Vincent, *Periplus of the Erythrean Sea*, vol. ii. pp. 290—311.) 4. M. Fresnel, long a resident in the country, thinks that the Marsyabae of Strabo must be identical with the Mariaba in Pliny's list of captured cities, the same writer's Baramalacum, and Ptolemy's Mariama; and that the Rhamanitae of Strabo are the Rhamnei of Pliny, the Manitae of Ptolemy, one of the divisions of the Minaei, to which rather than to the other division, the Charmaei, Mariaba Baramalacum should have been assigned. In agreement with Vincent, he finds the Marsyabae of Strabo in the capital of the Minaei, i. e. the Carana of Strabo and the Carnan Regia of Ptolemy, which he however finds in the modern *Al-Ckarn* in the *Wady Doàn* or *Dawàn* (*Kurein* and *Grein* in Kiepert's and Zimmerman's maps), six or seven days' journey north of *Moukallah*, and in the heart of *Hadramaut*. (Fresnel, in *Journal Asiatique*, *Juillet*, 1840, 3me série, tom. x. pp. 83—96, 177, &c.) He fancied that he recovered the Caripeta of Pliny in the site of *Khour-aybah*, also in the vicinity of *Moukallah* (*Ib.* p. 196). 5. Desvergers prefers the identification

of Leuce Come with *El-Haura*, proposed by D'Anville, to the *Moilah* of Gosselin and Vincent. In common with D'Anville and Vincent, he finds the town of Anagrana (which he writes "la ville des Négranes") in the modern *Nedjrân*, and doubtingly fixes Marsyabae at *Mâreb* in *Yemen*. The Manitae of Ptolemy he identifies with the Rhamanitae of Strabo,—suggesting an ingenious correction to Jamanitae = the people of *Yemen* (*L'Univers. Arabie*, pp. 58, 59). 6. Jomard, one of the highest authorities on Arabian geography, has offered a few valuable remarks on the expedition of Gallus, with a view to determine the line of march. He thinks the name Marsyabae an evident corruption for Mariaba, which he assumes to be "that of the Tank," the capital of the Minaei, now *Mâreb*. Negranes exactly corresponds with *Nedjrân* or *Negrân*, nine days' journey NW. of *Mâreb*. He fixes Leuce Come at *Moilah*, and Negra or Nera opposite to *Coseyr*, in the 26th degree of latitude. His argument for determining the value of a day's march is ingenious. The whole distance from *Mâreb* to the place indicated would be 350 leagues of 25 to a degree. From Mariaba to Negra was 60 days' march: *Negrân*, therefore, which was nine days from Mariaba, is $\frac{9}{60}$ths of the whole march, and *Wady Nedjrân* is 52 leagues NW. of *Mâreb*. The distance of the Seven Wells, eleven days from *Negrân*, = $\frac{11}{60}$ths of the march = 117 leagues from Mariaba: and the same analogy might have been applied to Chaalla and the river Malothas, had Strabo indicated the distances of these two stations. The troops, in order to reach the sea, on their retreat must have traversed the province of *Asyr*, a district between *Yemen* and the *Hedjaz* (whose geography has been recently restored to us by M. Jomard), and one of the elevated plains which separate the mountain chain of *Yemen* from that of the *Hedjaz*. "The road," he says, "is excellent, and a weak body of troops could defend it against a numerous army." Having thus disposed of the line followed in the retreat, he briefly considers the advance:—"The country governed by Aretas, and the next mentioned, Ararene, correspond with *Thamoud* and *Nedjd*, and the southern part of the latter province approaching *Nedjrân* has always been a well-peopled and cultivated district. Asca, on the river, and Athrulla, the last-named station before Mariaba, cannot be exactly determined, as the distances are not stated; and the line between *Nedjrân* and *Mâreb* is still but little known." (Jomard, *ap. Mengin. Histoire de l'Egypte, &c.*, pp. 383—389.) 7. Mr. Forster has investigated the march with his usual diligence, and with the partial success and failure that must almost necessarily attach to the investigation of so difficult a subject. To take first the three main points, viz., Leuce Come, the point of departure; Marsyabae, the extreme limit; and Nera, the point at which they embarked on their return. He accepts D'Anville's identification of *Haûra* as Leuce Come, thinking the coincidence of name decisive; Marsyabae he finds in *Sabbia*, the chief city of the province of *Sabie*, a district on the northern confines of *Yemen*, 100 miles S. of *Beishe*, the frontier and key of *Yemen*; and Nera, in *Yembo*, the sea-port of *Medina*. The line of march on their advance he makes very circuitous, as Strabo intimates; conducting them first through the heart of *Nedjd* to the province of *El-Ahsa* on the *Persian Gulf*, and then again through the same province in a SW. direction to *Yemen*. On their retreat, he brings them direct to *Nedjrân*, then due west to the sea, which they coast as far north as *Yembo*. To be more particular: he thinks that "a difference in distance in the advance and retreat, commensurate, in some reasonable degree, with the recorded difference of time, i. e. as 3 to 1, must be found; that the caravan road from *Haûra* by *Medina* and *Kasym*, into the heart of *Nedjd*, was the line followed by Gallus (the very route, in fact, traversed by Captain Sadlier in 1819: *Transactions of Lit. Soc. of Bombay*, vol. x. pp. 449—493), and thence by one of the great *Nedjd* roads into *Yemen*, the description of which in Burckhardt agrees in many minute particulars with the brief notices of Strabo. He further finds nearly all the towns named by Pliny as taken by the Romans, on this line of march: Mariaba of the Calingii in *Merab*, in the NE. extremity of *Nedjd*, within the province of *Hagar* or *Bahrein*—in the former of which names he finds the Ararena or Agarena of Strabo. Caripeta he identifies, as Gosselin had done, with *Cariatain* in *Nedjd*; but he does not attempt to explain how Pliny could call this the extreme limit of the expedition,—"quo longissime processit." The Tammacus of Pliny = the Agdami of Ptolemy = the well-known town of *Tayf*. Magusa (Ptolemy's Magulaba) presents itself in *Korn el-Maghsal*, a place situated about half-way between *Tayf* and *Nedjrân*, which last is with him, as with all preceding writers except Gosselin, the Anagrana of Strabo, the Negra of Pliny. "Labecia is the anagram, with the slightest possible inversion, of *Al-Beishe*;" and this is called by the northern Bedouins "the key of *Yemen*,"—the only pass, according to Burckhardt, for heavy-laden camels going from *Mekka* to *Yemen*, "a very fertile district, extremely rich in date-trees." The river at which the battle with the Arabs was fought is the modern *Sancan*, "which, taking its rise in the *Hedjaz* mountains near *Korn el-Maghsal*, after a southern course of somewhat more than 100 miles, is lost in the sands of the *Tehamah*, to the westward of the mountains of *Asyr*." The Asca of Strabo, the Nesca of Pliny, are "obviously identical with *Sancan*, the present name of a town seated on the *Sancan* river, near its termination in the sands." Athrulla, next mentioned by Strabo, is again Labecia, i. e. *Beishe*; and this hypothesis "implies a countermarch," of which there is no hint in the authors. Lastly, "if Amnestus may be supposed to have its representative in *Ibn Maan* (the Manambis of Ptolemy), a town about half-way between *Beishe* and *Sabbia*, all the cities enumerated by Pliny occur on the route in question."

As to the retreat of the army. From Marsyabae to *Nedjrân*, a distance of from 140 to 160 miles, was accomplished in nine days; thence to the Seven Wells, eleven days from *Nedjrân*, brings us to *El-Hasba* (in Arabic "the Seven"), a place about 150 miles due west of *Nedjrân*, and then to Chaalla, the modern *Chaulan* (according to Forster as well as D'Anville, the chief town of the province of the same name), and thence to Malotha, situated on a river, the same as that crossed on the advance, i. e. the *Sancan*. The Malotha of Strabo is plainly identified, by its site, with the Tabala of Burckhardt, a town on the *Sancan*, at this point, on the caravan road to *Hedjaz*, a short day's march from *El-Hasba*. From Malotha to Nera Come, i. e. through the *Tehamah*, there are two routes described by Burckhardt; one along the coast, in which only one well is found between *Djidda* and *Leyth*,—a distance of four days; another more eastern, somewhat mountainous, yielding plenty of water, five days' journey between the same two

towns. Now as Strabo describes the latter part of the retreat through a desert track containing only a few wells, it is obvious that the coast-road was that followed by the Romans as far as *Yembo*, already identified with Nera Come; "the road-distance between Sabbia and Yembo (about 800 English miles) allowing, for the entire retreat, the reasonable average of little more than thirteen miles a-day." (Forster, *Geogr. of Arabia*, vol. ii. pp. 277—332.)

III. Amid these various and conflicting theories there is not perhaps one single point that can be regarded as positively established, beyond all question; but there are a few which may be safely regarded as untenable. 1. And first, with regard to Leuce Come, plausible as its identification with *El-Haura* is rendered by the coincidence of name, there seem to be two inseparable objections to it; first, that the author of the Periplus places the harbour and castle of Leuce two or three days' sail from Myos Hormus (for Mr. Forster's gloss is quite inadmissible), while *El-Haura* is considerably more than double that distance, under the most favourable circumstances; and secondly, that the same author, in perfect agreement with Strabo, places it in the country of the Nabathaei, which never could have extended so far south as *Haura*. Mr. Forster attempts to obviate this objection by supposing that both Leuce Come and Nera were sea-ports of the Nabathaei beyond their own proper limits, and in the hostile territory of the Thamudites (*l. c.* p. 284, note *). But this hypothesis is clearly inconsistent with the author of the Periplus, who implies, and with Strabo, who asserts, that Leuce Come lay in the territory of the Nabathaei (ἧκεν εἰς Λευκὴν κώμην τῆς Ναβαταίων γῆς, ἐμπορεῖον μέγα), a statement which is further confirmed by the fact that Nera Come, which all agree to have been south of Leuce, is also placed by Strabo in the territory of Obodas, the king of the Nabathaei (ἔστι δὲ τῆς Ὀβόδα). Leuce cannot therefore be placed further south than *Moilah*, as Gosselin, Vincent, and Jomard all agree; and Nera must be sought a little to the south of this, for Jomard has justly remarked that Strabo, in contrasting the time occupied in the advance and in the retreat, evidently draws his comparison from a calculation of the same space (*l. c.* p. 385). 2. With regard to the site of Marsyabae, it may be remarked that its identification with Mariaba, the metropolis of the Sabaei, the modern *Máreb*, maintained by D'Anville, Fresnel, and Jomard, is inadmissible for the following reasons: first, that distinct mention having been made of the latter by Strabo, it is not to be supposed that he would immediately mention it with a modification of its name, and assign it to another tribe, the Rhamanitae: and it is an uncritical method of removing the difficulty suggested by M. Jomard without the authority of MSS.,—"il faut lire partout *Mariaba;* le mot *Marsiaba* est corrompu évidemment." Secondly, whether the Mariaba Baramalacum of Pliny be identified with Strabo's Marsyabae or no, and whatever becomes of the plausible etymology of this epithet, suggested by Dean Vincent (quasi *Bahr em-Malac=the royal reservoir*), the fact remains the same, that the Mariaba of the Sabaeans was abundantly supplied with water from numerous rivulets collected in its renowned Tank; and that therefore, as Gosselin remarks, drought was the last calamity to which the Romans would have been exposed in such a locality. 3. With regard to Anagrana and Negra, on the identity of which with the modern *Nedjrân* there is a singular agreement among all commentators, there seems to be an insuperable objection to that also, if Strabo, who it must be remembered had his information direct from Gallus himself, is a trustworthy guide; for the Anagrana of the retreat (which is obviously also the Negra of Pliny), nine days distant from Marsyabae, was the place where the battle had been fought on their advance. But he had said before that this battle was fought at the river; and there is no mention of a river nearer to *Nedjrân* than the *Sancan*, which is, according to Mr. Forster, 170 miles, or twelve days' journey, distant. It is certainly strange that, of the writers who have commented on this expedition, all, with one exception, have overlooked the only indication furnished by the classical geographers of the *direction* of the line of march,—clearly pointing to the west, and not to the south. The Mariaba taken by the Romans was, according to Pliny, that of the Calingii, whom he places in the vicinity of the *Persian Gulf;* for he names two other towns of the same tribe, Pallon and Urannimal or Muranimal, which he places near the river by which the Euphrates is thought to debouche into the *Persian Gulf* (vi. 28), opposite to the *Bahrein* islands. (Forster, vol. ii. p. 312.) This important fact is remarkably confirmed by the expedition having landed near the mouth of the Elanitic gulf of the Red Sea, and commencing their march through the territory of Obodas and his kinsman Aretas, two powerful sheikhs of the Nabathaei, who inhabited the northern part of the Arabian peninsula from the Euphrates to the peninsula of Mount Sinai [NABATHAEI], and there can be little doubt that the Mariaba of Pliny is correctly identified with the *Merab*, still existing at the eastern base of the *Nedjd* mountains. [MARIABA, No. 3.] Whether this be the Marsyabae of Strabo, or whether future investigations in the eastern part of the peninsula, hitherto so imperfectly known, may not restore to us both this and other towns mentioned in the lists of Strabo and Pliny, it is impossible to determine. At any rate, the very circuitous route through *Nedjd* to *Yemen*, marked out by Mr. Forster, and again his line of the retreat, seem to involve difficulties and contradictions insurmountable, which this is not the place to discuss; and with regard to the supposed analogy of the modern names, it may be safely assumed that an equal amount of ingenuity might discover like analogies in any other parts of Arabia, even with the very scanty materials that we at present have at command. In conclusion, it may be remarked that the observation of Strabo that the expedition had reached within two days' journey of the country of the Frankincense, is of no value whatever in determining the line of march, as there were two districts so designated, and there is abundant reason to doubt whether either in fact existed; and that the reports brought home by Gallus and preserved by Pliny, so far as they prove anything, clearly indicate profound ignorance of the nature and produce of *Yemen*, which some authors suppose him to have traversed, for we are in a position to assert that so much of his statement concerning the Sabaei as relates to their wealth—"silvarum fertilitate odorifera, auri metallis"—is pure fiction. The question of the confusion of the various Mariabas, and their cognate names, is discussed by Ritter with his usual ability. (*Erdkunde von Arabien*, vol. i. pp. 276—284.) [G. W.]

MA'RSYAS (Μαρσύας). 1. A tributary of the Maeander, having its sources in the district called

Idrias, that is in the neighbourhood of Stratoniceia, and flowing in a north-western direction past Alabanda, discharged its waters into the Maeander nearly opposite to Tralles. On its banks were the λευκαὶ στῆλαι, near which the Carians held their national meetings. (Herod. v. 118.) The modern name of this river is *Tshina*, as is clearly proved by Leake (*Asia Minor*, p. 234, &c.); while earlier geographers generally confound this Marsyas with the Harpasus.

2. A small river of Phrygia, and, like the Carian Marsyas, a tributary of the Maeander. Herodotus (vii. 26) calls it a καταῤῥάκτης; and according to Xenophon (*Anab.* i. 2. § 8) its sources were in the market-place of Celaenae, below the acropolis, where it fell down with a great noise from the rock (Curt. iii. 1.) This perfectly agrees with the term applied to it by Herodotus; but the description is apparently opposed to a statement of Pliny (v. 41), according to whom the river took its origin in the valley of Aulocrene, ten miles from Apamea. (Comp. Strab. xii. p. 578; Max. Tyr. viii. 8.) Strabo, again, states that a lake above Celaenae was the source of both the Maeander and the Marsyas. "Comparing these accounts," says Col. Leake (*Asia Minor*, p. 160), "with Livy (xxxviii. 38), who probably copied from Polybius, it may be inferred that the lake or pool on the summit of a mountain which rose above Celaenae was the reputed source of the Marsyas and Maeander; but that in fact the two rivers issued from different parts of the mountain below the lake." By this explanation the difficulty of reconciling the different statements seems to be removed, for Aulocrene was probably the name of the lake, which imparted its own name to the plain mentioned by Pliny. The Marsyas joined the Maeander a little way below Celaenae. (Comp. MAEANDER; and Hamilton's *Researches*, i. p. 499.) [L.S.]

MARSYAS (Μαρσύας), a river of Coelesyria, mentioned only by Pliny (v. 23) as dividing Apameia from the tetrarchy of the Nazerini. It was probably the river mentioned—without its name—by Abulfeda as a tributary of the Orontes, which, rising below Apameia, falls into the lake synonymous with that city, and so joins the Orontes. The modern name *Yarmuk* is given by Pococke, who places it in his map on the east of the Orontes. (Abulfeda, *Tabula Syriae*, ed. Koehler, pp. 151, 152; Pococke, *Description of the East*, vol. ii. p. 79.) It doubtless gave its name to Marsyas, a district of Syria, mentioned by Strabo, who joins it with Ituraea, and defines its situation by the following notes:—It adjoined the Macra Campus, on its east, and had its commencement at Laodiceia ad Libanum. Chalcis was, as it were, an acropolis of the district. This Chalcis is joined with Heliopolis, as under the power of Ptolemy, son of Mennaeus, who ruled over Marsyas and Ituraea. (Strab. xvi. pp. 753, 755.) The same geographer speaks of Chalcidice ἀπὸ τοῦ Μαρσύου καθήκουσα (p. 153), and extends it to the sources of the Orontes, above which was the Αὐλὼν βασιλικός (p. 155), now the *Bekaa*. From these various notices it is evident that the Marsyas comprehended the valley of the Orontes from its rise to Apameia, where it was bounded on the north probably by the river of the same name. But it extended westward to the Macra Campus, which bordered on the Mediterranean. (Mannert, *Geographie von Syrien*, pp. 326, 363.) [ITURAEA; ORONTES.] [G.W.]

MARTA, a river of Etruria, still called the *Marta*, which has its source in the *Lake of Bolsena* (Lacus Vulsiniensis), of which it carries off the superfluous waters to the sea. It flowed under the N. side of the hill on which stood Tarquinii; but its name is known only from the Itineraries, from which we learn that it was crossed by the Via Aurelia, 10 miles from Centumcellae (*Civita Vecchia*). (*Itin. Ant.* p. 291; *Tab. Peut.*) [E. H. B.]

MARTIAE. [GALLAECIA, p. 934, b.]

MARTIA'LIS, a place in Gallia, near to, and northwest of Augustonemetum (*Clermont en Auvergne*), which Sidonius Apollinaris, once bishop of Clermont, names Pagus Violvascensis, with the remark that it was in a previous age named Martialis, from having been the winter quarters of the Julian legions. The tradition may refer to Caesar's legions. The place is now *Volvic* (D'Anville, *Notice*, *&c.*) [G. L.]

MARTIA'NE (Μαρτιανή, Ptol. vi. 2. §§ 2. 5), a lake placed by Ptolemy (*l. c.*) in Atropatene, and probably the same as that called SPAUTA by Strabo (ἡ λίμνη Σπαῦτα, xi. p. 523). St. Martin (*Mém. sur l'Armenie*, vol. i. p. 57) has ingeniously conjectured that the name Spauta that is applied to it in our MSS. of Strabo, is an error of some copyist for Caputa, a word which answers to the Armenian *Gaböïd* and Persian *Kabúd*, signifying "blue," and which, in allusion to the colour of the water, is the title usually assigned to it by the Oriental geographers. It is identified with the lake of *Urumiyah* in *Azerbaiján*, remarkable for the quantity of salt which it retains in solution. This peculiarity has been noticed by Strabo (*l.c.*), where, for the unintelligible reading καταπορωθεῖσιν, Groskurd (*ad loc.*) has substituted the κατυρωπθεῖσιν of the MSS. and older editions. (*Journ. Geog. Soc.* vol. iii. p. 56, vol. x. pp. 7—9; Ritter, *Erdkunde*, vol. ix. p. 782; Chesney, *Euphrat.* vol. i. pp. 77, 97.) [E. B. J.]

MARTI'NI (Μαρτῖνοι or Μαρτηνοί), a people of Arabia Petraea, near Babylonia (Ptol. v. 19. § 2), the exact position of which it is now impossible to fix. (Forster, *Geog. of Arabia*, vol. ii. pp. 238, 239.) [G. W.]

MARTIS, AD, a mansio marked by the Itins. on the road from Taurini (*Turino*) to Brigantio (*Briançon*) in Gallia Narbonensis, and the next station to Brigantio. The Antonine Itinerary makes it xviiii. M. P. between Ad Martis and Brigantio, omitting Gesdao [GESDAO]. The Table gives the same distance between Ad Martis and Brigantio, thus divided: from Ad Martis to Gascido (Gesdao) viii., to Alpis Cottia, v., to Brigantio vi.; and the Jerusalem Itin. makes the distance between Ad Martis and Brigantio the same. Ad Martis is fixed at *Houlx* or *Oulx*, on the road from *Susa to Briançon*. Ammianus Marcellinus mentions this place "nomine Martis" (xv. 10), and he calls it a statio. [G. L.]

MARTYRO'POLIS (Μαρτυρόπολις), a town of Sophanene in Armenia, near the river Nymphaeus, which, according to the national traditions, was founded towards the end of the 5th century by the bishop Marontha, who collected to this place the relics of all the martyrs that could be found in Armenia, Persia, and Syria. (St. Martin, *Mém. sur l'Armenie*, vol. i. p. 96.) Armenia, which as an independent kingdom, had long formed a slight counterpoise between the Roman and Persian empires, was in the reign of Theodosius II. partitioned by its powerful neighbours. Martyropolis was the capital of Roman Armenia, and was made by Justinian a strong fortress. (Procop. *de Aed.* iii. 2, *B. P.* i. 17; Le Beau, *Bas Empire*, vol. ix. p. 135; Gibbon, c. xl.) It is represented by the modern

Miíjarékyn (Μιεφερκείμ, Cedren, vol. ii. pp. 419, 501, ed. Bekker; Ritter, *Erdkunde*, vol. x. pp. 78, 90, 1087, vol. xi. pp. 67, foll.) [E. B. J.]

MARU'CA. [SOGDIANA.]

MARVINGI (Μαρουίγγοι), a German tribe on the east of Mons Abnoba, between the Suevi and the Danube. (Ptol. ii. 11. § 22.) The town of Bergium (the modern *Bamberg*) was probably the capital of the Marvingi. (Ptol. ii. 11. § 29.) [L.S.]

MARUNDAE (Μαροῦνδαι, Ptol. vii. 2. § 14), a people who lived in India extra Gangem, along the left bank of the Ganges, and adjoining the Gangaridae [GANGARIDAE]. They are probably the same as those whom Pliny calls Molindae (vi. 19. s. 22), and may perhaps be considered the same as the native Indian *Varendri*. [V.]

MARUS, a tributary of the Danube, into which it flows from the north. Between it and the Cusus a band of exiled Marcomannians received settlements from the Romans under Tiberius. (Tac. *Ann.* ii. 63; Plin. *H. N.* iv. 25.) It is generally believed that this river is the same as the *March* in *Moravia;* but it is more probably identical with the *Marosch*, which the ancients generally call Marisus. [MARISUS.] [L. S.]

MARU'SIUM, a town which the Jerusalem Itinerary fixes at 13 M. P. from Clodiana, and 14 M. P. from the river Apsus, on the road to Apollonia. Colonel Leake's map identifies it with *Lusjna*. [E. B. J.]

MARU'VIUM. [MARRUVIUM.]

MASADA (Μασάδα), a very strong fortress of Palestine, mentioned by Strabo and Pliny, but much more fully described by Josephus. Strabo mentions it in connection with the phaenomena of the Dead Sea, saying that there are indications of volcanic action in the rugged burnt rocks about Moasada (Μοασάδα). Pliny describes it as situated on a rock not far from the lake Asphaltis. (Strab. xvi. p. 764; Plin. v. 17.) The description of Josephus, in whose histories it plays a conspicuous part, is as follows:—A lofty rock of considerable extent, surrounded on all sides by precipitous valleys of frightful depth, afforded difficult access only in two parts; one on the east, towards the lake Asphaltis, by a zigzag path, scarcely practicable and extremely dangerous, called "the Serpent," from its sinuosities; the other more easy, towards the west, on which side the isolated rock was more nearly approached by the hills. The summit of the rock was not pointed, but a plane of 7 stadia in circumference, surrounded by a wall of white stone, 12 cubits high and 8 cubits thick, fortified with 37 towers of 50 cubits in height. The wall was joined within by large buildings connected with the towers, designed for barracks and magazines for the enormous stores and munitions of war which were laid up in this fortress. The remainder of the area, not occupied by buildings, was arable, the soil being richer and more genial than that of the plain below; and a further provision was thus made for the garrison in case of a failure of supplies from without. The rain-water was preserved in large cisterns excavated in the solid rock. A palace on a grand scale occupied the north-west ascent, on a lower level than the fortress, but connected with it by covered passages cut in the rock. This was adorned within with porticoes and baths, supported by monolithic columns; the walls and floor were covered with tesselated work. At the distance of 1000 cubits from the fortress a massive tower guarded the western approach at its narrowest and most difficult point, and thus completed the artificial defences of this most remarkable site, which nature had rendered almost impregnable. Jonathan, the high-priest, had been the first to occupy this rock as a fortress, but it was much strengthened and enlarged by Herod the Great, who designed it as a refuge for himself, both against his own disaffected subjects, and particularly against the more dreaded designs of Cleopatra, who was constantly importuning Antony to put her in possession of the kingdom of Judaea by removing Herod out of the way. It was in this fortress that the unfortunate Mariamne and other members of Herod's family were left for security, under his brother Joseph and a small garrison, when he was driven from Jerusalem by Antigonus and his Parthian allies. The fortress was besieged by the Parthians, and Joseph was on the point of surrendering for want of water, when a timely shower filled the cisterns and enabled the garrison to hold out until it was relieved by Herod on his return from his successful mission to Rome. It next figures in the history of the Jewish revolt, having been occupied first by Manahem, son of Judas the Galilean, a ringleader of the *sicarii*, who took it by treachery, and put the Roman garrison to the sword; and afterwards by Eleazar and his partisans, a rival faction of the same murderous fanatics, by whom it was held for some time after Jerusalem itself had fallen; and here it was that the last scene of that awful tragedy was enacted under circumstances singularly characteristic of the spirit of indomitable obstinacy and endurance that had actuated the Jewish zealots throughout the whole series of their trials and sufferings. It was the only stronghold that still held out when Flavius Silva succeeded Bassus as prefect in Judaea (A. D. 73). The first act of the general was to surround the fortress with a wall, to prevent the escape of the garrison. Having distributed sentries along this line of circumvallation, he pitched his own camp on the west, where the rock was most nearly approached by the mountains, and was therefore more open to assault; for the difficulty of procuring provisions and water for his soldiers did not allow him to attempt a protracted blockade, which the enormous stores of provisions and water still found there by Eleazar would have enabled the garrison better to endure. Behind the tower which guarded the ascent was a prominent rock of considerable size and height, though 300 cubits lower than the wall of the fortress, called the White Cliff. On this a bank of 200 cubits' height was raised, which formed a base for a platform (βῆμα) of solid masonry, 50 cubits in width and height, on which was placed a tower similar in construction to those invented and employed in sieges by Vespasian and Titus, covered with plates of iron, which reached an additional 60 cubits, so as to dominate the wall of the castle, which was quickly cleared of its defenders by the showers of missiles discharged from the scorpions and balistae. The outer wall soon yielded to the ram, when an inner wall was discovered to have been constructed by the garrison—a framework of timber filled with soil, which became more solid and compact by the concussions of the ram. This, however, was speedily fired. The assault was fixed for the morrow, when the garrison prevented the swords of the Romans by one of the most cold-blooded and atrocious massacres on record. At the instigation of Eleazar, they first slew every man his wife and children; then having

collected the property into one heap, and destroyed it all by fire, they cast lots for ten men, who should act as executioners of the others, while they lay in the embrace of their slaughtered families. One was then selected by lot to slay the other nine survivors; and he at last, having set fire to the palace, with a desperate effort drove his sword completely through his own body, and so perished. The total number, including women and children, was 960. An old woman, with a female relative of Eleazar and five children, who had contrived to conceal themselves in the reservoirs while the massacre was being perpetrated, survived, and narrated these facts to the astonished Romans when they entered the fortress on the following morning and had ocular demonstration of the frightful tragedy.

The scene of this catastrophe has been lately recovered, and the delineations of the artist and the description of the traveller have proved in this, as in so many other instances, the injustice of the charge of exaggeration and extravagance so often preferred against the Jewish historian. Mr. Eli Smith was the first in modern times to suggest the identity of the modern *Sebbeh* with the Masada of Josephus. He had only viewed it at a distance, from the cliffs above Engeddi, in company with Dr. Robinson (*Biblical Researches*, vol. iii. p. 242, n. 1); but it was visited and fully explored, in 1842, by Messrs. Woolcot and Tipping, from whose descriptions the following notices are extracted. The first view of it from the west strikingly illustrates the accuracy of Strabo's description of its site. "Rocky precipices of a rich reddish-brown colour surrounded us; and before us, across a scorched and desolate tract, were the cliff of *Sebbeh*, with its ruins, the adjacent height with rugged defiles between, and the Dead Sea lying motionless in its bed beneath. The aspect of the whole was that of lonely and stern grandeur." So on quitting the spot they found the ground "sprinkled with volcanic stones." The base of the cliff is separated from the water by a shoal or sand-bank; and the rock projects beyond the mountain range, and is completely isolated by a valley, even on the west side, where alone "the rock can now be climbed: the pass on the east described by Josephus seems to have been swept away. The language of that historian respecting the loftiness of the site, is not very extravagant. It requires firm nerves to stand over its steepest sides and look directly down. The depth at these points cannot be less than 1000 feet...... The whole area we estimated at three-quarters of a mile in length from N. to S., and a third of a mile in breadth. On approaching the rock from the west, the 'white promontory,' as Josephus appropriately calls it, is seen on this side near the northern end. This is the point where the siege was pressed and carried. Of 'the wall built round about the entire top of the hill by King Herod,' all the lower part remains. Its colour is of the same dark red as the rock, though it is said to have been 'composed of white stone;' but on breaking the stone, it appeared that it was naturally whitish, and had been burnt brown by the sun." The ground-plan of the storehouses and barracks can still be traced in the foundations of the buildings on the summit, and the cisterns excavated in the natural rock are of enormous dimensions: one is mentioned as nearly 50 feet deep, 100 long, and 45 broad; its wall still covered with a white cement. The foundations of a round tower, 40 or 50 feet below the northern summit, may have been connected with the palace, and the windows cut in the rock near by, which Mr. Woolcot conjectures to have belonged to some large cistern, now covered up, may possibly have lighted the rock-hewn gallery by which the palace communicated with the fortress. From the summit of the rock every part of the wall of circumvallation could be traced,—carried along the low ground, and, wherever it met a precipice, commencing again on the high summit above, thus making the entire circuit of the place. Connected with it, at intervals, were the walls of the Roman camps, opposite the NW. and SE. corners, the former being the spot where Josephus places that of the Roman general. A third may be traced on the level near the shore. The outline of the works, as seen from the heights above, is as complete as if they had been but recently abandoned. The Roman wall is 6 feet broad, built, like the fortress walls and buildings above, with rough stones laid loosely together, and the interstices filled in with small pieces of stone. The wall is half a mile or more distant from the rock, so as to be without range of the stones discharged by the garrison. No water was to be found in the neighbourhood but such as the recent rains had left in the hollows of the rocks; confirming the remark of Josephus, that water as well as food was brought thither to the Roman army from a distance. Its position is exactly opposite to the peninsula that runs into the Dead Sea from its eastern shore, towards its southern extremity. (*Bibliotheca Sacra*, 1843, pp. 62—67; Traill's *Josephus*, vol. ii. pp. 109—115: the plates are given in vol. i. p. 126, vol. ii. pp. 87, 238.) It must be admitted that the identification of *Sebbeh* with Masada is most complete, and the vindication of the accuracy of the Jewish historian, marvellous as his narrative appears without confirmation, so entire as to leave no doubt that he was himself familiarly acquainted with the fortress. [G. W.]

MASAITICA (Μασαϊτίκη), a river the "embouchure" of which is placed by Arrian (*Peripl.* p. 18) on the S. coast of the Euxine, 90 stadia from the Nesis. Rennell (*Comp. Geog.* vol. ii. p. 325) has identified it with the *Kamuslar*. [E. B. J.]

MASANI (Μασανοί), a people of Arabia Deserta, mentioned only by Ptolemy (v. 19. § 2), situated above the Rhaabeni. (Forster, *Geog. of Arabia*, vol. i. pp. 284, 285.) [G. W.]

MASCAS (Μασκᾶς, Xenoph. *Anab.* i. 5. § 4), a small river of Mesopotamia, mentioned by Xenophon in the march of Cyrus the Younger through that country. It flowed round a town which he calls Corsote, and was probably a tributary of the Euphrates. Forbiger imagines that it is the same as the Saocoras of Ptolemy (v. 18. § 3), which had its rise in the neighbourhood of Nisibis. [V.]

MASCIACUM, a place in Rhaetia, on the road leading from Veldidena to Pons Aeni (*It. Ant.* p. 259), identified with *Gmünd* on the *Tegernsee*, or with *Matzen*, near *Rattenberg*. [L. S.]

MASCLIANA or MASCLIANAE, a town in Dacia, which the Peutinger Table fixes at 11 M. P. from Gagana. The Geographer of Ravenna calls it Marsclunis; its position must be sought for near *Karansebes*. [E. B. J.]

MASDORA'NI (Μασδωρανοὶ or Μαζωρανοί), a wild tribe who occupied the mountain range of Masdoranus, between Parthia and Ariana, extending SW. towards the desert part of Carmania or Kirman. (Ptol. vi. 17. § 3.) [V.]

MASDORA'NUS (Μασδώρανος), a chain of mountains which divided Parthia from Carmania Deserta, extending in a S. direction. They must be considered as spurs of the Sariphi mountains (*Hazarás*), which lie to the N. of Parthia (Ptol. vi. 5. § 1). [V.]

MASES (Μάσης, ἡ Μάσητος, Steph. B.: *Eth* Μασήτιος), an ancient city in the district Hermionis, in the Argolic peninsula, mentioned by Homer along with Aegina. In the time of Pausanias it was used as a harbour by Hermione. (Hom. *Il.* ii. 562; Strab. viii. p. 376; Paus. ii. 36. § 2; Steph. B. *s. v.*) It was probably situated on the western coast of Hermionis, at the head of the deep bay of *Kiládhia*, which is protected by a small island in front. The possession of this harbour on the Argolic gulf must have been of great advantage to the inhabitants of Hermione, since they were thus saved the navigation round the peninsula of *Krandhi*. The French Commission, however, place Mases more to the south, at port *Kheli*, which we suppose to have been the site of Halice. [HALICE.] (Leake, *Morea*, vol. ii. p. 463, *Peloponnesiaca*, p. 287; Boblaye, *Récherches*, *&c.* p. 61; Curtius, *Peloponnesos*, vol. ii. p. 462.)

MASICES. [MAURETANIA.]

MA'SIUS (τὸ Μάσιον ὄρος, Strab. xi. pp. 506, 527; Ptol. v. 18. § 2), a chain of mountains which form the northern boundary of Mesopotamia, and extend in a direction nearly east and west. They may be considered as connecting the great western mountain known by the name of Amanus, between Cilicia and Assyria, and the Niphates, on the eastern or Armenian side. The modern name is *Karja Baghlar*. Strabo states, that M. Masius is in Armenia, because he extends Armenia somewhat more to the W. and S. than other geographers. A southern spur of the Masian chain is the mountain district round Singara (now *Sinjar*). [V.]

MA'SPII (Μάσπιοι, Herod. i. 125), one of the three tribes mentioned by Herodotus, as forming the first and most honourable class among the ancient Persians. [V.]

MASSA (Μάσσα, Ptol. iv. 6. § 6; Masatat, Polyb. *ap. Plin.* v. 1), a river of Libya, which joined the sea not far to the N. of the Daras (*Senegal*), and to the S. of Soloeis (*Cape Blanco*) in E. long. 10° 30′, N. lat. 16° 30′. [E. B. J.]

MASSA, surnamed MASSA VETERNENSIS, a town of Etruria, situated about 12 miles from the sea, on a hill overlooking the wide plain of the *Maremma*: hence it is now called *Massa Marittima*. In the middle ages it was a considerable city and the see of a bishop; but it is not mentioned by any ancient author earlier than Ammianus Marcellinus (xiv. 11. § 27), who tells us that it was the birthplace of the emperor Constantius Gallus. From the epithet Veternensis, it would seem probable that there was an Etruscan city of the name of Veternum in its neighbourhood; and, according to Mr. Dennis, there are signs of an Etruscan population on a hill called the *Poggio di Vetreta*, a little to the SE. of the modern town. (Dennis, *Etruria*, vol. ii. p. 218.) [E. H. B.]

MASSABATICA. [MESSABATAE.]

MASSAEI (Μασσαῖοι), a people placed by Ptolemy (vi. 14. §§ 9, 11) in the extreme N. of Scythia, near the mountains of the Alani, or the N. part of the *Ural* chain. [E. B. J.]

MASSAESYLI. [NUMIDIA.]

MASSAGA (τὰ Μάσσαγα, Arrian, *Anab.* iv. 25, 39), a strongly fortified town in the NE. part of India, between the Cophes and the Indus. It is stated by Arrian (*l. c.*) to have made a desperate defence, and to have withstood Alexander for four days of continued assault. It had been the residence of the Indian king Assacanus, who was recently dead when Alexander arrived there. (Curt. viii. 10). This name is written differently in different authors. Thus, Strabo writes it Μασόγα (xv. p. 698); Steph. Byz. and Diodorus, Μασσάκα (xvii. Prooem.); and Curtius, Mazaga (*l. c.*). It is doubtless the same as the Sanscrit, *Maçaka*, near the Guraeus (or *Gauri*). Curtius himself mentions that a rapid river or torrent defended it on its eastern side. (Lassen's *Map of India.*) [V.]

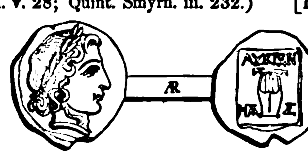
MASSA'GETAE (Μασσαγέται), a numerous and powerful tribe who dwelt in Asia on the plains to the E. of the Caspian and to the S. of the Issedones, on the E. bank of the Araxes. Cyrus, according to story, lost his life in a bloody fight against them and their queen Tomyris. (Herod. i. 205—214; Justin. i. 8.) They were so analogous to the Scythians that they were reckoned as members of the same race by many of the contemporaries of Herodotus, who has given a detailed account of their habits and manner of life. From the exactness of the geographical data furnished by that historian, the situation of this people can be made out with considerable precision. The Araxes is the Jaxartes, and the immense plain to the E. of the Caspian is that "steppe" land which now includes *Sungaria* and *Mongolia*, touching on the frontier of *Eygur*, and extending to the chain of the *Altai*. The gold and bronze in which their country abounded were found in the *Altai* range. Strabo (xi. pp. 512—514) confirms the statements of the Father of History as to the inhuman practices and repulsive habits of these earliest specimens of the Mongolian race. It may be observed that while Niebuhr (*Klein Schrift.* p. 362), Böckh (*Corp. Inscr. Graec.* pl. xi. p. 81) and Schafarik (*Slav. Alt.* vol. i. p. 279) agree in assigning them to the Mongol stock, Von Humboldt (*Asie Centrale*, vol. i. p. 400) considers them to have belonged to the Indo-European family.

Alexander came into collision with these wandering hordes, during the campaign of Sogdiana, B. C. 328. (Arrian, *Anab.* iv. 16, 17.) The Massagetae occur in Pomponius Mela (i. 2. § 5), Pliny (vi. 19), and Ptolemy (vi. 10. § 2, 13. § 3): afterwards they appear as Alani. [ALANI.] [E. B. J.]

MASSA'LIA (Μασσαλία), a river of Crete, which Ptolemy (iii. 17. § 3) places to the W. of Psychium (*Kastri*), now the *Megálo-pótamo*. (Höck, *Kreta*, vol. i. p. 393.) [E. B. J.]

MASSA'LIA. [MASSILIA.]

MASSALIO'TICUM OSTIUM. [FOSSA MARIANA.]



MASSANI (Μασσανοί, Diod. xv. 102), a people of India, who are said by Diodorus to have lived near the mouths of the Indus, in the district called Pattalene. [V.]

MASSAVA, in Gallia, is placed by the Table between Brivodurum (*Briare*) and Ebirnum, which is Nevirnum (*Nevers*) on the *Loire*. The distance is marked the same from Massava to Brivodurum and to Nevirnum, being xvi. in each case. Massava is *Mesve* or *Mèves*, a place where the small river *Masau* flows into the Loire; but the numbers in the Table do not agree with the real distance, as D'Anville says, and he would correct them in his usual way. [G. L.]

MASSIA'NI (Μασσιανοί, Strab. xv. p. 698), a people who dwelt in the NE. part of India, beyond the *Panjáb*, between the Cophes and the Indus. They are mentioned by Strabo in connection with the Astaceni and Aspasii, and must therefore have dwelt along the mountain range to the N. of the *Kábul* river. [V.]

MA'SSICUS MONS (*Monte Massico*), a mountain, or rather range of hills, in Campania, which formed the limit between Campania properly so called and the portion of Latium, south of the Liris, to which the name of Latium Novum or Adjectum was sometimes given. (Plin. iii. 5. s. 9.) The Massican Hills form a range of inconsiderable elevation, which extends from the foot of the mountain group near Suessa (the *Mte. di Sta. Croce*), in a SW. direction, to within 2 miles of the sea, where it ends in the hill of *Mondragone*, just above the ancient Sinuessa. The Massican range is not, like the more lofty group of the *Mte. di Sta. Croce* or *Rocca Monfina*, of volcanic origin, but is composed of the ordinary limestone of the Apennines (Daubeny *On Volcanoes*, p. 175). But, from its immediate proximity to the volcanic formations of Campania, the soil which covers it is in great part composed of such products, and hence probably the excellence of its wine, which was one of the most celebrated in Italy, and vied with the still more noted Falernian. (Virg. *Georg.* ii. 143, *Aen.* vii. 724; Hor. *Carm.* i. 1. 19, iii. 21. 5; Sil. Ital. vii. 20; Martial, i. 27. 8, xiii. 111; Plin. xiv. 6. s. 8; Columell. iii. 8.) Yet the whole of this celebrated range of hills does not exceed 9 miles in length by about 2 in breadth. [E. H. B.]

MASSICYTES, MASSYCITES, or MASSICYTUS (Μασσίκυτος), a mountain range traversing western Lycia from north to south, issuing in the north, near Nysa, from Mount Taurus, and running almost parallel to the river Xanthus, though in the south it turns a little to the east. (Ptol. v. 3. § 1; Plin. v. 28; Quint. Smyrn. iii. 232.) [L. S.]

COIN OF MASSICYTES.

MASSIE'NA, a town, mentioned only by Avienus (*Or. Marit.* 450, seq.), situated on the south coast of Hispania Tarraconensis, from which the Sinus Massienus derived its name. It is the bay S. of *Cartagena*, between *C. Palos* and *C. Gata*.

MASSI'LIA (Μασσαλία: *Eth.* Μασσαλιώτης, Μασσαλιήτης, Μασσαλιεύς, in the feminine, Μασσαλιῶτις; Massiliensis: the modern name, *Marseille*, is from the corrupted Latin, Marsilia, which in the Provençal became *Marsillo*). Massalia, which the Romans wrote Massilia, is a town of Gallia Narbonensis, on the coast, east of the Rhone. Its position is represented by the French city of *Marseille*, in the department of *Bouches-du-Rhone*. Ptolemy (ii. 10. § 8) calls Massalia a city of the Commoni, whose territory he extends along the coast from Massalia to Forum Julii (*Fréjus*). He places Massalia in 43° 5′ N. lat.; and he makes the length of the longest day 15 hours, 15 minutes; which does not differ many minutes from the length of the longest day as deduced from the true latitude of *Marseille*, which is about 43° 18′ N. lat.

The territory of *Marseille*, though poor, produced some good wine and oil, and the sea abounded in fish. The natives of the country were probably a mixed race of Celtae and Ligures; or the Ligurian population may have extended west as far as the Rhone. Stephanus (*s. v.* Μασσαλία), whose authority is nothing, except we may understand him as correctly citing Hecataeus, describes Massalia as a city of Ligystice in Celtice. And Strabo (iv. p. 203) observes, "that as far west as Massalia, and a little further, the Salyes inhabit the Alps that lie above the coast and some parts of the coast itself, mingled with the Hellenes." This is doubtless the meaning of Strabo's text, as Groskurd remarks (*Transl. Strab.* vol. i. p. 350). Strabo adds, "and the old Greeks give to the Salyes the name of Ligyes, and to the country which the Massaliots possess the name of Ligystice; but the later Greeks name them Celtoligyes, and assign to them the plain country as far as the Rhodanus and the Druentia." Massalia, then, appears to have been built on a coast which was occupied by a Ligurian people.

The inhabitants of the Ionian town of Phocaea in Asia, one of the most enterprising maritime states of antiquity, showed their countrymen the way to the Adriatic, to Tyrrhenia, Iberia, and to Tartessus. (Herod. i. 163). Herodotus says nothing of their visiting Celtice or the country of the Celtae. The story of the origin of Massalia is preserved by Aristotle (*ap. Athen.* xiii. p. 576) in his history of the polity of the Massilienses. Euxenus, a Phocaean, was a friend of Nannus, who was the chief of this part of the coast. Nannus, being about to marry his daughter, invited to the feast Euxenus, who happened to have arrived in the country. Now the marriage was after the following fashion. The young woman was to enter after the feast, and to give a cup of wine and water to the suitor whom she preferred; and the man to whom she gave it was to be her husband. The maid coming in gave the cup, either by chance or for some reason, to Euxenus. Her name was Petta. The father, who considered the giving of the cup to be according to the will of the deity, consented that Euxenus should have Petta to wife; and Euxenus gave her the Greek name Aristoxena. It is added, that there was a family in Massalia, up to Aristotle's time, named Protiadae, for Protis was a son of Euxenus and Aristoxena.

Justin (xliii. 3, &c.), the epitomiser of Trogus Pompeius, who was either of Gallic or Ligurian origin, for his ancestors were Vocontii, tells the story in a somewhat different way. He fixes the time of the Phocaeans coming to Gallia in the reign of Tarquinius, who is Tarquinius Priscus. The Phocaeans first entered the Tiber, and, making a treaty with the Roman king, continued their voyage to the furthest bays of Gallia and the mouths of the Rhone. They were pleased with the country, and returning to Phocaea, induced a greater number of Phocaeans to go with them to Gallia. The commanders of the fleet were Simos and Protis. Plutarch also (*Solon*, c. 2.) names Protos the founder of Massalia. Simos and Protis introduced themselves to Nannus, king of the Segobrii or Segobrigii, in whose territories they wished to build a city. Nannus was busy at this time with preparing for the marriage of his daughter Cyptis, and the strangers were politely invited to the marriage feast. The choice of the young woman for her husband fell on Protis; but the cup which she offered him contained only water. From this fact, insignificant in itself, a modern writer deduces the

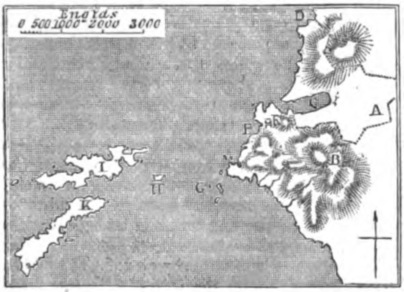
conclusion, that if it was wine and water, the wine came from foreign commerce, and commerce anterior to the arrival of the Phocaeans ; "for the vine was not yet introduced into Gaul." But the vine is a native of Gallia Narbonensis, and king Nannus may have had wine of his own making. The Phocaeans now built Massalia ; and though they were continually harassed by the Ligurians, they beat them off, conquered fresh territories, and built new cities in them. The time of the settlement of Massalia is fixed by Scymnus Chius 120 years before the battle of Marathon, or B. C. 600.

Strabo (iv. p. 179) found in some of his authorities a story that the Phocaeans before they sailed to Gallia were told by an oracle to take a guide from Artemis of Ephesus ; and accordingly they went to Ephesus to ask the goddess how they should obey the oracular order. The goddess appeared to Aristarche, one of the women of noblest rank in Ephesus, in a dream, and bade her join the expedition, and take with her a statue from the temple. Aristarche went with the adventurers, who built a temple to Artemis, and made Aristarche the priestess. In all their colonies the Massaliots established the worship of Artemis, and set up the same kind of wooden statue, and instituted the same rites as in the mother-city. For though Phocaea founded Massalia, Ephesus was the city which gave to it its religion. [EPHESUS, Vol. I. p. 834.]

The Galli, as Justin calls them, learned from the Massaliots the usages of civilised life (Justin, xliii. 4), to cultivate the ground, and to build walls round their cities. They learned to live under the rules of law, to prune the vine, and to plant the olive. Thus Greek civility was imported into barbaric Gallia, and France still possesses a large and beautiful city, a lasting memorial of Greek enterprise.

Nannus died, and was succeeded by his son Comanus, to whom a cunning Ligurian suggested that Massalia would some time ruin all the neighbouring people, and that it ought to be stifled in its infancy. He told him the fable of the bitch and her whelps, which Phaedrus has (i. 19): but this part of the old story is hardly credible. However, the king took advantage of a festival in Massalia, which Justin calls by the Roman name of Floralia, to send some stout men there under the protection of Massaliot hospitality, and others in carts, concealed in hampers covered with leaves. He posted himself with his troops in the nearest mountains, ready to enter the city when his men should open the gates at night, and the Massaliots were sunk in sleep and filled with wine. But a woman spoiled the plot. She was a kinsman of the king, and had a Greek for her lover. She was moved with compassion for the handsome youth as she lay in his arms : she told him of the treachery, and urged him to save his life. The man reported it to the magistrates of the city. The Ligurians were pulled out of their hiding-places and massacred, and the treacherous king was surprised when he did not expect it, and cut to pieces with 7000 of his men. From this time the Massaliots on festal days shut their gates, kept good watch, and exercised a vigilant superintendence over strangers.

The traditions of the early history of Massalia have an appearance of truth. Everything is natural. A woman's love founded and saved Massalia. A woman's tender heart saved the life of the noble Englishman who rescued the infant colony of Virginia from destruction ; and the same gentle and heroic woman, Pocahontas, by marrying another Englishman, made peace between the settlers and the savages, and secured for England a firm footing in Chesapeake Bay.



Livy's story (v. 34) of the Phocaeans landing on the site of Massalia at the time of Bellovesus and his Celts being on the way to invade Italy, is of no value.
